The initials of the Contributors of the following articles have been inadvertently omitted:—J. R. B., ROMAN EMPIRE; TABERNACLES, FEAST OF.—H. A. C. H., GENESIS.—J. F. R., SPICES; STORAX; TAMAR, 1; TEIL TREE; TIRZAH, 1.—W. W., JUDE; NEBUCHADNEZZAR.

PREFACE.

The present work was undertaken with the design of providing the public with a more complete view of the existing state of Biblical literature, both at home and abroad, than it previously possessed. It was felt that former works of the kind, numerous as they are, and useful as some of them may be considered, were built too exclusively upon the 'old learning' of Calmet and others; and that some recent attempts to give a more modern character to such undertakings had been made too entirely from home materials, and had too exclusive reference to such external facts and circumstances as travellers and antiquarians offer, to meet the demands of the present time. The work, therefore, owes its origin to the Editor's conviction of the existence of a great body of untouched materials, applicable to such a purpose, which the activity of modern research and the labours of modern criticism had accumulated, and which lay invitingly ready for the use of those who might know how to avail themselves of such resources.

It was no task for one man to gather in this great harvest. And as the ground seemed, for the most part, common to all Christian men, it appeared desirable that assistance should be sought from a sufficient number of competent Biblical scholars and others, without distinction of country or religious party, that the field might be the more thoroughly swept, and the greater wealth of illustration obtained, from men of different lines of reading and various habits of thought. The prompt manner in which the call of the Editor for co-operation has been met by the numerous eminent Biblical scholars and naturalists, whose names appear in the List of Contributors, has been among the highest gratifications arising to him out of this undertaking; while the ability, the laborious research, the care and the punctuality, with which they have discharged the various tasks confided to them, demand his warmest acknowledgments.

The only drawback likely to arise from co-operation so various and extensive, lay in the probability that considerably different views might be manifested in the several articles; and that, too, on subjects on which every reader is likely to have formed some opinion of his own, and will be disposed to regard as

erroneous or suspicious every opinion which may not entirely coincide with that which he has been accustomed to entertain. In this lay the sole danger and the greatest difficulty of such an undertaking. Here was to be a book which no one man, and not even a very few men, could produce; and which the public would yet probably expect to exhibit as much unity, not only of plan and execution, but of opinion and sentiment, as if it were the produce of a single mind. The Editor, however, felt that he could not undertake to find forty independent thinkers among whom there should be no visible diversities of sentiment. But he thought that much might be done in producing so near an approach to uniformity on matters of real importance as would satisfy every reasonable reader; especially when he should come to consider that the choice lay between taking the work with such diversities as necessarily arose from the extent of the co-operation employed in its production, or of altogether dispensing with the immense amount of Biblical information which it embodies. Entire uniformity, if attainable at all, could only have been attained at the cost of providing a very different and greatly inferior work; and a work thus different and inferior could not have established a distinction sufficiently marked from all previous undertakings of the kind to justify its production.

It has not consisted with the Editor's idea of the functions he had undertaken, to dictate to the Contributors the views they were to take of the subjects intrusted to them, or to set up his own views as the standard of correct opinion. This he must have done, had he made it his rule to insert only such statements as exactly coincided with his own sentiments, or to exclude altogether whatever views of particular subjects might differ from those with which his own mind is satisfied. The Contributors were expected to abstain from introducing the opinions peculiar to their nation or to their religious communion; but they have been under slight restraint with respect to the conclusions which they might form as independent thinkers and reasoners, competent by their attainments and studies to form a judgment worthy of attention on the various matters coming under their consideration. In conformity with no other principle could this work have been produced; and such being the nature of its execution, it became necessary that the initials of the several writers should be affixed to their contributions, that the reader might know to whom to ascribe the responsibility of the particular articles, and that no one contributor might be deemed responsible for any other articles than those to which his signature is annexed. The Editor also, who has provided all those articles which bear no signature (except those adverted to at the end of the List of Contributors), does not hold himself responsible for any statements or opinions advanced in any other articles than these. Some of them exhibit opinions in which he is not able to concur, but which have nevertheless been furnished by persons whom he could not regard as less competent than himself to arrive at just conclusions.

Yet although some explanation is due to those who may possibly find in this

work, in a few articles, opinions in which they cannot agree, and views from which their own differ; it is right that the persons engaged in producing it should claim for it a judgment founded not upon particular articles, but upon its general character, which was intended to be, and is, in accordance with the known standards of orthodox opinion in this country, as may be ascertained by reference to those leading articles which may be regarded as stamping the character of any work in which they are found. In fact, a Cyclopædia of *Biblical Literature*, as distinct from *Theology* properly so called, offers less occasion than might at first sight appear for the obtrusion of those matters of doctrine and discipline which Christian men regard with differences of opinion which the Editor would fain believe to be less wide and less important than is too generally supposed. In the dispensations of Divine Providence, he has been by physical privations shut out from many of those external influences and associations which tend to magnify such differences, and to deepen into impassable gulfs the space which lies between them. He has not found this condition a disadvantage in conducting the work which he has now the happiness of having brought to a conclusion; nor will he venture to regard that condition as an unmitigated evil, if, through the complete isolation in which he has thereby been placed, he has been enabled, without any compromise of the views he conscientiously entertains and which *his own* writings will sufficiently indicate, to realize more extensive co-operation in this undertaking than under pastoral or official connection with any religious denomination he could expect to have attained. It is believed that the English language has no other book which eminent foreign scholars have co-operated with our own in producing; and it is certain that it possesses no other work which embodies the combined labours of writers who, indeed, are of different communions here, and are known by different names among men, but who have the same hope in this world, and but one name in heaven.

The nature of the present work, and the place which its conductors desire it should occupy in the Biblical Literature of this country, will be best understood by a sketch of the whole field in which that place is marked out. This will show not only what is here attempted, but how much of this wide and fruitful field remains open to the same process of cultivation. For this sketch we are indebted to the able pen of Dr. Credner, who has enriched this work by several valuable contributions, and by whom it has been prepared expressly for the place which it here occupies. It will be understood by most readers that the term *Theological Encyclopædia* is technically employed on the Continent, and is beginning to be employed in this country, to describe the whole field of Sacred Literature, of which Biblical Literature, strictly so called, is but a part.

"A comprehensive arrangement of all that belongs to the region of human knowledge has—not quite properly—been indicated by the term *Encyclopædia*, i.e., *ἐν κύκλῳ παιδεία* or *ἐγκύκλιος παιδεία*. Another term, *Wissenschafts*

Kunde (knowledge of science), has also been applied to that arrangement in Germany, when it includes likewise an internal and scientific development of the systems and subjects under discussion. In our title, *Cyclopædia of Biblical Literature*, it is obvious that the word 'Cyclopædia' cannot be taken in the more extended acceptation of the term, but merely so far as the Bible and Theology are concerned. As the peculiar province of *Biblical Encyclopædia* can only be clearly understood and defined in its connection with *Theological Encyclopædia*, it may be requisite to describe at length the meaning of the latter and more comprehensive term.

But even the notion of Theological Encyclopædia in general, is yet of too extended range for our purpose, as it might be supposed to comprehend a systematic development of *all* that refers to the knowledge of God generally; while here cognizance can be only taken of some particular branch of that knowledge, namely, of that belonging to Christianity alone. Our notice must therefore be limited to the Encyclopædia of *Christian* theology. But Christian theology forms only a special and limited part of general theology. The former, in endeavouring to comprehend scientifically the Christian religion, deals altogether with a subject of experience. For the Christian religion, or the Christian knowledge of God, is not innate and constitutional in man, or something existing in his mind *à priori*, but is a religion connected with Jesus Christ as its revealer. Christian theology is thus a positive or historical science, which can be traced from its origin at a known point of time.

Now, nothing more intimately concerns the spirit of Christian theology than the solution of the question, By what standard are we to determine the tenets of the Christian religion, or from what source must they be deduced? It is in the solution of this important question that the adherents of the Christian religion divide themselves into two large bodies; the one considers the Scriptures, emanating from the Holy Ghost, as the first and last source of knowledge for Christian truth,—a source, however, not bounded by time and space, but continuing to flow, and pour forth new religious truths within the range of the Church formed under the guidance of the Holy Spirit. This doctrine is usually expressed in the following terms: the Catholic Church assumes a double outward source of the knowledge of religious truth, namely, the *Apostolic*, both *Scriptural* and *traditional*. The other great religious party makes a very marked distinction between the revealed doctrines laid down in the Scriptures and the later views and development of the same by the Church; in other words, they distinguish between Scriptural and traditional revelation. Their leading principle is that the Christian religion can be derived pure and unalloyed from the Bible alone; and they therefore reject, as unnecessary and unauthorised, all professed sources of religious knowledge which are foreign to the Holy Scriptures. As Christians of the latter category we here take the Scriptures as the *only* external source of revelation for religious truth; and in this point of view we also trace the outlines of theological science.

Thus considered, a little examination of the subject leads us to discover in it a threefold principle:—1. An eternal, ever-prevailing, and therefore immutable, Christian principle; 2. Another, *established* upon this positive foundation; and 3. One that is *developing* itself out of this. Our business is, therefore, not with a revealed doctrine which has long since been completed, which had lived, lost its spirit, and died; but with one which, like the human mind itself, is continually expanding in youthful vigour—one which, when correctly comprehended, exhibits a mutual relationship and equal degree of development with whatever stage of culture and civilization its adherents, the Christians, may have reached. Thus it has happened that in process of time many truths which must ever be most essential to the Christian, have been variously and differently understood and interpreted. Every thinking Christian must strive to bring his religious opinions and actions into a possible, perfect, and continued harmony with a correct view of the doctrines contained in the Bible. *Christian Protestantism* is the spiritual advancement of humanity at the side of the Bible; and the task of Christian theology must thus be to show, not only how far that end has been aimed at in past times and until now, but also in what manner man is to strive after it in time to come, and to indicate the means by which the teachings of the Scriptures are to be exhibited in their true unison with every advancement which mankind can make in knowledge and civilization.

It is thus evident that Christian theology stands in the closest relation to all the departments of human knowledge, and more especially to philosophy, to which, when duly applied, Christianity has ever been much indebted,—while it has caused her great damage and injury whenever its natural and necessary boundaries have been overpassed; and it is not less clear that the efforts of the theologian must, above all, be directed towards a due comprehension and a progressively seasonable development and advancement of the always living Christian spirit contained in the Scriptural doctrines. This task pre-supposes a proper understanding of the Scriptures. Christian theology must, therefore, in the first instance, try to solve scientifically the questions—What is meant by Holy Writ? How have its doctrines been understood until now? And by what laws are we to proceed so as to arrive at a right understanding of their scope and spirit? The results of these inquiries, systematically obtained, form a complete science in themselves. As Christianity, however, is not limited to abstract speculations, but has for its chief aim the enkindling and diffusion of true piety, in thought and in practice, Christian theology has further to display the means by which this Christian conviction may be on the one hand called forth in the soul of man and diffused abroad, and on the other quickened and defended. Christian theology is, finally, required to set forth the course which Christianity has pursued in former ages, and to describe its past vicissitudes and present condition.

The foundation of Christian theology must thus be sought in the Scriptures: and, divesting ourselves of all prepossessions and hypotheses, it will, in the first instance, be necessary for us to obtain a clear insight as to the

circumstances and the times in which the series of books which constitute the Scriptures came into existence. This leads us to the first branch of theological science, namely, to BIBLICAL ARCHÆOLOGY, or BIBLICAL ANTIQUITIES. Biblical Archæology, usually confined within too narrow limits, is that part of theological science which tries to unravel the various circumstances and conditions which have exercised more or less influence upon the composition of the Scriptural books. Its object is, therefore, to treat of:—

1. The nature of the country in which those books have originated; to this branch of inquiry belong *Physical Geography* and *Natural History*. By the latter we understand not only (a common mistake) a systematic survey of the natural productions, but also and chiefly an enumeration of the peculiar features of their origin, growth, continuance, cultivation, use, etc. It is, for instance, quite immaterial what place the date-palms or balsam-shrubs occupy in the system—such investigations being of no importance for the understanding of the Bible, the writers of which have disregarded those points; while, on the other hand, the peculiarities of the locality where the palm-tree stands, its external appearance at the different seasons of the year, its growth, fertility, use, etc.—in short, all that particularly strikes the sense of the beholder, have frequently exercised considerable influence on the inspired writers; and these sources of external impressions on the senses and mind of man, are to be particularly considered and noticed by Biblical Archæology.
2. The inhabitants of those countries; their peculiar character, manners, customs, way of living, and their intercourse with other nations.
3. The vicissitudes of their people,—consequently, the history of the Hebrews and Jews, down to that time when the last books of the Scriptures were written.
4. The politico-religious institutions, the civil and geographical order and division of the land and the people; and
5. The mental development of the Hebrews and Jews, the regulations founded on it, and the degree of progress which the arts and sciences had attained among them.

Biblical Archæology may be further divided into two classes—that of the Old Testament and that of the New Testament: the former may again be subdivided into the *Hebrew* and the *Jewish* archæology.

As soon as the foundation for Biblical researches is laid by the help of Biblical Archæology, the theologian then turns to the solution of the second main question in theology:—What is meant by the Scriptures? How and when have they arisen? In what form do they lie before us? The answer to all these questions is the object of BIBLICAL INTRODUCTION, or, more correctly, of the *History of Holy Writ*. It is divided into Introduction to the Old Testament and Introduction to the New Testament. It must render an account—

1. Of the origin of the individual books received into the sacred canon; not omitting to notice at the same time the various views that have been entertained on that point by critics of all ages, as well as those particular opinions which are seemingly the more correct.

2. Of the origin of the collection of the books of Scripture as the repository of Christian knowledge, or of religion; constituting the *History of the Canon.*

3. Of the spread of the Scriptures by transcriptions, translations, and printing.

4. Of the vicissitudes and fate of the original text; forming the *History of the Text;* and—

5. Of the various motives which have led to various modes of understanding the Bible; being the *History of Interpretation.*

We next come to that important part of Theological Encyclopædia connected with the question—What precepts have been regarded as Christian doctrines from the introduction of Christianity to the present day?

The answer to this important question is given by DOCTRINE-HISTORY,* which, in a less limited sense than that in which the term is usually taken, points out the peculiar doctrines which have from time to time been received as articles of Christian belief. But as a variety of opinions with regard to the essentials of the Christian religion has arisen, not only among the various and different sects as separate bodies, but likewise at sundry times among the members of even one and the same sect or party, Doctrine-History must necessarily include all the peculiar features of schismatic views, their origin and history, the causes of their rise and gradual development, as well as their connection with the Scriptures, from which they all claim to be derived, and by which they must be tried.

A principle that is given out by a Christian sect as an essentially Christian doctrine, becomes an article of creed, a *dogma* (δόγμα = ὅ δέδοκται).

A *Dogma* is understood to be the doctrine of a particular party or sect, although that party may agree with the other sects in respect of other doctrines of Christianity, and must necessarily agree with them in regard to the spirit and central point of the Christian religion. Such dogmas, or articles of creed, are the fruit of a certain way of thinking peculiar to the age in which they arise, and obtain clerical importance when received either into the system of *Symbols* or into the public liturgy. All symbols must therefore only be considered as belonging to both a certain party and a certain time, and are thus not to be ranked among the eternal and universal articles of faith. The exhibition of a finished system of doctrines lies beyond the range of *Symbolik;* it sets forth merely the

* *Dogmen-geschichte,* 'history of doctrines.' We have no corresponding term in the English language, and therefore propose that of Doctrine-History.

most essential truths, the fundamental elements, leaving the farther scientific or systematic details to the sphere of *Dogmatik*. Dogmatik is therefore immediately linked to the doctrines established by a certain party of Christians. An universal Christian Dogmatik is not to be hoped for, so long as there are different parties among Christians. We should therefore have to range Symbol, Dogma, and Dogmatik together, under the comprehensive head of Doctrine-History. Such history ought, however, not to be limited to actual dogmas alone, but ought likewise to embrace many of the more loose and unembodied doctrinal views and speculations; partly on account of the influence which they may have had upon the rise and reception of some embodied dogmas, and partly because history shows that some doctrinal views advanced but rejected in earlier times, have, perhaps after the lapse of some centuries, been reproduced, received, and sanctioned. A comparative survey of the various dogmas of the different sects or church parties is the object of *Comparative Dogmatik;* though it has hitherto limited its views chiefly to the dogmas of the principal sects alone.

It is greatly to be desired that the scope of Comparative Dogmatik should be so extended as to embrace the collection of those dogmas which have, from time to time, prevailed within the church of one and the same party—as, *e. g.*, of the Roman Catholics, with special regard to the variety of opinions entertained by this church on some doctrinal points, from her foundation in the second century, in comparison with those held in the fourth, fifth, and sixth centuries. This function of Doctrine-History has been too much confined to the established doctrines within *one* church-party alone; and this limitation is almost unavoidable with those sects which, like the Roman Catholics, look at all other sects as infidels,—a judgment surely as erroneous as it is partial and uncourteous.

Christian Morals is, properly speaking, only the practical part of Dogmatik, and was, indeed, formerly always exhibited only in its connection therewith. Its province is to show the influence which the Christian dogmas exercise upon the dispositions of the heart, or in what degree those dogmas may be brought into action upon the will of man. What, in our recent times, has often been called—especially on the part of some German Protestant theologians—*dogmatics* or *doctrines of faith*, without attaching to them any particular meaning of a sect or church-party, partakes mostly of a middle view between church dogmatik, Biblical theology, and religious philosophy, wavering between all, and belonging to none.

Patristics * and Patrology † seem to lie beyond the circle by which we have defined the limits of theological science. For the notion attached to the term 'Fathers of the Church' is not universally acknowledged by all Christian sects, and least so among Protestants, who consider it a contradiction to the

* Patristics, the literary character and history of the Fathers.
† Patrology, the doctrinal and ethical systems founded on their writings.

principle by which the Scriptures are recognised as the *only* source of the knowledge of religious truth.

The immense mass of manifold and various tenets which have prevailed as Christian doctrines at different times and in different countries, ever since the introduction of Christianity, makes it evidently impossible to ascertain what is real Christian doctrine, and what is not, if we do not take the SCRIPTURES as the only guide in this labyrinth. The science, therefore, which discloses to us the tenets of Holy Writ we call BIBLICAL EXEGESIS, or INTERPRETATION. It involves the difficult task of discovering the true meaning attached to the words by the writer. To be able to do this, a thorough knowledge of the language in which the author has written down his thoughts is indispensable; consequently, a profound knowledge of Hebrew for the Old Testament, and of Greek for the New Testament, is of the utmost necessity, and is one of the first requisites, in an expounder of the Bible. But as the Sacred Writings have greatly suffered from, and have been disfigured by the liberties of transcribers and emendators, it is needful to try to discover or restore the real words of the original text; and the science employed in this task is known by the name of BIBLICAL CRITICISM. By means of criticism and philological research the sense of the Biblical writings may be ascertained, *grammatically* or philologically. To this mode of exegesis or interpretation is given the name of *Grammatical Exposition*. But although it is most essential to correct interpretation of the Scriptures that the text should be grammatically considered, yet it is equally undeniable that philological exegesis is by itself insufficient to develope completely the meaning of the sacred writers in the words which they employ. To be able to do this completely and satisfactorily, it is necessary that the interpreter should possess the means of transporting himself into the times and into the spirit of the ages in which those writers lived; or, in other words, that he should be well acquainted with the historical conditions of those ages, and with the modes of thought which then prevailed; as well as with the circumstances affecting the particular position of the individual writer of every sacred book, and of the people whom he addressed. Biblical Archæology and Biblical Introduction are the proper instruments for the accomplishment of that object, which we call the Historical Interpretation of the Scriptures; the *true* and perfect Biblical Interpretation is thus comprised in the category of GRAMMATICO-HISTORICAL EXEGESIS,—a term implying conditions which are hardly ever found in an equal degree of profundity in one and the same interpreter.

A more easy, partial, and objectionable species of interpretation is that called DOGMATICAL EXEGESIS, which does not limit itself to an independent inquiry into the meaning of the sacred writings, but attempts rather to determine the sense of the text by arbitrary dogmas. Equally objectionable, and still more arbitrary, is the process of the ALLEGORICAL mode of exposition, which tortures the Biblical sense into figurative meanings; and which rarely fails to evince the essential difference that exists between the mode of

thinking in the author and the interpreter, or between the ancient and modern times.

HERMENEUTICS establishes the laws by which the interpreter is to proceed in his labours. Its relation to Interpretation is that of theory to practice. The suggestions which have led to the formation of Biblical Hermeneutics were given chiefly by Dogmatical Exegesis.

The requisites of theology are, however, not confined to the mere endeavour to discover by means of correct exegesis the true meaning of Holy Writ, or of particular passages in the New Testament; but the object of theology as a science is also and chiefly to collect the various religious views and doctrines dispersed in the Scriptures, and to compare and unite them into an entire system; and this science, aided by exegesis, is called BIBLICAL THEOLOGY, which is the true corner-stone of Biblical Exegesis. The inquiries involved in it are rendered difficult and intricate by the fact that the Scriptures were composed by various authors, and at different, and often at very long intervals. Biblical Theology must in the first instance be divided into two parts, that of the Old Testament and that of the New Testament. But at the time of the rise of Christianity and the writing of the New Testament, the Jews had already formed a theology of their own, founded upon what may be called exegetical explanations of the religious views set forth in the Old Testament, and which, although not essentially wrong in its principles, was considerably at variance with historical truth. This system of Jewish theology represents the religious opinions which prevailed in the time of Christ, in consequence of the peculiar views which the Jews entertained of the Old Testament writings and of the revelations contained in them; and it therefore supplies an intermediate link which is often of more direct use to us for understanding the theology of the New Testament, than the theology of the Old Testament viewed in its purer and more simple results. Neither the Biblical theology of the Old Testament, nor the Jewish theology in general, can be of binding force upon Christians, except in so far as either may be borne out by the Biblical theology of the New Testament. The former bear about the same relation to the latter as Biblical archæology does to the exegesis of the New Testament.

If the essence of Christianity be made a foundation for farther philosophical speculations, we arrive then at CHRISTIAN RELIGIOUS-PHILOSOPHY, which embodies into its system some but by no means all the doctrines of Scripture.

There have always been individuals, ever since Christianity has existed, who have particularly employed themselves in diffusing, enlivening, animating, and defending the Christian faith; and in most instances the Church, as an independent community, has made the conservation of the Christian interests the particular obligation of some of her members. Thus has arisen a science for itself, directed towards the care and preservation of Christianity, and usually called PRACTICAL THEOLOGY. The province of this science is of a threefold character:—

1. A guidance to the right method of calling forth Christian conviction either in those who had hitherto been attached to another religion,—PROSELYTISM, MISSIONARY-STUDIES; or in those who, although Christians, are still in want of Christian instruction,—CATECHETICS.

2. The preservation and religious animation of the Church community by means either of public worship itself,—LITURGICS; or of edifying discourses during the same,—HOMILETICS; or of that peculiar agency which has its sphere in domestic and private life,—PASTORAL THEOLOGY.

3. Defence of the Christian Church, by diverting the attacks made either against her rights,—CHURCH RIGHTS; or against her sublime truths,—APOLOGETICS.

Finally, Christianity having already existed for very many centuries as a religious institution, it must be for every man, as a *man*, and more particularly for the thinking Christian, of the highest importance to learn the origin of Christianity, its propagation and vicissitudes until our present times, and the extent and nature of the influence which it has exercised upon its votaries. The science which gives information on all these points is called CHURCH HISTORY, describing all the known facts belonging to the total process of development of Christianity. This science is of such an enormous extent as to compel its division into several departments, which have also been variously treated. Such are the *History of the Spread of Christianity; History of Church Doctrine; History of the Moral Influence of Christianity; History of Religious Confusions and Fanaticisms arising out of Christianity; History of Christian Civil Constitutions; History of the Relations of the Church to the State; Ecclesiastical Antiquities or Archæology; History of some Christian Sects*, such as, *History of the Jewish Christians; History of the Catholics; History of the Protestant Church, of the Presbyterians, Methodists*, etc.; *Church History of some Countries and Nations; History of Christian Literature.* In that part of Church History which describes the vicissitudes of the Church in times long gone by, the question at last suggests itself, What is the present state of Christianity in the world? The science which—far from being as yet sufficiently cultivated—solves this important question, goes by the name of CHURCH STATISTICS, and with it we may regard the sphere of THEOLOGICAL ENCYCLOPÆDIA as completed.

It cannot lie within the province of the present work as a *Cyclopædia of Biblical Literature* to embrace in the form of a dictionary all the subjects thus described as appertaining to Christian theology. Passing by systematic theology (which is the object of dogmatic history), practical theology, and church-history, the work comprises those branches of positive knowledge which are indispensable for the understanding of the Bible, and its historical interpretation, including, therefore, *Biblical Archæology* and *Biblical Introduction*, but leaving the application itself, together with grammatical criticism, to the department of *Biblical Interpretation.* The treatment of these matters in the form here adopted has

certainly the disadvantage of somewhat obscuring the survey and impeding the systematic development of the whole; but this disadvantage is greatly counterbalanced by the benefits arising from the easy and convenient use which in this form can be made of the abundant and various materials belonging to the subjects discussed: a dictionary of such a character has, moreover, this important advantage, that the subjects embraced in its plan can be handled with such fulness of criticism as the present age requires.

Attempts were early made to exhibit information pertaining to the Bible under the alphabetical arrangement of a dictionary. Of the many works of that kind, deserving notice, are: *Hierolexicon reale collectum, moderante.* Ad. Rechenbergio, Lipsiæ et Francf., 1714, 2 vols.; Aug. Calmet, *Dictionnaire Historique, Critique, Chronologique, Géographique, et Littérale de la Bible*, Paris, 1722, 2 vols., and (most complete) 1730, 4 vols. fol.; *Dictionnaire Universelle, Dogmatique, Canonique, Historique, et Chronologique des Sciences Ecclésiastiques, et avec des Sermons abrégés des plus célèbres Orateurs Chrétiens*, par le P. R. Richard et autres Religieux Dominicains, etc., Paris, 1760–64, 5 vols.; W. F. Hezel, *Biblisches Real-Lexicon, über Biblische, und die Bibel erlaüternde alte Geschichte, Erdbeschreibung, Zeitrechnung, etc.*, Leipz., 1783–85, 3 vols., 4to.; F. G. Leun, *Bibl. Encyclopædie, oder exegetisches Real-wörterbuch über die Sämmtlichen Hülfswissenschaften des Auslegers, nach den Bedürfnissen jetziger Zeit. Durch eine Gesellschaft von Gelehrten.* Gotha, 1793–98, 4 vols., 4to.

Although the work of Calmet was the most learned and practically useful of all, the partial standing point of the author rendered it unsuited to the enlarged demands of the present age; which, with the superficiality and want of plan in later works, had brought performances of this kind into some disrepute; and it was reserved for George Benedict Winer, a theologian of Leipsic, to restore them to their former credit by his *Biblisches Real-wörterbuch*, Leip., 1820, 2 vols., 8vo., of which a second and improved edition was published in 1833–38. The sphere of that work is, however, too narrowly drawn, the critical treatment in it is of a very unequal character, and many of the subjects examined in its pages, especially in the department of natural history, have in reality no relation whatever to the Bible. Similar publications by various other writers have been produced on the Continent, but they cannot be regarded as exhibiting any claims to scientific criticism, or well-considered arrangement."

To particularise the works of the kind produced in our own country might appear invidious. It may suffice to say that they have all in their day served purposes of more or less usefulness, for which they are no longer available. All that has been done till now has been in various degrees based upon Calmet's great work; and the present is the only production which can be regarded as even professing to draw its materials from original sources of information. Calmet's

own work was composed in a great degree out of the materials already used by him in the notes, dissertations, and prefaces of his great work, the *Commentaire Littérale*. The first translation of it appeared in 1732, in three large and costly folio volumes, executed by two clergymen, Samuel d'Oyley, M.A., and John Colson, M.A., F.R.S., the former of whom translated to the letter M, and the other to the end of the book. This translation formed the great treasury from which were drawn the materials of the large number of lesser Dictionaries of the Bible which subsequently appeared. These exhibited little more diversity from each other than such as naturally arises where persons of different habits of mind form different abridgments of the same work, the original or new matter being chiefly exhibited by the interspersion of doctrinal articles in support of the particular views which the compiler entertained. At length a new edition of Calmet was undertaken by Mr. Charles Taylor, and appeared in 1795 in four, and in later editions in five, quarto volumes. This was a very eccentric performance, composed thus:—two volumes consisted of *an abridgment* of Calmet; one volume of engravings; and two volumes of 'Fragments.' These fragments contained a sprinkling of useful matter drawn from histories and travels; but three-fourths of the whole consist of singularly wild and fanciful speculations respecting mythology, ethnology, natural history, antiquities, and sundry other matters, and are replete with unsound learning, outrageous etymologies, and the vagaries of an undisciplined intellect. Calmet, thus transformed, and containing as much of the editor as of the original author, has in its turn formed the basis of the Biblical Dictionaries which have since appeared, including a very painstaking digest of the more useful parts of Taylor's matter incorporated with the Dictionary under one alphabet, the whole abridged into one volume royal 8vo., which appeared in 1832. This work was in the same year reproduced in America under the supervision of Dr. Robinson, who made some few but valuable additions to particular articles. For the sake of these additions, reference has in the present work been occasionally made to that edition, but more in the early than in the latter part, where the sources of such additions were rather sought in the German authorities from which they were found to be derived. This is the sole assistance which has been obtained from any edition of Calmet; and it is so trifling that no notice would have been taken of it here, were it not that Calmet's name has been in this country so much used in connection with such undertakings, that many readers would, without this explanation, be disposed to confound the present work with the numerous compilations based upon or made up out of his folios. Of Winer's *Biblisches Real-wörterbuch* more frequent use has, in some classes of subjects, been made; but rather as an index than as a direct source of materials; and not to any extent which can impair the claim of this work to be derived from original sources of information, rather than from other productions of the same description.

The Editor cannot but regard with peculiar satisfaction the ample refer-

ences to books which occur in almost every article, and which indicate to the reader the means of more extensive inquiry into the various subjects which have been noticed with indispensable brevity in this work. The numerous references to Scripture will greatly assist its chief use and design—the illustration of the sacred volume. It is believed that the articles in the departments of Biblical INTRODUCTION and CRITICISM embrace a body of information, respecting the books of Scripture and sacred criticism, such as no work of the kind in any language has hitherto contained. The NATURAL HISTORY of Scripture has now for the first time been examined, and as far as possible settled, not by mere scholars ignorant of natural history, but by naturalists of acknowledged eminence. The SCRIPTURE GEOGRAPHY has, by the help of Dr. Robinson's invaluable *Biblical Researches in Palestine*, and of other publications less known in this country, assumed in the present work a greatly altered and much more distinct aspect. The ARCHÆOLOGICAL articles exhibit an extent of illustration and research which will tend greatly to elucidate the obscurities which the subjects necessarily involve. The HISTORY has been discussed under the influence of those broad principles which constitute its philosophy; and in this, as well as in the BIOGRAPHY, it has not been forgotten that while actions are always to be judged by the immutable standard of right and wrong which the word of God has established, the judgments which we pass upon men must be qualified by considerations of age, country, situation, and other incidental circumstances.

It is hoped that with such claims to attention, and embodying, as it does, the results of great labour and much anxious thought, the work now offered to the public will receive indulgent consideration for the minute errors, defects, and perhaps discrepancies, from which the Editor dares not hope that it is wholly exempt, and which are perhaps inevitable in a work executed by so many different hands, and involving so large a body of references, titles, and proper names.

JOHN KITTO.

Woking, Oct. 15th, 1845.

CYCLOPÆDIA

OF

BIBLICAL LITERATURE.

AARON (אַהֲרֹן, etymology and signification unknown; Sept. Ἀαρών), the eldest son of Amram and Jochebad, of the tribe of Levi, and brother of Moses. He was born B.C. 1574 (Hales, B.C. 1730), three years before Moses, and one year before Pharaoh's edict to destroy the male children of the Israelites (Exod. v. 20; vii. 7). His name first occurs in the mysterious interview which Moses had with the Lord, who appeared to him in the burning bush, while he kept Jethro's flock in Horeb. Among other excuses by which Moses sought to evade the great commission of delivering Israel, one was that he lacked that persuasive readiness of speech (literally was 'not a man of words') which appeared to him essential to such an undertaking. But he was reminded that his brother Aaron possessed in a high degree the endowment which he deemed so needful, and could therefore speak in his name and on his behalf. During the forty years' absence of Moses in the land of Midian, Aaron had married a woman of the tribe of Judah, named Elisheba (or Elizabeth), who had born to him four sons, Nadab, Abihu, Eleazer, and Ithamar; and Eleazer had, before the return of Moses, become the father of Phinehas (Exod. vi. 23-25).

Pursuant to an intimation from God, Aaron went into the wilderness to meet his long-exiled brother, and conduct him back to Egypt. After forty years of separation they met and embraced each other at the mount of Horeb. When they arrived in Goshen, Aaron, who appears to have been well known to the chiefs of Israel, introduced his brother to them, and assisted him in opening and enforcing the great commission which had been confided to him. In the subsequent transactions, from the first interview with Pharaoh till after the delivered nation had passed the Red Sea, Aaron appears to have been almost always present with his more illustrious brother, assisting and supporting him; and no separate act of his own is recorded. This co-operation was ever afterwards maintained. Aaron and Hur were present on the hill from which Moses surveyed the battle which Joshua fought with the Amalekites; and these two long sustained the weary hands upon whose uplifting the fate of the battle was found to depend (Exod. xvii. 10-12). Afterwards, when Moses ascended Mount Sinai to receive the tables of the law, Aaron, with his sons and seventy of the elders, accompanied him part of the way up, and, as a token of the Divine favour, were permitted to behold afar off the outskirts of that radiant symbol of the Sacred Presence, which Moses was allowed to view more nearly (Exod. xxiv. 1, 2, 9-11).

The absence of Moses in the mountain was prolonged for forty days, during which the people seem to have looked upon Aaron as their head, and an occasion arose which first brings the respective characters of the brothers into real comparison, and the result fully vindicates the Divine preference of Moses by showing that, notwithstanding the seniority and greater eloquence of Aaron, he wanted the high qualities which were essential in the leader of the Israelites, and which were possessed by Moses in a very eminent degree. The people grew impatient at the protracted stay of their great leader in the mountain, and at length concluded that he had perished in the devouring fire that gleamed upon its top. The result of this hasty conclusion gives us the first intimation of the extent to which their minds were tainted with the rank idolatries of Egypt. Recognising the authority of their lost chief's brother, they gathered around him, and clamorously demanded that he should provide them with a visible symbolic image of their God, that they might worship him as other gods were worshipped. Either afraid to risk the consequences of a refusal, or imperfectly impressed with the full meaning of the recent and authoritative prohibition of all such attempts to represent or symbolize the Divine Being, Aaron complied with their demand; and with the ornaments of gold which they freely offered, cast the figure of a calf [CALF, GOLDEN], being, probably, no other than that of the Egyptian god Mnevis, whose worship prevailed in Lower Egypt. However, to fix the meaning of this image as a symbol of the true God, Aaron was careful to proclaim a feast to Jehovah for the ensuing day. On that day the people met to celebrate the feast, after the fashion of the Egyptian festivals of the calf-idol, with dancing, with shouting, and with sports.

Meanwhile Moses had been dismissed from the mountain, provided with the decalogue, written 'by the finger of God,' on two tablets of stone. These, as soon as he came sufficiently near to observe the proceedings in the camp, he cast from him with such force that they brake in pieces. His re-appearance confounded the multitude, who quailed under his stern rebuke, and quietly submitted to see their new-made idol destroyed. For

this sin the population was decimated by sword and plague. Aaron, when taxed by his brother for his conduct in this matter, attempted to excuse himself by casting the whole blame upon the people, and pleading the necessity of circumstances (Exod. xxxii.).

During his long absence in the mountain, Moses had received instructions regarding the ecclesiastical establishment, the tabernacle [TABERNACLE], and the priesthood [PRIESTS], which he soon afterwards proceeded to execute. Under the new institution Aaron was to be high-priest, and his sons and descendants priests; and the whole tribe to which he belonged, that of Levi, was set apart as the sacerdotal or learned caste [LEVITES]. Accordingly, after the tabernacle had been completed, and every preparation made for the commencement of actual service, Aaron and his sons were consecrated by Moses, who anointed them with the holy oil and invested them with the sacred garments. The high-priest applied himself assiduously to the duties of his exalted office, and during the period of nearly forty years that it was filled by him, his name seldom comes under our notice. But his elevation was soon followed by a most afflictive event. His two eldest sons, Nadab and Abihu, were struck dead for daring, seemingly when in a state of partial inebriety, to conduct the service of God in an irregular manner, by offering incense with unlawful fire. On this occasion it was enjoined that the priests should manifest none of the ordinary signs of mourning for the loss of those who were so dear to them. To this heavy stroke Aaron bowed in silence (Lev. x. 1-11).

Aaron would seem to have been liable to some fits of jealousy at the superior influence and authority of his brother; for he joined in, or at least sanctioned the invidious conduct of his sister Miriam [MIRIAM], who, after the wife of Moses had been brought to the camp by Jethro, became apprehensive for her own position, and cast reflections upon Moses, much calculated to damage his influence, on account of his marriage with a foreigner—always an odious thing among the Hebrews. For this, Miriam was struck with temporary leprosy, which brought the high-priest to a sense of his sinful conduct, and he sought and obtained forgiveness (Num. xii.).

Some twenty years after (B.C. 1471), when the camp was in the wilderness of Paran, a formidable conspiracy was organized against the sacerdotal authority exercised by Aaron and his sons, and the civil authority exercised by Moses. This conspiracy was headed by chiefs of influence and station—Korah, of the tribe of Levi, and Dathan and Abiram, of the tribe of Reuben [KORAH]. But the divine appointment was attested and confirmed by the signal destruction of the conspirators: and the next day, when the people assembled tumultuously and murmured loudly at the destruction which had overtaken their leaders and friends, a fierce pestilence broke out among them, and they fell by thousands on the spot. When this was seen, Aaron, at the command of Moses, filled a censer with fire from the altar, and, rushing forward to the point where life had ended and death had not begun, he stood there, and the plague was stayed where he stood. This was in fact another attestation of the Divine appointment; and, for its further confirmation, as regarded Aaron and his family, the chiefs of the several tribes were required to deposit their staves, and with them was placed that of Aaron for the tribe of Levi. They were all laid up together over night in the tabernacle, and in the morning it was found that, while the other rods remained as they were, that of Aaron had budded, blossomed, and yielded the fruit of almonds. The rod was preserved in the tabernacle, as an authentic evidence of the divine appointment of the Aaronic family to the priesthood—which, indeed, does not appear to have been ever afterwards disputed (Num. xvii. 1).

Aaron was not allowed to enter the Promised Land, on account of the distrust which he, as well as his brother, manifested when the rock was stricken at Meribah (Num. xx. 8-13). His death indeed occurred very soon after that event. For when the host arrived at Mount Hor, in going down the Wady Arabah [ARABAH], in order to *double* the mountainous territory of Edom, the Divine mandate came that Aaron, accompanied by his brother Moses and by his son Eleazer, should ascend to the top of that mountain in the view of all the people; and that he should there transfer his pontifical robes to Eleazer, and then die. He was 123 years old when his career thus strikingly terminated; and his son and his brother buried him in a cavern of the mountain [HOR, MOUNT]. The Israelites mourned for him thirty days; and on the first day of the month Ab, the Jews still hold a fast in commemoration of his death.

AARONITES, the descendants of Aaron, who served as priests at the sanctuary (Num. iv. 5, *seq.*; 1 Chron. xii. 27; xxvii. 17).

AB (אָב, *father*) is found as the first member of several compound Hebrew proper names, the etymology and meaning of which may be explained by a few remarks on the laws of their construction. This is the more necessary, as Leusden, Hiller, and Simonis, the authors of the three most celebrated *Onomastica Sacra*, as well as the many who blindly follow them, indifferently take the former or latter member of such compounds to be in the relation of genitive to the other, *i. e.* consider it equally legitimate to say, *Abner* means *father of light*, or *light of the father*. Nevertheless, it may be laid down as an incontestable canon—being founded not merely on an accessory law, but on one of the *characteristic* peculiarities of the Syro-Arabian languages (that is, on the *state construct*)—that, in all cases in which a compound name consists of two nouns, *one of which is to be considered in the relation of genitive to the other*, that one must invariably be *the latter*. Abner, therefore, can only mean *father of light*.

This error appears to have arisen (besides the want of sure principles of construction) from the inability to appreciate the metaphorical sense in which the Hebrews use the terms *father*, *son*, &c. The name *Abigail*, *father of joy*, appeared inexplicable as the name of a *woman*; and therefore those scholars thought it allowable to sacrifice the construction to the necessities of the sense. And yet it is not difficult to conceive the process by which the idea of a natural father became modified into that of *author*, *cause*, *source* (as when it is said, 'has the rain a father?' Job

xxviii. 28); nor that, when once the language had sanctioned the use of father as equivalent to source, the word might be sometimes treated as an abstract, in idea, and be applied without gross incongruity to a woman.

As the Ethiopic, and especially the Arabic languages very frequently use *father* in the sense of *possessor* (as *father of white*, a name for milk), some have been disposed to vindicate the same privilege to Hebrew also. Thus Gesenius seems to have entertained this view, when he rendered *Abigail* by 'pater exultationis, *i. e.* hilaris,' in his *Thesaurus*. In the German edition of his *Manual*, however, he has explained it by '*whose father is joy*.' Into the question as to the principle involved in the latter of his modes of interpretation, there is no need to enter; the immediate object of this article being solely to define the relation of the two *nouns* in a compound proper name, when one of them is considered dependent as a genitive on the other.

Very much light yet remains to be thrown on compound Hebrew proper names, by a study of those of the same class in Arabic. The innumerable compound *prænomina* and *cognomina* which the Arabs bestow not only on men, but on beasts and inanimate objects, furnish parallels to almost every peculiarity observable in Hebrew; and although no example may be found in which a woman is called *father* of joy, yet the principle of the metaphorical use of terms of relationship, as the first element in a name, will receive ample illustration, and be brought within the reach of our occidental conceptions. (See an instructive paper on the *Prænomina* of the Arabs, by Kosegarten, in Ewald's *Zeitschrift für die Kunde des Morgenlandes*, i. 297-317.)—J. N.

AB (אָב; 'Αββά, Joseph. *Antiq.* iv. 4; the Macedonian Λῷος) is the Chaldee name of that month which is the fifth of the ecclesiastical and eleventh of the civil year of the Jews. The name was first introduced after the Babylonian captivity, and does not occur in the Old Testament, in which this month is only mentioned by its numeral designation as *the fifth*. It commenced with the new moon of our *August* (the reasons for this statement will be given in the article MONTHS), and always had 30 days. This month is pre-eminent in the Jewish calendar as the period of the most signal national calamities. The 1st is memorable for the death of Aaron (Num. xxxiii. 38). The 9th is the date assigned by Moses Cotzensis (cited in Wagenseil's *Sota*, p. 736) to the following events: the declaration that no one then adult, except Joshua and Caleb, should enter into the Promised Land (Num. xiv. 30); the destruction of the first Temple by Nebuchadnezzar (to these first two 'the fast of the fifth month,' in Zech. vii. 5; viii. 19, is supposed to refer; yet the tract *Pesachim*, cited in Reland's *Antiq. Sacr.*, iv. 10, asserts that the *latter* was the only fast observed during the Captivity); the destruction of the second Temple by Titus; the devastation of the city Bettar (ביתר); and the slaughter of Ben Cozibah (Bar Cocâb), and of several thousand Jews there; and the ploughing up of the foundations of the Temple by Turnus Rufus—the two last of which happened in the time of Hadrian.

With regard to the destruction of the first Temple, although there is no doubt that the Jews commemorate that event by a fast on the 9th of Ab, yet the *seventh* is the date given for it in 2 Kings xxv. 8 (where, however, the Syriac and Arabic versions read the *ninth*), and the *tenth* that assigned in Jer. lii. 12. Josephus, however, in mentioning that the Herodian Temple was burnt on the *tenth* of Lous, expressly asserts that it was on the *same* day of the month on which the first Temple was destroyed (*Bell. Jud.* vi. 4, 5). Buxtorf, in his *Synag. Jud.* ch. xxx., reconciles the discrepancy between the 9th as the day of commemoration and the 10th as the date of the event, by saying that the conflagration *began* on the former day. Compare also Wagenseil's *Sota*, p. 942.

In a calendar ascribed to the celebrated astronomer Rab Ada, who lived in the third century, which Bodenschatz has given in his *Kirchliche Verfassung der Juden*, ii. 106, the 15th is the day appointed for the festival of the ξυλοφορία, in which the wood for the burnt-offering was stored up in the court of the Temple, to which Nehemiah alludes in x. 34, and xiii. 31. Some place this festival on another day, or even month; or assume, on the authority of the treatise *Taanith*, that nine particular families brought wood on nine separate days, four of which, however, occur in Ab (Otho, *Lexicon Rabbin.* p. 380). The election of particular families accords with the statement in Nehemiah. Nevertheless, Josephus, speaking of this festival, says, ἐν ᾗ πᾶσιν ἔθος ὕλην προσφέρειν (*Bell. Jud.* ii. 17); and the date of the day succeeding it, which he mentions in the next section, fixes its celebration, in his time, on the 14th of the month. It is, however, extremely difficult to distinguish the original from the later forms in any rite of a people so prone to multiply its ceremonial observances as the Jews were.

Lastly, the *Megillat Taanith* states that the 18th is a fast in memory of the western lamp going out in the Temple in the time of Ahaz. It may be conjectured that this refers to the extinction of 'the lamps' which is mentioned in 2 Chron. xxix. 7, as a part of Ahaz's attempts to suppress the Temple service. For an inquiry into what is meant by the *western* or *evening* lamp, see the article CANDLESTICK.—J. N.

ABADDON, or APOLLYON (אֲבַדּוֹן, *destruction*; 'Αβαδδὼν in Rev. ix. 11, where it is rendered by the Greek 'Απολλύων, *destroyer*). The former is the Hebrew name, and the latter the Greek, for the angel of death, described (Rev. ix. 11) as the king and chief of the Apocalyptic locusts under the fifth trumpet, and as the angel of the abyss or 'bottomless pit.' This personification is peculiar to the present text. In the Bible, and in every Rabbinical instance that occurs to us, the word אבדון (*abaddon*) means destruction (Job xxxi. 12), or the place of destruction, *i. e.* the subterranean world, Hades, the region of the dead (Job xxvi. 6; xxviii. 22; Prov. xv. 11). It is in fact the second of the seven names which the Rabbins apply to that region; and they deduce it particularly from Ps. lxxxviii. 11, 'Shall thy loving kindness be declared in the grave, or thy faithfulness in (*abaddon*) destruction?' [HADES.]

ABANA, or AMANA (אֲבָנָה or אֲמָנָה; the former being the *kethib* or Hebrew text, and the latter the *keri* or marginal reading; Sept. Ἀβανά,), the name of one of the rivers which are mentioned by Naaman (2 Kings v. 12), 'Abana and Pharpar,' as 'rivers of Damascus.' Amana signifies 'perennial,' and is probably the true name, the permutation of *b* and *m* being very common in the Oriental dialects. It is easy to find 'rivers of Damascus;' but there is a difficulty in appropriating the distinctive names which are here applied to them. The main stream by which Damascus is now irrigated is called *Barrada*. This river, the Chrysorrhoas, or 'golden stream,' of the ancient geographers, as soon as it issues from a cleft of the Anti-Lebanon mountains, is immediately divided into three smaller courses. The central or principal stream runs straight towards the city, and there supplies the different public cisterns, baths, and fountains; the other branches diverge to the right and left along the rising ground on either hand, and having furnished the means of extensive irrigation, fall again into the main channel, after diffusing their fertilizing influences, without which the whole would be an arid desert, like the vast surrounding plains. In those plains the soil is in some parts even finer than here, but barren from the want of water. The main stream and its subsidiaries unite in greatly weakened force beyond the town on the south-east; and the collected waters, after flowing for two or three hours through the eastern hills, are at length lost in a marsh or lake, which is known as the *Bahr el Merdj*, or Lake of the Meadow. Dr. Richardson (*Travels*, ii. 499) states that the 'water of the Barrada, like the water of the Jordan, is of a white sulphureous hue, and an unpleasant taste.' At the present day it seems scarcely possible to appropriate with certainty the Scriptural names to these streams. There is indeed a resemblance of name which would suggest the Barrada to be the Pharpar, and then the question would be, which of the other streams is the Abana. But some contend that the Barrada is the Abana, and are only at a loss for the Pharpar. Others find both in the two subsidiary streams, and neglect the Barrada. The most recent conjecture seeks the Abana in the small river *Fidgi* or *Fijih*, which Dr. Richardson describes as rising near a village of the same name in a pleasant valley fifteen or twenty miles to the north-west of Damascus. It issues from the limestone rock, in a deep, rapid stream, about thirty feet wide. It is pure and cold as iced water; and, after coursing down a stony and rugged channel for above a hundred yards, falls into the Barrada, which comes from another valley, and at the point of junction is only half as wide as the Fijih. Dr. Mansford (*Script. Gaz.* in ABANA), who adopts the notion that the Abana was one of the subsidiary streams, well remarks that 'Naaman may be excused his national prejudice in favour of his own rivers, which, by their constant and beautiful supply, render the vicinity of Damascus, although on the edge of a desert, one of the most beautiful spots in the world; while the streams of Judæa, with the exception of the Jordan, are nearly dry the greater part of the year, and, running in deep and rocky channels, convey but partial fertility to the lands through which they flow.'

ABARIM (עֲבָרִים; Sept. Ἀβαρίμ), a mountain (הר־העברים), or rather chain of mountains (הרי־העברים) which form or belong to the mountainous district east of the Dead Sea and the lower Jordan. It presents many distinct masses and elevations, commanding extensive views of the country west of the river (Irby and Mangles, p. 459). From one of the highest of these, called Mount Nebo, Moses surveyed the Promised Land before he died. From the manner in which the names Abarim, Nebo, and Pisgah are connected (Deut. xxxii. 49, 'Get thee up into this mountain Abarim, unto Mount Nebo;' and xxxiv. 1, 'Unto the mountain of Nebo, to the top of Pisgah'), it would seem that Nebo was a mountain of the Abarim chain, and that Pisgah was the highest and most commanding peak of that mountain. The loftiest mountain of the neighbourhood is Mount Attarous, about ten miles north of the Arnon; and travellers have been disposed to identify it with Mount Nebo. It is represented as barren, its summit being marked by a wild pistachio-tree overshadowing a heap of stones. The precise appropriation of the three names, however, remains to be determined, as this locality has not yet (1843) had the advantage of such searching exploration as Professor Robinson has applied to Western Palestine.

[Cucurbita citrullus.]

ABATTACHIM (אֲבַטִּחִים; Sept. σίκυος). This word occurs only in Numbers xi. 5, where the murmuring Israelites say, 'We remember the fish which we did eat freely in Egypt, the cucumbers and the *abattachim*,' &c. The last word has always been rendered 'MELONS.' The probable correctness of this translation may be inferred from melons having been known to the nations of antiquity; and it may be proved to be so, by comparing the original term with the name of the melon in a cognate language such as the Arabic.

The cucurbitaceæ, or gourd tribe, are remarkable for their power of adapting themselves to the different situations where they can be grown. Thus Mr. Elphinstone describes some of them as yielding large and juicy fruit in the midst of the Indian desert, where water is 300 feet from the surface. Extreme of moisture, however, is far from injurious to them, as the great majority are successfully cultivated in the rainy season in India. Mr. Moorcroft describes an ex-

tensive cultivation of melons and cucumbers on the beds of weeds which float on the lakes of Cashmere. They are similarly cultivated in Persia and in China. In India, 'some of the species may be seen in the most arid places, others in the densest jungles. Planted at the foot of a tree, they emulate the vine in ascending its branches; and near a hut, they soon cover its thatch with a coating of green. They form a principal portion of the culture of Indian gardens: the farmer even rears them in the neighbourhood of his wells' (Royle, *Himalayan Botany*, p. 218).

These plants, though known to the Greeks, are not natives of Europe, but of Eastern countries, whence they must have been introduced into Greece. They probably may be traced to Syria or Egypt, whence other cultivated plants, as well as civilization, have travelled westwards. In Egypt they formed a portion of the food of the people at the very early period when the Israelites were led by Moses from its rich cultivation into the midst of the desert. The melon, the water-melon, and several others of the Cucurbitaceæ, are mentioned by Wilkinson (*Thebes*, p. 212; *Ancient Egyptians*, iv. 62), as still cultivated there, and are described as being sown in the middle of December, and cut, the melons in ninety and the cucumbers in sixty days.

If we consider that the occurrences so graphically detailed in the Bible took place in the East, we should expect, among the natural products noticed, that those which appear from the earliest times to have been esteemed in these countries would be those mentioned. But as all are apt to undervalue the good which they possess, and think of it only when beyond their reach, so the Israelites in the desert longed for the delicious coolness of the melons of Egypt. Among these we may suppose both the melon and water-melon to have been included, and therefore both will be treated of in this article.

By the term *Abattachim* there is little doubt that melons are intended, as, when we remove the plural form *im*, we have a word very similar to the Arabic بطيخ *Butikh*, which is the name of the melon in that language. This appears, however, to be a generic term, inasmuch as they employ it simply to indicate the common or musk melon, while the water-melon is called *Butikh-hindee*, or Indian melon. The former is called in Persian *khurpoozeh*, and in Hindee *khurbooja*. It is probably a native of the Persian region, whence it has been carried south into India, and north into Europe, the Indian being a slight corruption of the Persian name. As the Arabian authors append *fufash* as the Greek name of *butikh*, which is considered to be the melon, it is evident that *fufash* must, in their estimation, be the same. From there being no *p* in Arabic, and as the diacritical point *noon* might, by transcribers, have easily been mistaken for that of *shen*, it is more than probable that this is intended for *πέπων*, especially if we compare the description in Avicenna with that in Dioscorides. By Galen it was called *Melopepo*, from *melo* and *pepo*, the former from being roundish in form like the apple. The melon is supposed to have been the *σίκυος* of Theophrastus, and the *σίκυος πέπων* of Hippocrates. It was known to the Romans, and cultivated by Columella, with the assistance of some precaution at cold times of the year. It is said to have been introduced into this country about the year 1520, and was called musk-melon to distinguish it from the pumpkin, which was usually called melon.

The melon, being thus a native of warm climates, is necessarily tender in those of Europe, but, being an annual, it is successfully cultivated by gardeners with the aid of glass and artificial heat of about 75° to 80°. The fruit of the melon may be seen in great variety, whether with respect to the colour of its rind or of its flesh, its taste or its odour, and also its external form and size. The flesh is soft and succulent, of a white, yellowish, or reddish hue, of a sweet and pleasant taste, of an agreeable, sometimes musk-like odour, and forms one of the most delicious of fruits, which, when taken in moderation, is wholesome, but, like all other fruits of a similar kind, is liable to cause indigestion and diarrhœa when eaten in excess, especially by those unaccustomed to its use.

All travellers in Eastern countries have borne testimony to the refreshment and delight they have experienced from the fruit of the melon. But we shall content ourselves with referring to Alpinus, who, having paid particular attention to such subjects, says of the Egyptians, 'Fructibus, &c. se replent, ut ex iis solis sæpe cœnam, vel prandium perficiant, cujusmodi sunt precocia, cucurbitæ, pepones, melopepones; quorum quidem nomen genericum est Batech' (*Rerum Ægypt. Hist.* l. 17). He also describes in the same chapter the kind of melon called Abdellavi, which, according to De Sacy, receives its name from having been introduced by Abdullah, a governor of Egypt under the Khalif Al Mamoon. It may be a distinct species, as the fruit is oblong, tapering at both ends, but thick in the middle; a figure (tab. xli.) is given in his work *De Plantis Ægypti;* but Forskal applies this name also to the Chate, which is separately described by Alpinus, and a figure given by him at tab. xl.

The *Cucumis Chate* is a villous plant with trailing stems, leaves roundish, bluntly angled, and toothed; the fruit pilose, elliptic, and tapering to both ends. 'Horum usum corporibus in cibo ipsis tum crudis, tum coctis vescentibus, salubrem esse apud omnes eorum locorum incolas creditur' (Alpin. *l. c.* p. 54). Hasselquist calls this the 'Egyptian melon' and 'queen of cucumbers,' and says that it grows only in the fertile soil round Cairo; that the fruit is a little watery, and the flesh almost of the same substance as that of the melon, sweet and cool. 'This the grandees and Europeans in Egypt eat as the most pleasant fruit they find, and that from which they have the least to apprehend. It is the most excellent fruit of this tribe of any yet known' (Hasselquist, *Travels*, p. 258). Forskal, uniting the Abdellavi and Chate into one species, says it is the commonest of all fruits in Egypt, and is cultivated in all their fields, and that many prepare from it a very grateful drink (*Flora Ægyptiaco-Arabica*, p. 168).

With the melon it is necessary to notice the Water-Melon, which is generally supposed to be specially indicated by the term Battich. But

this it would be difficult to determine in the affirmative in a family like the cucurbitaceæ, where there are so many plants like each other, both in their herbage and fruit. In the first place, the term Battich is rather generic than specific, and, therefore, if *Abattachim* were similarly employed, it might include the water-melon, but not to the exclusion of the others. In the second place, it is doubtful whether the water-melon was introduced into Egypt at a very early period, as we find no distinct mention of it in Greek writers. It is now common in all parts of Asia. It seems to have been first distinctly mentioned by Serapion under the name of Dullaha, which in the Latin translation is interpreted, 'id est melo magnus viridis;' and Sethio is quoted as the earliest author who applies the term Ἀγγούριον to the water-melon, as has subsequently been frequently the case, though it is often distinguished as Anguria indica. Serapion, however, quotes Rhases, Meseha, and Ishmahelita. In the Persian books referred to in a Note, the author finds *Battich hindee* given as the Arabic of *turbooz*, which is the name assigned in India to the water-melon. So Alpinus, speaking of the anguria in Egypt, says, 'vulgo *Batech el Maovi* (water), et in Scriptoribus Medicis *Batech-Indi* vel *Anguria indica* dicitur.' One of the Persian names is stated to be *hinduaneh*. It may be indigenous to India, but it is difficult, in the case of this as of other long-cultivated plants, to ascertain its native country with certainty. For, even when we find such a plant apparently wild, we are not sure that the seed has not escaped from cultivation; and at present we know that the water-melon is cultivated in all parts of Asia, in the north of Africa, and in the south of Europe.

The water-melon is clearly distinguished by Alpinus as cultivated in Egypt, and called by the above names, 'quæ intus semina tantum, et aquam dulcissimam continent.' It is mentioned by Forskal, and its properties described by Hasselquist. Though resembling the other kinds very considerably in its properties, it is very different from them in its deeply-cut leaves, from which it is compared to a very different plant of this tribe—that is, the colocynth. 'Citrullus folio colocynthidis secto semine nigro.' A few others have cut leaves, but the water-melon is so distinguished among the edible species. The plant is hairy, with trailing cirrhiferous stems. The pulp abounds so much in watery juice, that it will run out by a hole made through the rind; and it is from this peculiarity that it has obtained the names of water-melon, melon d'eau, wasser-melon. Hasselquist says that it is cultivated on the banks of the Nile, in the rich clayey earth which subsides during the inundation, and serves 'the Egyptians for meat, drink, and physic. It is eaten in abundance, during the season, even by the richer sort of people; but the common people, on whom Providence hath bestowed nothing but poverty and patience, scarcely eat anything but these, and account this the best time of the year, as they are obliged to put up with worse at other seasons of the year' (*Travels*, p. 256).—J. F. R.

*** In concluding the first article in this work on the botany of the Bible, the author thinks it desirable to state the mode in which he has studied the subject, and the grounds upon which he has formed his opinions, whether they agree with or differ from those of previous writers. He has already related, in his 'Essay on the Antiquity of Hindoo Medicine,' that his attention was first directed to the identification of the natural products mentioned in ancient authors, in consequence of being requested by the Medical Board of Bengal to investigate the medicinal plants and drugs of India, for the purpose of ascertaining how far the public service might be supplied with medicines grown in India, instead of importing them nearly all from foreign countries. In effecting this important object, his first endeavour was to make himself acquainted with the different drugs which the natives of India are themselves in the habit of employing as medicines. For this purpose he had to examine the things themselves, as well as to ascertain the names by which they were known. He therefore directed specimens of every article in the bazars to be brought to him, whether found wild in the country or the produce of culture—whether the result of home manufacture or of foreign commerce—whether of the animal, vegetable, or mineral kingdom—whether useful as food or as medicine, or employed in any of the numerous arts which minister to the wants or comforts of man. In order to acquire a knowledge of their names, he caused the native works on Materia Medica to be collated by competent hakeems and moonshees, and the several articles arranged under the three heads of the animal, vegetable, and mineral kingdoms. The works collated were chiefly the 'Mukhzun-al-Udwieh,' 'Tohfat-al-Moomeneen,' 'Ihtiarut Buddie,' and 'Taleef Shereef,' all of them in Persian, but consisting principally of translations from Arabic authors. These were themselves indebted for much of their information respecting drugs to Dioscorides; but to his descriptions the Persians have fortunately appended the Asiatic synonymes, and references to some Indian products not mentioned in the works of the Arabs. The author himself made a catalogue of the whole, in which, after the most usually received, that is, the Arabic name, the several synonymes in Persian, Hindee, &c., as well as in metamorphosed Greek, were inserted. He traced the articles as much as possible to the plants, animals, and countries whence they were derived; and attached to them their natural history names, whenever he was successful in ascertaining them.

Being without any suitable library for such investigations, and being only able to obtain a small copy of Dioscorides, he was in most cases obliged to depend upon himself for the identification of the several substances. The results of several of these investigations are briefly recorded in his observations on the history and uses of the different natural families of plants, in his 'Illustrations of the Botany of the Himalayan Mountains.' The author also made use of these materials in his 'Essay on the Antiquity of Hindoo Medicine,' in tracing different Indian products from the works of the Arabs into those of the Greeks, even up to the time of Hippocrates. He inferred that tropical products could only travel from south to north, and that the Hindoos must have ascertained their properties, and used them as medicines, before they became suffi-

ciently famous to be observed and recorded by the Greeks. Having thus traced many of these Eastern products to the works of almost contemporary authors, he was led to conclude that many of them must be the same as those mentioned in the Bible, especially as there is often considerable resemblance between their Arabic and Hebrew names (*Essay*, p. 138).

Although, like Hasselquist, Alpinus, Forskal, and others, the author studied these subjects in Eastern countries, yet he differs from them all in the circumstances under which he pursued his inquiries. His investigations were carried on while he was resident in the remotest of the Eastern nations known in early times, who were probably among the first civilized, and who are still not only acquainted with the various drugs and their names, but possess an ancient literature, in which many of these very substances are named and arranged. Having obtained the drugs, heard their names applied by the natives, read their descriptions, and traced them to their plants, he formed many of his opinions from independent sources. It may therefore be considered a strong confirmation of the correctness of his results when they agree with those of previous inquirers; when they differ, it must be ascribed to the peculiar process by which they have been obtained.—J. F. R.

[Cucumis melo.]

ABBA (Ἀββᾶ, אַבָּא) is the Hebrew word אב, *father*, under a form peculiar to the Chaldee idiom. The Aramaic dialects do not possess the definite article in the form in which it is found in Hebrew. They compensate for it by adding a syllable to the end of the simple noun, and thereby produce a distinct form, called by grammarians the *emphatic*, or *definitive*, which is equivalent (but with much less strictness in its use, especially in Syriac) to a noun with the article in Hebrew. This emphatic form is also commonly used to express the vocative case of our language—the context alone determining when it is to be taken in that sense (just as the noun with the article is sometimes similarly used in Hebrew). Hence this form is appropriately employed in all the passages in which it occurs in the New Testament (Mark xiv. 36; Rom. viii. 15; Gal. iv. 6): in all of which it is an invocation. Why *Abba* is, in all these passages, immediately rendered by ὁ πατήρ, instead of πάτερ, may perhaps be in part accounted for on the supposition that, although the Hellenic (as well as the classical) Greek allows the use of the nominative with the article for the vocative (Winer, *Gram. des Neutest. Sprach.* § 29), the writers of the New Testament preferred the former, because the article more adequately represented the force of the emphatic form.

It is also to be observed that, in the usage of the Targums, אבא, even when it is the subject of an ordinary proposition, may mean *my father;* and that the absolute form of the word is not used with the suffix of the *first* person singular. Lightfoot has endeavoured (*Horæ Hebr. ad Marc.* xiv. 36) to show that there is an important difference between the Hebrew אב and the Chaldee אבא: that whereas the former is used for all senses of *father*, both strict and metaphorical, the latter is confined to the sense of a *natural* or *adoptive* father. This statement, which is perhaps not entirely free from a doctrinal bias, is not strictly correct. At least the Targums have rendered the Hebrew *father* by אבא, in Gen. xlv. 8, and Job xxxviii. 28, where the use of the term is clearly metaphorical; and, in later times, the Talmudical writers (according to Buxtorf, *Lex. Talm.*) certainly employ אבא to express *rabbi, master*—a usage to which he thinks reference is made in Matt. xxiii. 9.—J. N.

ABBREVIATIONS. As there are satisfactory grounds for believing that the word *Selah*, in the Psalms, is not an anagram, the earliest positive evidence of the use of abbreviations by the Jews occurs in some of the inscriptions on the coins of Simon the Maccabee. Some of these, namely, have יש for ישראל, and חר for חרות; and some of those of the first and second years have א and שב; the former of which is considered to be a numeral letter, and the latter an abbreviation for שנת ב, *anno II.* (Bayer, *De Numis Hebræo-Samaritanis*, p. 171). It is to be observed, however, that both these latter abbreviations alternate on other equally genuine coins, with the full legends שנת אחת and שנת שתים; and that the coins of the third and fourth years invariably express both the year and the numeral in *words* at length.

The earliest incontestable evidence of the use of abbreviations in the copies of the Old Testament is found in some few extant MSS., in which common words, not liable to be mistaken, are curtailed of one or more letters at the end. Thus ישר׳ is written for ישראל; and the phrase כי לעולם חסדו, so frequently recurring in Ps. cxxxvi., is in some MSS. written כ׳ ל׳ ח׳. Yet even this licence, which is rarely used, is always denoted by the sign of abbreviation, an oblique stroke on the last letter, and is generally confined to the end of a line; and as all the MSS. extant (with hardly *two* exceptions) are later than the tenth century, when the Rabbinical mode of abbreviation had been so long established and was carried to such an extent, the infrequency and limitation of the licence, under such circumstances, might be considered to favour the belief that it was not more freely employed in earlier times.

Nevertheless, some learned men have endeavoured to prove that abbreviations must have

been used in the MSS. of the sacred text which were written before the Alexandrian version was made; and they find the grounds of this opinion in the existence of several Masoretic various lections in the Hebrew text itself, as well as in the several discrepancies between it and the ancient versions, which may be plausibly accounted for on that assumption. This theory supposes that both the copyists who resolved the abbreviations (which it is assumed existed in the ancient Hebrew MSS. prior to the LXX.) into the entire full text which we now possess, and the early translators who used such abbreviated copies, were severally liable to error in their solutions. To illustrate the application of this theory to the Masoretic readings, Eichhorn (*Einleit. ins A. T.* i. 323) cites, among other passages, Jos. viii. 16, in which the Kethib is עיר, and the Keri עי; and 2 Sam. xxiii. 20, in which חי is the Kethib, and חיל the Keri. With regard to the versions, *Drusius* suggests that the reason why the LXX. rendered the words (Jon. i. 9) אנכי עברי, by δοῦλος κυρίου εἰμί, was because they mistook the *Resh* for *Daleth*, and believed the *Jod* to be an abbreviation of Jehovah, as if it had been originally written עבדי' (*Quæst. Ebraic.* iii. 6). An example of the converse is cited from Jer. vi. 11, where our text has חמת יהוה, which the LXX. has rendered θυμόν μου, as if the original form had been חמתי', and they had considered the *Jod* to be a suffix, whereas the later Hebrew copyists took it for an abbreviation of the sacred name. Kennicott's three *Dissertations* contain many similar conjectures; and Stark's *Davidis aliorumque Carminum Libri V.* has a collection of examples out of the ancient versions, in which he thinks he traces false solutions of abbreviations.

In like manner some have endeavoured to account for the discrepancies in statements of *numbers* in parallel passages and in the ancient versions, by assuming that numbers were not expressed in the early MSS. by entire words (as they invariably are in our present text), but by some kind of abbreviation. Ludolf, in his *Commentar. ad Hist. Æthiop.* p. 85, has suggested that numeral *letters* may have been mistaken for the initial letter, and, consequently, for the abbreviation of a numeral *word*, giving as a pertinent example the case of the Roman V being mistaken for *Viginti*. He also thinks the converse to have been possible. Most later scholars, however, are divided between the alternative of *letters* or of *arithmetical cyphers* analogous to our figures. The last was the idea Cappellus entertained (*Critica Sacra*, i. 10), although De Vignoles appears to have first worked out the theory in detail in his *Chronologie de l'Histoire Sainte:* whereas Scaliger (cited in Walton's *Prolegomena*, vii. 14) and almost all modern critics are in favour of letters. Kennicott has treated the subject at some length; but the best work on it is that of J. M. Faber, entitled *Literas olim pro vocibus in numerando à scriptoribus V. T. esse adhibitas*, Onoldi, 1775, 4to.

It is undeniable that it is much easier to explain the discordant statements which are found, for instance, in the parallel numbers of the 2nd chapter of Ezra and the 7th of Nehemiah, by having recourse to either of these suppositions, than it is to conceive how such very dissimilar signs and sounds, as the entire names of the Hebrew numerals are, could be so repeatedly confounded as they appear to have been. This adequacy of the theory to account for the phenomena constitutes the internal argument for its admission. Gesenius has also, in his *Geschichte der Hebräischen Sprache*, p. 173, adduced the following external grounds for its adoption: the fact that *both* letters and numeral notes are found in other languages of the Syro-Arabian family, so that neither is altogether alien to their genius; letters, namely, in Syriac, Arabic, and later Hebrew; numeral figures on the Phœnician coins and Palmyrene inscriptions (those employed by the Arabs and transmitted through them to us are, it is well known, of Indian origin). And although particular instances are more easily explained on the one supposition than on the other, yet he considers that analogy, as well as the majority of examples, favours the belief that the numerals were expressed, in the ancient copies, by *letters;* that they were then liable to frequent confusion; and that they were finally written out at length in words, as in our present text.

There is an easy transition from these abbreviations to those of the later Hebrew, or Rabbinical writers, which are nothing more than a very extended use and development of the same principles of stenography. Rabbinical abbreviations, as defined by Danz, in his valuable *Rabbinismus Enucleatus*, § 65, are either *perfect*, when the initial letters only of several words are written together, and a double mark is placed between such a group of letters, as in אמ״ת, the common abbreviation of the Hebrew names of the books of Job, Proverbs, and Psalms (the *last* letters only of words are also written in *Cabbalistical* abbreviations); or *imperfect*, where more than one letter of a single word is written, and a single mark is placed at the end to denote the mutilation, as ישר׳ for ישראל. The perfect abbreviations are called by the Rabbinical writers ראשי תיבות, i. e. *capitals of words.* When proper names, as frequently happens, are abbreviated in this manner, it is usual to form the mass of consonants into proper syllables by means of the vowel *Patach*, and to consider *Jod* and *Vau* as representatives of *I* and *U*. Thus רמ״בם, *Rambam*, the abbreviation of 'Rabbi Mosheh ben Maimon,' and רש״י, *Rashi*, that of 'Rabbi Shelomoh Jarchi,' are apposite illustrations of this method of contraction. Some acquaintance with the Rabbinical abbreviations is necessary to understand the Masoretic notes in the margin of the ordinary editions of the Hebrew text; and a considerable familiarity with them is essential to those who wish, with ease and profit, to consult the Talmud and Jewish commentators. The elder Buxtorf wrote a valuable treatise on these abbreviations, under the title *De Abbreviaturis Hebraicis*, which has often been reprinted; but, from the inexhaustible nature of the subject, O. G. Tychsen added two valuable supplements, in 1768, and Selig incorporated them with his own researches in his *Compendia vocum Hebraico-Rabbinicarum*, Lips. 1780, which is the completest work of the kind extant.

With regard to the abbreviations in the MSS.

of the New Testament, it may be observed that they have furnished little matter for critical inquiry. Those that exist are almost exclusively confined to common and easily supplied words, e. g. *God*, *Lord*, *father*, *son*, &c.; or to the terminations of formation and inflexion, in which case they fall more properly under the province of general Greek Palæography. They very rarely furnish any hint of the mode in which a various reading has arisen, as has been suggested, for instance, in the case of καιρῷ and κυρίῳ in Romans xii. 11. The use of *letters* for numerals, however, according to Eichhorn's *Einleit. ins N. T.*, iv. 199, is not only found in some MSS. now extant, but, in the instance of the number 666, in Rev. xiii. 18, can be traced up to the time of the apostles; partly on the testimony of Irenæus, and partly because those MSS. which wrote the number out in words differ in the gender of the first word, some writing ἑξακόσιοι, some ἑξακόσιαι, some ἑξακόσια. The early fathers have also unhesitatingly availed themselves of the theory that numbers were originally denoted by letters, whenever they wished to explain a difficulty in numbers. Thus Severus of Antioch (cited by Theophylact) accounts for the difference of the hour of our Lord's crucifixion, as stated in Mark xv. 25, and John xix. 14, by the mistake of γ (3) for ς (6). Eichhorn has given a lithographed table of the most usual abbreviations in the MSS. of the New Testament.

Lastly, the abbreviations by which Origen, in his 'Hexapla,' cites the Septuagint and other Greek versions, deserve some notice. The nature of this work rendered a compendious mode of reference necessary; and, accordingly, numeral letters and initials are the chief expedients employed. A large list of them may be seen in Montfaucon's edition of the 'Hexapla;' and Eichhorn (*Einleit. ins A. T.* i. 548-50) has given those which are most important.—J. N.

1. ABDON (עַבְדּוֹן, *a servant;* Sept. Ἀβδών), the son of Hillel, of the tribe of Ephraim, and tenth judge of Israel. He succeeded Elon, and judged Israel eight years. His administration appears to have been peaceful; for nothing is recorded of him but that he had forty sons and thirty nephews, who rode on young asses—a mark of their consequence (Judg. xii. 13-15). Abdon died B.C. 1112.

There were three other persons of this name, which appears to have been rather common. They are mentioned in 1 Chron. viii. 29; ix. 36; xxxiv. 20.

2. ABDON, a city of the tribe of Asher, which was given to the Levites of Gershom's family (Job xxi. 30; 1 Chron. vi. 74).

ABEDNEGO (עֲבֵד־נְגוֹ, *servant of Nego*, i. e. Nebo; Sept. Ἀβδεναγώ), the Chaldee name imposed by the king of Babylon's officer upon Azariah, one of the three companions of Daniel. With his two friends, Shadrach and Meshach, he was miraculously delivered from the burning furnace, into which they were cast for refusing to worship the golden statue which Nebuchadnezzar had caused to be set up in the plain of Dura (Dan. iii.).

ABEL (הֶבֶל; Sept. Ἄβελ), properly HEBEL, the second son of Adam, who was slain by Cain, his elder brother (Gen. iv. 1-16). The circumstances of that mysterious transaction are considered elsewhere [CAIN]. To the name *Abel* a twofold interpretation has been given. Its primary signification is *weakness* or *vanity*, as the word הֶבֶל, from which it is derived, indicates. By another rendering it signifies *grief* or *lamentation*, both meanings being justified by the Scripture narrative. CAIN (*a possession*) was so named to indicate both the joy of his mother and his right to the inheritance of the first-born: Abel received a name indicative of his weakness and poverty when compared with the supposed glory of his brother's destiny, and *prophetically* of the pain and sorrow which were to be inflicted on him and his parents.

Ancient writers abound in observations on the mystical character of Abel; and he is spoken of as the representative of the pastoral tribes, while Cain is regarded as the author of the nomadic life and character. St. Chrysostom calls him the *Lamb of Christ*, since he suffered the most grievous injuries solely on account of his innocency (*Ad Stagir.* ii. 5); and he directs particular attention to the mode in which Scripture speaks of his offerings, consisting of the best of his flock, 'and of the fat thereof,' while it seems to intimate that Cain presented the fruit which might be most easily procured (*Hom. in Gen.* xviii. 5). St. Augustin, speaking of regeneration, alludes to Abel as representing the new or spiritual man in contradistinction to the natural or corrupt man, and says, 'Cain founded a city on earth, but Abel as a stranger and pilgrim looked forward to the city of the saints which is in heaven' (*De Civitate Dei*, xv. i.). Abel, he says in another place, was the first-fruits of the Church, and was sacrificed in testimony of the future Mediator. And on Ps. cxviii. (*Serm.* xxx. sec. 9) he says: 'this city' (that is, 'the city of God') 'has its beginning from Abel, as the wicked city from Cain.' Irenæus says that God, in the case of Abel, subjected the just to the unjust, that the righteousness of the former might be manifested by what he suffered (*Contra Hæres.* iii. 23).

Heretics existed in ancient times who represented Cain and Abel as embodying two spiritual powers, of which the mightier was that of Cain, and to which they accordingly rendered divine homage.

In the early Church Abel was considered the first of the martyrs, and many persons were accustomed to pronounce his name with a particular reverence. An obscure sect arose under the title of *Abelites*, the professed object of which was to inculcate certain fanatical notions respecting marriage; but it was speedily lost amid a host of more popular parties.—H. S.

ABEL (אָבֵל; Sept. Ἀβέλ), a name of several villages in Israel, with additions in the case of the more important, to distinguish them from one another. From a comparison of the Arabic and Syriac, it appears to mean *fresh grass;* and the places so named may be conceived to have been in peculiarly verdant situations. In 1 Sam. vi. 18, it is used as an appellative, and probably signifies *a grassy plain*.

ABEL, ABEL-BETH-MAACHAH, or ABEL-MAIM, a city in the north of Palestine, which seems to have been of considerable strength from its his-

tory, and of importance from its being called 'a mother in Israel' (2 Sam. xx. 19). The identity of the city under these different names will be seen by a comparison of 2 Sam. xx. 14, 15, 18; 1 Kings xv. 20; 2 Chron. xvi. 4. The addition of 'Maacah' marks it as belonging to, or being near to, the region Maacah, which lay eastward of the Jordan under Mount Lebanon. This is the town in which Sheba posted himself when he rebelled against David. Eighty years afterwards it was taken and sacked by Benhadad, king of Syria; and 200 years subsequently by Tiglath-pileser, who sent away the inhabitants captives into Assyria (2 Kings xx. 29).

ABEL-BETH-MAACHAH, that is, Abel near the house or city of Maacah: the same as Abel.

ABEL-CARMAIM (אָבֵל כְּרָמִים, *place of the vineyards;* Sept. Ἐβελχαρμίμ), a village of the Ammonites, about six miles from Philadelphia, or Rabbath Ammon, according to Eusebius, in whose time the place was still rich in vineyards (Judg. xi. 33).

ABEL-MAIM. The same as ABEL.

ABEL-MEHOLAH, or ABEL-MEA (אָבֵל מְחוֹלָה, *place of the dance;* Sept. Ἀβελμεουλά), a town supposed to have stood near the Jordan, and some miles (Eusebius says ten) to the south of Bethshan or Scythopolis (1 Kings iv. 12). It is remarkable in connection with Gideon's victory over the Midianites (Judg. vii. 22), and as the birth-place of Elisha (1 Kings xix. 16).

ABEL-MIZRAIM (אָבֵל מִצְרַיִם, *the mourning of the Egyptians;* Sept. Πένθος Αἰγύπτου), the name of a threshing-floor, so called on account of the 'great mourning' made there for Jacob by the funeral party from Egypt (Gen. l. 11). Jerome places it between Jericho and the Jordan, where Bethagla afterwards stood.

ABEL-SHITTIM (אָבֵל הַשִּׁטִּים, *place of acacias;* Sept. Βελσά), a town in the plains of Moab, on the east of the Jordan, between which and Beth-Jesimoth was the last encampment of the Israelites on that side the river (Num. xxxiii. 49). It is more frequently called Shittim merely (Num. xxv. 1; Josh. ii. 1; Mic. vi. 5). Eusebius says it was in the neighbourhood of Mount Peor; and in the time of Josephus it was known as Abila, and stood sixty stadia from the Jordan (*Antiq.* iv. 8, 1; v. 1, 1). The place is noted for the severe punishment which was there inflicted upon the Israelites when they were seduced into the worship of Baal-Peor, through their evil intercourse with the Moabites and Midianites.

ABELA. [ABILA.]

ABI, the mother of King Hezekiah (2 Kings xviii. 2), called also Abijah (2 Chron. xxix. 1). Her father's name was Zachariah, perhaps the same who was taken by Isaiah (viii. 2) for a witness.

ABIA. [ABIJAH, 3.]

ABIAH or ABIJAH (אֲבִיָּה, '*pater Jehovæ*, i.e. *vir divinus*, ut videtur, i. q. איש אלהים,' Gesenius in *Thesaur.;* Sept. Ἀβιά), one of the sons of Samuel, who were intrusted with the administration of justice, and whose misconduct afforded the ostensible ground on which the Israelites demanded that their government should be changed into a monarchy (1 Sam. viii. 1-5).

ABI-ALBON. [ABIEL 2.]

ABIATHAR (אֶבְיָתָר, *father of abundance;* Sept. Ἀβιάθαρ), the tenth high-priest of the Jews, and fourth in descent from Eli. When his father, the high-priest Abimelech, was slain with the priests at Nob, for suspected partiality to the fugitive David, Abiathar escaped the massacre; and bearing with him the most essential part of the priestly raiment [EPHOD], repaired to the son of Jesse, who was then in the cave of Adullam (1 Sam. xxii. 20-23; xxiii. 6). He was well received by David, and became the priest of the party during its exile and wanderings. As such he sought and received for David responses from God. When David became king of Judah he appointed Abiathar high-priest. Meanwhile Zadok had been appointed high-priest by Saul, and continued to act as such while Abiathar was high-priest in Judah. The appointment of Zadok was not only unexceptionable in itself, but was in accordance with the divine sentence of deposition which had been passed, through Samuel, upon the house of Eli (1 Sam. ii. 30-36). When, therefore, David acquired the kingdom of Israel, he had no just ground on which Zadok could be removed, and Abiathar set in his place; and the attempt to do so would probably have been offensive to his new subjects, who had been accustomed to the ministration of Zadok, and whose good feeling he was anxious to cultivate. The king got over this difficulty by allowing both appointments to stand; and until the end of David's reign Zadok and Abiathar were joint high-priests. How the details of duty were settled, under this somewhat anomalous arrangement, we are not informed. As a high-priest Abiathar must have been perfectly aware of the divine intention that Solomon should be the successor of David: he was therefore the least excusable, in some respects, of all those who were parties in the attempt to frustrate that intention by raising Adonijah to the throne. So his conduct seems to have been viewed by Solomon, who, in deposing him from the high-priesthood, and directing him to withdraw into private life, plainly told him that only his sacerdotal character, and his former services to David, preserved him from capital punishment. This deposition of Abiathar completed the doom long before denounced upon the house of Eli, who was of the line of Ithamar, the younger son of Aaron. Zadok, who remained the high-priest, was of the elder line of Eleazer. Solomon was probably not sorry to have occasion to remove the anomaly of two high-priests of different lines, and to see the undivided pontificate in the senior house of Eleazer (1 Kings i. 7, 19; ii. 26, 27).

In Mark ii. 26, a circumstance is described as occurring 'in the days of Abiathar, the high-priest,' which appears, from 1 Sam. xxi. 1, to have really occurred when his father Abimelech was the high-priest. Numerous solutions of this difficulty have been offered. The most probable in itself is that which interprets the reference thus 'in the days of Abiathar, *who was afterwards* the high-priest' (Bishop Middleton, *Greek Article*, pp. 188-190). But this leaves open another difficulty which arises from the precisely opposite reference (in 2 Sam. viii. 17; 1 Chron. xviii. 16; xxiv. 3, 6, 31) to 'Abimelech, the son of Abia-

thar,' as the person who was high-priest along with Zadok, and who was deposed by Solomon; whereas the history describes that personage as *Abiathar*, the son of Abimelech. The only explanation which seems to remove *all* these difficulties—although we cannot allege it to be altogether satisfactory—is, that both father and son bore the two names of Abimelech and Abiathar, and might be, and were called by, either. But although it was not unusual for the Jews to have two names, it was *not* usual for both father and son to have the same two names. We therefore incline to leave the passage in Mark ii. 26, as explained above; and to conclude that the other discrepancies arose from an easy and obvious transposition of words by the copyists, which was afterwards perpetuated. In these places, the Syriac and Arabic versions have 'Abiathar, the son of Abimelech.'

ABIB. [Nisan.]

1. ABIEL (אֲבִיאֵל, *father of strength*, i.e. *strong*; Sept. Ἀβιήλ), the father of Kish, whose son Saul was the first king of Israel, and of Ner, whose son Abner was captain of the host to his cousin Saul (1 Sam. ix. 1; xiv. 5).

2. ABIEL, one of the thirty most distinguished men of David's army (1 Chron. xi. 32). He is called Abi-albon (אבי עלבון) in 2 Sam. xxiii. 31; a name which has precisely the same signification (*father of strength*) as the other.

ABIEZER (אֲבִיעֶזֶר, *father of help*; Sept. Ἀβιέζερ, Josh. xvii. 2), a son of Gilead, the grandson of Manasseh (Num. xxvi. 30), and founder of the family to which Gideon belonged, and which bore his name as a patronymic—Abiezrites (Judg. vi. 34; viii. 2). Gideon himself has a very beautiful and delicate allusion to this patronymic in his answer to the fierce and proud Ephraimites, who, after he had defeated the Midianites with 300 men, chiefly of the family of Abiezer, came to the pursuit, and captured the two Midianitish princes Zeba and Zalmunna. They sharply rebuked him for having engrossed all the glory of the transaction by not calling them into action at the first. But he soothed their pride by a remark which insinuated that their exploit, in capturing the princes, although late, surpassed his own in defeating their army:—'What have I done now in comparison with you? Is not the (grape) *gleaning* of Ephraim better than the *vintage* of Abiezer?' (Judg. viii. 1-3).

ABIGAIL (אֲבִיגַיִל or אֲבִיגַל, *father of joy*; Sept. Ἀβιγαία), the wife of a prosperous sheep-master, called Nabal, who dwelt in the district of Carmel, west of the Dead Sea. She is known chiefly for the promptitude and discretion of her conduct in taking measures to avert the wrath of David, which, as she justly apprehended, had been violently excited by the insulting treatment which his messengers had received from her husband [Nabal]. She hastily prepared a liberal supply of provisions, of which David's troop stood in much need—and went forth to meet him, attended by only one servant. When they met, he was marching to exterminate Nabal and all that belonged to him; and not only was his rage mollified by her prudent remonstrances and delicate management, but he became sensible that the vengeance which he had purposed was not warranted by the circumstances, and was thankful that he had been prevented from shedding innocent blood. The beauty and prudence of Abigail made such an impression upon David on this occasion, that when, not long after, he heard of Nabal's death, he sent for her, and she became his wife (1 Sam. xxv. 14-42). By her it is usually stated that he had two sons, Chileab and Daniel; but it is more likely that the Chileab of 2 Sam. iii. 3, is the same as the Daniel of 1 Chron. iii. 1; the son of Abigail being known by both these names.

1. ABIHAIL (אֲבִיהַיִל, *father of light* or *splendour*; Sept. Ἀβιαία), the wife of Rehoboam, king of Judah. She is called the daughter of Eliab, David's elder brother (2 Chron. xi. 18): but, as David began to reign more than eighty years before her marriage, and was 30 years old when he became king, we are doubtless to understand that she was only a descendant of Eliab. This name, as borne by a female, illustrates the remarks under Ab.

2. ABIHAIL (אֲבִיחַיִל, *father of might*, i.e. *mighty*; Sept. Ἀβιχαΐλ). This name, although the same as the preceding in the authorized version, is, in the original, different both in orthography and signification. It should be written Abichail. The name was borne by several persons: 1. Abichail, the son of Huri, one of the family-chiefs of the tribe of Gad, who settled in Bashan (1 Chron. v. 14); 2. Abichail, the father of Zuriel, who was the father of the Levitical tribes of Merari (Num. iii. 35); 3. Abichail, the father of queen Esther, and brother of Mordecai (Esth. ii. 15).

ABIHU (אֲבִיהוּא, *father of him*; Sept. Ἀβιούδ), the second of the sons of Aaron, who, with his brothers Nadab, Eleazer, and Ithamar, was set apart and consecrated for the priesthood (Exod. xxviii. 1). When, at the first establishment of the ceremonial worship, the victims offered on the great brazen altar were consumed by fire from heaven, it was directed that this fire should always be kept up; and that the daily incense should be burnt in censers filled with it from the great altar. But one day, Nadab and Abihu presumed to neglect this regulation, and offered incense in censers filled with 'strange' or common fire. For this they were instantly struck dead by lightning, and were taken away and buried in their clothes without the camp [Aaron]. There can be no doubt that this severe example had the intended effect of enforcing becoming attention to the most minute observances of the ritual service. As immediately after the record of this transaction, and in apparent reference to it, comes a prohibition of wine or strong drink to the priests, whose turn it might be to enter the tabernacle, it is not unfairly surmised that Nadab and Abihu were intoxicated when they committed this serious error in their ministrations (Lev. x. 1-11).

1. ABIJAH (אֲבִיָּהוּ, אֲבִיָּה, see signif. in Abiah; Sept. Ἀβιά, 2 Chron. xiii. 1). He is also called Abijam (אבים; Sept. Ἀβιού, 1 Kings xv. 1). Lightfoot (*Harm. O. T.* in loc.) thinks that the writer in Chronicles, not describing his reign as wicked, admits the sacred Jah in his name; but which the book of Kings, charging him with fol-

lowing the evil ways of his father, changes into JAM. This may be fanciful; but such changes of name were not unusual. Abijah was the second king of the separate kingdom of Judah, being the son of Rehoboam, and grandson of Solomon. He began to reign B.C. 958 (Hales, B.C. 973), in the eighteenth year of Jeroboam, king of Israel; and he reigned three years. At the commencement of his reign, looking on the well-founded separation of the ten tribes from the house of David as rebellion, Abijah made a vigorous attempt to bring them back to their allegiance. In this he failed; although a signal victory over Jeroboam, who had double his force and much greater experience, enabled him to take several cities which had been held by Israel. The speech which Abijah addressed to the opposing army before the battle has been much admired. It was well suited to its object, and exhibits correct notions of the theocratical institutions. His view of the political position of the ten tribes with respect to the house of David is, however, obviously erroneous, although such as a king of Judah was likely to take. The numbers reputed to have been present in this action are 800,000 on the side of Jeroboam, 400,000 on the side of Abijah, and 500,000 left dead on the field. Hales and others regard these extraordinary numbers as corruptions, and propose to reduce them to 80,000, 40,000, and 50,000 respectively, as in the Latin Vulgate of Sixtus Quintus, and many earlier editions, and in the old Latin translation of Josephus; and probably also in his original Greek text, as is collected by De Vignoles from Abarbanel's charge against the historian of having made Jeroboam's loss no more than 50,000 men, contrary to the Hebrew text (Kennicott's *Dissertations*, i. 533; ii. 201, &c. 564). The book of Chronicles mentions nothing concerning Abijah adverse to the impressions which we receive from his conduct on this occasion; but in Kings we are told that 'he walked in all the sins of his father' (1 Kings xv. 3). He had fourteen wives, by whom he left twenty-two sons and sixteen daughters. Asa succeeded him.

There is a difficulty connected with the maternity of Abijah. In 1 Kings xv. 2, we read, 'His mother's name was Maachah, the daughter of Abishalom;' but in 2 Chron. xiii. 2, 'His mother's name was Michaiah, the daughter of Uriel of Gibeah.' Maachah and Michaiah are variations of the same name; and Abishalom is in all likelihood Absalom, the son of David. The word (בת) rendered 'daughter' is applied in the Bible not only to a man's child, but to his niece, grand-daughter, or great-grand-daughter. It is therefore probable that Uriel of Gibeah married Tamar, the beautiful daughter of Absalom (2 Sam. xiv. 27), and by her had Maachah, who was thus the daughter of Uriel and grand-daughter of Absalom.

2. ABIJAH, son of Jeroboam I., king of Israel. His severe and threatening illness induced Jeroboam to send his wife with a present [PRESENT], suited to the disguise in which she went, to consult the prophet Ahijah respecting his recovery. This prophet was the same who had, in the days of Solomon, foretold to Jeroboam his elevation to the throne of Israel. Though blind with age, he knew the disguised wife of Jeroboam, and was authorised, by the prophetic impulse that came upon him, to reveal to her that, because there was found in Abijah only, of all the house of Jeroboam, 'some good thing towards the Lord,' he only, of all that house, should come to his grave in peace, and be mourned in Israel. Accordingly, when the mother returned home, the youth died as she crossed the threshold of the door. 'And they buried him, and all Israel mourned for him' (1 Kings xiv. 1-18).

3. ABIJAH, one of the descendants of Eleazer, the son of Aaron, and chief of one of the twenty-four courses or orders into which the whole body of the priesthood was divided by David (1 Chron. xxiv. 10). Of these the course of Abijah was the eighth. Only four of the courses returned from the captivity, of which that of Abijah was not one (Ezra ii. 36-39; Neh. vii. 39-42; xii. 1). But the four were divided into the original number of twenty-four, with the original names; and it hence happens that Zecharias, the father of John the Baptist, is described as belonging to the course of Abijah or 'Abia' (Luke i. 5).

ABIJAM [ABIJAH, 1.]

ABILA, capital of the Abilene of Lysanias (Luke iii. 1); and distinguished from other places of the same name as the Abila of Lysanias ('Αβίλη τοῦ Λυσανίου), and (by Josephus) as 'the Abila of Lebanon.' It is unnecessary to reason upon the meaning of this Greek name; for it is obviously a form of the Hebrew *Abel*, which was applied to several places, and means *a grassy spot*. This has been supposed to be the same as Abel-beth-Maacah, but without foundation, for that was a city of Naphtali, which Abila was not. An old tradition fixes this as the place where Abel was slain by Cain, which is in unison with the belief that the region of Damascus was the land of Eden. But the same has been said of other places bearing the name of Abel or Abila, and appears to have originated in the belief (created by the Septuagint and the versions which followed it) that the words are identical; but, in fact, the name of the son of Adam is in Hebrew *Hebel* (הבל), and therefore different from the repeated local name of *Abel* (אבל). However, under the belief that the place and district derived their name from Abel, a monument upon the top of a high hill, near the source of the river Barrada, which rises among the eastern roots of Anti-Libanus, and waters Damascus, has long been pointed out as the tomb of Abel, and its length (thirty yards) has been alleged to correspond with his stature! (Quaresmius, *Elucid. Terræ Sanctæ*, vii. 7, 1; Maundrell, under May 4th). This spot is on the road from Heliopolis (Baalbec) to Damascus, between which towns—thirty-two Roman miles from the former and eighteen from the latter—Abila is indeed placed in the Itinerary of Antoninus. About the same distance north-west of Damascus is Souk Wady Barrada, where an inscription was found by Mr. Banks, which, beyond doubt, identifies that place with the Abila of Lysanias (*Quart. Rev.* xxvi. 388; Hogg's *Damascus*, i. 301). *Souk* means *market*, and is an appellation often added to villages where periodical markets are held. The name of Souk (Wady) Barrada first occurs in Burckhardt (*Syria*, p. 2); and he states that there are here two villages, built on the opposite sides of the Barrada. The lively and refreshing green of this neigh-

bourhood is noticed by him and other travellers, and undesignedly suggests the propriety of the name of Abel, in its Hebrew acceptation of *a grassy spot.*

ABILENE (Ἀβιληνή, Luke iii. 1), the small district or territory which took its name from the chief town, Abila. Its situation is in some degree determined by that of the town; but its precise limits and extent remain unknown. Northward it must have reached beyond the Upper Barrada, in order to include Abila; and it is probable that its southern border may have extended to Mount Hermon (Jebel es-Sheikh). It seems to have included the eastern declivities of Anti-Libanus, and the fine valleys between its base and the hills which front the eastern plains. This is a very beautiful and fertile region, well wooded, and watered by numerous springs from Anti-Libanus. It also affords fine pastures; and in most respects contrasts with the stern and barren western slopes of Anti-Libanus.

This territory had been governed as a tetrarchate by Lysanias, son of Ptolemy and grandson of Mennæus (Joseph. *Antiq.* xiv. 13, 3), but he was put to death, B.C. 33, through the intrigues of Cleopatra, who then took possession of the province (*Antiq.* xiv. 4, 1). After her death it fell to Augustus, who rented it out to one Zenodorus; but as he did not keep it clear of robbers, it was taken from him, and given to Herod the Great (*Antiq.* xv. 10, 1; *Bell. Jud.* i. 20, 4). At his death, a part (the southern, doubtless) of the territory was added to Trachonitis and Ituræa to form a tetrarchy for his son Philip; but by far the larger portion, including the city of Abila, was then, or shortly afterwards, bestowed on another Lysanias, mentioned by Luke (iii. 1), who is supposed to have been a descendant of the former Lysanias, but who is nowhere mentioned by Josephus. Indeed, nothing is said by him or any other profane writer, of this part of Abilene until about ten years after the time referred to by Luke, when the emperor Caligula gave it to Agrippa I. as 'the tetrarchy of Lysanias' (Joseph. *Antiq.* xviii. 6, 10), to whom it was afterwards confirmed by Claudius. At his death, it was included in that part of his possessions which went to his son Agrippa II. This explanation (which we owe to the acuteness and research of Winer), as to the division of Abilene between Lysanias and Philip, removes the apparent discrepancy between Luke, who calls Lysanias tetrarch of Abilene at the very time that, according to Josephus, (a part of) Abilene was in the possession of Philip.

1. ABIMELECH (אֲבִימֶלֶךְ, *father of the king*, or perhaps *royal father;* Sept. Ἀβιμέλεχ), the name of the Philistine king of Gerar in the time of Abraham (Gen. xx. 1, *sqq.:* B.C. 1898; Hales, B.C. 2054); but, from its recurrence, it was probably less a proper name than a titular distinction, like PHARAOH for the kings of Egypt, or AUGUSTUS for the emperors of Rome. Abraham removed into his territory after the destruction of Sodom; and fearing that the extreme beauty of Sarah might bring him into difficulties, he declared her to be his sister. The conduct of Abimelech in taking Sarah into his harem, shows that even in those early times kings claimed the right of taking to themselves the unmarried females not only of their natural subjects, but of those who sojourned in their dominions. Another contemporary instance of this custom occurs in Gen. xii. 15; and one of later date in Esth. ii. 3. But Abimelech, obedient to a divine warning communicated to him in a dream, accompanied by the information that Abraham was a sacred person who had intercourse with God, restored her to her husband. As a mark of his respect he added valuable gifts, and offered the patriarch a settlement in any part of the country; but he nevertheless did not forbear to rebuke, with mingled delicacy and sarcasm, the deception which had been practised upon him (Gen. xx.). The most curious point in this transaction seems to be, that it appears to have been admitted, on all hands, that he had an undoubted right to appropriate to his harem whatever unmarried woman he pleased—all the evil in this case being that Sarah was already married: so early had some of the most odious principles of despotism taken root in the East. The interposition of Providence to deliver Sarah twice from royal harems will not seem superfluous when it is considered how carefully women are there secluded, and how impossible it is to obtain access to them, or get them back again (Esth. iv. 5). It is scarcely necessary to add that these practices still prevail in some Eastern countries, especially in Persia. The present writer, when at Tabreez, in the days of Abbas Meerza, was acquainted with a Persian khan who lived in continual anxiety and alarm lest his only daughter should be required for the harem of the prince, who, he was aware, had heard of her extreme beauty. Nothing further is recorded of King Abimelech, except that a few years after, he repaired to the camp of Abraham, who had removed southward beyond his borders, accompanied by Phichol, 'the chief captain of his host,' to invite the patriarch to contract with him a league of peace and friendship. Abraham consented; and this first league on record [ALLIANCE] was confirmed by a mutual oath, made at a well which had been dug by Abraham, but which the herdsmen of Abimelech had forcibly seized without his knowledge. It was restored to the rightful owner, on which Abraham named it BEERSHEBA (*the Well of the Oath*), and consecrated the spot to the worship of Jehovah (Gen. xxi. 22-34).

2. ABIMELECH, another king of Gerar, in the time of Isaac (about B.C. 1804; Hales, 1960), who is supposed to have been the son of the preceding. Isaac sought refuge in his territory during a famine; and having the same fear respecting his fair Mesopotamian wife, Rebekah, as his father had entertained respecting Sarah, he reported her to be his sister. This brought upon him the rebuke of Abimelech, when he accidentally discovered the truth. The country appears to have become more cultivated and populous than at the time of Abraham's visit, nearly a century before; and the inhabitants were more jealous of the presence of such powerful pastoral chieftains. In those times, as now, wells of water were of so much importance for agricultural as well as pastoral purposes, that they gave a proprietary right to the soil, not previously appropriated, in which they were dug. Abraham had dug wells during his sojourn in the country; and, to bar the claim which re-

sulted from them, the Philistines had afterwards filled them up; but they were now cleared out by Isaac, who proceeded to cultivate the ground to which they gave him a right. The virgin soil yielded him a hundred-fold; and his other possessions, his flocks and herds, also received such prodigious increase that the jealousy of the Philistines could not be suppressed; and Abimelech desired him to seek more distant quarters, in language which gives a high notion of the wealth of the patriarchal chiefs, and the extent of their establishments:—'Depart from us: *for thou art more and mightier than we.*' Isaac complied, and went out into the open country, and dug wells for his cattle. But the shepherds of the Philistines, out with their flocks, were not inclined to allow the claim to exclusive pasturage in these districts to be thus established; and their opposition induced the quiet patriarch to make successive removals, until he reached such a distance that his operations were no longer disputed. Afterwards, when he was at Beersheba, he received a visit from Abimelech, who was attended by Ahuzzath, his friend, and Phichol, the chief captain of his army. They were received with some reserve by Isaac; but when Abimelech explained that it was his wish to renew, with one so manifestly blessed of God, the covenant of peace and goodwill which had been contracted between their fathers, they were more cheerfully entertained, and the desired covenant was, with due ceremony, contracted accordingly. (Gen. xxvi.) From the facts recorded respecting the connection of the two Abimelechs with Abraham and Isaac, it is manifest that the Philistines, even at this early time, had a government more organized, and more in unison with that type which we now regard as Oriental, than appeared among the native Canaanites, one of whose nations had been expelled by these foreign settlers from the territory which they occupied [PHILISTINES].

3. ABIMELECH, a son of Gideon, by a concubine-wife, a native of Shechem, where her family had considerable influence. Through that influence Abimelech was proclaimed king after the death of his father, who had himself refused that honour, when tendered to him, both for himself and his children (Judg. viii. 22-24). In a short time, a considerable part of Israel seems to have recognised his rule. One of the first acts of his reign was to destroy his brothers, seventy in number, being the first example of a system of barbarous state policy of which there have been frequent instances in the East, and which indeed has only within a recent period been discontinued. They were slain 'on one stone' at Ophrah, the native city of the family. Only one, the youngest, named Jotham, escaped; and he had the boldness to make his appearance on Mount Gerizim, where the Shechemites were assembled for some public purpose (perhaps to inaugurate Abimelech), and rebuke them in his famous parable of the trees choosing a king [JOTHAM; PARABLE]. In the course of three years the Shechemites found ample cause to repent of what they had done; they eventually revolted in Abimelech's absence, and caused an ambuscade to be laid in the mountains, with the design of destroying him on his return. But Zebul, his governor in Shechem, contrived to apprise him of these circumstances, so that he was enabled to avoid the snare laid for him; and, having hastily assembled some troops, appeared unexpectedly before Shechem. The people of that place had meanwhile secured the assistance of one Gaal and his followers [GAAL], who marched out to give Abimelech battle. He was defeated, and returned into the town; and his inefficiency and misconduct in the action had been so manifest, that the people were induced by Zebul to expel him and his followers. Although without his protection, the people still went out to the labours of the field. This being told Abimelech, who was at Arumah, he laid an ambuscade in four bodies in the neighbourhood; and when the men came forth in the morning, two of the ambushed parties rose against them, while the other two seized the city gates to prevent their return. Afterwards the whole force united against the city, which, being now deprived of its most efficient inhabitants, was easily taken. It was completely destroyed by the exasperated victor, and the ground strewn with salt, symbolical of the desolation to which it was doomed. The fortress, however, still remained; but the occupants, deeming it untenable, withdrew to the temple of Baal-Berith, which stood in a more commanding situation. Abimelech employed his men in collecting and piling wood against this building, which was then set on fire and destroyed, with the thousand men who were in it. Afterwards Abimelech went to reduce Thebez, which had also revolted. The town was taken with little difficulty, and the people withdrew into the citadel. Here Abimelech resorted to his favourite operation, and while heading a party to burn down the gate, he was struck on the head by a large stone cast down by a woman from the wall above. Perceiving that he had received a death-blow, he directed his armour-bearer to thrust him through with his sword, lest it should be said that he fell by a woman's hand. Thus ended the first attempt to establish a monarchy in Israel. The chapter in which these events are recorded (Judg. ix.) gives a more detailed and lively view of the military operations of that age than elsewhere occurs, and claims the close attention of those who study that branch of antiquities. Abimelech himself appears to have been a bold and able commander, but utterly uncontrolled by religion, principle, or humanity in his ambitious enterprises. His fate resembled that of Pyrrhus II., king of Epirus (Justin. xxv. 5; Pausan. i. 13; Thucyd. iii. 74); and the dread of the ignominy of its being said of a warrior that he died by a woman's hand was very general (Sophocl. *Trach.* 1064; Senec. *Herc. Oet.* 1176). Vainly did Abimelech seek to avoid this disgrace; for the fact of his death by the hand of a woman was long after associated with his memory (2 Sam. xi. 21).

ABINADAB (אֲבִינָדָב, *father of voluntariness;* Sept. Ἀμιναδάβ). There are several persons of this name, all of whom are also called AMINADAB—the letters *b* and *m* being very frequently interchanged in Hebrew.

1. ABINADAB, one of the eight sons of Jesse, and one of the three who followed Saul to the war with the Philistines (1 Sam. xvi. 8).

2. ABINADAB, one of Saul's sons, who was slain at the battle of Gilboa (1 Sam. xxxi. 2).

3. ABINADAB, the Levite of Kirjath-jearim,

in whose house, which was on a hill, the Ark of the Covenant was deposited, after being brought back from the land of the Philistines. It was committed to the special charge of his son Eleazar; and remained there seventy years until it was removed by David (1 Sam. vii. 1, 2; 1 Chron. xiii. 7). [ARK.]

1. ABIRAM (אֲבִירָם, *father of altitude*, i.e. *high*; Sept. Ἀβειρών), one of the family-chiefs of the tribe of Reuben, who, with Dathan and On of the same tribe, joined Korah, of the tribe of Levi, in a conspiracy against Aaron and Moses [AARON]. (Num. xvi.)

2. ABIRAM, eldest son of Hiel the Bethelite (1 Kings xvi. 34). [HIEL; JERICHO.]

ABISHAG (אֲבִישַׁג, *father of error*; Sept. Ἀβισάγ), a beautiful young woman of Shunam, in the tribe of Issachar, who was chosen by the servants of David to be introduced into the royal harem, for the special purpose of ministering to him, and cherishing him in his old age. She became his wife; but the marriage was never consummated. Some time after the death of David, Adonijah, his eldest son, persuaded Bathsheba, the mother of Solomon, to entreat the king that Abishag might be given to him in marriage. But as rights and privileges peculiarly regal were associated with the control and possession of the harem of the deceased kings [HAREM], Solomon detected in this application a fresh aspiration to the throne, which he visited with death (1 Kings i. 1-4; ii. 13-25) [ADONIJAH].

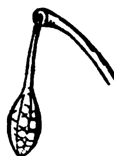
ABISHAI (אֲבִישַׁי, *father of gifts*; Sept. Ἀβεσσά and Ἀβισαί), a nephew of David by his sister Zeruiah, and brother of Joab and Asahel. The three brothers devoted themselves zealously to the interests of their uncle during his wanderings. Though David had more reliance upon the talents of Joab, he appears to have given more of his private confidence to Abishai, who seems to have attached himself in a peculiar manner to his person, as we ever find him near, and ready for council or action, on critical occasions. Abishai, indeed, was rather a man of action than of council; and although David must have been gratified by his devoted and uncompromising attachment, he had more generally occasion to check the impulses of his ardent temperament than to follow his advice. Abishai was one of the two persons whom David asked to accompany him to the camp of Saul; and he alone accepted the perilous distinction (1 Sam. xxvi. 5-9). The desire he then expressed to smite the sleeping king, identifies him as the man who afterwards burned to rush upon Shimei and slay him for his abuse of David (2 Sam. xvi. 9). For when the king fled beyond the Jordan from Absalom, Abishai was again by his side: and he was entrusted with the command of one of the three divisions of the army which crushed that rebellion (2 Sam. xviii. 2). Afterwards, in a war with the Philistines, David was in imminent peril of his life from a giant named Ishbi-benob; but was rescued by Abishai, who slew the giant (2 Sam. xx. 15-17). He was also the chief of the three 'mighties,' who, probably in the same war, performed the chivalrous exploit of breaking through the host of the Philistines to procure David a draught of water from the well of his native Bethlehem (2 Sam. xxiii. 14-17). Among the exploits of this hero it is mentioned that he withstood 300 men and slew them with his spear: but the occasion of this adventure, and the time and manner of his death, are equally unknown. In 2 Sam. viii. 13, the victory over the Edomites in the Valley of Salt is ascribed to David, but in 1 Chron. xviii. 12, to Abishai. It is hence probable that the victory was actually gained by Abishai, but is ascribed to David as king and commander-in-chief.

ABISHUA (אֲבִישׁוּעַ, *father of safety*; Sept. Ἀβισού), the son of Phinehas, and fourth high-priest of the Jews (1 Chron. vi. 50). The commencement and duration of his pontificate are uncertain, but the latter is inferred from circumstances, confirmed by the Chronicon of Alexandria, to have included the period in which Ehud was judge, and probably the preceding period of servitude to Eglon of Moab. Blair places him from B.C. 1352 to 1302—equivalent to Hales, B.C. 1513 to 1463. This high-priest is called Abiezer by Josephus (*Antiq.* v. 12, 5).

ABIYONAH (אֲבִיּוֹנָה; Sept. κάππαρις). This word occurs only once in the Bible, Eccles. xii. 5: 'When the almond-tree shall flourish, and the grasshopper shall be a burden, and *desire* shall fail; because man goeth to his long home.' The word translated *desire* is ABIYONAH, which by others has been considered to signify the CAPER-PLANT. The reasons assigned for the latter opinion are: that the Rabbins apply the term *abionoth* to the small fruit of trees and berries, as well as to that of the caper-bush; that the caper-bush is common in Syria and Arabia; that its fruit was in early times eaten as a condiment, being stimulating in its nature, and

[Capparis spinosa.]

therefore calculated to excite desire; that as the caper-bush grows on tombs, it will be liable to



be destroyed when these are opened; and, finally, that as Solomon speaks here in symbols and allegories, we must suppose him to deviate from the course he had apparently prescribed to himself, if he were to express in plain words that 'desire shall fail,' instead of intimating the same thing, by the failure of that which is supposed to have been used to excite desire.

Celsius (*Hierobotanicon*, i. 210) argues, on the contrary, that Solomon in other places, when treating of the pleasures of youth, never speaks of capers, but of wine and perfumes; that, had he wished to adduce anything of the kind, he would have selected something more remarkable; that capers, moreover, instead of being pleasantly stimulant, are rather acrid and hurtful, and though occasionally employed by the ancients as condiments, were little esteemed by them; and, finally, that the word abionoth of the Rabbins is distinct from the abiyonah of this passage, as is admitted even by Ursinus: 'Nam quod vocabulum אביונות *Abionoth*, quod Rabbinis usitatum, alia quædam puncta habeat, non puto tanti esse momenti' (*Arboret. Biblicum*, xxviii. 1). To this Celsius replies: 'Immo, nisi vocales et puncta genuina in Ebraicis observentur, Babelica fiet confusio, et cœlo terra miscebitur. Incertam pariter pro certo assumunt, qui cappares volunt proprie abionoth dici Rabbinis' (*l. c.* p. 213).

But as the Septuagint, the Vulgate, and some other translations, have understood the caper-bush to be meant, it is desirable to give some account of it, especially as, from its ornamental nature, it could not but attract attention. There are, moreover, some points in its natural history which have been overlooked, but which may serve to show that in the passage under review it might without impropriety have been employed in carrying out the figurative language with which the verse commences.

The caper-plant belongs to a tribe of plants, the Capparideæ, of which the species are found in considerable numbers in tropical countries, such as India, whence they extend northwards into Arabia, the north of Africa, Syria, and the south of Europe. The common caper-bush—*Capparis spinosa*, Linn. (the *C. sativa* of Persoon)—is common in the countries immediately surrounding the Mediterranean. Dioscorides describes it as spreading in a circular manner on the ground, in poor soils and rugged situations; and Pliny, 'as being set and sown in stony places especially.' Theophrastus states that it refuses to grow in cultivated ground. Dioscorides describes it as having thorns like a bramble, leaves like the quince, and fruit like the olive; characters almost sufficient to identify it. The caper is well known to the Arabs, being their قبر *kibbur*; and designated also by the name اظف *athuf* or *azuf*. The bark of the root, which is still used in the East, as it formerly was in Europe, no doubt possesses some irritant property, as it was one of the five aperient roots. The unexpanded flower-buds, preserved in vinegar, are well known at our tables as a condiment by the name of capers. Parts of the plant seem to have been similarly used by the ancients.

The caper-plant is showy and ornamental, growing in barren places in the midst of the rubbish of ruins, or on the walls of buildings. It was observed by Ray on the Temple of Peace at Rome, and in other similar situations. It forms a much-branched, diffuse shrub, which annually loses its leaves. The branches are long and trailing; smooth, but armed with double curved stipulary spines. The leaves are alternate, roundish or oblong-oval, a little fleshy, smooth, of a green colour, but sometimes a little reddish. The flowers are large and showy, produced singly in the axils of the leaves, on stalks which are larger than the leaves. The calyx is four-leaved, coriaceous; the petals are also four in number, white, and of an oval roundish form. The stamens are very numerous and long; and their filaments being tinged with purple, and terminated by the yellow anthers, give the flowers a very agreeable appearance. The ovary is borne upon a straight stalk, which is a little longer than the stamens, and which, as it ripens, droops and forms an oval or pear-shaped berry, enclosing within its pulp numerous small seeds.

Many of the caper tribe, being remarkable for the long stalks by which their fruit is supported, conspicuously display, what also takes place in other plants, namely, the drooping and hanging down of the fruit as it ripens. As, then, the flowering of the almond-tree, in the first part of the verse, has been supposed to refer to the whitening of the hair, so the drooping of the ripe fruit of a plant like the caper, which is conspicuous on the walls of buildings, and on tombs, may be supposed to typify the hanging down of the head before 'man goeth to his long home.'—J. F. R.

ABLUTION, the ceremonial washing, whereby, as a symbol of purification from uncleanness, a person was considered—1. to be cleansed from the taint of an inferior and less pure condition, and initiated into a higher and purer state; 2. to be cleansed from the soil of common life, and fitted for special acts of religious service; 3. to be cleansed from defilements contracted by particular acts or circumstances, and restored to the privileges of ordinary life; 4. as absolving or purifying himself, or declaring himself absolved and purified, from the guilt of a particular act. We do not meet with any such ablutions in patriarchal times: but under the Mosaical dispensation they all occur.

A marked example of the *first* kind of ablution occurs when Aaron and his sons, on their being set apart for the priesthood, were washed with water before they were invested with the priestly robes and anointed with the holy oil (Lev. viii. 6). To this head we are inclined to refer the ablution of persons and raiment which was commanded to the whole of the Israelites, as a preparation to their receiving the law from Sinai (Exod. xix. 10-15). We also find examples of this kind of purification in connection with initiation into a higher state. Thus those admitted into the lesser or introductory mysteries of Eleusis were previously

purified on the banks of the Ilissus, by water being poured upon them by the Udranos.

The *second* kind of ablution was that which required the priests, on pain of death, to wash their hands and their feet before they approached the altar of God (Exod. xxx. 17-21). For this purpose a large basin of water was provided both at the tabernacle and at the temple. To this the Psalmist alludes when he says—'I will wash my hands in innocency, and so will I compass thine altar' (Ps. xxvi. 6). Hence it became the custom in the early Christian church for the ministers, in the view of the congregation, to wash their hands in a basin of water brought by the deacon, at the commencement of the communion (Jamieson, p. 126); and this practice, or something like it, is still retained in the Eastern churches, as well as in the church of Rome, when mass is celebrated. Similar ablutions by the priests before proceeding to perform the more sacred ceremonies were usual among the heathen. The Egyptian priests indeed carried the practice to a burdensome extent, from which the Jewish priests were, perhaps designedly, exonerated; and in their less torrid climate it was, for purposes of real cleanliness, less needful. Reservoirs of water were attached to the Egyptian temples; and Herodotus (ii. 37) informs us that the priests shaved the whole of their bodies every third day, that no insect or other filth might be upon them when they served the gods, and that they washed themselves in cold water twice every day and twice every night: Porphyry says thrice a day, with a nocturnal ablution occasionally. This kind of ablution, as preparatory to a religious act, answers to the simple *Wàdù* of the Moslems, which they are required to go through five times daily before their stated prayers. This makes the ceremonies of ablution much more conspicuous to a traveller in the Moslem East at the present day than they would appear among the ancient Jews, seeing that the law imposed this obligation on the priests only, not on the people. Connected as these Moslem ablutions are with various forms and imitative ceremonies, and recurring so frequently as they do, the avowedly heavy yoke of even the Mosaic law seems light in the comparison.

In the *third* class of ablutions washing is regarded as a purification from positive defilements. The Mosaical law recognises eleven species of uncleanness of this nature (Lev. xii.-xv.), the purification for which ceased at the end of a certain period, provided the unclean person then washed his body and his clothes; but in a few cases, such as leprosy and the defilement contracted by touching a dead body, he remained unclean seven days after the physical cause of pollution had ceased. This was all that the law required: but in later times, when the Jews began to refine upon it, these cases were considered generic instead of specific—as representing classes instead of individual cases of defilement—and the causes of pollution requiring purification by water thus came to be greatly increased. This kind of ablution for substantial uncleanness answers to the Moslem غسل *ghasl*, in which the causes of defilement greatly exceed those of the Mosaical law, while they are perhaps equalled in number and minuteness by those which the later Jews devised. The uncleanness in this class arises chiefly from the natural secretions of human beings and of beasts used for food; and from the ordure of animals not used for food; and, as among the Jews, the defilement may be communicated not only to persons, but to clothes, utensils, and dwellings—in all which cases the purification must be made by water, or by some representative act where water cannot be applied.

Of the *last* class of ablutions, by which persons declared themselves free from the guilt of a particular action, the most remarkable instance is that which occurs in the expiation for an unknown murder, when the elders of the nearest village washed their hands over the expiatory heifer, beheaded in the valley, saying, 'Our hands have not shed this blood, neither have our eyes seen it' (Deut. xxi. 1-9). It has been thought by some that the signal act of Pilate, when he washed his hands in water and declared himself innocent of the blood of Jesus (Matt. xxvii. 24), was a designed adoption of the Jewish custom: but this supposition does not appear necessary, as the custom was also common among the Greeks and Romans.

We have confined this notice to the usages of ablution as a sign of purification sanctioned or demanded by the law itself. Other practices not there indicated appear to have existed at a very early period, or to have grown up in the course of time. From 1 Sam. xvi. 5, compared with Exod. xix. 10-14, we learn that it was usual for those who presented or provided a sacrifice to purify themselves by ablution: and as this was everywhere a general practice, it may be supposed to have existed in patriarchal times, and, being an established and approved custom, not to have required to be mentioned in the law. There is a passage in the apocryphal book of Judith (xii. 7-9) which has been thought to intimate that the Jews performed ablutions before prayer. But we cannot fairly deduce that meaning from it. It would indeed prove too much if so understood, as Judith bathed in the water, which is more than even the Moslems do before their prayers. Moreover, the authority, if clear, would not be conclusive.

But after the rise of the sect of the Pharisees, the practice of ablution was carried to such excess, from the affectation of excessive purity, that it is repeatedly brought under our notice in the New Testament through the severe animadversions of our Saviour on the consummate hypocrisy involved in this fastidious attention to the external types of moral purity, while the heart was left unclean. All the practices there exposed come under the head of purification from uncleanness;—the acts involving which were made so numerous that persons of the stricter sect could scarcely move without contracting some involuntary pollution. For this reason they never entered their houses without ablution, from the strong probability that they had unknowingly contracted some defilement in the streets; and they were especially careful never to eat without washing the hands (Mark vii. 1-5), because they were peculiarly liable to be defiled; and as unclean hands were held to communicate uncleanness to all food (excepting fruit) which they touched, it was deemed that there was no security against eating unclean food but by always

washing the hands ceremonially before touching any meat. We say 'ceremonially,' because this article refers only to ceremonial washing. The Israelites, who, like other Orientals, fed with their fingers, washed their hands before meals, for the sake of cleanliness [Washing]. But these customary washings were distinct from the ceremonial ablutions, as they are now among the Moslems. There were, indeed, distinct names for them. The former was called simply נטילה, or *washing*, in which water was *poured upon* the hands; the latter was called טבילה, *plunging*, because the hands were *plunged in* water (Lightfoot, on Mark vii. 4). It was this last, namely, the ceremonial ablution, which the Pharisees judged to be so necessary. When therefore some of that sect remarked that our Lord's disciples ate 'with unwashen hands' (Mark vii. 2), it is not to be understood literally that they did not at all wash their hands, but that they did not *plunge* them ceremonially according to their own practice. And this was expected from them only as the disciples of a religious teacher; for these refinements were not practised by the class of people from which the disciples were chiefly drawn. Their wonder was, that Jesus had not inculcated this observance on his followers, and not, as some have fancied, that he had enjoined them to neglect what had been their previous practice.

In at least an equal degree the Pharisees multiplied the ceremonial pollutions which required the ablution of inanimate objects—'cups and pots, brazen vessels and tables;' the rules given in the law (Lev. vi. 28; xi. 32-36; xv. 23) being extended to these multiplied contaminations. Articles of earthenware which were of little value were to be broken; and those of metal and wood were to be scoured and rinsed with water. All these matters are fully described by Buxtorf, Lightfoot, Gill, and other writers of the same class, who present many striking illustrations of the passages of Scripture which refer to them. The Mohammedan usages of ablution, which offer many striking analogies, are fully detailed in the third book of the *Mischat ul Masábih*, and also in D'Ohsson's *Tableau*, liv. i. chap. i.

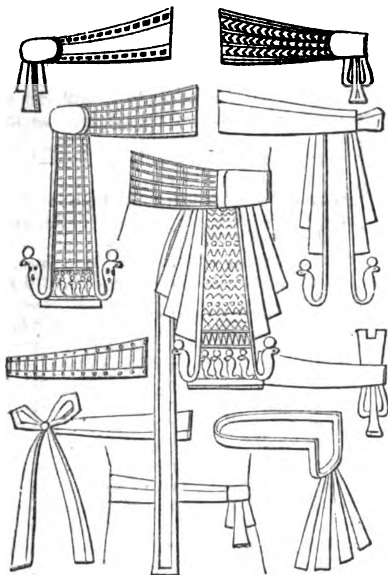
ABNAIM (אָבְנַיִם). This word is the dual of אבן, *a stone*, and in this form only occurs twice, Exod. i. 16, and Jer. xviii. 3. In the latter passage it undeniably means *a potter's wheel;* but what it denotes in the former, or how to reconcile with the use of the word in the latter text any interpretation which can be assigned to it in the former, is a question which (see Rosenmüller *in loc.*) has mightily exercised the ingenuity and patience of critics and philologers. The meaning appears to have been doubtful even of old, and the ancient versions are much at variance. The LXX. evades the difficulty by the general expression ὅταν ὦσι πρὸς τῷ τίκτειν, 'when they are about to be delivered,' and is followed by the Vulgate, '*et partus tempus advenerit;*' but our version is more definite, and has 'and see them upon *the stools.*' This goes upon the notion that the word denotes a particular kind of open stool or chair constructed for the purpose of delivering pregnant women. The usages of the East do not, however, acquaint us with any such utensil, the employment of which, indeed, is not in accordance with the simple manners of ancient times. Others, therefore, suppose the word to denote stone or other bathing troughs, in which it was usual to lave new-born infants. This conjecture is so far probable, that the midwife, if inclined to obey the royal mandate, could then destroy the child without check or observation. Accordingly, this interpretation is preferred by Gesenius (*Thesaur. s. v.* אבן), quoting in illustration Thevenot (*Itin.* ii. 98), who states 'that the kings of Persia are so afraid of being deprived of that power which they abuse, and are so apprehensive of being dethroned, that they cause the male children of their female relations to be destroyed in the stone bathing-troughs in which newly-born children are laved.' The question, however, is not as to the existence of the custom, but its application to the case in view. Professor Lee treats the preceding opinions with little ceremony, and decides nearly in accordance with the LXX. and other ancient versions, none of which, as he remarks, say anything about *wash-pots, stools,* or the like. He then gives reasons for understanding the command of Pharaoh thus: 'Observe, look carefully on the *two occasions* (*i. e.* in which either a male or female child is born). If it be a son, then,' &c. We may add that this is a subject on which some light may possibly be thrown at a future day by the monuments of Egypt, in which the ancient manners of that country are so minutely portrayed.

ABNER (אַבְנֵר or אֲבִינֵר, *father of light;* Sept. Ἀβεννήρ), the cousin of Saul (being the son of his uncle Ner), and the commander-in-chief of his army. He does not come much before us until after the death of Saul, B.C. 1056. Then, the experience which he had acquired, and the character for ability and decision which he had established in Israel, enabled him to uphold the falling house of Saul for seven years; and he might probably have done so longer if it had suited his views. It was generally known that David had been divinely nominated to succeed Saul on the throne: when, therefore, that monarch was slain in the battle of Gilboa, David was made king over his own tribe of Judah, and reigned in Hebron. In the other tribes an influence adverse to Judah existed, and was controlled chiefly by the tribe of Ephraim. Abner, with great decision, availed himself of this state of feeling, and turned it to the advantage of the house to which he belonged, of which he was now the most important surviving member. He did not, however, venture to propose himself as king; but took Ishbosheth, a surviving son of Saul, whose known imbecility had excused his absence from the fatal fight in which his father and brothers perished, and made him king over the tribes, and ruled in his name. Ishbosheth reigned in Mahanaim, beyond Jordan, and David in Hebron. A sort of desultory warfare arose between them, in which the advantage appears to have been always on the side of David. The only one of the engagements of which we have a particular account is that which ensued when Joab, David's general, and Abner, met and fought at Gibeon. Abner was beaten and fled for his life; but was pursued by Asahel, the brother of Joab and Abishai, who was 'swift of foot as a wild roe.' Abner,

dreading a blood-feud with Joab, for whom he seems to have entertained a sincere respect, entreated Asahel to desist from the pursuit: but finding that he was still followed, and that his life was in danger, he at length ran his pursuer through the body by a back thrust with the pointed heel of his spear (2 Sam. ii. 8-32). This put a strife of blood between the two foremost men in all Israel (after David); for the law of honour which had from times before the law prevailed among the Hebrews, and which still prevails in Arabia, rendered it the conventional duty of Joab to avenge the blood of his brother upon the person by whom he had been slain [BLOOD-REVENGE].

As time went on, Abner had occasion to feel more strongly that he was himself not only the chief, but the only remaining prop of the house of Saul: and this conviction, acting upon a proud and arrogant spirit, led him to more presumptuous conduct than even the mildness of the feeble Ishbosheth could suffer to pass without question. He took to his own harem a woman who had been a concubine-wife of Saul. This act, from the ideas connected with the harem of a deceased king [HAREM], was not only a great impropriety, but was open to the suspicion of a political design, which Abner may very possibly have entertained. A mild rebuke from the nominal king, however, enraged him greatly; and he plainly declared that he would henceforth abandon his cause and devote himself to the interests of David. To excuse this desertion to his own mind, he then and on other occasions avowed his knowledge that the son of Jesse had been appointed by the Lord to reign over all Israel: but he appears to have been unconscious that this avowal exposed his previous conduct to more censure than it offered excuse for his present. He, however, kept his word with Ishbosheth. After a tour, during which he explained his present views to the elders of the tribes which still adhered to the house of Saul, he repaired to Hebron with authority to make certain overtures to David on their behalf. He was received with great attention and respect; and David even thought it prudent to promise that he should still have the chief command of the armies, when the desired union of the two kingdoms took place. The political expediency of this engagement is very clear, and to that expediency the interests and claims of Joab were sacrificed. That distinguished personage happened to be absent from Hebron on service at the time, but he returned just as Abner had left the city. He speedily understood what had passed; and his dread of the superior influence which such a man as Abner might establish with David, quickened his remembrance of the vengeance which his brother's blood required. His purpose was promptly formed. Unknown to the king, but apparently in his name, he sent a message after Abner to call him back; and as he returned, Joab met him at the gate, and, leading him aside, as if to confer peaceably and privately with him, suddenly thrust his sword into his body (B.C. 1048). The lamentations of David, the public mourning which he ordered, and the funeral honours which were paid to the remains of Abner, the king himself following the bier as chief mourner, exonerated him in public opinion from having been privy to this assassination. As for Joab, his privilege as a blood-avenger must to a great extent have justified his treacherous act in the opinion of the people; and that, together with his influence with the army, screened him from punishment (2 Sam. iii. 6-39).

For the following interesting elucidation of David's lament over Abner, we are indebted to a learned and highly valued contributor.



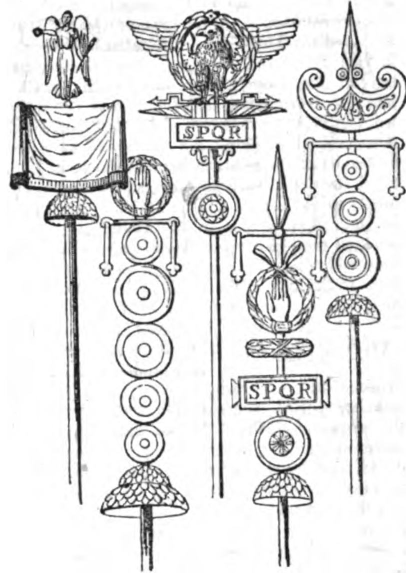
[David's short but emphatic lament over Abner (2 Sam. iii. 33) may be rendered, with stricter adherence to the *form* of the original, as follows:—

'Should Abner die as a villain dies?—
Thy hands—not bound,
Thy feet—not brought into fetters:
As one falls before the sons of wickedness,
fellest thou!'

As to the syntactical structure of these lines, it is important to observe that the second and third lines are two *propositions of state* belonging to the *last*, which describe *the condition in which he was when he was slain*. This kind of proposition is marked by the *subject* being placed *first*, and by the verb generally becoming a *participle*. On the right knowledge of this structure the beauty and sense of many passages altogether depend; and the common ignorance of it is to be ascribed to the circumstance, that the study of Hebrew so very seldom reaches beyond the vocabulary into the deeper-seated peculiarities of its *construction*. (See Ewald's *Hebr. Gram.* §556.) As to the sense of the words, J. D. Michaelis (in his *Uebersetzung des Alten Test. mit Anmerkungen für Ungelehrte*) saw that the point of this indignant, more than sorrowful, lament, lies in the *mode* in which Abner was slain. Joab professed to kill him 'for the blood of Asahel his brother,' 2 Sam. iii. 27. But if a man claimed his brother's blood at the hand of his murderer, the latter (even if he fled to the altar for refuge, Exod. xxi. 14) would have been delivered up (bound, hand and foot, it is *assumed*) to the avenger of blood, who would then possess a legal right to slay him. Now Joab not only had no title to claim the right of the *Goel*, as Asahel was killed under justifying circumstances (2 Sam. ii. 19); but, while pretending to exercise the avenger's right, he took a lawless and private mode of satisfaction, and committed a murder. Hence David charged him, in allusion to this conduct, with 'shedding the blood of war in peace' (1 Kings ii. 5); and hence he expresses himself in this lament, as if indignant that the noble Abner, instead of being surrendered with the formalities of the law to meet an authorized penalty, was treacherously stabbed like a worthless fellow by the hands of an assassin.—J. N.]

ABNET (אַבְנֵט). As this word can be traced to no root in the Hebrew language, and as it occurs in the narrative immediately after the departure from Egypt, it is reasonably supposed by Professor Lee to be Egyptian, in opposition however to Hottinger, who refers it to the Persic, and to Gesenius, who finds it in the Sanscrit. It means a *band*, a *bandage;* and from the places in which it occurs, it appears to have been made of fine linen variously wrought, and used to bind as a girdle about the body of persons in authority especially the Jewish priests (Exod. xxix. 9; xxviii. 39; xxxix. 29; Lev. viii. 13; Isa. xxii.

21). These girdles may be considered as fairly represented by those which we observe on such persons in the Egyptian paintings.



ABOMINATION (תּוֹעֵבָה and שִׁקּוּץ; Sept. and New Test.—*e. g.* Matt. xxiv. 15—βδέλυγμα, for both). These words describe generally any object of detestation or disgust (Lev. xviii. 22; Deut. vii. 25); and are applied to an impure or detestable action (Ezek. xxii. 11; xxx. 26; Mal. ii. 11, &c.); to any thing causing a ceremonial pollution (Gen. xliii. 32; xlvi. 34; Deut. xiv. 3); but more especially to idols (Lev. xviii. 22; xx. 13; Deut. vii. 26; 1 Kings xi. 5, 7; 2 Kings xxiii. 13); and also to food offered to idols (Zech. ix. 7); and to filth of every kind (Nahum iii. 6). There are two or three of the texts in which the word occurs, to which, on account of their peculiar interest or difficulty, especial attention has been drawn. The *first* is Gen. xliii. 32: 'The Egyptians might not eat bread with the Hebrews; for that is an abomination (תועבה) unto the Egyptians.' This is best explained by the fact that the Egyptians considered themselves ceremonially defiled if they ate with *any* strangers. The primary reason appears to have been that the cow was the most sacred animal among the Egyptians, and the eating of it was abhorrent to them; whereas it was both eaten and sacrificed by the Jews and most other nations, who on that account were abominable in their eyes. It was for this, as we learn from Herodotus (ii. 41), that no Egyptian man or woman would kiss a Greek on the mouth, or would use the cleaver of a Greek, or his spit, or his dish, or would taste the flesh of even clean beef (that is, of oxen) that had been cut with a Grecian carving-knife. It is true that Sir J. G. Wilkinson (*Anc. Egyptians*, iii. 358) ascribes this to the repugnance of the fastidiously clean Egyptians to the comparatively foul habits of their Asiatic and other neighbours: but it seems scarcely fair to take the *facts* of the father of history, and ascribe to them any other than the very satisfactory *reason* which he assigns. We collect then that it was as *foreigners*, not pointedly as Hebrews, that it was an abomination for the Egyptians to eat with the brethren of Joseph. The Jews themselves subsequently exemplified the same practice; for in later times they held it unlawful to eat or drink with foreigners in their houses, or even to enter their houses (John xviii. 28; Acts x. 28; xi. 3); for not only were the houses of Gentiles unclean (*Mishn. Oholoth.* 18, § 7), but they themselves rendered unclean those in whose houses they lodged (Maimon. *Mishcab a. Morheb*, c. 12, § 12); which was carrying the matter a step further than the Egyptians (see also *Mitzvoth Tora*, pr. 148). We do not however trace these examples before the Captivity.

The *second* passage is Gen. xlvi. 34. Joseph is telling his brethren how to conduct themselves when introduced to the king of Egypt; and he instructs them that when asked concerning their occupation they should answer: 'Thy servants' trade hath been about cattle from our youth even until now, *both we and also our fathers*.' This last clause has emphasis, as showing that they were hereditary nomade pastors; and the reason is added: 'That ye may dwell in the land of Goshen,—*for every shepherd is an abomination* unto the Egyptians.' In the former instance they were 'an abomination' *as strangers*, with whom the Egyptians could not eat; here they are a further abomination as *nomade shepherds*, whom it was certain that the Egyptians, for that reason, would locate in the border land of Goshen, and not in the heart of the country. That it was nomade shepherds, or Bedouins, and not simply shepherds, who were abominable to the Egyptians, is evinced by the fact that the Egyptians themselves paid great attention to the rearing of cattle. This is shown by their sculptures and paintings, as well as by the offer of this very king of Egypt to make such of Jacob's sons as were men of activity 'overseers of his cattle' (xlvii. 6). For this aversion to nomade pastors two reasons are given; and it is not necessary that we should choose between them, for both of them were, it is most likely, concurrently true. One is, that the inhabitants of Lower and Middle Egypt had previously been invaded by, and had remained for many years subject to, a tribe of nomade shepherds [EGYPT], who had only of late been expelled, and a native dynasty restored—the grievous oppression of the Egyptians by these pastoral invaders, and the insult with which their religion had been treated. The other reason, not necessarily superseding the former, but rather strengthening it, is, that the Egyptians, as a settled and civilized people, detested the lawless and predatory habits of the wandering shepherd tribes, which then, as now, bounded the valley of the Nile, and occupied the Arabias. Their constantly aggressive operations upon the frontiers, and upon all the great lines of communication, must, with respect to them, have given intensity to the odium with which all strangers were regarded. If any proof of this were wanting, it is found in the fact (attested by the Rev. R. M. Macbriar and others) that, sunk as Modern Egypt is, there is still such a marked and irreconcilable difference of ideas and habits between the inhabitants and the Bedouins, whose camps are often in the near neighbourhood of their towns and villages,

that the latter are regarded with dislike and fear, and no friendly intercourse exists between them. We know that the same state of feeling prevails between the settled inhabitants and the Bedouins along the Tigris and Euphrates.

The *third* marked use of this word again occurs in Egypt. The king tells the Israelites to offer to their god the sacrifices which they desired, without going to the desert for that purpose. To which Moses objects, that they should have to sacrifice to the Lord '*the abomination of the Egyptians*,' who would thereby be highly exasperated against them (Exod. viii. 25, 26). A reference back to the first explanation shows that this 'abomination' was the cow, the only animal which *all* the Egyptians agreed in holding sacred; whereas, in the great sacrifice which the Hebrews proposed to hold, not only would heifers be offered, but the people would feast upon their flesh.

THE ABOMINATION OF DESOLATION. In Dan. ix. 27, שִׁקּוּץ מְשֹׁמֵם; literally, '*the abomination of the desolater*, which, without doubt, means the idol or idolatrous apparatus which the desolater of Jerusalem should establish in the holy place. This appears to have been a prediction of the pollution of the temple by Antiochus Epiphanes, who caused an idolatrous altar to be built on the altar of burnt offerings, whereon unclean things were offered to Jupiter Olympius, to whom the temple itself was dedicated. Josephus distinctly refers to this as the accomplishment of Daniel's prophecy; as does the author of the first book of Maccabees, in declaring that 'they set up the abomination of desolation upon the altar'—ᾠκοδόμησαν τὸ βδέλυγμα τῆς ἐρημώσεως ἐπὶ τὸ θυσιαστήριον (1 Macc. i. 59; vi. 7; 2 Macc. vi. 2-5; Joseph. *Antiq.* xii. 5, 4; xii. 7, 6). The phrase is quoted by Jesus, in the form of τὸ βδέλυγμα τῆς ἐρημώσεως (Matt. xxiv. 15), and is applied by him to w it was to take place at the advance of the Romans against Jerusalem. They who saw 'the abomination of desolation standing in the holy place' were enjoined to 'flee to the mountains.' And this may with probability be referred to the advance of the Roman army against the city with their image-crowned standards, to which idolatrous honours were paid, and which the Jews regarded as idols. The unexpected retreat and discomfiture of the Roman forces afforded such as were mindful of our Saviour's prophecy an opportunity of obeying the injunction which it contained. That the Jews themselves regarded the Roman standards as *abominations* is shown by the fact that, in deference to their known aversion, the Roman soldiers quartered in Jerusalem forbore to introduce their standards into the city: and on one occasion, when Pilate gave orders that they should be carried in by night, so much stir was made in the matter by the principal inhabitants, that for the sake of peace the governor was eventually induced to give up the point (Joseph. *Antiq.* xviii. 3, 1). Those however who suppose that 'the holy place' of the text must be the temple itself, may find the accomplishment of the prediction in the fact that, when the city had been taken by the Romans, and the holy house destroyed, the soldiers brought their standards in due form to the temple, set them up over the eastern gate, and *offered sacrifice to them* (Joseph. *Bell. Jud.* vi. 6, 1); for (as Havercamp judiciously notes from Tertullian, *Apol.* c. xvi. 162) 'almost the entire religion of the Roman camp consisted in worshipping the ensigns, swearing by the ensigns, and in preferring the ensigns before all the other gods.'

Nor was this the last appearance of 'the abomination of desolation, in the holy place:' for, not only did Hadrian, with studied insult to the Jews, set up the figure of a boar over the Bethlehem gate of the city (Ælia Capitolina) which rose upon the site and ruins of Jerusalem (Euseb. *Chron.* l. i. p. 45, ed. 1658), but he erected a temple to Jupiter upon the site of the Jewish temple (Dion Cass. lxix. 12), and caused an image of himself to be set up in the part which answered to the most holy place (Nicephorus Callist., iii. 24). This was a consummation of all the abominations which the iniquities of the Jews brought upon their holy place.

ABRAHAM (אַבְרָהָם, *father of a multitude;* Sept. Ἀβραάμ), the founder of the Hebrew nation. Up to Gen. xvii. 4, 5, he is uniformly called ABRAM (אברם, *father of elevation, or high father;* Sept. Ἄβραμ), and this was his original name; but the extended form, which it always afterwards bears, was given to it to make it significant of the promise of a numerous posterity which was at the same time made to him.

Abraham was a native of Chaldea, and descended, through Heber, in the ninth generation, from Shem the son of Noah. His father was Terah, who had two other sons, Nahor and Haran. Haran died prematurely 'before his father,' leaving a son Lot, and two daughters, Milcah and Iscah. Lot attached himself to his uncle Abraham; Milcah became the wife of her uncle Nahor; and Iscah, who was also called Sarai, became the wife of Abraham (Gen. xi. 26-29: comp. Joseph. *Antiq.* i. 6, 5) [ISCAH].

Abraham was born A.M. 2008, B.C. 1996 (Hales, A.M. 3258, B.C. 2153), in 'Ur of the Chaldees' (Gen. xi. 28). The concise history in Genesis states nothing concerning the portion of

his life prior to the age of 60; and respecting a person living in times so remote no authentic information can be derived from any other source. There are indeed traditions, but they are too manifestly *built up* on the foundation of a few obscure intimations in Scripture to be entitled to any credit. Thus it is intimated in Josh. xxiv. 2, that Terah and his family 'served other gods' beyond the Euphrates: and on this has been founded the romance that Terah was not only a worshipper, but a maker of idols; that the youthful Abraham, discovering the futility of such gods, destroyed all those his father had made, and justified the act in various conversations and arguments with Terah, which we find repeated at length. Again, 'Ur of the Chaldees' was the name of the place where Abraham was born, and from which he went forth to go, he knew not whither, at the call of God. Now Ur (אור) means *fire;* and we may therefore read that he came forth from *the fire of the Chaldees;* on which has been built the story that Abraham was, for his disbelief in the established idols, cast by king Nimrod into a burning furnace, from which he was by special miracle delivered. And to this the premature death of Haran has suggested the addition that he, by way of punishment for his disbelief of the truths for which Abraham suffered, was marvellously destroyed by the same fire from which his brother was still more marvellously preserved. Again, the fact that Chaldea was the region in which astronomy was reputed to have been first cultivated, suggested that Abraham brought astronomy westward, and that he even taught that science to the Egyptians (Joseph. *Antiq.* i. 8). These are goodly specimens of tradition-building; and more of them may be found in the alleged history of Abraham by those who think them worth the trouble of the search. It is just to Josephus to state that most of these stories are rejected by him, although the tone of some of his remarks is in agreement with them.

Although Abraham is, by way of eminence, named first, it appears probable that he was the youngest of Terah's sons, and born by a second wife, when his father was 130 years old. Terah was seventy years old when the eldest son was born (Gen. xi. 32; xii. 4; xx. 12: comp. Hales, ii. 107); and that eldest son appears to have been Haran, from the fact that his brothers married his daughters, and that his daughter Sarai was only ten years younger than his brother Abraham (Gen. xvii. 17). It is shown by Hales (ii. 107), that Abraham was 60 years old when the family quitted their native city of Ur, and went and abode in Charran. The reason for this movement does not appear in the Old Testament. Josephus alleges that Terah could not bear to remain in the place where Haran had died (*Antiq.* i. 6. 5); while the apocryphal book of Judith, in conformity with the traditions still current among the Jews and Moslems, affirms that they were cast forth because they would no longer worship the gods of the land (Judith v. 6-8). The real cause transpires in Acts vii. 2-4: 'The God of glory appeared to our father Abraham while he was (at Ur of the Chaldees) in Mesopotamia, *before he dwelt in Charran,* and said unto him, Depart from *thy land,* and from thy kindred, and come hither to *a land* (γῆν) which *I will* shew thee. Then departing from the land of the Chaldees, he dwelt in Charran.' This *first* call is not recorded, but only implied in Gen. xii.: and it is distinguished by several pointed circumstances from the *second,* which alone is there mentioned. Accordingly Abraham departed, and his family, including his aged father, removed with him. They proceeded not at once to the land of Canaan, which indeed had not been yet indicated to Abraham as his destination; but they came to Charran, and tarried at that convenient station for fifteen current years, until Terah died, at the age of 205 years. Being free from his filial duties, Abraham, now 75 years of age, received a second and more pointed call to pursue his destination: 'Depart from thy land, and from thy kindred, and *from thy father's house,* unto *the land* (הארץ, τὴν γῆν), which I will shew thee' (Gen. xii. 1). The difference of the two calls is obvious: in the former the *land* is indefinite, being designed only for a temporary residence; in the latter it is definite, intimating a permanent abode. A third condition was also annexed to the latter call, that he should separate from his father's house, and leave his brother Nahor's family behind him in Charran. This must have intimated to him that the Divine call was personal to himself, and required that he should be isolated not only from his nation, but from his family. He however took with him his nephew Lot, whom, having no children of his own, he appears to have regarded as his heir, and then went forth 'not knowing whither he went' (Heb. xi. 8), but trusting implicitly to the Divine guidance. And it seems to have been the intention of Him by whom he had been called, to open gradually to him the high destinies which awaited him and his race, as we perceive that every successive communication with which he was favoured rendered more sure and definite to him the objects for which he had been called from the land of his birth.

No particulars of the journey are given. Abraham arrived in the land of Canaan, which he found occupied by the Canaanites in a large number of small independent communities, which cultivated the districts around their several towns. The country was however but thinly peopled; and, as in the more recent times of its depopulation, it afforded ample pasture-grounds for the wandering pastors. One of that class Abraham must have appeared in their eyes. In Mesopotamia the family had been pastoral, but dwelling in towns and houses, and sending out the flocks and herds under the care of shepherds. But the migratory life to which Abraham had now been called, compelled him to take to the tent-dwelling as well as the pastoral life: and the usages which his subsequent history indicates are therefore found to present a condition of manners and habits analogous to that which still exists among the nomade pastoral, or Bedouin tribes of south-western Asia.

The rich pastures in that part of the country tempted Abraham to form his first encampment in the vale of Moreh, which lies between the mountains of Ebal and Gerizim. Here the strong faith which had brought the childless man thus far from his home was rewarded by the grand promise:—'I will make of thee a great nation, and I will bless thee and make thy name great, and thou shalt be a blessing; and I will bless them that bless thee, and curse them that curse

thee: and in thee shall all the families of the earth be blessed' (Gen. xii. 2, 3). It was further promised that to his posterity should be given the rich heritage of that beautiful country into which he had come (v. 7). It will be seen that this important promise consisted of two parts, the one temporal, the other spiritual. The *temporal* was the promise of posterity, that he should be blessed himself, and be the founder of a great nation; the *spiritual*, that he should be the chosen ancestor of the Redeemer, who had been of old obscurely predicted (Gen. iii. 15), and thereby become the means of blessing all the families of the earth. The implied condition on his part was, that he should publicly profess the worship of the true God in this more tolerant land; and accordingly 'he built there an altar unto the Lord, who appeared unto him.' He soon after removed to the district between Bethel and Ai, where he also built an altar to that 'JEHOVAH' whom the world was then hastening to forget. His farther removals tended southward, until at length a famine in Palestine compelled him to withdraw into Egypt, where corn abounded. Here his apprehension that the beauty of his wife Sarai might bring him into danger with the dusky Egyptians, overcame his faith and rectitude, and he gave out that she was his sister. As he had feared, the beauty of the fair stranger excited the admiration of the Egyptians, and at length reached the ears of the king, who forthwith exercised his regal right of calling her to his harem, and to this Abraham, appearing as only her brother, was obliged to submit. As, however, the king had no intention to act harshly in the exercise of his privilege, he loaded Abraham with valuable gifts, suited to his condition, being chiefly in slaves and cattle. These presents could not have been refused by him without an insult which, under all the circumstances, the king did not deserve. A grievous disease inflicted on Pharaoh and his household relieved Sarai from her danger, by revealing to the king that she was a married woman; on which he sent for Abraham, and, after rebuking him for his conduct, restored his wife to him, and recommended him to withdraw from the country. He accordingly returned to the land of Canaan, much richer than when he left it 'in cattle, in silver, and in gold' (Gen. xii. 8; xiii. 2).

Lot also had much increased his possessions: and soon after their return to their previous station near Bethel, the disputes between their respective shepherds about water and pasturage soon taught them that they had better separate. The recent promise of posterity to Abraham himself, although his wife had been accounted barren, probably tended also in some degree to weaken the tie by which the uncle and nephew had hitherto been united. The subject was broached by Abraham, who generously conceded to Lot the choice of pasture-grounds. Lot chose the well-watered plain in which Sodom and other towns were situated, and removed thither [LOT]. Thus was accomplished the dissolution of a connection which had been formed before the promise of children was given, and the disruption of which appears to have been necessary for that complete isolation of the coming race which the Divine purpose required. Immediately afterwards the patriarch was cheered and encouraged by a more distinct and formal reiteration of the promises which had been previously made to him, of the occupation of the land in which he lived by a posterity numerous as the dust. Not long after, he removed to the pleasant valley of Mamre, in the neighbourhood of Hebron (then called Arba), and pitched his tent under a terebinth tree (Gen. xiii.).

It appears that fourteen years before this time the south and east of Palestine had been invaded by a king called Chedorlaomer, from beyond the Euphrates, who brought several of the small disunited states of those quarters under tribute. Among them were the five cities of the Plain of Sodom, to which Lot had withdrawn. This burden was borne impatiently by these states, and they at length withheld their tribute. This brought upon them a ravaging visitation from Chedorlaomer and four other (perhaps tributary) kings, who scoured the whole country east of the Jordan, and ended by defeating the kings of the plain, plundering their towns, and carrying the people away as slaves. Lot was among the sufferers. When this came to the ears of Abraham, he immediately armed such of his slaves as were fit for war, in number 318, and being joined by the friendly Amoritish chiefs, Aner, Eshcol, and Mamre, pursued the retiring invaders. They were overtaken near the springs of the Jordan; and their camp being attacked on opposite sides by night, they were thrown into disorder, and fled. Abraham and his men pursued them as far as the neighbourhood of Damascus, and then returned with all the men and goods which had been taken away. Although Abraham had no doubt been chiefly induced to undertake this exploit by his regard for Lot, it involved so large a benefit, that, as the act of a sojourner, it must have tended greatly to enhance the character and power of the patriarch in the view of the inhabitants at large. In fact, we afterwards find him treated by them with high respect and consideration. When they had arrived as far as Salem on their return, the king of that place, Melchizedek, who was one of the few native princes, if not the only one, who retained the knowledge and worship of 'the Most High God,' whom Abraham served, came forth to meet them with refreshments, in acknowledgment for which, and in recognition of his character, Abraham presented him with a tenth of the spoils. By strict right, founded on the war usages which still subsist in Arabia (Burckhardt's *Notes*, p. 97), the recovered goods became the property of Abraham, and not of those to whom they originally belonged. This was acknowledged by the king of Sodom, who met the victors in the valley near Salem. He said, 'Give me the persons, and keep the goods to thyself.' But with becoming pride, and with a disinterestedness which in that country would now be most unusual in similar circumstances, he answered, 'I have lifted up mine hand [i. e. I have sworn] unto Jehovah, the most high God, that I will not take from a thread even to a sandal-thong, and that I will not take any thing that is thine, *lest thou shouldest say, I have made Abram rich*' (Gen. xiv.).

Soon after his return to Mamre the faith of Abraham was rewarded and encouraged, not only by a more distinct and detailed repetition of the promises formerly made to him, but by the confirmation of a solemn covenant contracted, as nearly as might be, 'after the manner of men' [COVENANT] between him and God. It was now

that he first understood that his promised posterity were to grow up into a nation under foreign bondage; and that, in 400 years after (or, strictly, 405 years, counting from the birth of Isaac to the Exode), they should come forth from that bondage as a nation, to take possession of the land in which he sojourned (Gen. xiv.).

After ten years' residence in Canaan (B.C. 1913), Sarai, being then 75 years old, and having long been accounted barren, chose to put her own interpretation upon the promised blessing of a progeny to Abraham, and persuaded him to take her woman-slave Hagar, an Egyptian, as a secondary or concubine-wife, with the view that whatever child might proceed from this union should be accounted her own [HAGAR]. The son who was born to Abraham by Hagar, and who received the name of Ishmael [ISHMAEL], was accordingly brought up as the heir of his father and of the promises (Gen. xvi.). Thirteen years after (B.C. 1900), when Abraham was 99 years old, he was favoured with still more explicit declarations of the Divine purposes. He was reminded that the promise to him was that he should be the father of *many* nations; and to indicate this intention his name was now changed (as before described) from *Abram* to *Abraham*. The Divine Being then solemnly renewed the covenant to be a God to him and to the race that should spring from him; and in token of that covenant directed that he and his should receive in their flesh the sign of circumcision [CIRCUMCISION]. Abundant blessings were promised to Ishmael; but it was then first announced, in distinct terms, that the heir of the special promises was not yet born, and that the barren Sarai, then 90 years old, should twelve months thence be his mother. Then also her name was changed from Sarai to Sarah (*the princess*); and to commemorate the laughter with which the prostrate patriarch received such strange tidings, it was directed that the name of Isaac (*he laughed*) should be given to the future child. The very same day, in obedience to the Divine ordinance, Abraham himself, his son Ishmael, and his house-born and purchased slaves were all circumcised (Gen. xvii.).

Three months after this, as Abraham sat in his tent door during the heat of the day, he saw three travellers approaching, and hastened to meet them, and hospitably pressed upon them refreshment and rest. They assented, and under the shade of a terebinth tree partook of the abundant fare which the patriarch and his wife provided, while Abraham himself stood by in respectful attendance. From the manner in which one of the strangers spoke, Abraham soon gathered that his visitants were no other than the Lord himself and two attendant angels in human form. The promise of a son by Sarah was renewed; and when Sarah herself, who overheard this within the tent, laughed inwardly at the tidings, which, on account of her great age, she at first disbelieved, she incurred the striking rebuke, 'Is any thing too hard for Jehovah?' The strangers then addressed themselves to their journey, and Abraham walked some way with them. The two angels went forward in the direction of Sodom, while the Lord made known to him that, for their enormous iniquities, Sodom and the other 'cities of the plain' were about to be made signal monuments of his wrath and of his moral government. Moved by compassion and by remembrance of Lot, the patriarch ventured, reverently but perseveringly, to intercede for the doomed Sodom; and at length obtained a promise that, if but ten righteous men were found therein, the whole city should be saved for their sake. Early the next morning Abraham arose to ascertain the result of this concession: and when he looked towards Sodom, the smoke of its destruction, rising 'like the smoke of a furnace,' made known to him its terrible overthrow [SODOM]. He probably soon heard of Lot's escape: but the consternation which this event inspired in the neighbourhood induced him, almost immediately after, to remove farther off into the territories of Abimelech, king of Gerar. By a most extraordinary infatuation and lapse of faith, Abraham allowed himself to stoop to the same mean and foolish prevarication in denying his wife, which, twenty-three years before, had occasioned him so much trouble in Egypt. The result was also similar [ABIMELECH], except that Abraham answered to the rebuke of the Philistine by stating the fears by which he had been actuated—adding, 'And yet indeed she is my sister; she is the daughter of my father, but not the daughter of my mother; and she became my wife.' This mends the matter very little, since in calling her his sister he designed to be understood as saying she was *not* his wife. As he elsewhere calls Lot his 'brother,' this statement that Sarah was his 'sister' does not interfere with the probability that she was his niece.

The same year* Sarah gave birth to the long-promised son, and, according to previous direction, the name of Isaac was given to him [ISAAC]. This greatly altered the position of Ishmael, who had hitherto appeared as the heir both of the temporal and the spiritual heritage; whereas he had now to share the former, and could not but know that the latter was limited to Isaac. This appears to have created much ill-feeling both on his part and that of his mother towards the child; which was in some way manifested so pointedly, on occasion of the festivities which attended the weaning, that the wrath of Sarah was awakened, and she insisted that both Hagar and her son should be sent away. This was a very hard matter to a loving father; and Abraham was so much pained that he would probably have refused compliance with Sarah's wish, had he not been apprised in a dream that it was in accordance with the Divine intentions respecting both Ishmael and Isaac. With his habitual uncompromising obedience, he then hastened them away early in the morning, with provision for the journey. Their adventures belong to the article HAGAR.

When Isaac was about 20 years old (B.C. 1872) it pleased God to subject the faith of Abraham to a severer trial than it had yet sustained, or that has ever fallen to the lot of any other mortal man. He was commanded to go into the mountainous country of Moriah (probably where the temple afterwards stood), and there offer up in sacrifice the son of his affection, and the heir of so many hopes and

* It is, however, supposed by some biblical critics that the preceding adventure with Abimelech is related out of its order, and took place at an earlier date. Their chief reason is that Sarah was now 90 years of age. But the very few years by which such a supposition might reduce this age, seem scarcely worth the discussion [SARAH].

promises, which his death must nullify. It is probable that human sacrifices already existed; and as, when they did exist, the offering of an only or beloved child was considered the most meritorious, it may have seemed reasonable to Abraham that he should not withhold from his own God the costly sacrifice which the heathen offered to their idols. The trial and peculiar difficulty lay in the singular position of Isaac, and in the unlikelihood that his loss could be supplied. But Abraham's 'faith shrunk not, assured that what God had promised he would certainly perform, and that he was able to restore Isaac to him even from the dead' (Heb. xii. 17-19), and he rendered a ready, however painful, obedience. Assisted by two of his servants, he prepared wood suitable for the purpose, and without delay set out upon his melancholy journey. On the third day he descried the appointed place; and informing his attendants that he and his son would go some distance farther to worship, and then return, he proceeded to the spot. To the touching question of his son respecting the victim to be offered, the patriarch replied by expressing his faith that God himself would provide the sacrifice; and probably he availed himself of this opportunity of acquainting him with the Divine command. At least, that the communication was made either then or just after is unquestionable; for no one can suppose that a young man of twenty-five could, against his will, have been bound with cords and laid out as a victim on the wood of the altar. Isaac would most certainly have been slain by his father's uplifted hand, had not the angel of Jehovah interposed at the critical moment to arrest the fatal stroke. A ram which had become entangled in a thicket was seized and offered; and a name was given to the place (יהוה יראה, *Jehovah-Jireh*—'the Lord will provide') allusive to the believing answer which Abraham had given to his son's inquiry respecting the victim. The promises before made to Abraham—of numerous descendants, superior in power to their enemies, and of the blessings which his spiritual progeny, and especially the Messiah, were to extend to all mankind—were again confirmed in the most solemn manner; for Jehovah swore by himself (comp. Heb. vi. 13, 17), that such should be the rewards of his uncompromising obedience. The father and son then rejoined their servants, and returned rejoicing to Beersheba (Gen. xxi. 19).

Eight years after (B.C. 1860) Sarah died at the age of 120 years, being then at or near Hebron. This loss first taught Abraham the necessity of acquiring possession of a family sepulchre in the land of his sojourning. His choice fell on the cave of Machpelah [MACHPELAH], and after a striking negotiation with the owner in the gate of Hebron, he purchased it, and had it legally secured to him, with the field in which it stood and the trees that grew thereon. This was the only possession he ever had in the Land of Promise (Gen. xxiii.). The next care of Abraham was to provide a suitable wife for his son Isaac. It has always been the practice among pastoral tribes to keep up the family ties by intermarriages of blood-relations (Burckhardt, *Notes*, p. 154): and now Abraham had a further inducement in the desire to maintain the purity of the separated race from foreign and idolatrous connections. He therefore sent his aged and confidential steward Eliezer, under the bond of a solemn oath to discharge his mission faithfully, to renew the intercourse between his family and that of his brother Nahor, whom he had left behind in Charran. He prospered in his important mission [ISAAC], and in due time returned, bringing with him Rebekah, the daughter of Nahor's son Bethuel, who became the wife of Isaac, and was installed as chief lady of the camp, in the separate tent which Sarah had occupied (Gen. xxiv.). Some time after Abraham himself took a wife named Keturah, by whom he had several children. These, together with Ishmael, seem to have been portioned off by their father in his lifetime, and sent into the east and south-east, that there might be no danger of their interference with Isaac, the divinely appointed heir. There was time for this: for Abraham lived to the age of 175 years, 100 of which he had spent in the land of Canaan. He died in B.C. 1822 (Hales, 1978), and was buried by his two eldest sons in the family sepulchre which he had purchased of the Hittites (Gen. xxv. 1-10).

ABRAHAM'S BOSOM. There was no name which conveyed to the Jews the same associations as that of Abraham. As undoubtedly he was in the highest state of felicity of which departed spirits are capable, 'to be with Abraham' implied the enjoyment of the same felicity; and 'to be in Abraham's bosom' meant to be in repose and happiness with him. The latter phrase is obviously derived from the custom of sitting or reclining at table which prevailed among the Jews in and before the time of Christ [ACCUBATION]. By this arrangement, the head of one person was necessarily brought almost into the bosom of the one who sat above him, or at the top of the triclinium; and the guests were so arranged that the most favoured were placed so as to bring them into that situation with respect to the host (comp. John xiii. 23; xxi. 20). These Jewish images and modes of thought are amply illustrated by Lightfoot, Schoettgen, and Wetstein, who illustrate Scripture from Rabbinical sources. It was quite usual to describe a just person as being with Abraham, or lying on Abraham's bosom; and as such images were unobjectionable, Jesus accommodated his speech to them, to render himself the more intelligible by familiar notions, when, in the beautiful parable of the rich man and Lazarus, he describes the condition of the latter after death under these conditions (Luke xvi. 22, 23).

ABRECH (אַבְרֵךְ). This word occurs only in Gen. xli. 43, where it is used in proclaiming the authority of Joseph. Something similar happened in the case of Mordecai; but then several words were employed (Esth. vi. 11). If the word be Hebrew, it is probably an imperative of ברך in Hiphil, and would then mean, as in our version, 'bow the knee!' We are indeed assured by Wilkinson (*Anc. Egyptians*, ii. 24) that the word *abrek* is used to the present day by the Arabs, when requiring a camel to kneel and receive its load. But Luther and others suppose the word to be a compound of אב־רך, '*the father of the state*,' and to be of Chaldee origin. It is however probably Egyptian, and Dr. Lee is inclined with De Rossi (*Etym. Egypt.* p. 1) to repair to the Coptic, in which *Aberek* or *Abrek* means '*bow the head*.' It is right to add, that Origen, a native of Egypt, and Jerome, both of whom knew the Semitic languages, concur in the

opinion that *Abrech* means 'a native Egyptian;' and when we consider how important it was that Joseph should cease to be regarded as a foreigner [ABOMINATION], it has in this sense an importance and significance which no other interpretation conveys. It amounts to a proclamation of naturalization, which, among such a people as the Egyptians, was essential to enable Joseph to work out the great plan he had undertaken. We believe however that it is not now possible to determine the signification of the word with certainty.

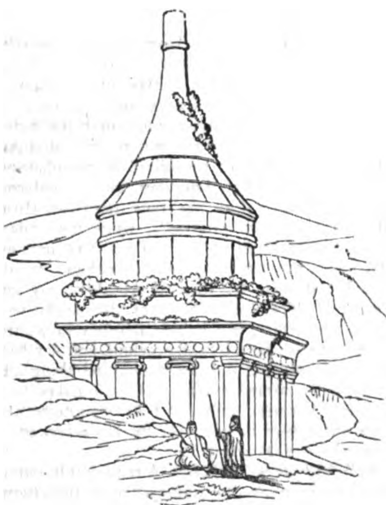
ABSALOM (אַבְשָׁלוֹם, *father of peace;* Sept. Ἀβεσσαλώμ; Vulg. *Absalon*), the third son of David, and his only son by Maachah, daughter of Talmai, king of Geshur (2 Sam. iii. 3). He was deemed the handsomest man in the kingdom; and was particularly noted for the profusion of his beautiful hair, which appears to have been regarded with great admiration; but of which we can know nothing with certainty, except that it was very fine and very ample. We are told that when its inconvenient weight compelled him at times (מקץ ימים לימים does not necessarily mean 'every year,' as in the A.V.) to cut it off, it was found to weigh '200 shekels after the king's weight;' but as this has been interpreted as high as 112 ounces (Geddes) and as low as 7½ ounces (A. Clarke), we may be content to understand that it means a quantity unusually large. David's other child by Maachah was a daughter named Tamar, who was also very beautiful. She became the object of lustful regard to her half-brother Amnon, David's eldest son; and was violated by him. In all cases where polygamy is allowed, we find that the honour of a sister is in the guardianship of her full brother, more even than in that of her father, whose interest in her is considered less peculiar and intimate. We trace this notion even in the time of Jacob (Gen. xxxiv. 6, 13, 25, sqq.). So in this case the wrong of Tamar was taken up by Absalom, who kept her secluded in his own house, and said nothing for the present, but brooded silently over the wrong he had sustained and the vengeance which devolved upon him. It was not until two years had passed, and when this wound seemed to have been healed, that Absalom found opportunity for the bloody revenge he had meditated. He then held a great sheep-shearing feast at Baal-hazor near Ephraim, to which he invited all the king's sons; and, to lull suspicion, he also solicited the presence of his father. As he expected, David declined for himself, but allowed Amnon and the other princes to attend. They feasted together; and, when they were warm with wine, Amnon was set upon and slain by the servants of Absalom, according to the previous directions of their master. Horror-struck at the deed, and not knowing but that they were included in the doom, the other princes took to their mules and fled to Jerusalem, filling the king with grief and horror by the tidings which they brought. As for Absalom, he hastened to Geshur and remained there three years with his father-in-law, king Talmai.

Now it happened that Absalom, with all his faults, was eminently dear to the heart of his father. His beauty, his spirit, his royal birth, may be supposed to have drawn to him those fond paternal feelings which he knew not how to appreciate. At all events, David mourned every day after the banished fratricide, whom a regard for public opinion and a just horror of his crime forbade him to recall. His secret wishes to have home his beloved though guilty son were however discerned by Joab, who employed a clever woman of Tekoah to lay a supposed case before him for judgment; and she applied the anticipated decision so adroitly to the case of Absalom, that the king discovered the object and detected the interposition of Joab. Regarding this as in some degree expressing the sanction of public opinion, David gladly commissioned Joab to 'call home his banished.' Absalom returned; but David, still mindful of his duties as a king and father, controlled the impulse of his feelings, and declined to admit him to his presence. After two years, however, Absalom, impatient of his disgrace, found means to compel the attention of Joab to his case; and through his means a complete reconciliation was effected, and the father once more indulged himself with the presence of his son (2 Sam. xiii. xiv.).

The position at this time occupied by Absalom was very peculiar, and the view of it enables us to discover how far the general Oriental laws of primogeniture were affected by the peculiar conditions of the Hebrew constitution. At the outset he was the third son of David, Amnon and Chileab being his elder brothers. But it was possible that he might even then, while they lived, consider himself entitled to the succession; and Oriental usage would not have discountenanced the pretension. He alone was of royal descent by the side of his mother; and royal or noble descent by the mother is even now (as we see by the recent instance of Abbas Meerza in Persia) of itself a sufficient ground of preference over an elder brother whose maternal descent is less distinguished. This circumstance, illustrated by Absalom's subsequent conduct, may suggest that he early entertained a design upon the succession to the throne, and that the removal of Amnon was quite as much an act of policy as of revenge. The other elder brother, Chileab, appears to have died: and if the claims of Absalom, or rather his grounds of pretension, were so important while Amnon and Chileab lived, his position must have been greatly strengthened when, on his return from exile, he found himself the eldest surviving son, and, according to the ordinary laws of primogeniture, the heir apparent of the crown. Such being his position, and his father being old, it would seem difficult at the first view to assign a motive for the conspiracy against the crown and life of his indulgent father, in which we soon after find him engaged. It is then to be considered that the king had a dispensing power, and was at liberty, according to all Oriental usage, to pass by the eldest son and to nominate a younger to the succession. This could not have affected Absalom, as there is every reason to think that David, if left to himself, would have been glad to have seen the rule of succession take its *ordinary* course in favour of his best loved son. But then, again, under the peculiar theocratical institutions of the Hebrews, the Divine king reserved and exercised a power of dispensation, over which the human king, or viceroy, had no control. The house of David was established as a reigning dynasty; and although the law of

primogeniture was allowed eventually to take in general its due course, the Divine king reserved the power of appointing any member of that house whom he might prefer. That power had been exercised in the family of David by the preference of Solomon, who was at this time a child, as the successor of his father. David had known many years before that his dynasty was to be established in a son not yet born (2 Sam. vii. 12); and when Solomon was born, he could not be ignorant, even if not specially instructed, that *he* was the destined heir. This fact must have been known to many others as the child grew up, and probably the mass of the nation was cognizant of it. In this we find a clear motive for the rebellion of Absalom—to secure the throne which he deemed to be his right by the laws of primogeniture, during the lifetime of his father; lest delay, while awaiting the natural term of his days, should so strengthen the cause of Solomon with his years, as to place his succession beyond all contest.

The fine person of Absalom, his superior birth, and his natural claim, pre-disposed the people to regard his pretensions with favour: and this predisposition was strengthened by the measures which he took to win their regard. In the first place he insinuated that he was the heir apparent, by the state and attendance with which he appeared in public; while that very state the more enhanced the show of condescending sympathy with which he accosted the suitors who repaired for justice or favour to the royal audience, inquired into their various cases, and hinted at the fine things which might be expected if he were on the throne, and had the power of accomplishing his own large and generous purposes. By these influences 'he stole the hearts of the men of Israel;' and when at length, four years after his return from Geshur, he repaired to Hebron and there proclaimed himself king, the great body of the people declared for him. So strong ran the tide of opinion in his favour, that David found it expedient to quit Jerusalem and retire to Mahanaim, beyond the Jordan.

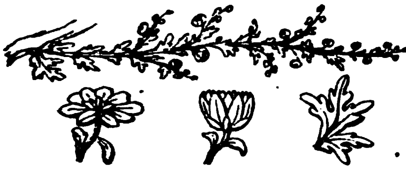


When Absalom heard of this, he proceeded to Jerusalem and took possession of the throne without opposition. Among those who had joined him was Ahithophel, who had been David's counsellor, and whose profound sagacity caused his counsels to be regarded like oracles in Israel. This defection alarmed David more than any other single circumstance in the affair, and he persuaded his friend Hushai to go and join Absalom, in the hope that he might be made instrumental in turning the sagacious counsels of Ahithophel to foolishness. The first piece of advice which Ahithophel gave Absalom was that he should publicly take possession of that portion of his father's harem which had been left behind in Jerusalem. This was not only a mode by which the succession to the throne might be confirmed [ABISHAG: comp. Herodotus, iii. 68], but in the present case, as suggested by the wily counsellor, this villanous measure would dispose the people to throw themselves the more unreservedly into his cause, from the assurance that no possibility of reconcilement between him and his father remained. Hushai had not then arrived. Soon after he came, when a council of war was held, to consider the course of operations to be taken against David. Ahithophel counselled that the king should be pursued that very night, and smitten, while he was 'weary and weak handed, and before he had time to recover strength.' Hushai, however, whose object was to gain time for David, speciously urged, from the known valour of the king, the possibility and fatal consequences of a defeat, and advised that all Israel should be assembled against him in such force as it would be impossible for him to withstand. Fatally for Absalom, the counsel of Hushai was preferred to that of Ahithophel; and time was thus given to enable the king, by the help of his influential followers, to collect his resources, as well as to give the people time to reflect upon the undertaking in which so many of them had embarked. The king soon raised a large force, which he properly organized and separated into three divisions, commanded severally by Joab, Abishai, and Ittai of Gath. The king himself intended to take the chief command; but the people refused to allow him to risk his valued life, and the command then devolved upon Joab. The battle took place in the borders of the forest of Ephraim; and the tactics of Joab, in drawing the enemy into the wood, and there hemming them in, so that they were destroyed with ease, eventually, under the providence of God, decided the action against Absalom. Twenty thousand of his troops were slain, and the rest fled to their homes. Absalom himself fled on a swift mule; but as he went, the boughs of a terebinth tree caught the long hair in which he gloried, and he was left suspended there. The charge which David had given to the troops to respect the life of Absalom prevented any one from slaying him: but when Joab heard of it, he hastened to the spot, and pierced him through with three darts. His body was then taken down and cast into a pit there in the forest, and a heap of stones was raised upon it.

David's fondness for Absalom was unextinguished by all that had passed; and as he sat, awaiting tidings of the battle, at the gate of Mahanaim, he was probably more anxious to learn that Absalom lived, than that the battle was gained; and no sooner did he hear that Absalom was dead, than he retired to the chamber above the gate, to give vent to his paternal anguish. The victors, as they returned, slunk into the town like criminals, when they heard the bitter wailings of the king:—'O my son Absalom! my son, my son Absalom! would God I had died for thee, O Absalom, my son, my son!' The consequences of this weakness—not in his feeling, but in the inability to control it—might have been most dangerous, had not Joab gone up to him, and, after sharply rebuking him for thus discouraging those who had risked their lives in his cause, induced him to go down and cheer the returning warriors by his presence (2 Sam. xiii.-xix. 8).

ABSALOM'S TOMB. A remarkable monument bearing this name makes a conspicuous figure in the Valley of Jehoshaphat, outside Jerusalem; and it has been noticed and described by almost all travellers. It is close by the lower bridge over the Kedron, and is a square isolated block hewn out from the rocky ledge so as to leave an area or niche around it. The body of this monument is about 24 feet square, and is ornamented on each side with two columns and two half co-

lumns of the Ionic order, with pilasters at the corners. The architrave exhibits triglyphs and Doric ornaments. The elevation is about 18 or 20 feet to the top of the architrave, and thus far it is wholly cut from the rock. But the adjacent rock is here not so high as in the adjoining tomb of Zecharias (so called), and therefore the upper part of the tomb has been carried up with mason-work of large stones. This consists, first, of two square layers, of which the upper one is smaller than the lower; and then a small dome or cupola runs up into a low spire, which appears to have spread out a little at the top, like an opening flame. This mason-work is perhaps 20 feet high, giving to the whole an elevation of about 40 feet. There is a small excavated chamber in the body of the tomb, into which a hole had been broken through one of the sides several centuries ago.



The old travellers who refer to this tomb, as well as Calmet after them, are satisfied that they find the history of it in 2 Sam. xviii. 18, which states that Absalom, having no son, built a monument to keep his name in remembrance, and that this monument was called 'Absalom's Hand'—that is, *index*, *memorial*, or *monument* [HAND]. With our later knowledge, a glance at this and the other monolithic tomb bearing the name of Zecharias, is quite enough to show that they had no connection with the times of the persons whose names have been given to them. 'The style of architecture and embellishment,' writes Dr. Robinson, 'shows that they are of a later period than most of the other countless sepulchres round about the city, which, with few exceptions, are destitute of architectural ornament. Yet, the foreign ecclesiastics, who crowded to Jerusalem in the fourth century, found these

monuments here; and of course it became an object to refer them to persons mentioned in the Scriptures. Yet, from that day to this, tradition seems never to have become fully settled as to the individuals whose names they should bear. The *Itin. Hieros.* in A.D. 333, speaks of the two monolithic monuments as the tombs of Isaiah and Hezekiah. Adamnus, about A.D. 697, mentions only one of these, and calls it the tomb of Jehoshaphat. . . . . . The historians of the Crusades appear not to have noticed these tombs. The first mention of a tomb of Absalom is by Benjamin of Tudela, who gives to the other the name of King Uzziah; and from that time to the present day the accounts of travellers have been varying and inconsistent' (*Biblical Researches*, i. 519, 520). The remarks of professed architects on things requiring a real knowledge of the Scriptures and of the ancient Hebrews, are generally so unsound and trivial that little can be expected from them in such matters. Yet with the clear information on some points which we now possess, it is surprising to hear so learned an architect as Professor Cockerell speak of this alleged tomb of Absalom as a most precious monument of antiquity, and insist on its undoubted identity, and its 'perfect correspondence with holy writ' (*Athenæum*, Jan. 28, 1843); which holy writ says no more than that Absalom *did erect some monument*.

ABSINTHIUM (Ἀψίνθιον in New Test., by which also the Sept. renders the Heb. לַעֲנָה; A.V. *wormwood*). This proverbially bitter plant is used in the Hebrew, as in most other languages, metaphorically, to denote the moral bitterness of distress and trouble (Deut. xxix. 17; Prov. v 4; Jer. ix. 14; xxiii. 15; Lam. iii. 15, 19; Amos v. 7; vi. 12). Thence also the name given to the fatal star in Rev. viii. 10, 11. *Artemisia* is the botanical name of the genus of plants in which the different species of wormwoods are found. The plants of this genus are easily recognised by the multitude of fine divisions into which the leaves are usually separated, and the numerous clusters of small, round, drooping, greenish-yellow, or brownish flower-heads with which the branches are laden. It must be understood that our common wormwood (*Artemisia absinthium*) does not appear to exist in Palestine, and cannot therefore be that specially denoted by the Scriptural term. Indeed it is more than probable that the word is intended to apply to *all* the plants of this class that grew in Palestine, rather than to any one of them in particular. The examples of this genus that have been found in that country are:—1. *Artemisia Judaica*, which, if a particular species be intended, is probably the Absinthium of Scripture. Rauwolff found it about Bethlehem, and Shaw in Arabia and the deserts of Numidia plentifully. This plant is erect and shrubby, with stem about eighteen inches high. Its taste is very bitter; and both the leaves and seeds are much used in Eastern medicine, and are reputed to be tonic, stomachic, and anthelmintic. 2. *Artemisia Romana*, which was found by Hasselquist on Mount Tabor (p. 281). This species is herbaceous, erect, with stem one or two feet high (higher when cultivated in gardens), and nearly upright branches. The plant has a pleasantly aromatic scent; and the bitterness of its taste is so tempered by the aromatic flavour as scarcely to be disagreeable. 3. *Artemisia abrotanum*, found in the south of Europe, as well as in Syria and Palestine, and eastward even to China. This is a hoary plant, becoming a shrub in warm countries; and its branches bear loose panicles of nodding yellow flower-heads. It is bitter and aromatic, with a very strong scent. It is not much used in

medicine; but the branches are employed in imparting a yellow dye to wool.

[Artemisia Judaica.]

ABSTINENCE is a refraining from the use of certain articles of food usually eaten; or from all food during a certain time for some particular object. It is distinguished from TEMPERANCE, which is moderation in ordinary food; and from FASTING, which is abstinence from a religious motive. The first example of abstinence which occurs in Scripture is that in which the use of blood is forbidden to Noah (Gen. ix. 20) [BLOOD]. The next is that mentioned in Gen. xxxii. 32: 'The children of Israel eat not of the sinew which shrank, which is upon the hollow of the thigh, *unto this day*, because he (the angel) touched the hollow of Jacob's thigh in the sinew that shrank.' This practice of particular and commemorative abstinence is here mentioned by anticipation long after the date of the fact referred to, as the phrase 'unto this day' intimates. No actual instance of the practice occurs in the Scripture itself, but the usage has always been kept up; and to the present day the Jews generally abstain from the whole hind-quarter on account of the trouble and expense of extracting the particular sinew (Allen's *Modern Judaism*, p. 421). By the law, abstinence from blood was confirmed, and the use of the flesh of even lawful animals was forbidden, if the manner of their death rendered it impossible that they should be, or uncertain that they were, duly exsanguinated (Exod. xxii. 31; Deut. xiv. 21). A broad rule was also laid down by the law, defining whole classes of animals that might not be eaten (Lev. xi.) [ANIMAL; FOOD]. Certain parts of lawful animals, as being sacred to the altar, were also interdicted. These were the large lobe of the liver, the kidneys and the fat upon them, as well as the tail of the 'fat-tailed' sheep (Lev. iii. 9-11). Everything consecrated to idols was also forbidden (Exod. xxxiv. 15). In conformity with these rules the Israelites abstained generally from food which was more or less in use among other people. Instances of abstinence from allowed food are not frequent, except in commemorative or afflictive fasts. The forty days' abstinence of Moses, Elijah, and Jesus are peculiar cases requiring to be separately considered [FASTING]. The priests were commanded to abstain from wine previous to their actual ministrations (Lev. x. 9), and the same abstinence was enjoined to the Nazarites during the whole period of their separation (Num. vi. 5). A constant abstinence of this kind was, at a later period, voluntarily undertaken by the Rechabites (Jer. xxxv. 16, 18). Among the early Christian converts there were some who deemed themselves bound to adhere to the Mosaical limitations regarding food, and they accordingly abstained from flesh sacrificed to idols, as well as from animals which the law accounted unclean; while others contemned this as a weakness, and exulted in the liberty wherewith Christ had made his followers free. This question was repeatedly referred to St. Paul, who laid down some admirable rules on the subject, the purport of which was, that every one was at liberty to act in this matter according to the dictates of his own conscience; but that the strong-minded had better abstain from the exercise of the freedom they possessed, whenever it might prove an occasion of stumbling to a weak brother (Rom. xiv. 1-3; 1 Cor. viii.). In another place the same apostle reproves certain sectaries who should arise, forbidding marriage and enjoining abstinence from meats which God had created to be received with thanksgiving (1 Tim. iv. 3, 4). The council of the apostles at Jerusalem decided that no other abstinence regarding food should be imposed upon the converts than 'from meats offered to idols, from blood, and from things strangled' (Acts xv. 29).

The Essenes, a sect among the Jews which is not mentioned by name in the Scriptures, led a more abstinent life than any recorded in the sacred books. As there is an account of them elsewhere [ESSENES], it is only necessary to mention here that they refused all pleasant food, eating nothing but coarse bread and drinking only water; and that some of them abstained from food altogether until after the sun had set (Philo, *De Vita Contemplativâ*, p. 692, 696).

That abstinence from ordinary food was practised by the Jews medicinally is not shown in Scripture, but is more than probable, not only as a dictate of nature, but as a common practice of their Egyptian neighbours, who, we are informed by Diodorus (i. 82), 'being persuaded that the majority of diseases proceed from indigestion and excess of eating, had frequent recourse to *abstinence*, emetics, slight doses of medicine, and other simple means of relieving the system, which some persons were in the habit of repeating every two or three days.'

ABYSS (Ἄβυσσος). The Greek word means literally '*without bottom*,' but actually *deep, profound*. It is used in the Sept. for the Hebrew תהום, which we find applied either to the ocean (Gen. i. 2; vii. 11), or to the under world (Ps. lxxi. 21; cvii. 26). In the New Testament it is used as a noun to describe Hades, or the place of the dead generally (Rom. x. 7); but more especially that part of Hades in which the souls of the wicked were supposed to be confined (Luke viii. 31; Rev. ix. 1, 2, 11; xx. 1, 3; comp. 2 Pet. ii. 4). In the Revelation the authorized version invariably renders it 'bottomless pit,' elsewhere 'deep.'

Most of these uses of the word are explained by reference to some of the cosmological notions which the Hebrews entertained in common with other Eastern nations. It was believed that the abyss, or sea of fathomless waters, encompassed the whole earth. The earth floated on the abyss, of which it covered only a small part. According to the same notion, the earth was founded upon the waters, or, at least, had its foundations in the abyss beneath (Ps. xxiv. 2; cxxxvi. 6). Under these waters, and at the bottom of the abyss, the wicked were represented as groaning, and undergoing the punishment of their sins.

There were confined the Rephaim—those old giants who while living caused surrounding nations to tremble (Prov. ix. 18; xxix. 16). In those dark regions the sovereigns of Tyre, Babylon, and Egypt are described by the prophets as undergoing the punishment of their cruelty and pride (Jer. xxvi. 14; Ezek. xxviii. 10, &c.). This was 'the deep' into which the evil spirits in Luke, viii. 31, besought that they might not be cast, and which was evidently dreaded by them [COSMOGONY; HADES].

The notion of such an abyss was by no means confined to the East. It was equally entertained by the Celtic Druids, who held that *Annwn* (the deep, the low port), the abyss from which the earth arose, was the abode of the evil principle (Gwarthawn), and the place of departed spirits, comprehending both the Elysium and the Tartarus of antiquity. With them also wandering spirits were called *Plant annwn*, 'the children of the deep' (Davis's *Celtic Researches*, p. 175; *Myth. and Rites of the B. Druids*, p. 49).

ABYSSINIA. 'There is no part of Africa, Egypt being excepted, the history of which is connected with so many objects of interest as Abyssinia. A region of Alpine mountains, ever difficult of access by its nature and peculiar situation, concealing in its bosom the long-sought sources of the Nile, and the still more mysterious origin of its singular people, Abyssinia has alone preserved, in the heart of Africa, its peculiar literature and its ancient Christian church. What is still more remarkable, it has preserved existing remains of a previously existing and wide-spread Judaism, and with a language approaching more than any living tongue to the Hebrew, a state of manners, and a peculiar character of its people, which represent in these latter days the habits and customs of the ancient Israelites in the times of Gideon and of Joshua. So striking is the re-

Female. Priests. Warrior.

semblance between the modern Abyssinians and the Hebrews of old, that we can hardly look upon them but as branches of one nation; and if we had not convincing evidence to the contrary, and knew not for certain that the Abrahamidæ originated in Chaldea, and to the northward and eastward of Palestine, we might frame a very probable hypothesis, which should bring them down as a band of wandering shepherds from the mountains of Habesh (Abyssinia), and identify them with the pastor kings, who, according to Manetho, multiplied their bands of the Pharaohs, and being, after some centuries, expelled thence by the will of the gods, sought refuge in Judea, and built the walls of Jerusalem. Such an hypothesis would explain the existence of an almost Israelitish people, and the preservation of a language so nearly approaching to the Hebrew, in intertropical Africa. It is certainly untrue, and we find no other easy explanation of the facts which the history of Abyssinia presents, and particularly the early extension of the Jewish religion and customs through that country' Prichard's *Physical History of Man*, pp. 279, 280).

The above paragraph will suggest the grounds which appear to entitle Abyssinia to a place in a Biblical Cyclopædia. But as the country has no physical connection with Palestine—which is, geographically, our central object—a particular description of it is not necessary, and it will suffice to notice the points of inquiry suggested by the quotation. A brief outline is all that seems requisite.

'ABYSSINIA' is an European improvement upon the native name of 'HABESH.' That this country lies to the south of Nubia, which separates it from Egypt, and to the east of the Gulf of Bab-el-Mandah and the southern part of the Arabian sea, will sufficiently indicate its position. Abyssinia is a high country, which has been compared by Humboldt to the lofty Plain of Quito. By one of those beautiful synthetical operations of which his writings offer so many examples, the greatest living geographer, Carl Ritter of Berlin, has established, from the writings of various travellers, that the high country of Habesh consists of three terraces, or distinct table-lands, rising one above another, and of which the several grades of ascent offer themselves in succession to the traveller as he advances from the shores of the Red Sea (*Erdkunde*, th. i. s. 168). The *first* of these levels is the plain of Baharnegash: the *second* level is the plain and kingdom of Tigré, which formerly contained the kingdom of Axum: the *third* level is High Abyssinia, or the kingdom of Ambara. This name of Amhara is now given to the whole kingdom, of which Gondar is the capital, and where the Amharic language is spoken, eastward of the Takazzé. Ambara Proper is, however, a mountainous province to the south-east, in the centre of which was Tegulat, the ancient capital of the empire, and at one period the centre of the civilization of Abyssinia. This province is now in the possession of the Gallas, a barbarous people who have overcome all the southern parts of Habesh. The present kingdom of Amhara is the heart of Abyssinia, and the abode of the emperor, or *Negush*. It contains the upper course of the Nile, the valley of Dembea, and the lake Tzana, near which is the royal city of Gondar, and likewise the high region of Gojam, which Bruce states to be at least two miles above the level of the sea.

Abyssinia is inhabited by several distinct races, who are commonly included under the name of Habesh or Abyssins. They are clearly distin-

guished from each other by their languages, but have more or less resemblance in manners and physical character. These races are—1. The *Tigrani*, or Abyssins of the kingdom of Tigré, which nearly coincides in extent with the old kingdom of Axum. They speak a language called by Tellez and Ludolph *lingua Tigrania*. It is a corruption or modern dialect of the Gheez or old Ethiopic, which was the ancient vernacular tongue of the province; but is now a dead language consecrated to literature and religious uses [ETHIOPIC LANGUAGE], and the modern language of Tigré has been for more than five centuries merely an oral dialect. 2. The *Amharas*, who have been for ages the dominant people in Abyssinia; the genuine Amhara being considered as a higher and nobler caste, as the military and royal tribe. Their language—the Amharic—now extends over all the eastern parts of Abyssinia, including various provinces, some of which appear at one time to have had vernacular languages of their own. 3. The *Agows*, which name is borne by two tribes, who speak different languages and inhabit different parts of Abyssinia. These are the Agows of Damot, one of the most extensive of the southern provinces, where they are settled about the sources and on the banks of the Nile; and the Agows of Lasta, who, according to Bruce, are Troglodytes, living in caverns and paying the same adoration to the river Takazzé which those of Damot pay to the Nile. These last are called by Salt the Agows of Takazzé; and although they scarcely differ from the other Abyssinians in physical character, their language shows them to be a distinct race from the *Persian* as well as from the Amhara. 4. The *Falasha*, a people whose present condition suggests many curious inquiries, and the investigation of whose history may hereafter throw light upon that of the Abyssins, and of their literature and ecclesiastical antiquities. They all profess the Jewish religion, and probably did so before the era of the conversion of the Abyssins to Christianity. They themselves profess to derive their origin from Palestine; but their language, which is said to have no affinity with the Hebrew, seems sufficiently to refute this pretension (Vater, *Mithridates*, t. iii.) According to Bruce, the Falasha were very powerful at the time of the conversion of the Abyssins to Christianity. They were formerly a caste of potters and tile-makers in the low country of Dembea, but, owing to religious animosities, and being weakened by long wars, they were driven out thence, and took refuge among rugged and almost inaccessible rocks, in the high ridge called the mountains of Samen, where they live under princes of their own, bearing Hebrew names, and paying tribute to the Negush. It is conjectured that the Falasha and the Agows were at one time the principal inhabitants of the south-eastern parts of Abyssinia. 5. The *Gafats*, a pagan tribe, with a distinct language, living on the southern banks of the Nile, near Damot. 6. The *Gongas* and *Enareans*. The former inhabit the province of Gonga, and have a language distinct from all the preceding, but the same which is spoken by the people of Narea, or Enarea, to the southward of Habesh. 7. To these we should perhaps now add the *Gallas*, a race of wandering herdsmen, extensively spread in eastern intertropical Africa, who have become, during the last century, very formidable by their numbers, and threaten to overwhelm the Abyssinian empire.

The Abyssinians are to be regarded as belonging to the *black* races of men, but this is to be received with some explanation. Without entering into particulars, it may be observed, after Rüppell (*Reise in Abyssinien*), that there are two physical types prevalent among the Abyssinians. The greater number are a finely-formed people of the European type, having a countenance and features precisely resembling those of the Bedouins of Arabia. To this class belong most of the inhabitants of the high mountains of Samen, and of the plains around Lake Tzana, as well as the Falasha, or Jews, the heathen Gafats, and the Agows, notwithstanding the variety of their dialects. The other and very large division of the Abyssinian people is identified, as far as physical traits are concerned, with the race which has been distinguished by the name of Ethiopian. This race is indicated by a somewhat flattened nose, thick lips, long and rather dull eyes, and by very strongly crisped and almost woolly hair, which stands very thickly upon the head. They are therefore one of the connecting links between the Arabian and the Negro races, being separated from the former by a somewhat broader line than from the latter. In their essential characteristics they agree with the Nubians, Berberines, and native Egyptians (Prichard's *Nat. Hist. of Man*, p. 285).

Abyssinia has for ages been united under one governor, who during the earliest periods resided at Axum, the ancient capital of Tigré; but who for some centuries past has resided at Gondar, a more central part of the kingdom. For ages also the Abyssins have been Christians, but with a strange mixture of the Judaism which appears to have been previously professed, and with the exceptions which have been already indicated. Tigré, in which was the ancient capital of the empire, was the country in which Judaism appears to have been in former times the most prevalent. It was also the country which possessed, in the Gheez or ancient Ethiopic, a Semitic language. It was, moreover, the seat of civilization, which, it is important to observe, appears to have been derived from the opposite coast of Arabia, and to have had nothing Egyptian or Nubian in its character.

These observations have brought us back again to the difficulty stated at the commencement of this article, in the words of Dr. Prichard, which has hitherto been considered insuperable. There is no doubt, however, that this difficulty has chiefly arisen from attempting to explain *all* the phenomena on a single principle; whereas two causes at least contributed to produce them, as the following remarks will clearly show:—

The former profession of Judaism in the country is sufficient to account for the class of observances and notions derivable from the Jewish ritual, which are very numerous, and appear singular, mixed up as they are with a professedly Christian faith. This, however, does not account for Jewish manners and customs, or for the existence of a language so much resembling the Hebrew, and so truly a Semitic dialect as the Gheez, or old Ethiopian. For nations may adopt a foreign religion, and maintain the usages

arising from it, without any marked change of their customs or language. But all which this leaves unsolved may, to our apprehension, be very satisfactorily accounted for by the now generally admitted fact, that at least the people of Tigré, who possessed a Semitic language so nearly resembling the Hebrew, are a Semitic colony, who imported into Abyssinia not only a Semitic language, but Semitic manners, usages, and modes of thought. Whether this may or may not be true of the Amhara also, depends in a great degree upon the conclusion that may be reached respecting the Amharic language, which, through the large admixture of Ethiopic and Arabic words, has a Semitic appearance, but may, notwithstanding, prove to be fundamentally African. At all events, the extent to which the Gheez language has operated upon it would afford a proof of the influence of the Semitic colony upon the native population: which is all that can reasonably be desired to account for the phenomena which have excited so much inquiry and attention.

If it should be objected that it is not sufficient to identify as Semitic the manners and usages which have been described as Hebrew, we would beg to call attention to that passage, in the commencing extract, which, with an unintended significance, intimates that these customs are those of the early times of Gideon and Joshua, when the Hebrews had not been long subject to the peculiar modifying influences of the Mosaical institutions. This is very much the same as to say that the customs and usages in view are in accordance with the general type of Semitic manners, rather than with the particular type which the Mosaical institutions produced; or, in other words, that they resemble the manners of the Hebrews most when those manners had least departed from the general standard of usages which prevailed among the Semitic family of nations. They are, therefore, less Hebrew manners than Semitic manners, and, as such, are accounted for by the presence of Semitic races in the country. In point of fact, travellers who derive their first notions of the East from the Bible, when they come among a strange people, are too ready to set down as *specifically* Hebrew some of the more striking usages which attract their notice; whereas, in fact, they are generically *Oriental*, or at least Semitic, and are Hebrew also merely because the Hebrews were an Oriental people, and had Oriental features, habits, and usages. Our conclusion, then, is, that the former prevalence of the Jewish religion in Abyssinia accounts for the existence of the Jewish ritual usages; and that the presence of one (perhaps more than one) paramount Semitic colony accounts for the existence, in this quarter, of a Semitic language, and Semitic (and therefore Hebrew) manners and usages. We entertain a very strong conviction that this conclusion will be corroborated by all the research into Abyssinian history and antiquities which may hereafter be made.

Having thus considered the question which alone authorized the introduction of this article, we reserve for other articles [CANDACE; ETHIOPIA; SHEBA, QUEEN OF] some questions connected with other points in the history of Abyssinia, especially the introduction of Judaism into that country. Of the numerous books which have been written respecting Abyssinia, the *Histories* of Tellez and Ludolph, and the *Travels* of Kramp, Bruce, Salt, and Ruppell, are the most important: and an admirable digest of existing information may be found in Ritter's *Erdkunde*, th. i., and (as far as regards ethnography and languages) in Prichard's *Researches*, vol. ii. ch. vi., and his *Natural History of Man*, sect. 26.

ACCAD (אַכַּד; Sept. 'Αρχάδ), one of the five cities in 'the land of Shinar,' or Babylonia, which are said to have been built by Nimrod, or rather to have been 'the beginning of his kingdom' (Gen. x. 10). Their situation has been much disputed. Ælian (*De Animal.* xvi. 42) mentions that in the district of Sittacene was a river called 'Αργάδης, which is so near the name 'Αρχάδ which the LXX. give to this city, that Bochart was induced to fix Accad upon that river (*Phaleg.* iv. 17). It seems that several of the ancient translators found in their Hebrew MSS. Achar (אכר) instead of Accad (אכד) (Ephrem Syrus, Pseudo-Jonathan, *Targum Hieros.*, Jerome, Abulfaragi, &c.); and the ease with which the similar letters ד and ר might be interchanged in copying, leaves it doubtful which was the real name. Achar was the ancient name of Nisibis; and hence the Targumists give Nisibis or Nisibin (נציבין) for Accad, and they continued to be identified by the Jewish literati in the times of Jerome. But the Jewish literati have always been deplorable geographers, and their unsupported conclusions are worth very little. Nisibis is unquestionably too remote northward to be associated with Babel, Erech, and Calneh, '*in the land of Shinar*.' These towns could not have been very distant from each other; and when to the analogy of names we can add that of situation and of tradition, a strong claim to identity is established. These circumstances unite at a place in the ancient Sittacene, to which Bochart had been led by other analogies. The probability that the original name was *Achar* having been established, the attention is naturally drawn to the remarkable pile of ancient buildings called *Akker-koof*, in Sittacene, and which the Turks know as *Akker-i-Nimrood* and *Akker-i-Babil*. Col. Taylor, the British resident at Baghdad, who has given much attention to the subject, was the first to make out this identification, and to collect evidence in support of it; and to his unpublished communications the writer and other recent travellers are indebted for their statements on the subject. The Babylonian Talmud might be expected to mention the site; and it occurs accordingly under the name of *Aggada*. It occurs also in Maimonides (*Jud. Chaz. Tract. Madee*, fol. 25, as quoted by Hyde), who says, 'Abraham xl. annos natus cognovit creatorem suum'; and immediately adds, 'Extat Aggada tres annos natus.'

Akker-koof is about nine miles west of the Tigris, at the spot where that river makes its nearest approach to the Euphrates. The heap of ruins to which the name of Nimrod's Hill—*Tel-i-Nimrood*, is more especially appropriated, consists of a mound surmounted by a mass of brick-work, which looks like either a tower or an irregular pyramid, according to the point from which it is viewed. It is about 400 feet in circumference at the bottom, and rises to the height of 125 feet above the sloping elevation on which it stands.

The mound, which seems to form the foundation of the pile, is a mass of rubbish accumulated by the decay of the superstructure. In the ruin itself, the layers of sun-dried bricks, of which it is composed, can be traced very distinctly. They are cemented together by lime or bitumen, and are divided into courses varying from 12 to 20 feet in height, and are separated by layers of reeds, as is usual in the more ancient remains of this primitive region. Travellers

have been perplexed to make out the use of this remarkable monument, and various strange conjectures have been hazarded. The embankments of canals and reservoirs, and the remnants of brick-work and pottery occupying the place all around, evince that the Tel stood in an important city; and, as its construction announces it to be a Babylonian relic, the greater probability is that it was one of those pyramidal structures erected upon high places, which were consecrated to the heavenly bodies, and served at once as the temples and the observatories of those remote times. Such buildings were common to all Babylonian towns; and those which remain appear to have been constructed more or less on the model of that in the metropolitan city of Babylon.

ACCARON. [EKRON.]

ACCENT. This term is often used with a very wide meaning: as when we say that a person has 'a Scotch accent,' in which case it denotes all that distinguishes the Scotch from the English pronunciation. We here confine the word, in the first place, to mean those peculiarities of sound for which grammarians have invented the *marks* called accents; and we naturally must have a principal reference to the Hebrew and the Greek languages. Secondly, we exclude the consideration of *such* a use of accentual marks (so called) as prevails in the French language; in which they merely denote a certain change in the quality of a sound attributed to a vowel or diphthong. It is evident that, had a sufficient number of alphabetical vowels been invented, the accents (in such a sense) would have been superseded. While the Hebrew and Greek languages are here our chief end, yet, in order to pass from the known to the unknown, we shall throughout refer to our own tongue as the best source of illustration. In this respect, we undoubtedly overstep the proper limits of a Biblical Cyclopædia; but we are in a manner constrained so to do, since the whole subject is misrepresented or very defectively explained in most English grammars: and if we abstained from this full exposition, many readers would most probably, after all, misunderstand our meaning.

Even after the word accent has been thus limited, there is an ambiguity in the term; it has still a double sense, according to which we name it either oratorical or vocabular. By the latter, we mean the accent which a word in isolation receives; for instance, if we read in a vocabulary: while by oratorical accent we understand that which words actually have when read aloud or spoken as parts of a sentence.

The Greek men of letters, who, after the Macedonian kingdoms had taken their final form, invented accentual marks to assist foreigners in learning their language, have (with a single uniform exception) been satisfied to indicate the vocabular accent: but the Hebrew grammarians aimed, when the pronunciation of the old tongue was in danger of being forgotten, at indicating by marks the traditional inflections of the voice with which the Scriptures were to be read aloud in the synagogues. In consequence, they have introduced a very complicated system of accentuation to direct the reader. Some of their accents (so called) are, in fact, *stops*, others syntactical notes, which served also as guides to the voice in chanting.

In intelligent reading or speaking, the vocal organs execute numerous intonations which we have no method of representing on paper; especially such as are called *inflections* or *slides* by teachers of elocution: but on these a book might be written; and we can here only say, that the Masoretic accentuation of the Hebrew appears to have struggled to depict the *rhythm* of sentences; and the more progress has been made towards a living perception of the language, the higher is the testimony borne by the learned to the success which this rather cumbrous system has attained. The rhythm, indeed, was probably a sort of chant; since to this day the Scriptures are so recited by the Jews, as also the Koran by the Arabs or Turks: nay, in Turkish, the same verb (*oqumaq*) signifies to sing and to read. But this chant by no means attains the sharp *discontinuity* of European singing: on the contrary, the voice *slides* from note to note. Monotonous as the whole sounds, a deeper study of the expression intended might probably lead to a fuller understanding of the Masoretic accents.

Wherein the Accent consists.—In ordinary European words, one syllable is pronounced with a peculiar stress of the voice; and is then said to be accented. In our own language, the most obvious accompaniment of this stress on the syllable is a greater clearness of sound in the vowel; insomuch that a *very* short vowel cannot take the primary accent in English. Nevertheless, it is very far from the truth, that accented vowels and syllables are necessarily long, or longer than the unaccented in the same word; of which we shall speak afterwards. In illustration, however, of the loss of clearness in a vowel, occasioned by a loss of accent, we may compare *a cóntest* with *to contést; équal* with *equálity;* in which the syllables *con, qual,* are sounded with a very obscure vowel when unaccented.

Let us observe, in passing, that when a vowel sound changes through transposition of the ac-

cent, the Hebrew grammarians—instead of trusting that the voice will of itself modify the vowel when the accent is shifted—generally think it necessary to depict the vowel differently: which is one principal cause of the complicated changes of the vowel points.

A second concomitant of the accent is less marked in English than in Italian or Greek; namely—a musical elevation of the voice. On a piano or violin we of course separate entirely the *stress* given to a note (which is called forte and staccato) from its elevation (which may be A, or C, or F); yet in speech it is natural to execute in a higher tone, or, as we improperly term it, in a higher *key*, a syllable on which we desire to lay stress: possibly because sharp sounds are more distinctly heard than flat ones. Practically, therefore, accent embraces a slide of the voice into a higher note, as well as an emphasis on the vowel; and in Greek and Latin it would appear that this slide upwards was the most marked peculiarity of accent, and was that which gained it the names *προσῳδία, accentus.* Even at the present day, if we listen to the speech of a Greek or Italian, we shall observe a marked elevation in the slides of the voice, giving the appearance of great vivacity, even where no peculiar sentiment is intended. Thus, if a Greek be requested to pronounce the words *σοφία* (wisdom), *παραβολή* (parable), his voice will rise on the *ί* and *ή* in a manner never heard from an Englishman. In ancient Greek, however, yet greater nicety existed; for the voice had *three kinds* of accent, or slides, which the grammarians called flat, sharp, and circumflex; as in *τὶς, τίς; ποῦ.* It is at the same time to be remarked, that this flat accent was solely oratorical; for when a word was read in a vocabulary, or named in isolation, or indeed at the end of a sentence, it never took the flat accent, even on the last syllable; except, it would seem, the word *τὶς*, a certain one. In the middle of a sentence, however, the simple accent (for we are not speaking of the circumflex) on a penultima or antepenultima was always sharp, and on a last syllable was flat. *Possibly* a stricter attention to the speech of the best educated modern Greeks, or, on the contrary, to that of their peasants in isolated districts, might detect a similar peculiarity: but it is generally believed that it has been lost, and some uncertainty therefore naturally rests on the true pronunciation. On the whole, it is most probable that the flat accent was a stress of the voice uttered in a lower note, much as the second accent in *grándfàther;* that the sharp accent was that which prevails in modern Greek, and has been above described; and that the circumflex combined an upward and a downward slide on the same vowel. The last was naturally incapable of being executed, unless the vowel was *long;* but the other two accents could exist equally well on a short vowel.

In English elocution various slides are to be heard, more complicated than the Greek circumflex; but with us they are wholly oratorical, never vocabular. Moreover, they are peculiar to vehement or vivacious oratory; being abundant in familiar or comic speech, and admissible also in high pathetic or indignant declamation: but they are almost entirely excluded from tranquil and serious utterance.

Secondary Accent.—On the same word, when it consists of many syllables, a double accent is frequently heard, certainly in English, and probably in most languages; but in our own tongue one of the two is generally feebler than the other, and may be called secondary. If we agree to denote this by the flat accent (\`) of the Greeks, we may indicate as follows our double accent:

considerátion, disobédience, ùnpreténding;
sécondàry, áccessòry, péremptòrily.

We have purposely selected as the three last examples cases in which the secondary accent falls on a very short or obscure vowel, such as can never sustain the primary accent.

In some cases, *two* syllables intervene between the accents, and it may then be difficult to say which accent is the principal. In *áristocràt, équalize, ántidòte*, the first syllable has a stronger accent than the last; but in *àristocrátic, èqualizátion, àntedilúvian*, they seem to be as equal as possible, though the latter catches the ear more. In *àristócracy*, the former is beyond a doubt secondary; but here the two are separated by only one syllable. *Prèdetèrminátion* has three accents, of which the middlemost is secondary.

In the Greek language a double accent is sometimes found on one word; but only when the latter is superinduced by some short and subordinate word which hangs upon the other. Such short words are called *enclitics*, and form a class by themselves in the language, as they cannot be known by their meaning or form. By way of example we may give, *τύραννός τις* (a certain usurper), *οἶδά σε* (I know thee). In these cases, we observe that the two accents, if both are sharp, are found on alternate syllables, as in English; but whether one of them was secondary we do not know. If the former is a circumflex, the latter is on the following syllable. Occasionally, two or more enclitics follow each other in succession, and produce a curious combination; as, *εἶπάς πού τί μοι.* These accents, however, are not vocabular, but oratorical.

The Hebrews have, in many cases, secondary accents, called a *foretone*, because with them it always precedes the principal accent (or 'tone'), as, כָּתְבוּ, *kàtebú;* the intermediate and unaccented vowel being in such cases exceedingly short and obscure, so that some grammarians refuse to count it at all. This foretone is described as a stress of the voice uttered in a lower note, and therefore may seem identical in sound with the flat accent of the Greeks. It differs, however, in being always accompanied with the sharp accent on the same word, and in being vocabular, not merely oratorical.

On the Place of the Accent.—A great difference exists between different languages as to the place of the accent. In Hebrew it is found solely on the last syllable and last but one, and is assumed systematically by many grammatical terminations, as in *Mélek* (for *Málk*), a king, pl. *Mel'ākī'm.* This is so entirely opposed to the analogies of English, that it has been alleged (Latham *On the English Language*) that *Princéss* is the only word in which our accent falls on a final inflection. The radical contrast of all this to our own idiom leads to a perverse pronunciation of most Hebrew names: thus we say Isáiah, Nehemíah, Cánaan, I'srael—although with their true

accent they are Isaiáh, Nehemyáh, Caná-an, Isra-él; to say nothing of other peculiarities of the native sound. In Greek, the accent is found on any of the three last syllables of a word; the circumflex only on the two last. In the Latin language, it is very remarkable that (except in the case of monosyllables) the accent never fell on the last syllable, but was strictly confined to the penultima and antepenultima. This peculiarity struck the Greek ear, it is said, more than anything else in the sound of Latin, as it gave to it a pompous air. It is the more difficult to believe that any thoughtful Greek seriously imputed it to Roman pride, since we are told that the Æolic dialect of Greek itself agreed in this respect with the Latin (See Foster *On Accent and Quantity*, ch. iv.). The Latin accentuation is remarkable for having the place of the accent dictated solely by euphony, without reference to the formation or meaning of the word; in which respect the Greek only partly agrees with it, chiefly when the accent falls on the penultima or antepenultima. The Latin accent, however, is guided by the quantity of the penultimate *syllable;* the Greek accent by the quantity of the ultimate *vowel* The rules are these:—

1. Greek: 'When the last *vowel* is long, the accent is on the penultima; when the last vowel is short, the accent is on the antepenultima.' *Oxytons* are herein excepted. 2. Latin: 'When the penultimate *syllable* is long, the accent is upon it; when short, the accent is on the antepenultima. Every dissyllable is accented on the penultima.' Accordingly, the Greek accent, even on the cases of the very same noun, shifted in the following curious fashion: N. ἄνθρωπος, G. ἀνθρώπου, D. ἀνθρώπῳ, Ac. ἄνθρωπον; and in Latin, rather differently, yet with an equal change, N. *Sérmo*, G. *Sermónis*, &c. It is beyond all question that the above rule in Greek is genuine and correct (though it does not apply to *oxytons*, that is, to words accented on the last syllable, and has other exceptions which the Greek grammars will tell); but there is a natural difficulty among Englishmen to believe it, since we have been taught to pronounce Greek *with the accentuation of Latin;* a curious and hurtful corruption, to which the influence of Erasmus is said to have principally contributed. It deserves to be noted that the modern Greeks, in pronouncing their ancient words, retain, with much accuracy on the whole, the ancient rules of accent; but in words of recent invention or introduction they follow the rule, which seems natural to an Englishman, of keeping the accent on the same syllable through all cases of a noun. Thus, although they sound as of old, N. ἄνθρωπος, G. ἀνθρώπου, yet in the word κοκώνη, *a lady*, which is quite recent, we find (plural), N. αἱ κοκῶνες, G. τῶν κοκώνων, &c. Similarly, ὁ καπιτάνος, *the captain*, G. τοῦ καπιτάνου, &c. This is only one out of many marks that the modern Greek has lost the nice appreciation of the *quantity* or time of vowel sounds, which characterized the ancient.

In all Latin or Greek words which we import into English, so long as we feel them to be foreign, we adhere to the Latin rules of accentuation as well as we know how: thus, in *démŏcrat, demócrăcy, dèmocrátical; philósŏphy, philosóphical; astrónŏmy, àstronómical; doméstic, doméstícity, domèsticátion; póssible, pòssibílity; bárbarous, barbárity*. But the moment we treat *any* of these words as natives, we follow our own rule of keeping the accent on the radical syllable; as in *bárbarousness*, where the Saxon ending, *ness*, is attached to the foreign word. With the growth of the language, we become more and more accustomed to hear a long train of syllables following the accent. Thus, we have *cómfort, cómfortàble, cómfortàbleness; párliament, párliamentary*, which used to be *pàrliaméntary*.

In many provinces of England, and in particular families, the older and better pronunciations, *contráry, indústry*, keep their place, instead of the modern *cóntrary, índustry*. The new tendency has innovated in Latin words so far, that many persons say *ínimical, cóntemplate, ínculcate, décorous, sónorous*, and even *cóncordance*, for *inímical, contémplate*, &c. *'Alexànder* has supplanted *'Alexánder*. In the cases of *cóncordance, clámorous*, and various others, it is probable that the words have been made to follow the pronunciation of *cóncord, clámor*, as in native English derivatives. The principle of change, to which we have been pointing, is probably deep-seated in human speech; for the later Attics are stated to have made a similar innovation in various words; for example, Æschylus and Thucydides said ὁμοῖος, τροπαῖον, but Plato and Aristotle, ὅμοιος, τρόπαιον.

If the principal accent is very distant from one end of a long word, a great obscurity in the distant vowel-sounds results, which renders a word highly unmusical, and quite unmanageable to poetry. This will be seen in such pronunciations as *párliamentary, péremptorily*.

In Hebrew the same phenomenon is exhibited in a contrary way, the early vowels of a word being apt to become extremely short, in consequence of the accent being delayed to the end. Thus, אֹהֶל, *óhĕl*, a tent, pl. אֳהָלִים, *ŏhālī́m;* קָטְלוּ, *qátelú*, they killed; קְטָלוּהוּ, *qĕtalúhu*, they killed him. Oratorical reasons occasionally induce a sacrifice of the legitimate vocabular accent. In English this happens chiefly in cases of antithesis; as when the verbs, which would ordinarily be sounded *incréase* and *decréase*, reverse their accent in order to bring out more clearly the contrasted syllables: 'He must *ín*crease, but I must *dé*crease.'

This change is intended, not for mere euphony, but to assist the meaning. Variety and energy seem to be aimed at in the following Hebrew example, which Ewald has noticed, and which seems to indicate that more of the same sort must remain to be discovered: *Judges* v. 12, *'Urí, 'urí, Deborá: 'úri, 'úri, dabbiri shír;* which, after Ewald, we may imitate by translating thus, 'Up thén, up thén, Deboráh: úp then, úp then, utter a sóng.' The Greek and Hebrew languages, moreover, in the *pause* of a sentence, modified the accent without reference to the meaning of the words. Thus the verb ordinarily sounded גָּדְלוּ, *gàdĕlú*, with a very short penultimate vowel, becomes at the end of the sentence גָּדֵלוּ, *gadélu*, with a long and accented penultima (See Ewald's *Hebrew Gram.* § 131, 133). The Greek lan-

guage also at the end of a sentence changes a flat accent into a sharp one; for instance, the word τιμὴ (honor) before a pause becomes τιμή; but no elongation of vowels ever accompanies this phenomenon.

Accent in Compound Words.—It is principally by the accent that the syllables of a word are joined into a single whole; and on this account a language with well-defined accentuation is (cæteris paribus) so much the easier to be understood when heard, as well as so much the more musical. This function of the accent is distinctly perceived by us in such words of our language as have no other organized union of their parts. To the eye of a foreigner reading an English book, *steam-boat* appears like two words; especially as our printers have an extreme dislike of hyphens, and omit them whenever the corrector of the press will allow it. In Greek or Persian two such words would be united into one by *a vowel of union*, which is certainly highly conducive to euphony, and the compound would appear in the form *steamiboat* or *steamobôtos*. As we are quite destitute of such apparatus (in spite of a few such exceptions as *handicraft*, *mountebank*), the accent is eminently important; by which it is *heard* at once that *steámboat* is a single word. In fact, we thus distinguish between a *stónebox* and a *stóne bóx;* the former meaning a box for holding stones, the latter a box made of stone. Mr. Latham (*Engl. Language*, § 234) has ingeniously remarked that we may read the following lines from Ben Jonson in two ways:

'An'd thy sílvershìning quiver'—
or, 'An'd thy sílver shíning quiver'—

with a slight difference of sense.

The Hebrew language is generally regarded as quite destitute of compound words. It possesses, nevertheless, something at least closely akin to them in (what are called) *nouns in regimen*. Being without a genitive case, or any particle devoted to the same purpose as the English preposition *of*, they make up for this by sounding two words as if in combination. The former word loses its accent, and thereby often incurs a shortening and obscuration of its vowels; the voice hurrying on to the latter. This may be illustrated by the English pronunciation of *ship of wár*, *man of wár*, *man at árms*, phrases which, by repetition, have in spirit become single words, the first accent being lost. Many such exist in our language, though unregistered by grammarians—in fact, even in longer phrases the phenomenon is observable. Thus, *Secretary at Wár*, *Court of Queen's Bénch*, have very audibly but one predominating accent, on the last syllable. So, in Hebrew, from חִזָּיוֹן, *χizzāyo'n*, a vision, comes חֶזְיוֹן לַיְלָה, *χezyón-lāïlá*, vision of the night (Job xx. 8). That every such case is fairly to be regarded as a compound noun was remarked by Dr. Campbell of Aberdeen, who urged that otherwise, in Isaiah ii. 20, we ought to render the words 'the idols of *his* silver;' whereas, in fact, the exact representation of the Hebrew in Greek is not εἴδωλα ἀργύρου-αὐτοῦ, but, so to say, ἀργυρείδωλα αὐτοῦ. In Greek compounds the position of the accent is sometimes a very critical matter in distinguishing active and passive meanings of epithets. Thus, μητρόκτονος means *mother-slain*, or slain by one's mother; while μητροκτόνος is *mother-slaying*, or slaying one's mother. Such distinctions, however, seem to have been confined to a very small class of compounds.

Sense of a simple word modified by the Accent.—It is familiarly remarked in our English grammars, that (in words of Latin origin, generally imported from French) we often distinguish a verb from a noun by putting the accent on the penultimate syllable of the noun and the ultimate of the verb. Thus, we say, *an ínsult, to insúlt; a cóntest, to contést;* &c., &c. The distinction is so useful, that in doubtful cases it appears desirable to abide by the rule, and to say (as many persons do say) *a pérfume, to perfúme; détails, to detáil; the cóntents of a book, to contént;* &c. It is certainly curious that the very same law of accent pervades the Hebrew language, as discriminating the simplest triliteral noun and verb. Thus, we have מֶלֶךְ, *mélek*, king; מָלַךְ, *mālák*, he ruled. In the Greek language the number of nouns is very considerable in which the throwing of the accent on the last syllable seriously alters the sense; as, τρόπος, a manner; τροπὸς, the leather of an oar: θυμὸς, anger or mind; θύμος, garlic: κρίνων, judging; κρινὼν, a lily-bed: ὦμος, a shoulder; ὠμὸς, cruel. A very extensive vocabulary of such cases is appended to Scapula's *Greek Lexicon*.

Relation of Accent to Rhythm and Metre.—Every sentence is necessarily both easier to the voice and pleasanter to the ear when the whole is broken up into symmetrical parts, with convenient pauses between them. The measure of the parts is marked out by the number of principal beats of the voice (or oratorical accents) which each clause contains; and when these are so regulated as to attain a certain musical uniformity without betraying art, the sentence has the pleasing *rhythm* of good prose. When art is not avowed, and yet is manifest, this is unpleasing, as seeming to proceed from affectation and insincerity. When, however, the art is avowed, we call it no longer rhythm, but *metre;* and with the cultivation of poetry, more and more melody has been exacted of versifiers.

To the English ear, three and four beats of the voice give undoubtedly the most convenient length of clauses. Hence, in what is called *poetical prose*, it will be found that any particularly melodious passage, if broken up into lines or verses, yields generally either three or four beats in every verse. For example:

'Whére is the máid of Ar'van?
Góne, as a vísion of the níght.
Whére shall her lóver loók for her?
The háll, which ónce she gláddened, is désolate.'

But no poetical prose, not even translations of poetry which aim at a half-metrical air, will be found to retain constantly the *three*fold and *four*fold accent. To produce abruptness, *half* lines, containing but two accents, are thrown in; and in smoother feeling clauses of five accents, which often tend to become the true English blank verse. All *longer* clauses are composite, and can be resolved into three and three, four and three, four and four, &c. To illustrate this, let us take

a passage of the *Old Testament* in the common English translation. Habakkuk iii. 2:

'Oh, Lórd!
I have heárd thy speéch; and was afraíd.
Oh Lórd!
Revíve thy wórk in the mídst of the yeárs!
In the midst of the yeárs make knówn!
In wráth remémber mércy!
Gód cáme from Téman,
And the Hóly One from Moúnt Páran.
His glóry cóvered the heávens,
And the eárth was fúll of his práise.
His bríghtness was ás the líght,
He had hórns coming oút of his hánd,
And thére was the híding of his pówer.' &c. &c.

The accent which we have been here describing as the source of rhythm is strictly the *oratorical* accent. As this falls only on the more emphatic words of the sentence, it is decidedly strong, and, in comparison with it, all the feebler and secondary accents are unheard, or at least uncounted. Nor is any care taken that the successive accents should be at equable distances. Occasionally they occur on successive syllables; much oftener at the distance of two, three, or four syllables. Nevertheless, this poetical rhythm, as soon as it becomes avowedly cultivated, is embryo-metre; and possibly this is the real state of the Hebrew versification. Great pains have been taken, from Gomarus in 1630 to Bellermann and Saalschutz in recent times, to define the laws of Hebrew metre. A concise history of these attempts will be found in the Introduction to De Wette's *Commentary on the Psalms*. But although the occasional use of *rhyme* or *assonance* in Hebrew seems to be more than accidental, the failure of so many efforts to detect any real metre in the old Hebrew is decisive enough to warn future inquirers against losing their labour. (See the article *Parallelismus* in Ersch and Gruber's *Encyclopedie*). The modern Jews, indeed, have borrowed accentual metre from the Arabs: but, although there is nothing in the genius of the tongue to resist it, perhaps the fervid, practical genius of the Hebrew prophets rejected any such trammel. Repetition and amplification mark their style as too declamatory to be what we call poetry. Nevertheless, in the Psalms and lyrical passages, increasing investigation appears to prove that considerable artifice of composition has often been used (See Ewald's *Poetical Books of the Old Test.* vol. i.).

In our own language, it is obvious to every considerate reader of poetry that the metres called anapæstic depend far more on the oratorical accent than on the vocabular (which is, indeed, their essential defect); and on this account numerous accents, which the voice really utters, are passed by as counting for nothing in the metre. We offer, as a single example, the two following lines of Campbell, in which we have denoted by the flat accent those syllables the stress upon which is subordinate and *extra metrum*:

'Sày, rúsh'd the bòld eágle exùltingly fórth
From his hóme, in the dàrk-ròlling cloúds of the nórth.'

Such considerations, drawn entirely out of *oratory*, appear to be the only ones on which it is any longer useful to pursue an inquiry concerning Hebrew metres.

Confusion of Accent with Quantity.—It is a striking fact that Foster, the author of a learned and rather celebrated book intended to clear up this confusion, succeeded in establishing the truth concerning Greek and Latin, by help of ancient grammarians, but himself fell into the popular errors whenever he tried to deal with the English language. Not only does he allege that 'the voice dwells longer' on the first syllable of *hónestly*, *cháracter*, &c., than on the two last (and improperly writes them *hŏnēstlў*, *chărăctĕr*), but he makes a general statement that accent and quantity, though separated in Greek and Latin, are inseparable in English. The truth is so far otherwise, that probably in three words out of four we separate them. As single instances, consider the words *hónestly*, *cháracter*, just adduced. The accent is clearly on the first syllable; but that syllable in each is very short. On the other hand, the second syllable of both, though unaccented, yet by reason of the consonants *s t l*, *c t*, is long, though less so than if its vowel likewise had been long. The words are thus, like the Greek κύλινδρος, *cy'linder*, accented on the first syllable, yet as to quantity an amphibrach (◡ — ◡). Until an Englishman clearly feels and knows these facts of his own tongue, he will be unable to avoid the most perplexing errors on this whole subject.

Invention of Accents.—We have already said that the accentual marks of the Greeks were invented not long after the Macedonian conquests. To Aristophanes of Byzantium, master of the celebrated Aristarchus, is ascribed the credit of fixing both the punctuation and the accentuation of Greek. He was born near the middle of the second century B.C.; and there seems to be no doubt that we actually have before our eyes a pronunciation which cannot have greatly differed from that of Plato. As for the Hebrew accentuation generally called *Masoretic*, the learned are agreed that it was a system only gradually built up by successive additions; the word Masora itself meaning *tradition*. The work is ascribed to the schools of Tiberias and Babylon, which arose after the destruction of Jerusalem by the Romans; but it cannot be very accurately stated in how many centuries the system of vowel-points and accentuation attained the fully-developed state in which we have received it. There is, however, no question among the ablest scholars that these marks represent the utterance of a genuine Hebrew period; the pronunciation, it may be said with little exaggeration, of Ezra and Nehemiah.—F. W. N.

ACCHABIS. [SPIDER.]

ACCHO (עַכּוֹ; Sept. Ἀκχώ), a town and haven within the nominal territory of the tribe of Asher, which however never acquired possession of it (Judg. i. 31). The Greek and Roman writers call it Ἄκη, ACE (Strab. xvi. 877; Diod. Sic. xix. 93; C. Nep. xiv. 5); but it was eventually better known as PTOLEMAIS (Plin. *Hist. Nat.* v. 19), which name it received from the first Ptolemy, king of Egypt, by whom it was much improved. By this name it is mentioned in the Apocrypha (1 Macc. x. 56; xi. 22, 24; xii. 45, 48; 2 Macc. xiii. 14), in the New Testament (Acts xxi. 7), and by Josephus (*Antiq.* xiii. 12, 2, *seq.*). It was also called *Colonia Claudii*

Cæsaris, in consequence of its receiving the privileges of a Roman city from the emperor Claudius (Plin. v. 17; xxxvi. 65). But the names thus imposed or altered by foreigners never took with the natives, and the place is still known in the country by the name of عكا Akka. It continued to be called Ptolemais by the Greeks of the lower empire, as well as by Latin authors, while the Orientals adhered to the original designation. This has occasioned some speculation. Vitriacus, who was bishop of the place, produces the opinion (*Hist. Orient.* c. 25) that the town was founded by twin-brothers, Ptolemæus and Acon. Vinisauf imagines that the old town retained the name of Accho, while that of Ptolemais was confined to the more modern additions northward, towards the hill of Turon (G. Vinisauf, i. 2, p. 248), but the truth undoubtedly is that the natives never adopted the foreign names of this or any other town. The word Accho, or Akka, can be traced to no Hebrew or Syriac root, and is, Sir W. Drummond alleges (*Origines*, b. v. c. 3), clearly of Arabian origin, and derived from عكّ *ak*, which signifies sultry. The neighbourhood was famous for the sands which the Sidonians employed in making glass (Plin. *Hist. Nat.* v. 19; Strabo, xvi. 877); and the Arabians denote a sandy shore heated by the sun by the word عكه *akeh*, or عكة *aket*, or (with the nunnation) *aketon*. During the Crusades the place was usually known to Europeans by the name of Acon: afterwards, from the occupation of the Knights of St. John of Jerusalem, as St. Jean d'Acre, or simply Acre.

This famous city and haven is situated in N. lat. 32° 55′, and E. long. 35° 5′, and occupies the north-western point of a commodious bay, called the Bay of Acre, the opposite or south-western point of which is formed by the promontory of Mount Carmel. The city lies on the plain to which it gives its name. Its western side is washed by the waves of the Mediterranean, and on the south lies the bay, beyond which may be seen the town of Caipha, on the site of the ancient Calamos, and, rising high above both, the shrubby heights of Carmel. The mountains belonging to the chain of Anti-Libanus are seen at the distance of about four leagues to the north, while to the east the view is bounded by the fruitful hills of the Lower Galilee. The bay, from the town of Acre to the promontory of Mount Carmel, is three leagues wide and two in depth. The port, on account of its shallowness, can only be entered by vessels of small burden; but there is excellent anchorage on the other side of the bay, before Caipha, which is, in fact, the roadstead of Acre (Turner, ii. 111; G. Robinson, i. 198). In the time of Strabo Accho was a great city (Πτολεμαῒς ἐστι μεγάλη πόλις ἣν Ἄκην ὠνόμαζον πρότερον, xvi. p. 877), and it has continued to be a place of importance down to the present time. But after the Turks gained possession of it, Acre so rapidly declined, that the travellers of the sixteenth and seventeenth centuries concur in describing it as much fallen from its former glory, of which, however, traces still remained. The missionary Eugene Roger (*La Terre Saincte*, 1645, pp. 44-46), remarks that the whole place had such a sacked and desolated appearance, that little remained worthy of note except the palace of the grand-master of the Knights Hospitallers, and the church of St. Andrew: all the rest was a sad and deplorable ruin, pervaded by a pestiferous air, which soon threw strangers into dangerous maladies. The Emir Fakr-ed-din had, however, lately built a commodious khan for the use of the merchants: for there was still considerable traffic, and vessels were constantly arriving from France, Venice, England, and Holland, laden with oil, cotton, skins, and other goods. The Emir had also built a strong castle, notwithstanding repeated orders from the Porte to desist. Roger also fails not to mention the immense stone balls, above a hundredweight, which were found in the ditches and among the ruins, and which were thrown into the town from machines before the use of cannon. This account is confirmed by other travellers, who add little or nothing to it (Doubdan, Cotovicus, Zuallart, Morison, Nau, D'Arvieux, and others). Morison, however, dwells more on the ancient remains, which consisted of portions of old walls of extraordinary height and thickness, and of fragments of buildings, sacred and secular, which still afforded manifest tokens of the original magnificence of the place. He (ii. 8) affirms that the metropolitan church of St. Andrew was equal to the finest of those he had seen in France and Italy, and that the church of St. John was of the same perfect beauty, as might be seen by the pillars and vaulted roof, half of which still remained. An excellent and satisfactory account of the place is given by Nau (liv. v. ch. 19), who takes particular notice of the old and strong vaults on which the houses are built; and the present writer, having observed the same practice in Baghdad, has no doubt that Nau is right in the conjecture that they were designed to afford cool underground retreats to the inhabitants during the heat of the day in summer, when the climate of the plain is intensely hot. This provision might not be necessary in the interior and cooler parts of the country. Our Maundrell gives no further information, save that he mentions that the town appears to have been encompassed on the land side by a double wall, defended with towers at small distances; and that without the walls were ditches, ramparts, and a kind of bastions faced with hewn stone (*Journey*, p. 72). Pococke speaks chiefly of the ruins. After the impulse given to the prosperity of the place by the measures of Sheikh Daher, and afterwards of Djezzar Pasha, the descriptions differ. Much of the old ruins had disappeared from the natural progress of decay, and from their materials having been taken for new works. It is, however, mentioned by Buckingham, that, in sinking the ditch in front of the then (1816) new outer wall, the foundations of small buildings were exposed, twenty feet below the present level of the soil, which must have belonged to the earliest ages, and probably formed part of the original *Accho*. He also thought that traces of *Ptolemais* might be detected in the shafts of grey and red granite and marble pillars, which lie about or have been converted into thresholds for large doorways, of the Saracenic period; some partial remains might be traced in the inner walls; and he is disposed to refer to that time the now old khan, which, as stated above, was really built by the Emir Fakr-

ed-din. All the Christian ruins mentioned by the travellers already quoted had disappeared. In actual importance, however, the town had much increased. The population in 1819 was computed at 10,000, of whom 3000 were Turks, the rest Christians of various denominations (Connor, in Jowett, i. 423). Approached from Tyre the city presented a beautiful appearance, from the trees in the inside, which rise above the wall, and from the ground immediately around it on the outside being planted with orange, lemon, and palm trees. Inside, the streets had the usual narrowness and filth of Turkish towns; the houses solidly built with stone, with flat roofs; the bazaars mean, but tolerably well supplied (Turner, ii. 113). The principal objects were the mosque, the pasha's seraglio, the granary, and the arsenal (Irby and Mangles, p. 195). Of the mosque, which was built by Djezzar Pasha, there is a description by Pliny Fisk (*Life*, p. 337; also G. Robinson, i. 200). The trade was not considerable; the exports consisted chiefly of grain and cotton, the produce of the neighbouring plain; and the imports chiefly of rice, coffee, and sugar from Damietta (Turner, ii. 112). As thus described, the city was all but demolished in 1832 by the hands of Ibrahim Pasha; and although considerable pains were taken to restore it, yet, as lately as 1837, it still exhibited a most wretched appearance, with ruined houses and broken arches in every direction (Lord Lindsay, *Letters*, ii. 81).

As the fame of Acre is rather modern than biblical, its history must in this place be briefly told. It belonged to the Phoenicians, until they, in common with the Jews, were subjugated by the Babylonians. By the latter it was doubtless maintained as a military station against Egypt, as it was afterwards by the Persians (Strabo, xvi. p. 877). In the distribution of Alexander's dominions Accho fell to the lot of Ptolemy Soter, who valued the acquisition, and gave it his own name. Afterwards it fell into the hands of the kings of Syria; and is repeatedly mentioned in the wars of the Maccabees. It was at one time the head-quarters of their heathen enemies (1 Macc. v. 15, 22, 55). In the endeavour of Demetrius Soter and Alexander Balas to bid highest for the support of Jonathan, the latter gave Ptolemais and the lands around to the temple at Jerusalem (x. 1, 39). Jonathan was afterwards invited to meet Alexander and the king of Egypt at that place, and was treated with great distinction by them (x. 56-66); but there he at length (B.C. 144) met his death through the treachery of Tryphon (xii. 48-50). Alexander Jannaeus took advantage of the civil war between Antiochus Philometor and Antiochus Cyzicenus to besiege Ptolemais, as the only maritime city in those parts, except Gaza, which he had not subdued; but the siege was raised by Ptolemy Lathyrus (then king of Cyprus), who got possession of the city (Joseph. *Antiq.* xiii. 12, 2-6), of which he was soon deprived by his mother Cleopatra (xiii. 13, 2). She probably gave it, along with her daughter Selene, to Antiochus Grypus, king of Syria. At least, after his death, Selene held possession of that and some other Phoenician towns, after Tigranes, king of Armenia, had acquired the rest of the kingdom (xiii. 16, 4). But an injudicious attempt to extend her dominions drew upon her the vengeance of that conqueror, who, in B.C. 70, reduced Ptolemais, and, while thus employed, received with favour the Jewish embassy which was sent by Queen Alexandra, with valuable presents, to seek his friendship (xiii. 16, 4). A few years after, Ptolemais was absorbed, with all the country, into the Roman empire; and the rest of its *ancient* history is obscure and of little note. It is only mentioned in the New Testament from St. Paul having spent a day there on his voyage to Caesarea (Acts xxi. 7). The importance acquired by the last-named city through the mole constructed by Herod, and the safe harbour thus formed, must have had some effect on the prosperity of Ptolemais; but it continued a place of importance, and was the seat of a bishopric in the first ages of the Christian Church. The see was filled sometimes by orthodox and sometimes by Arian bishops; and it has the equivocal distinction of having been the birthplace of the Sabellian heresy (Niceph. vi. 7). Accho, as we may now again call it, was an imperial garrison town when the Saracens invaded Syria, and was one of those that held out until Caesarea was taken by Amru, in A.D. 638 (*Mod. Univ. Hist.* i. 473).

The Franks first became masters of it in A.D. 1110, when it was taken by Baldwin, king of Jerusalem. But in A.D. 1187 it was recovered by Salah-ed-din, who retained it till A.D. 1191, when it was retaken by the Christians. This was the famous siege in which Richard Cœur-de-Lion made so distinguished a figure. The Christians kept it exactly one hundred years, or till A.D. 1291; and it was the very last place of which they were dispossessed. It had been assigned to the Knights Hospitallers of Jerusalem, who fortified it strongly, and defended it valiantly, till it was at length wrested from them by Khalil ben Kelaoun, Sultan of Egypt, who is called Melek Seruf by Christian writers (D'Herbelot, in 'Acca;' Will. Tyr. l. xxiii. c. 6, 7; Vitriacus, capp. 25, 99, 100; Quaresmius, tom. ii. p. 897). Under this dominion it remained till A.D. 1517, when the Mamluke dynasty was overthrown by Selim I., and all its territories passed to the Turks (*Chronica de Syria*, lib. v. cap. 1; *Mod. Univ. Hist.* b. xv. c. 10, § 2). After this Acre remained in quiet obscurity till the middle of the last century, when the Arab Sheikh Daher took it by surprise. Under him the place recovered some of its trade and importance. He was succeeded by the barbarous but able tyrant Djezzar Pasha, who strengthened the fortifications and improved the town. Under him it rose once more into fame, through the gallant and successful resistance which, under the direction of Sir Sidney Smith, it offered to the arms of Buonaparte. After that the fortifications were further strengthened, till it became the strongest place in all Syria. In 1832 the town was besieged for nearly six months by Ibrahim Pasha, during which 35,000 shells were thrown into it, and the buildings were literally beaten to pieces (Hogg's *Damascus*, pp. 160-166). It had by no means recovered from this calamity, when it was subjected to the operations of the English fleet under Admiral Stopford, in pursuance of the plan for restoring Syria to the Porte. On the 3rd of November, 1840, it was bombarded for several hours, when the explosion of the powder-magazine destroyed the garrison and laid the town in ruins (Napier's *War in Syria*).

ACCOMMODATION, as used by theological writers, has been defined to be the application of one thing to another by analogy. This definition, however, is far from being complete, as the term, at least in modern times, has been used in various senses.

It has been applied to the *form* of instruction in which it has pleased the Almighty to communicate his will to mankind. Thus the sensible images and anthropomorphitic expressions which were used for the conveyance of divine truths, especially in the infancy of mankind, are frequently denominated *accommodation*. To express this sense the term *divine condescension* has been also employed. It is meant thereby that God, in order to lead mankind to a knowledge of religion and morality, humbled himself to the weakness, the prevailing ignorance, modes of thought, and spiritual wants of men, and communicated truths under various images [ANTHROPOMORPHISM]. When it is considered that the first oracles of our holy religion are the earliest monuments of human thought extant, and preserve the memorials of the infancy of society, and that, in order to attain their end—that of communicating instruction—they must be accommodated in their form to the prevalent modes of thought and language, we may readily perceive the reasons for the employment of figurative expressions and typical symbols. (See Archbishop Whately's *Bampton Lectures*; also, *Lectures on Theology*, by the Rev. W. D. Conybeare, Lond. 1836). This is called *divine* condescension, in order to distinguish it from *human*, which consists in a teacher's adapting himself to the modes of thought and imperfections of men, with the design of leading them to fresh knowledge and better views. This is considered to be a necessary condescension to the weakness of the ignorant and uncivilized. Few, it is maintained, would have received wholesome truths if the teacher had not regulated himself according to this system, at least, in matters of *subordinate* import, so far as this could be done without prejudice to the truth. The person who employs this method is said to speak κατ' οἰκονομίαν, or economically (See Seiler's *Biblical Hermeneutics*, by the Rev. W. Wright, LL.D., Lond. 1834, § 31, &c.). Symbols, types, parables, and allegories are included under this form of instruction, of which, in all its parts, the inspired teachers, both under the former as well as the Christian dispensation, are considered to have availed themselves in the communication of the divine will. They conformed themselves to the capacities of their hearers, and did not think it necessary to refute such of their errors as had no connection with religious truths. But in modern times, and especially within the last half-century, the principle of accommodation in dogmatic theology has, in the interpretation of the Scriptures, far exceeded these limits. While sober interpreters allowed that it was the duty of a religious instructor to *reserve* the inculcation of certain religious truths, which the hearers were yet inadequate to comprehend, or admitted that the inspired teachers adopted the prevailing opinions in natural science, or even in regard to genealogical records, or points of chronology and other topics unconnected with the salvation of mankind—such as the received popular notions respecting demons—or, at least, would not disturb the minds of their hearers by correcting their notions on such subjects—the advocates of this theory, feeling the difficulty of fixing the exact limits of the system, or considering the only substantial truths to be those of natural religion, proceeded to the length of holding that all beyond these, including every peculiar doctrine of Christianity, was a mere accommodation to the prejudices or expectations of their contemporaries. They thus confounded what was true, viz., accommodation in the *form*, with—what was inconsistent with the character of a divine revelation, or even with that of an upright human legislator—accommodation in the *matter* of their instructions; every thing mysterious and difficult, the very notion that Christianity was a revelation from heaven, was said to be merely a wise condescension to the weakness of former ages; and this system long continued to be the prevalent one in Germany. Others have maintained that the sacred writers were themselves not free from the errors and prejudices of their countrymen, and that, instead of accommodating themselves to these, they were only teaching what they believed to be true. The question has assumed a new shape since the rise and development of this latter view, according to which the apostles have been placed, in regard to their interpretations, said to be derived from the Rabbinical schools, on a level with the mass of their countrymen. The general inclination and tendency of the system is this—that in the New Testament we shall find only the opinions of Christ and the apostles, and not religious and eternal truths. The principle of dogmatical accommodation, to a certain extent, has, in various degrees, exercised from an early age an influence on the interpretation of the Scriptures; but it did not assume its present form before the time of Semler, in whose writings we find the germ, at least, of that system which has been considered as the most formidable weapon ever devised for the destruction of Christianity (Rose's *Protestantism in Germany*, p. 75, Lond. 1829).

The dogmatical accommodation has been also called, in latter times, *historical* interpretation, in contradistinction to *grammatical*, or doctrinal, inasmuch as it refers to the alleged transient opinions of a peculiar age, which the inspired teachers are said to have employed in their instructions. Those who support this theory are strongly opposed to verbal, or what they designate *literal* criticism, which they contemn as being barren, minute, and of little value, as if it had reference only to words and syllables; but experience has shown that where verbal criticism has been neglected, literature has been unknown or uncultivated (Preface to Tittman's *Meletemata Sacra*. See also Storr, *De Sensu Historico Scripturæ Sacræ*, and his *Dissertation on the Object of the Death of Christ*; also his *Confidential Letters on the subject of Religion*; Haupt's *Bemerkungen über die Lehrart Jesu*; Heringa, *Verhandeling, ten betooge, dat Jesus end zyn Apostelen zich doorgaans niet geschikt hebben naar de Verkeerde denkbeelden van hunne tydgeenooten*; *Reason and Revelation*, by Crusius; Planck's *Introduction to Theological Sciences*, in *Biblical Cabinet*, vol. vii.; Less's *Letters on the Principle of Accommodation*; Lang, in Flatt's *Magazine*; Meyer's *Attempt*; Tzschirner's *Memorabilia*; and Starck's *Dialogues*, pp.

118-116. The doctrine has been defended, with various limitations, by Vogel, in his *Aufsätze*, and in his *Manual of Practical Divinity;* and by Schott, in his *Journal for Clergymen*. See also Bauer's *Hermeneutik*, § 147-151, p. 121-126; and Wright's *Seiler*, § 264-276, p. 418-438: these paragraphs are thus referred to by Jahn, *Enchiridion Hermeneuticæ*, p. 49).—W. W.

ACCOMMODATION (exegetical or special) is principally employed in the application of certain passages of the Old Testament to events in the New, to which they had no actual historical or typical reference. In this sense it is also called *illustration*. Citations of this description are apparently very frequent throughout the whole New Testament, but especially in the Epistle to the Hebrews. As the system of exegetical accommodation has in modern times been the occasion of much angry controversy, it will be necessary to enter somewhat minutely into its character and history.

It cannot be denied that many such passages, although apparently introduced as referring to, or predictive of, certain events recorded in the New Testament, seem to have, in their original connection, an exclusive reference to quite other objects. The difficulty of reconciling such *seeming* misapplications, or deflections from their original design, has been felt in all ages, although it has been chiefly reserved to recent times to give a solution of the difficulty by the theory of *accommodation*. By this it is meant that the prophecy or citation from the Old Testament was not designed literally to apply to the event in question, but that the New Testament writer merely adopted it for the sake of ornament, or in order to produce a strong impression, by showing a remarkable parallelism between two analogous events, which had in themselves no mutual relation.

There is a catalogue of more than seventy of these accommodated passages adduced by the Rev. T. H. Horne, in support of this theory, in his *Introduction to the Critical Study of the Holy Scriptures* (vol. ii. part i. ch. iv. sect. 11, p. 343, 7th ed. 1834), but it will suffice for our purpose to select the following specimens, which are those given by Jahn, in his *Enchiridion Hermeneuticæ*, § 31:—

Matt. xiii. 35,	cited from	Psalm lxxviii. 2.
„ viii. 17	„	Isaiah liii. 4.*
„ ii. 15	„	Hosea xi. 1.
„ ii. 17, 18	„	Jeremiah xxxi. 15.
„ iii. 3	„	Isaiah xl. 3.

It will be necessary, for the complete elucidation of the subject, to bear in mind the distinction not only between accommodated passages and such as must be properly explained (as those which are absolutely adduced as proofs), but also between such passages and those which are merely borrowed, and applied by the sacred writers, sometimes in a higher sense than they were used by the original authors. Passages which do not strictly and literally predict future events, but which can be applied to an event recorded in the New Testament by an accidental parity of circumstances, can alone be thus designated. Such accommodated passages therefore, if they exist, can only be considered as descriptive, and not predictive.

It will here be necessary to consider the various modes in which the prophecies of the Old Testament are supposed to be fulfilled in the New. For instance, the opinion has been maintained by several divines, and is adopted in Mr. Horne's *Introduction*, that there is sometimes a literal, sometimes only a mediate, typical, or spiritual fulfilment. Sometimes a prophecy is cited merely by way of illustration (accommodation), while at other times nothing more exists than a mere allusion. Some prophecies are supposed to have an immediate literal fulfilment, and to have been afterwards accomplished in a larger and more extensive sense; but as the full development of this part of the subject appertains more properly to the much controverted question of the single and double sense of prophecy, we shall here dwell no further on it than to observe, that not only are commentators who support the theory of a double sense divided on the very important question, what are literal prophecies and what are only prophecies in a secondary sense, but they who are agreed on this question are at variance as to what appellation shall be given to those passages which are applied by the New Testament writers to the ministry of our Saviour, and yet historically belong to an antecedent period. In order to lessen the difficulty, a distinction has been attempted to be drawn, by Dathe and others, from the formula with which the quotation is ushered in. Passages, for instance, introduced by the formula ἵνα πληρωθῇ, 'that it might be fulfilled,' are considered, on this account, as direct predictions by some, who are willing to consider citations introduced with the expression τότε ἐπληρώθη, 'then was fulfilled,' as nothing more than accommodations. The use of the former phrase, as applied to a mere accommodation, they maintain is not warranted by Jewish writers: such passages, therefore, they hold to be prophecies, at least in a secondary sense (see Bishop Marsh's seventeenth *Lecture*, in which, however, he justly observes, that if *all* prophecies were to be considered such only in a secondary or mystical sense, they would lose much of their satisfactory character). Bishop Kidder (*Demonstration of the Messias*, part ii. p. 81, Lond. 1726) appositely observes, in regard to this subject, that 'a scripture may be said to be fulfilled several ways, viz., properly and in the letter, as when that which was foretold comes to pass; or again, when what was fulfilled in the type is fulfilled again in the antitype; or else a scripture may be fulfilled more improperly, viz., by way of *accommodation*, as when an event happens to any place or people like to that which fell out some time before.' He instances the citation, Matt. ii. 17, 'In Ramah was a voice heard,' &c. 'These words,' he adds, 'are made use of by way of allusion to express this sorrow by. The evangelist doth not say "that it might be fulfilled," but "then was fulfilled," *q. d.*, such another scene took place.'

It must at the same time be admitted that this distinction in regard to the formula of quotation

* Jahn has observed that the quotation from the Old Testament in this passage 'He cast out the spirits with his word, and healed all that were sick, *that it might be fulfilled which was spoken by Esaias, saying. Himself took our infirmities, and bare our sicknesses,* is constantly used in its proper sense when cited in other parts of the New Testament.

is not acknowledged by the majority of commentators, either of those who admit or of those who deny the theory of accommodation. Among the former it will suffice to name Calmet, Doddridge, Rosenmüller, and Jahn, who look upon passages introduced by the formula 'that it might be fulfilled,' as equally accommodations with those which are prefaced by the words 'then was fulfilled;' while those who deny the accommodative theory altogether, consider both as formulas of direct prophecies, at least in a secondary or typical sense. This, for instance, is the case especially in regard to the two citations of this description which first present themselves in the New Testament, viz. Matt. ii. 15, and Matt. ii. 17, the former of which is introduced by the first, and the latter by the second of these formulas. But inasmuch as the commentators above referred to cannot perceive how the citation from Hosea xi. 1, 'Out of Egypt have I called my son,' although prefaced by the formula 'that it might be fulfilled,' and which literally relates to the calling of the children of Israel out of Egypt, can be prophetically diverted from its historical meaning, they look upon it as a simple accommodation, or applicable quotation, and consider the ἵνα πληρωθῇ as a Jewish formula of accommodation. Mr. Horne, after referring in support of this explication to some *questionable* examples from Surenhusius's Βίβλος καταλλαγῆς, and Rosenmüller's *Commentary on the New Testament*, observes, that 'it was a familiar idiom of the Jews, when quoting the writings of the Old Testament, to say, *that it might be fulfilled which was spoken by such and such a prophet*, not intending it to be understood that such a particular passage in one of the sacred books was ever designed to be a *real prediction* of what they were then relating, but signifying only that the words of the Old Testament might be properly adopted to express their meaning and illustrate their ideas' (*Introduction*, vol. ii. part i. ch. 4). 'The apostles,' he adds, 'who were Jews by birth, and wrote and spoke in the Jewish idiom, frequently thus cite the Old Testament, intending no more by this mode of speaking, than that the words of such an ancient writer might with equal propriety be adopted to characterize any similar occurrence which happened in their times. The formula "that it might be fulfilled," does not therefore differ in signification from the phrase "then was fulfilled," applied in the following citation in Matt. ii. 17, 18, from Jer. xxxi. 15-17, to the massacre of the infants at Bethlehem. They are a beautiful quotation, and not a prediction of what then happened, and are therefore applied to the massacre of the infants according not to their original and historical meaning, but according to Jewish phraseology.' Dr. Adam Clarke, also, in his Commentary on Jeremiah (xxxi. 15-17), takes the same view:—'St. Matthew, who is ever fond of accommodation, applied these words to the massacre of the children of Bethlehem; that is, they were suitable to that occasion, and therefore he applied them, but they are not a prediction of that event. So opposed, however, was the late Rev. Hugh James Rose to this principle of accommodation, that he included the application of it to this very passage among those which ought to exclude Kuinoel as a commentator from the library of the theological student (Supplement to *State of Protestantism*, p. xlii.); and the Rev. Chas. Forster, in his *Critical Essays*, p. 59, in which he altogether opposes the theory, designates the distinction attempted to be drawn by Dathe and Bishop Marsh between the formulas of citation as "in all its bearings fanciful and licentious." Mr. Forster's view is, that in the return of the Messiah out of Egypt, and in his return alone, the promise of the Lord to Rachel (Jer. xxxi. 16), 'and they shall come again from the land of the enemy,' which was figuratively fulfilled in the return of the Jews of the three generations from the captivity in Babylon, was adequately and literally fulfilled, and that his coming again out of Egypt is an event distinctly predicted of the Messiah, under the figure of Israel in Egyptian bondage (Hos. xi. 1).

In the same manner he infers that, so far from the prophecy in Jer. xxxi. being an accommodation of the evangelist's, the prophet himself had diverted to his immediate purpose (the Babylonish captivity), in the way of accommodation only, the prophetic type (Gen. xxxv. 16-19) from its proper object, the birth of the Messiah at Bethlehem, in which the historical type found its literal fulfilment (*Critical Essays*, p. 34).

D. J. G. Rosenmüller gives as examples, which he conceives clearly show the use of these formulas, the passages Matt. i. 22, 23; ii. 15, 17, 23; xv. 7; Luke iv. 21; James ii. 23; alleging that they were designed only to denote that something took place which resembled the literal and historical sense. The sentiments of a distinguished English divine are to the same effect:—'I doubt not that this phrase, "that it might be fulfilled," and the like were used first in quoting real prophecies, but that this, by long use, sunk in its value, and was more vulgarly applied, so that at last it was given to scripture only accommodated.' And again, 'If prophecy could at last come to signify singing (Titus i. 12; 1 Sam. x. 10; 1 Cor. xiv. 1), why might not the phrase *fulfilling of Scripture* and *prophecy* signify only quotation' (Nicholl's *Conference with a Theist*, 1698, part iii. p. 13).

The accommodation theory in exegetics has been equally combated by two classes of opponents. Those of the more ancient school consider such mode of application of the Old Testament passages not only as totally irreconcilable with the plain grammatical construction and obvious meaning of the controverted passages which are said to be so applied, but as an unjustifiable artifice, altogether unworthy of a divine teacher; while the other class of expositors, who are to be found chiefly among the most modern of the German (so called) Rationalists, maintain that the sacred writers, having been themselves trained in this erroneous mode of teaching, had mistakenly, but *bonâ fide*, interpreted the passages which they had cited from the Old Testament in a sense altogether different from their historical meaning, and thus applied them to the history of the Christian dispensation. Some of these have maintained that the accommodation theory was a mere shift (see Rosenmüller's *Historia Interpretationis*) resorted to by commentators who could not otherwise explain the application of Old Testament prophecies in the New consistently with the inspiration of the sacred writers: while the advocates of the system consider that the apostles, in adapting themselves to the mode of interpretation which

was customary in their days, and in further adopting what may be considered an argument *e concessis*, were employing the most persuasive mode of oratory, and the one most likely to prove effectual; and that it was therefore lawful to adopt a method so calculated to attract attention to their divine mission, which they were at all times prepared to give evidence of by other and irrefragable proofs.

We shall conclude with giving a brief sketch of the history of this method of interpretation. Mr. Stuart, of Andover, in the Excursus to his *Commentary on Hebrews*, alleges that the fathers of the church had no hesitation in applying this system to the interpretation of the Scriptures. But he has furnished us with no example of their critical application of it, and any such application seems to us scarcely compatible with the allegorical fancies to which they seem to have been addicted. The difference, indeed, had been at all times felt, from Origen downwards, between the historical sense of the citations, and that to which they are applied in the New Testament; and expositors have been divided into two classes; the one making the New Testament interpretation the rule for the explanation of Old Testament passages, and the other attempting, in various ways, to reconcile the discrepancy (see Tholuck's *Commentary on Hebrews*). But the first who appears to have led the way to the mode of interpretation in question, was Theodore of Mopsuestia, in the fifth century, who, so far as we can judge from the few writings of his which have come down to us, was decidedly favourable to literal and historical interpretation. He considered that the Old Testament contained very few direct prophecies of the Messiah, and in reference to other quotations, such as that in John xix. 24, and Rom. x. 6, observes that the apostle 'alters the phrase to suit it to his argument' (see Tholuck's *Commentary on Hebrews*). And again, in reference to Psalm xxii. 19, Theodore observes that the second verse, and consequently the psalm itself, cannot possibly refer to Him 'who did no sin, neither was guile found in His mouth;' but that as our Lord on the cross cited the words of the psalm, 'My God, my God, why hast thou forsaken me?' the apostle, on this account, *accommodated* to Christ the words of this verse also: 'They parted my garments among them, and for my vesture did they cast lots.' He seems at the same time to have acknowledged the existence of a higher and lower sense, for he observes that some passages referring to the Messiah had been 'hyperbolically applied to historical personages in the Old Testament,' and says of Psalm lxix. 22, that the words may, in another sense, be referred to our Lord, although the Psalm did not historically refer to him (see Rosenmüller's *Historia Interpretationis*, vol. iii. 260). Rosenmüller conceives, from an expression of Nicholas Lyranus, that he (Nicholas) had at least a glimpse of this system. But the person who, 'so far as modern theology is concerned,' to use the words of the Rev. J. J. Conybeare (*Bampton Lectures*), 'was the first and most eminent patron and advocate of the system' was Calvin, who 'adopted principles of exposition which, since the condemnation of Theodore, in the fifth century, had scarcely perhaps been heard of, and assuredly never been entertained in the Christian church.' Erasmus and Luther had, no doubt, led the way by their advocacy of the literal interpretation; but, even in passages which have been supposed to bear a double relation to the Jewish and Christian church, Calvin appears rather to ground such application on the nature and similarity of the subjects and their condition, than upon anything of a distinctly typical and prophetical character. He is, therefore, disposed to look not so much for an intention originally spiritual and predictive of higher things, as for the authoritative application of a new and more extended sense by the inspired writers themselves. On Heb. ii. 6, he remarks, 'that it was not the apostle's intention to give the genuine exposition of the words, and that no inconvenience can result from supposing that the apostle makes allusions to the Old Testament passage for the sake of embellishment.' In regard to the passages in Matt. ii. 15-17, already cited, he observes, 'beyond controversy, the passage Hos. xi. 1, must not be restricted to Christ;' and in reference to the second quotation (Jerem. xxxi. 15), he says 'it is certain that the prophet refers to the slaughter of the tribe of Benjamin, which took place in his own time; and Matthew, in citing the words of the prophet, does not mean that this was a prediction of what Herod was about to do, but that there was a renewal of the lamentation of the Benjamites.' And again, 'Non tam impetratur, quam piâ *deflexione* ad Christi personam *accommodat*' (Calvin's *Commentary on Hebrews*, passim).

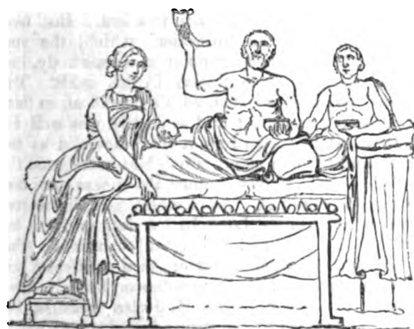
But while the credit of this invention has been thus attributed to Calvin, 'a writer, whom on the one hand no one will accuse of any Neologian tendency, while on the other the most sober and judicious critic will find nothing in his exposition revolting to the strictest rules of just interpretation' (*Lectures*, &c., by W. D. Conybeare), the doctrine of accommodation, once employed for the purpose of discarding all spiritual and allegorical methods of interpretation, was at a later period extended to all that had been hitherto considered as typical. In England, Dr. Sykes, in his answer to Collins, and in the preface to his *Commentary on the Epistle to the Hebrews*, surrendered the whole scheme of typical prefiguration and secondary prophecy, as destitute of proof, and accommodated to the mission of our Lord in condescension to the reigning prejudices of the people. Le Clerc carried his notions of accommodation to such excess, as nearly to invalidate the prophetical character of the Old Testament altogether, and considerably to depreciate the divine authority of the New; and Semler pronounced *all* the references made in Scripture by our blessed Lord and his disciples, to be the mere result of a compliance with the false and Rabbinical theories of their unenlightened countrymen.

Among those who, in modern times, have most ably vindicated the system of the typical interpretation of prophecy, as opposed to the accommodation theory, is Professor Tholuck, of Berlin, in the Dissertation affixed to his *Commentary on Hebrews*. He does not, indeed, deny all instances of accommodation, but refers a great number of passages which had been so interpreted (as Matt. ii. 15, 18; xxvii. 9, 35; John iii. 14; xix. 24, 36; Acts i. 20; ii. 27-31) to the class of typical prophecies.

The only canon furnished by Professor Tholuck for distinguishing between types and accommodation is, the consideration of the importance of the subject to which they are applied—a rule which must ever be vague and unsatisfactory. The Rev. J. J. Conybeare is of opinion that we are 'not to look for any secondary sense but what is inherent in and consequential on the typical, the typical being determined by the real and essential points of analogy between the connected objects.' Professor Tholuck had been preceded by Bilroth in his *Commentary on Corinthians*, who had observed in reference to the citation in 1 Cor. i. 19, that we are 'not to look for a strict historical identity between the meaning which St. Paul attaches to the passages, and that entertained by their original authors, but merely a connection of an analogical kind.' Bilroth then proceeds to vindicate the sacred writers from the charge of ignorance, if not disingenuousness, by the consideration that the Old Testament, taken as a whole, is a type of the New. This is the idea on which Tholuck has enlarged, and which, he thinks, dispels all misconception on the subject; but Bilroth's translator observes that, if it be meant that 'the declarations of the prophets, instead of being actual descriptions of the coming Messiah, directly communicated by divine impulse, were merely poetical delineations of persons or events connected with Jewish history, and intended by the divine Spirit to be typical of what was to happen in after times, then were they, correctly speaking, no prophecies at all, and it was vain and foolish in our Lord and his apostles to appeal to the fulfilment of them in Him and His church, as a proof that he was the Messiah to whom they referred.' The writer conceives it to be more philosophical to consider the Old Testament passages as having the meaning which the apostle ascribes to them, than suppose our own interpretation of them to be correct, or attempt to explain them in an accommodative or even *typical* sense. To remark on these views would amount to a re-opening of the question: we shall, therefore, conclude these observations in the words of the temperate and judicious writer whom we have already cited.

'Although, even the most cautious and unquestionably pious expositors of Scripture have admitted that some few passages of the Old Testament, quoted or referred to in the New, must, in the present state of our knowledge, be regarded as so applied or accommodated to the description and illustration of subjects foreign to their original scope and intention, yet it is surely unreasonable and uncritical to argue from these few to the whole, or even the larger portion of those sayings, which we are assured that holy men of old uttered, as the spirit directed and enabled them' (*Bampton Lectures*, by J. J. Conybeare, Oxford, 1826).—W. W.

ACCUBATION, the posture of reclining on couches at table, which prevailed among the Jews in and before the time of Christ. We see no reason to think that, as commonly alleged, they borrowed this custom from the Romans after Judea had been subjugated by Pompey. But it is best known to us as a Roman custom, and as such must be described. The dinner-bed, or *triclinium*, stood in the middle of the dining-room, clear of the walls, and formed three sides of a square which enclosed the table. The open end of the square, with the central hollow, allowed the servants to attend and serve the table. In all the existing representations of the dinner-bed it is shown to have been higher than the enclosed table. Among



the Romans the usual number of guests on each couch was three, making nine for the three couches, equal to the number of the Muses; but sometimes there were four to each couch. The Greeks went beyond this number (Cic. *In Pis.* 27); the Jews appear to have had no particular fancy in the matter, and we know that at our Lord's last supper *thirteen* persons were present. As each guest leaned, during the greater part of the entertainment, on his left elbow, so as to leave the right arm at liberty, and as two or more lay on the same couch, the head of one man was near the breast of the man who lay behind him, and he was, therefore, said 'to lie in the bosom' of the other. This phrase was in use among the Jews (Luke xvi. 22, 23; John i. 18; xiii. 23), and occurs in such a manner as to show that to lie next below, or 'in the bosom' of the master of the feast, was considered the most favoured place; and is shown by the citations of Kypke and Wetstein (on John xiii. 23) to have been usually assigned to near and dear connections. So it was 'the disciple whom Jesus loved' who 'reclined upon his breast' at the last supper. Lightfoot and others suppose that as, on that occasion, John lay next below Christ, so Peter, who was also highly favoured, lay next above him. This conclusion is founded chiefly on the fact of Peter beckoning to John that he should ask Jesus who was the traitor. But this seems rather to prove the contrary—that Peter was not near enough to speak to Jesus himself. If he had been there, Christ must have lain near *his* bosom, and he would have been in the best position for whispering to his master, and in the worst for beckoning to John. The circumstance that Christ was able to reach the sop to Judas when he had dipped it, seems to us rather to intimate that *he* was the one who filled that place. Any person who tries the posture may see that it is not easy to deliver anything but to the person next above or next below. And this is not in contradiction to, but in agreement with, the circumstances. The morsel of favour was likely to be given to one in a favoured place; and Judas being so trusted and honoured as to be the treasurer and almoner of the whole party, might, as much as any other of the apostles, be expected to fill that place. This also gives more point to the narrative, as it aggravates by contrast the turpitude and baseness of his conduct.

The frame of the dinner-bed was laid with mattresses variously stuffed, and, latterly, was furnished with rich coverings and hangings. Each person

was usually provided with a cushion or bolster on which to support the upper part of his person in a somewhat raised position; as the left arm alone could not long without weariness sustain the weight. The lower part of the body being extended diagonally on the bed, with the feet outward, it is at once perceived how easy it was for 'the woman that was a sinner' to come behind between the dinner-bed and the wall, and anoint the feet of Jesus (Matt. xxvi. 7; Mark xiv. 3).

The dinner-beds were so various at different times, in different places, and under different circumstances, that no one description can apply to them all. Even among the Romans they were at first (after the Punic war) of rude form and materials, and covered with mattresses stuffed with rushes or straw; mattresses of hair and wool were introduced at a later period. At first the wooden frames were small, low, and *round;* and it was not until the time of Augustus that square and ornamented couches came into fashion. In the time of Tiberius the most splendid sort were veneered with costly woods or tortoiseshell, and were covered with valuable embroideries, the richest of which came from Babylon, and cost large sums (U.K.S. *Pompeii*, ii. 88). The Jews perhaps had all these varieties, though it is not likely that the usage was ever carried to such a pitch of luxury as among the Romans; and it is probable that the mass of the people fed in the ancient manner—seated on stools or on the ground. It appears that couches were often so low, that the feet rested on the ground; and that cushions or bolsters were in general use. It would also seem, from the mention of two and of three couches, that the arrangement was more usually square than semicircular or round (Lightfoot, *Hor. Heb.* in John xiii. 23).

It is utterly improbable that the Jews derived this custom from the Romans, as is constantly alleged. They certainly knew it as existing among the Persians long before it had been adopted by the Romans themselves (Esth. i. 6; vii. 8); and the presumption is that they adopted it while subject to that people. The Greeks also had the usage (from the Persians) before the Romans; and with the Greeks of Syria the Jews had very much intercourse. Besides, the Romans adopted the custom from the Carthaginians (Val. Max. xii. 1, 2; Liv. xxviii. 28); and, that *they* had it, implies that it previously existed in Phœnicia, in the neighbourhood of the Jews. Thus, that in the time of Christ the custom had been lately adopted from the Romans, is the last of various probabilities. It is also unlikely that in so short a time it should have become usual and even (as the Talmud asserts) obligatory to eat the Passover in that posture of indulgent repose, and in no other. All the sacred and profane literature of this subject has been most industriously brought together by Stuckius (*Antiq. Convivalium*, ii. 34); and the works on Pompeii and Herculaneum supply the more recent information.

ACCURSED. [ANATHEMA.]

ACCUSER (מֵרִיב and אִישׁ רִיב; Sept. and New Test. Ἀντίδικος). The original word, which bears this leading signification, means, 1. One who has a cause or matter of contention; the accuser, opponent, or plaintiff in any suit (Judg. xii. 2; Matt. v. 25; Luke xii. 58). We have little information respecting the manner in which causes were conducted in the Hebrew courts of justice, except from the Rabbinical authorities, who, in matters of this description, may be supposed well informed as to the later customs of the nation. Even from these we learn little more than that great care was taken that, the accused being deemed innocent until convicted, he and the accuser should appear under equal circumstances before the court, that no prejudicial impression might be created to the disadvantage of the defendant, whose interests, we are told, were so anxiously guarded, that any one was allowed to speak whatever he knew or had to say in his favour, which privilege was withheld from the accuser (Lewis, *Origines Hebrææ*, i. 68). The word is, however, to be understood in regard to the real plaintiff, not to the advocates, who only became known in the later period of the Jewish history [ADVOCATE].

The word is also applied in Scripture, in the general sense, to any adversary or enemy (Luke xviii. 3; 1 Pet. v. 8). In the latter passage there is an allusion to the old Jewish notion that Satan was the accuser or calumniator of men before God (Job i. 6, *sq.*; Rev. xii. 10, *sq.*; comp. Zech. iii. 1). In this application the forensic sense was still retained, Satan being represented as laying to man's charge a breach of the law, as in a court of justice, and demanding his punishment [SATAN].

ACELDAMA (Ἀκελδαμά, from the Syro-Chaldaic, חֲקַל דְּמָא, *field of blood*), the field purchased with the money for which Judas betrayed Christ, and which was appropriated as a place of burial for strangers (Matth. xxvii. 8; Acts i. 19). It was previously 'a potter's field.' The field now shown as Aceldama lies on the slope of the hills beyond the valley of Hinnom, south of Mount Zion. This is obviously the spot which Jerome points out (*Onomast. s. v.* 'Acheldamach'), and which has since been mentioned by almost every one who has described Jerusalem. Sandys thus writes of it: 'On the south side of this valley, neere where it meeteth with the valley of Jehoshaphat, mounted a good height on the side of the mountain, is *Aceldama*, or the field of blood, purchased with the restored reward of treason, for a buriall place for strangers. In the midst whereof a large square roome was made by the mother of Constantine; the south side, walled with the naturall rocke; flat at the top, and equall with the vpper level; out of which ariseth certaine

little cupolos, open in the midst to let doune the dead bodies. Thorow these we might see the bottome, all couered with bones, and certaine corses but newly let doune, it being now the sepulchre of the Armenians. A greedy graue, and great enough to deuoure the dead of a whole nation. For they say (and I believe it), that the earth thereof within the space of eight and forty houres will consume the flesh that is laid thereon' (*Relation of a Journey*, p. 187). He then relates the common story, that the empress referred to caused 270 ship-loads of this flesh-consuming mould to be taken to Rome, to form the soil of the Campo Sancto, to which the same virtue is ascribed. Castela affirms that great quantities of the wondrous mould were removed by divers Christian princes in the time of the Crusades, and to this source assigns the similar sarcophagic properties claimed not only by the Campo Santo at Rome, but by the cemetery of St. Innocents at Paris, by the cemetery at Naples (*Le Sainct Voyage de Hierusalem*, 1603, p. 150; also Roger, p. 160); and, we may add, that of the Campo Santo at Pisa.

The plot of ground originally bought 'to bury strangers in,' seems to have been early set apart by the Latins, as well as by the Crusaders, as a place of burial for pilgrims (Jac. de Vitriaco, p. 64). The charnel-house is mentioned by Sir John Mandeville, in the fourteenth century, as belonging to the Knights-hospitallers. Sandys shows that, early in the seventeenth century, it was in the possession of the Armenians. Eugene Roger (*La Terre Saincte*, p. 161) states that they bought it for the burial of their own pilgrims, and ascribes the erection of the charnel-house to them. They still possessed it in the time of Maundrell, or rather rented it, at a sequin a day, from the Turks. Corpses were still deposited there; and the traveller observes that they were in various stages of decay, from which he conjectures that the grave did not make that quick dispatch with the bodies committed to it which had been reported. 'The earth, hereabouts,' he observes, 'is of a chalky substance; the plot of ground was not above thirty yards long by fifteen wide; and a moiety of it was occupied by the charnel-house, which was twelve yards high' (*Journey*, p. 136). Richardson (*Travels*, p. 567) affirms that bodies were thrown in as late as 1818; but Dr. Robinson alleges that it has the appearance of having been for a much longer time abandoned: 'The field or plat is not now marked by any boundary to distinguish it from the rest of the hill-side; and the former charnel-house, now a ruin, is all that remains to point out the site.... An opening at each end enabled us to look in; but the bottom was empty and dry, excepting a few bones much decayed' (*Biblical Researches*, i. 524).

ACHAIA (Ἀχαΐα), a region of Greece, which in the restricted sense occupied the north-western portion of the Peloponnesus, including Corinth and its isthmus (Strabo, viii. p. 438, sq.). By the poets it was often put for the whole of Greece, whence Ἀχαιοί, *the Greeks*. Under the Romans, Greece was divided into two provinces, Macedonia and Achaia, the former of which included Macedonia proper, with Illyricum, Epirus, and Thessaly; and the latter, all that lay southward of the former (Cellar. i. p. 1170, 1022). It is in this latter acceptation that the name of Achaia is always employed in the New Testament (Acts xviii. 12, 16; xix. 21; Rom. xv. 26; xvi. 25; 1 Cor. xvi. 15; 2 Cor. i. 1; ix. 2; xi. 10; 1 Thess. i. 7, 8). Achaia was at first a senatorial province, and, as such, was governed by proconsuls (Dion Cass. liii. p. 704). Tiberius changed the two into one imperial province under procurators (Tacit. *Annal.* i. 76); but Claudius restored them to the senate and to the proconsular form of government (Suet. *Claud.* 25). Hence the exact and minute propriety with which St. Luke expresses himself in giving the title of proconsul to Gallio, who was appointed to the province in the time of Claudius (Acts xviii. 12).

ACHAICUS (Ἀχαϊκός), a native of Achaia, and a follower of the apostle Paul. He, with Stephanus and Fortunatus, was the bearer of the 1st Epistle to the Corinthians, and was recommended by the apostle to their special respect (1 Cor. xvi. 17).

ACHAN (עָכָן; Sept. Ἀχαν, or Ἀχαρ, Josh. vii. 1). In the parallel passage (1 Chron. ii. 7) the name is spelt עכר, and as it has there the meaning of *troubling*, it is thought by some that this is an intentional change, after the fact, to give the name a significant reference to the circumstance which renders it notorious. The city of Jericho, before it was taken, was put under that awful ban, of which there are other instances in the early Scripture history, whereby all the inhabitants (excepting Rahab and her family) were devoted to destruction, all the combustible goods to be consumed by fire, and all the metals to be consecrated to God. This vow of devotement was rigidly observed by all the troops when Jericho was taken, save by one man, Achan, a Judahite, who could not resist the temptation of secreting an ingot of gold, a quantity of silver, and a costly Babylonish garment, which he buried in his tent, deeming that his sin was hid. But God made known this infraction, which, the vow having been made by the nation as one body, had involved the whole nation in his guilt. The Israelites were defeated, with serious loss, in their first attack upon Ai; and as Joshua was well assured that this humiliation was designed as the punishment of a crime which had inculpated the whole people, he took immediate measures to discover the criminal. As in other cases, the matter was referred to the Lord by the lot, and the lot ultimately indicated the actual criminal. The conscience-stricken offender then confessed his crime to Joshua; and his confession being verified by the production of his ill-gotten treasure, the people, actuated by the strong impulse with which men tear up, root and branch, a polluted thing, hurried away not only Achan, but his tent, his goods, his spoil, his cattle, his children, to the valley (afterwards called) of Achor, north of Jericho, where they stoned him, and all that belonged to him; after which the whole was consumed with fire, and a cairn of stones raised over the ashes. The severity of this act, as regards the *family* of Achan, has provoked some remark. Instead of vindicating it, as is generally done, by the allegation that the members of Achan's family were probably accessories to his crime after the fact, we prefer the supposition that they were included in the doom by one of those sudden impulses of indiscriminate popular vengeance to which the Jewish people were exceed-

ingly prone, and which, in this case, it would not have been in the power of Joshua to control by any authority which he could under such circumstances exercise. It is admitted that this is no more than a conjecture: but, as such, it is at least worth as much, and assumes considerably less, than the conjectures which have been offered by others (Josh. vii.).

ACHAR. [ACHAN.]

ACHASHDARPENIM (אֲחַשְׁדַּרְפְּנִים; Sept. σατράπαι and στρατηγοί; Vulg. *satrapæ;* A. V. 'rulers of provinces.' It occurs in Esth. iii. 12; viii. 9; ix. 3; and with the Chaldee termination *an*, in Dan. iii. 2, 3, 27; vi. 2, 3). The word is undoubtedly merely another form of writing the Persian word *satrap*, the origin of which has been much disputed, and does not claim to be here considered. These satraps are known in ancient history as the governors or viceroys of the provinces into which the Persian empire was divided. Strictly speaking, they had an extended civil jurisdiction over several smaller provinces, each of which had its own פחה or governor. Thus Zerubbabel and Nehemiah were 'governors' of Judea, under the Persian satraps of Syria (Ezra, iv. 3, 6; Neh. ii. 9). The power and functions of the Persian satraps were not materially different from those of the modern Persian governors and Turkish pashas; and, indeed, the idea of provincial government by means of viceroys, entrusted with almost regal powers in their several jurisdictions, and responsible only to the king, by whom they are appointed, has always been prevalent in the East. The important peculiarity and distinction in the ancient Persian government, as admirably shown by Heeren (*Researches*, i. 489, sq.), was that the civil and military powers were carefully separated: the satrap being a very powerful civil and political chief, but having no immediate control over the troops and garrisons, the commanders of which were responsible only to the king. The satraps, in their several provinces, employed themselves in the maintenance of order and the regulation of affairs; and they also collected and remitted to the court the stipulated tribute, clear of all charges for local government and for the maintenance of the troops (Xenoph. *Cyrop.* viii. 6, § 1-3). In later times this prudent separation of powers became neglected, in favour of royal princes and other great persons (Xenoph. *Anab.* i. 1, § 2), who were entrusted with the military as well as civil power in their governments; to which cause may be attributed the revolt of the younger Cyrus, and the other rebellions and civil wars, which, by weakening the empire, facilitated its ultimate subjugation by Alexander.

ACHBAR. [MOUSE.]

ACHISH (אָכִישׁ, signification uncertain; Sept. Ἀγχοῦς, also Ἀρχίς, Ἀχίς, called Abimelech in the title of Ps. xxxiv.), the Philistine king of Gath, with whom David twice sought refuge when he fled from Saul (1 Sam. xxi. 10-15; xxvii. 1-3). The first time David was in imminent danger; for he was recognised and spoken of by the officers of the court as one whose glory had been won at the cost of the Philistines. This talk filled David with such alarm that he feigned himself mad when introduced to the notice of Achish, who, seeing him 'scrabbling upon the doors of the gate, and letting his spittle fall down upon his beard,' rebuked his people sharply for bringing him to his presence, asking, 'Have I need of madmen, that ye have brought this fellow to play the madman in my presence? Shall this fellow come into my house?' After this David lost no time in quitting the territories of Gath. Winer illustrates David's conduct by reference to the similar proceeding of some other great men, who feigned themselves mad in difficult circumstances—as Ulysses (Cic. *Off.* iii. 26; Hygin. f. 95, *Schol. ad Lycophr.* 818), the astronomer Meton (Ælian, *Hist.* xiii. 12), L. Junius Brutus (Liv. i. 56; Dion. Hal. iv. 68), and the Arabian king Bacha (Schultens, *Anth. Vet. Hamasa*, p. 535). About four years after, when the character and position of David became better known, and when he was at the head of not less than 600 resolute adherents, he again repaired with his troop to King Achish, who received him in a truly royal spirit, and treated him with a generous confidence, of which David took rather more advantage than was creditable to him [DAVID].

ACHMETHA (אַחְמְתָא, Ezra vi. 2; Ἐκβάτανα, 2 Macc. ix. 3; Judith xi. 1; Tob. v. 9; Joseph. *Antiq.* x. 11, 7; xi. 4, 6; also, in Greek authors, Ἐγβάτανα and Ἀγβάτανα), a city in Media. The derivation of the name is doubtful; but Major Rawlinson (*Geogr. Journal*, x. 134) has left little question that the title was applied exclusively to cities having a fortress for the protection of the royal treasures. In Ezra we learn that in the reign of Darius Hystaspes the Jews petitioned that search might be made in the king's treasure-house at Babylon, for the decree which Cyrus had made in favour of the Jews (Ezra v. 17). Search was accordingly made in the record-office ('house of the rolls'), where the treasures were kept at Babylon (vi. 1): but it appears not to have been found there, as it was eventually discovered 'at Achmetha, in the palace of the province of the Medes' (vi. 2). It is here worthy of remark, that the LXX. regarded 'Achmetha,' in which they could hardly avoid recognising the familiar title of Ecbatana, as the generic name for a city, and, accordingly, rendered it by πόλις; and that Josephus, as well as all the Christian Greeks, while retaining the proper name of Ecbatana, yet agree, with the Greek Scriptures, in employing the word βάρις to express the Hebrew בירתא, *Birtha* ('the palace'), which is used as the distinctive epithet of the city.

In Judith i. 2-4, there is a brief account of Ecbatana, in which we are told that it was built by Arphaxad, king of the Medes, who made it his capital. It was built of hewn stones, and surrounded by a high and thick wall, furnished with wide gates and strong and lofty towers. Herodotus ascribes its foundation to Dejoces, in obedience to whose commands the Medes erected 'that great and strong city, now known under the name of Agbatana, where the walls are built circle within circle, and are so constructed that each inner circle overtops its outer neighbour by the height of the battlements alone. This was effected partly by the nature of the ground, a conical hill, and partly by the building itself. The number of the circles was seven, and within the innermost was the palace of the treasury. The battlements of the first circle were white, of

the second black, of the third scarlet, of the fourth blue, of the fifth orange; all these were brilliantly coloured with different pigments; but the battlements of the sixth circle were overlaid with silver, and of the seventh with gold. Such were the palace and the surrounding fortification that Dejoces constructed for himself: but he ordered the mass of the Median nation to construct their houses in a circle around the outer wall (Herodot. i. 98). It is contended by Major Rawlinson (*Geogr. Journal*, x. 127) that this story of the seven walls is a fable of Sabæan origin, the seven colours mentioned being precisely those employed by the Orientals to denote the seven great heavenly bodies, or the seven climates in which they revolve. He adds (p. 128), 'I cannot believe that at Agbatana the walls were really painted of these colours: indeed, battlements with gold and silver are manifestly fabulous; nor do I think that there ever could have been even seven concentric circles: but in that early age, where it is doubtful whether mithraicism, or fire-worship, had originated in this part of Asia, it is not at all improbable that, according to the Sabæan superstitions, the city should have been dedicated to the seven heavenly bodies, and perhaps a particular part assigned to the protection of each, with some coloured device emblematic of the tutelar divinity.'

This Ecbatana has been usually identified with the present Hamadan. Major Rawlinson, however, while admitting that Hamadan occupies the site of the Median Ecbatana, has a learned and most elaborate paper in the *Geographical Journal* (x. 65-158; *On the Site of the Atropatenian Ecbatana*), in which he endeavours to show that the present Takht-i-Suleiman was the site of another, the Atropatenian Ecbatana; and that to it, rather than to the proper Median Ecbatana, the statement in Herodotus and most of the other ancient accounts are to be understood to refer. Our only business is with the Achmetha of Ezra; and that does not require us to enter into this question. The major, indeed, seems inclined to consider the Ecbatana of the apocryphal books as his Atropatenian Ecbatana; but is rather more doubtful in claiming it as the Achmetha of Ezra. But without undertaking to determine what amount of ancient history should be referred to the one or to the other, we feel bound to conclude that Hamadan was the site of the Achmetha of Ezra, and the Ecbatana of the Apocrypha: 1. Because it is admitted that the Median Ecbatana was a more ancient and more anciently great city than the Atropatenian metropolis. 2. Because the name 'Achmetha' may easily, through the Syrian Ahmethan, and the Armenian Ahmetan, be traced in the Persian Hamadan. 3. And because all the traditions of the Jews refer to Hamadan as the site of the Achmetha and Ecbatana of their Scriptures.

Hamadan is still an important town, and the seat of one of the governments into which the Persian kingdom is divided. It is situated in north lat. 34° 53′, east long. 40°, at the extremity of a rich and fertile plain, on a gradual ascent, at the base of the Elwund Mountains, whose higher summits are covered with perpetual snow. Some remnants of ruined walls of great thickness, and also of towers of sun-dried bricks, present the only positive evidence of a more ancient city than the present on the same spot. Heaps of comparatively recent ruins, and a wall fallen to decay, attest that Hamadan has declined from even its modern importance. The population is said by Southgate to be about 30,000, which, from what the present writer has seen of the place, he should judge to exceed the truth very considerably. It is little distinguished, inside, from other Persian towns of the same rank, save by its excellent and well-supplied bazaars, and the unusually large number of khans of rather a superior description. This is the result of the extensive transit trade of which it is the seat, it being the great centre where the routes of traffic between Persia, Mesopotamia, and Persia converge and meet. Its own manufactures are chiefly in leather. Many Jews reside here, claiming to be descended from those of the Captivity who remained in Media. Benjamin of Tudela says that in his time the number was 50,000. Modern travellers assign them 500 houses; but the Rabbi David de Beth Hillel (*Travels*, pp. 85-87, Madras, 1832), who was not likely to understate the fact, and had the best means of information, gives them but 200 families. He says they are mostly in good circumstances, having fine houses and gardens, and are chiefly traders and goldsmiths. They speak the broken Turkish of the country, and have two synagogues. *They* derive the name of the town from '*Haman*' and '*Mede*,' and say that it was given to that foe of Mordecai by King Ahasuerus. In the midst of the city is a tomb which is in their charge, and which is said to be that of Mordecai and Esther. It is a plain structure of brick, consisting of a small cylindrical tower and a dome (the whole about 20 feet high), with small projections or wings on three sides. Within are two apartments—a small porch formed by one of the wings, and beyond it the tomb-chamber, which is a plain room paved with glazed tiles. In the midst, over the spots where the dead are supposed to lie, are two large wooden frames or chests, shaped like sarcophagi, with inscriptions in Hebrew and flowers carved upon them. There is another inscription on the wall, in bas-relief, which, as translated by Sir Gore Ouseley, describes the present tomb as having been built over the graves of Mordecai and Esther by two devout Jews of Kashan, in A.M. 4474. The original structure is said to have been destroyed when Hamadan was sacked by Timour. As Ecbatana was then the summer residence of the Persian court, it is probable enough that Mordecai and Esther died and were buried there; and traditional testimony, taken in connection with this fact, and with such a monument in a place where Jews have been permanently resident, is better evidence than is usually obtained for the allocation of ancient sepulchres. The tomb is in charge of the Jews, and is one of their places of pilgrimage. Kinneir, Ker Porter, Morier, Frazer, and Southgate furnish the best accounts of modern Hamadan.

History mentions another Ecbatana, in Palestine, at the foot of Mount Carmel, towards Ptolemais, where Cambyses died (Herod. iii. 64: Plin. v. 19). It is not mentioned by this or any similar name in the Hebrew writings: and we are at a loss to discover the grounds which Major Rawlinson says exist for concluding that there was a treasury in this position (*Geogr. Journ.* x. 134).

ACHOR (עָכוֹר; Sept. Ἀχώρ), a valley between Jericho and Ai, which received this name (signifying *trouble*) from the trouble brought upon the Israelites by the sin of Achan (Josh. vii. 24) [ACHAN].

ACHSAH (עַכְסָה, *an anklet;* Sept. Ἀχσά), the daughter of Caleb, whose hand her father offered in marriage to him who should lead the attack on the city of Debir, and take it. The prize was won by his nephew Othniel; and as the bride was conducted with the usual ceremony to her future home, she alighted from her ass, and sued her father for an addition of springs of water to her dower in lands. It is probable that custom rendered it unusual, or at least ungracious, for a request tendered under such circumstances by a daughter to be refused; and Caleb, in accordance with her wish, bestowed upon her 'the upper and the nether springs' (Josh. xv. 16-19; Judg. i. 9-15).

ACHSHAPH (אַכְשָׁף; Sept. Ἀζίφ, Ἀχσάφ, and Ἀχίφ), a royal city of the Canaanites (Josh. xi. 1), has been supposed by many to be the same as ACHZIB, both being in the tribe of Asher. But a careful consideration of Josh. xix. 25 and 29, will make it probable that the places were different. There is more reason in the conjecture (Hamelsveld, iii. 237) that Achshaph was another name for Accho or Acre, seeing that Accho otherwise does not occur in the list of towns in the lot of Asher, although it is certain, from Judg. i. 31, that Accho was in the portion of that tribe.

ACHU (אָחוּ). This word occurs in Job viii. 11, where it is said, 'Can the rush grow up without mire? can the FLAG grow without water?' Here *flag* stands for *achu;* which would seem to indicate some specific plant, as *gome*, or rush, in the first clause of the sentence, may denote the papyrus. *Achu* occurs also twice in Gen. xli. 2, 18, 'And, behold, there came up out of the river seven well-favoured kine and fat-fleshed, and they fed in a *meadow:*' here it is rendered *meadow*, and must, therefore, have been considered by our translators as a general, and not a specific term. In this difficulty it is desirable to ascertain the interpretation put upon the word by the earlier translators. Dr. Harris has already remarked that 'the word is retained in the Septuagint, in Gen. ἐν τῷ ἄχει; and is used by the son of Sirach, Eccles. xi. 16, ἄχι or ἄχει, for the copies vary. Jerome, in his Hebrew questions or traditions on Genesis, writes '*Achi* neque Græcus sermo est, nec Latinus, sed et Hebræus ipse corruptus est.' The Hebrew vau ו and iod י being like one another, differing only in length, the LXX., he observes, wrote אחי, *achi*, for אחו, *achu*, and according to their usual custom put the Greek χ for the double aspirate ח (*Nat. Hist. of the Bible*, in 'Flag').

From the context of the few passages in which *achu* occurs, it is evident that it indicates a plant or plants which grew in or in the neighbourhood of water, and also that it or they were suitable as pasturage for cattle. Now it is generally well known that most of the plants which *grow in water*, as well as many of those which *grow in its* vicinity, are not well suited as food for *cattle;* some being very watery, others very coarse in texture, and some possessed of acrid and even poisonous properties. None, therefore, of the *Algæ* can be intended, nor any species of *Butomus*. The different kinds of *Juncus*, or rush, though abounding in such situations, are not suited for pasturage, and in fact are avoided by cattle. So are the majority of the *Cyperaceæ*, or sedge tribe; and also the numerous species of *Carex*, which grow in moist situations, yet yield a very coarse grass, which is scarcely if ever touched by cattle. A few species of *Cyperus* serve as pasturage, and the roots of some of them are esculent and aromatic; but these must be dug up before cattle can feed on them. Some species of scirpus, or club-rush, however, serve as food for cattle: *S. cespitosus*, for instance, is the principal food of cattle and sheep in the highlands of Scotland, from the beginning of March till the end of May. Varieties of *S. maritimus*, found in different countries, and a few of the numerous kinds of Cyperaceæ common in Indian pastures, as *Cyperus dubius* and *hexastachyus*, are also eaten by cattle. Therefore, if any specific plant is intended, as seems implied in what goes before, it is perhaps one of the edible species of scirpus or cyperus, perhaps *C. esculentus*, which, however, has distinct Arabic names: or it may be a true grass; some species of panicum, for instance, which form excellent pasture in warm countries, and several of which grow luxuriantly in the neighbourhood of water.

[Cyperus esculentus.]

But it is well known to all acquainted with warm countries subject to excessive drought, that the only pasturage to which cattle can resort is a green strip of different grasses, with some sedges, which runs along the banks of rivers or of pieces of water, varying more or less in breadth according to the height of the bank, that is, the distance of water from the surface. Cattle emerging from rivers, which they may often be seen doing in hot countries, as has been well remarked by the editor of the 'Pictorial Bible' on Gen. xli. 2, would naturally go to such green herbage as intimated in this passage of Genesis, and which, as indicated in Job xviii. 2, could not grow without water in a warm dry country and climate. As no similar name is known to be applied to any plant or plants in Hebrew, endeavours have been made to find a similar one so applied in the cognate languages; and, as quoted by Dr. Harris, the learned Chapellon says, 'we have no radix for אחו

unless we derive it, as Schultens does, from the Arabic *achi*, to bind or join together.' Hence it has been inferred that it might be some one of the grasses or sedges employed in former times, as some still are, for making ropes. But there is probably some other Arabic root which has not yet been ascertained, or which may have become obsolete; for there are numerous words in the Arabic language having reference to greenness, all of which have *akh* as a common element. Thus

اخياس *akhyas*, thickets, dark groves, places full of reeds or flags, in which animals take shelter;

اخواس *akhevas*, putting forth leaves; so *akhsirar*, greenness, verdure; *akhchishab*, abounding in grass. These may be connected with *kah*, a common term for grass in Northern India, derived from the Persian, whence amber is called *kah-robehy*, grass-attracter. So Jerome, with reference to *achu*, says, "Cum ab eruditis quærerem, quid hic sermo significaret, audivi ab Ægyptiis hoc nomine lingua eorum omne quod in palude virens nascitur appellari."—J. F. R.

ACHZIB (אַכְזִיב). There were two places of this name, not usually distinguished.

1. Achzib (Sept. Ἀσχαζί), in the tribe of Asher nominally, but almost always in the possession of the Phœnicians; being, indeed, one of the places from which the Israelites were unable to expel the former inhabitants (Judg. i. 31). In the Talmud it is called Chezib. The Greeks called it Ecdippa, from the Aramæan pronunciation אכדיב (Ptol. v. 15); and it still survives under the name of Zib. It is upon the Mediterranean coast, about ten miles north of Acre. It stands on an ascent close by the sea-side, and is described as a small place, with a few palm-trees rising above the dwellings (Pococke, ii. 115; Richter, p. 70; Maundrell, p. 71; Irby and Mangles, p. 196; Buckingham, ch. iii.).

2. Achzib (Sept. Ἀχζίβ) in the tribe of Judah (Josh. xv. 44; Mic. i. 14), of which there is no historical mention, but, from its place in the catalogue, it appears to have been in the middle part of the western border-land of the tribe, towards the Philistines. This is very possibly the Chezib (כזיב) of Gen. xxxviii. 5.

ACRA (Ἄκρα), a Greek word, signifying *a citadel*, in which sense הקרא also occurs in the Syriac and Chaldaic. Hence the name of Acra was acquired by the eminence north of the Temple, on which a citadel was built by Antiochus Epiphanes, to command the holy place. It thus became, in fact, the *Acropolis* of Jerusalem. Josephus describes this eminence as semicircular; and reports that when Simon Maccabæus had succeeded in expelling the Syrian garrison, he not only demolished the citadel, but caused the hill itself to be levelled, that no neighbouring site might thenceforth be higher or so high as that on which the temple stood. The people had suffered so much from the garrison, that they willingly laboured day and night, for three years, in this great work (*Antiq.* xiii. 6. 6; *Bell. Jud.* v. 4. 1). At a later period the palace of Helena, queen of Adiabene, stood on the site, which still retained the name of Acra, as did also, probably, the council-house, and the repository of the archives (*Bell. Jud.* vi. 6. 3; see also *Descript. Urbis Ierosolymæ*, per J. Heydenum, lib. iii. cap. 2).

1. ACRABATTENE, a district or toparchy of Judæa, extending between Shechem (now Nâbulus) and Jericho, inclining east. It was about twelve miles in length. It is not mentioned in Scripture, but it occurs in Josephus (*Bell. Jud.* ii. 12, 4; iii. 3, 4, 5). It took its name from a town called Acrabi in the *Onomasticon*, s. v. Ἀκραββείν, where it is described as a large village, nine Roman miles east of Neapolis, on the road to Jericho. In this quarter Dr. Robinson (*Bib. Researches*, iii. 103) found a village still existing under the name of Akrabeh.

2. ACRABATTENE, another district in that portion of Judæa, which lies towards the south end of the Dead Sea, occupied by the Edomites during the Captivity, and afterwards known as Idumæa. It is mentioned in 1 Macc. v. 3; Joseph. *Antiq.* xii. 8. 1. It is assumed to have taken its name from the Maaleh Akrabbim (מעלה עקרבים), or *Steep of the Scorpions*, mentioned in Num. xxxiv. 4. and Josh. xv. 3, as the southern extremity of the tribe of Judah [Akrabbim].

ACRE. [Accho.]

ACTS OF THE APOSTLES. This is the title of one of the canonical books of the New Testament, the fifth in order in the common arrangement, and the last of those properly of an historical character. Commencing with a reference to an account given in a former work of the sayings and doings of Jesus Christ before his ascension, its author proceeds to conduct us to an acquaintance with the circumstances attending that event, the conduct of the disciples on their return from witnessing it, the outpouring on them of the Holy Spirit according to Christ's promise to them before his crucifixion, and the amazing success which, as a consequence of this, attended the first announcement by them of the doctrine concerning Jesus as the promised Messiah and the Saviour of the World. After following the fates of the mother-church at Jerusalem up to the period when the violent persecution of its members by the rulers of the Jews had broken up their society and scattered them, with the exception of the apostles, throughout the whole of the surrounding region; and after introducing to the notice of the reader the case of a remarkable conversion of one of the most zealous persecutors of the church, who afterwards became one of its most devoted and successful advocates, the narrative takes a wider scope and opens to our view the gradual expansion of the church by the free admission within its pale of persons directly converted from heathenism and who had not passed through the preliminary stage of Judaism. The first step towards this more liberal and cosmopolitan order of things having been effected by Peter, to whom the honour of laying the foundation of the Christian church, both within and without the confines of Judaism, seems, in accordance with our Lord's declaration concerning him (Matt. xvi. 18), to have been reserved, Paul, the recent convert and the destined apostle of the Gentiles, is brought forward as the main actor on the scene. On his course of missionary activity, his successes and his sufferings, the chief interest of the narrative is thenceforward concentrated, until, having followed him to Rome, whither he had been sent as

a prisoner to abide his trial, on his own appeal, at the bar of the emperor himself, the book abruptly closes, leaving us to gather further information concerning him and the fortunes of the church from other sources.

Respecting the *authorship* of this book there can be no ground for doubt or hesitation. It is, unquestionably, the production of the same writer by whom the third of the four Gospels was composed, as is evident from the introductory sentences of both (comp. Luke i. 1-4, with Acts i. 1). That this writer was Luke has not in either case been called in question. With regard to the book now under notice tradition is firm and constant in ascribing it to Luke (Irenæus, *Adv. Hær.* lib. i. c. 31; iii. 14; Clemens Alexandr. *Strom.* v. p. 588; Tertullian, *Adv. Marcion.* v. 2; *De Jejun.* c. 10; Origen, apud Euseb. *Hist. Eccles.* vi. 23, &c. Eusebius himself ranks this book among the ὁμολογούμενα, *H. E.* iii. 25). From the book itself, also, it appears that the author accompanied Paul to Rome when he went to that city as a prisoner (xxviii.). Now, we know from two epistles written by Paul at that time, that *Luke* was with him at Rome (Col. iv. 14; Phil. 24), which favours the supposition that he was the writer of the narrative of the apostle's journey to that city. The only parties in primitive times by whom this book was rejected were certain heretics, such as the Marcionites, the Severians, and the Manicheans, whose objections were entirely of a dogmatical, not of a historical nature; indeed, they can hardly be said to have questioned the authenticity of the book; they rather cast it aside because it did not favour their peculiar views. At the same time, whilst this book was acknowledged as genuine where it was known, it does not appear to have been at first so extensively circulated as the other historical books of the New Testament; for we find Chrysostom complaining that by many in his day it was not so much as known (*Hom.* i. *in Act.* sub init.). Perhaps, however, there is some rhetorical exaggeration in this statement; or, it may be, as Kuinoel (*Proleg. in Acta App. Comment.* tom. iv. p. 5) suggests, that Chrysostom's complaint refers rather to a prevalent omission of the Acts from the number of books publicly read in the churches, which would, of course, lead to its being comparatively little known among the people attending those churches.

Many critics are inclined to regard the Gospel by Luke and the Acts of the Apostles as having formed originally only one work, consisting of two parts. For this opinion, however, there does not appear to be any satisfactory authority; and it is hardly accordant with Luke's own description of the relation of these two writings to each other; being called by him, the one the former and the other the latter *treatise* (λόγος), a term which would not be appropriate had he intended to designate by it the first and second parts of the *same* treatise. It would be difficult, also, on this hypothesis to account for the two, invariably and from the earliest times, appearing with *distinct titles*.

Of the greater part of the events recorded in the Acts the writer himself appears to have been witness. He is for the first time introduced into the narrative in ch. xvi. 11, where he speaks of accompanying Paul to Philippi. He then disappears from the narrative until Paul's return to Philippi, more than two years afterwards, when it is stated that they left that place in company (xx: 6); from which it may be justly inferred that Luke spent the interval in that town. From this time to the close of the period embraced by his narrative he appears as the companion of the apostle. For the materials, therefore, of all he has recorded from ch. xvi. 11, to xxviii. 31, he may be regarded as having drawn upon his own recollection or on that of the apostle. To the latter source, also, may be confidently traced all he has recorded concerning the earlier events of the apostle's career; and as respects the circumstances recorded in the first twelve chapters of the Acts, and which relate chiefly to the church at Jerusalem and the labours of the apostle Peter, we may readily suppose that they were so much matter of general notoriety among the Christians with whom Luke associated, that he needed no assistance from any other merely human source in recording them. Some of the German critics have laboured hard to show that he must have had recourse to written documents, in order to compose those parts of his history which record what did not pass under his own observation, and they have gone the length of supposing the existence of a work in the language of Palestine, under the title of מעברי דכיפא or אכרוזתא, of which the Apocryphal book Πράξεις Πέτρου or Κήρυγμα Πέτρου, mentioned by Clement of Alexandria and Origen, was an interpolated edition (Heinrichs, *Prolegg. in Acta App.* p. 21; Kuinoel, *Proleg.* p. 14). All this, however, is mere ungrounded supposition.* There is not the shadow of evidence that any written documents were extant from which Luke could have drawn his materials, and with regard to the alleged impossibility of his learning from traditionary report the minute particulars he has recorded (which is what these critics chiefly insist on), it is to be remembered that, in common with all the sacred writers, he enjoyed the superintending and inspiring influence of the Divine Spirit, whose office it was to preserve him from all error and to guide him into all truth.

A more important inquiry respects the *design* of the evangelist in writing this book. A prevalent popular opinion on this head is, that Luke, having in his Gospel given a history of the life of Christ, intended to follow that up by giving in the Acts a narrative of the establishment and early progress of his religion in the world. That this, however, could not have been his design is obvious from the very partial and limited view which his narrative gives of the state of things in

* This is admitted by Heinrichs: 'Quot enim et qualia fuerint illa monumenta, quo idiomate consignata, num Syriaco, Aramæo, an Græco, quo titulo vulgata, quotusque à Luca excerpta, &c. de his quidem non certissime, sed ex conjecturarum tantummodo umbris poterit disquiri' (Heinrichs, *l. c.* p. 21). Of documents whose names, nature, language, as well as the extent to which they were used by a writer who is said to have been indebted for his materials to them, can be gathered only out of the 'shadowy regions of conjecture,' one would think no mind that is accustomed to weigh evidence would think it worth while to take any notice.

the church generally during the period through which it extends. As little can we regard this book as designed to record the official history of the apostles Peter and Paul, for we find many particulars concerning both these apostles mentioned incidentally elsewhere, of which Luke takes no notice (comp. 2 Cor. xi.; Gal. i. 17; ii. 11; 1 Pet. v. 13. See also Michaelis, *Introduction*, vol. iii. p. 328. Haenlein's *Einleitung*, th. iii. s. 150). Heinrichs, Kuinoel, and others are of opinion that no particular design should be ascribed to the evangelist in composing this book beyond that of furnishing his friend Theophilus with a pleasing and instructive narrative of such events as had come under his own personal notice, either immediately through the testimony of his senses or through the medium of the reports of others; but such a view savours too much of the lax opinions which these writers unhappily entertained regarding the sacred writers, to be adopted by those who regard all the sacred books as designed for the permanent instruction and benefit of the church universal. Much more deserving of notice is the opinion of Haenlein, with which that of Michaelis substantially accords, that 'the general design of the author of this book was, by means of his narratives, to set forth the co-operation of God in the diffusion of Christianity, and along with that, to prove, by remarkable facts, the dignity of the apostles and the perfectly equal right of the Gentiles with the Jews to a participation in the blessings of that religion' (*Einleitung*, th. iii. s. 156. Comp. Michaelis, *Introduction*, vol. iii. p. 330). Perhaps we should come still closer to the truth if we were to say that the design of Luke in writing the Acts was to supply, by select and suitable instances, an illustration of the power and working of that religion which Jesus had died to establish. In his gospel he had presented to his readers an exhibition of Christianity as embodied in the person, character, and works of its great founder; and having followed him in his narration until he was taken up out of the sight of his disciples into heaven, this second work was written to show how his religion operated when committed to the hands of those by whom it was to be announced 'to all nations, beginning at Jerusalem' (Luke xxiv. 47). In this point of view the recitals in this book present a theme that is practically interesting to Christians in all ages of the church and all places of the world; for they exhibit to us what influences guided the actions of those who laid the foundations of the church, and to whose authority all its members must defer—what courses they adopted for the extension of the church,—what ordinances they appointed to be observed by those Christians who, under their auspices, associated together for mutual edification,—and what difficulties, privations, and trials were to be expected by those who should zealously exert themselves for the triumph of Christianity. We are thus taught not by dogmatical statement, but by instructive narrative, under what sanctions Christianity appears in our world, what blessings she offers to men, and by what means her influence is most extensively to be promoted and the blessings she offers to be most widely and most fully enjoyed.

Respecting the *time* when this book was composed it is impossible to speak with certainty. As the history is continued up to the close of the second year of Paul's imprisonment at Rome, it could not have been written before A.D. 63; it was probably, however, composed very soon after, so that we shall not err far if we assign the interval between the year 63 and the year 65 as the period of its completion. Still greater uncertainty hangs over the *place* where Luke composed it, but as he accompanied Paul to Rome, perhaps it was at that city and under the auspices of the apostle that it was prepared.

The *style* of Luke in the Acts is, like his style in his Gospel, much purer than that of most other books of the New Testament. The Hebraisms which occasionally occur are almost exclusively to be found in the speeches of others which he has reported. These speeches are indeed, for the most part, to be regarded rather as summaries than as full reports of what the speaker uttered; but as these summaries are given in the speakers' own words, the appearance of Hebraisms in them is as easily accounted for as if the addresses had been reported in full. His mode of narrating events is clear, dignified, and lively; and, as Michaelis observes, he 'has well supported the character of each person whom he has introduced as delivering a public harangue, and has very faithfully and happily preserved the manner of speaking which was peculiar to each of his orators' (*Introduction*, vol. iii. p. 332).

Whilst, as Lardner and others have very satisfactorily shown (Lardner's *Credibility*, Works, vol. i.; Biscoe, *On the Acts*; Paley's *Horæ Paulinæ*; Benson's *History of the First Planting of Christianity*, vol. ii. &c.), the *credibility* of the events recorded by Luke is fully authenticated both by internal and external evidence, very great obscurity attaches to the *chronology* of these events. Of the many conflicting systems which have been published for the purpose of settling the questions that have arisen on this head, it is impossible within such limits as those to which this article is necessarily confined, to give any minute account. As little do we feel ourselves at liberty to attempt an original investigation of the subject, even did such promise to be productive of any very satisfactory result. The only course that appears open to us is to present, in a tabular form, the dates affixed to the leading events by those writers whose authority is most deserving of consideration in such an inquiry.—(*See next page*.)

The majority of these dates can only be regarded as approximations to the truth, and the diversity which the above table presents shows the uncertainty of the whole matter. The results at which Mr. Greswell and Dr. Anger have arrived are, in many cases, identical, and upon the whole the earlier date which they assign to the ascension of Christ seems worthy of adoption. We cannot help thinking, however, that the interval assigned by these writers to the events which transpired between the ascension of Christ and the stoning of Stephen is much too great. The date which they assign to Paul's first visit to Jerusalem is also plainly too late, for Paul himself tells us that his flight from Damascus occurred whilst that town was under the authority of Aretas, whose tenure of it cannot be extended beyond the year 38 of the common æra (2 Cor. xi. 32. See also Neander's remarks on these in *Geschichte der Pflanzung und Leitung der Christlichen Kirche*, Bd. i.

	Usher.[1]	Pearson.[2]	Michaelis.[3]	Hug.[4]	Haenlein.[5]	Greswell.[6]	Anger.[7]
The Ascension of Christ	33	33	33	31	33	30	31

Paul arrives in Rome	63	61	63	62	63	59	61

s. 80). Perhaps the following is the true order of the events of the apostle's early career, as a Christian. In Gal. ii. 1, he speaks himself of going up to Jerusalem fourteen years, or about fourteen years, after his conversion (for so we understand his words). Now this visit could not have been that recorded in Acts xv., because we cannot conceive that *after* the events detailed in that chapter Peter would have acted as Paul describes in Gal. ii. 11. We conclude, therefore, that the visit here referred to was one earlier than that mentioned in Acts xv. It must, therefore, have been that mentioned in Acts xi. 12. Now, this being at the time of the famine, its date is pretty well fixed to the year 45, or thereabouts. Subtract 14 from this, then, and we get 31 as the date of Paul's conversion, and adding to this the three years that elapsed between his conversion and his first visit to Jerusalem (Gal. i. 18), we get the year 34 as the date of this latter event. If this arrangement be not adopted, the visit to Jerusalem mentioned in Gal. ii. 1, must, for the reason just mentioned, be intercalated between the commencement of Paul's first missionary tour and his visit to Jerusalem at the time of the holding of the so-called council; so that the number of Paul's visits to that city would be *six*, instead of *five*. Schrader adopts somewhat of a similar view, only he places this additional visit between the fourth and fifth of those mentioned in the Acts (*Der Apostel Paulus*, 4 Th. Leipz. 1830-1838).

9. Of separate commentaries on the Acts of the Apostles the most valuable are the following: Limborch, *Commentarium in Acta Apostolorum*, &c. fol., Roterodami, 1711; J. E. M. Walch, *Dissertt. in Acta App.* 3 tom. 4to. Jena, 1756-1761; Sam. F. N. Morus, *Versio et Explicatio Act. App.* ed. Dindorf, 2 tom. 8vo. Leips. 1794; Richard Biscoe's *History of the Acts, confirmed from other authors*, &c. 8vo. Oxford, 1829; Kuinoel, *Comment. in Acta App.* which forms the fourth vol. of his *Comment. in Libros Hist. N. T.* Leips. 1818; Heinrichs, *Acta App. perpetua Annott. illustrata*, being the third vol. of the *Nov. Test. Koppianum*. The works of Benson on the *Planting of the Christian Churches*, 3 vols. 4to.; and of Neander, *Geschichte der Leitung und Pflanzung der Christlichen Kirche durch die Apostel* (recently translated into English as part of the *Edinburgh Biblical Cabinet*), may be also viewed in the light of Commentaries on the Acts.—W. ACTS, SPURIOUS [Apocrypha]. This term has been applied to several ancient writings pretended to have been composed by, or to supply historical facts respecting our Blessed Saviour and his disciples, or other individuals whose actions are recorded in the holy Scriptures. Of these spurious or pseudepigraphal writings several are still extant; others are only known to have existed, by the accounts of them which are to be met with in ancient authors.

Acts of Christ, Spurious. Several sayings attributed to our Lord, and alleged to be handed down by tradition, may be included under this head, as they are supposed by some learned men to have been derived from histories which are no longer in existence. As explanatory of our meaning it will suffice to refer to the beautiful sentiment cited by St. Paul (Acts xx. 35), Μακάριόν ἐστι μᾶλλον διδόναι ἢ λαμβάνειν, tc which the term apocryphal has been sometimes applied, inasmuch as it is not contained in any of the written biographies of our Lord. This term is so applied by M. Gaussen of Geneva, in his *Theopneustia* (English translation, Bagster, 1842). The learned Heinsius is of opinion that the passage is taken from some lost apocryphal book, such as that entitled, in the *Recognitions* of Clement, 'the Book of the Sayings of Christ,' or the pretended *Constitutions of the Apostles.*

Others, however, conceive that the apostle, in Acts xx. 35, does not refer to any one saying of our Saviour's in particular, but that he deduced Christ's sentiments on this head from several of his savings and parables (see Matt. xix. 21; xxv.; and Luke xvi. 9). But the probability is that St. Paul received this passage by tradition from the other apostles.

There is also a saying ascribed to Christ to be found in the *Epistle of Barnabas*, a work at least of the second century: 'Let us resist all iniquity, and hate it;' and again, 'So they who would see me, and lay hold on my kingdom, must receive me through much suffering and tribulation:' but it is not improbable that these passages contain merely an allusion to some of our Lord's discourses.

Clemens Romanus, the third bishop of Rome after St. Peter (or the writer who passes under the name of Clement), in his *Second Epistle to the Corinthians*, ascribes the following saying to Christ:—'Though ye should be united to me in my bosom, and yet do not keep my commandments, I will reject you, and say, Depart from me, I know not whence ye are, ye workers of iniquity.' This passage seems evidently to be taken from St. Luke's gospel, xiii. 25, 26, 27.

There are many similar passages, which several eminent writers, such as Grabe, Mill, and Fabricius, have considered as derived from apocryphal gospels, but which seem with greater probability to be nothing more than loose quotations from the Scriptures, which were very common among the apostolical Fathers.

There is a saying of Christ's, cited by Clement in the same epistle, which is found in the apocryphal gospel of the Egyptians:—'The Lord, being asked when his kingdom should come, replied, *When two shall be one, and that which is without as that which is within, and the male with the female neither male nor female*' [GOSPELS, APOCRYPHAL].

We may here mention that the genuineness of the Second Epistle of Clement is itself disputed, and is rejected by Eusebius, Jerome, and others; at least Eusebius says of it, 'We know not that this is as highly approved of as the former, or that it has been in use with the ancients' (*Hist. Eccles.* iii. 38, Cruse's translation, 1842).

Eusebius, in the last chapter of the same book, states that Papias, a companion of the apostles, 'gives another history of a woman who had been accused of many sins before the Lord, which is also contained in the Gospel according to the Nazarenes.' As this latter work is lost, it is doubtful to what woman the history refers. Some suppose it alludes to the history of the woman taken in adultery; others, to the woman of Samaria. There are two discourses ascribed to Christ by Papias, preserved in Irenæus (*Adversus Hæres.* v. 33), relating to the doctrine of the Millennium, of which Papias appears to have been the first propagator. Dr. Grabe has defended the truth of these traditions, but the discourses themselves are unworthy of our blessed Lord.

There is a saying ascribed to Christ by Justin Martyr, in his *Dialogue with Trypho*, which has been supposed by Dr. Cave to have been taken from the *Gospel of the Nazarenes*. Mr. Jones conceives it to have been an allusion to a passage in the prophet Ezekiel. The same Father furnishes us with an apocryphal history of Christ's baptism, in which it is asserted that 'a fire was kindled in Jordan.' He also acquaints us that Christ worked, when he was on earth, at the trade of a carpenter, making ploughs and yokes for oxen.

There are some apocryphal sayings of Christ preserved by Irenæus, but his most remarkable observation is, that Christ 'lived and taught beyond his fortieth, or even fiftieth year.' This he founds partly on absurd inferences drawn from the character of his mission, partly on John viii. 57, and also on what he alleges to have been John's own testimony, delivered to the presbyter of Asia. It is scarcely necessary to refute this absurd idea, which is in contradiction with all the statements in the genuine gospels. There is also an absurd saying attributed to Christ by Athenagoras, *Legat. pro Christianis*, cap. 28.

There are various sayings ascribed to our Lord by Clemens Alexandrinus and several of the Fathers. One of the most remarkable is, 'Be ye skilful money-changers.' This is supposed to have been contained in the *Gospel of the Nazarenes*. Others think it to have been an early interpolation into the text of Scripture. Origen and Jerome cite it as a saying of Christ's.

In Origen, *Contra Celsum* lib. i., is an apocryphal history of our Saviour and his parents, in which it is reproached to Christ that he was born in a mean village, of a poor woman who gained her livelihood by spinning, and was turned off by her husband, a carpenter. Celsus adds that Jesus was obliged by poverty to work as a servant in Egypt, where he learned many powerful arts, and thought that on this account he ought to be esteemed as a god. There was a similar account contained in some apocryphal books extant in the time of St. Augustine. It was probably a Jewish forgery. Augustine, Epiphanius, and others of the Fathers equally cite sayings and acts of Christ, which they probably met with in the early apocryphal gospels.

There is a spurious hymn of Christ's extant, ascribed to the Priscillianists by St. Augustine. There are also many such acts and sayings to be found in the *Koran* of Mahomet, and others in the writings of the Mohammedan doctors (see Toland's *Nazarenus*).

There is a prayer ascribed to our Saviour by the same persons, which is printed in Latin and Arabic in the learned Selden's *Commentary on Eutychius's Annals of Alexandria*, published at Oxford, in 1650, by Dr. Pococke. It contains a petition for pardon of sin, which is sufficient to stamp it as a forgery.

We must not omit to mention here the two curious acts of Christ recorded, the one by Eusebius, and the other by Evagrius. The first of these included a letter said to have been written to our Saviour by Agbarus (or Abgarus), king of Edessa, requesting him to come and heal a disease under which he laboured. The letter, together with the supposed reply of Christ, are preserved by Eusebius. This learned historian asserts that he obtained the documents, together with the history, from the public registers of the city of Edessa, where they existed in his time in the Syriac language, from which he translated them into Greek.

These letters are also mentioned by Ephraim Syrus, deacon of Edessa, at the close of the fourth century. Jerome refers to them in his comment on Matt. x., and they are mentioned by Pope Gelasius, who rejects them as spurious and apocryphal. They are, however, referred to as genuine by Evagrius and later historians. Among modern writers the genuineness of these letters has been maintained by Dr. Parker, in the preface to his *Demonstration of the Law of Nature, and the Christian Religion*, part ii. § 16, p. 235; by Dr. Cave, in his *Historia Literaria*, vol. i. p. 23; and by Grote, in his *Spicilegium Patrum*, particularly p. 319. On the other hand, most writers, including the great majority of Roman Catholic divines, reject them as spurious. Mr. Jones, in his valuable work on the *Canonical Authority of the New Testament*, although he does not venture to deny that the Acts were contained in the public registers of the city of Edessa, yet gives it, as a probable conjecture, in favour of which he adduces some strong reasons, drawn from internal evidence, that this whole chapter (viz. the 13th of the first book) in the *Ecclesiastical History* of Eusebius is itself an interpolation. But the letters will speak for themselves:—

Copy of a Letter written by King Agbarus to Jesus, and sent to him at Jerusalem, by Ananias, the courier.

'Agbarus, prince of Edessa, sends greeting, to Jesus, the excellent Saviour, who has appeared in the borders of Jerusalem. I have heard the reports respecting thee and thy cures, as performed by thee without medicines and without the use of herbs. For, as it is said, thou causest the blind to see again, the lame to walk, and thou cleansest the lepers, and thou castest out impure spirits and demons, and thou healest those who are tormented by long disease, and thou raisest the dead. And hearing all these things of thee, I concluded in my mind one of two things: either, that thou art God, and having descended from heaven, doest these things; or else, doing them, thou art the Son of God. Therefore, now I have written, and besought thee to visit me, and to heal the disease with which I am afflicted. I have also heard that the Jews murmur against thee, and are plotting to injure thee: I have, however, a very small but noble estate, which is sufficient for us both.'

The Answer of Jesus to King Agbarus, by the courier Ananias.

'Blessed art thou, O Agbarus, who, without seeing, hast believed in me. For it is written concerning me, that they who have seen will not believe, that they who have not seen may believe, and live. But in regard to what thou hast written, that I should come to thee, it is necessary that I should fulfil all things here, for which I am sent, and after their fulfilment, then to be received again by him that sent me; and after I have been received up, I will send to thee a certain one of my disciples, that he may heal thy affliction, and give life to thee and those who are with thee' [EPISTLES, SPURIOUS].

The other apocryphal history related by Evagrius, out of Procopius, states that Agbarus sent a limner to draw the picture of our Saviour, but that not being able to do it by reason of the brightness of Christ's countenance, our Saviour 'took a cloth, and laying it upon his divine and life-giving face, he impressed his likeness on it.' This story of Christ's picture is related by several, in the Second Council of Nice, and by other ancient writers, one of whom (Leo) asserts that he went to Edessa, and saw 'the image of Christ, not made with hands, worshipped by the people.' This is the first of the four likenesses of Christ mentioned by ancient writers. The second is that said to have been stamped on a handkerchief by Christ, and given to Veronica, who had followed him to his crucifixion. The third is the statue of Christ, stated by Eusebius to have been erected by the woman whom he had cured of an issue of blood, and which the learned historian acquaints us he saw at Cæsarea Philippi (Eusebius, *Hist. Eccles.* vii. 18). Sozomen and Cassiodorus assert that the emperor Julian took down this statue and erected his own in its place. It is, however, stated by Asterius, a writer of the fourth century, that it was taken away by Maximinus, the predecessor of Constantine. The fourth picture is one which Nicodemus presented to Gamaliel, which was preserved at Berytus, and which having been crucified and pierced with a spear by the Jews, there issued out from the side blood and water. This is stated in a spurious treatise concerning the passion and image of Christ, falsely ascribed to Athanasius. Eusebius the historian asserts (*loc. cit.*) that he had here seen the pictures of Peter, Paul, and of Christ himself, in his time (see also Sozomen, *Hist. Eccles.* v. 21).

ACTS OF THE APOSTLES, SPURIOUS.

Of these several are extant, others are lost, or only fragments of them are come down to us.

Of the following we know little more than that they once existed. They are here arranged chronologically:—*The Preaching of Peter*, referred to by Origen, in his *Commentary on St. John's Gospel*, lib. xiv.; also referred to by Clemens Alexandrinus.—*The Acts of Peter*, supposed by Dr. Cave to be cited by Serapion.—*The Acts of Paul and Thecla*, mentioned by Tertullian, *Lib. de Baptismo*, cap. xvii.: this is, however, supposed by some to be the same which is found in a Greek MS. in the Bodleian Library, and has been published by Dr. Grabe, in his *Spicil. Patrum Secul. I.*—*The Doctrine of Peter*, cited by Origen, 'Procem.' *in Lib. de Princip.*—*The Acts of Paul*, ib. *de Princip.* i. 2.—*The Preaching of Paul*, referred to by St. Cyprian, *Tract. de non iterando Baptismo.*—*The Preaching of Paul and Peter at Rome*, cited by Lactantius, *De vera Sap.* iv. 21.—*The Acts of Peter*, thrice mentioned by Eusebius, *Hist. Eccles.* iii. 3: 'as to that work, however, which is ascribed to him, called "The Acts" and the "Gospel according to Peter," we know nothing of their being handed down as Catholic writings, since neither among the ancient nor the ecclesiastical writers of our own day has there been one that has appealed to testimony taken from them.'—*The Acts of Paul*, ib.—*The Revelation of Peter*, ib.—*The Acts of Andrew and John*, ib. cap. 25. Thus,' he says, 'we have it in our power to know . . . those books that are adduced by the heretics, under the name of the apostles, such, viz. as compose the gospels of Peter, Thomas, and Matthew, ... and such as contain the Acts of the Apostles by Andrew and John, and others of which no one of those writers in the ecclesiastical succession has condescended to make any mention in his works; and, indeed, the character of the style it-

self is very different from that of the apostles, and the sentiments and the purport of those things that are advanced in them, deviating as far as possible from sound orthodoxy, evidently proves they are the fictions of heretical men; whence they are to be ranked not only among the spurious writings, but are to be rejected as altogether absurd and impious.'—*The Acts of Peter, John, and Thomas.* Athanasius, *Synops.* § 76.—*The Writings of Bartholomew the Apostle*, mentioned by the pseudo-Dionysius.—*The Acts, Preaching, and Revelation of Peter*, cited by Jerome, in his *Catal. Script. Eccles.*—*The Acts of the Apostles by Seleucus*, ib. *Epist. ad Chrom.*, &c.—*The Acts of Paul and Thecla*, ib. *Catalog. Script. Eccles.*—*The Acts of the Apostles, used by the Ebionites*, cited by Epiphanius, *Adversus Hæres.* § 16.—*The Acts of Leucius, Lentius*, or *Lenticius*, called the Acts of the Apostles, Augustin. *Lib. de Fid.* c. 38.—*The Acts of the Apostles*, used by the Manichees.—*The Revelations of Thomas, Paul, Stephen*, &c. Gelasius, *de Lib. Apoc. apud Gratian. Distinct.* 15. c. 3.

To these may be added the *genuine Acts of Pilate*, appealed to by Tertullian and Justin Martyr, in their *Apologies*, as being then extant. Tertullian describes them as 'the records which were transmitted from Jerusalem to Tiberius concerning Christ.' He refers to the same for the proof of our Saviour's miracles.

The following is a catalogue of the principal spurious Acts still extant:—*The Creed of the Apostles.*—*The Epistles of Barnabas, Clement, Ignatius, and Polycarp.*—*The Recognitions of Clement*, or the *Travels of Peter.*—*The Shepherd of Hermas.*—*The Acts of Pilate* (spurious), or the *Gospel of Nicodemus.*—*The Acts of Paul*, or the *Martyrdom of Thecla.*—Abdias's *History of the Twelve Apostles.*—*The Constitutions of the Apostles.*—*The Canons of the Apostles.*—*The Liturgies of the Apostles.*—*St. Paul's Epistle to the Laodiceans.*—*St. Paul's Letters to Seneca.* Together with some others, for which see Cotelerius's *Ecclesiæ Græcæ Monumenta*, Paris, 1677-92; Fabricius, *Codex Apocryphus, N. T.*; Du Pin, *History of the Canon of the New Testament*, London, 1699; Grabe's *Spicilegium Patrum*, Oxford, 1714; Lardner's *Credibility*, &c.; Jones's *New and Just Method of Settling the Canonical Authority of the New Testament*; Birell's *Tuctarium*, Hafniæ, 1804; Thilo's *Acta St. Thomæ*, Lips. 1823, and *Codex Apocryphus N. T.*, Lips. 1832.—W. W.

ADAD is the name of the chief deity of the Syrians, the *sun*, according to Macrobius, whose words are (*Saturnal.* i. 23): 'Accipe quid Assyrii de Solis potentia opinentur; deo enim, quem summum maximumque venerantur, Adad nomen dederunt. Ejus nominis interpretatio significat *unus.* . . . . Simulacrum, Adad insigne cernitur radiis inclinatis, quibus monstratur vim cœli in radiis esse Solis, qui demittuntur in terram.' Moreover, Pliny (*Hist. Nat.* xxxvii. 11, 71), speaking of remarkable stones named after parts of the body, mentions some called 'Adadunephros, ejusdem oculus ac digitus dei;' and adds, 'et hic colitur a Syris.' He is also called Ἄδωδος βασιλεὺς θεῶν by Philo *Byblius* (in Eusebii *Præpar. Evan.* i. 10), where the occurrence of the long *o* for *a* is to be ascribed to the characteristic pronunciation of the Western Aramæan dialect. The passage of Hesychius which Harduin adduces in his note to Pliny, concerning the worship of this god by the Phrygians, only contains the name Ἄδωδος by an emendation of Salmasius, which Jablonski declares to be inadmissible (*De Ling. Lycaonica*, p. 64).

This Syrian deity claims some notice here, because his name is most probably an element in the names of the Syrian kings Benhadad and Hadadezer. Moreover, several of the older commentators have endeavoured to find this deity in Isaiah lxvi. 17; either by altering the text there to suit the *name* given by Macrobius; or by adapting the name he gives to his *interpretation* and to the reading of the Hebrew, so as to make that extract bear testimony to a god *Achad.* Michaelis has argued at some length against both these views: and the modern commentators, such as Gesenius, Hitzig, Böttcher (in *Proben Altest. Schrifterklär.*), and Ewald, do not admit the name of any deity in that passage.—J. N.

ADAD-RIMMON, properly Hadad-Rimmon (הֲדַדְרִמּוֹן; Sept. *ῥοών, a garden of pomegranates*), a city in the valley of Jezreel, where was fought the famous battle between King Josiah and Pharaoh-Necho (2 Kings xxiii. 29; Zech. xii. 11). Adad-rimmon was afterwards called Maximianopolis, in honour of the emperor Maximian (Jerome, *Comment. in Zach.* xii.). It was seventeen Roman miles from Cæsarea, and ten miles from Jezreel (*Itin. Hieros.*).

ADAH (עָדָה, *adornment, comeliness*; Sept. Ἀδά): 1. one of the wives of Lamech (Gen. iv. 19). 2. one of the wives of Esau, daughter of Elon the Hittite (Gen. xxxvi. 4). She is called Judith in Gen. xxvi. 34.

ADAM (אָדָם), the word by which the Bible designates the first human being.

It is evident that, in the earliest use of language, the vocal sound employed to designate the first perceived object, of any kind, would be an appellative, and would be formed from something known or apprehended to be a characteristic property of that object. The word would, therefore, be at once the appellative and the proper name. But when other objects of the same kind were discovered, or subsequently came into existence, difficulty would be felt; it would become necessary to guard against confusion, and the inventive faculty would be called upon to obtain a discriminative term for each and singular individual, while some equally appropriate term would be fixed upon for the whole kind. Different methods of effecting these two purposes might be resorted to, but the most natural would be to retain the original term in its simple state, for the first individual: and to make some modification of it by prefixing another sound, or by subjoining one, or by altering the vowel or vowels in the body of the word, in order to have a term for the kind, and for the separate individuals of the kind.

This reasoning is exemplified in the first applications of the word before us: (Gen. i. 26), 'Let us make man [Adam] in our image;' (i. 27), 'And God created the man [the Adam] in his own image.' The next instance (ii. 7) expresses the source of derivation, a character or property, namely, the material of which the human body was formed: 'And the Lord God [Jehovah

Elohim] formed the man [the Adam] dust from the ground [the adamah]'. The meaning of the primary word is, most probably, any kind of *reddish tint*, as a beautiful human complexion (Lam. iv. 7); but its various derivatives are applied to different objects of a red or brown hue, or approaching to such. The word *Adam*, therefore, is an appellative noun made into a proper one. It is further remarkable that, in all the other instances in the second and third chapters of Genesis, which are nineteen, it is put with the article, *the man*, or *the Adam*. It is also to be observed that, though it occurs very frequently in the Old Testament, and though there is no grammatical difficulty in the way of its being declined by the dual and plural terminations and the pronominal suffixes (as its derivative דם, *dam*, blood, is), yet it never undergoes those changes; it is used abundantly to denote *man* in the general and collective sense—*mankind*, *the human race*, but it is never found in the plural number. When the sacred writers design to express *men* distributively, they use either the compound term, *sons of men* (בני אדם, *benei adam*), or the plural of אנוש *enosh*, or איש *ish*.

The question arises, Was the uttered sound, originally employed for this purpose, the very vocable *Adam*, or was it some other sound of correspondent signification? This is equivalent to asking, what was the primitive language of men?

That language originated in the instinctive cries of human beings herding together in a condition like that of common animals, is an hypothesis which, apart from all testimony of revelation, must appear unreasonable to a man of serious reflection. There are other animals, besides man, whose organs are capable of producing articulate sounds, through a considerable range of variety, and distinctly pronounced. How, then, is it that parrots, jays, and starlings have not among themselves developed an articulate language, transmitted it to their successive generations, and improved it, both in the life-time of the individual and in the series of many generations? Those birds never attempt to speak till they are compelled by a difficult process on the part of their trainers, and they never train each other.

Upon the mere ground of reasoning from the necessity of the case, it seems an inevitable conclusion that not the capacity merely, but the actual use of speech, with the corresponding faculty of promptly understanding it, was given to the first human beings by a superior power: and it would be a gratuitous absurdity to suppose that power to be any other than the Almighty Creator. In what manner such communication or infusion of what would be equivalent to a habit took place, it is in vain to inquire; the subject lies beyond the range of human investigation: but, from the evident exigency, it must have been instantaneous, or nearly so. It is not necessary to suppose that a copious language was thus bestowed upon the human creatures in the first stage of their existence. We need to suppose only so much as would be requisite for the notation of the ideas of natural wants and the most important mental conceptions; and from these, as germs, the powers of the mind and the faculty of vocal designation would educe new words and combinations as occasion demanded

That the language thus formed continued to be the universal speech of mankind till after the deluge, and till the great cause of diversity [LANGUAGE] took place, is in itself the most probable supposition. If there were any families of men which were not involved in the crime of the Babel-builders, they would almost certainly retain the primeval language. The longevity of the men of that period would be a powerful conservative of that language against the slow changes of time. That there were such exceptions seems to be almost an indubitable inference from the fact that Noah long survived the unholy attempt. His faithful piety would not have suffered him to fall into the snare; and it is difficult to suppose that none of his children and descendants would listen to his admonitions, and hold fast their integrity by adhering to him: on the contrary, it is reasonable to suppose that the habit and character of piety were established in many of them.

The confusion of tongues, therefore, whatever was the nature of that judicial visitation, would not fall upon that portion of men which was the most orderly, thoughtful, and pious, among whom the second father of mankind dwelt as their acknowledged and revered head.

If this supposition be admitted, we can have no difficulty in regarding as the mother of languages, not indeed the Hebrew, absolutely speaking, but that which was the stock whence branched the Hebrew, and its sister tongues, usually called the Shemitic, but more properly, by Dr. Prichard, the Syro-Arabian. It may then be maintained that the actually spoken names of Adam and all the others mentioned in the ante-diluvian history were those which we have in the Hebrew Bible, very slightly and not at all essentially varied.

On the other hand, some of the greatest names in the study and comparison of languages maintain that 'the primeval language has not been anywhere preserved, but that fragments of it must, from the common origin of all, everywhere exist; that these fragments will indicate the original derivation and kindredship of all; and that some direct causation of no common agency has operated to begin, and has so permanently affected mankind as to establish, a striking and universally experienced diversity' (Mr. Sharon Turner 'On the Languages of the World,' &c., in the *Transactions of the Royal Society of Literature*, the volumes published in 1827 and 1834). We take this citation from Dr. Bosworth's Anglo-Saxon Dictionary, Pref. p. iii., where that eminent scholar and antiquary seems tacitly to intimate his concurrence with Mr. Turner, and subjoins,—'A gentleman, whose erudition is universally acknowledged, and whose opinion, from his extensive lingual knowledge and especially from his critical acquaintance with the Oriental tongues, deserves the greatest attention, has come to this conclusion; for he has stated, "The original language, of which the oldest daughter is the Sanskrit, the fruitful mother of so many dialects, exists no longer" (Prof. Hamaker's *Academische Voorlezingen*, Leyden, 1835).

Upon this hypothesis it will follow that a knowledge of the proper names of the first human family, and of all down to the times of Abraham, is absolutely unattainable; and that the Hebrew designations which we possess are not echoes of the

sounds, but representatives or translations of their signification. We acknowledge that the former seems to us the more probable opinion.

That men and other animals have existed from eternity, by each individual being born of parents and dying at the close of his period, that is, by an infinite succession of finite beings, has been asserted by some: whether they really believed their own assertion may well be doubted. Others have maintained that the first man and his female mate, or a number of such, came into existence by some spontaneous action of the earth or the elements, a chance-combination of matter and properties, without an intellectual designing cause. We hold these notions to be unworthy of a serious refutation. An upright mind, upon a little serious reflection, must perceive their absurdity, self-contradiction, and impossibility. To those who may desire to see ample demonstration of what we here assert, we recommend Dr. Samuel Clarke *On the Being and Attributes of God;* Mr. Samuel Drew's *Essays;* or an admirable work not known in a manner corresponding to its worth, *Discourses on Atheism*, by the Rev. Thomas Allin, 1828.

It is among the clearest deductions of reason, that men and all dependent beings have been *created*, that is, produced or brought into their first existence by an intelligent and adequately powerful being. A question, however, arises, of great interest and importance. Did the Almighty Creator produce only one man and one woman, from whom all other human beings have descended?—or did he create several parental pairs, from whom distinct stocks of men have been derived? The affirmative of the latter position has been maintained by some, and, it must be confessed, not without apparent reason. The manifest and great differences in complexion and figure, which distinguish several races of mankind, are supposed to be such as entirely to forbid the conclusion that they have all descended from one father and one mother. The question is usually regarded as equivalent to this: whether there is only one species of men, or there are several. But we cannot, in strict fairness, admit that the questions are identical. It is hypothetically *conceivable* that the Adorable God might give existence to any number of creatures, which should all possess the properties which characterize identity of species, even without such differences as constitute varieties, or with any degree of those differences. A learned German divine, Dr. de Schrank, thinks it right to maintain that, of all organized beings besides man, the Creator gave existence to innumerable individuals, of course in their proper pairs (*Comm. in Gen.* p. 69, Sulzbach, 1835). His reason probably is, that otherwise there would not be a provision of food: but whether the conjecture be admitted or not, it is plain that it involves no contradiction, and that therefore distinct races of men might have been created, differing within certain limits, yet all possessing that which physiologists lay down as the only proper and constant character, the perpetuity of propagation.

But the admission of the possibility is not a concession of the reality. So great is the evidence in favour of the derivation of the entire mass of human beings from one pair of ancestors, that it has obtained the suffrage of the men most competent to judge upon a question of comparative anatomy and physiology. The late illustrious Cuvier and Blumenbach, and our countryman Mr. Lawrence, are examples of the highest order. But no writer has a claim to deference upon this subject superior to that of Dr. J. C. Prichard. He has devoted a large work, which is still in the progress of publication, to this subject and others allied to it—*Researches into the Physical History of Mankind*, 3 volumes, and one more at least to come, 1836-1841: also another work, just completed—*The Natural History of Man*, 1842. In the Introductory Observations contained in the latter work we find a passage which we cite as an example of that noble impartiality and disregard of even sacred prepossessions with which the author has pursued his laborious investigation: 'I shall not pretend that in my own mind I regard the question now to be discussed as one of which the decision is indifferent either to religion or to humanity. But the strict rule of scientific scrutiny exacts, according to modern philosophers, in matters of inductive reasoning, an exclusive homage. It requires that we should close our eyes against all presumptive and extrinsic evidence, and abstract our minds from all considerations not derived from the matters of fact which bear immediately on the question. The maxim we have to follow in such controversies is, *fiat justitia, ruat cœlum*. In fact, what is actually true, it is always most desirable to know, whatever consequences may arise from its admission.'

The animals which render eminent services to man, and peculiarly depend upon his protection, are widely diffused—the horse, the dog, the hog, the domestic fowl. Now of these the varieties in each species are numerous and different, to a degree so great, that an observer ignorant of physiological history would scarcely believe them to be of the same species. But man is the most widely diffused of any animal. In the progress of ages and generations, he has naturalized himself to every climate, and to modes of life which would prove fatal to an individual man suddenly transferred from a remote point of the field. The alterations produced affect every part of the body, internal and external, without extinguishing the marks of the specific identity. A further and striking evidence is, that when persons of different varieties are conjugally united, the offspring, especially in two or three generations, becomes more prolific, and acquires a higher perfection in physical and mental qualities than was found in either of the parental races. From the deepest African black to the finest Caucasian white, the change runs through imperceptible gradations; and, if a middle hue be assumed, suppose some tint of brown, all the varieties of complexion may be explained upon the principle of divergence influenced by outward circumstances. The conclusion may be fairly drawn, in the words of the able translators and illustrators of Baron Cuvier's great work:—'We are fully warranted in concluding, both from the comparison of man with inferior animals, so far as the inferiority will allow of such comparison, and, beyond that, by comparing him with himself, that the great family of mankind loudly proclaim a descent, at some period or other, from one common origin.' (*Animal Kingdom*, with the Supplements of Mr. E.

Griffith, Col. Hamilton Smith, and Mr. Pidgeon, vol. i. p. 179).

Thus, by an investigation totally independent of historical authority, we are brought to the conclusion of the inspired writings, that the Creator 'hath made of one blood all nations of men, for to dwell on all the face of the earth' (Acts xvii. 26).

We shall now follow the course of those sacred documents in tracing the history of the first man, persuaded that their right interpretation is a sure basis of truth. At the same time we shall not reject illustrations from natural history and the reason of particular facts.

It is evident upon a little reflection, and the closest investigation confirms the conclusion, that the first human pair must have been created in a state equivalent to that which all subsequent human beings have had to reach by slow degrees, in growth, experience, observation, imitation, and the instruction of others: that is, a state of prime maturity, and with an infusion, concreation, or whatever we may call it, of knowledge and habits, both physical and intellectual, suitable to the place which man had to occupy in the system of creation, and adequate to his necessities in that place. Had it been otherwise, the new beings could not have preserved their animal existence, nor have held rational converse with each other, nor have paid to their Creator the homage of knowledge and love, adoration and obedience; and reason clearly tells us that the last was the noblest end of existence. Those whom unhappy prejudices lead to reject revelation must either admit this, or must resort to suppositions of palpable absurdity and impossibility. If they will not admit a direct action of Divine power in creation and adaptation to the designed mode of existence, they must admit something far beyond the miraculous, an infinite succession of finite beings, or a spontaneous production of order, organization, and systematic action, from some unintelligent origin. The Bible coincides with this dictate of honest reason, expressing these facts in simple and artless language, suited to the circumstances of the men to whom revelation was first granted. That this production in a mature state was the fact with regard to the vegetable part of the creation, is declared in Gen. ii. 4, 5: 'In the day of Jehovah God's making the earth and the heavens, and every shrub of the field before it should be in the earth, and every herb of the field before it should bud.' The reader sees that we have translated the verbs (which stand in the Hebrew future form) by our potential mood, as the nearest in correspondence with the idiom called by Dr. Nordheimer the 'Dependent Use of the Future' (*Critical Grammar of the Heb. Lang.*, vol. ii. p. 186; New York, 1841). The two terms, shrubs and herbage, are put, by the common synecdoche, to designate the whole vegetable kingdom. The reason of the case comprehends the other division of organized nature; and this is applied to man and all other animals, in the words, 'Out of the ground—dust out of the ground—Jehovah God formed them.'

It is to be observed that there are two narratives at the beginning of the Mosaic records, different in style and manner, distinct and independent; at first sight somewhat discrepant, but when strictly examined, perfectly compatible, and each one illustrating and completing the other. The first is contained in Gen. i. 1, to ii. 3; and the other, ii. 4, to iv. 26. As is the case with the Scripture history generally, they consist of a few principal facts, detached anecdotes, leaving much of necessary implication which the good sense of the reader is called upon to supply; and passing over large spaces of the history of life, upon which all conjecture would be fruitless.

In the second of these narratives we read, 'And Jehovah God formed the man [*Heb.* the Adam], dust from the ground [הָאֲדָמָה, *haadamah*], and blew into his nostrils the breath of life; and the man became a living animal' (Gen. ii. 7). Here are two objects of attention, the organic mechanism of the human body, and the vitality with which it was endowed.

The mechanical material, formed (moulded, or arranged, as an artificer models clay or wax) into the human and all other animal bodies, is called 'dust from the ground.' This would be a natural and easy expression to men in the early ages, before chemistry was known or minute philosophical distinctions were thought of, to convey, in a general form, the idea of *earthy matter*, the constituent substance of the ground on which we tread. To say, that of this the human and every other animal body was formed, is a position which would be at once the most easily apprehensible to an uncultivated mind, and which yet is the most exactly true upon the highest philosophical grounds. We now know, from chemical analysis, that the animal body is composed, in the inscrutable manner called *organization*, of carbon, hydrogen, oxygen, nitrogen, lime, iron, sulphur, and phosphorus. Now all these are mineral substances, which in their various combinations form a very large part of the solid ground.

Some of our readers may be surprised at our having translated נֶפֶשׁ חַיָּה *nephesh hhaya* by *living animal.* There are good interpreters and preachers who, confiding in the common translation, *living soul*, have maintained that here is intimated the distinctive pre-eminence of man above the inferior animals, as possessed of an immaterial and immortal spirit. But, however true that doctrine is, and supported by abundant argument from both philosophy and the Scriptures, we should be acting unfaithfully if we were to affirm its being contained or implied in this passage. The two words are frequently conjoined in the Hebrew, and the meaning of the compound phrase will be apparent to the English reader, when he knows that our version renders it, in Gen. i. 20, 'creature that hath life;' in verse 24, 'living creature,' and so in ch. ii. 19; ix. 12, 15, 16; and in ch. i. 30, 'wherein there is life.'

This expression therefore sets before us the ORGANIC LIFE of the animal frame, that mysterious something which man cannot create nor restore, which baffles the most acute philosophers to search out its nature, and which reason combines with Scripture to refer to the immediate agency of the Almighty—'in him we live, and move, and have our being.'

The other narrative is contained in these words, 'God created man in his own image: in the image of God created he him; male and female created he them' (Gen. i. 27). *The image* (צֶלֶם *tselem*, resemblance, such as a shadow bears to the object which casts it) *of God* is an expression which

breathes at once archaic simplicity and the most recondite wisdom: for what term could the most cultivated and copious language bring forth more suitable to the purpose? It presents to us man as made in a resemblance to the author of his being, a true resemblance, but faint and shadowy; an outline, faithful according to its capacity, yet infinitely remote from the reality: a distant form of the *intelligence*, *wisdom*, *power*, *rectitude*, *goodness*, and *dominion* of the Adorable Supreme. To the inferior sentient beings with which he is connected man stands in the place of God. We have every reason to think that none of them are capable of conceiving a being higher than man. All, in their different ways, look up to him as their superior; the ferocious generally flee before him, afraid to encounter his power, and the gentle court his protection and show their highest joy to consist in serving and pleasing him. Even in our degenerate state it is manifest that if we treat the domesticated animals with wisdom and kindness, their attachment is most ardent and faithful.

Thus had man the shadow of the divine *dominion* and *authority* over the inferior creation. The attribute of *power* was also given to him, in his being made able to convert the inanimate objects and those possessing only the vegetable life, into the instruments and the materials for supplying his wants, and continually enlarging his sphere of command.

In such a state of things *knowledge* and *wisdom* are implied: the one quality, an acquaintance with those substances and their changeful actions which were necessary for a creature like man to understand, in order to his safety and comfort; the other, such sagacity as would direct him in selecting the best objects of desire and pursuit, and the right means for attaining them.

Above all, *moral excellence* must have been comprised in this 'image of God;' and not only forming a part of it, but being its crown of beauty and glory. The Christian inspiration, than which no more perfect disclosure of God is to take place on this side eternity, casts its light upon this subject: for the apostle Paul, in urging the obligations of Christians to perfect holiness, evidently alludes to the endowments of the first man in two parallel and mutually illustrative epistles; '— the new man, renewed in knowledge after the image of HIM that created him; the new man which, after [κατὰ, according to] GOD, is created in righteousness and true holiness' (Col. iii. 10; Eph. iv. 24).

In this perfection of faculties, and with these high prerogatives of moral existence, did human nature, in its first subject, rise up from the creating hand. The whole Scripture-narrative implies that this STATE of existence was one of correspondent *activity* and *enjoyment*. It plainly represents the DEITY himself as condescending *to assume a human form and to employ human speech*, in order to instruct and exercise the happy creatures whom (to borrow the just and beautiful language of the Apocryphal 'Wisdom') 'God created for incorruptibility, and made him an image of his own nature.'* The only plausible objection to this is, that the condescension is too great, an objection which can be no other than a presumptuous limiting of the Divine goodness. It was the voice of reason which burst through the trammels of an infidel philosophy, when the celebrated German, Fichte, wrote, 'Who, then, educated the first human pair? A spirit bestowed its care upon them, as is laid down in an ancient and venerable original record, which, taken altogether, contains the profoundest and the loftiest wisdom, and presents those results to which all philosophy must at last return' (cited in the German Bible of Brentano, Dereser, and Scholz, vol. i., p. 16, Frankfort, 1820-1833).

The noble and sublime idea that man thus had his Maker for his teacher and guide, precludes a thousand difficulties. It shows us the simple, direct, and effectual method by which the newly formed creature would have communicated to him all the intellectual knowledge, and all the practical arts and manipulations, which were needful and beneficial for him. The universal management of the 'garden in Eden eastward' (Gen. ii. 8), the treatment of the soil, the use of water, the various training of the plants and trees, the operations for insuring future produce, the necessary implements and the way of using them;—all these must have been included in the words 'to dress it and to keep it' (ver. 15). To have gained these attainments and habits without any instruction previous or concomitant, would have required the experience of men in society and co-operation for many years, with innumerable anxious experiments, and often the keenest disappointment. If we suppose that the first man and woman continued in their primitive state but even a few weeks, they must have required some tools for 'dressing and keeping the garden:' but if not, the condition of their children, when severe labour for subsistence became necessary, presented an obvious and undeniable need. They could not do well without *iron* instruments. Iron, the most useful and the most widely diffused of all the metals, cannot be brought into a serviceable state without processes and instruments which it seems impossible to imagine could have been first possessed *except in the way of supernatural communication*. It would, in all reasonable estimation, have required the difficulties and the experience of some centuries, for men to have discovered the means of raising a sufficient heat, and the use of fluxes: and, had that step been gained, the fused iron would not have answered the purposes wanted. To render it malleable and ductile, it must be beaten, at a white heat, by long continued strokes of prodigious hammers. To *make* iron (as is the technical term) requires previous iron. If it be said that the first iron used by man was native metallic iron, of which masses have been found, the obvious reply is, not only the rarity of its occurrence, but that, when obtained, it also requires previous iron instruments to bring it into any form for use. Tubal-cain most probably lived before the death of Adam; and he acquired fame as 'a hammerer, a universal workman in brass and iron' (Gen. iv. 22). This is the most literal

* Wisd. Sol. ii. 23. ἐπ' ἀφθαρσίᾳ, *incorruptibility*, often denoting *immortality*. We have translated ἰδιότης, *nature*, not being able to find a better word. The exact meaning of the Greek is, the whole combination of characteristic peculiarities.

translation of this grammatically difficult clause. In this brief description it is evident that much is implied beyond our power of ascertaining. The necessity and importance of the greatest hammers seem to be included. Considering these instances as representatives of many similar, we are confirmed in our belief that God not only gave to the earliest human families such *knowledge* as was requisite, but the *materials* and the *instruments* without which knowledge would have been in vain.

Religious knowledge and its appropriate habits also required an immediate infusion: and these are pre-eminently comprehended in the 'image of God.' On the one hand, it is not to be supposed that the newly created man and his female companion were inspired with a very ample share of the doctrinal knowledge which was communicated to their posterity by the successive and accumulating revolutions of more than four thousand years: and, on the other, the idea of their being left in gross ignorance upon the existence and excellencies of the Being who had made them, their obligations to him, and the way in which they might continue to receive the greatest blessings from him. It is self-evident that, to have attained such a kind and degree of knowledge, by spontaneous effort, under even the favourable circumstances of a state of negative innocence, would have been a long and arduous work. But the sacred narrative leaves no room for doubt upon this head. In the primitive style it tells of God as speaking to them, commanding, instructing, assigning their work, pointing out their danger, and showing how to avoid it. All this, reduced to the dry simplicity of detail, is equivalent to saying that the Creator, infinitely kind and condescending, by the use of forms and modes adapted to their capacity, fed their minds with truth, gave them a ready understanding of it and that delight in it which constituted holiness, taught them to hold intercourse with himself by direct addresses in both praise and prayer, and gave some disclosures of a future state of blessedness when they should have fulfilled the conditions of their probation.

An especial instance of this instruction and infusion of practical habits is given to us in the narrative: 'Out of the ground Jehovah God formed every beast of the field and every fowl of the air [*Hebr.* of the heavens]; and brought them unto the man [*Hebr.* the Adam], to see what he would call them' (Gen. ii. 19). This, taken out of the style of condescending anthropomorphism, amounts to such a statement as the following: the Creator had not only formed man with organs of speech, but he taught him the use of them, by an immediate communication of the practical faculty and its accompanying intelligence; and he guided the man, as yet the solitary one of his species, to this among the first applications of speech, the designating of the animals with which he was connected, by appellative words which would both be the help of his memory and assist his mental operations, and thus would be introductory and facilitating to more enlarged applications of thought and language. We are further warranted, by the recognised fact of the anecdotal and fragmentary structure of the Scripture history, to regard this as the selected instance for exhibiting a whole kind or class of operations or processes; implying that, in the same or similar manner, the first man was led to understand something of the qualities and relations of vegetables, earthy matters, the visible heavens, and the other external objects to which he had a relation.

The next important article in this primeval history is the creation of the human female. It has been maintained that the Creator formed Adam to be a sole creature, in some mode of androgynous constitution capable of multiplying from his own organization without a conjugate partner. This notion was advanced by Jacob (or James) Boehmen, the Silesian 'Theosophist,' and one very similar to it has been recently promulgated by Baron Giraud (*Philosophie Catholique de l'Histoire*, Paris, 1841), who supposes that the 'deep sleep' (Gen. ii. 21) was a *moral fainting* ('défaillance'), the first step in departing from God, the beginning of sin, and that Eve was its personified product by some sort of divine concurrence or operation. To mention these vagaries is sufficient for their refutation. Their absurd and unscriptural character is stamped on their front. The narrative is given in the more summary manner in the former of the two documents:—'Male and female created he them' (Gen. i. 27). It stands a little more at length in a *third* document, which begins the fifth chapter, and has the characteristic heading or title by which the Hebrews designated a separate work. 'This, the book of the generations of Adam. In the day God created Adam; he made him in the likeness [דמות *demuth*, a different word from that already treated upon, and which merely signifies *resemblance*] of God, male and female he created them; and he blessed them, and he called their name Adam, in the day of their being created' (ver. 1, 2). The reader will observe that, in this passage, we have translated the word for *man* as the proper name, because it is so taken up in the next following sentence.

The second of the narratives is more circumstantial: 'And Jehovah God said, it is not good the man's being alone: I will make for him a help suitable for him.' Then follows the passage concerning the review and the naming of the inferior animals; and it continues—'but for Adam he found not a help suitable for him. And Jehovah God caused a deep sleep to fall upon the man [the Adam], and he slept: and he took one out of his ribs, and closed up the flesh in its place: and Jehovah God built up the rib which he had taken from the man into a woman, and he brought her to the man: and the man said, this is the hit; bone out of my bones, and flesh out of my flesh; this shall be called woman [*ishah*], for this was taken from out of man [*ish*]' (Gen. ii. 18-23).

Two remarkable words in this passage demand attention. 'Suitable for him' (כנגדו *chenegdo*), literally, *according to his front-presence*, than which no words could better express a perfect adaptation or correspondence. That we render הפעם *happaam*, the *hit*, seems strange and even vulgar; but it appears necessary to the preservation of rigorous fidelity. The word, indeed, might have acquired a secondary adverbial meaning, like our English *now*, when very emphatical and partaking of the nature of an interjection; but there is only one passage in which that signification may be pleaded, and it is there repeated—'now in the open place, now in the

streets' (Prov. vii. 12). It properly means a smart, bold, successful *stroke*, and is used to signify *hitting the precise time* of any action or requirement. In this first and primitive instance it is equivalent to saying, this is the very thing, this hits the mark, this reaches to what was desired.

This *peculiar manner* of the creation of the woman has, by some, been treated as merely a childish fable; by others, as an allegorical fiction intended to represent the close relation of the female sex to the male, and the tender claims which women have to sympathy and love. That such was the intention we do not doubt; but why should that intention be founded upon a mythic allegory? Is it not taught much better, and impressed much more forcibly, by its standing not on a fiction, but on a fact? We have seen that, under the simple archaic phrase that man was made of the 'dust of the ground,' is fairly to be understood the truth, which is verified by the analysis of modern chemistry; and, in the case of the woman, it is the same combination of materials, the same carbon, and hydrogen, and lime, and the rest; only that, in the first instance, those primordial substances are taken *immediately*, but in the second, *mediately*, having been brought into a state of organization. Let an unprejudiced mind reflect, and we think that he must see in this part of the will and working of the Almighty, at once, a simplicity gentle and tender, adapted to affect, in the strongest manner, the hearts of primitive men; and yet, a sublimity of meaning worthy of 'Jehovah of hosts,' at whose command stand all atoms and organisms, and 'who is wonderful in counsel and excellent in working.'

The form of direct speech which appears here and in every part of these most ancient writings, and is a characteristic of the Hebrew and other ancient writings, should make no difficulty. It is the natural language of lively description; and it is equal to saying, such was the wise and benevolent will of God, and such were the feelings and thoughts of Adam. The 24th verse is a comment or doctrinal application of the inspired writer; pointing out the great law of marriage as founded in the original constitution of human nature.

The next particular into which the sacred history leads us, is one which we cannot approach without a painful sense of its difficulty and delicacy. It stands thus in the authorized version: 'And they were both naked, the man and his wife; and were not ashamed' (ii. 25). The common interpretation is, that, in this respect, the two human beings, the first and only existing ones, were precisely in the condition of the youngest infants, incapable of perceiving any incongruity in the total destitution of artificial clothing. But a little reflection will tell us, and the more carefully that reflection is pursued the more it will appear just, that this supposition is inconsistent with what we have established on solid grounds, the supernatural infusion into the minds of our first parents and into their nervous and muscular faculties, of the knowledge and practical habits which their descendants have had to acquire by the long process of instruction and example. We have seen the necessity that there must have been communicated to them, directly by their Creator, no inconsiderable measure of natural knowledge and the methods of applying it, or their lives could not have been secured; and of moral and spiritual 'knowledge, righteousness, and true holiness,' such a measure as would belong to the sinless state, and would enable them to render an intelligent and perfect worship to the Glorious Deity. It seems impossible for that state of mind and habits to exist without a correct sensibility to proprieties and decencies which infant children cannot understand or feel; and the capacities and duties of their conjugal state are implied in the narrative. Further, it cannot be overlooked that, though we are entitled to ascribe to the locality of Eden the most bland atmosphere and delightful soil, yet the action of the sun's rays upon the naked skin, the range of temperature through the day and the night, the alternations of dryness and moisture, the various labour among trees and bushes, and exposure to insects, would render some protective clothing quite indispensable.

From these considerations we feel ourselves obliged to understand the word ערום (*arom*) in that which is its *most usual* signification in the Hebrew language, as importing *not an absolute*, but a *partial* or *comparative* nudity. It is one of a remarkable family of words which appear to have branched off in different ways from the same root, originally ער (*ar* or *er*), but assuming several early forms, and producing five or six divergent participials: but they all, and especially this *arom*, are employed to denote a stripping off of the upper garment, or of some other usual article of dress, when all the habiliments were not laid aside; and this is a more frequent signification than that of entire destitution. If it be asked, Whence did Adam and Eve derive this clothing? we reply, that, as a part of the divine instruction which we have established, they were taught to take off the inner bark of some trees, which would answer extremely well for this purpose. If an objection be drawn from Gen. iii. 7, 10, 11, we reply, that, in consequence of the transgression, the clothing was disgracefully injured.

Another inquiry presents itself. How long did the state of paradisiac innocence and happiness continue? Some have regarded the period as very brief, not more even than a single day; but this manifestly falls very short of the time which a reasonable probability requires. The first man was brought into existence in the region called Eden; then he was introduced into a particular part of it, the garden, replenished with the richest productions of the Creator's bounty for the delight of the eye and the other senses; the most agreeable labour was required 'to dress and to keep it,' implying some arts of culture, preservation from injury, training flowers and fruits, and knowing the various uses and enjoyments of the produce; making observation upon the works of God, of which an investigation and designating of animals is expressly specified; nor can we suppose that there was no contemplation of the magnificent sky and the heavenly bodies: above all, the wondrous communion with the condescending Deity, and probably with created spirits of superior orders, by which the mind would be excited, its capacity enlarged, and its holy felicity continually increased. It is also to be remarked, that the narrative (Gen. ii. 19, 20) conveys the

implication that some time was allowed to elapse, that Adam might discover and feel his want of a companion of his own species, 'a help corresponding to him.'

These considerations impress us with a sense of probability, amounting to a conviction, that a period not very short was requisite for the exercise of man's faculties, the disclosures of his happiness, and the service of adoration which he could pay to his Creator. But all these considerations are strengthened by the recollection that they attach to man's solitary state; and that they all require new and enlarged application when the addition of conjugal life is brought into the account. The conclusion appears irresistible that a duration of many days, or rather weeks or months, would be requisite for so many and important purposes.

Thus divinely honoured and happy were the progenitors of mankind in the state of their creation.

The next scene which the sacred history brings before us is a dark reverse. Another agent comes into the field and successfully employs his arts for seducing Eve, and by her means Adam, from their original state of rectitude, dignity, and happiness.

Among the provisions of divine wisdom and goodness were two vegetable productions of wondrous qualities and mysterious significancy; 'the tree of life in the midst of the garden, and the tree of knowledge of good and evil' (Gen. ii. 9). It would add to the precision of the terms, and perhaps aid our understanding of them, if we were to adhere strictly to the Hebrew by retaining the definite prefix: and then we have 'the tree of the life' and 'the tree of the knowledge.' Thus would be indicated THE particular *life* of which the one was a symbol and instrument, and THE fatal *knowledge* springing from the abuse of the other. At the same time, we do not maintain that these appellations were given to them at the beginning. We rather suppose that they were applied afterwards, suggested by the events and connection, and so became the historical names.

We see no sufficient reason to understand, as some do, 'the tree of the life,' collectively, as implying a species, and that there were many trees of that species. The figurative use of the expression in Rev. xxii. 10, where a plurality is plainly intended, involves no evidence of such a design in this literal narrative. The phraseology of the text best agrees with the idea of a single tree, designed for a special purpose, and not intended to perpetuate its kind. Though in the state of innocence, Adam and Eve might be liable to some corporal suffering from the changes of the seasons and the weather, or accidental circumstances; in any case of which occurring, this tree had been endowed by the bountiful Creator with a medicinal and restorative property, probably in the way of instantaneous miracle. We think also that it was designed for a sacramental or symbolical purpose, a representation and pledge of 'the life,' emphatically so called, heavenly immortality when the term of probation should be happily completed. Yet we by no means suppose that this 'tree of the life' possessed any intrinsic property of communicating immortality. In the latter view, it was a sign and seal of the divine promise. But, with regard to the former intention, we see nothing to forbid the idea that it had most efficacious medicinal properties in its fruit, leaves, and other parts. Such were called *trees of life* by the Hebrews (Prov. iii. 18; xi. 30; xiii. 12; xv. 4).

The 'tree of the knowledge of good and evil' might be any tree whatever; it might be of any species even yet remaining, though, if it were so, we could not determine its species, for the plain reason, that no name, description, or information whatever is given that could possibly lead to the ascertainment. One cannot but lament the vulgar practice of painters representing it as an apple-tree; and thus giving occasion to profane and silly witticisms.

Yet we cannot but think the more reasonable probability to be, that it was a tree having poisonous properties, stimulating, and intoxicating, such as are found in some existing species, especially in hot climates. On this ground, the prohibition to eat or even touch the tree was a beneficent provision against the danger of pain and death. Should any cavil at the placing of so perilous a plant in the garden of delights, the abode of sinless creatures, we reply, that virulent poisons, mineral, vegetable, and animal, though hurtful or fatal to those who use them improperly, perform important and beneficial parts in the general economy of nature.

But the revealed object of this 'tree of the knowledge of good and evil' was that which would require no particular properties beyond some degree of external beauty and fruit of an immediately pleasant taste. That object was to be a *test of obedience*. For such a purpose, it is evident that to select an indifferent act, to be the object prohibited, was necessary; as the obligation to refrain should be only that which arises simply, so far as the subject of the law can know, from the sacred will of the lawgiver. This does not, however, nullify what we have said upon the possibility, or even probability, that the tree in question had noxious qualities: for upon either the affirmative or the negative of the supposition, the subjects of this positive law, having upon all antecedent grounds the fullest conviction of the perfect rectitude and benevolence of their Creator, would see in it the simple character of a test, a means of proof, whether they would or would not implicitly confide in him. For so doing they had every possible reason; and against any thought or mental feeling tending to the violation of the precept, they were in possession of the most powerful motives. There was no difficulty in the observance. They were surrounded with a paradise of delights, and they had no reason to imagine that any good whatever would accrue to them from their seizing upon anything prohibited. If perplexity or doubt arose, they had ready access to their divine benefactor for obtaining information and direction. But they allowed the thought of disobedience to form itself into a disposition, and then a purpose.

Thus was the seal broken, the integrity of the heart was gone, the sin was generated, and the outward act was the consummation of the dire process. Eve, less informed, less cautious, less endowed with strength of mind, became the more ready victim. 'The woman, being deceived, was in the transgression;' but 'Adam was not deceived' (1 Tim. ii. 14). He rushed knowingly

and deliberately to ruin. The offence had grievous aggravations. It was the preference of a trifling gratification to the approbation of the Supreme Lord of the universe; it implied a denial of the wisdom, holiness, goodness, veracity, and power of God; it was marked with extreme ingratitude; and it involved a contemptuous disregard of consequences, awfully impious as it referred to their immediate connection with the moral government of God, and cruelly selfish as it respected their posterity.

The instrument of the temptation was a serpent; whether any one of the existing kinds it is evidently impossible for us to know. Of that numerous order many species are of brilliant colours and playful in their attitudes and manners; so that one may well conceive of such an object attracting and fascinating the first woman. Whether it spoke in an articulate voice, like the human, or expressed the sentiments attributed to it by a succession of remarkable and significant actions, may be a subject of reasonable question. The latter is possible, and it seems the preferable hypothesis, as, without a miraculous intervention, the mouth and throat of no serpent could form a vocal utterance of words; and we cannot attribute to any wicked spirit the power of working miracles.

This part of the narrative begins with the words 'And the serpent was crafty above every animal of the field' (Gen. iii. 1). It is to be observed that this is not said of the order of serpents, as if it were a general property of them, but of *that* particular serpent. Had the noun been intended generically, as is often the case, it would have required to be without the substantive verb; for such is the usual Hebrew method of expressing universal propositions: of this the Hebrew scholar may see constant examples in the Book of Proverbs.

Indeed, this 'cunning craftiness, lying in wait to deceive' (Eph. iv. 14), is the very character of that malignant creature of whose wily stratagems the reptile was a mere instrument. The existence of spirits, superior to man, and of whom some have become depraved, and are labouring to spread wickedness and misery to the utmost of their power, has been found to be the belief of all nations, ancient and modern, of whom we possess information. It has also been the general doctrine of both Jews and Christians, that one of those fallen spirits was the real agent in this first and successful temptation. Of this doctrine, the declarations of our Lord and his apostles contain strong confirmation. In the same epistle in which St. Paul expresses his apprehension of some of the Corinthian Christians being seduced into error and sin, he adverts to the temptation of Eve as a monitory example: 'Lest Satan should get an advantage over us, for we are not ignorant of his devices. I fear, lest by any means, as the serpent beguiled Eve through his subtlety, so your minds should be corrupted from the simplicity that is in Christ. Such are false apostles, deceitful workers, transforming themselves into apostles of Christ; and no marvel; for even Satan himself is transformed into an angel of light' (2 Cor. ii. 11; xi. 3, 14). In the book of the Revelation the great tempter is mentioned as 'that old (ἀρχαῖος, *he of antiquity*) serpent, who is called the devil and the Satan, who deceiveth the whole world (2 Cor. xii. 9; xx. 2). The language of Jesus is a very definite allusion to the guilty transaction of Eden: 'Ye are of your father the devil, and the desires of your father ye are determined (θέλετε) to do. He was a man-murderer (ἀνθρωποκτόνος) from the beginning; and in the truth he stood not, for truth is not in him. When he speaketh falsehood, out of his own (stores) he speaketh, for a liar is he, and the father of it (*i. e.* of falsehood)' (John viii. 44). The summary of these passages presents almost a history of the Fall—the tempter, his manifold arts, his serpentine disguises, his falsehood, his restless activity, his bloodthirsty cruelty, and his early success in that career of deception and destruction. The younger Rosenmüller says upon this passage, 'That it was not a natural serpent that seduced Eve, but a wicked spirit which had assumed the form of a serpent; and although Moses does not expressly say so, from the fear of affording a handle to superstition, yet it is probable that he designed to intimate as much, from the very fact of his introducing the serpent as a rational being, and speaking; also, that this opinion was universal among the nations of Central and Upper Asia, from the remotest antiquity, appears from this, that, in the system of Zoroaster, it is related that Ahriman, the chief of wicked spirits, seduced the first human beings to sin by putting on the form of a serpent' (*Schol. in* Gen. iii. 1; and he refers to Kleuker's German version of the *Zendavesta*, and his own *Ancient and Modern Oriental Country*).

The condescending Deity, who had held gracious and instructive communion with the parents of mankind, assuming a human form and adapting all his proceedings to their capacity, visibly stood before them; by a searching interrogatory drew from them the confession of their guilt, which yet they aggravated by evasions and insinuations against God himself; and pronounced on them and their seducer the sentence due. On the woman he inflicted the pains of child-bearing, and a deeper and more humiliating dependence upon her husband. He doomed the man to hard and often fruitless toil, instead of easy and pleasant labour. On both, or rather on human nature universally, he pronounced the awful sentence of death. The denunciation of the serpent partakes more of a symbolical character, and so seems to carry a strong implication of the nature and the wickedness of the concealed agent. The human sufferings threatened are all, excepting the last, which will require a separate consideration, of a remedial and corrective kind. The pains and subjection of the female sex, when they come into connection with the benignant spirit of the gospel, acquire many alleviations, and become means of much good in relative life, which reacts with a delightful accumulation of benefit upon the Christian wife, mother, daughter, sister, friend. So also human labour, in the cultivation of the various soils, in all geognostic operations, in all fabrics and machinery, in means of transit by land, and in the wonders of navigation over the ocean, which for many ages was regarded as the barrier sternly forbidding intercourse;—while these have been the occasion of much suffering, they have been always towering over the suffering, counteracting and remedying it, diminishing the evil, and increasing the sum

of good. Further, under the influence of true Christianity, these and all the other mechanical and liberal arts are consecrated to the universal improvement of mankind; they afford means of spreading the gospel, multiplying every kind of good agency and increasing its force. Thus, 'in all labour there is profit,' and 'labour itself becomes a pleasure.'

Of a quite different character are the penal denunciations upon the serpent. If they be understood literally, and of course applied to the whole order of Ophidia (as, we believe, is the common interpretation), they will be found to be so flagrantly at variance with the most demonstrated facts in their physiology and economy, as to lead to inferences unfavourable to belief in revelation. Let us examine the particulars:—

'Because thou hast done this, cursed art thou above all cattle;' very properly so rendered, for we have not an English singular noun to answer to בהמה, so as to effect a literal translation of 'above every *behemah*.' But *the serpent tribe cannot be classed* with that of the *behemoth*. The word is of very frequent occurrence in the Old Testament; and though, in a few instances, it seems to be put for brevity so as to be inclusive of the flocks as well as the herds, and in poetical diction it sometimes stands metonymically for *animals* generally (as Job xviii. 3; Ps. lxxiii. 22; Eccles. iii. 18, 19, 21); yet its proper and universal application is to the large animals (pachyderms and ruminants), such as the elephant, camel, deer, horse, ox, rhinoceros, hippopotamus, &c. [BEHEMOTH].

As little will the declaration, 'cursed —,' agree with natural truth. It may, indeed, be supposed to be verified in the shuddering which persons generally feel at the aspect of any one of the order of serpents; but this takes place also in many other cases. It springs from fear of the formidable weapons with which some species are armed, as few persons know beforehand which are venomous and which are harmless; and, after all, this is rather an advantage than a curse to the animal. It is an effectual defence without effort. Indeed, we may say that no tribe of animals is so secure from danger, or is so able to obtain its sustenance and all the enjoyments which its capacity and habits require, as the whole order of serpents. If, then, we decline to urge the objection from the word *behemah*, it is difficult to conceive that serpents have more causes of suffering than any other great division of animals, or even so much.

Further, 'going upon the belly' is to none of them a punishment. With some differences of mode, their progression is produced by the pushing of scales, shields, or rings against the ground, by muscular contractions and dilatations, by elastic springings, by vertical undulations, or by horizontal wrigglings; but, in every variety, the *entire organization*—skeleton, muscles, nerves, integuments—is *adapted* to the mode of progression belonging to each species. That mode, in every variety of it, is sufficiently easy and rapid (often very rapid) for all the purposes of the animal's life and the amplitude of its enjoyments. To imagine this mode of motion to be, in any sense, a change from a prior attitude and habit of the erect kind, or being furnished with wings, indicates a perfect ignorance of the anatomy of serpents. Yet it has been said by learned and eminent theological interpreters, that, before this crime was committed, the serpent probably did 'not go upon his belly, but moved upon the hinder part of his body, with his head, breast, and belly upright' (Clarke's *Bible*, p. 1690). This notion may have obtained credence from the fact that some of the numerous serpent species, when excited, raise the neck pretty high; but the posture is to strike, and they cannot maintain it in creeping except for a very short distance.

Neither do they 'eat dust.' All serpents are carnivorous: their food, according to the size and power of the species, is taken from the tribes of insects, worms, frogs, and toads, and newts, birds, mice and other small quadrupeds, till the scale ascends to the pythons and boas, which can master and swallow very large animals. The excellent writer just cited, in his anxiety to do honour, as he deemed it, to the accuracy of Scripture allusions, has said of the serpent, 'Now that he creeps with his very mouth upon the earth, he must necessarily take his food out of the dust, and so lick in some of the dust with it.' But this is not the fact. Serpents habitually obtain their food among herbage or in water; they seize their prey with the mouth, often elevate the head, and are no more exposed to the necessity of swallowing adherent earth than are carnivorous birds or quadrupeds. At the same time, it may be understood figuratively. '*Eating the dust* is but another term for grovelling in the dust; and this is equivalent to being reduced to a condition of meanness, shame, and contempt.—See Micah vii. 17' (Bush *on Genesis*, vol. i. p. 84. New York, 1840).

But these and other inconsistencies and difficulties (insuperable they do indeed appear to us) are swept away when we consider the fact before stated, that the Hebrew is הנחש היה *hannachash haiah*, THE *serpent was*, &c., and that it refers specifically and personally to a rational and accountable being, *the spirit of lying and cruelty, the devil, the Satan, the old serpent*. That God, the infinitely holy, good, and wise, should have permitted any one or more celestial spirits to apostatize from purity, and to be the successful seducers of mankind, is indeed an awful and overwhelming mystery. But it is not more so than the permitted existence of many among mankind, whose rare talents and extraordinary command of power and opportunity, combined with extreme depravity, have rendered them the plague and curse of the earth; and the whole merges into the awful and insolvable problem, Why has the All-perfect Deity permitted evil at all? We are firmly assured that He will bring forth, at last, the most triumphant evidence that 'He is righteous in all his ways, and holy in all his works.' In the mean time, our happiness lies in the implicit confidence which we cannot but feel to be due to the Being of Infinite Perfection.

The remaining part of the denunciation upon the false and cruel seducer sent a beam of light into the agonized hearts of our guilty first parents: 'And enmity will I put between thee and the woman, and between thy seed and her seed: he will attack thee [on] the head, and thou wilt attack him [at] the heel.' The verb here used twice, occurs in only two other places of the O. T.: Job ix. 17, 'Who breaketh upon me with a tempestuous horror;' and Ps. cxxxix. 11, 'And if

I say, Surely darkness will burst upon me,' *i. e.* as a sudden and impervious covering. The meaning is established by Gesenius after Umbreit as the idea of a *violent and eager assault*. Christian interpreters generally regard this as the *Protevangelium*, the first gospel-promise, and we think with good reason. It was a manifestation of mercy: it revealed a Deliverer, who 'should be a human being, in a peculiar sense the offspring of the female, who should also, in some way not yet made known, counteract and remedy the injury inflicted, and who, though partially suffering from the malignant power, should, in the end, completely conquer it and convert its very success into its own punishment' (J. Pye Smith, *Scripture Testimony to the Messiah*, vol. i. p. 226).

The awful threatening to man was, 'In the day that thou eatest of it, thou wilt die the death.' *Beyom*, literally *in the day*, was also used as a general adverb of time, denoting *when*, without a strict limitation to a natural day. The verbal repetition is a Hebrew idiom to represent not only the *certainty* of the action, but its *intensity and efficacy*: we therefore think that the phrase *die the death* would more exactly convey the sense of the original than what some have proposed *dying thou shalt die*. The infliction is *Death* in the most comprehensive sense, that which stands opposed to *Life*, the life of not only animal enjoyment, but holy happiness, the life which comported with the image of God. This was lost by the fall; and the sentence of physical death was pronounced, to be executed in due time. Divine mercy gave a long respite.

The same mercy was displayed in still more tempering the terrors of justice. The garden of delights was not to be the abode of rebellious creatures. But before they were turned out into a bleak and dreary wilderness, God was pleased to direct them to make clothing suitable to their new and degraded condition, of the skins of animals. That those animals had been offered in sacrifice is a conjecture supported by so much probable evidence, that we may regard it as a well-established truth. Any attempt to force back the way, to gain anew the tree of life, and take violent or fraudulent posssession, would have been equally impious and nugatory. The sacrifice (which all approximative argument obliges us to admit), united with the promise of a deliverer, and the provision of substantial clothing, contained much hope of pardon and grace. The terrible debarring by lightning flashes and their consequent thunder, and by visible supernatural agency (Gen. iii. 22-24), from a return to the bowers of bliss, are expressed in the characteristic patriarchal style of anthropopathy; but the meaning evidently is, that the fallen creature is unable by any efforts of his own to reinstate himself in the favour of God, and that whatever hope of restoration he may be allowed to cherish must spring solely from free benevolence. Thus, in laying the first stone of the temple which shall be an immortal habitation of the Divine glory, it was manifested that 'Salvation is of the Lord,' and that 'grace reigneth through righteousness unto eternal life.'

From this time we have little recorded of the lives of Adam and Eve. Their three sons are mentioned with important circumstances in connection with each of them. See the articles CAIN, ABEL, and SETH. Cain was probably born in the year after the fall; Abel, possibly some years later; Seth, certainly one hundred and thirty years from the creation of his parents. After that, Adam lived eight hundred years, and had sons and daughters, doubtless by Eve, and then he died, nine hundred and thirty years old. In that prodigious period many events, and those of great importance, must have occurred; but the wise providence of God has not seen fit to preserve to us any memorial of them, and scarcely any vestiges or hints are afforded of the occupations and mode of life of men through the antediluvian period [ANTEDILUVIANS].—J. P. S.

2. ADAM, a city at some distance east from the Jordan, to which, or beyond which, the overflow of the waters of that river extended when the course of the stream to the Dead Sea was stayed to afford the Israelites a passage across its channel. Our public version follows the *keri*, or marginal reading, of Josh. iii. 16, 'very far from Adam' (מאדם); but the *kethib*, or textual reading, is, 'in Adam' (באדם). The former suggests that the overflow extended beyond Adam, the latter that it reached thereto. It appears from 1 Kings iv. 12; vii. 46, that Zarethan was on the west side of the Jordan, in the tribe of Manasseh: whereas certainly Adam was on the east side of that river, where the Israelites already were. The text must therefore signify that the overflow reached on the east side to Adam, and on the west to Zarethan; and it admits of the construction that the 'heap of waters' was 'beside' Zarethan and beyond Adam, instead of that Zarethan itself was 'beside Adam.' The name of the city Adam (*red*) was probably derived from the colour of the clay in the neighbourhood.

ADAMAH. [ADMAH.]

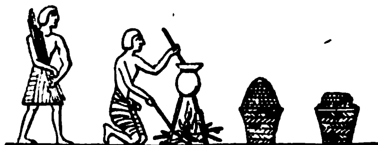
ADAMANT. [SHAMIR.]

ADAR (אֲדָר; Ἀδάρ, Esth. iii. 7; the Macedonian Δύστρος) is the sixth month of the civil and the twelfth of the ecclesiastical year of the Jews. The name was first introduced after the Captivity. The following are the chief days in it which are set apart for commemoration:—The 7th is a fast for the death of Moses (Deut. xxxiv. 5, 6). There is some difference, however, in the date assigned to his death by some ancient authorities. Josephus (*Antiq.* iv. 8) states that he died on the *first* of this month; which also agrees with Midrash Megillath Esther, cited by Reland (*Antiq. Hebr.* iv. 10): whereas the Talmudical tracts Kiddushim and Sota give the *seventh* as the day. It is at least certain that the latter was the day on which the fast was observed. On the 9th there was a fast in memory of the contention or open rupture of the celebrated schools of Hillel and Shammai, which happened but a few years before the birth of Christ. The cause of the dispute is obscure (Wolf's *Biblioth. Hebr.* ii. 826). The 13th is the so-called 'Fast of Esther.' Iken observes (*Antiq. Hebr.* p. 150) that this was not an actual fast, but merely a commemoration of Esther's fast of three days (Esth. iv. 16), and a preparation for the ensuing festival. Nevertheless, as Esther appears, from the date of Haman's edict, and from the course of the narrative, to have fasted in Nisan, Buxtorf adduces from the Rabbins the following account

of the name of this fast, and of the foundation of its observance in Adar (*Synag. Jud.* p. 554): that the Jews assembled together on the 13th, in the time of Esther, and that, after the example of Moses, who fasted when the Israelites were about to engage in battle with the Amalekites, they devoted that day to fasting and prayer, in preparation for the perilous trial which awaited them on the morrow. In this sense, this fast would stand in the most direct relation to the feast of Purim. The 13th was also, 'by a common decree,' appointed as a festival in memory of the death of Nicanor (2 Macc. xv. 36). The 14th and 15th were devoted to the feast of Purim (Esth. ix. 21). In case the year was an intercalary one, when the month of Adar occurred twice, this feast was first moderately observed in the intercalary Adar, and then celebrated with full splendour in the ensuing Adar. The former of these two celebrations was then called the *lesser*, and the latter the *great Purim*. These designations do not apply, as Horne has erroneously stated (*Introduction*, iii. 177), to the two days of the festival in an ordinary year, but to its double celebration in an intercalary year.—J. N.

ADARCONIM (אֲדַרְכֹּנִים i.q. דַּרְכְּמוֹנִים; Sept. δραχμή and χρυσοῦς; Vulg. *drachma* and *aureus*). Gesenius and most others are of opinion that these words, which occur in 1 Chron. xxix. 7; Ezra viii. 27; ii. 69; Neh. vii. 70-72, denote the *Persian Daric*, a gold coin, which must have been in circulation among the Jews during their subjection to the Persians. The א is prosthetic; and דרכון occurs in the Rabbins. Dr. Lee disputes the etymology of the word with Gesenius: but it is sufficient to observe that the *Daric*, which is radically included in these words, is not, as might be fancied, derived from the name of any particular king, but from the Persian دارا *dara*, a king. The last of these words seems to identify itself with the Greek δραχμή; and, observing that in some of the texts it is manifestly connected with words denoting weight, and in none with names of coins, he expresses some doubt of its being the δαρεικὸς (daric) of the Greeks. He is rather inclined to suppose, with Salmasius, that the Arabic *dirhem* درهم or درم presents us with the same word. The opinion of Heeren (*Researches*, i. 410) would, indirectly, go to discountenance the notion that the daric is to be here understood. He affirms that 'before the time of Darius Hystaspes the Persians had no coinage of their own, and that the *daricus* coined by him was probably a medal (Herod. iv. 166) of the finest gold. When the darics became current, especially after the mercenary troops were paid in them, their numbers must have been greatly augmented: yet Strabo assures us (l. xv. p. 1068) that the coin was by no means abundant among the Persians, and that gold was employed by them rather in decoration than as a circulating medium.' This, however, is of little real consequence; for it proceeds on the erroneous supposition that the coin derived its name from the first Darius, and could not have previously existed. In the later day of Strabo the coin may have become scarce, although once plentiful. Be this as it may, the daric is of interest, not only as the most ancient gold coin of which any specimens have been preserved to the present day, but as the earliest coined money which, we can be sure, was known to and used by the Jews. The distinguishing mark of the coin was a crowned archer, who appears with some slight variations on different specimens. His

garb is the same which is seen in the sculptures at Persepolis, and the figure on the coin is called, in numismatics, Sagittarius. The specimens weighed by Dr. Bernard were fifteen grains heavier than an English guinea, and their intrinsic value may, therefore, be reckoned at twenty-five shillings (Eckhel, *Doctrina Numorum Veterum*; Bernard, *De Mensuris et Ponderibus*).



ADARGAZERIN (אֲדַרְגָּזְרִין). This is a Chaldee word which occurs in Dan. iii. 2, 3, where the titles of the Babylonian officers are enumerated. It is difficult, perhaps impossible, to determine the particular office which the word describes; and opinions and versions have differed greatly. The Sept., which is followed by the Vulgate, has τύραννοι. Our version has 'treasurers;' and although we do not know the reason on which they proceeded, we may find one in the fact that *gaza* (γάζα), which seems the principal element of the word, means a treasury, and was avowedly adopted by the Greeks from the Persians. Jacchiades, who identifies all these officers with those of the Turkish court and government, compares the present to the *defterdars*, who have the charge of the receipts and disbursements of the *public* treasury. Gesenius and others conceive that the word means *chief-judges* (from אדר, *magnificent*, and גזרין, *deciders*); but Dr. Lee, while admitting the uncertainty of the whole matter, seems to prefer seeking its meaning in the Persian آذر *fire*, and گذر *passing*; and hence concludes that the Adargazerin were probably officers of state who presided over the ordeals by fire, and other matters connected with the government of Babylon. This last explanation is not, however, new, being the one rejected by Gesenius.

ADASA, or Adarsa ('Αδασά), called also by Josephus Adazer, Adaco, and Acodaco, a city in the tribe of Ephraim, said to have been four miles from Beth-horon, and not far from Gophna (Joseph. *Antiq.* xii. 17; Euseb. *Onomast.* in 'Αδασά). It was the scene of some important transactions in the history of the Maccabees (1 Mac. vii. 40, 45; Joseph. *Antiq.* xii. 17; *Bell. Jud.* i. 1).

ADASHIM (עֲדָשִׁים; Sept. φακός; Vulg. *lens*). 'Lentiles' is the interpretation given by our own and most other versions, and there is no reason to question its accuracy. In Syria lentiles are still called in Arabic عدس *addas* (Russel, *N. H. of Aleppo*, i. 74). Lentiles appear to have been chiefly used for making a kind of pottage. The *red* pottage for which Esau bar-

tered his birthright was of lentiles (Gen. xxv. 29-34). The term *red* was, as with us, extended to *yellowish brown*, which must have been the true colour of the pottage, if derived from lentiles. The Greeks and Romans also called lentiles red (see authorities in Celsius, i. 105). Lentiles were among the provisions brought to David when he fled from Absalom (2 Sam. xvii. 28), and a field of lentiles was the scene of an exploit of one of David's heroes (2 Sam. xxiii. 11). From Ezek. iv. 9, it would appear that lentiles were sometimes used as bread. This was, doubtless, in times of scarcity, or by the poor. Sonnini (*Travels*, p. 603, English translation) assures us that in southernmost Egypt, where corn is comparatively scarce, lentiles mixed with a little barley form almost the only bread in use among the poorer classes. It is called *bettan*, is of a golden yellow colour, and is not bad, although rather heavy. In that country, indeed, probably even more than in Palestine, lentiles anciently, as now, formed a chief article of food among the labouring classes. This is repeatedly noticed by ancient authors; and so much attention was paid to the culture of this useful pulse, that certain varieties became remarkable for their excellence. The lentiles of Pelusium, in the part of Egypt nearest to Palestine, were esteemed both in Egypt and foreign countries (Virg. *Georg.* i. 228); and this is probably the valued Egyptian variety which is mentioned in the *Mishna* (tit. *Kilvim*, xviii. 8) as neither large nor small. Large quantities of lentiles were exported from Alexandria (Augustin. *Comm. in* Ps. xlvi.). Pliny, in mentioning two Egyptian varieties, incidentally lets us know that one of them was red, by remarking that they like a red soil, and by speculating whether the pulse may not have thence derived the reddish colour which it imparted to the pottage made with it (*Hist. Nat.* xviii. 12). This illustrates Jacob's red pottage. Dr. Shaw (i. 257) also states that these lentiles easily dissolve in boiling, and form a red or chocolate coloured pottage, much esteemed in North Africa and Western Asia. Putting these facts together, it is likely that the reddish lentile, which is now so common in Egypt (*Descript. de l'Egypte*, xix. 65), is the sort to which all these statements refer.

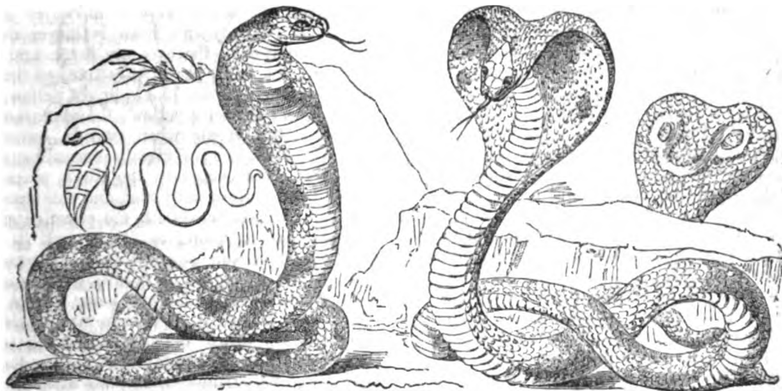
The tomb-paintings actually exhibit the operation of preparing pottage of lentiles, or, as Wilkinson (*Anc. Egyptians*, ii. 387) describes it, 'a man engaged in cooking lentiles for a soup or porridge; his companion brings a bundle of faggots for the fire, and the lentiles themselves are seen standing near him in wicker baskets.' The lentiles of Palestine have been little noticed by travellers.

Nau (*Voyage Nouveau*, p. 13) mentions lentiles along with corn and pease, as a principal article of traffic at Tortoura; D'Arvieux (*Mémoires*, ii. 237) speaks of a mosque, originally a Christian church, over the patriarchal tomb at Hebron, connected with which was a large kitchen, where lentile pottage was prepared every day, and distributed freely to strangers and poor people, in memory of the transaction between Esau and Jacob, which they (erroneously) believe to have taken place at this spot.

The lentile (*Ervum lens*) is an annual plant, and the smallest of all the leguminosæ which are cultivated. It rises with a weak stalk about eighteen inches high, having pinnate leaves at each joint composed of several pairs of narrow leaflets, and terminating in a tendril, which supports it by fastening about some other plant.

Lentiles (Cicer lens).

The small flowers, which come out of the sides of the branches on short peduncles, three or four together, are purple, and are succeeded by the short and flat legumes, which contain two or three flat round seeds slightly curved in the middle. The flower appears in May, and the seeds ripen in July. When ripe, the plants are rooted up, if they have been sown along with other plants, as is sometimes done; but they are cut down when grown by themselves. They are threshed, winnowed, and cleaned like corn.



ADBEEL, one of the twelve sons of Ishmael, and founder of an Arabian tribe (Gen. xxv. 13, 16).

ADDER, the English name of a kind of serpent, is a dialectical variation of the same word in a variety of languages of the Gothic and Teutonic family. Another name, varying, in the old European tongues, from *ag*, *ach*, to *hag*, has more connection with the Semitic; and in the south of Europe, where the Latin and its derivatives prevail, both are represented by the word *vipera* (viper). The first radically indicates poison; the second, pain, distress, strife; the third, parturition of offspring, not in the state of an egg, but of the perfect animal. Though not clearly distinguished, in common acceptation, from innoxious snakes, all strictly indicate serpents armed with poisonous fangs, and therefore all are truly viviparous. In the English version of the Bible the name 'adder' occurs several times, and is there used not for a particular species, but generally for several of this dangerous class of reptiles, without, therefore, being intended to be confined to a *genus*, in the sense modern systematists would ascribe to that denomination. We have before us

a list, far from complete, of the erpetology of Palestine, Arabia, and Egypt, in which there are, among forty-three species indicated, about eight whose bite is accompanied with a venomous effusion, and therefore almost all very dangerous. The Hebrew names applicable to them, depending upon some radical word descriptive of a property or character of the animal, are in themselves mostly insufficient to distinguish the one meant specifically; and therefore recourse must be had to the kindred dialects, and to a careful study of each species. This object is so far from being accomplished, that, in our present state of knowledge, we deem it best to discuss, under the words SERPENT and VIPER, all the Hebrew names not noticed in this article, and to refer to them those occurring in our version under the appellations of 'asp,' 'cockatrice,' &c.; and likewise to review the allusions to colossal boas and pythons, evidently meant, in some places, where the terms תן *than* and תנין *thannin* are used; and, finally, to notice water-snakes and murænæ, which translators and biblical naturalists have totally overlooked, although they must exist in the lakes of the Delta, are abundant on the north coast of Africa, and often exceed eight feet in length.

In this place we shall retain that genus alone which Laurenti and Cuvier have established upon characters distinguished from the innocuous coluber and the venomous vipera, and denominated *naja*, one of the Sanscrit forms of the same appellation whence we have the word *hag*, before noticed; and to the same root, in the Semitic tongues, we may refer the Hebrew עכשוב *achsub*, found in Psalm cxi. 3, and declared to be derived from a verb implying 'to bend back upon oneself'—a characteristic which most, if not all, of the species of the genus Naja evince. The Chaldee paraphrases render it by עכביש *acchabis*, perhaps erroneously applied to the spider, which, if we refer to several of the noxious arachnides, possesses nevertheless the faculty of springing back upon its victim, and therefore comes within the radical meaning of the term.

The genus Naja—Haridi (?) of Savary—is distinguished by a plaited head, large, very venomous fangs, a neck dilatable under excitement, which raises the ribs of the anterior part of the body into the form of a disk or hood, when the scales, usually not imbricated, but lying in juxta-position, are separated, and expose the skin, which at that time displays bright iridescent gleams, contrasting highly with their brown, yellow, and bluish colours. The species attain at least an equal, if not a superior, size to the generality of the genus viper; are more massive in their structure; and some possess the faculty of self-inflation to triple their diameter, gradually forcing the body upwards into an erect position, until, by a convulsive crisis, they are said suddenly to strike backwards at an enemy or a pursuer. With such powers of destroying animal life, and with an aspect at once terrible and resplendent, it may be easily imagined how soon fear and superstition would combine, at periods anterior to historical data, to raise these monsters into divinities, and endeavour to deprecate their wrath by the blandishments of worship; and how design and cupidity would teach these very votaries the manner of subduing their ferocity, of extracting their instruments of mischief, and making them subservient to the wonder and amusement of the vulgar, by using certain cadences of sound which affect their hearing, and exciting in them a desire to perform a kind of pleasurable movements that may be compared to dancing. Hence the *nagas* of the East, the *hag-worms* of the West, and the *haje*, have all been deified, styled agathodæmon or good spirit; and figures of them occur wherever the superstition of Pagan antiquity has been accompanied by the arts of civilization.

Naja Haje; and the form of Cneph from the Egyptian Monuments.

Naja Tripudians and Cobra di Capello; or, Hooded and Spectacled Snakes.

The most prominent species of the genus at present is the *naja tripudians*, *cobra di capello*, hooded or spectacled snake of India, venerated by the natives; even by the serpent-charmers styled the good serpent to this day, and yet so ferocious that it is one of the very few that will attack a man when surprised in its haunt, although it may be gorged with prey. This species is usually marked on the nape with two round spots, transversely connected in the form of a pair of spectacles; but among several varieties, one, perhaps distinct, is without the marks, and has a glossy golden hood, which may make it identical with

the *naja haje* of Egypt, the undoubted Ihh-nuphi, cneph, or agathodæmon of ancient Egypt, and accurately represented on the walls of its temples, in almost innumerable instances, both in form and colour. This serpent also inflates the skin on the neck, not in the expanded form of a hood, but rather into an intumefaction of the neck. As in the former, there is no marked difference of appearance between the sexes; but the psilli, or charmers, by a particular pressure on the neck have the power of rendering the inflation of the animal, already noticed as a character of the genus, so intense, that the serpent becomes rigid, and can be held out horizontally as if it were a rod. This practice explains what the soothsayers of Pharaoh could perform when they were opposing Moses, and reveals one of the names by which the Hebrews knew the species; for although the text (Exod. iv. 3) uses, for the rod of Aaron converted into a serpent, the word נחש *nachash*, and subsequently (vii. 15) תנין *thannin*, it is plain that, in the second passage, the word indicates 'monster,' as applied to the nachash just named—the first being an appellative, the second an epithet. That the rods of the magicians of Pharaoh were of the same external character is evident from no different denomination being given to them: therefore we may infer that they used a real serpent as a rod—namely, the species now called *haje*—for their imposture; since they no doubt did what the present serpent-charmers perform with the same species, by means of the temporary *asphyxiation*, or suspension of vitality, before noticed, and producing restoration to active life by liberating or throwing down. Thus we have the miraculous character of the prophet's mission shown by his real rod becoming a serpent, and the magicians' real serpents merely assuming the form of rods; and when both were opposed, in a state of animated existence, by the rod devouring the living animals, conquering the great typical personification of the protecting divinity of Egypt. *Nachash* may, therefore, with some confidence, be assumed to have been the Hebrew name, or at least one of the names, of the *naja haje*, *el haje*, and *haje nacher*, of the Arabs.* This species may be regarded as extending to India and Ceylon; and probably the *naja tripudians* is likewise an inhabitant of Arabia, if not of Egypt, although the assertion of the fact (common in authors) does not exclude a supposition that they take the two species to be only one. We are disposed to refer the 'winged' or 'flying' serpent to the *naja tripudians*, in one of its varieties, because—with its hood dilated into a kind of shining wings on each side of the neck, standing, in undulating (מעופף) motion, one-half or more erect, rigid, and fierce in attack, and deadly poisonous, yet still denominated 'good spirit,' and in Egypt ever figured in combination with the winged globe—it well may have received the name of שרף *saraph*, and may thus meet all the valid objections, and conciliate seemingly opposite comments (see Num. xxi. 6, 8; Deut. viii. 15; Isa. xvi. 29; xxx. 6; and Paxton's *Illustrations*), excepting the authority of Herodotus, Pausanias, and Bochart, which, with all the respect due to their names, is not now sufficient to establish the existence of a kind of serpents whose structure is contrary to the laws of zoological organization.*

Achsub (עכשוב *naja* (?), *reflectrix*, *nobis*) is another name of a serpent which may be considered as specifically different from the former, though it is most probably one more of this group of terrible creatures. The root of the name implies bending back, recurving, but not coiling up, for all snakes have that faculty. The syllable *ach*, however, shows a connection with the former denominations; and both are perfectly reconcilable with a serpent very common at the Cape of Good Hope, not unfrequent in Western Africa, and probably extending over that whole continent, excepting perhaps Morocco. It is the 'poff-adder' of the Dutch colonists, about three feet in length, and about six inches in circumference at the middle of the body; the head is larger than is usual in serpents; the eyes are large, and very brilliant; the back beautifully marked in half circles, and the colours black, bright yellow, and dark brown; the belly yellow; the appearance at all times, but chiefly when excited, extremely brilliant; the upper jaw greatly protruding, somewhat like what occurs in the shark, places the mouth back towards the throat, and this structure is said to be connected with the practice of the animal when intending to bite, to swell its skin till it suddenly rises up, and strikes backwards as if it fell over.† It is this faculty which appears to be indicated by the Hebrew name *achsub*, and therefore we believe it to refer to that species, or to one nearly allied to it. The Dutch name (poff-adder, or spooch-adder) shows that, in the act of swelling, remarkable eructations and spittings take place, all which no doubt are so many warn-

* *Nachash* was intensely the serpent of serpents with the Hebrews; and when figured with the crowns or caps of Upper and Lower Egypt, was the crowned serpent and basilisk. It is evident that nach-*ash* led authors, and Pliny among the number, to affix the term aspis to the haje, which however he did not recognise as the sacred serpent of Egypt. The true asp is a small viper, notwithstanding the opinion of M. Geoffroy to the contrary.

* In Isaiah xiv. 29, and xxx. 6, the epithet מעופף *meopheph*, 'vibrating,' (rendered 'flying' in A. V.) is another form for 'winged,' and occurs in passages unconnected with the events in Exodus. Both bear metaphorical interpretations.

A further confirmation of the 'fiery serpents,' or 'serpents of the burning bite,' being najas, occurs in the name Ras om Haye (Cape of the Haje serpents), situated in the locality where geographers and commentators agree that the children of Israel were afflicted by these reptiles. Should it be objected that these are the haje, and not the spectacle-snake, it may be answered that both Arabs and Hindoos confound the species.

† The writer is indebted for the details concerning this reptile to the kindness of Captain Stevens of the Royal Marines, who killed several; and from whom we learn the further fact that, in order to ascertain the truth of the universal report concerning the mode of striking back, ascribed to the serpent, he had a quill introduced into the vent of one lying dead on the table, and blown into. The skin distended till the body rose up nearly all its length: he then caused the experiment to stop, from the alarming attitude it assumed.

ings, the bite being fatal. The puff-adder usually resides among brushwood in stony places and rocks, is fond of basking in the sun, rather slow in moving, and is by nature timid [SERPENT; VIPER].—C. H. S.

ADDON (אַדּוֹן), one of several places mentioned in Neh. vii. 61, being towns in the land of captivity, from which those who returned to Palestine were unable to 'shew their father's house, or their seed, whether they were of Israel.' This, probably, means that they were unable to furnish such undeniable legal proof as was required in such cases. And this is in some degree explained by the subsequent (v. 63) mention of priests who were expelled the priesthood because their descent was not found to be genealogically registered. These instances show the importance which was attached to their genealogies by the Jews [GENEALOGY].

ADIABENE (Ἀδιαβηνή), the principal of the six provinces into which Assyria was divided. Pliny (*Hist. Nat.* v. 12) and Ammianus (xxiii. 6, § 20) comprehend the whole of Assyria under this name, which, however, properly denoted only the province which was watered by the rivers Diab and Adiab, or the Great and Little Zab (Dhab), which flow into the Tigris below Nineveh (Mosul), from the north-east. This region is not mentioned in Scripture; but in Josephus, its queen Helena and her son Izates, who became converts to Judaism, are very often named (Joseph. *Antiq.* xx. 2, 4; *Bell. Jud.* ii. 16, 19; v. 4, 6, 11).

ADIDA (Ἀδιδά; Vulg. *Addus*), a fortified town in the tribe of Judah. In 1 Macc. xii. 38, we read that Simon Maccabæus set up 'Adida in Sephela (Ἀδιδὰ ἐν τῇ Σεφήλᾳ), and made it strong with bolts and bars.' Eusebius says that Sephela was the name given in his time to the open country about Eleutheropolis. And this Adida in Sephela is probably the same which is mentioned in the next chapter (xiii. 13) as 'Adida over against the plain,' where Simon Maccabæus encamped to dispute the entrance into Judæa of Tryphon, who had treacherously seized on Jonathan at Ptolemais. In the parallel passage Josephus (*Antiq.* xiii. 6, 4) adds that this Adida was upon a hill, before which lay the plains of Judæa. Lightfoot, however, contrives to multiply the single place mentioned in the Maccabees and Josephus into four or five different towns (see *Chorog. Decad.* § 3). One of the places which Josephus calls Adida (*Bell. Jud.* iv. 9, 1) appears to have been near the Jordan, and was probably the Hadid of Ezra ii. 32.

ADJURATION. This is a solemn act or appeal, whereby one man, usually a person vested with natural or official authority, imposes upon another the obligation of speaking or acting as if under the solemnity of an oath. We find the word השביע used in this sense in Cant. ii. 7; iii. 5, &c. In the New Testament the act of adjuration is performed with more marked effect; as when the high-priest thus calls upon Christ, 'I adjure thee by the living God, tell us' &c.—Ἐξορκίζω σε κατὰ τοῦ Θεοῦ τοῦ ζῶντος, &c. (Matt. xxvi. 61). The word used here is that by which the LXX. render the Hebrew (see also Mark v. 7; Acts xix. 13; 1 Thess. v. 27). An oath, although thus imposed upon one without his consent, was not only binding, but solemn in the highest degree; and when connected with a question, an answer was compulsory, which answer being as upon oath, any falsehood in it would be perjury. Thus our Saviour, who had previously disdained to reply to the charges brought against him, now felt himself bound to answer the question put to him. The abstract moral right of any man to impose so serious an obligation upon another without his consent, may very much be doubted—not, indeed, as compelling a true answer, which a just man will give under all circumstances, but as extorting a truth which he might have just reasons for withholding.

ADMAH, one of the cities in the vale of Siddim (Gen. x. 19), which had a king of its own (Gen. xiv. 2). It was destroyed along with Sodom and Gomorrah (Gen. xix. 24; Hos. xi. 8).

ADMONI (אַדְמוֹנִי; Sept. πυῤῥάκης; Vulg. *rufus*). This word means *red-haired*, and is so rendered in the ancient versions, although ours understands *a ruddy complexion*. It would thus appear that Esau (Gen. xxv. 25) and David (1 Sam. xvi. 12; xvii. 42) were red-haired. Red hair is so uncommon in the East, that it forms a particular distinction, as in the Scriptural instances; but it is by no means unknown, especially in mountainous countries. The writer has observed it in Persia repeatedly, accompanied with the usual fresh complexion. Such hair and complexion together seem to have been regarded as a beauty among the Jews. The personal characters of Esau and David appear to agree well with the temperament which red hair usually indicates.

ADONAI (אֲדֹנָי; Sept. Κύριος, *lord, master*), the old plural form of the noun אדון *adon*, similar to that with the suffix of the first person; used as the *pluralis excellentiæ*, by way of dignity, for the name of JEHOVAH. The similar form *with the suffix* is also used of men, as of Joseph's master (Gen. xxxix. 2, 3, *sq.*); of Joseph himself (Gen. xlii. 30, 33; so also Isa. xix. 4). The Jews, out of superstitious reverence for the name JEHOVAH, always, in reading, pronounce *Adonai* where *Jehovah* is written; and hence the letters יהוה are usually written with the points belonging to *Adonai* [JEHOVAH]. The view that the word exhibits a plural termination without the affix is that of Gesenius (*Thesaur. s. v.* דון), and seems just, though rather disapproved by Professor Lee (*Lex.* in אדון). The latter adds that 'Our English bibles generally translate יהוה, by LORD, in capitals; when preceded by האדון, they translate it GOD; when צבאות *tzabaoth* follows, by LORD; as in Isa. iii. 1, 'The Lord, the LORD of Hosts.' The copies now in use are not, however, consistent in this respect.

ADONIBEZEK (אֲדֹנִי־בֶזֶק, *lord of Bezek;* Sept. Ἀδωνιβεζέκ), king or lord of Bezek, a town which Eusebius (in Βεζέκ) places 17 miles east of Neapolis or Shechem. The small extent of the kingdoms in and around Palestine at the time of its invasion by the Hebrews is shown by the fact that this petty *melek* had subdued no less than seventy of them; and the barbarity of the war-usages in those early times is painfully shown by his cutting off all the thumbs and great toes of his prisoners, and allowing them no food but that

which they gathered under his table. These conquests made Adonibezek 'a triton among the minnows;' and we find him at the head of the confederated Canaanites and Perizzites, against whom the tribes of Judah and Simeon marched after the death of Joshua. His army was routed and himself taken prisoner. The victors failed not to express their indignation at the mode in which he had treated his captives, by dealing with him in the same manner. His conscience was then awakened to the enormity of his conduct, and in his own treatment he recognised a severe but just application of the *lex talionis*. That the act was so intended by the captors is very clear; and it is strange that this strong reprobation of his conduct by the Israelites should have been construed into an example of their own barbarous usages in war. Adonibezek was taken to Jerusalem, where he died, B.C. 1449.

ADONIJAH (אֲדֹנִיָּהוּ, *Jehovah* [*is*] *my Lord;* Sept. Ἀδωνίας), the fourth son of David, by Haggith. He was born after his father became king, but when he reigned over Judah only (2 Sam. iii. 4). According to the Oriental notion developed in the article ABSALOM, Adonijah might have considered his claim superior to that of his eldest brother Amnon, who was born while his father was in a private station; but not to that of Absalom, who was not only his elder brother, and born while his father was a king, but was of royal descent on the side of his mother. When, however, Amnon and Absalom were both dead, he became, by order of birth, the heir-apparent to the throne. But this order had been set aside in favour of Solomon, who was born while his father was king of all Israel. Absalom perished in attempting to assert his claim of primogeniture, in opposition to this arrangement. Unawed by this example, Adonijah took the same means of showing that he was not disposed to relinquish the claim of primogeniture which now devolved upon him. He assumed the state of an heir-apparent, who, from the advanced age of David, must soon be king. But it does not appear to have been his wish to trouble his father as Absalom had done; for he waited till David appeared at the point of death, when he called around him a number of influential men, whom he had previously gained over, and caused himself to be proclaimed king. This was a formidable attempt to subvert the appointment made by the Divine king of Israel; for Adonijah was supported by such men as Joab, the general-in-chief, and Abiathar, the high-priest; both of whom had followed David in all his fortunes. The adhesion of such men, and the previous defection of the nation to Absalom, show the strength of the hereditary principle among the Israelites. In all likelihood, if Absalom had waited till David was on his death-bed, Joab and Abiathar would have given him their support; but his premature and unnatural attempt to dethrone his father, disgusted these friends of David, who might not otherwise have been adverse to his claims. This danger was avoided by Adonijah: but his plot was, notwithstanding, defeated by the prompt measure taken by David, who directed Solomon to be at once proclaimed, and crowned, and admitted to the real exercise of the sovereign power. Adonijah then saw that all was lost, and fled to the altar, which he refused to leave without a promise of pardon from King Solomon. This he received, but was warned that any further attempt of the same kind would be fatal to him. Accordingly, when, some time after the death of David, Adonijah covertly endeavoured to reproduce his claim through a marriage with Abishag, the virgin widow of his father [ABISHAG], his design was at once penetrated by the king, by whose order he was instantly put to death (1 Kings i.-ii. 13-25).

ADONIRAM (אֲדֹנִירָם, *lord of height*, i.q. *high lord;* Sept. Ἀδωνιράμ, 1 Kings iv. 6). This name is exhibited in the contracted form of ADORAM (אדורם) in 2 Sam. xx. 24; 1 Kings xii. 18; and of Hadoram (הדורם) in 2 Chron. x. 18.

1. ADONIRAM, or HADORAM, son of Toi, king of Hamath, who was sent by his father to congratulate David on his victory over their common enemy Hadarezer, king of Syria (1 Chron. xviii. 10). This prince is called Joram in 2 Sam. viii. 10.

2. ADONIRAM. A person of this name is mentioned as receiver-general of the imposts in the reigns of David, Solomon, and Rehoboam. Commentators have been much at a loss to determine whether the office was held by one person for so long a period, or by two or three persons of the same name. It appears very unlikely that even two persons of the same name should successively bear the same office, in an age when no example occurs of the father's name being given to his son. We find also that not more than forty-seven years elapse between the first and last mention of the Adoniram who was 'over the tribute;' and as this, although a long term of service, is not too long for one life, and as the person who held the office in the beginning of Rehoboam's reign had served in it long enough to make himself odious to the people, it appears on the whole most probable that one and the same person is intended throughout. Only one incident is recorded in connection with this person. When the ten tribes seceded from the house of David, and made Jeroboam king, Rehoboam sent Adoniram among them, for the purpose, we may presume, of collecting the usual imposts, which had become very heavy. Perhaps he had been rigid in his invidious office under Solomon: at all events the collector of the imposts which had occasioned the revolt was not the person whose presence was the most likely to sooth the exasperated passions of the people. They rose upon him, and stoned him till he died. Rehoboam, who was not far off, took warning by his fate, and, mounting his chariot, returned with all speed to Jerusalem (1 Kings xii. 18).

ADONIS. [THAMMUZ.]

ADONI-ZEDEK (אֲדֹנִי־צֶדֶק; Sept. Ἀδωνιβεζέκ, confounding him with Adonibezek). The name denotes *lord of justice*, i.e. *just lord*, but some would rather have it to mean *king of Zedek*. He was the Canaanitish king of Jerusalem when the Israelites invaded Palestine; and the similarity of the name to that of a more ancient king of (as is supposed) the same place, Melchi-zedek (*king of justice*, or *king of Zedek*), has suggested that Zedek was one of the ancient names of Jerusalem. Be that as it may, this Adonizedek was the first

of the native princes that attempted to make head against the invaders. After Jericho and Ai were taken, and the Gibeonites had succeeded in forming a treaty with the Israelites, Adonisedek was the first to rouse himself from the stupor which had fallen on the Canaanites (Josh. i. 9-11), and he induced the other Amoritish kings of Hebron—Jarmuth, Lachish, and Eglon—to join him in a confederacy against the enemy. They did not, however, march directly against the invaders, but went and besieged the Gibeonites, to punish them for the discouraging example which their secession from the common cause had afforded. Joshua no sooner heard of this than he marched all night from Gilgal to the relief of his allies; and falling unexpectedly upon the besiegers, soon put them to utter rout. The pursuit was long, and was signalized by Joshua's famous command to the sun and moon, as well as by a tremendous hail-storm, which greatly distressed the fugitive Amorites [JOSHUA]. The five kings took refuge in a cave; but were observed, and by Joshua's order the mouth of it was closed with large stones, and a guard set over it, until the pursuit was over. When the pursuers returned, the cave was opened, and the five kings brought out. The Hebrew chiefs then set their feet upon the necks of the prostrate monarchs—an ancient mark of triumph, of which the monuments of Persia and Egypt still afford illustrations. They were then slain, and their bodies hung on trees until the evening, when, as the law forbade a longer exposure of the dead (Deut. xxi. 23), they were taken down, and cast into the cave, the mouth of which was filled up with large stones, which remained long after (Josh. x. 1-27). The severe treatment of these kings by Joshua has been censured and defended with equal disregard of the real circumstances, which are, that the war was avowedly one of extermination, no quarter being given or expected on either side: and that the war-usages of the Jews were neither worse nor better than those of the people with whom they fought, who would most certainly have treated Joshua and the other Hebrew chiefs in the same manner, had they fallen into their hands.

ADOPTION. The Old Testament does not contain any word equivalent to this; but the act occurs in various forms. The New Testament has the word υἱοθεσία often (Rom. viii. 15, 23; ix. 4; Gal. iv. 5; Eph. i. 5); but no example of the act occurs. The term itself is well defined, and the act described, in the *literal* signification of the Greek word. It is the *placing as a son* of one who is not so by birth.

The practice of adoption had its origin in the desire for male offspring among those who have, in the ordinary course, been denied that blessing, or have been deprived of it by circumstances. This feeling is common to our nature; but its operation is less marked in those countries where the equalizing influences of high civilization lessen the peculiar privileges of the paternal character, and where the security and the well-observed laws by which estates descend and property is transmitted, withdraw one of the principal inducements to the practice. And thus most of the instances in the Bible occur in the patriarchal period. The law of Moses, by settling the relations of families and the rules of descent, and by formally establishing the Levirate law, which in some sort secured a representative posterity even to a man who died without children, appears to have put some check upon this custom. The allusions in the New Testament are mostly to practices of adoption which then existed among the Greeks and Romans, and rather to the latter than to the former; for among the more highly civilized Greeks adoption was less frequent than among the Romans. In the East the practice has always been common, especially among the Semitic races, in whom the love of offspring has at all times been strongly manifested. And here it may be observed that the additional and peculiar stimulus which the Hebrews derived from the hope of giving birth to the Messiah, was inoperative with respect to adoption, through which that privilege could not be realized.

In early times there appears to have been no limitation or restriction of the exercise of the power of adoption. But as the arrangements of society became more complicated, some restrictions were imposed, and certain public forms were made necessary to legalize the act. We are not much acquainted with the usages in this matter, which, *in different ages*, were, among the Hebrews, connected with the act of adoption. This is partly because the practice had ceased to be common among them by the time the sources of information became more open. And, indeed, the culpable facility of divorce in later times rendered unnecessary those adoptions which might have arisen, and in earlier times did arise, from the sterility of a wife. The want of positive information, however, is supplied, in some degree, by our acquaintance with the analogous practices of other Eastern nations.

It is scarcely necessary to say that adoption was confined to sons. The whole Bible history affords no example of the adoption of a female; for the Jews certainly were not behind any Oriental nation in the feeling expressed in the Chinese proverb—'He is happiest in daughters who has only sons' (*Mém. sur les Chinois*, t. x. 149).

The first instances of adoption which occur in Scripture are less the acts of men than of women, who, being themselves barren, give their female slaves to their husbands, with the view of adopting the children they may bear. Thus Sarah gave her handmaid Hagar to Abraham; and the son who was born, Ishmael, appears to have been considered as her son as well as Abraham's, until Isaac was born. In like manner Rachel, having no children, gave her handmaid Bilhah to her husband, who had by her Dan and Naphtali (Gen. xxx. 5-9); on which his other wife, Leah, although she had sons of her own, yet fearing that she had left off bearing, claimed the right of giving her handmaid Zilpah to Jacob, that she might thus increase their number; and by this means she had Gad and Asher (Gen. xxx. 9-13). In this way the greatest possible approximation to a natural relation was produced. The child was the son of the husband, and, the mother being the property of the wife, the progeny must be her property also; and the act of more particular appropriation seems to have been that, at the time of birth, the handmaid brought forth her child 'upon the knees of the adoptive mother' (Gen. xxx. 3). Strange as this custom may seem, it is in accordance with the notions of *representation* which we find very prevalent in analogous states of

society. We do not see the use of explaining away customs we do not like, or which do not agree with our own notions, by alleging that by this expression nothing more is meant than that the son was to be dandled and brought up *upon the knees* of the adoptive mother. In this case the vicarious bearing of the handmaid for the mistress was as complete as possible; and the sons were regarded as fully equal in right of heritage with those by the legitimate wife. This privilege could not, however, be conferred by the adoption of the wife, but by the natural relation of such sons to the husband. A curious fact is elicited by the peculiar circumstances in Sarah's case, which were almost the only circumstances that could have arisen to try the question, whether a mistress retained her power, as such, over a female slave whom she had thus vicariously employed, and over the progeny of that slave, even though by her own husband. The answer is given, rather startlingly, in the affirmative in the words of Sarah, who, when the birth of Isaac had wholly changed her feelings and position, and when she was exasperated by the offensive conduct of Hagar and her son, addressed her husband thus, 'Cast forth *this bondwoman* and her son; for *the son of this bondwoman* shall not be heir with *my son*, even with Isaac' (Gen. xxi. 10).

A previous instance of adoption in the history of Abraham, when as yet he had no children, appears to be discoverable in his saying, 'One born in my house is mine heir.' This unquestionably denotes a house-born slave, as distinguished from one bought with money. Abraham had several such; and the one to whom he is supposed here to refer is his faithful and devoted steward Eliezer. This, therefore, is a case in which a slave was adopted as a son—a practice still very common in the East. A boy is often purchased young, adopted by his master, brought up in his faith, and educated as his son; or if the owner has a daughter, he adopts him through a marriage with that daughter, and the family which springs from this union is counted as descended from him. But house-born slaves are usually preferred, as these have never had any home but their master's house, are considered members of his family, and are generally the most faithful of his adherents. This practice of slave adoption was very common among the Romans; and, as such, is more than once referred to by St. Paul (Rom. viii. 15; 1 Cor. ii. 12), the transition from the condition of a slave to that of a son, and the privilege of applying the tender name of 'Father' to the former 'Master,' affording a beautiful illustration of the change which takes place from the bondage of the law to the freedom and privileges of the Christian state.

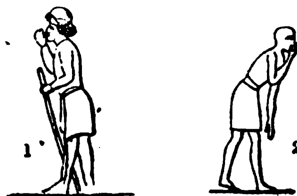
As in most cases the adopted son was to be considered dead to the family from which he sprung, the separation of natural ties and connections was avoided by this preference of slaves, who were mostly foreigners or of foreign descent. For the same reason the Chinese make their adoptions from children in the hospitals, who have been abandoned by their parents (*Mém. sur les Chinois*, t. vi. 325). The Tartars are the only people we know who prefer to adopt their near relatives—nephews or cousins, or, failing them, a Tartar of their own banner (*Ibid.* t. iv. 136). The only Scriptural example of this kind is that in which Jacob adopted his own grandsons Ephraim and Manasseh to be counted as his sons. Some have questioned whether this was really an act of adoption: but it seems to us that there is no way in which an act of adoption could be more clearly expressed. Jacob says to Joseph, their father—'Thy two sons, Ephraim and Manasseh, shall be mine: . . . . *as Reuben and Simeon* (his two eldest sons), *they shall be mine*. But thy issue which thou begettest after them shall be thine' (Gen. xlviii. 6). The object of this remarkable adoption was, that whereas Joseph himself could only have one share of his father's heritage along with his brothers, the adoption of his two sons enabled Jacob, through them, to bestow two portions upon his favourite son. One remarkable effect of this adoption was that the sons of Jacob, and the tribes which sprung from them, thus became thirteen instead of twelve; but the ultimate exclusion of Levi from a share of territory, rectified this so far as regarded the distribution of lands in Canaan.

The adoption of Moses by Pharaoh's daughter (Exod. ii. 1-10) is an incident rather than a practice; but it recalls what has just been stated respecting the adoption of outcast children by the Chinese.

A man who had only a daughter would naturally wish to build up a family, to be counted as his own, through her. We have seen that, under such circumstances, the daughter is often married to a freed slave, and the children counted as those of the woman's father, or the husband himself is adopted as a son. An instance of the former kind occurs in 1 Chron. ii. 34, *sq*. Sheshan, of the tribe of Judah, gives his daughter to Jarha, an Egyptian slave (whom, as the Targum premises, he no doubt liberated on that occasion): the posterity of the marriage are not, however, reckoned to Jarha, the husband of the woman, but to her father, Sheshan, and as *his* descendants they take their heritage and station in Israel. The same chapter gives another instance. Machir (grandson of Joseph) gives his daughter in marriage to Hezron, of the tribe of Judah. She gave birth to Segub, who was the father of Jair. This Jair possessed twenty-three cities in the land of Gilead, which came to him in right of his grandmother, the daughter of Machir; and he acquired other towns in the same quarter, which made up his possessions to threescore towns or villages (1 Chron. ii. 21-24; Josh. xiii. 9; 1 Kings iv. 13). Now this Jair, though of the tribe of Judah by his grandfather, is, in Num. xxxii. 41, counted as of Manasseh, for the obvious reason which the comparison of these texts suggests, that, through his grandmother, he inherited the property, and was the lineal representative of Machir, the son of Manasseh. This case is of some importance from the ground which it offers for the opinion of those who account for the difference between the pedigree of Christ as given by Matthew, and that in Luke, by supposing that the former is the pedigree through Joseph, his supposed father, and the latter through his mother Mary. This opinion, which will be examined in another place [GENEALOGY], supposes that Mary was the daughter of Heli, and that Joseph is called his son (Luke iii. 23) because he was adopted by Heli when he married his daughter, who was an heiress, as is proved by

the fact of her going to Bethlehem to be registered, when in the last stage of pregnancy.

The following are among the foreign customs connected with adoption which are supposed to be alluded to in the New Testament; and in explanation of these it may be remarked, that by the time of Christ the Jews had, through various channels, become well acquainted with the more remarkable customs of the Greeks and Romans; and the perfect familiarity of St. Paul, in particular, with such customs would be probable from circumstances, even were it not constantly apparent in his Epistles. In John viii. 36, 'If the Son shall make you free, ye shall be free indeed,' is supposed by Grotius and other commentators to refer to a custom in some of the cities of Greece, and elsewhere, called ἀδελφοθεσία, whereby the son and heir was permitted to adopt brothers and admit them to the same rights which he himself enjoyed. But it seems more likely that the reference was to the more familiar Roman custom, by which the son, after his father's death, often made free such as were born slaves in his house (Theophil. Antecensor, *Institut. Imp. Justinian.* i. 6. 5). In Rom. viii. 23, υἱοθεσίαν ἀπεκδεχόμενοι, 'anxiously waiting for the adoption,' the former word appears to be used in a sense different from that which it bears in ver. 15, and to signify the *consummation* of the act there mentioned; in which point of view it is conceived to apply to the two-fold ceremony among the Romans. The one was the private act, between the parties; and if the person to be adopted was not already the slave of the adopter, this private transaction involved *the purchase of him from his parents*, when practicable. In this manner Caius and Lucius were purchased from their father Agrippa before their adoption by Augustus. The other was the public acknowledgment of that act on the part of the adopter, when the adopted person was solemnly avowed and declared to be his son. The peculiar force and propriety of such an allusion in an epistle to the *Romans* must be very evident.



In Gal. iv. 5, 6, there is a very clear allusion to the privilege of adopted slaves to address their former master by the endearing title of *Abba*, or Father. Selden has shown that slaves were not allowed to use this word in addressing the master of the family to which they belonged, nor the corresponding title of *Mama*, mother, when speaking to the mistress of it (*De Succ. in Bona Defunct. secund. Hebr.* c. iv.).

A more minute investigation than would here be in place, might discover other allusions to the custom of adoption. The ideas and usages connected with the adoption of an official successor are considered elsewhere [INVESTITURE].

ADORAIM (אֲדוֹרַיִם; Sept. Ἀδωραΐμ), a town in the south of Judah, enumerated along with Hebron and Mareshah, as one of the cities fortified by Rehoboam (2 Chron. xi. 9). Under the name of Adora it is mentioned in the Apocrypha (1 Macc. xiii. 20), and also often by Josephus *Antiq.* viii. 10, 1; xiii. 6, 4. 15, 4; *Bell. Jud.* i. 2, 6. 8, 4), who usually connects Adora with Maressa, as cities of the later Idumæa. It was captured by Hyrcanus at the same time with Maressa, and rebuilt by Gabinius (Joseph. *Antiq.* xiii. 9, 1; xiv. 5, 3). This town does not occur in any writer after Josephus, until the recent researches of Dr. Robinson, who discovered it under the name of Dura, the first feeble letter having been dropped. It is situated five miles W. by S. from Hebron, and is a large village, seated on the eastern slope of a cultivated hill, with olive-groves and fields of grain all around. There are no ruins (Robinson's *Bib. Researches*, iii. 2-5).

ADORATION. This word is compounded of *ad* 'to,' and *os*, *oris*, 'the mouth,' and literally signifies to apply the hand to the mouth,' that is, 'to kiss the hand.' The *act* is described in Scripture as one of worship. Job says:—'If I had beheld the sun when it shined, or the moon, walking in brightness; and my heart had been secretly enticed, or my mouth had kissed my hand; this also were an iniquity to be punished by the judge' (Job xxxi. 26, 27). And this very clearly intimates that kissing the hand was considered an overt act of worship in the East. So Minutius Felix (*De Sacrific.* cap. 2, ad fin.) remarks, that when Cæcilius observed the statue of Serapis, '*Ut vulgus superstitiosus solet, manum ori admovens, osculum labiis pressit;* according to the custom of the superstitious vulgar, he moved his hand to his mouth, and kissed it with his lips.'

The same act was used as a mark of respect in the presence of kings and persons high in office or station. Or rather, perhaps, the hand was not merely kissed and then withdrawn from the mouth, but held continuously before or upon the mouth, to which allusion is made in such texts as Judg. xviii. 10; Job xxi. 5; xxix. 9; xl. 4; Ps. xxxix. 9; in which 'laying the hand upon the mouth' is used to describe the highest degree of reverence and submission; as such, this posture is exhibited on the monuments of Persia and of Egypt. In one of the sculptures at Persepolis a king is seated on his throne, and before him a person standing in a bent posture, with his hand laid upon his mouth as he addresses the sovereign (fig. 1). Exactly the same attitude is observed in the sculptures at Thebes, where one person, among several (in various postures of respect) who appear before the scribes to be registered, has his hand placed thus submissively upon his mouth (fig. 2). The particular object of this act is said to have been to prevent the breath from reaching the face of the superior. But we are not to suppose that this was always its direct purpose, seeing that many acts which originally had a specific purpose, eventually became merely conventional marks of respect and homage under given circumstances.

ADRA. [ARAD.]

ADRAMMELECH (אַדְרַמֶּלֶךְ, Ἀδραμέλεχ) is mentioned, together with Anammelech, in 2 Kings xvii. 31, as one of the idols whose

worship the inhabitants of Sepharvaim established in Samaria, when they were transferred thither by the king of Assyria, and whom they worshipped by the sacrifice of their children by fire. This constitutes the whole of our certain knowledge of this idol. With regard to the etymology of the name, the two most probable modes of interpretation are those which assume, either that, as the latter half of the word is evidently Semitic, the former is so too, and that it means *the magnificence of the king* (and this is the view which Gesenius now favours); or, according to a suggestion first made by Reland (in his *Dissertat. Miscell.* ii. 113), that the former member is Assyrian, and that the word means *the king of fire*. It is to be observed that, although it has been disputed to what family of languages the Assyrian belongs, some modern scholars incline to consider it as Medo-Persian (Gesenius, *Geschichte der Hebr. Sprache*, p. 62), and that, in this case, the position of that member of the compound which would be dependent on the other as the genitive, is exactly the converse of that which is necessary in Hebrew and the other Syro-Arabian languages. As to the figure under which this idol was worshipped, the Babylonian Talmud (cited at length in Carpzov's *Apparatus*, p. 516) asserts that he was adored under that of a *mule;* whereas Kimchi says it was under that of a *peacock;* statements upon which little reliance can be placed. There is greater unanimity in the opinion that the power adored under this name was one of the heavenly bodies, in general accordance with the astrological character of the Assyrian idolatry (Gesenius, *Jesaia*, iii. 327, seq.). Selden (*De Diis Syris*, i. 6) and others have identified him with Moloch, chiefly on the ground that the sacrifice of children by fire, and the general signification of the name, are the same in both. According, then, to the great difference of opinion concerning Moloch, authorities of nearly equal weight may be adduced for the opinion that Adrammelech represents the planet *Saturn*, or the *Sun:* the kind of sacrifice being the chief argument in favour of the former; the etymology of the name being that in favour of the latter [MOLOCH].

Selden has also maintained (*De Diis Syris*, ii. 9) that Adrammelech and Anammelech are only different names of one and the same idol. The contrary, however, is asserted by most ancient authorities, and by Hyde, Jurieu, Gesenius, and others, among the moderns. No argument for their identity can be drawn from the *kethib*, in 2 Kings xvii. 31, because the singular אלוה is not found *in prose* prior to the Captivity (and, even if it were, it would be *defectively* written here, of which there is only one instance in our present text, unless when it has a prefix or suffix). Besides, upwards of seventy MSS. and several early editions read the plural אלה ים *in the text* here (De Rossi, *Var. Lect.* ad loc.); and it is also the *keri* of our printed copies.—J. N.

2. ADRAMMELECH, one of the sons and murderers of Sennacherib, king of Assyria (2 Kings xix. 27; Isa. xxxvii. 38).

ADRAMYTTIUM (Ἀδραμύττιον), a sea-port town in the province of Mysia in Asia Minor, opposite the isle of Lesbos, and an Athenian colony (Strabo, xiii. p. 606; Herod. vii. 42). It is mentioned in Scripture only (Acts xxvii. 2) from the fact that the ship in which Paul embarked at Cæsarea as a prisoner on his way to Italy, belonged to Adramyttium. It was rare to find a vessel going direct from Palestine to Italy. The usual course therefore was to embark in some ship bound to one of the ports of Asia Minor, and there go on board a vessel sailing for Italy. This was the course taken by the centurion who had charge of Paul. The ship of Adramyttium took them to Myra in Lycia, and here they embarked in an Alexandrian vessel bound for Italy. Some commentators (Hammond, Grotius, Witsius, &c.) strangely suppose that *Adrametum* in Africa (Plin. v. 3; Ptol. iv. 3) was the port to which the ship belonged. Adramyttium is still called '*Adramyt*.' It is built on a hill, contains about 1000 houses, and is still a place of some commerce (Turner, *Tour*, iii. 265).

ADRIATIC SEA (Ἀδρίας, Acts xxvii. 27). This name is now confined to the gulf lying between Italy on one side, and the coasts of Dalmatia and Albania on the other. But in St. Paul's time it extended to all that part of the Mediterranean between Crete and Sicily. Thus Ptolemy (iii. 16) says that Sicily was bounded on the east by the Adriatic, and that Crete was bounded by the Adriatic on the west; and Strabo (ii. p. 185; vii. p. 488) says that the Ionian gulf was a part of what was in his time called the Adriatic Sea. This fact is of importance, as relieving us from the necessity of finding the island of Melita on which Paul was shipwrecked, in the *present* Adriatic gulf; and consequently removing the chief difficulty in the way of the identification of that island with the present Malta. To this use it has been skilfully applied by Dr. Falconer in his tractate *On the Voyage of St. Paul.*

ADRIEL (עַדְרִיאֵל, *the flock of God;* Sept. Ἀδριήλ), the person to whom Saul gave in marriage his daughter Merab, who had been originally promised to David (1 Sam. xviii. 19). Five sons sprung from this union, who were taken to make up the number of Saul's descendants, whose lives, on the principle of blood-revenge, were required by the Gibeonites to avenge the cruelties which Saul had exercised towards their race [GIBEONITES]. In 2 Sam. xxi. 8, the name of *Michal* occurs as the mother of these sons of Adriel: but as it is known that Merab, and not Michal, was the wife of Adriel, and that Michal had never any children (2 Sam. vi. 23), there only remains the alternative of supposing either that Michal's name has been substituted for Merab's by some ancient copyist, or that the word which properly means *bare* (which Michal *bare* unto Adriel), should be rendered *brought up* or educated (which Michal *brought up* for Adriel). The last is the choice of our public version, and also of the Targum. The Jewish writers conclude that Merab died early, and that Michal adopted her sister's children, and brought them up for Adriel (*T. Bab. Sanhed.* fol. 19. 2). But, as the word ילדה will not easily take any other sense than '*she bare*,' the change of names seems the easier explanation.

ADULLAM (עֲדֻלָּם; Sept. Ὀδολλάμ), an old city (Gen. xxxviii. 1, 12, 20) in the plain country of the tribe of Judah (Josh. xv. 35), and one of the royal cities of the Canaanites (Josh.

xii. 15). It was one of the towns which Rehoboam fortified (2 Chron. xi. 7; Micah i. 15), and is mentioned after the Captivity (Neh. xi. 30; 2 Macc. 12, 38). Eusebius and Jerome state that it existed in their time as a large village, ten miles to the east of Eleutheropolis; but they follow the Sept. in confounding it with Eglon (עֶגְלוֹן), whereas it is certain that these were different places, and had distinct kings in the time of Joshua (xii. 12, 15). It is evident that Adullam was one of the cities of 'the valley,' or plain between the hill country of Judah and the sea; and from its place in the lists of names (especially 2 Chron. xi. 8), it appears not to have been far from the Philistine city of Gath. This circumstance would suggest that the 'cave of Adullam' (1 Sam. xxii. 1), to which David withdrew immediately from Gath, was near the city of that name. But there is no passage of Scripture which connects the city and the cave, and it is certainly not in a plain that one would look for a cave capable of affording a secure retreat to 400 men; nor has any such cave been found in that quarter. It is therefore far from improbable that the cave of Adullam was in the mountainous wilderness in the west of Judah towards the Dead Sea, where such caves occur, and where the western names (as Carmel) are sometimes repeated. This conjecture is favoured by the fact that the usual haunts of David were in this quarter; whence he moved into the land of Moab, which was quite contiguous, whereas he must have crossed the whole breadth of the land, if the cave of Adullam had been near the city of that name. Other reasons occur which would take too much room to state: but the result is, that there appears at length good grounds for the local tradition which fixes the cave on the borders of the Dead Sea, although there is no certainty with regard to the particular cave usually pointed out. The cave so designated is at a point to which David was far more likely to summon his parents, whom he intended to take from Bethlehem into Moab, than to any place in the western plains. It is about six miles south-west of Bethlehem, in the side of a deep ravine (Wady Khureitun) which passes below the Frank mountain [HERODION] on the south. It is an immense natural cavern, the mouth of which can be approached only on foot along the side of the cliff. Irby and Mangles, who visited it without being aware that it was the reputed cave of Adullam, state that it 'runs in by a long winding, narrow passage, with small chambers or cavities on either side. We soon came to a large chamber with natural arches of great height; from this last there were numerous passages, leading in all directions, occasionally joined by others at right angles, and forming a perfect labyrinth, which our guides assured us had never been perfectly explored, the people being afraid of losing themselves. The passages are generally four feet high by three feet wide, and were all on a level with each other. There were a few petrifactions where we were: nevertheless the grotto was perfectly clean, and the air pure and good' (*Travels*, pp. 340, 341). It seems probable that David, as a native of Bethlehem, must have been well acquainted with this remarkable spot, and had probably often availed himself of its shelter when out with his father's flocks. It would therefore naturally occur to him as a place of refuge when he fled from Gath; and his purpose of forming a band of followers was much more likely to be realized here, in the neighbourhood of his native place, than in the westward plain, where the *city* of Adullam lay. These circumstances have considerable weight, when taken in connection with what has already been adduced; but the question is one which there is no means of deciding with certainty.

ADULTERY. In the common acceptation of the word adultery denotes the sexual intercourse of a married woman with any other man than her husband, or of a married man with any other woman than his wife. But the crime is not understood in this extent among Eastern nations, nor was it so understood by the Jews. With them, adultery was the act whereby any married man was exposed to the risk of having a spurious offspring imposed upon him. An adulterer was, therefore, any man who had illicit intercourse with a married or betrothed woman; and an adulteress was a betrothed or married woman who had intercourse with any other man than her husband. An intercourse between a married man and an unmarried woman was not, as with us, deemed adultery, but fornication—a great sin, but not, like adultery, involving the contingency of polluting a descent, of turning aside an inheritance, or of imposing upon a man a charge which did not belong to him. Adultery was thus considered a great social wrong, against which society protected itself by much severer penalties than attended an unchaste act not involving the same contingencies.

It will be seen that this Oriental limitation of adultery is intimately connected with the existence of polygamy. If adultery be defined as a breach of the marriage covenant, then, where the contract is between one man and one woman, as in Christian countries, the man as much as the woman infringes the covenant, or commits adultery, by *every* act of intercourse with any other woman: but where polygamy is allowed—where the husband may marry other wives, and take to himself concubines and slaves, the marriage contract cannot and does not convey to the woman a legal title that the man should belong to her alone. If, therefore, a Jew associated with a woman who was not his wife, his concubine, or his slave, he was guilty of unchastity, but committed no offence which gave a wife reason to complain that her legal rights had been infringed. If, however, the woman with whom he associated was the wife of another, he was guilty of adultery—not by infringing his own marriage covenant, but by causing a breach of that which existed between that woman and her husband (Michaelis, *Mosäisches Recht.* art. 259; Jahn's *Archäologie*, th. i. b. 2, § 183). By thus excluding from the name and punishment of adultery, the offence which did *not* involve the enormous wrong of imposing upon a man a supposititious offspring, in a nation where the succession to landed property went entirely by birth, so that a father could not by his testament alienate it from any one who was regarded as his son—the law was enabled, with less severity than if the inferior offence had been included, to punish the crime with death. It is still so punished wherever the practice of polygamy has similarly operated in limiting the crime—not, perhaps, that the law expressly assigns that punishment, but it recognises the right

of the injured party to inflict it, and, in fact, leaves it, in a great degree, in his hands. Now death was the punishment of adultery before the time of Moses; and if he had assigned a less punishment, his law would have been inoperative, for private vengeance, sanctioned by usage, would still have inflicted death. But by adopting it into the law, those restrictions were imposed upon its operation which necessarily arise when the calm inquiry of public justice is substituted for the impulsive action of excited hands. Thus, death would be less frequently inflicted; and that this effect followed seems to be implied in the fact that the whole biblical history offers no example of capital punishment for the crime. Indeed, Lightfoot goes farther, and remarks, 'I do not remember that I have anywhere, in the Jewish Pandect, met with an example of a wife punished for adultery with death. There is mention (*T. Hieros. Sanhed.* 242) of the daughter of a certain priest burned for committing fornication in her father's house; but she was not married' (*Hor. Hebr.* ad Matt. xix. 8). Eventually, divorce superseded all other punishment. There are indeed some grounds for thinking that this had happened before the time of Christ, and we throw it out as a matter of inquiry, whether the Scribes and Pharisees, in attempting to entrap Christ in the matter of the woman taken in adultery, did not intend to put him between the alternatives of either declaring for the revival of a practice which had already become obsolete, but which the law was supposed to command; or, of giving his sanction to the apparent infraction of the law, which the substitution of divorce involved (John viii. 1-11). In Matt. v. 32, Christ seems to assume that the practice of divorce for adultery already existed. In later times, it certainly did; and Jews who were averse to part with their adulterous wives, were compelled to put them away (Maimon. in *Gerushin*, c. 2). In the passage just referred to, our Lord does not appear to render divorce compulsory, even in case of adultery; he only permits it in that case alone, by forbidding it in every other.

In the law which assigns the punishment of death to adultery (Lev. xx. 10), the mode in which that punishment should be inflicted is not specified, because it was known from custom. It was not, however, *strangulation*, as the Talmudists contend, but *stoning*, as we may learn from various passages of Scripture (*e. g.* Ezek. xvi. 38, 40; John viii. 5); and as, in fact, Moses himself testifies, if we compare Exod. xxxi. 14; xxxv. 2; with Num. xv. 35, 36. If the adulteress was a slave, the guilty parties were both scourged with a leathern whip (בקרת), the number of blows not exceeding forty. In this instance the adulterer, in addition to the scourging, was subject to the further penalty of bringing a trespass offering (a ram) to the door of the tabernacle, to be offered in his behalf by the priest (Lev. xix. 20-22). Those who wish to enter into the reasons of this distinction in favour of the slave, may consult Michaelis (*Mosäisches Recht.* art. 264). We only observe that the Moslem law, derived from old Arabian usage, only inflicts upon a slave, for this and other crimes, half the punishment incurred by a free person.

It seems that the Roman law made the same important distinction with the Hebrew, between the infidelity of the husband and of the wife. 'Adultery' was defined by the civilians to be the violation of another man's bed (*violatio tori alieni*); so that the infidelity of the husband could not constitute the offence. The more ancient laws of Rome, which were very severe against the offence of the wife, were silent as to that of the husband. The offence was not capital until made so by Constantine, in imitation of the Jewish law; but under Leo and Marcian the penalty was abated to perpetual imprisonment, or cutting off the nose; and, under Justinian, the further mitigation was granted to the woman, that she was only to be scourged, to lose her dower, and to be shut up in a convent.

The punishment of cutting off the nose brings to mind the passage in which the prophet Ezekiel (xxiii. 25), after, in the name of the Lord, reproving Israel and Judah for their adulteries (*i. e.* idolatries) with the Assyrians and Chaldeans, threatens the punishment—'they shall take away thy nose and thy ears,' which Jerome states was actually the punishment of adultery in those nations. One or both of these mutilations, most generally that of the nose, were also inflicted by other nations, as the Persians and Egyptians, and even the Romans; but we suspect that among the former, as with the latter, it was less a judicial punishment than a summary infliction by the aggrieved party. It is more than once alluded to as such by the Roman poets: thus Martial asks,

'Quis tibi persuasit nares abscindere mœcho?'

and in Virgil (*Æn.* vi. 496) we read—

'Ora, manusque ambas, populataque tempora raptis
Auribus, et truncas inhonesto vulnere nares.'

It would also seem that these mutilations were more usually inflicted on the male than the female adulterer. In Egypt, however, cutting off the nose was the female punishment, and the man was beaten terribly with rods (Diod. Sic. i. 89, 90). The respect with which the conjugal union was treated in that country in the earliest times is manifested in the history of Abraham (Gen. xii. 19).

ADULTERY, TRIAL OF. It would be unjust to the spirit of the Mosaical legislation to suppose that the trial of the suspected wife by the bitter water, called the *Water of Jealousy*, was by it first produced. It is to be regarded as an attempt to mitigate the evils of, and to bring under legal control, an old custom which could not be entirely abrogated. The original usage, which it was designed to mitigate, was probably of the kind which we still find in Western Africa; and a comparison of the two may suggest the real points of the evil which the law of Moses was designed to rectify, and the real advantages which it was calculated to secure. The matter deserves particular attention, inasmuch as it relates to the only ordeal in use among the Israelites, or sanctioned by their law. The illustrative details of the *Trial by Red Water*, as it is called, vary among different nations, in minute particulars, which it would be tiresome to distinguish. The substantial facts may be embodied in one statement:—

The ordeal is, in some tribes, confined to the case of adultery, but in others it is used in all cases. *Differences*, rather than resemblances, must indicate the particular points in which the Mosaical law, while retaining the form, abandoned the sub-

stance and obviated the evils of this institution. The differences are, in fact, all-important. In Africa the drink is poisonous, and calculated to produce the effects which the oath imprecates; whereas the 'water of jealousy,' however unpleasant, was prepared in a prescribed manner, with ingredients known to all to be perfectly innocuous. It could not therefore injure the innocent; and its action upon the guilty must have resulted from the consciousness of having committed a horrible perjury, which crime, when the oath was so solemnly confirmed by the draught, and attended by such awful imprecations, was believed to be visitable with immediate death from heaven. It cannot be too strongly inculcated, that in the African examples the effect is not ascribed to the drink, but to a supernatural visitation upon a perjury which the confirmation of the oath-drink renders so awful. This name of 'oath-drink' is commonly applied to it on the Gold Coast. And it was, doubtless, to strengthen such an impression that this awful drink, so much dreaded in Africa, was with the Jews exclusively appropriated to the only ordeal trial among them. On the Gold Coast the oath-drink (not, of course, poisonous) is used as a confirmation of *all* oaths, not only oaths of purgation, but of accusation, or even of obligation. In all cases it is accompanied with an imprecation that the Fetish may destroy them if they speak untruly, or do not perform the terms of their obligation; and it is firmly believed that no one who is perjured under this form of oath will live an hour (Villault; Bosman). Doubtless the impression with respect to this more ordinary oath-drink is derived from observation of the effects attending the drink used in the actual ordeal; and it is our object to show that the popular and general opinion regards such an oath as of so solemn a nature that perjury is sure to bring down immediate punishment. The red-water as an ordeal is confined to crimes of the worst class. These are murder, adultery, witchcraft. Perhaps this arises less from choice than from the fact that such crimes are not only the highest, but are the least capable of that direct proof for which the ordeal is intended as a substitute. A party is accused: if he denies the crime, he is required to drink the red water, and, on refusing, is deemed guilty of the offence. The trial is so much dreaded that innocent persons often confess themselves guilty, in order to avoid it. And yet, the immediate effect is *supposed* to result less from the water itself than from the terrible oath with which it is drunk; for there are instances which show that the draught is the seal and sanction of the most solemn oath which barbarous imaginations have been able to devise; and in kind it is the same—if we may be forgiven the familiar illustration—which is heard but too often in our own land, 'May this drink be my poison, if—.' So the person who drinks the red water invokes the Fetish to destroy him if he is really guilty of the offence with which he is charged. The drink is made by an infusion in water of pieces of a certain tree, or of herbs. It is highly poisonous in itself; and, if rightly prepared, the only chance of escape is the rejection of it by the stomach, in which case the party is deemed innocent; as he also is if, being retained, it has no sensible effect, which can only be the case when the priests (so to call them), who have the management of the matter, are influenced by private considerations, or by reference to the probabilities of the case, to prepare the draught with a view to acquittal. The imprecations upon the accused if he be guilty, are repeated in an awful manner by the priests, and the effect is watched very keenly. If the party seems affected by the draught, like one intoxicated, and begins to foam at the mouth, he is considered undoubtedly guilty, and is slain on the spot; or else he is left to the operation of the poisonous draught, which causes the belly to swell and burst, and occasions death (Barbot, p. 126; Bosman, p. 148; Artus, in De Bry, vi. 62; Villault, p. 191; Corry's *Windward Coast*, p. 71; *Church Missionary Paper*, No. 17; Davis's *Journal*, p. 24).

The resemblances and the differences between this and the trial by bitter water, as described in Num. v. 11-31, will be apparent on comparison. The object, namely, to discover a crime incapable of being proved by evidence, is the same; the oath, and a draught as its sanction, are essentially the same; and similar also are the effects upon the guilty. If, therefore, we suppose the pre-existing custom to have been analogous to that which has been described, similar practices may be produced from other quarters. Hesiod, in his *Theogonia*, reports that when a falsehood had been told by any of the gods, Jupiter was wont to send Iris to bring some water out of the river Styx in a golden vessel; upon this an oath was taken, and if the god swore falsely, he remained for a whole year without life or motion. There was an ancient temple in Sicily, in which were two very deep basins, called Delli, always full of hot and sulphurous water, but never running over. Here the more solemn oaths were taken; and perjuries were immediately punished most severely (Diod. Sic. xi. 67). This is also mentioned by Aristotle, Silius Italicus, Virgil, and Macrobius; and from the first it would seem that the oath was written upon a ticket and cast into the water. The ticket floated if the oath was true, and sunk if it was false. In the latter case the punishment which followed was considered as an act of Divine vengeance.

The result of these views and illustrations will be, that the trial for suspected adultery by the bitter water amounted to this—that a woman suspected of adultery by her husband was allowed to repel the charge by a public oath of purgation, which oath was designedly made so solemn in itself, and was attended by such awful circumstances, that it was in the highest degree unlikely that it would be dared by any woman not supported by the consciousness of innocence. And the fact that no instance of the actual application of the ordeal occurs in Scripture, affords some countenance to the assertion of the Jewish writers—that the trial was so much dreaded by the women, that those who were really guilty generally avoided it by confession; and that thus the trial itself early fell into disuse. And if, as we have supposed, this mode of trial was only *tolerated* by Moses, the ultimate neglect of it must have been desired and intended by him. In later times, indeed, it was disputed in the Jewish schools, whether the husband was bound to prosecute his wife to this extremity, or whether it was not lawful for him to connive at and pardon her act, if he were so inclined. There were some who

held that he was bound by his duty to prosecute, while others maintained that it was left to his pleasure (*T. Hieros.* tit. *Sotah*, fol. 16, 2).

From the same source we learn that this form of trial was finally abrogated about forty years before the destruction of Jerusalem. The reason assigned is, that the men themselves were at that time generally adulterous; and that God would not fulfil the imprecations of the ordeal oath upon the wife while the husband was guilty of the same crime (John viii. 1-8).

Adultery, in the symbolical language of the Old Testament, means idolatry and apostacy from the worship of the true God (Jer. iii. 8, 9; Ezek. xvi. 32; xxiii. 37; also Rev. ii. 22). Hence an *Adulteress* meant an apostate church or city, particularly 'the daughter of Jerusalem,' or the Jewish church and people (Isa. i. 21; Jer. iii. 6, 8, 9; Ezek. xvi. 22; xxiii. 7). This figure resulted from the primary one, which describes the connection between God and his separated people as a marriage between him and them. By an application of the same figure, 'An adulterous generation' (Matt. xii. 39; xvi. 4; Mark viii. 38) means a faithless and impious generation.

ADUMMIM (אֲדֻמִּים; Sept. Ἀδαμμίν; various readings are Ἀδομμίμ, Ἀδομμί, and Ἐδωμίμ), a place which is only twice named in Scripture. Once (Josh. xv. 7), where, from the context, it seems to indicate the border between Judah and Benjamin, and that it was an ascending road (מעלה אדמים) between Gilgal (and also Jericho) and Jerusalem. The second notice (Josh. xviii. 17) adds no further information, but repeats '*the ascent to* Adummim.' Most commentators take the name to mean *the place of blood* (from the Heb. דם), and follow Jerome, who finds the place in the dangerous or mountainous part of the road between Jerusalem and Jericho, and supposes that it was so called from the frequent effusion of blood by the robbers, by whom it was much infested. In his time it was called corruptly *Mali domin*; in Greek, Ἀνάβα; in Latin, *Ascensus rufforum*, sive *robentium*. These are curious interpretations of the original word, which is most likely from אדם, and merely denotes the redness of the soil or rock. It does not appear that any traveller mentions the geological aspect of the spot, and therefore this must be regarded only as a probable conjecture. However, as a difficult pass in a desolate rocky region, between important cities, the part of the road indicated by Jerome, and all after him, was as likely to be infested by robbers in earlier times as in those of Jerome and at the present day. Indeed, the character of the road was so notorious, that Christ lays the scene of the parable of the good Samaritan (Luke x.) upon it; and Jerome informs us that Adummim or Adommim was believed to be the place where the traveller (taken as a real person) 'fell among thieves.' He adds that a fort and garrison was maintained here for the safeguard of travellers (Jerome, *in Loc. Heb.* Addomim, et *in Epit. Paulæ*). The travellers of the sixteenth and seventeenth centuries noticed the ruins of a castle, and supposed it the same as that mentioned by Jerome (*Zuallart.* iv. 30); but the judicious Nau (*Voyage Nouveau de la Terre-Sainte*, p. 349) perceived that this castle belonged to the time of the Crusades. Not far from this spot was a khan, called the 'Samaritan's khan' (*le Khan du Samaritain*), in the belief that it was the 'inn' to which the Samaritan brought the wounded traveller. The travellers of the present century mention the spot and neighbourhood nearly in the same terms as those of older date; and describe the ruins as those of '*a convent* and a khan' (Hardy, 193). They all represent the road as still infested by robbers, from whom some of them (as Sir F. Henniker) have not escaped without danger. The place thus indicated is about eight miles from Jerusalem, and four from Jericho.

ADVOCATE (Παράκλητος), one who pleads the cause of another; also one who exhorts, defends, comforts, prays for another. It is an appellation given to the Holy Spirit by Christ (John xiv. 16; xv. 26; xvi. 7), and to Christ himself by an apostle (1 John ii. 1; see also Rom. viii. 34; Heb. vii. 25).

In the forensic sense, advocates or pleaders were not known to the Jews until they came under the dominion of the Romans, and were obliged to transact their law affairs after the Roman manner. Being then little conversant with the Roman laws, and with the forms of the jurists, it was necessary for them, in pleading a cause before the Roman magistrates, to obtain the assistance of a Roman lawyer or *advocate*, who was well versed in the Greek and Latin languages (Otti *Spicil. Crim.* p. 325). In all the Roman provinces such men were found, who devoted their time and labour to the pleading of causes and the transacting of other legal business in the provincial courts (Lamprid. *Vit. Alex. Sev.* c. 44). It also appears (Cic. *pro Cælio*, c. 30) that many Roman youths who had devoted themselves to forensic business used to repair to the provinces with the consuls and prætors, in order, by managing the causes of the provincials, to fit themselves for more important ones at Rome. Such an advocate was Tertullus, whom the Jews employed to accuse Paul before Felix (Acts xxiv. 1); for although Ῥήτωρ, the term applied to him, signifies primarily an *orator* or *speaker*, yet it also denotes a pleader or advocate (Kuinoel, *Comment.* and Bloomfield, *Recens. Synopt.* ad Act. xxiv. 2) [Accuser].

ADYTUM, that which is inaccessible or impenetrable; and hence considered as descriptive of the holy of holies in the temple of Jerusalem, and of the innermost chambers, or penetralia, of other edifices accounted sacred, and of the secret places to which the priests only were admitted. It is used metaphorically by ecclesiastical writers, and employed to signify the heart and conscience of a man, and sometimes the deep, spiritual meaning of the Divine word.—H. S.

ÆGYPT. [Egypt.]

ÆLIA CAPITOLINA. [Jerusalem.]

ÆNON (Αἰνών, from עֵינָן, *fountain;* Buxt. *Lex. Ch. Rab. Talm.* 1601), the name of a place near Salem, where John baptized (John iii. 23); the reason given, 'because there was much water there,' would suggest that he baptized at the springs from which the place took its name. On the situation of Ænon nothing certain has been determined, although Eusebius places it eight Roman miles south of Scythopolis (Bethshan), and fifty-three north-east of Jesusalem.

ÆRA. [Chronology.]

ÆTHIOPIA. [Ethiopia.]

AFFINITY is relationship by marriage, as distinguished from *consanguinity*, which is relationship by blood. Marriages between persons thus related, in various degrees, which previous usage, in different conditions of society, had allowed, were forbidden by the law of Moses. These degrees are enumerated in Lev. xviii. 7, *sq.* The examples before the law are those of Cain and Abel, who, as the necessity of the case required, married their own sisters. Abraham married Sarah, the daughter of his father by another wife: and Jacob married the two sisters Leah and Rachel. In the first instance, and even in the second, there was an obvious consanguinity, and only the last offered a previous relationship of affinity merely. So also, in the prohibition of the law, a consanguinity can be traced in what are usually set down as degrees of affinity merely. The degrees of real affinity interdicted are, that a man shall not (nor a woman in the corresponding relations) marry—1. his father's widow (not his own mother); 2. the daughter of his father's wife by another husband; 3. the widow of his paternal uncle; 4. nor his brother's widow if he has left children by her; but, if not, he was bound to marry her to raise up children to his deceased brother [LEVIRATE LAW]. The other restrictions are connected with the condition of polygamy, and they prohibit a man from having —1. a mother and her daughter for wives at the same time; 2. or two sisters for wives at the same time. These prohibitions, although founded in Oriental notions, adapted to a *particular* condition of society, and connected with the peculiarities of the Levitical marriage law, have been imported wholesale into our canon law. The fitness of this is doubted by many: but as, apart from any moral questions, the prohibited marriages are such as few would, in the present condition of European society, desire to contract, and such as would be deemed repugnant to good taste and correct manners, there is little real matter of regret in this adoption of the Levitical law. Indeed, the objections to this adoption have rested chiefly upon one point; and that happens to be a point in which the law itself happens to have been egregiously misunderstood. This is in the injunction which, under permitted polygamy, forbade a man to have two sisters at once; an injunction which has been construed, under the Christian law, which allows but one wife, to apply equally to the case of a man marrying the sister of a deceased wife. The law itself, however, is so plain, that it is difficult to conceive how its true object—concerning which nearly all commentators are agreed—could have been thus interpreted. It is rendered in our version, 'Neither shalt thou take a wife to her sister, to vex her, to uncover her nakedness, *beside the other in her lifetime.*' Clear as this seems, it is still clearer if, with Gesenius and others, we take the word צרר, rendered *to vex*, to mean *to rival*, as in the Sept., Arabic, and Vulgate. The Targum of Jonathan, the Mishna, and the celebrated Jewish commentators Jarchi and Ben Gerson, are satisfied that *two sisters at once* are intended; and there seems an obvious design to prevent the occurrence of such unseemly jealousies and contentions between sister-wives as embittered the life of Jacob —the father of the twelve tribes. The more recondite sense has been extracted, with rather ungentle violence to the principles of Hebrew construction, by making 'vex her' the antecedent of 'in her lifetime,' instead of 'take her sister to her, in her lifetime.' Under this view it is explained, that the married sister should not be 'vexed' in her lifetime by the prospect that her sister might succeed her. It may be safely said that such an idea would never have occurred in the East, where unmarried sisters are far more rarely than in Europe brought into such acquaintance with the husband of the married sister as to give occasion for such 'vexation' or 'rivalry' as this. Yet, this view of the matter, which is completely exploded among sound biblical critics, has received the sanction of several Christian Councils (*Concil. Illiber.* can. 61; *Aurat.* can. 17; *Auxer.* can. 30); and is perhaps not calculated to do much harm, except under peculiar circumstances, and except as it may prove a snare to some sincere but weak consciences. It may be remarked, that in those codes of law which most resemble that of Moses on the general subject, no prohibition of the marriage of two sisters *in succession* can be found.

AFFIRMATIVES. Among the Jews the formula of assent or affirmation was כֵּן דִּבַּרְתָּ, *σὺ εἶπας, thou hast said*, or, *thou hast rightly said.* It is stated by Arvda and others that this is the prevailing mode in which a person expresses his assent, at this day, in Lebanon, especially when he does not wish to assert anything in express terms. This explains the answer of our Saviour to the high-priest Caiaphas (Matt. xxvi. 64), when he was asked whether he was the Christ, the son of God, and replied *σὺ εἶπας* (see also Matt. xxvi. 25). Instances occur in the Talmud: thus, 'A certain man was asked, "Is Rabbi dead?" He answered, "Ye have said:" on which they rent their clothes'—taking it for granted from this answer that it was so (*T. Hieros. Kilaim*, xxxii. 2). All readers even of translations are familiar with a frequent elegancy of the Scriptures, or rather of the Hebrew language, in using an affirmative and negative together, by which the sense is rendered more emphatic: sometimes the negative first, as Ps. cxviii. 17, 'I shall not die, but live,' &c.; sometimes the negative first, as Isa. xxxviii. 1, 'Thou shalt die, and not live.' In John i. 20, there is a remarkable instance of emphasis produced by a negative being placed between two affirmatives—*καὶ ὡμολόγησε, καὶ οὐκ ἠρνήσατο, καὶ ὡμολόγησεν*—'And he confessed, and denied not, but confessed, I am not the Christ.'

AFRICA. This 'quarter of the world' is not mentioned as such by any general name in Scripture, although some of its regions are indicated. It is thought by some, however, that Africa, or as much of it as was then known, is denoted by 'the land of Ham' in several of the Psalms. But we are inclined to think that the context rather restricts this designation to Egypt. Whether Africa was really 'the land of Ham,' that is, was peopled by the descendants of Ham, is quite another question [HAM].

AGABUS (Ἄγαβος; either from the Hebrew חָגָב, *a locust*, or עָגַב, *to love*), the name of 'a prophet,' supposed to have been one of the seventy disciples of Christ. He, with others, came from Judæa to Antioch, while Paul and

Barnabas (A.D. 43) were there, and announced an approaching famine, which actually occurred the following year. Some writers suppose that the famine was general; but most modern commentators unite in understanding that the large terms of the original, Ὅλην τὴν οἰκουμένην, apply not *to the whole world*, nor even to the whole Roman empire, but, as in Luke ii. 1, to Judæa only. Statements respecting four famines, which occurred in the reign of Claudius, are produced by the commentators who support this view; and as all the countries put together would not make up a tenth part of even the Roman empire, they think it plain that the words must be understood to apply to that famine which, in the fourth year of Claudius, overspread Palestine. The poor Jews, *in general*, were then relieved by the Queen of Adiabene, who sent to purchase corn in Egypt for them (Joseph. *Antiq.* xx. 2, 6); and for the relief of the Christians in that country contributions were raised by the brethren at Antioch, and conveyed to Jerusalem by Paul and Barnabas (Acts xi. 27-30). Many years after, this same Agabus met Paul at Cæsarea, and warned him of the sufferings which awaited him if he prosecuted his journey to Jerusalem.

AGAG (אֲגַג; Sept. Ἀγάγ), the name of two kings of the Amalekites, and perhaps a common name of all their kings, like Pharaoh in Egypt (comp. Num. xxiv. 7; 1 Sam. xv. 8, 9, 20, 32). The first of these passages would imply that the king of the Amalekites was, then at least, a greater monarch, and his people a greater people, than is commonly imagined [AMALEKITES]. The latter references are to that king of the Amalekites who was spared by Saul, contrary to the solemn vow of devotement to destruction, whereby the nation, as such, had of old precluded itself from giving any quarter to that people (Exod. xvii. 11; Num. xiv. 45). Hence, when Samuel arrived in the camp of Saul, he ordered Agag to be brought forth. He came 'pleasantly,' deeming secure the life which the king had spared. But the prophet ordered him to be cut in pieces; and the expression which he employed—'As thy sword hath made women childless, so shall thy mother be childless among women'—indicates that, apart from the obligations of the vow, some such example of retributive justice was intended, as had been exercised in the case of Adonibezek; or, in other words, that Agag had made himself infamous by the same treatment of some prisoners of distinction (probably Israelites) as he now received from Samuel. The unusual mode in which his death was inflicted strongly supports this conclusion.

AGAGITE, used as a Gentile name for Amalekite in Est. iii. 1, 10; viii. 3, 5.

AGAPE, AGAPÆ (ἀγάπη, ἀγάπαι), the Greek term for *love*, used by ecclesiastical writers (most frequently in the plural) to signify the social meal of the primitive Christians, which generally accompanied the Eucharist. Much learned research has been spent in tracing the origin of this custom; but though considerable obscurity may rest on the details, the general historical connection is tolerably obvious. It is true that the ἔρανοι and ἑταιρίαι, and other similar institutions of Greece and Rome, presented some points of resemblance which facilitated both the adoption and the abuse of the Agapæ by the Gentile converts of Christianity; but we cannot consider them as the direct models of the latter. If we reflect on the profound impression which the transactions of 'the night on which the Lord was betrayed' (1 Cor. xi. 23) must have made on the minds of the apostles, nothing can be conceived more natural, or in closer accordance with the genius of the new dispensation, than a wish to perpetuate the commemoration of his death in connection with their social meal (Neander, *Leben Jesu*, p. 643; *History of the Planting, &c. of the Christian Church*, vol. i. 27, Edinb. 1842). The primary celebration of the Eucharist had impressed a sacredness on the previous repast (comp. ἐσθιόντων αὐτῶν, Matt. xxvi. 26; Mark xiv. 22, with μετὰ τὸ δειπνῆσαι, Luke xxii. 20; 1 Cor. xi. 25); and when to this consideration we add the ardent faith and love of the new converts on the one hand, and the loss of property with the disruption of old connections and attachments on the other, which must have heightened the feeling of brotherhood, we need not look further to account for the institution of the Agapæ, at once a symbol of Christian love and a striking exemplification of its benevolent energy. However soon its purity was soiled, at first it was not undeserving of the eulogy pronounced by the great orator of the church—ἔθος κάλλιστον καὶ χρησιμώτατον· καὶ γὰρ ἀγάπης ὑπόθεσις ἦν, καὶ πενίας παραμυθία, καὶ πλούτου σωφρονισμός, καὶ ταπεινοφροσύνης διδασκαλία. 'A custom most beautiful and most beneficial; for it was a supporter of love, a solace of poverty, a moderator of wealth, and a discipline of humility!'

Thus the common meal and the Eucharist formed together one whole, and were conjointly denominated δεῖπνον τοῦ κυρίου, δεῖπνον κυριακόν, and ἀγάπη. They were also signified (according to Mosheim, Neander, and other eminent critics) by the phrases κλῶντες ἄρτον (Acts ii. 46), κλάσις τοῦ ἄρτου (Acts ii. 42), κλάσαι ἄρτον (Acts xx. 7). We find the term ἀγάπαι thus applied once, at least, in the New Testament (Jude 12), 'These are spots in your feasts of charity' (ἐν ταῖς ἀγάπαις ὑμῶν). The reading in 2 Pet. ii. 13, is of doubtful authority: 'Spots and blemishes, living luxuriously in their Agapæ' (ἐντρυφῶντες ἐν ταῖς ἀγάπαις αὐτῶν); but the common reading is, ἐν ταῖς ἀπάταις αὐτῶν, 'in their own deceivings.' The phrase ἀγάπην ποιεῖν was early employed in the sense of celebrating the Eucharist; thus in the epistle of Ignatius to the church at Smyrna (ἐκκλησίᾳ τῇ οὔσῃ ἐν Σμύρνῃ), § viii. οὐκ ἐξόν ἐστιν χωρὶς τοῦ ἐπισκόπου, οὔτε βαπτίζειν, οὔτε ἀγάπην ποιεῖν. In § vii. ἀγαπᾷν appears to refer more especially to the Agapæ.

By ecclesiastical writers several synonymes are used for the Agapæ, such as συμπόσια (Balsamon, ad *Can.* xxvii. *Concil. Laodicen.*); κοιναὶ τράπεζαι, εὐωχία, κοιναὶ ἑστιάσεις, κοινὰ συμπόσια (Chrysostom); δεῖπνα κοινά (Œcumenius); συσσιτία καὶ συμπόσια (Zonaras).

Though the Agapæ usually preceded the Eucharist, yet they are not alluded to in Justin Martyr's description of the latter (*Apol.* i. § 65, 67); while Tertullian, on the contrary, in his account of the Agapæ, makes no distinct mention of the Eucharist. 'The nature of our *Cœna*,' he says, 'may be gathered from its name, which is the Greek term for love (*dilectio*). However much it may cost us, it is real gain to incur such expense

in the cause of piety: for we aid the poor by this refreshment; we do not sit down to it till we have first tasted of prayer to God (*non prius discumbitur, quam oratio ad Deum prægustetur*); we eat to satisfy our hunger; we drink no more than befits the temperate; we feast as those who recollect that they are to spend the night in devotion; we converse as those who know that the Lord is an ear-witness. After water for washing hands, and lights have been brought in, every one is required to sing something to the praise of God, either from the Scriptures or from his own thoughts; by this means, if any one has indulged in excess, he is detected. The feast is closed with prayer.' Contributions or oblations of provisions and money were made on these occasions, and the surplus was placed in the hands of the presiding elder (ὁ προεστὼς—compare 1 Tim. v. 17, οἱ προεστῶτες πρεσβύτεροι), by whom it was applied to the relief of orphans and widows, the sick and destitute, prisoners and strangers (Justin. *Apol.* i. 67).

Allusions to the κυριακὸν δεῖπνον are to be met with in heathen writers. Thus Pliny, in his celebrated epistle to the emperor Trajan, after describing the meeting of the Christians for worship, represents them as assembling again at a later hour, '*ad capiendum cibum, promiscuum tamen et innoxium.*' By the phrase '*cibum promiscuum*' (Augustine remarks) we are not to understand merely food partaken in common with others, but common food, such as is usually eaten; the term *innoxium* also intimates that it was perfectly wholesome and lawful, not consisting, for example, of human flesh (for, among other odious imputations, that of cannibalism had been cast upon the Christians; which, to prejudiced minds, might derive some apparent support from a misinterpretation of our Lord's language in John vi. 53, 'Unless ye eat the flesh and drink the blood of the Son of man'), nor of herbs prepared with incantations and magical rites. Lucian also, in his account of the philosopher Peregrinus, tells us that when imprisoned on the charge of being a Christian, he was visited by his brethren in the faith, who brought with them δεῖπνα ποικίλα, which is generally understood to mean the provisions which were reserved for the absent members of the church at the celebration of the Lord's Supper. Gesner remarks, on this expression, '*Agapas, afferente unoquoque aliquid, quod una consumerent; hinc ποικίλα; non à luxu.*'

From the passages in the Epistles of Jude and Peter, already quoted, and more particularly from the language of Paul in 1 Cor. xi., it appears that at a very early period the Agapæ were perverted from their original design: the rich frequently practised a selfish indulgence, to the neglect of their poorer brethren: ἕκαστος τὸ ἴδιον δεῖπνον προλαμβάνει (1 Cor. xi. 21); *i.e.* the rich feasted on the provisions they brought, without waiting for the poorer members, or granting them a portion of their abundance. They appear to have imitated the Grecian mode of entertainment called δεῖπνον ἀπὸ σπυρίδος (see Xenophon's *Memorabilia*, iii. 14; Neander's *History of the Planting of the Christian Church*, vol. i. (English transl.), p. 292).

On account of these and similar irregularities, and probably in part to elude the notice of their persecutors, the Christians, about the middle of the second century, frequently celebrated the Eucharist by itself and before daybreak (*antelucanis cœtibus*) (Tertullian, *De Cor. Militis*, § 3). From Pliny's *Epistle* it also appears that the Agapæ were suspected by the Roman authorities of belonging to the class of Hetæriæ (ἑταιρίαι), unions or secret societies, which were often employed for political purposes, and as such denounced by the imperial edicts; for he says (referring to the '*cibum promiscuum*,' &c.) '*quod ipsum facere desiisse post edictum meum, quo secundum mandata tua Hetærias esse vetueram*' (Plin. *Ep.* 96, al. 97).

At a still later period the Agapæ were subjected to strict regulation by various councils. Thus by the 28th canon of the Council of Laodicea it was forbidden to hold them in churches: ὅτι οὐ δεῖ ἐν τοῖς κυριακοῖς ἢ ἐν ταῖς ἐκκλησίαις τὰς λεγομένας ἀγάπας ποιεῖν, καὶ ἐν τῷ οἴκῳ τοῦ Θεοῦ ἐσθίειν καὶ ἀκούβιτα (*accubitus*) στρωννύειν. At the Council of Carthage (A.D. 397) it was ordered (Can. 29) that none should partake of the Eucharist unless they had previously abstained from food: '*Ut sacramenta altaris nonnisi à jejunis hominibus celebrentur;*' but it is added, '*excepto uno die anniversario, quo cœna domini celebratur.*' This exception favours the supposition that the Agapæ were originally held in close imitation of the Last Supper, *i.e.* before, instead of after, the Eucharist. The same prohibition was repeated in the sixth, seventh, and ninth centuries, at the Council of Orleans (Can. 12), A.D. 533; in the Trullanian Council at Constantinople, A.D. 692; and in the council held at Aix-la-Chapelle, A.D. 816. Yet these regulations were not intended to set aside the Agapæ altogether. In the Council of Gangra in Paphlagonia (about A.D. 360) a curse was denounced (ἀνάθεμα ἔστω) on whoever despised the partakers of the Agapæ or refused to join in them. When Christianity was introduced among the Anglo-Saxons by Austin (A.D. 596), Gregory the Great advised the celebration of the Agapæ, in booths formed of the branches of trees, at the consecration of churches.

Besides the Eucharistic Agapæ, three other kinds are mentioned by ecclesiastical writers: 1. *Agapæ natalitiæ*, held in commemoration of the martyrs (Theodoret, *Evang. Verit.* viii. pp. 923-924, edit. Schulz); 2. *Agapæ connubiales*, or marriage-feasts (Greg. Naz. *Epist.* i. 14); 3. *Agapæ funerales*, funeral feasts (Greg. Naz. *Carm.* X.), probably similar to the περίδειπνον or νεκρόδειπνον of the Greeks.

In modern times social meetings bearing a resemblance to the Agapæ, and, in allusion to them, termed Love-feasts, have been regularly held by the Church of the United Brethren, or Moravians, and the Wesleyan Methodists; also in Scotland, by the followers of Mr. Robert Sandeman.

AGATE (שְׁבוֹ; Sept. ἀχάτης; Vulg. *achates*), a precious or rather ornamental stone, which was one of those in the pectoral of the high-priest (Exod. xxviii. 19; xxxix. 12). The word *agate*, indeed, occurs also in Isa. liv. 12, and Ezek. xxvii. 6, in our translation; but in the original the word in these texts is altogether different, being כדכד [KADKOD]. It seems not to have been questioned that some stone of the agate kind is intended. This stone is popularly known in this country under the name of Scotch pebble. Theophrastus describes the agate as 'an elegant stone, which took its name from the river Achates (now the Drillo in the Val di Noto) in Sicily, and was sold at a great price' (καλὸς καὶ λίθος καὶ ὁ Ἀχάτης ὁ ἀπὸ τοῦ Ἀχάτου ποταμοῦ τοῦ ἐν Σικελίᾳ καὶ πωλεῖται τίμιος, 58). This, no doubt, means that the stone was first found by the Greeks in the Achates. But it must have been known long before in the East; and, in fact, there are few countries in which agates of some quality or other are not produced. The finest are those of India; they are plentiful, and sometimes fine, in Italy, Spain, and Germany; but those found in this country are seldom good.

We have no evidence that agates were found in Palestine. Those used in the desert were doubtless brought from Egypt. Pliny says that those found in the neighbourhood of Thebes were usually red, veined with white. He adds that these, as well as most other agates, were deemed to be effectual against scorpions; and gives some curious accounts of the pictorial delineations which the variegations of agates occasionally assumed. Many such instances are produced by later authors. Agate is one of the numerous modifications of form under which silica presents itself, almost in a state of purity, forming 98 per cent. of the entire mineral. The siliceous particles are not so arranged as to produce the transparency of rock crystal, but a semi-pellucid, sometimes almost opaque substance, with a resinous or waxy fracture; and the various shades of colour arise from minute quantities of iron. The same stone sometimes contains parts of different degrees of translucency, and of various shades of colour; and the endless combinations of these produce the beautiful and singular internal forms, from which, together with the high polish they are capable of receiving, agates acquire their value as precious stones. Agates are usually found in detached rounded nodules in that variety of the trap rocks called amygdaloid or mandelstein, and occasionally in other rocks. Some of the most marvellous specimens on record were probably merely fancied, and possibly some were the work of art, as it is known that agates may be artificially stained. From Pliny we learn that in his time agates were less valued than they had been in more ancient times (*Hist. Nat.* xxxvii. 10). The varieties of the agate are numerous, and are now, as in the time of Pliny, arranged according to the colour of their ground. The Scripture text shows the early use of this stone for engraving; and several antique agates, engraved with exquisite beauty, are still preserved in the cabinets of the curious.

AGE. [CHRONOLOGY; ETERNITY; GENERATION; LONGEVITY.]

AGE, OLD. The strong desire of a protracted life, and the marked respect with which aged persons were treated among the Jews, are very often indicated in the Scriptures. The most striking instance which Job can give of the respect in which he was once held, is that *even* old men stood up as he passed them in the streets (Job xxix. 8), the force of which is illustrated by the injunction in the law, 'Before the hoary head thou shalt stand up, and shalt reverence the aged' (Lev. xix. 30). Similar injunctions are repeated in the Apocrypha, so as to show the deportment expected from young men towards their seniors in company. Thus, in describing a feast, the author of Ecclesiasticus (xxxii. 3, 7) says, 'Speak thou that art the elder, for it becometh thee. Speak, young man, if there be need of thee, and yet scarcely, when thou art twice asked.'

The attainment of old age is constantly promised or described as a blessing (Gen. xv. 15; Job v. 26), and communities are represented as highly favoured in which old people abound (Isa. lxv. 20; Zech. viii. 4, 9), while premature death is denounced as the greatest of calamities to individuals, and to the families to which they belong (1 Sam. ii. 32); the aged are constantly supposed to excel in understanding and judgment (Job xii. 20; xv. 10; xxxii. 9; 1 Kings xii. 6, 8), and the mercilessness of the Chaldeans is expressed by their having 'no compassion' upon the 'old man, or him who stooped for age' (2 Chron. xxxvi. 17).

The strong desire to attain old age was necessarily in some degree connected with or resembled the respect paid to aged persons; for people would scarcely desire to be old, were the aged neglected or regarded with mere sufferance.

Michaelis, carrying out a hint of Montesquieu, fancies that veneration for old age is 'peculiarly suitable to a democracy,' and, consequently, 'to the republican circumstances of the Israelites.' He adds, 'In a monarchy or aristocracy, it is birth and office alone which give rank. The more pure a democracy is, the more are all on an equal footing; and those invested with authority are obliged to bear that equality in mind. Here great actions confer respect and honour; and the right discharge of official duties, or the arrival of old age, are the only sources of rank. For how else can rank be established among those who have no official situation, and are by birth perfectly equal' (*Mos. Recht.*, art. cxl.). This is ingenious, and partly true. It would perhaps be wholly so, if, instead of connecting it with 'republican circumstances,' the respect for age were rather regarded in connection with a certain state of society, short of high civilization, in which the sources of distinction, from whatever causes, are so limited, that room is left for the natural condition of age itself to be made a source of distinction. Of all marks of respect that to age is most willingly paid; because every one who does homage to age, may himself, evntually, become an object of such homage. We almost invariably observe that where civilization advances, and where, in consequence, the claims to respect are multiplied, the respect for old age in itself, diminishes; and, like other conditions, it is estimated by the positive qualities which it exhibits. In the East, at present, this respect is manifested *under every* form of government. In the United States the aged are certainly not treated with *more* consideration than under the monarchical and

aristocratical governments of Europe. Professor C. Stowe (in *Am. Bib. Repos.*), who had unusual means of comparison, says they are there treated with *less;* and this seems to prove satisfactorily, that it is rather the condition of civilization than the condition of government, which produces the greater or less respect for age.

Attention to age was very general in ancient times; and is still observed in all such conditions of society as those through which the Israelites passed. Among the Egyptians, the young men rose before the aged, and always yielded to them the first place (Herod. ii. 80). The youth of Sparta did the same, and were silent—or, as the Hebrews would say, laid their hand upon their mouth—whenever their elders spoke. At Athens, and in other Greek states, old men were treated with corresponding respect. In China deference for the aged, and the honours and distinctions awarded to them, form a capital point in the government (*Mém. sur les Chinois*, vol. i. p. 450); and among the Moslems of Western Asia, whose usages offer so many analogies to those of the Hebrews, the same regard for seniority is strongly shown. Among the Arabs, it is very seldom that a youth can be permitted to eat with men (Lane, *Arabian Nights*, c. xi. note 26). With the Turks, age, even between brothers, is the object of marked deference (Urquhart, *Spirit of the East*, ii. 471).

In all such instances, which might be accumulated without number, we see the respect for age providentially implanted the most strongly in those states of social existence in which some such sentiment is necessary to secure for men of decayed physical powers, that safety and exemption from neglect, which are ensured to them in higher conditions of civilization by the general rather than the particular and exemptive operation of law and softened manners.

AGMON (אַגְמוֹן) occurs in Job xl. 21; xli. 2; Isa. ix. 14; xix. 15; lviii. 5; in the first of which passages it is translated in our authorized version by *flag;* in the second by *hook;* in the two next by *rush;* and in the last by *bulrush.* As no plant is known under this name in the Hebrew or cognate languages, its nature has been sought for by tracing the word to its root, and by judging of its nature from the context. Thus אגם *agom* is said to mean a lake or pool of water, also a reed; and in Arabic اجام, pronounced *ijam*, is translated reed-bed, cane-bed. *Agom* is also considered to be derived from the same root as גמא *goma*, the papyrus. Some have even concluded that both names indicate the same thing, and have translated them by *juncus*, or rush.

Celsius is of opinion that in all the above passages *agmon* should be translated by *arundo*, or reed. Dr. Harris (art. 'Reed') has suggested that in Job xli. 2, instead of 'Canst thou put an *hook* into his nose,' we should read 'Canst thou tie up his mouth with a *rush rope*,' as had previously been suggested by others (Celsius, *Hiero-Bot.* vol. i. 467); and that in ver. 20 we should read 'out of his nostrils goeth smoke, *and the rushes are kindled before it*,' instead of 'as out of a seething pot or caldron,' as in the authorized version.

Lobo, in his *Voyage d'Abyssinie*, speaking of the Red Sea, says, 'Nous ne l'avons pas jamais vue rouge, que dans les lieux ou il y a beaucoup de Gouemon.' 'Il y a beaucoup de cette herbe dans la Mer rouge.' What this herb is does not elsewhere appear. Forskal applies the name of *ghobeibe* to a species of arundo, which he considered closely allied to *A. phragmites*, the plant which Celsius conceived to be the *agmon* of Scripture. M. Bové, in his *Voyage Botanique en Egypte*, observed, especially on the borders of the Nile, quantities of *Saccharum ægyptiacum* and of *Arundo ægyptiaca*, which is, perhaps, only a variety of *A. donax*, the cultivated Spanish or Cyprus reed, or, as it is usually called in the south of Europe, Canna and Cana. In the neighbourhood of Cairo he found *Poa cynosuroides* (the koosha, or cusa, or sacred grass of the Hindoos), which, he says, serves 'aux habitans pour faire des cordes, chauffer leurs fours, et cuire des briques et poteries. Le *Saccharum cylindricum* est employé aux mêmes usages.' The Egyptian species of arundo is probably the *A. isiaca* of Delile, which is closely allied to *A. phragmites*, and its uses may be supposed to be very similar to those of the latter. This species is often raised to the rank of a genus under the name of phragmites, so named from being employed for making partitions, &c. It is about six feet high, with annual stems, and is abundant about the banks of pools and rivers, and in marshes. The panicle of flowers is very large, much subdivided, a little drooping and waving in the wind. The plant is used for thatching, making screens, garden fences, &c.; when split it is made into string, mats, and matches. It is the *gemeine rohr* of the Germans, and the *Canna* or *Cana palustre* of the Italians and Spaniards.

Any of the species of reed here enumerated will suit the different passages in which the word *agmon* occurs; but several species of saccharum, growing to a great size in moist situations, and reed-like in appearance, will also fulfil all the conditions required, as affording shelter for the behemoth or hippopotamus, being convertible into ropes, forming a contrast with their hollow stems to the solidity and strength of the branches of trees, and when dry easily set on fire: and when in flower their light and feathery inflorescence may be bent down by the slightest wind that blows.—J. F. R.

AGONY (Ἀγωνία), a word generally denoting *contest*, and especially the contests by wrestling, &c. in the public games; whence it is applied metaphorically to a severe *struggle* or *conflict* with pain and suffering. *Agony* is the actual struggle with present evil, and is thus distinguished from *anguish*, which arises from the reflection on evil that is past. In the New Testament the word is only used by Luke (xx. 44), and is employed by him with terrible significance to describe the fearful struggle which our Lord sustained in the garden of Gethsemane. The circumstances of this mysterious transaction are recorded in Matt. xxvi. 36-46; Mark xiv. 32-42; Luke xx. 39-48; Heb. v. 7, 8. None of these passages, taken separately, contains a full history of our Saviour's agony. Each of the three Evangelists has omitted some particulars which the others have recorded, and all are very brief. The passage in Hebrews is only an incidental notice. The three Evangelists appear to have had the

same design, namely, to convey to their readers an idea of the intensity of the Lord's distress; but they compass it in different ways. Luke alone notices the agony, the bloody sweat, and the appearance of an angel from heaven strengthening him. Matthew and Mark alone record the change which appeared in his countenance and manner, the complaint which he uttered of the overpowering sorrows of his soul, and his repetition of the same prayer. All agree that he prayed for the removal of what he called 'this cup,' and are careful to note that he qualified this earnest petition by a preference of his Father's will to his own.

All the circumstances of this wonderful mental conflict have been minutely and ably examined by Dr. Lewis Mayer, of New York, in the *Am. Bib. Repository* for April, 1841. We are necessitated to confine our attention to the most essential points, the cause and nature of this agony.

Jesus himself intimates the cause of his overwhelming distress in the prayer, 'If it be possible, *let this cup pass from me;*' the cup which his Father had appointed for him; and the question is, what does he mean by 'this cup.' Doddridge and others think that he means the instant agony, the trouble that he then actually endured. But this is solidly answered by Dr. Mayer, who shows, by reference to John xviii. 18, that the cup respecting which he prayed was one that was then before him, which he had not yet taken up to drink, and which he desired, if possible, that the Father should remove. It could, therefore, be no other than the scene of suffering upon which he was about to enter. It was the death which the Father had appointed for him—the death of the cross – with all the attending circumstances which aggravated its horror; that scene of woe which began with his arrest in the garden, and was consummated by his death on Calvary. Jesus had long been familiar with this prospect, and had looked to it as the appointed termination of his ministry (Matt. xvi. 21; xvii. 9-12; xx. 17, 19, 28; Mark x. 32-34; John x. 18; xii. 32, 33). But when he looked forward to this destination, as the hour approached, a chill of horror sometimes came over him, and found expression in external signs of distress (John xii. 27; comp. Luke xii. 49, 50). But on no occasion did he exhibit any very striking evidence of perplexity or anguish. He was usually calm and collected, and if at any time he gave utterance to feelings of distress and horror, he still preserved his self-possession, and quickly checked the desire which nature put forth to be spared so dreadful a death. It is, therefore, hardly to be supposed that the near approach of his sufferings, awful as they were, apart from everything else, could alone have wrought so great a change in the mind of Jesus and in his whole demeanour, as soon as he had entered the garden. It is manifest that something more than the cross was now before him, and that he was now placed in a new and hitherto untried situation. Dr. Mayer says: 'I have no hesitation in believing that he was here put upon the trial of his obedience. It was the purpose of God to subject the obedience of Jesus to a severe ordeal, in order that, like gold tried in the furnace, it might be an act of more perfect and illustrious virtue; and for this end he permitted him to be assailed by the fiercest temptation to disobey his will and to refuse the appointed cup. In pursuance of this purpose, the mind of Jesus was left to pass under a dark cloud, his views lost their clearness, the Father's will was shrouded in obscurity, the cross appeared in ten-fold horror, and nature was left to indulge her feelings, and to put forth her reluctance.'

Dr. Mayer admits that the sacred writers have not explained what that was, connected in the mind of Jesus with the death of the cross, which at this time excited in him so distressing a fear. 'Pious and holy men have looked calmly upon death in its most terrific forms. But the pious and holy man has not had a world's salvation laid upon him; he has not been required to be absolutely perfect before God; he has known that, if he sinned, there was an advocate and a ransom for him. But nothing of this consolation could be presented to the mind of Jesus. He knew that he must die, as he had lived, without sin; but if the extremity of suffering should so far prevail as to provoke him into impatience or murmuring, or into a desire for revenge, this would be sin; and if he sinned, all would be lost, for there was no other Saviour. In such considerations may probably be found the remote source of the agonies and fears which deepened the gloom of that dreadful night.' Under another head [Bloody Sweat] will be found the considerations suggested by one of the remarkable circumstances of this event.

AGORA (Ἀγορά), a word of frequent occurrence in the New Testament: it denotes generally any place of public resort in towns and cities where the people came together; and hence more specially it signifies, 1. A public place, a broad street, &c., as in Matt. xi. 16; xx. 3; xxiii. 7; Mark vi. 56; xii. 38; Luke vii. 32; xi. 43; xx. 46. 2. A forum or market-place, where goods were exposed for sale, and assemblies or public trials held, as in Acts xvi. 19; xvii. 17. In Mark vii. 4, it is doubtful whether ἀγορὰ denotes the market itself, or is put for that which is brought from the market; but the known customs of the Jews suggest a preference of the former signification.

AGORAIOS (Ἀγοραῖος), a Greek word signifying the things belonging to, or persons frequenting, the *Agora*. In Acts xix. 38, it is applied to the days on which public trials were held in the forum; and in ch. xvii. 5, it denotes idlers, or persons lounging about in the markets and other places of public resort. There is a peculiar force in this application of the word, when we recollect that the market-places or bazaars of the East were, and are at this day, the constant resort of unoccupied people, the idle, and the newsmongers.

AGRAMMATOS (Ἀγράμματος), a Greek word meaning *unlearned, illiterate*. In Acts iv. 13, the Jewish literati apply the term to Peter and John, in the same sense in which they asked, with regard to our Lord himself, 'How knoweth this man letters, having never learned' (John vii. 15). In neither case did they mean to say that they had been altogether without the benefits of the common education, which consisted in reading and writing, and in an acquaintance with the sacred books; but that they were not learned men, had not sat at the feet of any of the great doctors of the law, and had not been

instructed in the mysteries and refinements of their peculiar learning and literature.

AGRARIAN LAW. To this, or some such heading, belongs the consideration of the peculiar laws by which the distribution and tenure of land were regulated among the Hebrews; while the modes in which the land was cultivated belong to AGRICULTURE.

It has been the custom to regard the Hebrews as a pastoral people until they were settled in Palestine. In a great degree they doubtless were so; and when they entered agricultural Egypt, the land of Goshen was assigned to them expressly because that locality was suited to their pastoral habits (Gen. xlvii. 4-6). These habits were substantially maintained; but it is certain that they became acquainted with the Egyptian processes of culture; and it is more than probable that they raised for themselves such products of the soil as they required for their own use. We may, indeed, collect that the portion of their territory which lay in the immediate vicinity of the Nile was placed by them under culture (Deut. xi. 10), while the interior, with the free pastures of the desert beyond their immediate territory, sufficed abundantly for their cattle (1 Chron. vii. 21). This partial attention to agriculture was in some degree a preparation for the condition of cultivators, into which they were destined eventually to pass. While the Israelites remained in a state of subjection in Egypt, the maintenance of their condition as shepherds was highly instrumental in keeping them distinct and separate from the Egyptians, who were agriculturists, and had a strong dislike to pastoral habits (Gen. xlvi. 34). But when they became an independent and sovereign nation, their separation from other nations was to be promoted by inducing them to devote their chief attention to the culture of the soil. A large number of the institutions given to them had this object of separation in view. Among these, those relating to agriculture—forming the agrarian law of the Hebrew people—were of the first importance. They might not alone have been sufficient to secure the end in view; but no others could have been effectual without them; for, without such attention to agriculture as would render them a self-subsisting nation, a greater degree of intercourse with the neighbouring and idolatrous nations must have been maintained than was consistent with the primary object of the Mosaical institutions. The commonest observation suffices to show how much less than others agricultural communities are open to external influences, and how much less disposed to cultivate intercourse with strangers.

It was, doubtless, in subservience to this object, and to facilitate the change, that the Israelites were put in possession of a country already in a state of high cultivation (Deut. vi. 11). And it was in order to retain them in this condition, to give them a vital interest in it, and to make it a source of happiness to them, that a very peculiar agrarian law was given to them. In stating this law, and in declaring it to have been in the highest degree wise and salutary, regard must be had to its peculiar object with reference to the segregation of the Hebrew people: for there are points in which this and other Mosaical laws were unsuited to general use, some by the very circumstances which adapted them so admirably to their special object. When the Israelites were numbered just before their entrance into the land of Canaan, and were found (exclusive of the Levites) to exceed 600,000 men, the Lord said to Moses: 'Unto these the land shall be divided for an inheritance, according to the number of names. To many thou shalt give the more inheritance, and to the few thou shalt give the less inheritance; to every one shall his inheritance be given according to those that were numbered of him. Notwithstanding the land shall be divided by lot: according to the names of the tribes of their fathers shall they inherit' (Num. xxvi. 33-54). This equal distribution of the soil was the basis of the agrarian law. By it provision was made for the support of 600,000 yeomanry, with (according to different calculations) from sixteen to twenty-five acres of land to each. This land they held independent of all temporal superiors, by direct tenure, from Jehovah their sovereign, by whose power they were to acquire the territory, and under whose protection they were to enjoy and retain it. 'The land shall not be sold for ever, for the land is mine, saith the Lord: ye are strangers and sojourners with me' (Lev. xxv. 23). Thus the basis of the constitution was an equal agrarian law. But this law was guarded by other provisions equally wise and salutary. The accumulation of debt was prevented, first, by prohibiting every Hebrew from accepting of interest from any of his fellow-citizens (Lev. xxv. 35, 36); next, by establishing a regular discharge of debts every seventh year; and, finally, by ordering that no lands could be alienated for ever, but must, on each year of Jubilee, or every seventh Sabbatic year, revert to the families which originally possessed them. Thus, without absolutely depriving individuals of all temporary dominion over their landed property, it re-established, every fiftieth year, that original and equal distribution of it, which was the foundation of the national polity; and as the period of this reversion was fixed and regular, all parties had due notice of the terms on which they negotiated; so that there was no ground for public commotion or private complaint.

This law, by which landed property was released in the year of Jubilee from all existing obligations, did not extend to houses in towns, which, if not redeemed within one year after being sold, were alienated for ever (Lev. xv. 29, 30). This must have given to property in the country a decided advantage over property in cities, and must have greatly contributed to the essential object of all these regulations, by affording an inducement to every Hebrew to reside on and cultivate his land. Further, the original distribution of the land was to the several tribes according to their families, so that each tribe was, so to speak, settled in the same county, and each family in the same barony or hundred. Nor was the estate of any family in one tribe permitted to pass into another, even by the marriage of an heiress (Num. xxvii.); so that not only was the original balance of property preserved, but the closest and dearest connections of affinity attached to each other the inhabitants of every vicinage.

It often happens that laws in appearance similar have in view entirely different objects. In Europe the entailment of estates in the direct line is designed to encourage the formation of large

properties. In Israel the effect was entirely different, as the entail extended to all the small estates into which the land was originally divided, so that they could not legally be united to form a large property, and then entailed upon the descendants of him by whom the property was formed. This division of the land in small estates among the people, who were to retain them in perpetuity, was eminently suited to the leading objects of the Hebrew institutions. It is allowed on all hands that such a condition of landed property is in the highest degree favourable to high cultivation, and to increase of population, while it is less favourable to pasturage. The two first were objects which the law had in view, and it did not intend to afford undue encouragement to the pastoral life, while the large pastures of the adjacent deserts and of the commons secured the country against such a scarcity of cattle as the division of the land into small heritages has already produced in France.

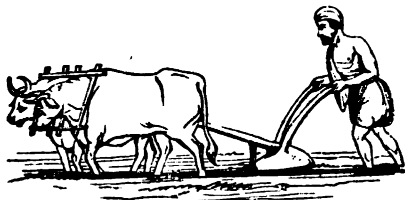
For this land a kind of quit-rent was payable to the sovereign proprietor, in the form of a tenth or tithe of the produce, which was assigned to the priesthood [TITHES]. The condition of military service was also attached to the land, as it appears that every freeholder (Deut. xx. 5) was obliged to attend at the general muster of the national army, and to serve in it, at his own expense (often more than repaid by the plunder), as long as the occasion required. In this direction, therefore, the agrarian law operated in securing a body of 600,000 men, inured to labour and industry, always assumed to be ready, as they were bound, to come forward at their country's call. This great body of national yeomanry, every one of whom had an important stake in the national independence, was officered by its own hereditary chiefs, heads of tribes and families (comp. Exod. xviii. and Num. xxxi. 14); and must have presented an insuperable obstacle to treacherous ambition and political intrigue, and to every attempt to overthrow the Hebrew commonwealth and establish despotic power. Nor were these institutions less wisely adapted to secure the state against foreign violence, and at the same time prevent offensive wars and remote conquests. For while this vast body of hardy yeomanry were always ready to defend their country, when assailed by foreign foes, yet, being constantly employed in agriculture, attached to domestic life, and enjoying at home the society of the numerous relatives who peopled their neighbourhood, war must have been in a high degree alien to their tastes and habits. Religion also took part in preventing them from being captivated by the splendour of military glory. On returning from battle, even if victorious, in order to bring them back to more peaceful feelings after the rage of war, the law required them to consider themselves as polluted by the slaughter, and unworthy of appearing in the camp of Jehovah until they had employed an entire day in the rites of purification (Num. xix. 13-16; xxxi. 19). Besides, the force was entirely infantry; the law forbidding even the kings to multiply horses in their train (Deut. xvii. 16); and this, with the ordinance requiring the attendance of all the males three times every year at Jerusalem, proved the intention of the legislator to confine the natives within the limits of the Promised Land, and rendered long and distant wars and conquests impossible without the virtual renunciation of that religion which was incorporated with their whole civil polity, and which was, in fact, the charter by which they held their property and enjoyed all their rights (Graves's *Lectures on the Pentateuch*, lect. iv.; Lowman's *Civil Gov. of the Heb.* c. iii. iv.; Michaelis, *Mos. Recht*, i. 240, sqq.).

AGRICULTURE. The antiquity of agriculture is indicated in the brief history of Cain and Abel, when it tells us that the former was a 'tiller of the ground,' and brought some of the fruits of his labour as an offering to God (Gen. iv. 2, 3), and that part of the ultimate curse upon him was: 'when thou tillest the ground, it shall not henceforth yield to thee her strength' (iv. 12). Of the actual state of agriculture before the deluge we know nothing. It must have been modified considerably by the conditions of soil and climate, which are supposed by many to have undergone some material alterations at the flood. Whatever knowledge was possessed by the old world was doubtless transmitted to the new by Noah and his sons; and that this knowledge was considerable is implied in the fact that one of the operations of Noah, when he 'began to be a husbandman,' was to plant a vineyard, and to make wine with the fruit (Gen. ix. 2). There are few agricultural notices belonging to the patriarchal period, but they suffice to show that the land of Canaan was in a state of cultivation, and that the inhabitants possessed what were at a later date the principal products of the soil in the same country. It is reasonable therefore to conclude that the modes of operation were then similar to those which we afterwards find among the Jews in the same country, and concerning which our information is more exact.

In giving to the Israelites possession of a country already under cultivation, it was the Divine intention that they should keep up that cultivation, and become themselves an agricultural people; and in doing this they doubtless adopted the practices of agriculture which they found already established in the country. This may have been the more necessary, as agriculture is a practical art; and those of the Hebrews who were acquainted with the practices of Egyptian husbandry had died in the wilderness; and even had they lived, the processes proper to a hot climate and alluvial soil, watered by river inundation, like that of Egypt, although the same in essential forms, could not have been altogether applicable to so different a country as Palestine.

As the nature of the seasons lies at the root of all agricultural operations, it should be noticed that the variations of sunshine and rain, which with us extend throughout the year, are in Palestine confined chiefly to the latter part of autumn and the winter. During all the rest of the year the sky is almost uninterruptedly cloudless, and rain very rarely falls. The autumnal rains usually commence at the latter end of October or beginning of November, not suddenly, but by degrees, which gives opportunity to the husbandman to sow his wheat and barley. The rains continue during November and December, but afterwards they occur at longer intervals; and rain is rare after March, and almost never occurs as late as May. The cold of winter is not severe; and as the ground is never frozen, the labours of the hus-

bandman are not entirely interrupted. Snow falls in different parts of the country, but never lies long on the ground. In the plains and valleys the heat of summer is oppressive, but not in the more elevated tracts. In these high grounds the nights are cool, often with heavy dew. The total absence of rain in summer soon destroys the verdure of the fields, and gives to the general landscape, even in the high country, an aspect of drought and barrenness. No green thing remains but the foliage of the scattered fruit-trees, and occasional vineyards and fields of millet. In autumn the whole land becomes dry and parched; the cisterns are nearly empty; and all nature, animate and inanimate, looks forward with longing for the return of the rainy season. In the hill country the time of harvest is later than in the plains of the Jordan and of the sea-coast. The barley harvest is about a fortnight earlier than that of wheat. In the plain of the Jordan the wheat harvest is early in May; in the plains of the coast and of Esdraelon, it is towards the latter end of that month; and in the hills, not until June. The general vintage is in September, but the first grapes ripen in July; and from that time the towns are well supplied with this fruit (Robinson, *Biblical Researches*, ii. 96-100).



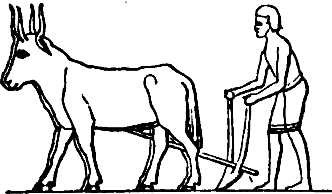
Soil, &c.—The geological characters of the soil in Palestine have never been satisfactorily stated; but the different epithets of description which travellers employ, enable us to know that it differs considerably, both in its appearance and character, in different parts of the land; but wherever soil of any kind exists, even to a very slight depth, it is found to be highly fertile. As parts of Palestine are hilly, and as hills have seldom much depth of soil, the mode of cultivating them in terraces was anciently, and is now, much employed. A series of low stone walls, one above another, across the face of the hill, arrest the soil brought down by the rains, and afford a series of levels for the operations of the husbandman. This mode of cultivation is usual in Lebanon, and is not unfrequent in Palestine, where the remains of terraces across the hills, in various parts of the country, attest the extent to which it was anciently carried. This terrace cultivation has necessarily increased or declined with the population. If the people were so few that the valleys afforded sufficient food for them, the more difficult culture of the hills was neglected; but when the population was too large for the valleys to satisfy with bread, then the hills were laid under cultivation.

In such a climate as that of Palestine, water is the great fertilizing agent. The rains of autumn and winter, and the dews of spring, suffice for the ordinary objects of agriculture; but the ancient inhabitants were able, in some parts, to avert even the aridity which the summer droughts occasioned, and to keep up a garden-like verdure, by means of aqueducts communicating with the brooks and rivers (Ps. i. 3; lxv. 10; Prov. xxi. 1; Isa. xxx. 25; xxxii. 2, 20; Hos. xii. 11). Hence springs, fountains, and rivulets were as much esteemed by husbandmen as by shepherds (Josh. xv. 19; Judg. i. 15). The soil was also cleared of stones, and carefully cultivated; and its fertility was increased by the ashes to which the dry stubble and herbage were occasionally reduced by being burned over the surface of the ground (Prov. xxiv. 31; Isa. vii. 23; xxxii. 13). Dung, and, in the neighbourhood of Jerusalem, the blood of animals, were also used to enrich the soil (2 Kings ix. 37; Ps. lxxxiii. 10; Isa. xxv. 10; Jer. ix. 22; Luke xiv. 34, 35).

That the soil might not be exhausted, it was ordered that every seventh year should be a sabbath of rest to the land: there was then to be no sowing or reaping, no pruning of vines or olives, no vintage or gathering of fruits; and whatever grew of itself was to be left to the poor, the stranger, and the beasts of the field (Lev. xxv. 1-7; Deut. xv. 1-10). But such an observance required more faith than the Israelites were prepared to exercise. It was for a long time utterly neglected (Lev. xxvi. 34, 35; 2 Chron. xxxvi. 21), but after the Captivity it was more observed. By this remarkable institution the Hebrews were also trained to habits of economy and foresight, and invited to exercise a large degree of trust in the bountiful providence of their Divine King.

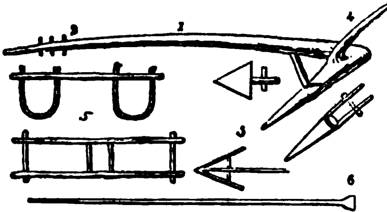
Fields.—Under the term דגן, *dagan*, which we translate 'grain' and 'corn,' the Hebrews comprehended almost every object of *field* culture. Syria, including Palestine, was regarded by the ancients as one of the first countries for corn (Pliny, *Hist. Nat.* xviii. 7). Wheat was abundant and excellent; and there is still one bearded sort, the ear of which is three times as heavy, and contains twice as many grains, as our common English wheat (Irby and Mangles, p. 472). Barley was also much cultivated, not only for bread, but because it was the only kind of corn which was given to beasts; for oats and rye do not grow in warm climates. Hay was not in use; and therefore the barley was mixed with chopped straw to form the food of cattle (Gen. xxiv. 25, 32; Judg. xix. 19, &c.) Other kinds of field culture were millet, spelt, various species of beans and peas, pepperwort, cummin, cucumbers, melons, flax, and, perhaps, cotton. Many other articles might be mentioned as being now cultivated in Palestine; but, as their names do not occur in Scripture, it is difficult to know whether they were grown there in ancient times, or not.

Anciently, as now, in Palestine and the East the arable lands were not divided into fields by hedges, as in this country. The ripening products therefore presented an expanse of culture unbroken, although perhaps variegated, in a large view, by the difference of the products grown. The boundaries of lands were therefore marked by stones as landmarks, which, even in patriarchal times, it was deemed a heinous wrong to remove (Job xxiv. 2); and the law pronounced a curse upon those who, without authority, removed them (Deut. xix. 14; xxvii. 17). The walls and hedges which are occasionally mentioned in Scripture belonged to orchards, gardens, and vineyards.



Agricultural Operations.—Of late years much light has been thrown upon the agri-

cultural operations and implements of ancient times, by the discovery of various representations on the sculptured monuments and painted tombs of Egypt. As these agree surprisingly with the notices in the Bible, and, indeed, differ little from what we find employed in Syria and Egypt, it is very safe to receive them as guides on the present subject.

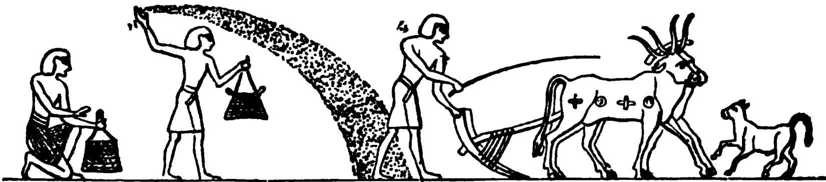


Ploughing.—This has always been a light and superficial operation in the East. At first, the ground was opened with pointed sticks; then, a kind of hoe was employed; and this, in many parts of the world, is still used as a substitute for

the plough. But the plough was known in Egypt and Syria before the Hebrews became cultivators (Job i. 14). In the East, however, it has always been a light and inartificial implement. At first, it was little more than a stout branch of a tree, from which projected another limb, shortened and pointed. This, being turned into the ground, made the furrow; while at the farther end of the larger branch was fastened a transverse yoke, to which the oxen were harnessed. Afterwards a handle to guide the plough was added. Thus the plough consisted of—1. the pole; 2. the point or share; 3. the handle; 4. the yoke. The Syrian plough is, and doubtless was, light enough for a man to carry in his hand (Russell's *Nat. Hist. of Aleppo*, i. 73). We annex a figure of the ancient Egyptian plough, which had the most resemblance

to the one now used (as figured in p. 89), and the comparison between them will probably suggest a fair idea of the plough which was in use among the Hebrews. The following cut (from Mr. Fellowes' work on Asia Minor) shows the parts of a

1. The plough. 2. The pole. 3. Shares (various). 4. Handle. 5. Yokes. 6. Ox-goad.



still lighter plough used in Asia Minor and Syria, with but a single handle, and with different shares according to the work it has to execute.

The plough was drawn by oxen, which were sometimes urged by a scourge (Isa. x. 26; Nahum iii. 2); but oftener by a long staff, furnished at one end with a flat piece of metal for clearing the plough, and at the other with a spike for goading the oxen. This ox-goad might be easily used as a spear (Judg. iii. 31; 1 Sam. xiii. 21). Sometimes men followed the plough with hoes to break the clods (Isa. xxviii. 24); but in later times a kind of harrow was employed, which appears to have been then, as now, merely a thick block of wood, pressed down by a weight, or by a man sitting on it, and drawn over the ploughed field.

Sowing.—The ground, having been ploughed as soon as the autumnal rains had mollified the soil, was fit, by the end of October, to receive the seed; and the sowing of wheat continued, in different situations, through November into December. Barley was not generally sown till January and February. The seed appears to have been sown and harrowed at the same time; although sometimes it was ploughed in by a cross furrow.

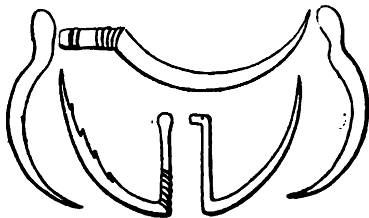
Ploughing in the Seed.—The Egyptian paintings illustrate the Scriptures by showing that in those soils which needed no previous preparation by the hoe (for breaking the clods) the sower followed the plough, holding in the left hand a basket of seed, which he scattered with the right hand, while another person filled a fresh basket. We also see that the mode of sowing was what we call 'broad-cast,' in which the seed is thrown loosely over the field (Matt. xiii. 3-8). In Egypt, when the levels were low, and the water had continued long upon the land, they often dispensed with the plough altogether; and probably, like the present inhabitants, broke up the ground with hoes, or simply dragged the moist mud with bushes after the seed had been thrown upon the surface. To this cultivation without ploughing Moses probably alludes (Deut. xi. 10), when he tells the Hebrews that the land to which they were going was *not* like the land of Egypt, where they 'sowed their seed and watered it with their foot *as a garden of herbs*.' It seems however that even in Syria, in sandy soils, they sow without ploughing, and then plough down the seed (Russell's *N. H. of Aleppo*, i. 73, &c.). It does not appear that any instrument resembling our *harrow* was known; the word rendered *to harrow*, in Job xxxix. 10, means literally

to break the clods, and is so rendered in Isa. xxviii. 24; Hos. x. 11: and for this purpose the means used have been already indicated. The passage in Job, however, is important. It shows that this breaking of the clods was not always by the hand, but that some kind of instrument was drawn by an animal over the ploughed field, most probably the rough log which is still in use.

Harvest.—It has been already mentioned that the time of the wheat harvest in Palestine varies, in different situations, from early in May to late in June; and that the barley harvest is about a fortnight earlier than that of wheat. Among the Israelites, as with all other people, the harvest was a season of joy, and as such is more than once alluded to in Scripture (Ps. cxxvi. 5; Isa. ix. 13).

Reaping.—Different modes of reaping are indicated in Scripture, and illustrated by the Egyptian monuments. In the most ancient times, the corn was plucked up by the roots, which continued

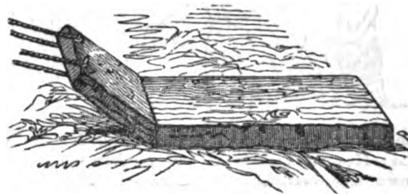
to be the practice with particular kinds of grain after the sickle was known. In Egypt, at this day, barley and dourra are pulled up by the roots. The choice between these modes of operation was probably determined, in Palestine, by the consideration pointed out by Russell (*N. H. of Aleppo*, i. 74), who states that 'wheat, as well as barley in general, does not grow half as high as in Britain; and is therefore, like other grain, not reaped with the sickle, but plucked up by the roots with the hand. In other parts of the country, where the corn grows ranker, the sickle is used.' When the sickle was used, the wheat was either cropped off under the ear or cut close to the ground. In the former case, the straw was afterwards plucked up



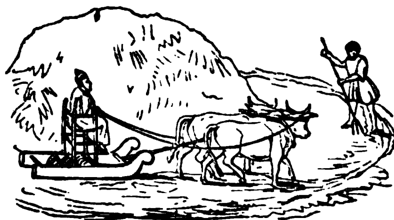
for use; in the latter, the stubble was left and burnt on the ground for manure. As the Egyptians needed not such manure, and were economical of straw, they generally followed the former method; while the Israelites, whose lands derived benefit from the burnt stubble, used the latter; although the practice of cutting off the ears was also

known to them (Job xxiv. 24). Cropping the ears short, the Egyptians did not generally bind them into sheaves, but removed them in baskets. Sometimes, however, they bound them into *double* sheaves; and such as they plucked up were bound into single long sheaves. The Israelites appear generally to have made up their corn into sheaves (Gen. xxxvii. 7; Lev. xxiii. 10-15; Ruth ii. 7, 15; Job xxiv. 10; Jer. ix. 22; Mich. iv. 12), which were collected into a heap, or removed in a cart (Amos ii. 13) to the threshing-floor. The carts were probably similar to those which are still employed for the same purpose. The sheaves were never made up into *shocks*, as with us, although the word occurs in our translation of Judg. xv. 5; Job v. 26; for the original term signifies neither a shock composed of a few sheaves standing temporarily in the field, nor a stack of many sheaves in the home yard, properly thatched, to stand for a length of time; but a heap of sheaves laid loosely together, in order to be trodden out as quickly as possible, in the same way as is done in the East at the present day (Brown, *Antiq. of the Jews*, ii. 591).

With regard to sickles, tnere appear to have been two kinds, indicated by the different names *chermesh* (חרמשׁ) and *meggol* (מגל); and as the former occurs only in the Pentateuch (Deut. xvi. 9; xxiii. 20), and the latter only in the Prophets (Jer. ii. 16; Joel i. 17), it would seem that the one was the earlier and the other the later instrument. But as we observe two very different kinds of sickles in use among the Egyptians, not only at the same time, but in the same field (see the cut, p. 92), it may have been so with the Jews also. The figures of these Egyptian sickles probably mark the difference between them. One was very much like our common reaping-*hook*, while the other had more resemblance in its shape to a scythe, and in the Egyptian examples appears to have been toothed. This last is probably the same as the Hebrew *meggol*, which is indeed rendered by *scythe* in the margin of Jer. l. 16. The reapers were the owners and their children, men-



servants and women-servants, and day-labourers (Ruth ii. 4, 6, 21, 23; John iv. 36; James v. 4). Refreshments were provided for them, especially drink, of which the gleaners were allowed to partake (Ruth ii. 9). So in the Egyptian harvest-scenes, we perceive a provision of water in skins, hung against trees, or in jars upon stands, with the reapers drinking, and gleaners applying to share the draught. Among the Israelites, gleaning



was one of the stated provisions for the poor: and for their benefit the corners of the field were left unreaped, and the reapers might not return for a forgotten sheaf. The gleaners, however, were to obtain in the first place the express permission of the proprietor or his steward (Lev. xix. 9, 10; Deut. xxiv. 19; Ruth ii. 2, 7).

Threshing.—The ancient mode of threshing, as described in Scripture and figured on the Egyptian monuments, is still preserved in Palestine. Formerly the sheaves were conveyed from the field to the threshing-floor in carts; but now they are borne, generally, on the backs of camels and asses. The threshing-floor is a level plot of ground, of a circular shape, generally about fifty feet in diameter, prepared for use by beating down the earth till a hard floor is formed (Gen. l. 10; Judg. vi. 37; 2 Sam. xxiv. 16, 24). Sometimes several of these floors are contiguous to each other. The sheaves are spread out upon them; and the grain is trodden out by oxen, cows, and young cattle, arranged five abreast, and driven in a circle, or rather in all directions, over the floor. This was the common mode in the Bible times; and Moses forbade that the oxen thus employed should be muzzled to prevent them from tasting the corn (Deut. xxv. 4; Isa. xxviii. 28). *Flails*, or sticks, were only used in threshing small quantities, or for the lighter kinds of grain (Ruth ii. 17; Isa. xxviii. 27). There were, however, some kinds of threshing-machines, which are still used in Palestine and Egypt. One of them, represented in the annexed figure, is very much used in Palestine. It

is composed of two thick planks, fastened together side by side, and bent upwards in front. Sharp fragments of stone are fixed into holes bored in the bottom. This machine is drawn over the corn by oxen—a man or boy sometimes sitting on it to increase the weight. It not only separates the grain, but cuts the straw and makes it fit for fodder (2 Kings xiii. 7). This is, most probably, the *Charutz* חרוץ, or 'corn-drag,' which is mentioned in Scripture (Isa. xxviii. 27; xli. 15; Amos i. 3, rendered 'threshing instrument'), and would seem to have been sometimes furnished with iron points instead of stones. The Bible also notices a machine called a *Moreg*, מורג (2 Sam. xxiv. 22; 1 Chron. xxi. 23; Isa. xli. 15), which is unquestionably the same which bears in Arabic the name of نورج *Noreg*. This is explained by Freytag (from the Kamoos Lex.) by—'tribulum, instrumentum, quo fruges in area tentatur (*in Syria*), *sive* ferreum, *sive* ligneum.' This machine is not now often seen in Palestine; but is more used in some parts of Syria, and is common in Egypt. It is a sort of frame of wood, in which are inserted three wooden rollers, armed with iron teeth, &c. It bears a sort of seat or chair, in which the driver sits to give the benefit of his weight. It is generally drawn over the corn by two oxen, and separates the grain, and breaks up the straw even more effectually than the drag. In all these processes, the corn is occasionally turned by a fork; and, when sufficiently threshed, is thrown up by the same fork against the wind to separate the grain, which is then gathered up and winnowed.

Winnowing.—This was generally accomplished by repeating the process of tossing up the grain against the wind with a fork (Jer. iv. 11, 12), by which the broken straw and chaff were dispersed while the grain fell to the ground. The grain afterwards passed through a sieve to separate the bits of earth and other impurities. After this, it underwent a still further purification, by being tossed up with wooden scoops or short-handed shovels,

such as we see in Egyptian paintings (Isa. xxx. 24; Jahn, *Biblisches Archäologie*, b. i. ch. i. kap. 4; Winer, *Biblisches Realworterbuch*, *s. v.* 'Ackerbau;' Paulsen, *Ackerbau d. Morgenlander;* Surenhusius, *Mischna*, part i.; Ugolini, *De Re Rustica Vett. Hebræorum*, in *Thesaurus*, t. xxix.; Norberg, *De Agricult. Orientali*, in *Opusc. Acad.* iii.; Reynier, *De l'Economie Publique et Rurale des Arabes et des Juifs;* Brown, *Antiquities of the Jews;* Robinson, *Biblical Researches in Palestine;* Wilkinson, *Ancient Egyptians; Description de l'Egypte, Antiquités*, and *Etat Moderne;* Rosellini, *Monumenti dell' Egitto*. Information respecting the *actual* products and agriculture of Palestine, collected from numerous travellers, may be seen in Kitto's *Pictorial History of Palestine, Physical History*, 'History of the Months.')

AGRIELAIA (Ἀγριελαία; New Test. ἀγριέλαιος). The wild olive-tree is mentioned by St. Paul in Romans xi. 17, 24. Here different opinions have been entertained, not only with respect to the plant, but also with respect to the explanation of the metaphor. One great difficulty has arisen from the same name having been applied to different plants. Thus by Dioscorides (*De Mater. Med.* i. 137) it is stated that the Ἀγριελαία, or wild olive-tree, is by some called Cotinus, and by others, the Ethiopic olive. So, in the notes to Theoph. ed Boda Stapel, p. 224, we read, 'Sed hic κότινος lego cum Athenæo, id est oleaster. Est vero alius cotinus, frutex, de quo Plinius, xvi. 18. Est et in Apennino frutex qui vocatur Cotinus, ad lineamenta modo conchylii colore insignis.' Hence the wild olive-tree has been confounded with *rhus cotinus*, or Venetian sumach, with which it has no point of resemblance. Further confusion has arisen from the present *Elæagnus angustifolia* of botanists having been at one time called *Olea sylvestris*. Hence it has been inferred that the Ἀγριελαία is this very Eleagnus, E. angustifolia, or the narrow-leaved Oleaster-tree of Paradise of the Portuguese. In many points it certainly somewhat resembles the true olive-tree—that is, in the form and appearance of the leaves, in the oblong-shaped fruit (edible in some of the species), also in an oil being expressed from the kernels; but it will not explain the present passage, as no process of grafting will enable the Elæagnus to bear olives of any kind.

If we examine a little further the account given by Dioscorides of the Ἀγριελαία, we find in i. 141, Περὶ δακρύου ἐλαίας Αἰθιοπικῆς, that our olives and wild olives exude tears—that is, a gum or resin, like the Ethiopic olive. Here it is important to remark that the wild olive of the Grecians is distinguished from the wild olive of Ethiopia. What plant the latter may be, it is not perhaps easy to determine with certainty; but Arabian authors translate the name by *zait-al-Soudan*, or the olive of Ethiopia. Other synonymes for it are *lous-al-bur*, or wild almond; and *badam kohee*, *i. e.* mountain almond. Under the last name the writer has obtained the kernels of the apricot in Northern India, and it is given in Persian works as one of the synonymes of the *bur-kookh*, or apricot, which was originally called apricock and præcocia, no doubt from the Arabic *bur-kookh*. The apricot is extensively cultivated in the Himalayas, chiefly on account of the clear beautiful oil yielded by its kernels, on which account it might well be compared with the olive-tree. But it does not serve better than the Elæagnus to explain the passage of St. Paul.

From the account of Dioscorides, however, it is clear that the Ethiopic was distinguished from the wild, and this from the cultivated olive; and as the plant was well known both to the Greeks and Romans, there was no danger of mistaking it for any other plant except itself in a wild state, that is, the true Ἀγριελαία, Oleaster, or *Olea europæa*, in a wild state. That this is the very plant alluded to by the Apostle seems to be proved from its having been the practice of the ancients to graft the wild upon the cultivated olive tree. Thus Pliny (*Hist. Nat.* xvii. 18) says, 'Africæ peculiare quidem in oleastro est inserere. Quadam æternitate consenescunt proxima adoptioni virga emissa, atque ita alia arbore ex eadem juvenescente: iterumque et quoties opus sit, ut sævis eadem oliveta constent. Inseritur autem oleaster calamo, et inoculatione.' In the 'Pictorial Bible' this practice has already been adduced as explaining the text; and Theophrastus and Columella (*De Re Rust.* v. 9) also refer to it. The apostle, therefore, in comparing the Romans to the wild olive tree grafted on a cultivated stock, made use of language which was most intelligible, and referred to a practice with which they must have been perfectly familiar.—J. F. R.

AGRIPPA [Herodian Family]. Although of the two Herods, father and son, who also bore the name of Agrippa, the latter is best known by his Roman name, it seems proper to include him with the other members of the Herodian dynasty, under the name which he bore among his own people.

AGUR (אָגוּר), the author of the sayings contained in Prov. xxx., which the inscription describes as composed of the precepts delivered by 'Agur, the son of Jakeh,' to his friends 'Ithiel and Ucal.' Beyond this everything that has been stated of him, and of the time in which he lived, is pure conjecture. Some writers have regarded the name as an appellative, but differ as to its signification. The Vulgate has 'Verba Congregantis filii Vomentis.' Most of the fathers think that Solomon himself is designated under this name; and if the word is to be understood as an appellative, it may be as well to look for its meaning in the Syriac, where, according to Bar Bahlul, in Castell. ܐܓܘܪ means *qui sapientiæ studiis se applicat*. The Septuagint omits the chapter ascribed to Agur, as well as the nine first verses of the following chapter.

AH (אָח, *brother*) or rather Ach, is frequently found, according to the inadequate representation

of the guttural which is followed in our Version, as the first syllable of compound Hebrew proper names. The observations already offered in the article AB may be referred to for some illustration of the metaphorical use of the term *brother* in such combinations, as well as for the law of their construction, whenever the two members are nouns of which one is dependent as a genitive on the other.—J. N.

AHAB (אַחְאָב, *father's brother;* Sept. Ἀχαάβ), son of Omri, and the sixth king of Israel, who reigned twenty-one years, from B.C. 918 to 897. Ahab was, upon the whole, the weakest of all the Israelitish monarchs; and although there are occasional traits of character which show that he was not without good feelings and dispositions, the history of his reign proves that weakness of character in a king may sometimes be as injurious in its effects as wickedness. Many of the evils of his reign may be ascribed to the close connection which he formed with the Phœnicians. There had long been a beneficial commercial intercourse between that people and the Jews; and the relations arising thence were very close in the times of David and Solomon. After the separation of the kingdoms, the connection appears to have been continued by the nearer kingdom of Israel, but to have been nearly, if not quite, abandoned by that of Judah. The wife of Ahab was Jezebel, the daughter of Ethbaal, or Ithobaal, king of Tyre. She was a woman of a decided and energetic character, and, as such, soon established that influence over her husband which such women always acquire over weak, and not unfrequently also over strong, men. Ahab, being entirely under the control of Jezebel, sanctioned the introduction, and eventually established the worship of the Phœnician idols, and especially of the sun-god Baal. Hitherto the golden calves in Dan and Bethel had been the only objects of idolatrous worship in Israel, and they were intended as symbols of JEHOVAH. But all reserve and limitation were now abandoned. The king built a temple at Samaria, and erected an image, and consecrated a grove to Baal. A multitude of the priests and prophets of Baal were maintained. Idolatry became the predominant religion; and Jehovah, with the golden calves as symbolical representations of him, were viewed with no more reverence than Baal and his image. So strong was the tide of corruption, that it appeared as if the knowledge of the true God was soon to be for ever lost among the Israelites. But a man suited to this emergency was raised up in the person of Elijah the prophet, who boldly opposed himself to the regal authority, and succeeded in retaining many of his countrymen in the worship of the true God. The greater the power which supported idolatry, the more striking were the prophecies and miracles which directed the attention of the Israelites to Jehovah, and brought disgrace on the idols, and confusion on their worshippers. At length the judgment of God on Ahab and his house was pronounced by Elijah, who announced that, during the reign of his son, his whole race should be exterminated. Ahab died of the wounds which he received in a battle with the Syrians, according to a prediction of Micaiah, which the king disbelieved, but yet endeavoured to avert by disguising himself in the action (1 Kings xvi. 29; xxii. 40).

2. AHAB and ZEDEKIAH. The names of two false prophets, who deceived the Israelites at Babylon. For this they were threatened by Jeremiah, who foretold that they should be put to death by the king of Babylon in the presence of those whom they had beguiled; and that in following times it should become a common malediction to say, 'The Lord make thee like Ahab and Zedekiah, whom the king of Babylon roasted in the fire' (Jer. xxix. 21, 22).

AHALIM (אֲהָלִים) and AHALOTH (אֲהָלוֹת), usually translated ALOES, occur in several passages of the Old Testament, as in Psalm xlv. 8, 'All thy garments smell of myrrh, and *ahaloth*, and cassia;' Prov. vii. 17, 'I have perfumed my bed with myrrh, with cinnamon and *ahalim;*' Canticles, iv. 14, 'Spikenard and saffron, calamus and cinnamon, with all trees of frankincense, myrrh and *ahaloth*, with all the chief spices.' From the articles which are associated with *ahaloth* and *ahalim* (both names indicating the same thing), it is evident that it was some odoriferous substance, probably well known in ancient times. Why these words have been translated 'aloes,' not only in the English, but in most of the older versions, it may not be easy to ascertain; but there is little doubt that the odoriferous *ahaloth* of the above passages ought not to be confounded with the bitter and nauseous aloes famed only as a medicine. The latter, no doubt, has some agreeable odour, when of the best quality from the island of Socotra, and when freshly-imported pieces are first broken; some not unpleasant odour may also be perceived when small pieces are burnt. But common aloes is usually disagreeable in odour and nauseous in taste, and could never have been employed as a perfume. Its usual name in Arabic, *sibbar*, has no resemblance to its European name. The earliest notice of aloes seems to be that of Dioscorides, iii. 25; the next that of Pliny (*Nat. Hist.* xxvii. 5). Both describe it as being brought from India, whence also probably came its name, which is *elwa* in Hindee.

The oldest and most complete account with which we are acquainted of the fragrant and aromatic substances known to the ancients is that given in the first twenty-eight chapters of the first book of Dioscorides. There, along with Iris, Acorum, Cyperum, Cardamomum, several Nards, Asarum, Phu, Malabathrum, Cassia, Cinnamon, Costus, Schœnus, Calamus aromaticus, Balsamum, Aspalathus, Crocus, &c., mention is also made of *Agallochum*, which is described as a wood brought from India and Arabia. In this list, which we shall afterwards have frequent occasion to refer to, we find Agallochum associated with most of the same substances which are mentioned along with it in the above passages of Scripture, whereas the author describes the true aloe in a very different part of his work. Subsequently to the time of Dioscorides, we find Agallochum mentioned by Orobasius, Ætius, and P. Ægineta; but they add nothing to the first description. The Arabs, however, as Rhases, Serapion, and Avicenna, were well acquainted with this substance, of which they describe several varieties, mostly named from the places where they were produced,

and give other particulars respecting it, besides quoting Dioscorides and previous authors of their own country. In the Latin translation of Avicenna these descriptions appear under Agallochum, Xilaloe, and Lignum aloes; but in the Arabic edition of the same author, under اغلاجون Aghlajoon, اغالوخي Aghalookhi, but most fully under عود 'Aod, pronounced *ood*. This is one instance, and many others might be adduced, of the Arabs describing the same thing under two names, when they found a substance described by the Greeks—that is, Galen and Dioscorides, under one name, and were themselves acquainted with it under another. In the Persian works on Materia Medica (*vide* ABATTACHIM) we are informed that *agallokhee* is the Greek name of this substance, and that the Hindee name of one kind, by them called *aod-i-hindee*, is *aggur*. Having thus traced a substance which was said to come from India to the name by which it is known in that country, the next process would perhaps naturally have been to procure the substance, and trace it to the plant which yielded it. We, however, followed the reverse method; having first obtained the substance called Aggur, we traced it, through its Asiatic synonymes, to the Agallochum of Dioscorides, and, as related in the *Illustr. of Himalayan Botany*, p. 171, obtained in the bazaars of Northern India three varieties of this far-famed and fragrant wood—1. *aod-i-hindee;* 2. a kind procured by commerce from Surat, which, however, does not appear to differ essentially from the third, *aod-i-kinaree*, which was said to come from China, and is, no doubt, the *aleamcricum* of Avicenna.

In the north-western provinces of India *aggur* is said to be brought from Surat and Calcutta. Garcias ab Horto (Clusius, *Exotic. Hist.*), writing on this subject near the former place, says that it is called 'in Malacca *garro*, selectissimum autem Calambac.' Dr. Roxburgh, writing in Calcutta, states that *ugooroo* is the Sanscrit name of the incense or aloe-wood, which in Hindee is called *ugoor*, and in Persian *aod-hindee;* and that there is little or no doubt that the real *calambac* or *agallochum* of the ancients is yielded by an immense tree, a native of the mountainous tracts east and south-east from Silhet, in about 24° of N. latitude. This plant, he says, cannot be distinguished from thriving plants exactly of the same age of the *Garo de Malacca* received from that place, and then in the Botanic Garden of Calcutta. He further states that small quantities of *agallochum* are sometimes imported into Calcutta by sea from the eastward; but that such is always deemed inferior to that of Silhet (*Flora Ind.* ii. 423).

The *Garo de Malacca* was first described by Lamarck from a specimen presented to him by Sonnerat as that of the tree which yielded the *bois d'aigle* of commerce. Lamarck named this tree *Aquilaria Malaccensis*, which Cavanilles afterwards changed unnecessarily to *A. ovata*. As Dr. Roxburgh found that his plant belonged to the same genus, he named it *Aquilaria Agallochum*, but it is printed *Agallocha* in his *Flora Indica*, probably by an oversight. He is of opinion that the *Agallochum secundarium* of Rumphius (*Amb.* ii. 34, t. 10), which that author received under the name of *Agallochum malaccense*, also belongs to the same genus, as well as the *Sinfoo* of Kæmpfer (*Amœn. Exot.* p. 903), and the *Ophispermum sinense* of Loureiro.

[Aquilaria Agallochum.]

These plants belong to the Linnæan class and order *Decandria monogynia*, and the natural family of *Aquilarineæ;* at all events, we have two trees ascertained as yielding this fragrant wood—one, *Aquilaria Agallochum*, a native of Silhet; and the other, *A. ovata* or *malaccensis*, a native of Malacca. The missionary Loureiro, in his description of the Flora of Cochin-China, describes a third plant, which he names *Aloexylum*, 'idem est ac lignum aloe,' and the species *A. Agallochum*, represented as a large tree growing in the lofty mountains of Champava belonging to Cochin-China, about the 13th degree of N. lat., near the great river 'Lavum:' 'Omnes veri aloes ligni species ex hac arbore procedunt, etiam pretiosissima, quæ dici solet Calambac.' This tree, belonging to the class and order *Decandria monogynia* of Linnæus, and the natural family of *Leguminosæ*, has always been admitted as one of the trees yielding *Agallochum*. But as Loureiro himself confesses that he had only once seen a mutilated branch of the tree in flower, which, by long carriage, had the petals, anthers, and stigma much bruised and torn, it is not impossible that this may also belong to the genus Aquilaria, especially as his tree agrees in so many points with that described by Dr. Roxburgh, as already observed by the latter in his *Hist. Flor. Ind.* l. c. Rumphius has described and figured a third plant, which he named arbor excæcans, from 'Blindhout,' in consequence of its acrid juice destroying sight—whence the generic name of Excæcaria; the specific one of agallochum he applied, because its wood is similar to and often substituted for agallochum: 'Lignum hoc tantam habet cum agallocho similitudinem.' And he states that it was sometimes exported as such to Europe, and even to China. This tree, the Excæcaria agallochum, of the Linnæan class and order Diœcia triandria, and the natural family of Euphorbiaceæ, is also very common in the delta of the Ganges, where it is called *Geria;* 'but the wood-cutters of the Sunder-

bunds,' Dr. Roxburgh says, 'who are the people best acquainted with the nature of this tree, report the pale, white, milky juice thereof to be highly acrid and very dangerous.' The only use made of the tree, as far as Dr. Roxburgh could learn, was for charcoal and firewood. Agallochum of any sort is, he believed, never found in this tree, which is often the only one quoted as that yielding agila-wood; but, notwithstanding the negative testimony of Dr. Roxburgh, it may, in particular situations, as stated by Rumphius, yield a substitute for that fragrant and long-famed wood.

Having thus traced the agallochum of commerce to the trees which yield it, it is extremely interesting to find that the Malay name of the substance, which is *agila*, is so little different from the Hebrew; not more, indeed, than may be observed in many well-known words, where the hard *g* of one language is turned into the aspirate in another. It is therefore probable that it was by the name agila (*aghil*, in Rosenmüller, *Bibl Bot.* p. 234) that this wood was first known in commerce, being conveyed across the Bay of Bengal to the island of Ceylon or the peninsula of India, which the Arab or Phœnician traders visited at very remote periods, and where they obtained the early-known spices and precious stones of India. It is not a little curious that Captain Hamilton (*Account of E. Indies*, i. 68) mentions it by the name of *agala*, an odoriferous wood at Muscat. We know that the Portuguese, when they reached the eastern coast from the peninsula, obtained it under this name, whence they called it pao d'aguila, or eagle-wood; which is the origin of the generic name Aquilaria.

The term *agila*, which in Hebrew we suppose to have been converted into *ahel*, and from which were formed *ahalim* and *ahaloth*, appears to have been the source of its confusion with aloes. Sprengel has observed that the primitive name seems to be preserved in the Arabic appellations اللوة and الّيّة, which may be read *alloeh* (or alloet) and *allieh*. These come extremely near ايلوا *aelwa*, pronounced *elwa*—the Hindoo name of the medical aloe. Hence the two names became confounded, and one of them applied to two very different substances. But it was soon found necessary to distinguish the agallochum by the term ξυλαλόην, which has been translated into lign-aloe. That the name aloe was considered to be synonymous with *ahalim*, at an early period, is evident, as 'the Chaldee translation of the Psalms and Canticles, the old Latin version of the Proverbs and Canticles, and the Syriac translation, have all rendered the Hebrew word by aloes' (Rosenmüller, *l. c.* p. 234). There can be little or no doubt that the same odoriferous agila is intended in the passage of John xix. 39. When the body of our Saviour was taken down from the cross, Nicodemus, we are told, brought myrrh and aloes for the purpose of winding it in linen clothes with these spices. But the quantity (100 lbs.) used has been objected to by some writers, and therefore Dr. Harris has suggested, that, 'instead of ἑκατόν, it might originally have been δεκατόν, 10 lbs. weight.' It is well known, however, that very large quantities of spices were occasionally used at the funerals of Jews. But before objecting to the quantity of this expensive wood, disputants should have ascertained the *proportions* in which it was mixed with the myrrh, an article sufficiently abundant and of moderate price, because easily obtained by the Arabians from the opposite coast of Africa. Dr. Harris has, moreover, objected, that 'the Indian lign-aloes is so odoriferous and so agreeable, that it stands in no need of any composition to increase or moderate its perfume.' But this very excellence makes it better suited for mixing with less fragrant substances, and, however large the quantity of these substances, like the broken vase, 'the scent of the roses will hang round it still.'

The only passage where there is any difficulty is that in which there is the earliest mention of the *ahalok* (Num. xxiv. 6). Here Balaam, referring to the flourishing condition of the Israelites, says, 'as the trees of *ăhalim*, which the Lord hath planted, and as cedar trees beside the waters.' Whether the expression is here to be understood literally, or merely as a poetical form, is doubtful, especially as authorities differ as to the true reading; some versions, as the Septuagint, Vulgate, Syriac, and Arabic, having 'tents' instead of 'lign-aloes,' from which it would seem that, in place of אֲהָלִים, *ahalim*, they had found in their copies אֳהָלִים, *ohalim* (Rosenmüller, p. 235).

In Arabian authors numerous varieties of agallochum are mentioned. These are enumerated by various writers (Cels. *Hierobot.* p. 143). Persian authors mention only three:—1. *Aod-i-hindee*, that is, the Indian; 2. *Aod-i-chinee*, or Chinese kind (probably that from Cochin-China); while the third, or *Sumunduree*, a term generally applied to things brought from sea, may have reference to the inferior variety from the Indian islands. In old works, such as those of Bauhin and Ray, three kinds are also mentioned:—1. Agallochum præstantissimum, also called *Calambac;* 2. A. Officinarum, or *Palo de Aguilla* of Linschoten; 3. A. sylvestre, or *Aguilla brava*. But besides these varieties, obtained from different localities, perhaps from different plants, there are also distinct varieties, obtainable from the same plant. Thus in a MS. account by Dr. Roxburgh, to which we have had access, and where, in a letter, dated 8th Dec., 1808, from R. K. Dick, esq., judge and magistrate at Silhet, it is stated that four different qualities may be obtained from the same tree:—1st. *Ghurkee*, which sinks in water, and sells from 12 to 16 rupees per seer of 2 lbs.; 2nd. *Doim*, 6 to 8 rupees per seer; 3rd. *Simula*, which floats in water, 3 to 4 rupees; and 4th, *Choorum*, which is in small pieces, and also floats in water, from 1 to 1½ rupee per seer (the three last names mean only 2nd, 3rd, and 4th kinds); and that sometimes 80 lbs. of these four kinds may be obtained from one tree. All these *tuggur*-trees, as they are called, do not produce the *Aggur*, nor does every part of even the most productive tree. The natives cut into the wood until they observe dark-coloured veins yielding the perfume: these guide them to the place containing the aggur, which generally extends but a short way through the centre of the trunk or branch. An essence, or attur, is obtained by bruising the wood in a mortar, and then infusing it in boiling water, when the attur floats on the

surface. Early decay does not seem incident to all kinds of agallochum, for we possess specimens of the wood gorged with fragrant resin (*Illustr. Him. Bot.* p. 173) which show no symptoms of it; but still it is stated that the wood is sometimes buried in the earth. This may be for the purpose of increasing its specific gravity. A large specimen in the Museum of the East India House displays a cancellated structure, in which the resinous parts remain, the rest of the wood having been removed, apparently by decay.—J. F. R.

AHASUERUS (אֲחַשְׁוֵרוֹשׁ), or Achashverosh, is the name, or rather the *title*, of four Median and Persian monarchs mentioned in the Bible. The earlier attempts of Simonis and others to derive this name from the Persian *âchash* are unworthy of notice. Hyde (*De Relig. Vet. Pers.* p. 43) more boldly proposed to disregard the Masoretic punctuation, and to read the consonants, *Acsuares*, so as to correspond with 'Οξυάρης, a Persian royal title. Among those who assume the identity of the names Achashverosh and Xerxes, Grotefend believes he has discovered the true orthography of Xerxes in the arrowhead inscriptions of Persepolis. He has deciphered signs representative of the sounds *khshhêrshê*, and considers the first part of the word to be the Zend form of the later *shah*, 'king' (Heeren's *Ideen*, i. 2, 350). Gesenius also (in his *Thesaurus*) assents to this, except that (as Reland had done before) he takes the first part of the word to be the original form of *shir*, *a lion*, and the latter to be that of *shah*. The Hebrew Achashverosh might thus be a modification of khshhêrshê: the prosthetic aleph being prefixed (as even Scaliger suggested), and a new vowel being inserted between the first two sounds, merely to obviate the difficulty which, as is well known, all Syro-Arabians find in pronouncing two consonants *before* a vowel. One of the highest authorities in such questions, however, A. F. Pott (*Etymol. Forschungen*, i. p. lxv.), considers Xerxes to be a compound of the Zend *csathra*, *king* (with loss of the *t*), and *csahya*, also meaning *king*, the original form of *shah*; and suggests that Achashverosh—its identity with Xerxes, as he thinks, not being established—may be the Pehlvi *huzvaresh*, 'hero' (from *hu*, 'good,' and *zour*, 'strength'), corresponding to ἀρήϊος, which Herodotus (vi. 98) says is the true sense of *Xerxes*. Jahn, indeed, first proposed the derivation from *zwaresh* (in his *Archäol.* ii. 2, 244); but then he still thought that the first part of the name was *âchash*—a modern Persian word, which only seems to denote *price*, *value*. Lastly, it deserves notice that the kethib, in Esther x. 1, has אחשרש, pointed *Achashresh*; and that the Syriac version always (and sometimes the Arabic also, as in Dan. ix. 1) writes the name *Achshiresh*. Ilgen adopts the kethib as the authentic consonants of the name; but changes the vowels to *Achshâresh*, and modifies his etymology accordingly.

The *first* Ahasuerus (Sept. 'Ασσούηρος, Theodotion, Ξέρξης) is incidentally mentioned, in Dan. ix. 1, as the father of Darius the Mede. It is generally agreed that the person here referred to is the Astyages of profane history. See the article Darius.

The *second* Ahasuerus (Sept. 'Ασσούηρος) occurs in Ezra iv. 6, where it is said that in the beginning of his reign the enemies of the Jews wrote an accusation against them, the result of which is not mentioned. The whole question, as to the Persian king here meant, depends on the light in which the passage of this chapter, from ver. 6 to 24, is regarded. The view which Mr. Howes seems to have first proposed, and which Dr. Hales adopted in his *Analysis of Chronology*, proceeds on the theory that the writer of this chapter, after mentioning the interruption to the building of the *temple* from the time of Cyrus down to that of Darius, king of Persia (ver. 1-5), is led, by the association of the subject, to enter into a detail of the hindrances thrown in the way of building and fortifying the *city* (after the temple had been completed), under the successors of Darius Hystaspis (ver. 6-23); and that, after this digressive anticipation of events posterior to the reign of Darius, he returns (in ver. 24) to the history of the building of the temple under that prince. This view necessarily makes the Achashverosh and Artachshashta of ver. 6 and 7 to be the *successors* of Darius Hystaspis, *i. e.* to be *Xerxes* and *Artaxerxes Longimanus*. The main argument on which this theory rests, seems to be the circumstance that, in the whole passage, there is no mention whatever of the *temple*; but, on the contrary, that the setting up the *walls* of the rebellious *city* forms the sole ground of complaint: so that the passage must refer to what occurred after the temple was finished (see the extract from Howes in the *Pictorial Bible*, *ad loc.*).

There are, however, some objections against the conclusiveness of this reasoning; for, first, even assuming the object of the enemies of the Jews, in this accusation, to have been to hinder the building of the temple, it is yet easy to conceive how the omission of all mention of the *temple* might be compatible with their end, and dependent on the means they were obliged to employ. They could only obtain their object through the Persian king; they therefore used arguments likely to weigh with him. They appealed to motives of state policy. Accordingly, they sought to alarm his jealousy lest the rebellious city should become strong enough to resist tribute, and refuse to allow the transit of his armies; they drew attention to the rebuilding of the defences, as the main point of the argument; and said nothing about the temple, because that would be a matter of secondary importance in the only point of view in which the subject would appear to the Persian king. But, secondly, it has been shown by a minute inquiry by Trendelenburg (in Eichhorn's *Einleit. in die Apocryph. Schrift.* p. 351), that the first book of the apocryphal Esdras is principally a free, but in parts continuous, translation of the canonical Ezra. It is, therefore, remarkable that the author of Esdras, who has taken this very account of the accusation from Ezra, was so far from discerning the omission of the *temple*, and the conclusion that Mr. Howes has drawn from it, that *his* letter (ii. 16-30) states, that 'The Jews, being come into Jerusalem, that rebellious city, do build the market-place, and repair the walls of it, *and do lay the foundation of the temple* . . . . And forasmuch as the things pertaining to the *temple are now in hand*, we think it meet not to neglect such a matter.' Josephus also (*Antiq.* xi. 2), conformably to his general adherence, in this part, to the apocryphal Esdras, both uses, in *his* letter, the same terms about the reconstruction of the temple being

then commenced, and even tells the whole story as referring to *Cambyses*, which makes it clear that he understood the passage of the immediate successor of Cyrus. Thirdly, it is even probable, *à priori*, that the rebuilding of the temple and of the city itself would, to a certain extent, necessarily go on together. The Jews must have had sufficient time and need, in the fifteen years between the accession of Cyrus and that of Darius Hystaspis, to erect some buildings for the sustenance and *defence* of the colony, as well as for carrying on the structure of the temple itself. As we read of '*ceiled* houses' in Haggai i. 4, they may have built defences sufficient to give a colour to the statements of the letter; and enough to free a critic from the necessity of transferring the passage in Ezra to the time of Artaxerxes Longimanus, solely because it speaks of the erection of the *walls*. Moreover, as Ezra (ix. 9) speaks of God having enabled the Jews to repair the temple, and of his having 'given them a wall in Jerusalem,' we find that, when the temple was finished (and no evidence shows how long *before* that), they actually had built a wall. Josephus also (*Antiq.* xi. 4, 4) mentions even 'strong walls with which they had surrounded the city' *before* the temple was completed. (It is worth while to remark that Dr. Hales, speaking of this *wall* of Ezra, endeavours, consistently with his theory, to make it 'most probably mean *the fence of a shepherd's fold*, here figuratively taken for their establishment in their own land.' But any lexicon will show that גדר means *a fence, a wall*, generally; and that it is only limited by the context to mean *the wall of a garden, the fence of a fold.*) Again, it is assumed that Nehemiah shows that the walls of the city were not built until his time. Not such, nor the same, as he erected, granted. But—to borrow a remark of J. D. Michaelis—when we read in Neh. i. 2, of the Jews who returned to Persia, and who answered Nehemiah's inquiry after the fate of the colony, by informing him that 'the wall of Jerusalem is broken down and the gates thereof burned with fire,' is it possible that they can refer to the destruction of the walls by Nebuchadnezzar, 144 years before? Was such news so long in reaching Nehemiah? Is it not much easier to believe that the Jews, soon after their return, erected some defences against the hostile and predatory clans around them; and that, in the many years which intervene between the books of Nehemiah and Ezra (of which we have no record), there was time enough for those tribes to have burnt the gates and thrown down the walls of their imperfect fortifications? Lastly, the view of Mr. Howes seems to require peculiar philological arguments, to reconcile the construction of the digression with the ordinary style of Hebrew narrative, and to point out the particles, or other signs disjunctive, by which we may know that ver. 24 is to be severed from the preceding. Nor is it altogether a trivial objection to his theory, that no scholar appears to have entertained it before himself. The nearest approach to it has been made by Vitringa, who, in his *Hypotyposi Temporum* (cited in Michaelis's *Adnott. Uberior.*), suggests, indeed, that ver. 6 refers to Xerxes, but explains all the rest of the passage as applying to Cambyses.

If the arguments here adduced are satisfactory, the Ahasuerus of our passage is the immediate successor of Cyrus—the frantic tyrant Cambyses, who came to the throne B.C. 529, and died after a reign of seven years and five months; and the discrepancy between Ezra and the apocryphal Esdras and Josephus—both of whom leave out ver. 6, and mention only the king of whom the detailed story of the letter is related, whom the one calls *Artaxerxes*, and the other *Cambyses*—may be reconciled, by supposing that they each make the reigns of Cambyses and of the impostor Smerdis into *one*.

The *third* Ahasuerus (Sept. Ἀρταξέρξης) is the Persian king of the book of Esther. The chief facts recorded of him there, and the *dates* of their occurrence, which are important in the subsequent inquiry, are these: In the *third* year of his reign he made a sumptuous banquet for all his nobility, and prolonged the feast for 180 days. Being on one occasion merry with wine, he ordered his queen Vashti to be brought out, to show the people her beauty. On her refusal to violate the decorum of her sex, he not only indignantly divorced her, but published an edict concerning her disobedience, in order to insure to every husband in his dominions the rule in his own house. In the *seventh* year of his reign he married Esther, a Jewess, who however concealed her parentage. In the *twelfth* year of his reign, his minister Haman, who had received some slights from Mordecai the Jew, offered him 10,000 talents of silver for the privilege of ordering a massacre of the Jews in all parts of the empire on an appointed day. The king refused this immense sum, but acceded to his request; and couriers were despatched to the most distant provinces to enjoin the execution of this decree. Before it was accomplished, however, Mordecai and Esther obtained such an influence over him, that he so far annulled his recent enactment as to despatch other couriers to empower the Jews to defend themselves manfully against their enemies on that day; the result of which was, that they slew 800 of his native subjects in Shushan, and 75,000 of them in the provinces.

Although almost every Medo-Persian king, from Cyaxares I. down to Artaxerxes III. (Ochus), has in his turn found some champion to assert his title to be the Ahasuerus of Esther, yet the present inquiry may reasonably be confined within much narrower limits than would be requisite for a discussion of all the rival claims which have been preferred. A succinct statement, principally derived from Justi's ingenious *Versuch über den König Ahasverus* (in Eichhorn's *Repertorium*, xv. 1-38), will suffice to show that Darius Hystaspis is the earliest Persian king in whom the plainest marks of identity are not evidently wanting; that Darius Hystaspis himself is, nevertheless, excluded on less obvious, but still adequate grounds; and that the whole question lies, and with what preponderance of probability, between Xerxes and his successor Artaxerxes Longimanus.

As Ahasuerus reigned from India to Ethiopia (Esth. i. 1), and imposed a tribute (not necessarily for the *first* time) on the land and isles of the sea (x. 1); and laid the disobedience of Vashti before the seven princes which see the king's face, and sit first in the kingdom (i. 14): it is argued that these three circumstances concur, according to the testimony of profane history,

exclude all the predecessors of Darius Hystaspis. For Darius was the first Persian king who subdued India, which thenceforth formed the twentieth province of his empire; and, as for Ethiopia, Cambyses, who first invaded it, only obtained a partial conquest there (Herod. iv. 44; iii. 25, 94). Darius was also the first who imposed a stated tribute on the different provinces of the empire, as, from the times of Cyrus, the revenue depended on the voluntary gifts of the people (Herod. iii. 89). Lastly, the seven princes, and their privilege of seeing the king's face, are traced to the events attending the elevation of Darius to the throne: when the seven conspirators who slew the usurper Smerdis stipulated, before ever it was decided which of their number should obtain the crown, that all the seven should enjoy special privileges, and, among others, this very one of seeing the king at any time without announcement (Herod. iii. 84). This is confirmed by the fact, that although the Persian counsellors of the time anterior to Darius are often mentioned (as when Cambyses laid before them a question parallel to that about Vashti, Herod. iii. 31), yet the definite number *seven* does not occur; whereas, after Darius, we find the seven counsellors both in Esther, and again in the reign of Artaxerxes Longimanus (Ezra vii. 14). (It is an oversight to appeal to this account of the seven conspirators, in order to find the precise number of *seven* princes. For the narrative in Herodotus shows that, as Darius was chosen king from among the seven, there could only be *six* persons to claim the privilege of seeing the king's face; not to insist that Otanes, who made a separate demand for himself, and who withdrew from the party before those stipulations were made, may *possibly* have reduced the number of privileged counsellors to *five*.)

But neither can it be Darius Hystaspis himself, although he possesses all these marks of agreement with the person intended in the book of Esther. For, first, not only can none of the names of the seven conspirators, as given either by Herodotus or by Ctesias, be brought to accord with the names of the seven princes in Esther; but, what is of greater importance, it is even more difficult to find the name of Darius himself in Achashverosh. For, notwithstanding the diverse corruptions to which proper names are exposed when transmitted through different foreign languages, there is yet such an agreement between the Zend name found by Grotefend in the cuneiform inscriptions, and the *Darius* of the Greeks, and *Darjávesh* (the name by which Darius Hystaspis is undoubtedly designated elsewhere in the Old Testament), that the genuineness of this title is open to less suspicion than that of almost any other Persian king. It would, therefore, be inexplicable that the author of the book of Esther above all others should not only not call him by the authentic name of sacred as well as profane history, but should apply to him a name which has been shown to be given, in almost all contemporary books of the Old Testament, to other Persian kings. Secondly, the moral evidence is against him. The mild and just character ascribed to Darius renders it highly improbable that, after favouring the Jews from the second to the sixth year of his reign, he should become a senseless tool in the hands of Haman, and consent to their extirpation. Lastly, we read of his marrying two daughters and a granddaughter of Cyrus, and a daughter of Otanes—and these only; would Darius have repudiated one of these for such a trifle, when his peculiar position, as the first king of his race, must have rendered such alliances indispensable?

It only remains now to weigh the evidence against Artaxerxes, in order to lead more cogently to the only alternative left—that it is Xerxes. As Artaxerxes allowed Ezra to go to Jerusalem with a colony of exiles in the seventh year of his reign (Ezra vii. 1-7); and as he issued a decree in terms so exceedingly favourable to the religious as well as civil interests of the Jews (giving them liberal grants and immunities, speaking of their law as the law of the God of heaven, and threatening punishment to whoever would not do the law of God and of the king, Ezra vii. 11-26): how could Haman, *five years afterwards*, venture to describe the Jews to him as a people whom, on the very account of their law, it was not for the king's profit to suffer? And how could Haman so directly propose their extermination, in the face of a decree so signally in their favour, and so recently issued by the same king? especially as the laws of the Medes and Persians might not be altered! Again, as Artaxerxes (assuming always that *he* is the Artachshast of Ezra vii. 1, and not *Xerxes*, as is nevertheless maintained by J. D. Michaelis, Jahn, and De Wette) was capable of such liberality to the Jews in the seventh year of his reign, let us not forget that, if he is the Ahasuerus of the book of Esther, it was in that same year that he married the Jewess. Now, if—by taking the first and tenth months in the seventh year of the king (the dates of the departure of Ezra, and of the marriage of Esther) to be the first and tenth months of the *Hebrew year* (as is the usual mode of notation; see Hitzig, *Die xii Kleinen Propheten*, note to Haggai i. 1), and not the first and tenth from the period of his *accession*—we assume that the departure of Ezra took place *after* his marriage with her, his clemency might be the effect of her influence on his mind. Then we have to explain how he could be induced to consent to the extirpation of the Jews in the twelfth year of his reign, notwithstanding that her influence still continued—for we find it evidently at work in the twelfth year. But if, on the other hand, his indulgence to Ezra was *before* his marriage, then we have even a greater difficulty to encounter. For then Artaxerxes must have acted from his own unbiassed lenity, and his purposed cruelty in the twelfth year would place him in an incongruous opposition with himself. As we, moreover, find Artaxerxes again propitious to their interests, in the twentieth year of his reign—when he allowed Nehemiah to return to Jerusalem—it is much easier to believe that he was also favourably disposed to them in the twelfth. At any rate, it would be allowing Esther a long time to exercise an influence on his disposition, if his clemency in the twentieth year was due to her, and not to his own inclination. Besides, the fact that neither Ezra nor Nehemiah gives the least hint that the liberal policy of Artaxerxes towards them was owing to the influence of their countrywoman, is an important negative point in the scale of probabilities. In this case also there is a serious difficulty in the name. As Artaxerxes is called

Artachshast in Ezra and Nehemiah, we certainly might expect the author of the book of Esther to agree with them in the name of a king whom they all had had such occasion to know. Nor is it, perhaps, unimportant to add, that Norberg asserts, on the authority of native Persian historians, that the *mother* of Bahman, *i. e.* Artaxerxes Longimanus, was a *Jewess* (*Opuscula Acad.* iii. 218). This statement would agree excellently with the theory that *Xerxes* was Ahasuerus. Lastly, the joint testimony borne to his clemency and magnanimity by the acts recorded of him in Ezra and Nehemiah, and by the accordant voice of profane writers (Plutarch, *Artaxerxes*; Diodor. Sic. xi. 71; Ammian. Marcell. xxx. 8), prevents us from recognising Artaxerxes in the debauched, imbecile, and cruel tyrant of the book of Esther.

On the ground of moral resemblance to that tyrant, however, every trait leads us to Xerxes. The king who scourged and fettered the sea; who beheaded his engineers because the elements destroyed their bridge over the Hellespont; who so ruthlessly slew the eldest son of Pythius because his father besought him to leave him one sole support of his declining years; who dishonoured the remains of the valiant Leonidas; and who beguiled the shame of his defeat by such a course of sensuality, that he publicly offered a reward for the inventor of a new pleasure—is just the despot to divorce his queen because she would not expose herself to the gaze of drunken revellers; is just the despot to devote a whole people, his subjects, to an indiscriminate massacre; and, by way of preventing that evil, to restore them the right of self-defence (which it is hard to conceive how the first edict ever could have taken away), and thus to sanction their slaughtering thousands of his other subjects.

There are also remarkable coincidences of date between the history of Xerxes and that of Ahasuerus. In the third year of his reign the latter gave a grand feast to his nobles, which lasted 180 days (Esth. i. 3); the former, in *his* third year, also assembled his chief officers to deliberate on the invasion of Greece (Herod. vii. 8). Nor should we wonder to find no nearer agreement in the two accounts than is expressed in the mere fact of the nobles being assembled. The two relations are quite compatible: each writer only mentioning that aspect of the event which had interest for him. Again, Ahasuerus married Esther at Shushan, in the seventh year of his reign: in the same year of *his* reign, Xerxes returned to Susa with the mortification of his defeat, and sought to forget himself in pleasure;—not an unlikely occasion for that quest for fair virgins for the harem (Esth. ii. 2). Lastly, the tribute imposed on the land and isles of the sea also accords with the state of his revenue exhausted by his insane attempt against Greece. In fine, these arguments, negative and affirmative, render it so highly probable that Xerxes is the Ahasuerus of the book of Esther, that to demand more conclusive evidence, would be to mistake the very nature of the question.

The *fourth* Ahasuerus (Ἀσούηρος) is mentioned in Tobit xiv. 15, in connection with the destruction of Nineveh. That circumstance points out Cyaxares I. as the person intended (Herod. i. 106).
—J. N.

AHAVA (אַהֲוָא; Sept. Ἀουέ, Ezra viii. 21 31, and Εὐεί, verse 15), the river by which the Jewish exiles assembled their second caravan under Ezra, when returning to Jerusalem. It would seem from ch. viii. 15, that it was designated from a town of the same name: 'I assembled them at the river that flows towards Ahava.' In that case, it could not have been of much importance in itself; and possibly it was no other than one of the numerous canals with which Babylonia then abounded. This is probably the true reason that Biblical geographers have failed to identify it. Some have sought the Ahava in the Lycus or Little Zab, finding that this river was anciently called Adiaba or Diaba. But these names would, in Hebrew characters, have no resemblance to אהוא; and it is exceedingly unlikely that the rendezvous for a Palestine caravan should have been north-east of the Tigris in Assyria, with the two great rivers, Tigris and Euphrates, between them and the plains they were to traverse. It is not so clear, however, that Rosenmuller is right in supposing that it probably lay to the south-west of Babylonia, *because that was in the direction of Palestine*. It is too much forgotten by him and other writers, that caravan routes seldom run in straight lines between two places. In this case, a straight line would have taken the caravan through the whole breadth of a desert seldom traversed but by the Arabs; and to avoid this, the usual route for large caravans lay, and still lies, north-west through Mesopotamia, much above Babylonia; and then, the Euphrates being crossed, the direction is south-west to Palestine. The greater probability, therefore, is, that the Ahava was one of the streams or canals of Mesopotamia communicating with the Euphrates, somewhere in the north-west of Babylonia.

AHAZ (אָחָז, *possessor*; Sept. Ἄχαζ; Joseph. Ἀχάζης), son of Jotham, and eleventh king of Judah, who reigned sixteen years, from B.C. 775 to 759. Ahaz was the most corrupt monarch that had hitherto appeared in Judah. He respected neither Jehovah, the law, nor the prophets; he broke through all the restraints which law and custom had imposed upon the Hebrew kings, and had regard only to his own depraved inclinations. He introduced the religion of the Syrians into Jerusalem, erected altars to the Syrian gods, altered the temple in many respects after the Syrian model, and at length ventured to shut it up altogether. Such a man could not exercise that *faith* in Jehovah, as the political head of the nation, which ought to animate the *courage* of a Hebrew king. Hence, after he had sustained a few repulses from Pekah and Rezin, his allied foes, when the Edomites had revolted from him, and the Philistines were making incursions into his country, notwithstanding a sure promise of divine deliverance, he called Pul, the king of Assyria, to his aid [ASSYRIA]. He even became tributary to that monarch, on condition of his obliging Syria and Israel to abandon their design of destroying the kingdom of Judah; and thus afforded to Tiglath-pilezer, the successor of Pul, an opportunity of conquering Syria, Israel beyond the Jordan, and Galilee. It would be wrong, however, to say that this would not have occurred but for the application of Ahaz; for the Assyrians were then prepared to

extend their empire west of the Euphrates, and would assuredly have done so without the immediate occasion which that application offered. The Assyrians, as might be expected, acted only with a view to their own interests, and afforded Ahaz no real assistance; on the contrary, they drove him to such extremities that he was scarcely able, with all the riches of the temple, of the nobility, and of the royal treasury, to purchase release from his troublesome protectors. He died at the age of thirty-six (2 Kings xvi.; 2 Chron. xxviii.; Isa. vii.; Jahn, *Biblisches Archäologie*, ii. 185; iii. 145; Hales, *Analysis*, ii. 417-419).

1. AHAZIAH (אֲחַזְיָה and אֲחַזְיָהוּ, *whom Jehovah sustains;* Sept. Ὀχοζίας), son and successor of Ahab, and seventh king of Israel. He reigned two years, B.C. 897-895. It seems that Jezebel exercised over her son the same influence which had guided her husband; and Ahaziah pursued the evil courses of his father. The most signal public event of his reign was the revolt of the Moabites, who took the opportunity of the defeat and death of Ahab to discontinue the tribute which they had paid to the Israelites. Ahaziah became a party in the attempt of Jehoshaphat, king of Judah, to revive the maritime traffic by the Red Sea; in consequence of which the enterprise was blasted, and came to nothing (2 Chron. xx. 35-37). Soon after, Ahaziah, having been much injured by a fall from the roof-gallery of his palace, had the infatuation to send to consult the oracle of Baal-zebub, the god of Ekron, respecting his recovery. But the messengers were met and sent back by Elijah, who announced to the king that he should rise no more from the bed on which he lay (1 Kings xxii. 51, to 2 Kings i. 50).

2. AHAZIAH, otherwise JEHOAHAZ, son of Jehoram by Athaliah, daughter of Ahab and Jezebel, and sixth king of Judah. He reigned but one year (B.C. 885), and that ill, suffering himself in all things to be guided by the wicked counsels of his idolatrous mother, Athaliah. He cultivated the connections which had unhappily grown up between the two dynasties, and which had now been cemented by marriage. Hence he joined his uncle Jehoram of Israel in an expedition against Hazael, king of Damascene-Syria, for the recovery of Ramoth-Gilead; and afterwards paid him a visit while he lay wounded in his summer palace of Jezreel. The two kings rode out in their several chariots to meet Jehu; and when Jehoram was shot through the heart, Ahaziah attempted to escape, but was pursued, and being mortally wounded, had only strength to reach Megiddo, where he died. His body was conveyed by his servants in a chariot to Jerusalem for interment (2 Kings ix. 22-28). In 2 Chron. xxii. 7-9, the circumstances are somewhat differently stated; but the variation is not substantial, and requires no particular notice. It appears from that passage, however, that Jehu was right in considering Ahaziah as included in his commission to root out the house of Ahab. He was Ahab's descendant (grandson by the mother's side) both in blood and character; and his presence in Jezreel at the time of Jehu's operations is considered as an arrangement of Providence for accomplishing his doom.

AHIAH (אֲחִיָּה, *frater Jehovæ*, i. e. *friend of God;* Sept. Ἀχιά, 1 Sam. viii. 3), son of Ahitub, and high-priest in the reign of Saul, and brother and predecessor of the Abimelech whom Saul slew for assisting David. Seeing that Abimelech, a son of Ahitub, was also high-priest in the same reign (1 Sam. xxii. 1), some have thought that both names belonged to the same person; but this seems less likely than the explanation which has just been given.

AHIAH, one of the two secretaries of Solomon (1 Kings iv. 3). Two other persons of this name occur in 1 Sam. xiv. 3; 1 Chron. viii. 7.

AHIAM, one of David's thirty heroes (2 Sam. xxiii. 33).

AHIEZER, the hereditary chief or prince of the tribe of Dan at the time that the Israelites quitted Egypt (Num. i. 12).

AHIHUD, a prince of the tribe of Asher, who, with the other chiefs of tribes, acted with Joshua and Eleazer in dividing the Promised Land (Num. xxxiv. 27).

AHIJAH (same name as AHIAH), a prophet residing in Shiloh in the times of Solomon and Jeroboam. He appears to have put on record some of the transactions of the former reign (2 Chron. ix. 29). It devolved on him to announce and sanction the separation of the ten tribes from the house of David, as well as the foundation (1 Kings xi. 29-39), and, after many years, the subversion of the dynasty of Jeroboam (1 Kings xiv. 7-11) [JEROBOAM].

AHIKAM, one of the four persons of distinction whom Josiah sent to consult Huldah, the prophetess (2 Kings xxii. 12-14). Ahikam and his family are honourably distinguished for their protection of the prophet Jeremiah (Jer. xxvi. 29; xxxix. 14).

AHIMAAZ (אֲחִימַעַץ, *brother of anger*, i. e. *irascible;* Sept. Ἀχιμάας), son and successor of Zadok, who was joint high-priest in the reign of David, and sole high-priest in that of Solomon. His history chiefly belongs to the time of David, to whom he rendered an important service during the revolt of Absalom. David having refused to allow the ark of God to be taken from Jerusalem when he fled thence, the high-priests, Zadok and Abiathar, necessarily remained in attendance upon it; but their sons, Ahimaaz and Jonathan, concealed themselves outside the city, to be in readiness to bear off to David any important information respecting the movements and designs of Absalom which they might receive from within. Accordingly, Hushai having communicated to the priests the result of the council of war, in which his own advice was preferred to that of Ahithophel [ABSALOM], they instantly sent a girl (probably to avoid suspicion) to direct Ahimaaz and Jonathan to speed away with the intelligence. The transaction, however, was witnessed and betrayed by a lad, and the messengers were so hotly pursued that they took refuge in a dry well, over which the woman of the house placed a covering, and spread thereon parched corn. She told the pursuers that the messengers had passed on in haste; and when all was safe, she released them, on which they made their way to David (2 Sam. xv. 24-37; xvii. 15-21). As may be inferred from his being chosen for this service, Ahimaaz was swift of foot. Of this we

have a notable example soon after, when, on the defeat and death of Absalom, he prevailed on Joab to allow him to carry the tidings to David. Another messenger, Cushi, had previously been despatched, but Ahimaaz outstripped him, and first came in with the news. He was known afar off by the manner of his running, and the king said, 'He is a good man, and cometh with good tidings;' and this favourable character is justified by the delicacy with which he waived that part of his intelligence concerning the death of Absalom, which he knew would greatly distress so fond a father as David (2 Sam. xviii. 19-33).

AHIMAN, one of three famous giants, of the race of Anak, who dwelt at Hebron when the Hebrew spies explored the land (Num. xiii. 22).

AHIMELECH (אֲחִימֶלֶךְ, *brother of the king*, i. e. *the king's friend;* Sept. Ἀβιμέλεχ; Cod. Alex. Ἀχιμέλεχ), son of Ahitub, and brother of Ahiah, who was most probably his predecessor in the high-priesthood [AHIAH]. When David fled from Saul, he went to Nob, a city of the priests in Benjamin, where the tabernacle then was; and by representing himself as on pressing business from the king, he obtained from Ahimelech, who had no other, some of the sacred bread which had been removed from the presence-table. He was also furnished with the sword which he had himself taken from Goliah, and which had been laid up as a trophy in the tabernacle (1 Sam. xxi. 1-9). These circumstances were witnessed by Doeg, an Edomite in the service of Saul, and were so reported by him to the jealous king as to appear acts of connivance at, and support to, David's imagined disloyal designs. Saul immediately sent for Ahimelech and the other priests then at Nob, and laid this treasonable offence to their charge; but they declared their ignorance of any hostile designs on the part of David towards Saul or his kingdom. This, however, availed them not; for the king commanded his guard to slay them. Their refusal to fall upon persons invested with so sacred a character might have brought even Saul to reason; but he repeated the order to Doeg himself, and was too readily obeyed by that malignant person, who, with the men under his orders, not only slew the priests then present, eighty-six in number, but marched to Nob, and put to the sword every living creature it contained. The only priest that escaped was Abiathar, Ahimelech's son, who fled to David, and afterwards became high priest (1 Sam. xxii.) [ABIATHAR].

AHINADAB, one of the twelve officers who, in as many districts into which the country was divided, raised supplies of provisions in monthly rotation for the royal household. Ahinadab's district was the southern half of the region beyond the Jordan (1 Chron. vi. 23).

AHINOAM (אֲחִינֹעַם, *brother of grace;* Sept. Ἀχινάαμ), a woman of Jezreel, one of the wives of David, and mother of Amnon. She was taken captive by the Amalekites when they plundered Ziklag, but was recovered by David (1 Sam. xxv. 43; xxvii. 3; xxx. 5; 2 Sam. ii. 2; iii. 2).

AHIO (אַחְיוֹ, *brotherly;* Sept., as an appellative, *his* [Uzzah's] *brothers—οἱ ἀδελφοὶ αὐτοῦ*), one of the sons of Abinadab, who, with his brother Uzzah, drove the new cart on which the ark was placed when David first attempted to remove it to Jerusalem. Ahio went before to guide the oxen, while Uzzah walked by the cart (2 Sam. vi. 3, 4. [UZZAH.]

AHIRA, chief of the tribe of Naphtali when the Israelites quitted Egypt (Num. i. 15).

AHISHAR, the officer who was 'over the household' of King Solomon (1 Kings iv. 6). This has always been a place of high importance and great influence in the East.

AHITHOPHEL (אֲחִיתֹפֶל, *brother of foolishness*, i.e. *foolish;* Sept. Ἀχιτόφελ), the very singular name of a man who, in the time of David, was renowned throughout all Israel for his worldly wisdom. He is, in fact, the only man mentioned in the Scriptures as having acquired a reputation for political sagacity among the Jews; and they regarded his counsels as oracles (2 Sam. xvi. 23). He was of the council of David; but was at Giloh, his native place, at the time of the revolt of Absalom, by whom he was summoned to Jerusalem; and it shows the strength of Absalom's cause in Israel that a man so capable of foreseeing results, and estimating the probabilities of success, took his side in so daring an attempt (2 Sam. xv. 12). The news of his defection appears to have occasioned David more alarm than any other single incident in the rebellion. He earnestly prayed God to turn the sage counsel of Ahithophel 'to foolishness' (probably alluding to his name); and being immediately after joined by his old friend Hushai, he induced him to go over to Absalom with the express view that he might be instrumental in defeating the counsels of this dangerous person (xv. 31-37). Psalm lv. is supposed to contain (12-14) a further expression of David's feelings at this treachery of one whom he had so completely trusted, and whom he calls 'My companion, my guide, and my familiar friend.' The detestable advice which Ahithophel gave Absalom to appropriate his father's harem, committed him absolutely to the cause of the young prince, since after that he could hope for no reconcilement with David (2 Sam. xvi. 20-23). His proposal as to the conduct of the war undoubtedly indicated the best course that could have been taken under the circumstances; and so it seemed to the council, until Hushai interposed with his plausible advice, the object of which was to gain time to enable David to collect his resources [ABSALOM]. When Ahithophel saw that his counsel was rejected for that of Hushai, the far-seeing man gave up the cause of Absalom for lost; and he forthwith saddled his ass, returned to his home at Giloh, deliberately settled his affairs, and then hanged himself, and was buried in the sepulchre of his fathers, B.C. 1023 (ch. xvii.). This is the only case of suicide which the Old Testament records, unless the last acts of Samson and Saul may be regarded as such.

1. AHITUB (אֲחִיטוּב, *brother of goodness* or *benignity*, i. e. *benign;* Sept. Ἀχιτώβ), son of Phinehas, and grandson of the high-priest Eli. His father Phinehas having been slain when the ark of God was taken by the Philistines, he succeeded his grandfather Eli B.C. 1141, and was himself succeeded by his son Ahiah about B.C. 1093.

2. AHITUB was also the name of the father of Zadok, who was made high-priest by Saul after the death of Ahimelech (2 Sam. viii. 17; 1 Chron. vi. 8). There is not the slightest ground for the notion that this Ahitub was ever high-priest himself—indeed, it is historically impossible.

AHOLAH and AHOLIBAH (אָהֳלָה and אָהֳלִיבָה), two fictitious or symbolical names adopted by Ezekiel (xxiii. 4) to denote the two kingdoms of Samaria (Israel) and Judah. There is a significant force in these names which must be noted. AHOLAH, אהלה, is usually rendered '*a tent*,' but more properly, *tentorium suum* (habet illa), 'she has *her own tent* or temple,' signifying that she has a tent or tabernacle of her own or of human invention. AHOLIBAH, אהלבה, means '*my tent*, i. e. *temple*, *is in her*,' that is to say—I, Jehovah, have given her a temple and religious service. They are both symbolically described as lewd women, adulteresses, prostituting themselves to the Egyptians and the Assyrians, in imitating their abominations and idolatries; wherefore Jehovah abandoned them to those very people for whom they showed such inordinate and impure affection. They were carried into captivity, and reduced to the severest servitude. But the crime of Aholibah was greater than that of Aholah, for she possessed more distinguished privileges, and refused to be instructed by the awful example of her sister's ruin. The allegory is an epitome of the history of the Jewish church.

AHOLIAB, of the tribe of Dan, a skilful artificer appointed along with Bezaleel to construct the Tabernacle (Exod. xxxv. 34).

AHUZZATH (אֲחֻזַּת, *a possession*), the 'friend' of Abimelech II., king of Gerar, who attended him on his visit to Isaac (Gen. xxvi. 26). In him occurs the first instance of that unofficial but important personage in ancient Oriental courts, called 'the king's friend,' or favourite. Several interpreters, following the Chaldee and Jerome, take *Ahuzzath* to be an appellative, denoting a *company of friends*, who attended Abimelech. The Sept. has Ὀχοζὰθ ὁ νυμφαγωγὸς αὐτοῦ.

AI (עַי, Josh. vii. 2; הָעַי, Gen. xii. 8; in Neh. xi. 31, עַיָּא; in Isa. x. 28, עַיָּת; Sept. Ἀγγαί, Ἀγγαΐ, and Γαΐ; Vulg. *Hai*), a royal city of the Canaanites, which lay east of Bethel. It existed in the time of Abraham, who pitched his tent between it and Bethel (Gen. xii. 8; xiii. 3); but it is chiefly noted for its capture and destruction by Joshua (vii. 2-5; viii. 1-29). This, as a military transaction, is noticed elsewhere [AMBUSCADE]. At a later period Ai was rebuilt, and is mentioned by Isaiah (x. 28), and also after the captivity. The site was known, and some scanty ruins still existed in the time of Eusebius and Jerome (*Onomast.* in *Agai*), but Dr. Robinson was unable to discover any certain traces of either. He remarks (*Bib. Researches*, ii. 313), however, that its situation with regard to Bethel may be well determined by the facts recorded in Scripture. That Ai lay to the east of Bethel is distinctly stated; and the two cities were not so far distant from each other but that the men of Bethel mingled in the pursuit of the Israelites when they feigned to flee before the king of Ai, and thus both cities were left defenceless (Josh. viii. 17); yet they were not so near but that Joshua could place an ambush on the west (or south-west) of Ai, without its being observed by the men of Bethel, while he himself remained behind in a valley to the north of Ai (Josh. viii. 4, 11-13). A little to the south of a village called Deir Diwan, and one hour's journey from Bethel, the site of an ancient place is indicated by reservoirs hewn in the rock, excavated tombs, and foundations of hewn stone. This, Dr. Robinson inclines to think, may mark the site of Ai, as it agrees with all the intimations as to its position. Near it, on the north, is the deep Wady el-Mutyâh, and towards the south-west other smaller wadys, in which the ambuscade of the Israelites might easily have been concealed.

AIL (אַיִל; Sept. κριός; *deer*, generically, according to Dr. Shaw):

AJAL (אַיָּל; Sept. ἔλαφος; *hart*, in Deut. xii. 15; Ps. xlii. 1; Isa. xxxv. 6):

AJALAH (אַיָּלָה; Sept. στέλεχος; *hind*, in Gen. xlix. 21; 2 Sam. xxii. 34; Job xxxix. 1; Ps. xviii. 31; Prov. v. 19; Cant. ii. 7; Jer. xiv. 5; Habak. iii. 19).

[Cervus barbarus.]

The *hart* and *hind* of our versions and of the older comments; but this interpretation is generally rejected by recent writers, who either suppose different species of antelope to be meant, or, with Dr. Shaw, consider the term to be generical for several species of deer taken together. Sir J. G. Wilkinson believes Ajal to be the Ethiopian oryx, with nearly straight horns. In the article ANTELOPE it will be shown under what terms the Oryges appear to be noticed in the Bible, and at present we only observe that an Ethiopian species could not well be meant where the clean animals fit for the food of Hebrews are indicated, nor where allusion is made to suffering from thirst, and to high and rocky places as the refuge of females, or of both, since all the species of oryx inhabit the open plains, and are not remarkable for their desire of drinking; nor can either of these propensities be properly ascribed to the true antelopes, or gazelles, of Arabia and Syria, all being residents of the plain and the desert; like the oryges, often

seen at immense distances from water, and unwilling to venture into forests, where their velocity of flight and delicacy of structure impede and destroy them. Taking the older interpretation, and reviewing all the texts where hart and hind are mentioned, we find none where these objections truly apply. Animals of the stag kind prefer the security of forests, are always most robust in rocky mountain covers, and seek water with considerable anxiety; for of all the light-footed ruminants, they alone protrude the tongue when hard pressed in the chace. Now, comparing these qualities with several texts, we find them perfectly appropriate to the species of these genera alone. Ajal appears to be a mutation of a common name with ἔλαφος; and although no great stress should be laid on names which, more particularly in early times, were used without much attention to specific identity, yet we find the Chaldee Ajal and Sarmatic Jelen strictly applied to stag. Hence the difficulty lay in the modern denial that ruminants with branched deciduous horns existed in the south-west of Asia and Egypt; and Cuvier for some time doubted, notwithstanding Virgil's notice, whether they were found in any part of Africa; nevertheless, though not abundant where water is rare, their existence from Morocco to the Nile and beyond it cannot be denied; and it is likely that an Asiatic species still appears sometimes in Syria, and, no doubt, was formerly common there.

The first species here referred to is now known by the name of Cervus Barbarus, or Barbary stag, in size between our red and fallow deer, distinguished by the want of a bisantler, or second branch on the horns, reckoning from below, and by a spotted livery, which is effaced only in the third or fourth year. This species is figured on Egyptian monuments, is still occasionally seen about the Natron lakes west of the Nile, and, it seems, was observed by a reverend friend in the desert east of the Dead Sea, on his route from Cairo towards Damascus. We take this to be the Igial or Ajal of the Arabs, the same which they accuse of eating fish—that is, the ceps, lizards, and snakes, a propensity common to other species, and similarly ascribed to the Virginian and Mexican deer.

The other is the Persian stag, or Maral of the Tahtar nations, and Gewazen of Armenia, larger than the stag of Europe, clothed with a heavy mane, and likewise destitute of bisanlters. We believe this species to be the Soëgur of Asiatic Turkey, and Mara of the Arabs, and therefore residing on the borders of the mountain forests of Syria and Palestine. One or both of these species were dedicated to the local *bona dea* on Mount Libanus—a presumptive proof that deer were found in the vicinity.

Of the hind it is unnecessary to say more than that she is the female of the stag, or hart, and that in the manners of these animals the males always are the last to hurry into cover.*—C. H. S.

AIN (עין, usually *En* in the English version), the Hebrew word for *a fountain*, which signification it also bears in Arabic, Syriac, and Ethiopic. It chiefly attracts notice as combined with the proper names of various places; and in all such cases it points to some remarkable or important fountain near or at the spot. Thus, עין־גדי, *En-gedi*, 'fountain of kids' [En-gedi]; עין־גנים, *En-gannim* (Josh. xv. 34), 'fountain of the gardens;' עין־דאר, *En-dor*, 'house-fountain' (*fons habitationis*, Gesenius) [En-dor]; עין־חדה, *En-haddah* (Josh. xix. 21), 'sharp,' *i. e.* 'swift fountain;' עין־משפט, *En-mishpat* (Gen. xiv. 7), 'fountain of judgment;' there also called קדש, but proleptically, as that name appears to have originated at a later period (Num. xx. 13), [Kadesh]; עין־אגלים, *Eneglaim*, 'fountain of two calves' (Ezek. xlvii. 10) [En-eglaim]: עין־שמש, *En-shemesh* (Josh. xv. 7), 'fountain of the sun;' עין־רגל, *En-rogel* (2 Sam. xvii. 17, &c.), literally 'fountain of the foot,' which is construed in the Targum 'fuller's fountain,' because the fullers there trod the cloths with their feet; others, 'fountain of the spy' [En-rogel]. There are other names with which עין is thus used in composition; but these are the most important. In one case עין occurs alone as the name of a place in the north-east of Palestine (Gesenius, *Thesaur.* in עין. In the plural it only occurs in the New Testament (John iii. 23) as Ænon (Αἰνών), or fountains, as in our *Fountains* Abbey in Yorkshire.

AIR (ἀήρ), the atmosphere, as opposed to the ether (αἰθήρ), or higher and purer region of the sky (Acts xxii. 24; 1 Thess. iv. 17; Rev. ii. 2; xvi 17). The phrase εἰς ἀέρα λαλεῖν—*to speak into the air* (1 Cor. xiv. 9), is a proverbial expression to denote speaking in vain, like *ventis verba profundere* in Latin (Lucret. iv. 929), and a similar one in our own language; and εἰς ἀέρα δέρειν, *to beat the air* (1 Cor. ix. 26), denotes *acting* in vain, and is a proverbial allusion to an abortive stroke into the air in pugilistic contests. The later Jews, in common with the Gentiles, especially the Pythagoreans, believed the air to be peopled with spirits, under the government of a chief, who there held his seat of empire (Philo, 31, 28; Diog. Laert. viii. 32). These spirits were supposed to be powerful, but malignant, and to incite men to evil. That the Jews held this opinion is plain from the Rabbinical citations of Lightfoot, Wetstein, &c. Thus in *Pirke Aboth* 83. 2, they are described as *filling the whole air*, arranged in troops, in regular subordination. The early Christian fathers entertained the same belief (Ignat. *Ad Ephes.* § 13), which has indeed come down to our own times. It is to this notion that St. Paul is supposed to allude in Eph. ii. 2, where Satan is called ἄρχων τῆς ἐξουσίας τοῦ ἀέρος, 'prince of the power (*i. e.* of those who exercise the power) of the air.' Some, however, explain ἀήρ here by *darkness*, a sense which it bears also in profane writers. But the apostle no doubt speaks according to the notions entertained by most of those to whom he wrote, without expressing the

* In Gen. xlix. 21, Bochart's version appears to be preferable to our present translation—'Naphtali is a hind let loose; he giveth goodly words;' this, by a slight alteration of the punctuation in the Hebrew, he renders 'Naphtali is a spreading tree, shooting forth beautiful branches.' In Ps. xxix. 9, instead of 'The voice of the Lord maketh the hind to calve, and discovereth the forests,' Bishop Lowth gives, 'The voice of the Lord striketh the oak, and discovereth the forests,' which is also an improvement.

extent of his own belief (see Lightfoot, Whitby, Koppe, Wetstein, and Bloomfield, *in loc.*).

AJALON (אַיָּלוֹן; Sept. Αἰαλών), a town and valley in the tribe of Dan (Josh. xix. 42), which was given to the Levites (Josh. xxi. 24; 1 Chron. vi. 69). It was not far from Bethshemesh (2 Chron. xxviii. 18), and was one of the places which Rehoboam fortified (2 Chron. xi. 10), and among the strongholds which the Philistines took from Ahaz (2 Chron. xxviii. 18). But the town, or rather the valley to which the town gave name, derives its chief renown from the circumstance that when Joshua, in pursuit of the five kings, arrived at some point near Upper Beth-horon, looking back upon Gibeon and down upon the noble valley before him, he uttered the celebrated command: 'Sun, stand thou still on Gibeon, and thou moon, in the valley of Ajalon' (Josh. x. 12). From the indications of Jerome, who places Ajalon two Roman miles from Nicopolis, on the way to Jerusalem, joined to the preservation of the ancient name in the form of Yâlo, Dr. Robinson (*Bibl. Researches*, iii. 63) appears to have identified the valley and the site of the town. From a housetop in Beit Ur (Beth-horon) he looked down upon a broad and beautiful valley, which lay at his feet, towards Ramleh. This valley runs out west by north through a tract of hills, and then bends off south-west through the great western plain. It is called Merj Ibn 'Omeir. Upon the side of the long hill which skirts the valley on the south, a small village was perceived, called Yâlo, which cannot well be any other than the ancient Ajalon; and there can be little question that the broad wady to the north of it is the valley of the same name.

AKKO. [GOAT.]

AKRABBIM (מַעֲלֵה עַקְרַבִּים, *Scorpion height;* Sept. Ἀνάβασις Ἀκραβίν), an ascent, hill, or chain of hills, which, from the name, would appear to have been much infested by scorpions and serpents, as some districts in that quarter certainly were (Deut. viii. 15; comp. Volney, ii. 256). It was one of the points which are only mentioned in describing the frontier-line of the Promised Land southward (Judg. i. 36). Shaw conjectures that Akrabbim may probably be the same with the mountains of Akabah, by which he understands the easternmost range of the μέλανα ὄρη, 'black mountains' of Ptolemy, extending from Paran to Judæa. This range has lately become well known as the mountains of Edom, being those which bound the great valley of Arabah on the east (*Travels*, ii. 120). More specifically, he seems to refer Akrabbim to the southernmost portion of this range, near the fortress of Akabah, and the extremity of the eastern gulf of the Red Sea; where, as he observes, 'from the badness of the roads, and many rocky passes that are to be surmounted, the Mohammedan pilgrims lose a number of camels, and are no less fatigued than the Israelites were formerly in getting over them.' Burckhardt (*Syria*, p. 509) reaches nearly the same conclusion, except that he rather refers 'the ascent of Akrabbim,' to the acclivity of the *western* mountains from the plain of Akabah. This ascent is very steep, 'and has probably given to the place its name of Akabah, which means a cliff, or steep declivity.' The probability of this identification depends upon the question, whether the south-eastern frontier of Judah would be laid down so far to the south in the time of Moses and Joshua. If so, the identification is fair enough; but if not, it is of no weight or value in itself. The apparent analogy of names can be little else than accidental, when the *signification* in the two languages is altogether different.

AKROTHINION (Ἀκροθίνιον). This Greek word, which occurs in Heb. vii. 4, means *the best of the spoils.* The Greeks, after a battle, were accustomed to collect the spoils into a heap, from which an offering was first made to the gods: this was the ἀκροθίνιον (Xenoph. *Cyrop.* vii. 5, 35; Herodot. viii. 121, 122; Pind. *Nem.* 7, 58). In the first-cited case, Cyrus, after the taking of Babylon, *first* calls the magi, and commands them to choose the ἀκροθίνια of certain portions of the ground for sacred purposes.

ALABASTER (Ἀλάβαστρον). This word occurs in the New Testament only in the notice of the 'alabaster *box*,' or rather *vessel*, of 'ointment of spikenard, very precious,' which a woman broke, and with its valuable contents anointed the head of Jesus, as he sat at supper in Bethany in the house of Simon the leper (Matt. xxvi. 7; Mark xiv. 3). At Alabastron, in Egypt, there was a manufactory of small pots and vessels for holding perfumes, which were made from a stone found in the neighbouring mountains. The Greeks gave to

these vessels the name of the city from which they came, calling them *alabastrons.* This name was eventually extended to the stone of which they were formed: and at length the term *alabastra* was applied without distinction to all perfume vessels, of whatever materials they consisted. Theocritus speaks of golden alabastra, Συρίω μύρω χρύσει' ἀλάβαστρα (*Idyl.* xv. 114); and perfume vessels of different kinds of stone, of glass, ivory, bone, and shells, have been found in the Egyptian tombs (Wilkinson, iii. 379). It does not, therefore, by any means follow that the alabastron which the woman used at Bethany was really of alabaster: but a probability that it was such arises from the fact that vessels made of this stone were deemed peculiarly suitable for the most costly and powerful perfumes (Plin. *Hist. Nat.* xiii. 2; xxxvi. 8, 24). The woman is said

to have 'broken' the vessel; which is explained by supposing that it was one of those shaped somewhat like a Florence oil-flask, with a long and narrow neck; and the mouth being curiously and firmly sealed up, the usual and easiest way of getting at the contents was to break off the upper part of the neck.

The alabastra were not usually made of that white and soft gypsum to which the name of alabaster is now for the most part confined. Dr. John Hill, in his useful notes on Theophrastus sets this matter in a clear light:—'The *alabastrum* and *alabastrites* of naturalists, although by some esteemed synonymous terms, and by others confounded with one another, are different substances. The *alabastrum* is properly the soft stone [the common "alabaster"] of a gypseous substance, burning easily into a kind of plaster; and the *alabastra*, the hard, bearing a good polish, and approaching the texture of marble. This stone was by the Greeks called also sometimes *onyx*, and by the Latins *marmor onychites*, from its use in making boxes to preserve precious ointments; which boxes were commonly called, "onyxes" and "alabasters." Thus Dioscorides, ἀλαβαστρίτης ὁ καλούμενος ὄνυξ. And hence have arisen a thousand mistakes in the later authors, of less reading, who have misunderstood Pliny, and confounded the onyx marble, as the alabaster was frequently called, with the precious stone of that name.'

This is now better understood. It is apprehended that, from certain appearances common to both, the same name was given not only to the common alabaster, called by mineralogists *gypsum*, and by chemists *sulphate of lime*; but also to the *carbonate of lime*, or that harder stone from which the alabastra were usually made, and which was often distinguished by the name of onyx alabaster, on account of the approach of its colour to that of the human finger-nails.

ALAH (אָלָה), the name of a tree, which, both in its singular and plural form, occurs often in the Scriptures. It is variously rendered in ancient and modern versions—as *oak*, *terebinth*, *teil* (linden) *tree*, *elm*, and even *plain*. This has occasioned more of apparent perplexity than now really belongs to the subject. In the masculine singular (איל) it occurs only in Gen. xiv. 6, in connection with Paran, or as *El*-Paran. This the Sept. renders by *terebinth* (τερεβίνθου τῆς Φαράν); Aquila, Symmachus, and Theodotion by 'oak,' *quercus*; and the Samaritan, Onkelos, Kimchi, Jerome, &c., by 'plain,' which is also adopted in the margin of our Bibles. The primary import of the word is *strength*, *power*; whence some hold that it denotes any mighty tree, especially the terebinth and the oak. But the oak is *not* a mighty tree in Palestine; and, as it possesses its own distinct name [ALLON], which is shown, by the apposition of the names in Isa. vi. 13, and Hos. iv. 13, to denote a different tree from *alah*, one can have little hesitation in restricting the latter to the terebinth. Indeed, this conclusion has not been much questioned since it was shown by Celsius (*Hierobotan.* ii. 34-58) that the terebinth was most probably denoted by the Hebrew *alah*; that the terebinth is the *but'm* بطم of the Arabs; and that the Arabian *but'm* is frequent in Palestine. The first position is of course incapable of absolute proof; the second has been confirmed by Forskal and Ehrenberg; and the third is attested by a host of travellers, who speak of it under both names. Celsius exhibits the testimonies which existed in his time: to which those of Forskal, Hasselquist, and Dr. Robinson may now be added. The last-named traveller gives the best account of the tree as it is found in Palestine. At the point where the roads from Gaza to Jerusalem, and from Hebron to Ramleh, cross each other, and about midway between the two last-named towns, this traveller observed an immense but'm-tree, the largest he saw anywhere in Palestine. 'This species (*Pistacia Terebinthus*) is, without doubt,' he adds, 'the terebinth of the Old Testament; and under the shade of such a tree Abraham may well have pitched his tent at

[Pistacia Terebinthus.]

Mamre. The but'm is not an evergreen, as is often represented; but its small feathered lancet-shaped leaves fall in the autumn, and are renewed in the spring. The flowers are small, and followed by small oval berries, hanging in clusters from two to five inches in length, resembling much the clusters of the vine when the grapes are just set. From incisions in the trunk there is said to flow a sort of transparent balsam, constituting a very pure and fine species of turpentine, with an agreeable odour, like citron or jessamine, and a mild taste, and hardening gradually into a transparent gum. In Palestine nothing seems to be now known of this product of the but'm. The tree is found also in Asia Minor (many of them near Smyrna), Greece, Italy, the south of France, Spain, and in the north of Africa; and is described as not usually rising to the height of more than twenty feet. It often exceeded that size as we saw it in the mountains; but here in the plains it was very much larger.'

In Palestine and the neighbouring countries the terebinth seems to be regarded with much the same distinction as the oak is in our northern lati-

tales. The tree is long-lived; and it is certain that there were in the country ancient terebinths, renowned for their real or supposed connection with scriptural incidents. Thus, about the time of Christ, there was at Mamre, near Hebron, a venerable terebinth, which a tradition, old in the time of Josephus, alleged to be that (rendered 'plain' in our version of Gen. xiii. 18) under which Abraham pitched his tent; and which, indeed, was believed to be as old as the creation of the world (Joseph. *Bell. Jud.* iv. 9, 7). The later tradition was content to relate that it sprang from the staff of one of the angels who appeared there to Abraham (Gen. xviii. 2). Having, from respect to the memory of the patriarch, and as one of the spots consecrated by the presence of 'commissioned angels,' become a place of great resort and pilgrimage both of Jews and Christians, the Phoenicians, Syrians, and Arabians were attracted to it with commercial objects; and it thus became a great fair. At this fair thousands of captive Jews were sold for slaves by order of Hadrian in A.D. 135 (Jerome, *Comm. in Zech.* xi. 4, *De Locis Heb.* 87; Hegesipp. iv. 17; Sozom. *Hist. Eccles.* ii. 4, 5; Niceph. viii. 30; Reland, *Palæst.* p. 714). Being a place of such heterogeneous assemblage, great abominations and scandals, religious and moral, arose, to which a stop was at length put by Eusebius of Cæsarea and the other bishops of Palestine, who, by order of Constantine, cast down all the pagan altars, and built a church by or under the tree. It is said that the tree dried up in the reign of Theodosius the Younger; but that the still vital trunk threw off shoots and branches, and produced a new tree, from which Brocard (vii. 64), Saliguac (x. 5), and other old travellers declare that they brought slips of the new and old wood to their own country. Zuallart, who alleges that some of its wood was given to him by the monks at Jerusalem, candidly admits the difficulty of believing the stories which were told of its long duration: but he satisfies himself with the authority of the authors we have mentioned, and concludes that God may have specially interfered to preserve it, with other old memorials, for his own glory and for our instruction (*Voyage de Jérusalem*, iv. 1). The tree was accidentally destroyed by fire in 1646 A.D. (Mariti, p. 520).

ALCIMUS, or JACIMUS (Ἄλκιμος ὁ καὶ Ἰάκειμος, Joseph. *Antiq.* xii. 9. 3, Græcised forms of Eliakim and Joachim—names often interchanged in Hebrew), an usurping high-priest of the Jews in the time of Judas Maccabæus [MACCABEES; PRIESTS, HIGH].

ALEXANDER THE GREAT. This mighty king is named in the opening of the first book of Maccabees, and is alluded to in the prophecies of Daniel. These, however, are not the principal reasons for giving his name a place in this work: he is chiefly entitled to notice here because his military career permanently affected the political state of the Jewish people, as well as their philosophy and literature. It is not our part, therefore, to detail even the outlines of his history, but to point out the causes and nature of this great revolution, and the influence which, formally through Alexander, Greece has exerted over the religious history of the West.

The conquest of Western Asia by Greeks was so thoroughly provided for by predisposing causes, as to be no mere accident ascribable to Alexander as an individual. The wars which were carried

on between Greece and Persia in the reigns of Darius, Xerxes, and Artaxerxes—from B.C. 490 to B.C. 449—sufficiently showed the decisive superiority in arms which the Greeks possessed, though no Greek as yet aspired to the conquest of Persia. Brave freemen, attached to their own soil, would not risk abandoning it for ever for the satisfaction of chasing their foe out of his home. But after the convulsions of the Peloponnesian War (B.C. 431-404) had filled Greece with exiles, whose sole trade was that of soldiers, a devoted standing army could be had for money. By the help of such mercenaries, Cyrus, younger brother of Artaxerxes II., attempted to seize the crown of Persia (B.C. 401); and although he was himself slain, this, in its results (which cannot be here properly detailed), did but show more signally that Greeks might force their way to the very palace of the great king, just as they afterwards triumphantly retreated through the heart of his empire. Soon after this, Agesilaus, king of Sparta, appears to have had serious designs of founding a Spartan province in Asia Minor, where he met with easy success; but he was recalled by troubles at home (B.C. 394). About the year B.C. 374, Jason, the chief man of Pheræ, in Thessaly, and virtually monarch of the whole province, having secured the alliance of Macedon, seriously meditated the conquest of the Persian empire; and he (or his son) might probably have effected it, had he not been assassinated, B.C. 370. The generation who heard of that event witnessed the rise of Macedon to supremacy under the great Philip, whose reign reached from B.C. 359 to B.C. 338. He too had proposed to himself the invasion and conquest of Persia as the end of all his campaigns and the reward of all his labours; and he too was suddenly taken off by the assassin's dagger. He was succeeded by his greater son, for whom it was reserved to accomplish that of which Grecian generals had now for seventy years dreamed. It seems therefore clear that Greece was destined to overflow into Asia, even without Alexander; for Persia was not likely to have such a series of able monarchs, and such an exemption from civil wars, as alone could have hindered the event. The personal genius of the Macedonian hero, however, determined the form and the suddenness of the conquest; and, in spite of his premature death, the policy which he pursued seems to have left some permanent effects. It is indeed possible that, in regard to the toleration of Oriental cus-

toms and religions, no other policy than his could have held the empire together. Since the Romans in Asia and the British in India have followed the same procedure, any other Greek conquerors of Persia might have done the same had Alexander never existed. Be this as it may, it is certain that his conciliatory policy was copied by his successors for at least a century and a half.

His respectful behaviour to the Jewish high-priest has been much dwelt on by Josephus (*Antiq.* xi. 8, 4-6), a writer whose trustworthiness has been greatly overrated. Special reasons for questioning the story may be found in Thirlwall (*Hist. of Greece*, vi. 206): but in fact, as it evidently rests on mere tradition, even a knowledge of human nature, and of the particular author, justifies large deductions from the picturesque tale. Some of the results, however, can hardly be erroneous, such as, that Alexander guaranteed to the Jews, not in Judæa only, but in Babylonia and Media, the free observance of their hereditary laws, and on this ground exempted them from tribute every seventh (or sabbatical) year. From the Romans in later times they gained the same indulgence, and it must no doubt have been enjoyed under the Persian king also, to whom they paid tribute at the time of Alexander's invasion. It is far from improbable then that the politic invader affected to have seen and heard the high-priest in a dream (as Josephus relates), and showed him great reverence, as to one who had declared 'that he would go before him and give the empire of Persia into his hand.' The profound silence observed concerning Judæa by all the historians of Alexander, at any rate proves that the Jews passed over without a struggle from the Persian to the Macedonian rule.

Immediately after, he invaded and conquered Egypt, and showed to its gods the same respect as to those of Greece. Almost without a pause he founded the celebrated city of Alexandria (B.C. 332), an event which, perhaps more than any other cause, permanently altered the state of the East, and brought about a direct interchange of mind between Greece, Egypt, and Judæa. Sidon had been utterly ruined by Artaxerxes Ochus (B.C. 351), and Tyre, this very year, by Alexander: the rise of a new commercial metropolis on the Mediterranean was thus facilitated; and when the sagacious Ptolemy became master of Egypt (B.C. 323), that country presently rose to a prosperity which it never could have had under its distant and intolerant Persian lords. The Indian trade was diverted from its former course up the Euphrates into the channel of the Red Sea; and the new Egyptian capital soon became a centre of attraction for Jews as well as Greeks. Under the dynasty of the Ptolemies the Hellenic race enjoyed such a practical ascendency (though on the whole to the benefit of the native Egyptians) that the influx of Greeks was of course immense. At the same time, owing to the proximity of the Egyptian religion, both the religion and the philosophy of the Greeks assumed here a modified form, and the monarchs, who were accustomed to tolerate and protect Egyptian superstition, were naturally very indulgent to Jewish peculiarities. Alexandria therefore became a favourite resort of the Jews, who here lived under their own laws, administered by a governor (ἐθνάρχης) of their own nation; but they learned the Greek tongue, and were initiated more or less into Greek philosophy. Their numbers were so great as to make them a large fraction of the whole city; and out of their necessities arose the translation of the Old Testament into Greek. The close connection which this Egyptian colony maintained with their brethren in Palestine produced various important mental and spiritual effects on the latter [ESSENES]. The most accessible specimen of rhetorical morality produced by the Hebrew culture of Greek learning is to be seen in the book called the Wisdom of Solomon: the most elaborate development of Hebrew Platonism is contained in the works of Philo. In the writing called the Third Book of the Maccabees is a sufficiently unfavourable specimen of an attempt at rhetorical history by a mind educated in the same school. How deep an impress has been left on the Christian Church by the combination of Greek and Hebrew learning which characterized Alexandria, it needs many pages for the ecclesiastical historian to discuss. The Grecian cities afterwards built in northern Palestine [DECAPOLIS] seem to have exerted little spiritual influence on the south; for a strong repulsion existed in the strictly Jewish mind against both Samaria and Galilee.

The tolerant policy of Alexander was closely followed by his great successor Seleucus, who admitted the Jews to equal rights with Macedonians in all his new cities, even in his capital of Antioch (Joseph. *Antiq.* xii. 3, 1); and similar or greater liberality was exercised by the succeeding kings of that line, down to Antiochus Epiphanes [ANTIOCHUS]. It can scarcely be doubted that on this to a great extent depended the remarkable westward migration of the Jews from Media and Babylon into Asia Minor, which went on silently and steadily until all the chief cities of those parts had in them the representatives of the twelve tribes. This again greatly influenced the planting of Christianity, the most favourable soil for which, during the time of its greatest purity, was in a Greek population which had previously received a Jewish culture. In passing we may remark, that we are unable to find the shadow of a reason for the popular assumption that the modern European Jews are descendants of the *two* more than of the other *ten* or eleven tribes.

The great founder of Alexandria died in his thirty-second year, B.C. 323. The empire which he then left to be quarrelled for by his generals comprised the whole dominions of Persia, with the homage and obedience of Greece superadded. But on the final settlement which took place after the battle of Ipsus (B.C. 301), Seleucus, the Greek representative of Persian majesty, reigned over a less extended district than the last Darius. Not only were Egypt and Cyprus severed from the eastern empire, but Palestine and Cœlesyria also fell to their ruler, placing Jerusalem for nearly a century beneath an Egyptian monarch. On this subject, see further under ANTIOCHUS.

The word Alexander means *the helper* or *rescuer of men*, denoting military prowess. It is Homer's ordinary name for Paris, son of Priam, and was borne by two kings of Macedon before the great Alexander. The history of this conqueror is known to us by the works of Arrian and Quintus Curtius especially, besides the general sources for all Greek history. Neither of these

authors wrote within four centuries of the death of Alexander; but they had access to copious contemporary narratives since lost.—F. W. N.

2. ALEXANDER, surnamed BALAS, from his mother Bala, a personage who figures in the history of the Maccabees and in Josephus. His extraction is doubtful; but he professed to be the

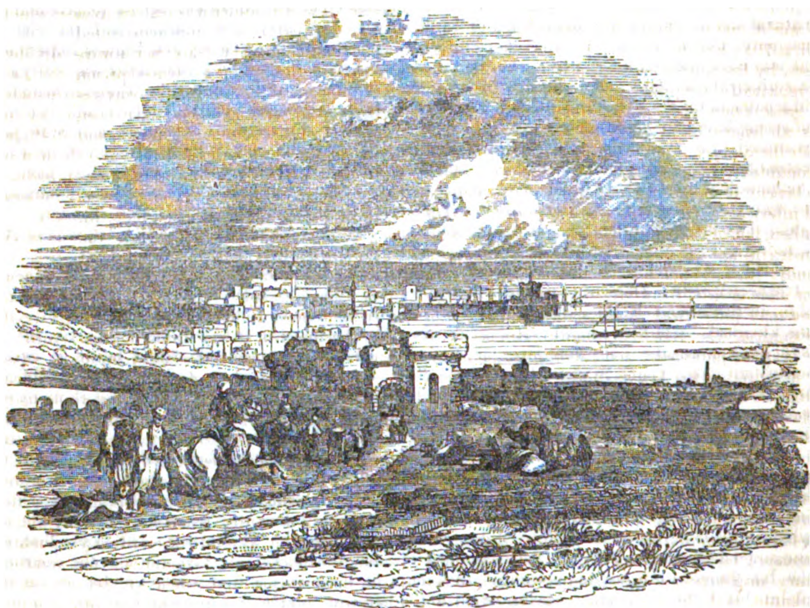
natural son of Antiochus Epiphanes, and in that capacity, out of opposition to Demetrius Soter, he was recognised as king of Syria by the king of Egypt, by the Romans, and eventually by Jonathan Maccabæus, on the part of the Jews. The degree of strength and influence which the Jewish chief possessed, was sufficient to render his adhesion valuable to either party in the contest for the throne. As he was obliged to take a side, and had reason to distrust the sincerity of Demetrius, Jonathan yielded to the solicitations of Alexander, who, on arriving at Ptolemais, sent him a purple robe and a crown of gold, to induce him to espouse his cause (1 Macc. x. 18). Demetrius was not long after slain in battle, and Balas obtained possession of the kingdom. He then sought to strengthen himself by a marriage with the king of Egypt's daughter. This marriage was celebrated at Ptolemais, and was attended by Jonathan, who received marks of high consideration from the Egyptian (Ptolemy Philometor) and Syrian kings (1 Macc. 51-56; Joseph. *Antiq.* xiii. 4). Prosperity ruined Alexander; he soon abandoned himself to voluptuousness and debauchery, leaving the government in the hands of ministers whose misrule rendered his reign odious. This encouraged Demetrius Nicator, the eldest son of the late Demetrius Soter, to appear in arms, and claim his father's crown. Alexander took the field against him; and in the brief war that followed, although his father-in-law Ptolemy (who had his own designs upon Syria) abandoned his cause, Jonathan remained faithful to him, and rendered him very important services, which the king rewarded by bestowing on him a golden chain, such as princes only wore, and by giving him possession of Ekron (Ἀκκαρών). The defection of the Egyptian king, however, was fatal to the cause of Balas; he was defeated in a pitched battle, and fled with 500 cavalry to Abæ in Arabia, and sought refuge with the emir Zabdiel. The Arabian murdered his confiding guest in the fifth year of his reign over Syria, and sent his head to Ptolemy, who himself died the same year, B.C. 145. Balas left a young son, who was eventually made king of Syria by Tryphon, under the name of Antiochus Theos (1 Macc. xi. 13-18; Joseph. *Antiq.* xiii. 4).

3. ALEXANDER JANNÆUS, the first prince of the Maccabæan dynasty who assumed the title of king [MACCABEES].

4. ALEXANDER, son of Herod the Great and Marianne [HERODIAN FAMILY].

5. ALEXANDER, a Jew of Ephesus, known only from the part he took in the uproar about Diana, which was raised there by the preaching of Paul. As the inhabitants confounded the Jews and Jewish Christians, the former put forward Alexander to speak on their behalf, but he was unable in the tumult to obtain a hearing (Acts xix. 33). Some suppose that this person is the same with 'Alexander the coppersmith,' of 2 Tim. iv. 14, but this is by no means probable: the name of Alexander was in those times very common among the Jews.

6. ALEXANDER, a coppersmith or brazier (mentioned in 1 Tim. i. 20; 2 Tim. iv. 14), who with Hymenæus and others broached certain heresies touching the resurrection, for which they were excommunicated by St. Paul. These persons, and especially Alexander, appear to have maligned the faith they had forsaken, and the character of the apostle. As every Jew learned some trade, it has been imagined that Alexander was really a man of learning, and not an artizan, although acquainted with the brazier's craft. But we are not aware that it was usual to designate a literate person by the name of the trade with which he was acquainted, although this may possibly have been the case when a man bore a name so common and so undistinguishing as that of Alexander.



ALEXANDRE, or SALOME, wife of Alexander Jannæus [MACCABEES].

ALEXANDRIA (Ἀλεξάνδρεια, 3 Macc. iii. 1, 21), the chief maritime city, and long the metropolis of Lower Egypt. As this city owed its foundation to Alexander the Great, the Old Testament canon had closed before it existed; nor is it often mentioned in the Apocrypha, or in the New Testament. But it was in many ways most importantly connected with the later history of the Jews—as well from the relations which subsisted between them and the Ptolemies, who reigned in that city, as from the vast numbers of Jews who were settled there, with whom a constant intercourse was maintained by the Jews of Palestine. It is perhaps safe to say that, from the foundation of Alexandria to the destruction of Jerusalem, and even after, the former was of all foreign places that to which the attention of the Jews was most directed. And this appears to have been true even at the time when Antioch first, and afterwards Rome, became the seat of the power to which the nation was subject.

Alexandria is situated on the Mediterranean, twelve miles west of the Canopic mouth of the Nile, in 31° 13′ N. lat. and 25° 53′ E. long. It owes its origin to the comprehensive policy of Alexander, who perceived that the usual channels of commerce might be advantageously altered; and that a city occupying this site could not fail to become the common emporium for the traffic of the eastern and western worlds, by means of the river Nile, and the two adjacent seas, the Red Sea and the Mediterranean: and the high prosperity which, as such, Alexandria very rapidly attained, proved the soundness of his judgment, and exceeded any expectations which even he could have entertained. For a long period Alexandria was the greatest of known cities; for Nineveh and Babylon had fallen, and Rome had not yet risen to pre-eminence: and even when

Rome became the mistress of the world, and Alexandria only the metropolis of a province, the latter was second only to the former in wealth, extent, and importance; and was honoured with the magnificent titles of the second metropolis of the world, the city of cities, the queen of the East, a second Rome (Diod. Sic. xvii.; Strab. xvii.; Ammian. Marcell. xxii.; Hegesipp. iv. 27; Joseph. *Bell. Jud.* iv. 11, 5).

The city was founded in B.C. 332, and was built under the superintendence of the same architect (Dinocrates) who had rebuilt the Temple of Diana at Ephesus. As a foreign city, not mentioned at all in the Old Testament, and only accidentally in the New (Acts vi. 9; xviii. 24; xxvii. 6), it is introduced into this work only on account of its connection with the history and condition of the Jewish people. To the facts resulting from or bearing on that connection, our notice must therefore be limited, without entering into those descriptions of the ancient or of the modern city which are given in general and geographical cyclopaedias. It may suffice to mention that the ancient city appears to have been of seven times the extent of the modern. If we may judge from the length of the two main streets (crossing each other at right angles) by which it was intersected, the city was about four miles long by one and a half wide: and in the time of Diodorus it contained a free population of 300,000 persons, and altogether probably 600,000, if we double the former number, as Mannert suggests, in order to include the slaves. The *port* of Alexandria is described by Josephus (*Bell. Jud.* iv. 10, 5); and his description is in perfect conformity with the best modern accounts.

It was secure, but difficult of access; in consequence of which, a magnificent pharos, or lighthouse, was erected upon an islet at the entrance, which was connected with the mainland by a dyke. This pharos was accounted one of the 'seven' wonders of the world. It was begun by Ptolemy Soter, and completed under Ptolemy Philadelphus, by Sostratus of Cnidus, B.C. 283. It was a square structure of white marble, on the top of which fires were kept constantly burning for the direction of mariners. It was erected at a cost of 800 talents, which, if Attic, would amount to 165,000*l.*, if Alexandrian, to twice that sum. It was a wonder in those times, when such erections were almost unknown; but, in itself, the Eddystone lighthouse is, in all probability, ten times more wonderful.

The business of working out the great design of Alexander could not have devolved on a more fitting person than Ptolemy Soter. From his first arrival in Egypt, he made Alexandria his residence: and no sooner had he some respite from war, than he bent all the resources of his mind to draw to his kingdom the whole trade of the East, which the Tyrians had, up to his time, carried on by sea to Elath, and from thence, by the way of Rhinocorura, to Tyre. He built a city on the west side of the Red Sea, whence he sent out fleets to all those countries to which the Phœnicians traded from Elath. But, observing that the Red Sea, by reason of rocks and shoals, was very dangerous towards its northern extremity, he transferred the trade to another city, which he founded at the greatest practicable distance southward. This port, which was almost on the borders of Ethiopia, he called, from his mother, Berenice; but the harbour being found inconvenient, the neighbouring city of Myos Hormos was preferred. Thither the products of the east and south were conveyed by sea; and were from thence taken on camels to Coptus, on the Nile, where they were again shipped for Alexandria, and from that city were

dispersed into all the nations of the west, in exchange for merchandise which was afterwards exported to the East (Strabo, xvii. p. 805; Plin. *Hist. Nat.* vi. 23). By these means, the whole trade was fixed at Alexandria, which thus became the chief mart of all the traffic between the East and West, and which continued to be the greatest emporium in the world for above seventeen centuries, until the discovery of the passage by the Cape of Good Hope opened another channel for the commerce of the East.

Alexandria became not only the seat of commerce, but of learning and the liberal sciences. This distinction also it owed to Ptolemy Soter, himself a man of education, who founded an academy, or society of learned men, who devoted themselves to the study of philosophy, literature, and science. For their use he made a collection of choice books, which, by degrees, increased under his successors until it became the finest library in the world, and numbered 700,000 volumes (Strab. xvii. p. 791; Euseb. *Chron.*) It sustained repeated losses, by fire and otherwise, but these losses were as repeatedly repaired; and it continued to be of great fame and use in those parts, until it was at length burnt by the Saracens when they made themselves masters of Alexandria in A.D. 642. Undoubtedly the Jews at Alexandria shared in the benefit of these institutions, as the Christians did afterwards; for the city was not only a seat of heathen, but of Jewish, and subsequently of Christian learning. The Jews never had a more profoundly learned man than Philo, nor the Christians men more erudite than Origen and Clement; and if we may judge from these celebrated natives of Alexandria, who were remarkably intimate with the heathen philosophy and literature—the learning acquired in the Jewish and Christian schools of that city must have been of that broad and comprehensive character which its large and liberal institutions were fitted to produce. It will be remembered that the celebrated translation of the Hebrew Scriptures into Greek [SEPTUAGINT] was made, under every encouragement from Ptolemy Philadelphus, principally for the use of the Jews in Alexandria, who knew only the Greek language; but partly, no doubt, that the great library might possess a version of a book so remarkable, and, in some points, so closely connected with the ancient history of Egypt. The work of Josephus against Apion affords ample evidence of the attention which the Jewish Scriptures excited.

At its foundation Alexandria was peopled less by Egyptians than by colonies of Greeks, Jews, and other foreigners. The Jews, however much their religion was disliked, were valued as citizens; and every encouragement was held out by Alexander himself and by his successors in Egypt, to induce them to settle in the new city. The same privileges as those of the first class of inhabitants (the Greeks) were accorded to them, as well as the free exercise of their religion and peculiar usages: and this, with the protection and security which a powerful state afforded against the perpetual conflicts and troubles of Palestine, and with the inclination to traffic, which had been acquired during the Captivity, gradually drew such immense numbers of Jews to Alexandria, that they eventually formed a very large portion of its vast population, and at the same time constituted a most thriving and important section of the Jewish nation. The Jewish inhabitants of Alexandria are therefore often mentioned in the later history of the nation; and their importance as a section of that nation would doubtless have been more frequently indicated, had not the Jews of Egypt thrown off their ecclesiastical dependence upon Jerusalem and its temple, and formed a separate establishment of their own, at On or Heliopolis [ON; ONIAS]. This left them less inducement or occasion than they would otherwise have had to mix themselves up with the affairs of the parent country: but they were not wanting in becoming patriotism; and they were on more than one occasion involved in measures directed against the Jews *as a nation*, and occasionally experienced some effects of that anger in the ruling powers, or of exasperation in the populace, of which the Jews in Palestine were the primary objects, or which resulted from the course which they had taken.

The inhabitants of Alexandria were divided into three classes: 1. The Macedonians, the original founders of the city; 2. the mercenaries who had served under Alexander; 3. the native Egyptians. Through the favour of Alexander and Ptolemy Soter, the Jews were admitted into the first of these classes, and this privilege was so important that it had great effect in drawing them to the new city (Hecatæus, in Joseph. *Contra Apion.* l. ii.; *Bell. Jud.* ii. 36; Q. Curt. iv. 8). These privileges they enjoyed undisturbed until the time of Ptolemy Philopator, who, being exasperated at the resistance he had met with in attempting to enter the temple at Jerusalem, wreaked his wrath upon the Jews of Alexandria, on his return to Egypt. He reduced to the third or lowest class all but such as would consent to offer sacrifices to the gods he worshipped; but of the whole body only 300 were found willing to abandon their principles in order to preserve their civil advantages. The act of the general body in excluding the 300 apostates from their congregations was so represented to the king as to move his anger to the utmost, and he madly determined to exterminate all the Jews in Egypt. Accordingly, as many as could be found were brought together, and shut up in the spacious hippodrome of the city, with the intention of letting loose 500 elephants upon them; but the animals refused their horrid task, and, turning wildly upon the spectators and the soldiers, destroyed large numbers of them. This, even to the king, who was present, seemed so manifest an interposition of Providence in favour of the Jews, that he not only restored their privileges, but loaded them with new favours. This story, as it is omitted by Josephus and other writers, and only found in the third book of Maccabees (ii.-v.), is considered doubtful.

The dreadful persecution which the Jews of Alexandria underwent in A.D. 39, shows that, notwithstanding their long establishment there, no friendly relations had arisen between them and the other inhabitants, by whom in fact they were intensely hated. This feeling was so well known, that at the date indicated, the Roman governor Avillius Flaccus, who was anxious to ingratiate himself with the citizens, was persuaded that the surest way of winning their affections was to withdraw his protection from the Jews, against whom the emperor was already exaspe-

rated by their refusal to acknowledge his right to divine honours, which he insanely claimed, or to admit his images into their synagogues. The Alexandrians soon found out that they would not be called to account for any proceedings they might have recourse to against the Jews. The insult and bitter mockery with which they treated Herod Agrippa when he came to Alexandria, before proceeding to take possession of the kingdom he had received from Caligula, gave the first intimation of their dispositions. Finding that the governor connived at their conduct, they proceeded to insist that the emperor's images should be introduced into the Jewish synagogues; and on resistance being offered, they destroyed most of them, and polluted the others by introducing the imperial images by force. The example thus set by the Alexandrians was followed in other cities of Egypt, which contained at this time about a million of Jews; and a vast number of oratories —of which the largest and most beautiful were called synagogues—were all either levelled with the ground, consumed by fire, or profaned by the emperor's statues (Philo, *In Flacc.* p. 968-1009, ed. 1640; *De Leg.* ix.; Euseb. *Chron.* 27, 28).

Flaccus soon after declared himself openly, by publishing an edict depriving the Jews of the rights of citizenship, which they had so long enjoyed, and declaring them aliens. The Jews then occupied two out of the five quarters (which took their names from the five first letters of the alphabet) into which the city was divided; and as they were in those times, before centuries of oppression had broken their spirit, by no means remarkable for their submission to wrongous treatment, it is likely that they made some efforts towards the maintenance of their rights, which Philo neglects to record, but which gave some kind of pretence for the excesses which followed. At all events, the Alexandrians, regarding them as abandoned by the authorities to their mercy, openly proceeded to the most violent extremities. The Jews were forcibly driven out of all the other parts of the city, and confined to one quarter; and the houses from which they had been driven, as well as their shops and warehouses, were plundered of all their effects. Impoverished, and pent up in a narrow corner of the city, where the greater part were obliged to lie in the open air, and where the supplies of food were cut off, many of them died of hardship and hunger; and whoever was found beyond the boundary, whether he had escaped from the assigned limits, or had come in from the country, was seized and put to death with horrid tortures. So likewise, when a vessel belonging to Jews arrived in port, it was boarded by the mob, pillaged, and then burnt, together with the owners.

At length king Herod Agrippa, who stayed long enough in Alexandria to see the beginning of these atrocities, transmitted to the emperor such a report of the real state of affairs as induced him to send a centurion to arrest Flaccus, and bring him a prisoner to Rome. This put the rioters in a false position, and brought some relief to the Jews; but the tumult still continued, and as the magistrates refused to acknowledge the citizenship of the Jews, it was at length agreed that both parties should send delegates, five on each side, to Rome, and refer the decision of the controversy to the emperor. At the head of the Jewish delegation was the celebrated Philo, to whom we owe the account of these transactions; and at the head of the Alexandrians was the noted Apion. The latter chiefly rested their case upon the fact that the Jews were the only people who refused to consecrate images to the emperor, or to swear by his name. But on this point the Jewish delegates defended themselves so well, that Caligula himself said, 'These men are not so wicked as ignorant and unhappy, in not believing me to be a god!' The ultimate result of this appeal is not known, but the Jews of Alexandria continued to be harassed during the remainder of Caligula's reign; and their alabarch Alexander Lysimachus (brother of Philo) was thrown into prison, where he remained till he was discharged by Claudius, upon whose accession to the empire the Alexandrian Jews betook themselves to arms. This occasioned such disturbances that they attracted the attention of the emperor, who, at the joint entreaty of Herod and Agrippa, issued an edict conferring on the Jews of Egypt all their ancient privileges (Philo, *In Flacc.* Op. p. 1019-1043; Joseph. *Antiq.* xviii. 10; xix. 4). The state of feeling in Alexandria which these facts indicate, was very far from being allayed when the revolt of the Jews in Palestine caused even those of the nation who dwelt in foreign parts to be regarded as enemies, both by the populace and the government. In Alexandria, on a public occasion, they were attacked, and those who could not save themselves by flight were put to the sword. Only three were taken alive, and they were dragged through the city to be consigned to the flames. At this spectacle the indignation of the Jews rose beyond all bounds. They first assailed the Greek citizens with stones, and then rushed with lighted torches to the amphitheatre, to set it on fire and burn all the people who were there assembled. The Roman prefect Tiberius Alexander, finding that milder measures were of no avail, sent against them a body of 17,000 soldiers, who slew about 50,000 of them, and plundered and burned their dwellings (Joseph. *Bell. Jud.* ii. 18. 7; comp. Matt. xxiv. 6).

After the close of the war in Palestine, new disturbances were excited in Egypt by the Sicarii, many of whom had fled thither. They endeavoured to persuade the Jews to acknowledge no king but God, and to throw off the Roman yoke. Such persons as opposed their designs and tendered wiser counsels to their brethren, they secretly assassinated, according to their custom. But the principal Jews in Alexandria having in a general assembly earnestly warned the people against these fanatics, who had been the authors of all the troubles in Palestine, about 600 of them were delivered up to the Romans. Several fled into the Thebaid, but were apprehended and brought back. The most cruel tortures which could be devised had no effect in compelling them to acknowledge the emperor for their sovereign; and even their children seemed endowed with souls fearless of death, and bodies incapable of pain. Vespasian, when informed of these transactions, sent orders that the Jewish temple in Egypt should be destroyed. Lupus the prefect, however, only shut it up, after having taken out the consecrated gifts: but his successor Paulinus stripped it completely, and excluded the Jews entirely from it. This was in A.D. 75, being the 343rd year from its erection by Onias.

St. Mark is said to have introduced the Christian religion into Alexandria, which early became one of the strongholds of the true faith. The Jews continued to form a principal portion of the inhabitants, and remained in the enjoyment of their civil rights till A.D. 415, when they incurred the hatred of Cyril the patriarch, at whose instance they were expelled, to the number of 40,000, and their synagogues destroyed. However, when Amrou, in A.D. 640, took the place for the caliph Omar, he wrote to his master in these terms:—'I have taken the great city of the west, which contains 4000 palaces, 4000 baths, 400 theatres, 12,000 shops for the sale of vegetable food, *and* 40,000 *tributary Jews.*' From that time the prosperity of Alexandria very rapidly declined; and when, in 969, the Fatemite caliphs seized on Egypt and built New Cairo, it sunk to the rank of a secondary Egyptian city. The discovery of the passage to the East by the Cape, in 1497, almost annihilated its remaining commercial importance; and although the commercial and maritime enterprises of Mehemet Ali have again raised it to some distinction, Alexandria must still be accounted as one of those great ancient cities whose glory has departed. When Benjamin of Tudela visited the place (*Itin.* i. 158, ed. Asher), the number of Jews was not more than 3000, and does not now exceed 500 (J. A. St. John, *Egypt*, ii. 384). The whole population at the present time (1843) is between 36,000 and 40,000, of whom 4876 are foreigners (Hogg's *Visit to Alexandria*, i. 101).

ALEXANDRIUM, a castle built by Alexander Jannæus on a mountain near Coreæ (Κορέαι), one of the principal cities of northernmost Judæa towards Samaria. The princes of the founder's family were mostly buried here; and hither Herod carried the remains of his sons Alexander and Aristobulus (who were maternally of that family), after they had been put to death at Sebaste (Joseph. *Antiq.* xiii. 24; xiv. 6, 10, 27; xvi. 2, *et ult.*). The situation of Coreæ, which determines that of the castle, is not known; but Dr. Robinson (*Bib. Researches*, iii. 83) conjectures that he may have found it in the modern Kuriyzet, which is about eight miles S. by E. from Nabulus (Shechem). But this place, we imagine, is too far north to have been within even the northernmost limits of Judæa.

ALGUM (אַלְגּוּמִּים), or ALMUG TREES (אַלְמֻגִּים). These are, no doubt, two forms of the same word, as they occur in passages referring to the same events, and differ only in the transposition of letters. In 1 Kings x. 11, it is said, 'And the navy also of Hiram, that brought gold from Ophir, brought in from Ophir great plenty of almug-trees and precious stones. And the king made of the almug-trees pillars for the house of the Lord, and for the king's house, harps also and psalteries for singers.' In the parallel passages of 2 Chron. ix. 10, 11, the word algum is substituted for almug, and it is added, 'There were none such seen before in the land of Judah.' As no similar name has yet been discovered which is applicable to any kind of wood from the countries whence the almug-trees are supposed to have been brought, various conjectures have been formed respecting them. It is necessary first to settle whence these trees were brought. To us there appears no doubt that Ophir was to the southward of the Red Sea, and was most probably in some part of India (*Pictorial Bible*, ii. 349-366). The products brought from thence, such as gold, precious stones, ivory, apes, and peacocks, were all procurable only from that country. Even tin, obtained at a later period from Tartessus, was probably first procured from an earlier Tarshish, as it is abundant in Tennaserim, the Malayan peninsula, the island of Banca, &c. Its uses were well known to the Indians, who received it also in exchange when brought to them by the Red Sea, as it no doubt was, at the time when the Periplus of the Erythræan Sea was written.

Various trees have been attempted to be identified with the almug. These it is unnecessary to enumerate at length, as only a few of them seem deserving of attention. The Greek translator of the book of Kings explains the Hebrew word by Ξύλα ἀπελέκητα, 'unhewn wood;' but in both the places in Chronicles it is rendered Ξύλα πεύκινα, 'pine-wood.' This is also the interpretation of the old Latin version at 2 Chron. ii. 8; but in the two other passages that version gives it the acceptation of 'thyine-wood' (*Ligna thyina*). The thyine-wood which is mentioned in Rev. xviii. 12, is no doubt the Lignum thyinum, which was also called citrinum, citron-wood. It was highly valued by the Romans, and employed by them for the doors of their temples and the images of their gods. This wood was obtained from the north of Africa, where the tree producing it has recently been rediscovered. If algum-wood was brought from the north coast of Africa, there certainly does not appear any tree more worthy to be considered as such than Thuya articulata, or Callitris quadrivalvis [THYINE WOOD]. From the passage of 2 Chron. ii. 8:—'Send me also cedar-trees, fir-trees, and algum-trees out of Lebanon,' it has been inferred that this might be one of the pine tribe procurable in that mountain: but in the parallel passage in 1 Kings v. 8, only timber of cedar and timber of fir are mentioned. On this Rosenmüller observes, 'that the addition of "almug" in the book of Chronicles appears to have been the interpolation of a transcriber' (*Bibl. Bot.* p. 245). If the almug had been a tree of Lebanon, we should have a difficulty in understanding how, after the time of Solomon, 'there came no such almug-trees, nor were such seen unto this day' (1 Kings x. 12).

We feel satisfied, however, that almug-trees were brought from southern regions by the Red Sea; and it could not have been more difficult to convey them from thence to the Mediterranean than it must have been to transport timber from Joppa to Jerusalem. If we consider the great deficiency of timber on the coasts both of Arabia and of Egypt—a deficiency which, from the general dryness of the soil and climate, must have been experienced in remote ages, as well as at the present time—we should expect that, where we have notices of so much shipping, there must early have been established a trade in timber. Forskal particularly mentions the importation of timber-woods from India into Arabia. Of the kinds enumerated, it has been shown that *saj*, *abnoos*, and *shishum* are teak, ebony, and sissoo (*Essay on Hindoo Medicine*, p. 128). Forskal also mentions

the Teak as imported into Egypt: 'Carina navis fundatur Ligno saj ساج ex India allato,' p. lvi.

Having been brought from so great a distance, and thought sufficiently remarkable to be worthy of special record, it is reasonable to suppose that almug-trees possessed properties not common in the timber usually met with in Palestine, whether in appearance, in colour, or in odour. Several Indian trees have been enumerated as likely to have been the almug. Of these, bukkum, or sapan wood (*Cæsalpinia sappan*), much used in dyeing, belongs to the same genus as the Brazil-wood of South America, but its nearest locality is the eastern side of the Bay of Bengal. The teak, highly valued from its indestructible nature, great size, and strength, might be more reasonably adduced, because more easily procurable, from the greater accessibility of the Malabar coast; but being a coarse-grained wood, it might not be so well suited for musical instruments. If one of the pine tribe be required, none is more deserving of selection than the deodar (*deo*, god; *dar*, wood: *Pinus deodara*), as it grows to a large size, yields excellent timber, which is close-grained and fragrant; but the tree is found only in very inaccessible situations.

Others have been in favour of sandal-wood, but have confounded with the true and far-famed kind what is called red sandal-wood, the product of *Pterocarpus santalinus*, as well as of *Adenanthera pavonina*. But there are two kinds of fragrant sandal-wood, the yellow and the white, both mentioned in old works on Materia Medica. Both these are thought by some to be the produce of the same tree, the younger and outer layers of wood forming the white, while the centre layers become coloured, and form the yellow.

Recent investigations confirm the opinion of Garcias, that the yellow and white sandal-woods are the produce of different trees, both of which, however, belong to the same genus, Santalum. M. Gaudichaud has described the species, which he has named *S. Freycinetianum*, as that yielding the yellow sandal-wood so much valued by the Chinese, and obtained by them from the Feejee, Marquesas, and Molucca Islands.

But the most common sandal-wood is that which is best known and most highly esteemed in India. It is produced by the *Santalum album*, a native of the mountainous parts of the coast of Malabar, where large quantities are cut for export to China, to different parts of India, and to the Persian and Arabian gulfs. The outer parts of this tree are white and without odour; the parts near the root are most fragrant, especially of such trees as grow in hilly situations and stony ground. The trees vary in diameter from 9 inches to a foot, and are about 25 or 30 feet in height, but the stems soon begin to branch. This wood is white, fine-grained, and agreeably fragrant, and is much employed for making rosaries, fans, elegant boxes and cabinets. The Chinese use it also as incense both in their temples and private houses, and burn long slender candles formed by covering the ends of sticks with its sawdust mixed with rice-paste.

As sandal-wood has been famed in the East from very early times, it is more likely than any other to have attracted the notice of, and been desired by, more northern nations. We do not, however, trace it by its present or any similar name at a very early period in the writings of

[Santalum album.]

Greek authors: it may, however, have been confounded with agila-wood, or agallochum, which, like it, is a fragrant wood and used as incense. Sandal-wood is mentioned in early Sanscrit works, and also in those of the Arabs. Actuarius is the earliest Greek author that expressly notices it, but he does so as if it had been familiarly known. In the Periplus of Arrian it is mentioned as one of the articles of commerce obtainable at Omana, in Gedrosia, by the name Ξύλα Σαγάλινα, which Dr. Vincent remarks may easily have been corrupted from Σανδάλινα. As it was produced on the Malabar coast, it could easily be obtained by the merchants who conveyed the cinnamon of Ceylon and other Indian products to the Mediterranean. That sandal-wood has often been employed in buildings is evident from J. Barb, 'Viaggio alla Persia:' 'La porta della camera ora de sandali entarsiata con file d'oro,' &c. The Hindoo temple of Somnat, in Guzerat, which was plundered and destroyed by Mahomed of Ghizni, had gates made of sandal-wood. These were carried off by the conqueror, and afterwards formed the gates of his tomb, whence, after 800 years, they were taken by the British conquerors of Ghizni, and brought back to India in 1842.

That sandal-wood, therefore, might have attained celebrity, even in very early ages, is not at all unlikely; that it should have attracted the notice of Phœnician merchants visiting the west coast of India is highly probable; and also that they should have thought it worthy of being taken as a part of their cargo on their return from Ophir. That it is well calculated for musical instruments, the author is happy to adduce the opinion of Professor Wheatstone, who says, 'I know no reason why sandal-wood should not have been employed in ancient days for constructing musical instruments. It is not so employed at present, because there are many much cheaper woods which present a far handsomer appearance. Musical instruments would appear very unfinished to modern taste unless varnished or French-polished, and it would be worse than useless to treat fragrant woods in this way. Formerly perhaps it might have been

more the fashion to delight the senses of smell and hearing simultaneously than it is with us, in which case odoriferous woods would be preferred for things so much handled as musical instruments are.'—J. F. R.

ALISGEMA (Ἀλίσγημα), a Hellenistic word, which occurs in Acts xv. 20 (comp. ver. 29 and 1 Cor. viii.), with reference to meat sacrificed to idols, and there means *defilement, pollution*. The Apostle in these passages alludes to the customs of the Gentiles, among whom—after a sacrifice had been concluded and a portion of the victim had been assigned to the priests—it was usual to hold a sacrificial feast in honour of the god, on which occasion they ate the residue of the flesh. This feast might take place either in the temple or in a private house. But there were many who, from need or avarice, salted and laid up the remnants for future use (Theoph. *Char.* c. x.), or even gave them to the butchers to sell in the shambles (Shoettg. *Hor. Heb. ad Act.* xv. 20; 1 Cor. viii.). This flesh, having been offered to idols, was held in abomination by the Jews; and they considered not only those who had been present at these feasts, but also those who ate the flesh which had been offered up, when afterwards exposed for sale in the shambles, as infected by the contagion of idolatry. The council at Jerusalem, therefore, at the suggestion of St. James, directed that converts should refuse all invitations to such feasts, and abstain from the use of all such meat, that no offence might be given to those Christians who had been Jews. See more largely Kuinoel, *ad Act.* xv. 20.

ALLEGORY (Ἀλληγορία). This word is found in the Authorized Version of Gal. iv. 24, but it does not actually exist as a noun in the Greek Testament, nor even in the Septuagint. In the passage in question Saint Paul cites the history of the free-born Isaac and the slave-born Ishmael, and in proceeding to apply it spiritually says, ἅτινά ἐστιν ἀλληγορούμενα, which does not mean, as in the A.V., 'which things are *an allegory*,' but 'which things are *allegorized*.' This is of some importance; for in the one case the Apostle is made to declare a portion of Old Testament history an allegory, whereas in truth he only speaks of it as allegorically applied. *Allegories themselves* are, however, of frequent occurrence in Scripture, although that name is not there applied to them.

An ALLEGORY has been sometimes considered as only a lengthened *metaphor*; at other times, as a *continuation of metaphors*. But the nature of allegory itself, and the character of allegorical interpretation, will be best understood by attending to the origin of the term which denotes it. Now the term 'Allegory,' according to its original and proper meaning, denotes a representation of one thing which is intended to excite the representation of another thing. Every allegory must therefore be subjected to a *twofold* examination: we must first examine the *immediate representation*, and then consider what *other representation* it is intended to excite. In most allegories the immediate representation is made in the form of a narrative; and, since it is the object of the allegory itself to convey a moral, not an historic truth, the narrative itself is commonly fictitious. The *immediate* representation is of no further value than as it leads to the *ultimate* representation. It is the application or the moral of the allegory which constitutes its worth.

Since, then, an allegory comprehends two distinct representations, the interpretation of an allegory must comprehend two distinct operations. The first of them relates to the immediate representation, and the second to the ultimate representation. The immediate representation is understood from the words of the allegory; the ultimate representation depends upon the immediate representation applied to the proper end. In the interpretation, therefore, of the former, we are concerned with the interpretation of *words*; in the interpretation of the latter, we are concerned with the *things signified* by the words. Now, whenever we speak of allegorical interpretation, we have always in view the ultimate representation, and, consequently, are then concerned with the interpretation of things. The interpretation of the words, which attaches only to the immediate representation, or the plain narrative itself, is commonly called the *grammatical* or the *literal* interpretation; although we should speak more correctly in calling it the *verbal* interpretation, since even in the plainest narratives, even in narratives not designed for moral application, the use of words is never restricted to their mere *literal* senses. Custom, however, having sanctioned the use of the term 'literal,' instead of the term 'verbal' interpretation, to mark the opposition to allegorical interpretation, we must understand it accordingly. But whatever be the term, whether verbal or literal, which we employ to express the interpretation of the words, it must always be borne in mind that the allegorical interpretation is the interpretation of things—of the things signified by the words, not of the words themselves.

Bishop Marsh, from the fifth of whose *Lectures on the Criticism and Interpretation of the Bible*, these principles are derived, proceeds, in that Lecture, to apply them to a few of the Scriptural examples. Every parable is a kind of allegory; and therefore the parable of the sower (Luke viii. 5-15), being especially clear and correct, is taken as the first example. In this we have a plain narrative, a statement of a few simple and intelligible facts, such, probably, as had fallen within the observation of the persons to whom our Saviour addressed himself. When he had finished the narrative, or the immediate representation of the allegory, he then gave the explanation or ultimate representation of it; that is, he gave the allegorical interpretation of it. And that the interpretation was an interpretation, not of the words, but of the things signified by the words, is evident from the explanation itself: 'The seed is the word of God; those by the wayside are they that hear,' &c. (v. 11, &c.) The impressive and pathetic allegory addressed by Nathan to David affords a similar instance of an allegorical narrative accompanied with its explanation (2 Sam. xii. 1-14). Allegories thus accompanied, constitute a kind of simile, in both parts of which the words themselves are construed either literally or figuratively, according to the respective use of them; and then we institute the comparison between the things signified in the former part, and the things signified in the latter part.

But allegorical narratives are frequently left to explain themselves, especially when the resem-

blance between the immediate and ultimate representation is sufficiently apparent to make an explanation unnecessary. Of this kind we cannot have a more striking example than that beautiful one contained in the 80th Psalm: 'Thou broughtest a vine out of Egypt,' &c.

The use of allegorical interpretation is not, however, confined to mere allegory, or fictitious narratives, but is extended also to history, or real narratives. And in this case the grammatical meaning of a passage is called its *historical* meaning, in contradistinction to its *allegorical* meaning. There are two different modes in which Scripture history has been thus allegorized. According to one mode, facts and circumstances, especially those recorded in the Old Testament, have been applied to other facts and circumstances, of which they have been described as *representative*. According to the other mode, these facts and circumstances have been described as mere *emblems*. The former mode is warranted by the practice of the sacred writers themselves; for when facts and circumstances are so applied, they are applied as *types* of those things to which the application is made. But the latter mode of allegorical interpretation has no such authority in its favour, though attempts have been made to procure such authority. For the same things are there described not as types or as real facts, but as mere *ideal* representations, like the immediate representations in allegory. By this mode, therefore, history is not *treated* as allegory, but *converted* into allegory. That this mode of interpretation cannot claim the sanction of St. Paul, from his treatment of the history of Isaac and Ishmael, has already been shown: the consideration, however, of the allegorical modes of dealing with the real histories of Scripture is a different subject from that of allegories and their interpretation, and belongs to another place [Interpretation, Biblical].

ALLELUIA. [Hallelujah.]

ALLIANCES. From a dread lest the example of foreign nations should draw the Israelites into the worship of idols, they were made a peculiar and separate people, and intercourse and alliance with such nations were strongly interdicted (Lev. xviii. 3, 4; xx. 22, 23). The tendency to idolatry was in those times so strong, that the safety of the Israelites lay in the most complete isolation that could be realized; and it was to assist this object that a country more than usually separated from others by its natural boundaries was assigned to them. It was shut in by the sea on the west, by deserts on the south and east, and by mountains and forests on the north. Among a people so situated we should not expect to hear much of alliances with other nations.

By far the most remarkable alliance in the political history of the Hebrews is that between Solomon and Hiram king of Tyre. It is in a great degree connected with considerations which belong to another head [Commerce]. But it may primarily be referred to a partial change of feeling which originated in the time of David, and which continued to operate among his descendants. During his wanderings he was brought into contact with several of the neighbouring princes, from some of whom he received sympathy and support, which, after he ascended the throne, he gratefully remembered (2 Sam. x. 2). There was probably more of this friendly intercourse than the Scripture has had occasion to record. Such timely aid, combined with the respect which his subsequently victorious career drew from foreign nations, must have gone far to modify in him and those about him that aversion to strangers which the Hebrews generally had been led to entertain. He married the daughter of a heathen king, and had by her his favourite son (2 Sam. iii. 3); the king of Moab protected his family (1 Sam. xxii. 3, 4); the king of Ammon showed kindness to him (2 Sam. x. 2); the king of Gath showered favours upon him (1 Sam. xxvii.; xxviii. 1, 2); the king of Hamath sent his own son to congratulate him on his victories (2 Sam. viii. 15): in short, the rare power which David possessed of attaching to himself the good opinion and favour of other men, extended even to the neighbouring nations, and it would have been difficult for a person of his disposition to repel the advances of kindness and consideration which they made. Among those who made such advances was Hiram, king of Tyre; for it eventually transpires that 'Hiram was ever a lover of David' (1 Kings v. 2); and it is probable that other intercourse had preceded that relating to the palace which Hiram's artificers built for David (2 Sam. v. 11). The king of Tyre was not disposed to neglect the cultivation of the friendly intercourse with the Hebrew nation which had thus been opened. He sent an embassy to condole with Solomon on the death of his father, and to congratulate him on his accession (1 Kings v. 1). The plans of the young king rendered the friendship of Hiram a matter of importance, and accordingly 'a league' was formed (1 Kings v. 12) between them: and that this league had a reference not merely to the special matter then in view, but was a general league of amity, is evinced by the fact that more than 250 years after, a prophet denounces the Lord's vengeance upon Tyre, because she 'remembered not the brotherly covenant' (Amos i. 9). Under this league large bodies of Jews and Phœnicians were associated, first in preparing the materials for the Temple (1 Kings v. 6-18), and afterwards in navigating the Red Sea and the Indian Ocean (1 Kings ix. 26-28): and this increasing intercourse with the heathen appears to have considerably weakened the sentiment of separation, which, in the case of the Hebrews, it was of the utmost importance to maintain. The disastrous consequences of even the seemingly least objectionable alliances may be seen in the long train of evils, both to the kingdom of Israel and of Judah, which ensued from the marriage of Ahab with Jezebel, the king of Tyre's daughter [Ahab; Jezebel]. These consequences had been manifested even in the time of Solomon; for he formed matrimonial alliances with most of the neighbouring kingdoms, and to the influence of his idolatrous wives are ascribed the abominations which darkened the latter days of the wise king (1 Kings xi. 1-8).

The prophets, who were alive to these consequences, often raised their voices against such dangerous connections (1 Kings xx. 38; 2 Chron. xvi. 7; xix. 2; xxv. 7, &c.; Isa. vii. 17); but it was found a difficult matter to induce even the best kings to place such absolute faith in Jehovah, the Head of their state, as to neglect altogether those human resources and alliances by which other nations strengthened themselves against their

enemies. The Jewish history, after Solomon, affords examples of several treaties with different kings of Syria, and with the kings of Assyria and Babylon. Asa, one of the most pious monarchs that ever sat on the throne of Judah, finding his kingdom menaced and his frontier invaded, sent to Benhadad, who reigned in Damascus, the most costly presents, reminding him of the league which had long subsisted between them and their fathers, and conjuring him not to succour the enemies of Judah, nor renounce the obligations of their old alliance (1 Kings xv. 16-20). Attacked by another king of Israel, whom another king of Damascus protected, Ahaz implored the king of Assyria for aid, and with the treasures of the temple and the palace purchased a defensive alliance (2 Kings xvi. 5, &c.; 2 Chron. xviii. 16, &c.). In later times, the Maccabees appear to have considered themselves unrestrained by any but the ordinary prudential considerations in contracting alliances; but they confined their alliances to distant states, which were by no means likely ever to exercise that influence upon the religion of the people which was the chief object of dread. The most remarkable alliances of this kind in the whole Hebrew history are those which were contracted with the Romans, who were then beginning to take a part in the affairs of Western Asia. Judas claimed their friendly intervention in a negotiation then pending between the Jews and Antiochus Eupator (2 Macc. xi. 34, *sq.*); and two years after he sent ambassadors to the banks of the Tiber to propose a treaty of alliance and amity. By the terms of this treaty the Romans ostensibly threw over the Jews the broad shield of their dangerous protection, promising to assist them in their wars, and forbidding any who were at peace with themselves to be at war with the Jews, or to assist directly or indirectly those who were so. The Jews, on their part, engaged to assist the Romans to the utmost of their power in any wars they might wage in those parts. The obligations of this treaty might be enlarged or diminished by the mutual consent of the contracting parties. This memorable treaty, having been concluded at Rome, was graven upon brass and deposited in the Capitol (1 Macc. viii. 22-28; Josephus, *Antiq.* xii. 10: other treaties with the Romans are given in lib. xiii.).

Anterior to the Mosaical institutions, such alliances with foreigners were permitted, or at least tolerated. Abraham was in alliance with some of the Canaanitish princes (Gen. xiv. 13); he also entered into a regular treaty of alliance, being the first on record, with the Philistine king Abimelech (ch. xxi. 22, *sq.*), which was renewed by their sons (ch. xxvi. 26-30). This primitive treaty is a model of its kind: instead of minute stipulations, it leaves all details to the honest interpretation of the contracting parties. Abimelech says: 'Swear unto me here by God that thou wilt not deal falsely with me, nor with my son, nor with my son's son; but according to the kindness that I have done unto thee, thou shalt do unto me, and unto the land wherein thou hast sojourned.' Even after the law, it appears, from some of the instances already adduced, that such alliances with distant nations as could not be supposed to have any dangerous effect upon the religion or morals of the people, were not deemed to be interdicted. The treaty with the Gibeonites is a remarkable proof of this. Believing that the ambassadors came from a great distance, Joshua and the elders readily entered into an alliance with them; and are condemned for it only on the ground that the Gibeonites were in fact their near neighbours (Josh. ix. 3-27).

From the time of the patriarchs, a covenant of alliance was sealed by the blood of some victim. A heifer, a goat, a ram, a turtle dove, and a young pigeon, were immolated in confirmation of the covenant between the Lord and Abraham (Gen. xv. 9). The animal or animals sacrificed were cut in two (except birds, ver. 10), to typify the doom of perjurers. This usage often recurs in the prophets, and there are allusions to it in the New Testament (Jer. xxxiv. 18; Dan. xiii. 55; Matt. xxiv. 51; Luke xii. 46). The perpetuity of covenants of alliance thus contracted is expressed by calling them 'covenants of salt' (Num. xviii. 19; 2 Chron. xiii. 5), salt being the symbol of incorruption. The case of the Gibeonites affords an exemplary instance, scarcely equalled in the annals of any nation, of scrupulous adherence to such engagements. The Israelites had been absolutely cheated into the alliance; but, having been confirmed by oaths, it was deemed to be inviolable (Josh. ix. 19). Long afterwards, the treaty having been violated by Saul, the whole nation was punished for the crime by a horrible famine in the time of David (2 Sam. xxi. 1, *sqq.*). The prophet Ezekiel (xvii. 13-16) pours terrible denunciations upon king Zedekiah, for acting contrary to his sworn covenant with the king of Babylon. In this respect the Jews were certainly most favourably distinguished among the ancient nations; and, from numerous intimations in Josephus, it appears that their character for fidelity to their engagements was so generally recognised after the Captivity, as often to procure for them highly favourable consideration from the rulers of Western Asia and of Egypt.

ALLON (אַלּוֹן; Sept. Βάλανος; Vulg. *Quercus*; Auth. Vers. Oak). The Hebrew word, thus pointed, as it occurs in Gen. xxxv. 8; Josh. xix. 32; Isa. ii. 13; vi. 13; xliv. 14; Hos. iv. 13; Amos ii. 9; Zech. xi. 2, was understood by the ancient translators, and has been supposed by most interpreters, to denote the oak, and there is no reason to disturb this conclusion. In our version other words are also rendered by 'oak,' particularly *Alah* (אֵלָה), which more probably denotes the terebinth-tree [Alah]. The oak is, in fact, less frequently mentioned in the original than in the A. V., where it occurs so often as to suggest that the oak is as conspicuous and as common in Palestine as in this country. But in Syria oaks are by no means common, except in hilly regions, where the elevation gives the effect of a more northern climate; and even in such circumstances it does not attain the grandeur in which it often appears in our latitudes. Indeed, Syria has not the species (*Quercus robur*) which forms the glory of our own forests. The 'oaks of Bashan' are in Scripture mentioned with peculiar distinction (Isa. ii. 3; Ezek. xxvii. 6; Zech. xi. 2), as if in the hills beyond the Jordan the oaks had been more abundant and of larger growth than elsewhere. This is the case even at the present day. In the hilly regions of Bashan and Gilead, Burckhardt repeatedly mentions forests of thick oaks—thicker than any

forests he had seen in Syria. He speaks gratefully of the shade thus afforded; and doubtless it was the presence of oaks which imparted to the scenery that European character which he notices (*Syria*, 265, 348). On that side of the river a thick oak-forest occurs as far south as the vicinity of Amman, the capital of the Ammonites (p. 356). Oaks of low stature are frequent in the hills and plains near the sources of the Jordan (pp. 45, 312, 315): and some of large dimensions are found in different parts of the country, beside the natural reservoirs of water fed by springs (pp. 193, 315). On

[Branch of Quercus Ægilops.]

the lower slopes of Lebanon low oak-trees are numerous, and the inhabitants employ their branches in the construction of the flat roofs of their dwellings (pp. 4, 7, 18, 193, 312, &c). Next to Burckhardt, Lord Lindsay is the traveller who makes the most frequent mention of oaks in Palestine. He confirms their existing abundance in the countries of Bashan and Gilead. He calls them 'noble prickly oaks,' and 'evergreen oaks,' and notices a variety of the latter with a broader leaf than usual (*Travels*, ii. 122, 124, 127).

But oak-trees are by no means wanting on the west of the Jordan, in the proper Land of Canaan. Lord Lindsay describes the hills of southern Judæa about Hebron as covered to the top with low shrubs of the prickly oak. Fine park scenery, composed chiefly of prickly and evergreen oaks, occurs between Samaria and Mount Carmel. The same trees abound on the southern prolongations of that mountain, and on the banks of the Kishon. The thick woods which cover Mount Tabor are composed chiefly of oaks and pistachio-trees; and oaks are found in the valleys which trend from that mountain (Lindsay, ii. 51, 77, 85). Hasselquist found groves of the Kermes oak (*Q. coccifera*) in the valleys beyond the plain of Acre, on the road to Nazareth (*Travels*, p. 153).

From the above and other notices we collect that the species of oak found in Palestine, and probably all comprehended under the word ALLON, are—1. The Evergreen Oak (*Quercus ilex*), which is met with not only in Western Asia, but in Northern Africa and Southern Europe. This is a tall but not wide-spreading tree; and the timber, being very hard, is much used for purposes in which compactness and durability are required. 2. The Holly-leaved Montpelier Oak (*Q. gramuntia*), another evergreen, which may be inserted on the authority of Pococke. This tree also, as its name imports, is a native of Southern Europe, and is markedly distinguished from the former by its numerous straggling branches and the thick underdown of its leaves. 3. The Hairy-cupped Oak (*Q. crinata*), so called from the bristly appearance of the calyx. It grows to a considerable size, and furnishes an excellent timber, much used by the Turks in the building of ships and houses. But although this species exists in Syria, it is much more common in Asia Minor. 4. The Great Prickly-cupped Oak (*Q. Ægilops* or *Valonia*), which takes its name from its large prickly calyx. This species is common in the Levant, where it is a handsome tree, which it is not in our ungenial climate, though it has long been cultivated. The wood of this species is of little worth; but its acorns form the valonia of commerce, of which 150,000 cwt. are yearly imported into this country for the use of tanners. 5. The Kermes Oak (*Q. coccifera*) takes its name from an insect (*kermes*, of the genus *coccus*) which adheres to the branches of this bushy evergreen shrub, in the form of small reddish balls about the size of a pea. This affords a crimson dye, formerly celebrated, but now superseded by cochineal. This dye was used by the ancient Hebrews; for the word תולת, which denotes a worm, and particularly the kermes worm, denotes also the dye prepared from it (Isa. i. 18; Lam. iv. 5), and is accordingly rendered *κόκκινον* in those passages where it occurs.

[Quercus Ægilops or Valonia.]

From the hints of travellers there appear to be some other species of oaks in Palestine, but their information is not sufficiently distinct to enable us to identify them.

ALLON-BACHUTH (the oak of weeping), a

place in Bethel, where Rebekah's nurse was buried (Gen. xxxv. 8).

ALMON (עַלְמוֹן; Sept. Ἀλμών, v. r. Γάμαλα), one of the three cities which belonged to the priests in the tribe of Benjamin (Josh. xxi. 18). It is supposed to be the same as the Alemeth of 1 Chron. vi. 60. Jarchi and Kimchi identify it with Bahurim, which name the Targum (2 Sam. iii. 16) renders by Almeth—both words signifying 'youth.' The site is unknown.

ALMON-DIBLATHAIM, one of the stations of the Israelites on their way from Mount Hor to the plains of Moab, round by Mount Seir (Num. xxxiii. 46).

ALMOND-TREE. [Luz.]

ALMS (ἐλεημοσύνη). The English word is an abridged form of the Greek, brought down in several successive corruptions, still to be found in the Anglo-Saxon and early English dialects: thus the Saxon translation of the original term is (Matt. vi. 4) ælmessan; Luther's, almosen; Wiclif's, almesse; Cranmer's, almose; Tyndale's, almes. The Greek word is derived from ἔλεος, pity or mercy; and hence comes to denote our manifestation of pity, namely, benefactions to the needy—'an almes-deede,' as it is translated in the Rheims version of the New Testament. The primary meaning of 'alms' does not, as is the case in its Greek original, appear on the face of the word, and the derivative signification only remains in the English term; so that a word which properly signified merciful feelings and merciful actions towards the indigent has, in process of time, been restricted to one particular kind of charitable deeds, denoting now scarcely anything more than giving money to beggars. This departure from the etymological meaning of the original word should be carefully borne in mind by those who undertake to expound such passages of Scripture as bear on the subject.

The regulations of the Mosaic law respecting property, and its benign spirit towards the poor, went far to prevent the existence of penury as a permanent condition in society, and, consequently, by precluding beggary, to render the need of almsgiving unnecessary. Poverty, however, considered as a state of comparative want, Moses seems to have contemplated as a probable event in the social frame which he had established; and accordingly, by the appointment of specific regulations, and the enjoining of a general spirit of tender-heartedness, he sought to prevent destitution and its evil consequences. The law which he promulgated in this matter is found in Lev. xxv. 35: 'And if thy brother be waxen poor, and fallen into decay with thee, then shalt thou relieve him.' The benignity and largeness of spirit of the legislator appear in the concluding words—'Yea, though he be a stranger or a sojourner, that he may live with thee.' The whole of the chapter may be advantageously consulted. The consideration by which this merciful enactment is recommended has peculiar force, 'I am the Lord your God, which brought you forth out of the land of Egypt to give you the land of Canaan, and to be your God.' The spirit of the Hebrew legislator on this point is forcibly exhibited in Deut. xv. 7 *et seq.*: 'If there be among you a poor man .... thou shalt open thine hand wide unto him. .... Beware that thine eye be not evil against thy poor brother, and thou givest him nought; and he cry unto the Lord against thee, and it be sin unto thee. Thou shalt surely give him, and thine heart shall not be grieved when thou givest unto him: because that for this the Lord thy God shall bless thee in all thy works.' The great antiquity of the practice of benevolence towards the poor is shown in the very beautiful passage which is found in Job xxix. 13 *et seq.* The phrase, 'father to the poor,' there given to the venerable patriarch, involves higher praise even than Cicero's 'pater patriæ.' How high the esteem was in which this virtue continued to be held in the time of the Hebrew monarchy may be learnt from Psalm xli. 1—'Blessed is he that considereth the poor; the Lord will remember him in time of trouble.' See also Psalm cxii. 9; Prov. xiv. 31. The progress of social corruption, however, led to the oppression of the poor, which the prophets, after their manner, faithfully reprobated (Isaiah lviii. 3): where, among other neglected duties, the Israelites are required to deal their bread to the hungry, and to bring the outcast poor to their house. See also Isaiah x. 2; Amos ii. 7; Jer. v. 28; Ezek. xxii. 29.

However favourable to the poor the Mosaic institutions were, they do not appear to have wholly prevented beggary; for the imprecation found in Psalm cix. 10, 'Let his children be vagabonds and beg,' implies the existence of beggary as a known social condition. Begging naturally led to almsgiving, though the language of the Bible does not present us with a term for 'alms' till the period of the Babylonish captivity, during the calamities attendant on which the need probably introduced the practice. צדקה corresponds with the Greek ἐλεημοσύνη, signifying originally that which is right, just,—and thence, derivatively, mercy and merciful deeds; and affords an interesting illustration of the gentle spirit of the Mosaic religion, since the ideas of justice and mercy are represented as springing from the same radical conception. In Psalm cxlv. 7, occurs, perhaps, the earliest passage in which the word clearly signifies love or mercy. 'They shall abundantly utter the memory of thy great goodness, and shall sing of thy *righteousness*;' where the parallelism shows that by צדקה 'mercy' is intended. In Daniel, however, iv. 27, we find the word actually rendered ἐλεημοσύνη in the Septuagint—though 'righteousness' is retained in our version. The ensuing member of the sentence puts the meaning beyond a question—'O king, break off thy sins by righteousness and thine iniquities by showing mercy to the poor, if it may be a lengthening of thy tranquillity.' A new idea is here presented, namely, that of merit and purchase, which is found more forcibly expressed in the Greek version ἁμαρτίας σου ἐν ἐλεημοσύναις λύτρωσαι. Almsgiving had come to be regarded as a means of conciliating God's favour and of warding off evil. At a still later period this idea took a firm seat in the national mind, and alms-deeds were regarded as a mark of distinguished virtue (Tobit ii. 15; iv. 11). That begging was customary in the time of the Saviour is clear from Mark x. 46, 'Blind Bartimeus sat by the wayside begging;' and Acts iii. 2, 'A lame man was laid daily at the gate of the temple, called Beautiful, to ask alms.' Comp. verse 10. And that it was usual for

the worshippers, as they entered the temple, to give relief, appears from the context, and particularly from the fine answer to the lame man's entreaty, made by the apostle Peter. The general spirit of Christianity, in regard to succouring the needy, is nowhere better seen than in 1 John iii. 17:—'Whoso hath this world's good, and seeth his brother have need, and shutteth up his bowels from him, how dwelleth the love of God in him?' With the faithful and conscientious observance of the 'royal law' of love, particular manifestations of mercy to the poor seem to be left by Christianity to be determined by time, place, and circumstances; and it cannot be supposed that a religion, one of whose principles is 'that, if any would not work, neither should he eat' (2 Thess. iii. 10), can give any sanction to indiscriminate almsgiving, or intend to encourage the crowd of wandering, idle beggars with which some parts of the world are still infested. The emphatic language employed by the Lord Jesus Christ and others (Luke iii. 11; vi. 30; xi. 41; xii. 33; Matt. vi. 1; Acts ix. 37; x. 2, 4) is designed to enforce the general duty of a merciful and practical regard to the distresses of the indigent—a duty which all history shows men have been lamentably prone to neglect; while the absence of ostentation and even secrecy, which the Saviour enjoined in connection with almsgiving, was intended to correct actual abuses, and bring the practice into harmony with the spirit of the Gospel. In the inimitable reflections of Jesus on the widow's mite (Mark xii. 42) is found a principle of great value, to the effect that the magnitude of men's offerings to God is to be measured by the disposition of mind whence they proceed; a principle which cuts up by the very roots the idea that merit attaches itself to almsgiving as such, and increases in proportion to the number and costliness of our alms-deeds.

One of the earliest effects of the working of Christianity in the hearts of its professors was the care which it led them to take of the poor and indigent in the 'household of faith.' Neglected and despised by the world, cut off from its sympathies, and denied any succour it might have given, the members of the early churches were careful not only to make provision in each case for its own poor, but to contribute to the necessities of other though distant communities (Acts xi. 29; xxiv. 17; 2 Cor. ix. 12). This commendable practice seems to have had its Christian origin in the deeply interesting fact (which appears from John xiii. 29) that the Saviour and his attendants were wont, notwithstanding their own comparative poverty, to contribute out of their small resources something for the relief of the needy.—J. R. B.

ALOE. [Ahalim].

ALPHA (A), the first letter of the Greek alphabet, corresponding to the Hebrew א, *Aleph*. Both the Hebrews and the Greeks employed the letters of their alphabets as numerals, and A (*Alpha* or *Aleph*) therefore denoted *one* or *the first*. Hence our Lord says of himself, that he is (τὸ A) *Alpha and* (τὸ Ω) *Omega*, *i. e.* the first and the last, the beginning and the ending, as he himself explains it (Rev. i. 8, 11; xxi. 6; xxii. 13).

ALPHABET. The origin of alphabetical writing belongs to a period long antecedent to the date of any historical testimonies, or ancient monuments, which have come down to us. This want of documentary evidence, however, has left a wider field for conjecture; and a mistaken and sometimes disingenuous zeal for the honour of the Scriptures has not only led many learned men to ascribe the invention of letters to Adam, Seth, Enoch, and Noah, but to produce copies of the very alphabets they employed. Several such alphabets, derived chiefly from Bonaventura, Hepburn, Roccha, and Athanasius Kircher, may be seen in Bangii *Cœlum Orientis* (or, according to the new title which was subsequently prefixed to it, *Exercitationes de Ortu et Progressu Literarum*), Hafniæ, 1657, p. 99, sqq. Our own time also has produced an attempt to prove, from the astrological character of the Hebrew alphabet —*i. e.* from its representing the relations of the zodiac and seven planets—that it was discovered, probably by Noah, on the 7th Sept. B.C. 3446 (Seyffart's *Unser Alphabet ein Abbild des Thierkreises*, Leips. 1834).

The earliest and surest data, however, on which any sound speculation on this subject can be based, are found in the genuine palæographical monuments of the Phœnicians; in the manifest derivation of all other Syro-Arabian and almost all European characters from that type, and in the testimony which history bears to the use and transmission of alphabetical writing.

The true principles of comparative Syro-Arabian palæography are a discovery of almost modern date. Bochart, Bernard, and others, in their early attempts, did not even possess the Phœnician alphabet at all, but only the *Samaritan* of printed books or of the Hasmonæan coins; for Rhenferd was the first that produced the genuine alphabet, in 1705. Besides, there was a very general prejudice that our present square Hebrew character was the primitive type (a list of some of the champions of which opinion is given in Carpzov's *Crit. Sacr.* p. 227); and the want of documents long concurred with that notion in hindering any important effort in the right direction. It was reserved for Kopp to make (in his *Bilder und Schriften der Vorzeit*, Mannheim, 1819) the first systematic representation of the genealogy of ancient Syro-Arabian alphabets. The latter portion of his second volume contains elaborate tabular views of the characters of a wide ethnographical circle, arranged according to their proximity to the parent type; and, by the breadth of his comparison, as well as by his deductions from the laws affecting the art of writing, he first succeeded in establishing a number of new and unexpected truths, which have had a permanent influence on all subsequent inquiries. Lastly, Gesenius, who possesses infinite philological advantages over Kopp, and who has also long devoted a more exclusive attention to Phœnician remains, has recently given accurate copies of the completest collection of them ever published, and has illustrated the characters and the language of the monuments themselves, and the general subject of palæography, with great learning and acumen: *Scripturæ Linguæque Phœniciæ Monumenta*, P. III., Lips. 1837—to which this article has many obligations.

Seventy-seven inscriptions and numerous coins —found chiefly at Tyre and Sidon, at Malta and Cyprus, in Sicily, the north of Africa, and on the

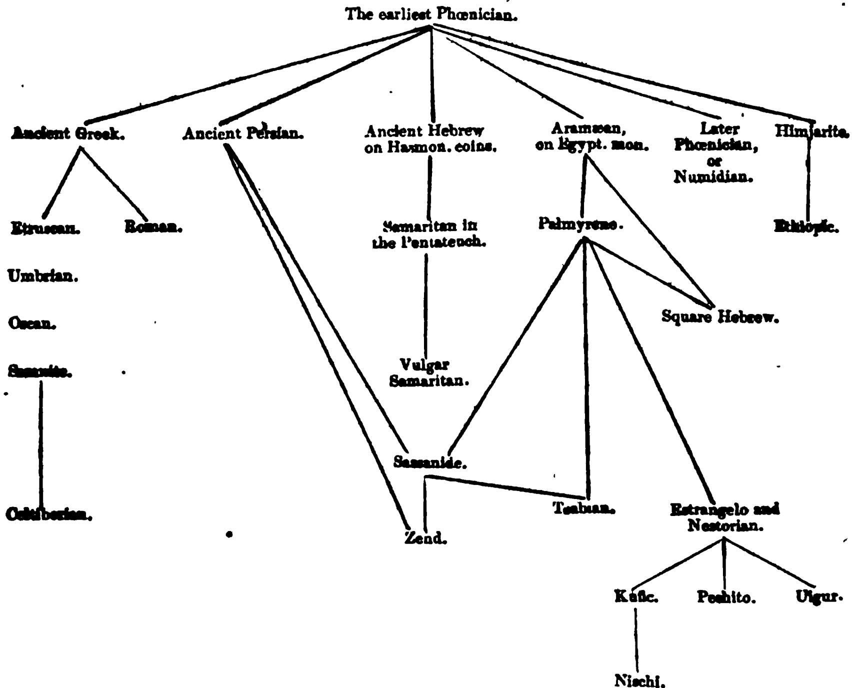
coast of Spain—have preserved to us the earliest form of that alphabet from which all others have been derived. These remains themselves belong generally to the period between Alexander the Great and the reign of Augustus; yet one is supposed to belong to the year B.C. 394, and the latest to be of the year A.D. 203. They are thus much later than the oldest Greek inscriptions; but that, nevertheless, does not affect their claim of preserving the most ancient known form of the primitive alphabet.

The characters of this alphabet, as seen on these monuments, are remarkable for their very angular and comparatively complex shape. This is an evidence of their antiquity; as this is just that feature which the tachygraphy and softer writing-materials of later times would naturally tend to obliterate. They also approach nearer to rude resemblances of the physical objects after which they are named, than those in any other Syro-Arabian alphabet, and, as another confirmation, resemble most their nearest descendant, the oldest Greek letters. This alphabet may be said to consist solely of consonants; as in it י ו א do not, except under the very narrowest limitations, possess the power of denoting the place and quality of a vowel, as they do in Hebrew. The mode of writing is, to use a technical term, in every respect much more *defective* than in Hebrew, especially in the middle of a word. There are no vestiges of vowel-points nor of final letters. Words are chiefly written continuously, yet sometimes with intervals, and with a rudimental interpunction. The use of diacritical marks seems to have been known; and that of abbreviations is very frequent. The course of the writing is from right to left, and there are no traces of the alternate or *βουστροφηδὸν* order. This alphabet was evidently invented, or first used, by a people speaking a Syro-Arabian language; as an alphabet consisting so exclusively of consonants is possible only in that family of language in which the vowels express merely the accidental part, the modifications and relations of the idea, and not its essence. It is, moreover, fully adequate to denote all the sounds of their speech; for it distinguishes that remarkable series of gutturals which is peculiar to the Syro-Arabians; and is able to express every sound without compound letters, to which other nations, who adapted Phœnician characters to their own native sounds, have been obliged to have recourse. The names of the twenty-two characters and the order of their arrangement can only be gathered (but then with considerable certainty) from the Hebrew and Greek alphabets. The names are evidently Syro-Arabian; and, as they appear in Hebrew, belong, as to their form, to a period anterior to the development of that language as we find it in the earliest books of the Old Testament: and, as they appear in the Greek, they have undergone modifications which (although some have considered them to betray signs of the Aramaic *status emphaticus*) are explained by Gesenius to be chiefly the effect of an influence, which is seen in other words (נבל, *νάβλα*; מלט, *μάλθα*) which the Greeks derived from the Phœnicians.



In tracing the derivation of all other alphabets from this type, the records of the intercourse of nations with each other and of their gradual acquisition of the arts of civilization furnish indeed an important evidence; but the *eye*, especially when trained in the school of such observation, is alone qualified to test the truth of even historical deductions on such a subject. It is, therefore, only the attentive view of accurate plates which will enable the reader fully to understand the following genealogical table of alphabets, which is taken from Gesenius. To give it entire is, nevertheless, the shortest way of laying before the student the results of a tedious inquiry; and will, at the same time, secure the opportunity of subsequent reference, by which the treatment of the several Syro-Arabian languages, under their respective heads, may be materially facilitated.

The lines which run between the different names are intended to mark the channel, and sometimes the distinct yet convergent channels, through which any given character has been derived. Thus, to give an illustration, the square Hebrew of our printed books is shown to descend from the old Aramæan of Egypt, but to be modified by the influence of the Palmyrene.

This primitive alphabet underwent various changes in its transmission to cognate and alien nations. The former class will be incidentally noticed when treating of the Syro-Arabian languages separately. Among the latter, those modifications which were necessary to adapt it to the Greek language are the most remarkable. The ancient Greek alphabet is an immediate descendant of the Phœnician; and its letters correspond, in name, figure, and order, to those of its prototype. Even the course of the writing, from right to left, was at first observed in short inscriptions; and then half retained in the *βουστροφηδόν*. But as the characters were reversed in the alternate lines of the *βουστροφηδόν*, and the order from left to right became at length the standard one, the systematic reversal of the characters became the law. This of itself was a striking departure from the Phœnician mode of writing. A more important change was produced by the nature of the language. The Greeks found the numerous gutturals superfluous, and at the same time felt the indispensable necessity of characters to denote their vowels. Accordingly, they converted *Aleph*, *He*, *Jod*, and *Ain* into A, E, I, O. This last transmutation (which is the only surprising one) is accounted for by Gesenius, on the ground that the Phœnician *Ain* leaned so much to the O sound, that it was written in Phœnician inscriptions to express that vowel (in cases when it arose from the fusion of the sounds A and L), and that the Greeks, when writing a Phœnician word in their own way, represented it by O, as Βωλαθῆς = בעלתי. Moreover, the LXX. appear to have felt the same influence, as Μωχὰ for מעכה, Gen. xxii. 24 (*Vide* Gesenii *Monumenta*, p. 431). *Cheth* also became the rough breathing, and subsequently was appropriated to the long E.

The two alphabets correspond as follows:

א	A		ט	Θ	ע	O	
ב	B		י	I	פ	Π	
ג	Γ		כ	K	צ	—	
ד	Δ		ל	Λ	ק	Κόππα	
ה	E		מ	M	ר	P	
ו	F	Βαῦ	נ	N	ש	Σ	Σάν
ז	Z		ס	Σίγμα	ת	T	
ח	H						

There is evidence that the Greeks received all these letters (except Tsade), because they continued to employ them as numerals, after they had ceased to use them as letters. The loss of Tsade, however, affected the numerical value of all letters below its place in the series. They subsequently rejected three letters in writing: *βαῦ*, the Roman F; *κόππα*, the Roman Q; and one of the sibilants. Gesenius explains the last case thus: The ancient alphabet had adopted Zeta for Zain, Sigma properly for Samech, and San for Shin. As the sound *sh* was disagreeable to the ear of the Greeks, it was dropped. Having thus no need of two characters to express their single S, the two letters gradually coalesced, and were indiscriminately called Sigma and San. But the S retained the position of the Shin, and not of the Samech; and when *Xi* was introduced, it usurped the place of the Samech. He also thinks that, in the statement of Pliny (*Hist. Nat.* vii. 56), about *sixteen* or *eighteen* Cadmean letters, the first number is decidedly too small; but finds some ground for the eighteen of Aristotle, in the facts that the Greeks rejected three, and so rarely used Z, that the actual number of current letters was reduced to that amount.

The historical testimonies respecting the use and transmission of letters disagree much as to the nation to which the discovery is to be ascribed. There are, however, only three nations which can compete for the honour—the Babylonians, the Phœnicians, and the Egyptians. Many eminent men, among whom are Kopp and Hoffmann, support the Babylonian claim to the priority of use. The chief arguments, as stated by them (*Bilder und Schriften*, ii. 147; *Gram. Syr.* p. 61), are based on the very early civilization of Babylon; on numerous passages which attribute the discovery to the Σύροι, Syri, and Χαλδαῖοι (quoted in Hoffmann, *l. c.*); and especially on the existence of a Babylonian brick containing an inscription in characters resembling the Phœnician. To these arguments Gesenius has replied most at length in the article *Palæographie*, in Ersch and Gruber's *Allgemeine Encyclopädie.* He especially endeavours to invalidate the evidence drawn from the brick (of which Kopp possessed an inaccurate transcript, and was only able to give an unsatisfactory interpretation), and asserts that the characters are Phœnician, but by no means those of the most antique shape. He considers the language of the inscription to be Aramaic; and maintains that the only conclusion which can fairly be drawn from the existence of such an inscription there, is, that during the time of the Persian kings the Babylonians possessed a common alphabet almost entirely agreeing with the Phœnician. And, indeed, as this inscription only contains seven letters, its claim to originality is not a matter of much moment; for, in the only practical question of palæography, the Phœnician alphabet still continues to be, to us at least, the primitive one. He also objects that it is, in itself, improbable that the alphabet was invented by the Aramæans, on the ground that, in their dialect, as far as it is known to us, א ע ו י are very weak and indistinct; whereas the existence of such letters in the primitive alphabet at all, is an evidence that they were well marked consonants, at least to the

people who felt the necessity of denoting them by separate signs.

Nearly an equal number of ancient authorities might be cited as testimonies that the discovery of letters was ascribed to the Phoenicians and to the Egyptians (see Walton's *Prolegomena*, ii. 2). And, indeed, there is a view, suggested by Gesenius (*Palaeographie*, *l. c.*), by which their rival claims might, to a certain extent, be reconciled:—that is, by the supposition that the hieroglyphical was, indeed, the earliest kind of all writing; but that the Phoenicians, whose commerce led them to Egypt, may have borrowed the first germ of alphabetical writing from the *phonetic* hieroglyphs. There is at least a remarkable coincidence between the Syro-Arabian alphabet and the phonetic hieroglyphs, in that in both the figure of a material object was made the sign of that sound with which the name of the object began. To follow this further would lead beyond the object of this article. But, if this theory were true, it would still leave the Phoenicians the possibility of having actually developed the first alphabetical writing; and that, together with the fact that the earliest monuments of the Syro-Arabians have preserved *their* characters, and the unanimous consent with which ancient writers ascribe to them the transmission of the alphabet to the Greeks (Herod. v. 58; Diod. Sic. v. 74), may make the probabilities preponderate in their favour [WRITING; WRITING-MATERIALS].—J. N.

ALPHABETICAL SOUNDS. In connection with the subject of the Hebrew and Greek alphabets, we may be allowed to enter on some considerations which are seldom duly developed in the grammars of either language; and which will besides throw some light on the Greek spelling of Hebrew names.

Let us first request the reader to bestow a little study on the following table of consonants:—

	Explosive.		Continuous.				
	Thin.	Full.	Thin.	Full.	Liquid.	Nasal.	
Labial . .	*p*	*b*	*f*	*v*	*w*	*m*	(1)
Dental or Palatal	{ ת ט } *t*	*d*	θ	δ	*l*	*n*	(2)
Guttural or Palatal	{ כ ק } *k*	*g*	χ خ	γ غ	Softest German *ch* or *g*	*ng*	(3)
Aspirate .	א	ע	ח *h*	ח? ح *hh*	*y*	French *n*	(4)
Sibilant or Vibratory			{ *s* ס, *sh* ש, צ }	*z* French *j*	} *r*		(5)

The names annexed to the left-hand of the rows are not perfectly satisfactory. To 'Labial' no objection can be made. Neither 'Dental' nor 'Palatal' fitly describes the second row, in which the sounds are produced by *contact* (more or less slight and momentary) of the tongue with the teeth, gums, or palate; while the third row, on the contrary, does not need contact. The term 'Guttural' is apt, improperly, to give the idea of a roughness which does not exist in *k* and *g*. The soft palatal sounds of χ, γ, *ch*, cannot be named absolutely 'Palatals,' without confounding them with those of the row above. The word 'Aspirate' (or breathing) has in English been generally appropriated to a 'rough' breathing; and it is against our usage to conceive of the liquid *y* as a *breathing* at all.

Those consonants are called *explosive* on which the voice cannot dwell when they terminate a word; as *ap*, *ak*, *ad*. At their end a rebound of the organs takes place, giving the sound of an obscure vowel; as *appĕ* for *ap*: for if this final sound be withheld, but half of the consonant is enunciated. The Latins, following the Greeks, called these 'Mutes.' On the contrary, we name those *continuous* the sound of which can be indefinitely prolonged, as *afff*..., *asss*...

For the names *thin* and *full*, others say sharp and flat; or hard and soft; or surd and sonant; or whispering and vocal. It would appear that in whispering the two are merged in one; for instance, *p* cannot be distinguished from *b*, nor *z* from *s*. Yet the 'Aspirates' (or fourth row) will not *strictly* bear this test.

By the Greek letters θ, δ, χ, γ, we understand the sounds given to them by the modern Greeks; in which θ = English *th* in *thin*; δ = English *th* in *that*; χ = German or Irish *ch*; γ = Dutch *g*. To conceive of the last sound, when we know that of χ, it is only requisite to consider that the following proportion strictly holds:—*g* (hard) : *k* : : γ : χ. At the same time, γ and χ have a double

pronunciation, rougher and smoother, as *ch* in German has. When their roughness is much exaggerated, they give the Arabic sounds خ (kha) and غ (ghain), which last is the consonant *gh* heard in gargling. As for the softer sounds, when their softness is exaggerated, the χ passes through the softest German *ch* into a mere *y*; while the γ is gradually merged in the soft imperfect *r* of lispers, and finally in *w*.

But the fourth row, or the 'Aspirates,' yet more urgently need explanation to an Englishman. The *explosive* aspirates come under the general head of what is called the Soft Breathing in Greek grammar (although ע in the Arab mouth is far enough from *soft*), while the *continuous* aspirates are Rough Breathings. Moreover, ע is a fuller and stronger א, just as ח is a fuller and stronger ה; and although the relation does not seem to be precisely that of *b* : *p*, or *d* : *t*, it is close enough to justify our tabular arrangement. As for ה, it is rather softer than our English *h*; and ח, or *hh*, is the *Irish h*, a wheezing sound. The consonant א is the hiatus heard between the vowels in the Greek word Ιηιε, and ע is the same sound exaggerated by a compression of the throat. The last is, in short, a jerking hiatus, such as a stuttering man often prefixes to a vowel-sound, when with effort he at length utters it. That א, ע, are explosive, and ה, ח, continuous, is evident on trial. It is also clear that the hiatus א readily softens itself into the liquid *y*. Just so, for the name מַהֲלַלְאֵל (*Maχ'lal'ĕl*) the Sept. reads Μαλελεήλ, where the ε before ήλ is in fact meant for an English *y*. On this ground we have put *y* into the fourth row.

It is important to observe *how* the consonants of different nations differ. For instance, the German *p* and *b* are *intermediate* to the English *p* and *b*, so as to be difficult to our ears to distinguish, and the Armenians have two different *p*'s. So the English *h* is intermediate in strictness to ה and ח, if at least we assume that these Hebrew letters had the sound of the Arabic ة and ح. Now this is a general phenomenon, in comparing the Indo-European with the Syro-Arabian sounds. Our *k* is between the two Hebrew or Arab *k*'s; our *t* is between their two *t*'s; and so on. To explain this, observe that we may execute a *t* in various ways; first, by slapping the tongue flat against the teeth, as an Irishman or man of Cumberland does when he says *water*; secondly (what is rather less broad), by slightly touching the root of the teeth, as a Frenchman or Italian does; thirdly, by touching only the gums, which is the English method; fourthly, by touching the palate, or by pressing on the gums with a muscular jerk. One or other of the last is the Hebrew ט, the Arab ط; hence some call it a palatal, others a strong *t*. In touching the palate, the throat is involuntarily opened, and a guttural sound is imparted to the letter *and to the following vowel*; for which reason it has been also called a guttural *t*. The other method, of pressing the tongue firmly, but not on the palate, is an Armenian *t*, but perhaps not the true Syro-Arabian.

What we have here to insist on is, that differences which with us are provincialisms, with them constitute differences of elementary sounds. To a Hebrew, ת differs from ט, or כ from ק, as decidedly as with us *p* from *b*. On the other hand, *t* and *th* (thin), as *d* and *th* (full), which with us have an elementary distinction, are but euphonic variations in Hebrew.

After this, we have to explain that כ was originally sounded forwarder on the palate than English *k*, as ק was far backwarder, at the root of the tongue. So ס was probably forwarder, and צ certainly backwarder than our *s*, each of them being nevertheless a kind of *s*. That צ was not *ts* is seen by צִלָּה, צִיּוֹן, מִצְרַיִם, &c. &c., which are written Σελλά, Σιών, Μεσραίν, &c. &c. in the Sept., as well as from the analogy of the Arabic ص. The *ts* pronunciation is a late invention, as is the *ng* sound, which has been arbitrarily assigned to ע. Nevertheless, out of צוֹר the Greeks made Τύρος, which is contrary to the analogy of Σιδὼν for צִידוֹן: yet the adjective *Sarranus*, instead of *Tyrius*, used by Virgil, may prove that *Sarr* or *Sour* was in ancient, as in modern days, the right pronunciation of *Tyre*. In English we have the double sound *s* and *sh*, which is illustrative of ת and ט, כ and ק, &c., to which modification it is closely analogous. For *sh* is only a modified *s*, being formed with the broad or central part of the tongue, instead of the tip. In this action the forepart of the tongue forms itself into a sort of cup, the whole rim of which comes near to the palate while the breath rushes between. On the contrary, in sounding צ, only a single transverse section of the tongue approaches the palate; but this section is far back, and the lips are protruded and smacked, so as to constitute a mouthing *s*. Farther, the alliance of *r* to *s*, so strongly marked in the Greek and Latin languages, justifies our arranging them in one row. The *r* is formed by a vibration along the tongue, which bears some analogy to the rush of the breath along its surface, on which the *s* and *sh* depend. The Armenians have a twofold *r*, of which one, if we mistake not, is related to the other, as our *sh* to *s*.

The Hebrews were commonly stated to have given two sounds to each of the letters פ ב ת ד כ ג so as to produce the twelve sounds, *p f*, *b v*, *t θ*, *d δ*, *k χ*, *g γ*; but it is now generally admitted that it was not so originally. The Greeks (at least provincially), even in early days, pronounced Βῆτα, *Vēta*, as they now also say *Ghamma*, *Dhelta*; and the Italians for Latin *b* sometimes have *v*, sometimes *b*. The Hebrew corruption was however so early as constantly to show itself in the Sept.; indeed, as a general rule, we must regard the thin consonants פ ת כ as having assumed the *continuous*, instead of the *explosive*, pronunciation; *i.e.* they were become *f*, *θ*, *χ*. Thus פִּישׁוֹן, תֻּבַל, כְּנַעַן are written Φισῶν, Θοβέλ, Χαναάν, in spite of the *dagesh lene* by which the later Masorites directed the initial letters to be sounded P, T, K. Yet there is no immovable rule. Thus the כִּתִּים is in the same book variously rendered Χεττιείμ and Κιτιέων (1 Macc. i. 1, and viii. 5). It will be observed that a decidedly dental *t* is very near to *th*, and a *k*, very mincing and forward in the mouth, easily melts into *ky*, as in the Turkish language, and thence into soft χ. In this way, θ and χ having been adopted for ת and כ, τ and κ were left as the general representatives of ט and ק. It

is well known that the Ephraimites at an early period said *s*, at least in some words, for *sh*, as in the celebrated tale of Shibboleth; but this corruption went on increasing after the orthography had been fixed, so that it became requisite to denote by a dot many a ש *sh*, the sound of which had degenerated into ס *s*. It is rather perplexing to find ס occupy the same place in the Hebrew alphabet as Ξ in the Greek, a fact which perhaps still needs elucidation.

But we must turn to an important subject—*the tendency of aspirates to degenerate into vowels*. The muscular language of barbarians seems to love aspirates; in fact, a vowel energetically sounded is itself an aspirate, as an aspirate softened is a vowel. Let it be noticed in passing that an over-vocalised language is by no means soft. Such a word as Ιηιε has of necessity strong hiatuses between the vowels, which hiatuses, although not *written* in Western languages, are virtually consonantal aspirates; in which respect an English representation of some barbarous languages is very misleading. The Hebrew spelling of Greek names often illustrates this; for example, *Antiochus* is אנטיאוכוס, where the central א indicates the hiatus between *i* and *o*. That the letters ה (final), י, ו, from the earliest times were used for the long vowels A, I, U, seems to be beyond doubt. At a later period perhaps, א was used for another A: the Greeks adopted ע for O, and finally ח for a long E. It is probable that a corruption in the Hebrew pronunciation of ה and ח had already come in when the Sept. adopted the spelling of proper names which we find. As for ה, it is the more remarkable that the Greek aspirate should not have been used for it; for both in Greece and in Italy the *h* sound must have been very soft, and ultimately has been lost. So we find in the Sept. Ἀβέλ for הבל *Hebel*, Ὠσηὲ for הושע *Hoshe'a*; and even the rougher and stronger aspirate ח often vanishes. Thus Ἐνὼχ for חנוך *Hhenôk*; Ῥοωβὼθ for רחבת *Rehhoboth*, &c. Sometimes however the ח becomes χ, as in Χὰμ for חם, Χαλὰχ for חלח; which may possibly indicate that ח, at least in proper names, occasionally retained the two sounds of Arabic ح *hh* and خ *kh*. The ע was of necessity omitted in Greek, since, at least when it was between two vowels, no nearer representation could be made than by leaving a hiatus. Where it has been denoted by Greek γ, as in Γόμοῤῥα, Γαιδάδ, Σηγώρ, there is no doubt that it had the force of the Arabic غ (ghain), whether or not this sound ever occurred in Hebrew except in proper names.

Respecting the vowels, we may add that it is now historically established, alike in the Syro-Arabian and in the Indo-European languages, that the sounds *ē* and *ō* (pronounced as in *maid* and *boat*) are later in time than those of *ā*, *ī*, *ū*, and are in fact corruptions of the diphthongs *ai*, *au*. Hence, originally, three long vowels, *ā*, *ī*, *ū*, with three vowel-points for the same when short, appeared to suffice. On the four very short vowels of Hebrew a needless obscurity is left in our grammars by its not being observed that we have the same number in the English language, really distinct; as in *sudděn* (or *castlĕ*), *contrăry*, *nobŏdy*, *bĕneath*; although it is probable that with ח the vowel was clearer and sharper than in any short English *a*. We have even the *furtive vowel* of which the Hebrew grammars speak; namely, when a word ends in *r*, preceded by a long accented vowel or diphthong. In this case, a very short *a* is heard in true English speech, but not in Irish, before the *r*, as in *beer*, *shore*, *flour* (whence the orthography *flower*, *bower*, &c.), which corresponds to the Hebrew רוּחַ, עֵץ. The Arabs have it also when the final letter is ק.—F. W. N.

1. **ALPHÆUS** (Ἀλφαῖος), father of James the Less (Matt. x. 3; Luke vi. 15), and husband of Mary, the sister of our Lord's mother (John xix. 25); for which reason James is called 'the Lord's brother' [BROTHER]. By comparing John xix. 25, with Luke xxiv. 10, and Matt. x. 3, it appears that Alphæus is the same person as Cleophas; Alphæus being his Greek, and Cleophas his Hebrew or Syriac name, according to the custom of the provinces or of the time, when men had often two names, by one of which they were known to their friends and countrymen, and by the other to the Romans or strangers. Possibly, however, the double name in Greek arises, in this instance, from a diversity in pronouncing the ח in his Aramæan name, חלפי, a diversity which is common also in the Septuagint (see Kuinoel *in Joan.* xix. 25) [NAMES].

2. **ALPHÆUS**, the father of the evangelist Levi or Matthew (Mark ii. 14).

ALTAR (מִזְבֵּחַ from זָבַח, *to slay (a victim)*, but used also for the altar of *incense*; Sept. generally θυσιαστήριον, sometimes βωμός). The first altar we read of in the Bible was that erected by Noah on leaving the ark. According to a Rabbinical legend, it was partly formed from the remains of one built by Adam on his expulsion from Paradise, and afterwards used by Cain and Abel, on the identical spot where Abraham prepared to offer up Isaac (Zohar, *In Gen.* fol. 51, 3, 4; Targum, Jonathan, Gen. viii. 20). Mention is made of altars erected by Abraham (Gen. xii. 7; xiii. 4; xxii. 9); by Isaac (xxvi. 25); by Jacob (xxxiii. 20; xxxv. 1, 3); by Moses (Exod. xvii. 15). After the giving of the law, the Israelites were commanded to make an altar of earth (מזבח אדמה); they were also permitted to employ stones, but no iron tool was to be applied to them. This has been generally understood as an interdiction of sculpture, in order to guard against a violation of the second commandment. Altars were frequently built on high places (במה, במות, βωμοί); the word being used not only for the elevated spots, but for the sacrificial structures upon them. Thus Solomon *built* an high place for Chemosh (1 Kings xi. 7), and Josiah brake down and burnt the high place, and stamped it small to powder (2 Kings xxiii. 15); in which passage במה is distinguished from מזבח. This practice, however, was forbidden by the Mosaic law (Deut. xii. 13; xvi. 5), except in particular instances, such as those of Gideon (Judg. vi. 26) and David (2 Sam. xxiv. 18). It is said of Solomon 'that he loved the Lord, walking in the statutes of David, his father, only he sacrificed and burnt incense on the high places' (1 Kings iii. 3). Altars were sometimes built on the roofs of houses: in 2 Kings xxiii. 12, we read of the altars that were on the top of the upper chamber of Ahaz. In the taber-

nacle, and afterwards in the temple, two altars were erected, one for sacrifices, the other for incense: the table for the shew-bread is also sometimes called an altar.

1. The altar of burnt-offering (מזבח העלה) belonging to the tabernacle was a hollow square, five cubits in length and breadth, and three cubits in height; it was made of Shittim-wood [SHITTIM], and overlaid with plates of brass. In the middle there was a ledge or projection, כרכב, *deambulacrum*, on which the priest stood while officiating; immediately below this, a brass grating was let down into the altar to support the fire, with four rings attached, through which poles were passed, when the altar was removed. Some critics have supposed that this grating was placed perpendicularly, and fastened to the outward edge of the כרכב, thus making the lower part of the altar larger than the upper. Others have imagined that it extended horizontally beyond the כרכב, in order to intercept the coals or portions of the sacrifice which might accidentally fall off the altar. Thus the Targumist Jonathan says, 'Quod si cadat frustum aut pruna ignis ex altari, cadat super craticulam nec pertingat ad terram; tum capient illud sacerdotes ex craticula et reponent in altari.' But for such a purpose (as Dr. Bähr remarks) a grating seems very unsuitable. As the priests were forbidden to go up by steps to the altar (Exod. xx. 26), a slope of earth was probably made rising to a level with the כרכב. According to the Jewish tradition this was on the south side, which is not improbable; for on the east was 'the place of the ashes' (מקום הדשן), Lev. i. 16, and the laver of brass was probably near the western side, so that only the north and south sides were left. Those critics who suppose the grating to have been perpendicular or on the outside, consider the injunction in Exod. xx. 24, as applicable to this altar, and that the inside was filled with earth; so that the boards of Shittim-wood formed merely a case for the real altar. Thus Jarchi, on Exod. xxvii. 5, says, 'Altare terreum est hoc ipsum æneum altare, cujus concavum terrâ implebatur cum castra metarentur.'

In Exod. xxvii. 3, the following utensils are mentioned as belonging to the altar, all of which were to be made of brass. (1) סירות *siroth*, pans or dishes to receive the ashes that fell through the grating. (2) יעים *yaim*, shovels (*forcipes*, Vulg.) for cleaning the altar. (3) מזרקות *mizrakoth* (*basons*, Auth. Vers.; φιάλαι, Sept.; *patera sacrifica*, Gesenius), vessels for receiving the blood and sprinkling it on the altar. (4) מזלגות *mizlagoth* ('*flesh-hooks*,' Auth. Vers.; κρεάγραι, Sept.; *fuscinulæ*, Vulg.), large forks to turn the pieces of flesh or to take them off the fire (see 1 Sam. ii. 13). (5) מחתות *machthoth* ('*fire-pans*,' Auth. Vers.; τὸ πυρεῖον, Sept.): the same word is elsewhere translated *censers*, Num. xvi. 17; but in Exodus xxv. 38, '*snuff-dishes*;' ὑποθέματα, Sept.

2. The altar of burnt-offering in Solomon's temple was of much larger dimensions, 'twenty cubits in length and breadth, and ten in height' (2 Chron. iv. 1), and was made entirely of brass. It is said of Asa that he renewed (חדש), that is, either *repaired* (in which sense the word is evidently used in 2 Chron. xxiv. 4) or *reconsecrated* (ἐνεκαίνισε, Sept.) the altar of the Lord that was before the porch of the Lord (2 Chron. xv. 8). This altar was removed by king Ahaz (2 Kings xvi. 14; it was 'cleansed' (טהר, ἁγνίζω) by Hezekiah; and in the latter part of Manasseh's reign was rebuilt (ויכן ketib; ויבן keri).

3. Of the altar of burnt-offering in the second temple, the canonical scriptures give us no information excepting that it was erected before the foundations of the temple were laid (Ezra iii. 3, 6) on the same place where it had formerly been built, ἐφ' οὗ καὶ πρότερον ἦν ἀνῳκοδομημένον τόπου (Joseph. *Antiq.* xi. 4. 1). From the Apocrypha, however, we may infer that it was made, not of brass, but of unhewn stone, for in the account of the restoration of the temple service by Judas Maccabæus, it is said, 'They took whole stones (λίθους ὁλοκλήρους), according to the law, and built a new altar according to the former' (1 Macc. iv. 47). When Antiochus Epiphanes pillaged Jerusalem, Josephus informs us that he left the temple bare, and took away the golden candlesticks and the golden altar [of incense] and table [of shew-bread], and the altar of burnt-offering, τὰ θυσιαστήρια (*Antiq.* xii. 5. 4).

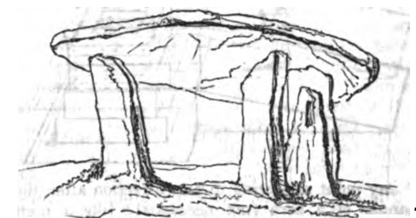
4. The altar of burnt-offering erected by Herod is thus described by Josephus (*De Bell. Jud.* v. 5. 6): 'Before this temple stood the altar, fifteen cubits high, and equal both in length and breadth, each of which dimensions was fifty cubits. The figure it was built in was a square, and it had corners like horns (κερατοειδεῖς προανέχων γωνίας), and the passage up to it was by an insensible acclivity from the south. It was formed without any iron tool, nor did any iron tool so much as touch it at any time.' The dimensions of this altar are differently stated in the Mishna. It is there described as a square 32 cubits at the base; at the height of a cubit it is reduced 1 cubit each way, making it 30 cubits square; at 5 cubits higher it is similarly contracted, becoming 28 cubits square, and at the base of the horns, 26 cubits; and allowing a cubit each way for the deambulacrum, a square of 24 cubits is left for the fire on the altar. Other Jewish writers place the deambulacrum 2 feet below the surface of the altar, which would certainly be a more suitable construction. The Mishna states, in accordance with Josephus, that the stones of the altar were unhewn, agreeably to the command in Exod. xx. 25; and that they were whitewashed every year at the Passover and the feast of tabernacles. On the south side was an inclined plane, 32 cubits long and 16 cubits broad, made likewise of unhewn stones. A pipe was connected with the south-west horn, through which the blood of the victims was discharged by a subterraneous passage into the brook Kedron. Under the altar was a cavity to receive the drink-offerings, which was covered with a marble slab, and cleansed from time to time. On the north side of the altar several iron rings were fixed to fasten the victims. Lastly, a red line was drawn round the middle of the altar to distinguish between the blood that was to be sprinkled above and below it.

II. The second altar belonging to the Jewish Cultus was *the altar of incense*, מזבח המקטר or מזבח הקטרת; θυσιαστήριον θυμιάματος, Sept.; θυμιατήριον, Josephus; called also the golden altar (Num. iv. 11) מזבח הזהב. It was placed between the table of shew-bread

and the golden candlestick, in the most holy place.

1. This altar in the tabernacle was made of Shittim-wood overlaid with gold plates, one cubit in length and breadth, and two cubits in height. It had horns (Lev. iv. 7) of the same materials; and round the flat surface was a border (זֵר, *crown*, Auth. Vers.; στρεπτὴν στεφάνην χρυσῆν, Sept.) of gold, underneath which were the rings to receive 'the staves (בַּדִּים, σκυτάλαι) made of Shittim-wood, overlaid with gold to bear it withal' Exod. xxx. 1-5; Joseph. *Antiq.* iii. 6. 8).

2. The altar in Solomon's Temple was similar, but made of cedar (1 Kings vi. 20; vii. 48; 1 Chron. xxix. 18) overlaid with gold.



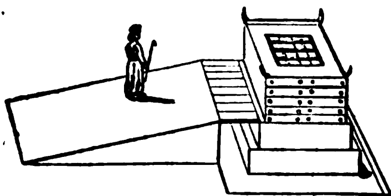
3. The altar in the second temple was taken away by Antiochus Epiphanes (1 Macc. i. 23), and restored by Judas Maccabæus (1 Macc. iv. 49). On the arch of Titus there appears no altar of incense; it is not mentioned in Heb. ix., nor by Joseph. *Antiq.* xiv. 4. 4 (*vide* Tholuck *On the Hebrews*, vol. ii. p. 8; *Biblical Cabinet*, vol. xxxix.) (Winer's *Realwörterbuch*, articles 'Altar,' 'Brandopfer altar,' 'Raucheraltar;' Bähr's *Symbolik des Mosaischen Cultus*, bd. 1. Heidelberg, 1837).—J. E. R.

ALTARS, FORMS OF. In the preceding article the reader is furnished with all the positive information which we possess respecting the altars mentioned in Scripture; but as, with regard to material objects so frequently named as altars, we feel a desire to have distinct images in the mind, some further remarks respecting the forms which they probably bore, may not be unacceptable.

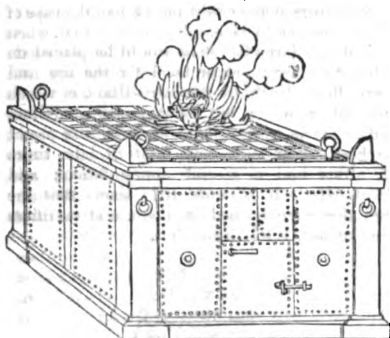
The direction to the Israelites, at the time of their leaving Egypt, to construct their altars of unhewn stones or of earth, is doubtless to be understood as an injunction to follow the usage of their patriarchal ancestors; and not to adopt the customs, full of idolatrous associations, which they had seen in Egypt, or might see in the land of Canaan. As they were also strictly enjoined to destroy the altars of the Canaanites, it is more than probable that the direction was levelled against such usages as those into which that people had fallen. The conclusion deducible from this, that the patriarchal altars were of unhewn stones or of earth, is confirmed by the circumstances under which they were erected, and by the fact that they are always described as being 'built.' The provision that they *might* be made of earth, applies doubtless to situations in which stones could not be easily obtained, as in the open plains and wildernesses. Familiar analogies lead to the inference that the largest stones that could be found in the neighbourhood would be employed to form the altar; but where no large stones could be had, that heaps of smaller ones might be made to serve.

As these altars were erected in the open air, and were very carefully preserved, there is at least a strong probability that some of those ancient monuments of unhewn stone, usually called Druidical remains, which are found in all parts of the world, were derived from the altars of primitive times. These are various in their forms; and their peculiar uses have been very much disputed. It is admitted, however, that some of them must have been altars; but the difficulty is, to determine whether these altars are to be sought in the Cromlechs or the Kistvaens. In another work (*Pictorial Hist. of Palestine*, Supp. Notes to b. iii. chs. i. iii. iv.) the whole subject is largely examined in its scriptural relations; and the author, through a mass of authority and illustration, there reaches the conclusion that the arguments preponderate in favour of the opinion that the Cromlechs are the representatives of the primitive altars, and that the Kistvaens (stones disposed in a chest-like form) are analogous to the arks of the Jewish ritual and of some of the pagan religions [ARK].

Cromlechs, as is well known, are somewhat in the form of a table, one large stone being supported, in a horizontal or slightly inclined position, upon three or more, but usually three stones, set upright. That they were used as altars is

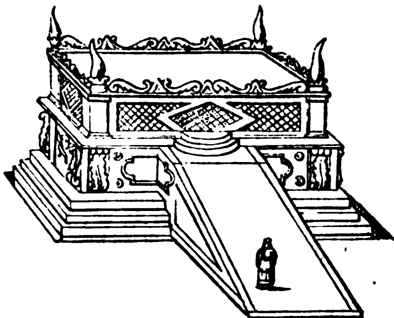


almost instinctively suggested to every one that views them; and this conclusion is strengthened when, as is often the case, we observe a small circular hole through which probably the rope was run by which the victims, when slaughtered, were bound to the altar, as they were to the angular projections or 'horns' of the Jewish altar (Ps. cxviii. 27). It was natural that where a sufficiency of large stones could not be found, heaps of smaller ones should be employed; and that, when practicable, a large flat stone would be placed on the top, to give a proper level for the fire and the sacrifice. Such are the cairn-altars, of which many still remain; but as they are sometimes found in places where stones of large size might have been obtained, it seems that in later times *such* altars had a special appropriation; and Toland (*Hist. B. Druids*, 101) shows that the sacred fires were burned on them, and sacrifices offered to Bel, Baal, or the Sun.



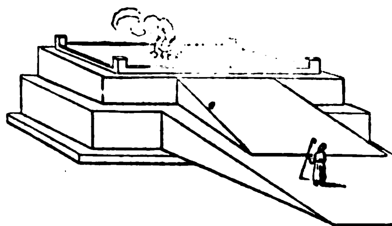
The injunction that there should be no ascent by steps to the *altar* appears to have been imperfectly understood. There are no accounts or figures of altars so elevated in their fabric as to require such steps for the officiating priests; but when altars are found on rocks or hills, the ascent to them is sometimes facilitated by steps *cut in the rock*. This, therefore, may have been an indirect way of preventing that erection of altars in high places which the Scriptures so often reprobate.

It is usually supposed, however, that the effect of this prohibition was, that the tabernacle altar,

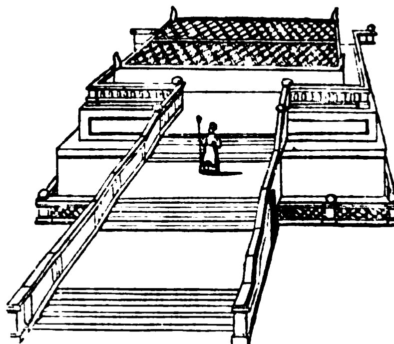


like most ancient altars, was so low as to need no ascent; or else that some other kind of ascent was provided. The former is Calmet's view, the latter Lamy's. Lamy gives a sloping ascent, while Calmet merely provides a low standing-board for the officiating priest. The latter is probably right, for the altar was but three cubits high, and was designed to be portable. There is one error in these and other figures of the Jewish altars composed from the descriptions; namely, with regard to the 'horns,' which were placed at the corners, called 'the horns of the altar' (Exod. xxvii. 2; xxix. 12; 1 Kings ii. 28), and to which the victims were tied at the time of sacrifice. The word horn (קרן *keren*) was applied by the Jews as an epithet descriptive

of any point projecting in any direction after the manner of a horn (not necessarily like a horn in shape); and there is no reason to doubt that the horns of the successive altars of burnt-offerings resembled those corners projecting upwards which are seen in many ancient altars. These are shown in the view now given (from the *Pictorial Bible*), which, although substantially the same, is, in this and other respects, a considerable improvement upon that of Calmet.

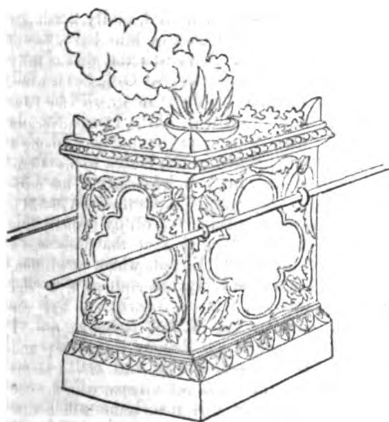


By the time of Solomon it appears to have been understood that the interdiction of steps of ascent did not imply that the altar was to be low, but rather that it was to be high, and that only a particular mode of ascent was forbidden. The altar of the temple was not less than ten cubits high, and some means of ascent must have been provided. The usual representations of Solomon's altar are formed chiefly from the descriptions of that in Herod's temple given by Josephus and the Rabbins; and although this last was almost one-third higher and larger than the other, it was doubtless upon the same model. The altar of the first temple had been seen, and could be described, by many of those who were present when that of the second temple was erected; and the latter was known to those by whom Herod's altar was built. Very different figures, however, have been formed from these descriptions.



The first figure is taken from Calmet's original work, and exhibits the form which, with slight variation, is also preferred by Bernard Lamy, and by Prideaux (*Connection*, i. 200). It is excellently conceived; but is open to the objection that the slope, so far from being 'insensible,' as Josephus describes it, is steep and inconvenient; and yet, on the other hand, a less steep ascent to an object so elevated must have been inconveniently extended.

Calmet gives the above only as in accordance with the Rabbinical descriptions. His own view of



the matter is conveyed in the annexed figure. This is certainly a very handsome altar in itself, but it would be scarcely possible to devise one more unsuitable for the actual, and occasionally extensive, services of the Jewish altar. None of these objections apply to the next figure, derived from Surenhusius (*Mishna*, tom. ii. p. 261), which, for

use and effect, far exceeds any other representation that has hitherto been attempted. An ascent

by an inclined plane to an altar so high as that of Solomon must either have been inconveniently steep, or have had an unseemly extension—objections obviated by the provision of three ascents, of four steps each, conducting to successive platforms. In the description of Ezekiel's temple, 'steps' (מַעֲלוֹת) are placed on the east side of the altar (Ezek. xliii. 17); and as it is generally supposed that the details of that description agree with those of Solomon's temple, it is on that authority the steps are introduced. If they actually existed, it may be asked how this was consistent with the law, which forbade steps altogether. The obvious answer is, that, as public decency was the ostensible ground of the prohibition (Exod. xx. 26), it might be supposed that it was not imperative if steps could be so disposed that decency should not be violated; and that, if a law may be interpreted by the reason of its enactment, this law could only be meant to forbid a *continuous* flight of steps, and not a broken ascent. If it is still urged against this view that, according to Josephus, the ascent in the temple of Herod was by an insensible slope, an answer is found in the fact, that, at the time of its erection, a mode of interpreting the law according to the dead letter, rather than the spirit, had arisen; and we have no doubt that even had it been then known that steps actually existed in Solomon's altar, or in that of the second temple, this would have been regarded as a serious departure from the strict letter of the law, not to be repeated in the new altar. In a similar way the student of the Bible may account for some other discrepancies between the temples of Solomon and Ezekiel, and that of Herod.

The altar of incense, being very simple in its parts and uses, has been represented with so little difference, except in some ornamental details, that one of the figures designed from the descriptions may suffice. It is the same as the one inserted in the *Pictorial Bible* (Exod. xxx.); and, as to the corners ('horns'), &c., is doubtless more accurate than those given by Calmet and others.

It is not our object to describe the altars of other nations; but, to supply materials for comparison and illustration, a group of the altars of the principal nations of Oriental and classical antiquity is here introduced. One obvious remark occurs namely, that all the Oriental altars are square or oblong, whereas those of Greece and Rome are more usually round; and that, upon the whole, the Hebrew altars were in accordance with the general Oriental type. In all of them we observe bases with corresponding projections at the top; and in some we find the true model of the 'horns,' or prominent and pointed angles.

1, 2, 3. Greek. 4. Egyptian. 5. Babylonian. 6. Roman. 7, 8. Persian.

Not regarding the *table of shew-bread* as an altar, an account of it is reserved for the proper head; and other articles afford information respecting the uses and privileges of the altars of burnt-offering and of incense [Asylum; Censer; Incense; Sacrifice].

Altar at Athens. St. Paul, in his admired address before the judges of the Areopagus at Athens, declares that he perceived that the Athenians were in all things too superstitious,* for that, as he was passing by and beholding their devotions, he found an altar, inscribed, 'To the Unknown God;' and adds, with unexpected force, '*Him* whom ye worship without knowing (ὃν οὖν ἀγνοοῦντες εὐσεβεῖτε), I set forth unto you' (Acts xvii. 22, 23). The questions suggested by the mention of an altar at Athens, thus inscribed 'to the unknown God,' have engaged much attention; and different opinions have been, and probably will continue to be, entertained on the subject.

The principal difficulty arises from this, that the Greek writers, especially such as illustrate the Athenian antiquities, make mention of *many altars* dedicated ἀγνώστοις Θεοῖς, *to the unknown gods*, but not of *any* one dedicated ἀγνώστῳ Θεῷ, *to the unknown god*. The passage

* Δεισιδαιμονεστέρους—a word that only occurs here, and is of ambiguous signification, being capable of a good, bad, or indifferent sense. Most modern, and some ancient, expositors hold that it is here to be taken in a good sense (*very religious*), as it was not the object of the apostle to give needless offence. This explanation also agrees best with the context, and with the circumstances of the case. A man may be 'very religious,' though his religion itself may be false.

in Lucian (*Philopatr.* § 9), which has often been appealed to as evidence that there existed at Athens an altar dedicated, in the singular, to the unknown God, ἀγνώστῳ Θεῷ, is of little worth for the purpose. For it has been shown by Eichhorn, and Niemeyer (*Interp. Orat. Paul. Ath. in Areop. hab.*), that this witty and profane writer only repeats the expression of St. Paul, with the view of casting ridicule upon it, as he does on other occasions. The other passages from Greek writers only enable us to conclude that there were altars at Athens dedicated to *many unknown gods* (Pausan. i. 1; Philostrat. *Vit. Ap.* vi. 3). It has also been supposed that the allusion may be to certain *anonymous* altars, which were erected by the philosopher Epimenides, in the time of a terrible pestilence, as a solemn expiation for the country (Diog. Laert. *Vit. Epimen.* i. 29). Dr. Doddridge, among others, dwells much on this. But it is a strong objection to the view which he has taken, that the sacrifices on these altars were to be offered not ἀγνώστῳ Θεῷ, but τῷ προσήκοντι Θεῷ, *i. e.* to the God to whom this affair appertains, or the God who can avert the pestilence, whoever he may be; and such, no doubt, would have been the inscription, if there had been any. But these altars are expressly said to have been βωμοὶ ἀνώνυμοι, i. e. *anonymous altars*, evidently not in the sense of altars inscribed *to the unknown God*, but altars without *any name* or inscription.

Now, since the ancient writers tell us that there were at Athens many altars inscribed to the unknown gods, Erasmus, Le Clerc, Brodæus, and many others, have maintained that St. Paul changed the plural number into the singular in *accommodation* to his purpose. Of this opinion was Jerome (*Comment. in Tit.* i. 12), who testifies that this inscription (which, he says, had been read by him) was, Θεοῖς Ἀσίας καὶ Εὐρώπης καὶ Λιβύης, Θεοῖς ἀγνώστοις καὶ ξένοις, 'To the gods of Asia, Europe, and Africa; to the unknown and strange gods.' Bretschneider, relying on this authority, supposes (*Lex. N. T.*, *s. v.* ἄγνωστος) the inscription to have been ἀγνώστοις Θεοῖς, *i. e.* to the gods of foreign nations, unknown to the Athenians; indicating that either foreigners might sacrifice upon that altar to their own gods, or that Athenians, who were about to travel abroad, might first by sacrifice propitiate the favour of the gods of the countries they were about to visit. He quotes the sentiment of Tertullian: 'I find, indeed, altars prostituted to *unknown* gods, but idolatry is an Attic tenet; also to *uncertain* gods, but superstition is a tenet of Rome.' To the view that such was the inscription which Paul noticed, and that he thus accommodated it to his immediate purpose, it has been very justly objected that, if this interpretation be admitted, the whole strength and weight of the apostle's argument are taken away; and that his assertion might have been convicted of falsity by his opponents. Therefore, while admitting the authorities for the fact, that there were altars inscribed to the unknown gods, they contend that St. Paul is at least equally good authority, for the fact that one of these altars, if not more, was inscribed in the singular, *to the unknown God.* Chrysostom (*In Acta Ap.*), who objects strongly to the preceding hypothesis, offers the conjecture that the Athenians, who were a people exceedingly superstitious, being apprehensive that they might have overlooked some divinity and omitted to worship him, erected altars in some part of their city inscribed to *the unknown God;* whence St. Paul took occasion to preach to the Areopagites Jehovah as a God, with respect to them truly *unknown;* but whom they yet, in some sort, adored without knowing him. Similar to this in essential import is the conjecture of Eichhorn (*Allgem. Biblioth.* iii. 414) to which Niemeyer subscribes, that there were standing at Athens several very ancient altars, which had originally no inscription, and which were afterwards not destroyed, for fear of provoking the anger of the gods to whom they had been dedicated, although it was no longer known who these gods were. He supposes, therefore, that the inscription ἀγνώστῳ Θεῷ, *to an* [*some*] *unknown God*, was placed upon them; and that one of these altars was seen by the apostle, who, not knowing that there were others, spoke accordingly. To this we may add the notion of Kuinoël (*Comm. in Act.* xvii. 23), who considers it proved that there were several altars at Athens on which the inscription was written in the plural number; and believes that there was *also one* altar with the inscription in the singular, although the fact has been *recorded* by no *other* writer. For no argument can be drawn from this silence, to the discredit of a writer, like St. Paul, of unimpeached integrity. The altar in question, he thinks, had probably been dedicated ἀγνώστῳ Θεῷ, on account of some remarkable benefit received, which seemed attributable to *some* God, although it was uncertain to *whom.*

It would be improper to dismiss this subject without noticing the opinion of Augustine, who had no doubt that the Athenians, under the appellation of the *unknown God*, really worshipped the true one. Others besides him have thought that the God of the Jews was the real object of this altar, he being a powerful God, but not fully known to them, as the Jews never used his name in speech, but substituted 'The Lord' for 'Jehovah.' One of the warmest modern advocates of Augustine's opinion is Dr. Hales, who, among a multitude of other matters, irrelevant to his 'Chronology,' but interesting in themselves, has critically examined this subject (vol. iii. pp. 519-531). Alluding to the alleged fact that Athens was colonized from Sais in Egypt, where there was a temple to Neith, the Egyptian goddess of wisdom, on which was the famous inscription, Ἐγώ εἰμι ΠΑΝ τὸ γέγενος, καὶ ὄν, καὶ ἐσόμενον· καὶ τὸν ἐμὸν πέπλον οὐδεὶς πω θνητὸς ἀπεκάλυψεν—'I am All that has been, and is, and shall be; and *my veil no mortal hath yet uncovered*,' he seems disposed to connect this inscription with the one on the Athenian altar, and to refer both to that remote 'unknowable' Wisdom, far beyond all known causes, whom the heathen dimly guessed at under obscure metaphors and recondite phrases; but whom the Hebrews *knew* under the name of Jehovah.

But there is no end of these hypotheses; and we are content to rest in the conclusion of Professor Robinson (*Add. in Am. Edit. of Calmet*): 'So much at least is certain, that altars to an unknown god or gods existed at Athens. But the attempt to ascertain definitively whom the Athenians worshipped under this appellation must ever remain fruitless for want of sufficient

data. The inscription afforded to Paul a happy occasion of proclaiming the Gospel; and those who embraced it found indeed that the being whom they had thus "ignorantly worshipped," was the one only living and true God.'

ALUKAH (עֲלוּקָה; Sept. Βδέλλα; Vulg. *Sanguisuga*; A. V. 'Horse-leech') occurs only in Prov. xxx. 15 (genus, *vermes*; order, *intestinata*, Linn. Viviparous, brings forth only *one* offspring at a time: many species). 'The *horse-leech*' is properly a *species* of leech discarded for medical purposes on account of the coarseness of its bite. There is no ground for the *distinction of species* made in the English Bible.

Although the Hebrew word is translated *leech* in all the versions, there has been much dispute whether that is its proper meaning. *Against the received translation*, it has been urged that, upon an examination of the context in which it occurs, the introduction of the leech seems strange: that it is impossible to understand what is meant by its '*two* daughters,' or *three*, as the Septuagint, Syriac, and Arabic versions assign to it; and that, instead of the incessant craving apparently attributed to it, the leech drops off when filled. In order to evade these difficulties it has been attempted, but in vain, to connect the passage either with the preceding or subsequent verse. It has also been attempted to give a different sense to the Hebrew word. But as it occurs nowhere besides in Scripture, and as the root from which it would seem to be derived is never used as a verb, no assistance can be obtained from the Scriptures themselves in this investigation. Recourse is therefore had to the Arabic. The following is the line of criticism pursued by the learned Bochart (*Hierozoicon*, a Rosenmüller, iii. 785, &c.). The Arabic word for leech is al*a*kah, which is derived from a verb signifying to hang or to adhere to. But the Hebrew word, al*u*kah, he would derive from another Arabic root, *aluk*, which means 'fate, heavy misfortune, or impending calamity'; and hence he infers that alukah properly means destiny, and particularly the *necessity of dying* which attaches to every man by the decree of God. He urges that it is not strange that *offspring* should be ascribed to this divine appointment, since, in Prov. xxvii. 1, offspring is attributed to time, a day—'Thou knowest not what a day may *bring forth*.' And the Hebrews call events the children of time. We also speak of the womb of time. Thus, then, Bochart considers that destiny, or the divine decree concerning death, is here personified and represented as having 'two daughters crying, give, give;' namely, שְׁאוֹל, Hades, or the state of departed souls, and the grave. He cites Prov. xxvii. 20, as a parallel passage: 'Hell (*sheol*) and the grave are never full,' which the Vulgate renders 'infernus et perditio.' Hence he supposes that *sheol* and the *grave* are the two daughters of Alukah or Destiny; each cries 'give' at the same moment—the former asks for the soul, and the latter for the body of man in death; both are insatiable, for both involve all mankind in one common ruin. He further thinks that both these are called daughters, because each of the words is of the feminine, or, at most, of the common gender; and in the 16th verse, the grave (sheol) is specified as one of the 'things that are never satisfied.' In further confirmation of this view, Bochart cites rabbinical writers, who state that by the word alukah, which occurs in the Chaldee paraphrase on the Psalms, they understand destiny to be signified; and also remark that it has two daughters—Eden and Gehenna, Paradise and Hell—the former of whom never has enough of the souls of the righteous, the latter of the souls of the wicked.

In behalf of the received translation, it is urged that it is scarcely credible that all the ancient translators should have confounded alukah with alakah; that it is peculiarly unlikely that this should have been the case with the Septuagint translator of the book of Proverbs, because it is believed that 'this ranks next to the translation of the Pentateuch for ability and fidelity of execution;' and that the author of it must have been well skilled in the two languages (Horne's *Introduction*, ii. 43: ed. 1828). It is further pleaded that the application of Arabic analogies to Hebrew words is not decisive; and finally, that the theory proposed by Bochart is not essential to the elucidation of the passage. In the preceding verse the writer (not Solomon—see verse 1) speaks of 'a generation, whose teeth are as swords, and their jaw-teeth as knives to *devour* the *poor* from off the earth, and the needy from among men;' and then, after the abrupt and picturesque style of the East, especially in their proverbs, which is nowhere more vividly exemplified than in this whole chapter, the leech is introduced as an illustration of the covetousness of such persons, and of the two distinguishing vices of which it is the parent, avarice and cruelty. May not also the 'two *daughters* of the leech, crying, Give, give,' be a figurative description of the two *lips* of the creature (for these it has, and perfectly formed), which are a part of its very complicated mouth? It certainly is agreeable to the Hebrew style to call the offspring of inanimate things *daughters*, for so branches are called daughters of trees (Gen. xlix. 22—margin). A similar use of the word is found in Eccles. xii. 4, 'All the *daughters* of music shall be brought low,' meaning the lips, front teeth, and other parts of the mouth. It is well remarked by Professor Paxton, that 'this figurative application of the entire genus is sufficient to justify the interpretation. The leech, as a symbol, in use among rulers of every class and in all ages, for avarice, rapine, plunder, rapacity, and even assiduity, is too well known to need illustration' (Plau. *Epidic.* art. 2; Cicero, *ad Attic.*; Horace, *Ars Poet.* 476; Theocritus, *Pharmaceut.*; &c. &c.).—J. F. D.

ALUSH (אָלוּשׁ; Sept. Αἰλούς), one of the places at which the Hebrews rested on their way to Mount Sinai (Num. xxxiii. 13). It was between Dophkah and Rephidim. The Jewish Chronology (*Seder Olam Rabba*, c. 5, p. 27) makes it twelve miles from the former and eight from the latter station. The Targum of Jonathan calls it 'a strong fort;' and it is alleged (upon an interpretation of Exod. xvi. 30) that in Alush the Sabbath was instituted, and the first Sabbath kept.

AMALEK (עֲמָלֵק), a son of Eliphaz (the first-born of Esau) by his concubine Timna: he

was the chieftain, or Emir (אלוף, Sept. ἡγεμών, Auth. V. *Duke*), of an Idumæan tribe (Gen. xxxvi. 16).

AMALEKITES, the name of a nation inhabiting the country to the south of Palestine between Idumæa and Egypt, and to the east of the Dead Sea and Mount Seir. 'The Amalekites dwell in the land of the south' (בארץ הנגב, Num. xiii. 29.). 'Saul smote the Amalekites from Havilah until thou comest to Shur, that is over against Egypt' (1 Sam. xv. 7). 'David went up and invaded the Geshurites, and Gezrites, and the Amalekites, for those nations were of old the inhabitants of the land as thou goest to Shur, even unto the land of Egypt' (1 Sam. xxvii. 8). In 1 Chron. iv. 42, it is said that the sons of Simeon went to Mount Seir and smote the rest of the Amalekites that were escaped. According to Josephus (*Antiq.* iii. 2, § 1) the Amalekites inhabited Gobolitis (גבל, Ps. lxxxiii. 8; Γέβαλα, Γάβαλα, Stephanus Byz.; Γεβαληνή, Γαβαληνή, Euseb.) and Petra, and were the most warlike of the nations in those parts: *οἵ τε τὴν Γοβολῖτιν καὶ τὴν Πέτραν κατοικοῦντες, οἱ καλοῦνται μὲν Ἀμαληκῖται, μαχιμώτατοι δὲ τῶν ἐκεῖσε ἐθνῶν ὑπῆρχον.* In another passage he says, 'Aliphaz had five legitimate sons, Theman, Omer, Saphus, Gotham, and Kanaz; for Amalek was not legitimate, but by a concubine, whose name was Thamna. These dwelt in that part of Idumæa called Gobolitis, and that called Amalekitis, from Amalek' (*Antiq.* ii. 1); and elsewhere he speaks of them as 'reaching from Pelusium of Egypt to the Red Sea' (*Antiq.* vi. 7). We find, also, that they had a settlement in that part of Palestine which was allotted to the tribe of Ephraim. Abdon, one of the judges of Israel, was buried in Pirathon, in the land of Ephraim, in the mount of the Amalekites, בהר העמלקי. In Deborah's triumphal ode it is said מני אפרים שרשם בעמלק, 'out of Ephraim was there a root of them against Amalek' (Auth. Vers.), which Ewald (*Die Poetischen Bücher des Alten Bundes*, &c., Göttingen, 1839, Band. i. 129) translates '*Von Efraim die, deren Wurzel ist in Amaleq*,' 'of Ephraim those whose root is in Amalek,' *i. e.* the Ephraimites who dwelt in the mount of the Amalekites. On comparing this text and Joshua xvi. 10, 'they drave not out the Canaanites that dwelt in Gezer (בגזר), but the Canaanites dwelt among the Ephraimites unto this day'—with 1 Sam. xxvii. 8, 'David invaded the Geshurites, and Gezrites, and the Amalekites,' &c.,—it seems probable that the Gezrites (גזרי) were the inhabitants of Gezer (גזר) (*v.* Gesenius); but in that case David must have marched northward instead of southward, and the southern position of the Amalekites is expressly stated. The first mention of the Amalekites in the Bible is Gen. xiv. 7; Chedorlaomer and his confederates returned and came to En-mishpat, which is Kadesh, and smote all the country of the Amalekites, and also the Amorites that dwelt in Hazezon-tamar.' From this passage it has been inferred that the Amalekites existed as an independent nation at that time, and were, therefore, totally distinct from the descendants of the son of Eliphaz. On the other hand, it has been remarked that while several other nations are specified ('the Rephaims, the Zuzims, the Emims,' v. 5, 'the Horites,' v. 6, and 'the Amorites,' v. 7), the phrase 'all the *country of* the Amalekites' (כל־שדה העמלקי) may have been used by the sacred historian to denote the locality not then, but long afterwards, occupied by the posterity of Amalek (Hengstenberg's *Die Authentie des Pentateuches*, Band ii. 305). The LXX. appear to have read כל־שרי, *all the princes*, instead of כל־שדה, all the country, *κατέκοψαν πάντας τοὺς ἄρχοντας Ἀμαλήκ*; a reading which, if correct, would be in favour of the former supposition. Origen says (*In Numer. Homil.* xix.), *interfecerunt omnes principes Amalek*, Rufinus's Latin version. After starting the question, whether this name belonged to two nations, without attempting to settle it, he turns off to its allegorical interpretation (*Opera*, x. 230, Berol. 1840). The Amalekites were the first assailants of the Israelites after their passage through the Red Sea (Exod. xvii.). In v. 13 it is said 'Joshua discomfited *Amalek* and *his people* with the edge of the sword.' Amalek may here be employed as the name of the chief of the tribe, as Pharaoh was the name of the successive kings of Egypt, and in this case the words must mean the prince and his army. But if 'Amalek' stand for the nation, 'his people' must mean their confederates. It has been thought improbable that in so short a period the descendants of Esau's grandson could have been sufficiently numerous and powerful to attack the host of Israel; but within nearly the same period the tribe of Ephraim had increased so that it could muster 40,500 men able to bear arms, and Manasseh 32,200: and admitting in the case of the Israelites an extraordinary rate of increase (Exod. i. 12, 20), still, if we consider the prostrating influence of slavery on the national character, and the absence of warlike habits, it is easy to conceive that a comparatively small band of marauders would be a very formidable foe to an undisciplined multitude, circumstanced as the Israelites were, in a locality so adapted to irregular warfare. It appears too that the attack was made on the most defenceless portion of the host. 'Remember (said Moses) what Amalek did unto thee by the way when ye were come forth out of Egypt; how he met thee by the way and smote the hindmost of thee, even all *that were feeble behind thee* (הנחשלים; Sept. *κοπιῶντες*, Vulg. *lassi*), when thou wast faint and weary' (Deut. xxv. 17). In Balaam's prophecy (Num. xxiv.) Amalek is denominated 'the first of the nations,' ראשית גוים. The Targumists and several expositors, both Jewish and Christian, have taken this to mean 'the first of the nations that warred against Israel' (Marg. reading, Auth. Vers.). But it appears more agreeable to the antithetical character of Oriental poetry to interpret it of the rank held by the Amalekites among the surrounding nations, their pre-eminence as a warlike tribe, here contrasted with their future downfall and extinction. Or if we understand the term ראשית, of priority in time, of the antiquity of the nation, this would become a striking contrast with 'his *latter end*' (אחריתו). In the Pentateuch the Amalekites are frequently mentioned in connection with the Canaanites (Num. xiv. 25, 43, 45), and, in the book of Judges, with the Moabites and Ammonites (Judg. iii. 13), with the Midianites (Judg. vi. 3; vii. 12: 'The Midianites, and the Amalekites, and all the children of the East lay along in the valley like

grasshoppers for multitude; and their camels were without number, as the sand by the sea-side for multitude'); with the Kenites, 1 Sam. xv. 6. By divine command, as a retribution for their hostility to the Israelites on leaving Egypt (1 Sam. xv. 2), Saul invaded their country with an army of 210,000 men, and '*utterly destroyed* (החרים, strangely taken for a proper name in the Sept.: *πάντα τὸν λαὸν καὶ Ἰερὶμ ἀπέκτεινεν*) all the people with the edge of the sword;' but he preserved their king Agag alive, and the best of the cattle, and by this act of disobedience forfeited the regal authority over Israel. Josephus states the number of Saul's army to be 400,000 men of Israel and 30,000 of Judah. He also represents Saul as besieging and taking the cities of the Amalekites, 'some by warlike machines, some by mines dug underground, and by building walls on the outside; some by famine and thirst, and some by other methods' (*Antiq.* vi. 7, § 2). About twenty years later they were attacked by David during his residence among the Philistines (1 Sam. xxvii.). It is said 'that he smote the land and left neither man nor woman alive:' this language must be taken with some limitation, for shortly after the Amalekites were sufficiently recovered from their defeat to make reprisals, and burnt Ziklag with fire (1 Sam. xxx.). David, on his return from the camp of Achish, surprised them while celebrating their success, 'eating, and drinking, and dancing,' and 'smote them from twilight even unto the evening of the next day, and there escaped not a man of them save 400 young men which rode upon camels, and fled' (1 Sam. xxx. 17). At a later period, we find that David dedicated to the Lord the silver and gold of Amalek and other conquered nations (2 Sam. viii. 12). The last notice of the Amalekites as a nation is in 1 Chron. iv. 43, from which we learn that in the days of Hezekiah, king of Judah, 500 men of the sons of Simeon 'went to Mount Seir, and smote the rest of the Amalekites that were escaped.'

In the book of Esther, Haman is called the Agagite, and was probably a descendant of the royal line (Num. xxiv. 7; 1 Sam. xv. 8). Josephus says that he was by birth an Amalekite (*Antiq.* xi. 6, § 5).

The editor of Calmet supposes that there were no less than three distinct tribes of Amalekites.—1. Amalek the ancient, referred to in Gen. xiv.; 2. A tribe in the region east of Egypt, between Egypt and Canaan (Exod. xvii. 8; 1 Sam. xv. &c.); 3. Amalek, the descendants of Eliphaz. No such distinction, however, appears to be made in the Biblical narrative; the national character is everywhere the same, and the different localities in which we find the Amalekites may be easily explained by their habits, which evidently were such as belong to a warlike nomade people. Le Clerc was one of the first critics who advocated the existence of more than one Amalek. Hengstenberg infers from 1 Chron. iv. 42, 43, that in a wider sense Amalekites might be considered as belonging to Idumæa, and urges, in behalf of the descent of the Amalekites from the son of Eliphaz, the improbability that a people who acted so conspicuous a part in the Israelitish history should have their origin concealed, and be, as he terms it, '*ἀγενεαλόγητος*, contrary to the whole plan of the Pentateuch' (*v. Die Authentie,* &c., ii. 303). Arabian writers mention غمليق, عمالقا, عماليق, *Amalika, Amalik, Imlik,* as an aboriginal tribe of their country, descended from Ham (Abulfeda says from Shem), and more ancient than the Ishmaelites. They also give the same name to the Philistines and other Canaanites, and assert that the Amalekites who were conquered by Joshua passed over to North Africa. Philo (*Vita Moysis*, i. 39) calls the Amalekites who fought with the Israelites on leaving Egypt, Phœnicians (*Φοίνικες*). The same writer interprets the name Amalek as meaning 'a people that licks up or exhausts:' *ὁ Ἀμαλήκ, ὃς ἑρμηνεύεται λαὸς ἐκλείχων* (*Legis Allegor.* iii. 66, *Lib. de Migr. Abr.* 26, *Cong. erud. grat.* 11).—J. E. R.

1. AMANA (אֲמָנָה), a mountain mentioned in Cant. iv. 8. Some have supposed it to be Mount Amanus in Cilicia, to which the dominion of Solomon is alleged to have extended northward. But the context, with other circumstances, leaves little doubt that this Mount Amana was rather the southern part or summit of Anti-Libanus, and was so called perhaps from containing the sources of the river Amana [ABANA].

2. AMANA, a river of Damascus [ABANA].

1. AMARIAH (אֲמַרְיָה, *word of Jehovah;* Sept. *Ἀμαρία, Ἀμαρίας*), mentioned in 1 Chron. vi. 7, in the list of the descendants of Aaron by his eldest son Eleazer. He was the son of Meraioth and the father of Ahitub, who was (not the grandson and successor of Eli of the same name, but) the father of that Zadok in whose person Saul restored the high-priesthood to the line of Eleazer. The years during which the younger line of Ithamar enjoyed the pontificate in the persons of Eli, Ahitub, and Abimelech (who was slain by King Saul at Nob) doubtless more than cover the time of Amariah and his son Ahitub; and it is therefore sufficiently certain that they never were high-priests in fact, although their names are given to carry on the direct line of succession to Zadok.

2. AMARIAH, high-priest at a later period, the son of Azariah, and also father of a second Ahitub (1 Chron. vi. 11). In like manner, in the same list, there are three high-priests bearing the name of Azariah.

3. AMARIAH, great-grandfather of the prophet Zephaniah (Zeph. i. 1).

1. AMASA (עֲמָשָׂא, *a burden;* Sept. *Ἀμεσσαΐ*), son of Abigail, a sister of king David. As his name does not occur prior to Absalom's rebellion (2 Sam. xvii. 25), he must have been neglected by David in comparison with Joab and Abishai, the sons of his other sister Zeruiah, who had before then been raised to great power and influence. This apparent estrangement may perhaps be connected with the fact that Abigail had married an Ishmaelite called Jether, who was the father of Amasa. This is the more likely, as the fact is pointedly mentioned (1 Chron. ii. 17), or covertly indicated (2 Sam. xvii. 25) whenever the name of Abigail occurs, whereas we are quite ignorant who was the husband of the other sister, Zeruiah, and father of her distinguished sons. We may thus form a conjecture of the grounds on which Amasa joined Absalom, and obtained the command of the rebel army. He was defeated

by his cousin Joab, who commanded the army of David. This transaction appears to have made David sensible of the neglect with which Amasa had been treated; and he eventually offered him not only pardon, but the command of the army in the room of Joab (2 Sam. xix. 13), whose overbearing conduct had become intolerable to him, and to whom he could not entirely forgive the death of Absalom. David, however, was too good a soldier himself to have made this offer, had not Amasa, notwithstanding his defeat, displayed high military qualities during his command of Absalom's army. But on the breaking out of Sheba's rebellion, Amasa was so tardy in his movements (probably from the reluctance of the troops to follow him), that David despatched Abishai with the household troops in pursuit of Sheba, and Joab joined his brother as a volunteer. When they reached 'the great stone of Gibeon,' they were overtaken by Amasa with the force he had been able to collect. Joab thought this a favourable opportunity of getting rid of so dangerous a rival, and immediately executed the treacherous purpose he had formed. He saluted Amasa, asked him of his health, and took his beard in his *right* hand to kiss him, while with the unheeded *left* hand he smote him dead with his sword. Joab then put himself at the head of the troops, and continued the pursuit of Sheba; and such was his popularity with the army, that David was unable to remove him from the command, or call him to account for this bloody deed: B.C. 1022 [ABNER; ABSALOM; JOAB].

2. AMASA, a chief of Ephraim, who, with others, vehemently resisted the retention as prisoners of the persons whom Pekah, king of Israel, had taken captive in a successful campaign against Ahaz, king of Judah (2 Chron. xxviii. 12).

AMASAI, the principal leader of a considerable body of men from the tribes of Judah and Benjamin, who joined David at Ziklag. The words with which David received them indicate some apprehension, which was instantly dissipated by a fervent declaration of attachment from Amasai (1 Chron. xii. 16-18).

AMATH, EMATH, or HAMATH, a city of Syria; the same with Emesa on the Orontes [HAMATH].

AMATHITIS, the district in Syria of which Amath or Hamath on the Orontes was the capital (1 Macc. xii. 25) [HAMATH].

AMATHUS (Ἀμαθοῦς), a fortified town beyond the Jordan, which the *Onomast.* (*s. v.* Æmeth) places 21 Roman miles south of Pella. It was taken by Alexander Jannæus (Joseph. *Bell. Jud.* i. 4, 2; *Antiq.* xiii. 13, 5), and its importance is shown by the fact that Gabinius made it the seat of one of the five jurisdictions (συνέδρια) into which he divided the country (*Antiq.* xiv. 5, 4; *Bell. Jud.* i. 8, 5). Josephus elsewhere (*Antiq.* xvii. 10, 6) mentions that a palace was burnt ἐν Ἀμαθοῖς on the Jordan, which was probably the same place.

1. AMAZIAH (אֲמַצְיָהוּ, *strength of Jehovah;* Sept. Ἀμασίας; Vulg. *Amasias*), son of Joash, and eighth king of Judah. He was 25 years old when he began to reign, and he reigned 29 years—from B.C. 838 to B.C. 809. He commenced his sovereignty by punishing the murderers of his father; and it is mentioned that he respected the law of Moses, by not including the children in the doom of their parents, which seems to show that a contrary practice had previously existed. In the twelfth year of his reign Amaziah attempted to reimpose upon the Edomites the yoke of Judah, which they had cast off in the time of Jehoram. The strength of Edom is evinced by the fact that Amaziah considered the unaided strength of his own kingdom unequal to this undertaking, and therefore hired an auxiliary force of 100,000 men from the king of Israel for 100,000 talents of silver. This is the first example of a mercenary army that occurs in the history of the Jews. It did not, however, render any other service than that of giving Amaziah an opportunity of manifesting that he knew his true place in the Hebrew constitution, as the viceroy and vassal of the king JEHOVAH [KING]. A prophet commanded him, in the name of the Lord, to send back the auxiliaries, on the ground that the state of alienation from God in which the kingdom of Israel lay, rendered such assistance not only useless but dangerous. The king obeyed this seemingly hard command, and sent the men home, although by doing so he not only lost their services, but the 100,000 talents, which had been already paid, and incurred the resentment of the Israelites, who were naturally exasperated at the indignity shown to them. This exasperation they indicated by plundering the towns and destroying the people on their homeward march.

The obedience of Amaziah was rewarded by a great victory over the Edomites, ten thousand of whom were slain in battle and ten thousand more savagely destroyed by being hurled down from the high cliffs of their native mountains. But the Edomites afterwards were avenged: for among the goods which fell to the conqueror were some of their idols, which, although impotent to deliver their own worshippers, Amaziah betook himself to worship. This proved his ruin. Puffed up by his late victories, he thought also of reducing the ten tribes under his dominion. In this attempt he was defeated by king Joash of Israel, who carried him a prisoner to Jerusalem. Joash broke down great part of the city wall, plundered the city, and even laid his hands upon the sacred things of the temple. He, however, left Amaziah on the throne, but not without taking hostages for his good behaviour. The disasters which Amaziah's infatuation had brought upon Judah probably occasioned the conspiracy in which he lost his life. On receiving intelligence of this conspiracy he hastened to throw himself into the fortress of Lachish; but he was pursued and slain by the conspirators, who brought back his body 'upon horses' to Jerusalem for interment in the royal sepulchre (2 Kings xiv.; 2 Chron. xxiv.).

2. AMAZIAH, the priest of the golden calves at Bethel, in the time of Jeroboam II. He complained to the king of Amos's prophecies of coming evil, and urged the prophet himself to withdraw into the kingdom of Judah and prophesy there (Amos vii. 10-17).

AMBASSADOR. The relations of the Hebrews with foreign nations were too limited to afford much occasion for the services of ambassadors. Still, the long course of their history affords some examples of the employment of such functionaries, which enable us to discover the position which they were considered to occupy. Of ambassadors resident at a foreign court they had, of course, no notion; all the embassies of which we

and being 'extraordinary,' or for special services and occasions, such as to congratulate a king on his accession or victories, or to condole with him in his troubles (2 Sam. viii. 15; x. 2; 1 Kings v. 1), to remonstrate in the case of wrong (Judg. xi. 12), to solicit favours (Num. xx. 14), or to contract alliances (Josh. ix. 3, *sqq.*; 1 Macc. viii. 17).

The notion that the ambassador represented the *person* of the sovereign who sent him, or the dignity of the state from which he came, did not exist in ancient times in the same sense as now. He was a highly distinguished and privileged *messenger*, and the inviolability of his person (2 Sam. x. 1-5) was rather that of our heralds than of our ambassadors. It may have been owing, in some degree, to the proximity of all the nations with which the Israelites had intercourse, that their ambassadors were intrusted with few if any discretionary powers, and could not go beyond the letter of their instructions. In general their duty was limited to the delivering of a message and the receiving of an answer; and if this answer was such as required a rejoinder, they returned for fresh instructions, unless they had been authorized how to act or speak in case such an answer should be given.

The largest act performed by ambassadors appears to have been the treaty of alliance contracted with the Gibeonites (Josh. ix.), who were supposed to have come from 'a far country;' and the treaty which they contracted was in agreement with the instructions with which they professed to be furnished. In allowing for the effect of proximity, it must be remembered that the ancient ambassadors of other nations, even to countries distant from their own, generally adhered to the letter of their instructions, and were reluctant to act on their own discretion. Generals of armies must not, however, be confounded with ambassadors in this respect.

AMBER. [CHASMIL.]

AMBIDEXTER, one who can use the left hand as well as the right, or, more literally, one whose hands are both right hands. It was long supposed that both hands are naturally equal, and that the preference of the right hand, and comparative incapacity of the left, are the result of education and habit. But it is now known that the difference is really physical (see Bell's *Bridgwater Treatise on the Hand*), and that the ambidexterous condition of the hands is *not* a natural development.

The capacity of equal action with both hands was highly prized in ancient times, especially in war. Among the Hebrews this quality seems to have been most common in the tribe of Benjamin, as all the persons noticed as being endued with it were of that tribe. By comparing Judg. iii. 15, xx. 16, with 1 Chron. xii. 2, we may gather that the persons mentioned in the two former texts as 'left-handed,' were really ambidexters. In the latter text we learn that the Benjamites who joined David at Ziklag were 'mighty men, helpers of the war. They were armed with bows, and could use both the right hand and the left in hurling [slinging] and shooting arrows out of a bow.' There were thirty of them; and as they appear to have been all of one family, it might almost seem as if the greater commonness of this power among the Benjamites arose from its being a hereditary peculiarity of certain families in that tribe. It may also partly have been the result of cultivation; for although the left hand is not naturally an equally strong and ready instrument as the right hand, it may doubtless be often rendered such by early and suitable training.

AMBUSCADE and AMBUSH, in military phraseology, are terms used promiscuously, though it is understood that the first more properly applies to the act, and the second to the locality, of a stratagem which consists mainly in the concealment of an army, or of a detachment, where the enemy, if he ventures, in ignorance of the measure, within the sphere of its action, is suddenly taken at a disadvantage, and liable to be totally defeated. The principles which must guide the contrivers of an ambuscade have been nearly the same in all ages; embracing concealment from the observation of an enemy so as to create no suspicion; a position of advantage in case of being attacked by superior forces, and having the means of retreating, as well as of issuing forth to attack, without impediment, when the proper moment is arrived. The example of Joshua at the capture of Ai shows the art to have been practised among the Jews on the best possible principles. The failure of a first attempt was sure to produce increased confidence in the assailed, who, being the armed, but not disciplined, inhabitants of a strong place, were likely not to be under the control of much caution. Joshua, encamping within sight, but with a valley intervening, when he came up to make a false attack, necessarily appeared to disadvantage, the enemy being above him, and his retreat towards his own camp rendered difficult by its being likewise above him on the other side, and both sides no doubt very steep, as they are in general in the hills near Libanus. His men therefore fled, as directed, not towards the north, where the camp was, but eastward, towards the plain and desert; while in the hills, not behind, but on the west side, lay the ambuscade, in sufficient force alone to vanquish the enemy. This body of Israelites had not therefore the objectionable route to take from behind the city, a movement that must have been seen from the walls, and would have given time to close the gates, if not to warn the citizens back; but, rising from the woody hills, it had the shortest distance to pass over to come down directly to the gate; and, if an accident had caused failure in the army of Joshua, the detachment could not itself be intercepted before reaching the camp of the main body; while the citizens of Ai, pursuing down hill, had little chance of returning up to the gates in time, or of being in a condition to make an effectual onset. This example, as a military operation, may be cited as perfect in all its details. In the attempt to surprise Shechem (Judg. ix. 30, *sqq.*) the operation, so far as it was a military manœuvre, was unskilfully laid, although ultimately successful in consequence of the party spirit within, and the intelligence which Abimelech maintained in the fortress.—C. H. S.

AMEN (אָמֵן; New Test. Ἀμήν). This word is strictly an adjective, signifying '*firm*,' and, metaphorically, 'faithful.' Thus in Rev. iii. 14, our Lord is called 'the *amen*, the *faithful* and *true* witness.' In Isa. lxv. 16, the Heb. has 'the God of amen,' which our version renders 'the God of *truth*,' i. e. of *fidelity*. In its sub-

verbial sense amen means *certainly, truly, surely.* It is used in the beginning of a sentence by way of emphasis—rarely in the Old Test. (Jer. xxviii. 6), but often by our Saviour in the New, where it is commonly translated '*verily.*' In John's gospel alone it is often used by him in this way double, *i. e.* 'verily, verily.' In the end of a sentence it often occurs singly or repeated, especially at the end of hymns or prayers, as 'amen and amen' (Ps. xli. 14; lxxii. 19; lxxxix, 53). The proper signification of it in this position is to confirm the words which have preceded, and invoke the fulfilment of them: 'so be it,' *fiat;* Sept. γένοιτο. Hence in oaths, after the priest has repeated the words of the covenant or imprecation, all those who pronounce the *amen* bind themselves by the oath (Num. v. 22; Deut. xxvii. 15, 17; Neh. v. 13; viii. 6; 1 Chron. xvi. 36; comp. Ps. cvi. 48).

AMETHYST (אַחְלָמָה; Sept. Ἀμέθυστος; Vulg. *Amethystus*), a precious stone, mentioned in Scripture as the ninth in the breastplate of the high-priest (Exod. xxviii. 19; xxxix. 12); and the twelfth in the foundations of the New Jerusalem (Rev. xxi. 20). The concurrence of various circumstances leave little doubt that the stone anciently known as the *amethyst* is really denoted by the Hebrew word; and as the stone so called by the ancients was certainly that which still continues to bear the same name, their identity may be considered as established.

The transparent gems to which this name is applied are of a colour which seems composed of a strong blue and deep red; and according as either of these prevails, exhibit different tinges of purple, sometimes approaching to violet, and sometimes declining even to a rose colour. From these differences of colour the ancients distinguished five species of the amethyst: modern collections afford at least as many varieties, but they are all comprehended under two species, the *Oriental Amethyst* and the *Occidental Amethyst.* These names, however, are given to stones of essentially different natures; which were, no doubt, anciently confounded in the same manner. The Oriental amethyst is very scarce, and of great hardness, lustre, and beauty. It is in fact a rare variety of the adamantine spar, or corundum. Next to the diamond, it is the hardest substance known. It contains about 90 per cent. of alumine, a little iron, and a little silica. Of this species, emery, used in cutting and polishing glass, &c., is a granular variety. To this species also belongs the sapphire, the most valuable of gems next to the diamond; and of which the Oriental amethyst is merely a violet variety. Like other sapphires, it loses its colour in the fire, and comes out with so much of the lustre and colour of the diamond, that the most experienced jeweller may be deceived by it.

The more common, or Occidental amethyst, is a variety of quartz, or rock crystal, and is found in various forms in many parts of the world, as India, Siberia, Sweden, Germany, Spain; and even in England very beautiful specimens of tolerable hardness have been discovered. This also loses its colour in the fire.

Amethysts were much used by the ancients for rings and cameos; and the reason given by Pliny—because they were easily cut—'sculpturis faciles' (*Hist. Nat.* xxxvii. 9), shows that the Occidental species is to be understood. The ancients believed that the amethyst possessed the power of dispelling drunkenness in those who wore or touched it, and hence its Greek name ('*a* a privativo et μεθύω ebrius sum'—Martini, *Excurs.* p. 158). In like manner, the Rabbins derive its Jewish name from its supposed power of procuring dreams to the wearer, חלם signifying 'to dream' (Brückmann, *Abhandlung von der Edelsteine;* Hill's Theophrastus, notes; Bochart, *Hieroz.;* Hillier, *Tract. de* xii. *Gemmis in Pector. Pontif. Hebræorum;* Winer, *Biblisches Realwörterbuch;* Rosenmüller, *Mineralogy, &c. of the Bible*).

1. AMINADAB (עַמִּינָדָב, *famulus principis;* Sept. Ἀμιναδάβ), one of the ancestors of David and of Christ (Matt. i. 4). He was the son of Aram, and the father of Naasson, and of Elisheba, who became the wife of Aaron (Exod. vi. 23).

2. AMINADAB, in Cant. vi. 12. The chariots of this Aminadab are mentioned as proverbial for their swiftness. Of himself we know nothing more than what is here glanced at, from which he appears to have been, like Jehu, one of the most celebrated charioteers of his day. In many MSS. the Hebrew term is divided into two words עַמִּי נָדִיב, *Ami nadib;* in which case, instead of the name of a person, it means 'of my willing,' or 'loyal people.' This division has been followed in the Syriac, by the Jews in their Spanish version, and by many modern translators; but, taken in this way, it is difficult to assign any satisfactory meaning to the passage. See Good's *Song of Songs,* note on vi. 12.

AMIR (אָמִיר; Sept. ἐπ' ἄκρου μετεώρου in Isa. xvii. 6, and οἱ Ἀμοῤῥαῖοι in ver. 9; Vulg. *summitate rami;* Auth. Vers. 'uppermost bough'). The word occurs only in Isa. xvii. 6, 9. It has been usual to derive it from the Arabic أمر, and to take its signification from أمير, which means a general, or Emir, and hence, in the present text, the higher or upper branches of a tree. Gesenius admits

that this interpretation is unsatisfactory; and Lee, who regards it as very fanciful, endeavours (*Lex. in voce*) to establish that it denotes the caul or sheath in which the fruit of the date-palm is enveloped. According to this view he translates the verse thus: '*Two or three berries in the head* (or upper part) *of the caul* (or pod, properly sheath), *four or five in its fissures.*' On this he remarks: 'סְעִיף signifies any fissure, and is also applied to those of rocks. If, therefore, the word אמיר signifies this caul or pod, the word סעיף, in the following context, applies well to its opening, but is quite unintelligible in any other sense.' This is at least ingenious; and if it be admitted as a sound interpretation of a passage confessedly difficult, this text is to be regarded as affording the only

scriptural allusion to the fact that the fruit of the date-palm is, during its growth, contained in a sheath, which rends as the fruit ripens, and at first partially, and afterwards more fully, exposes its precious contents [Palm].

AMMAN. [Rabbah.]

AMMON. [No Ammon.]

AMMONITES (בְּנֵי עַמּוֹן, עַמּוֹנִים; Sept. υἱοὶ Ἀμμών, Ἀμμανῖται), the descendants of the younger son of Lot (Gen. xix. 38). They originally occupied a tract of country east of the Amorites, and separated from the Moabites by the river Arnon. It was previously in the possession of a gigantic race called Zamzummins (Deut. ii. 20), 'but the Lord destroyed them before the Ammonites, and they succeeded them and dwelt in their stead.' The Israelites, on reaching the borders of the Promised Land, were commanded not to molest the children of Ammon, for the sake of their progenitor Lot. But, though thus preserved from the annoyance which the passage of such an immense host through their country might have occasioned, they showed them no hospitality or kindness; they were therefore prohibited from 'entering the congregation of the Lord' (*i. e.* from being admitted into the civil community of the Israelites) 'to the tenth generation for ever' (Deut. xxiii. 3). This is evidently intended to be a perpetual prohibition, and was so understood by Nehemiah (Neh. xiii. 1). The first mention of their active hostility against Israel occurs in Judges iii. 13: 'The king of Moab gathered unto him the children of Ammon and Amalek, and went and smote Israel.' About 140 years later we are informed that the children of Israel forsook Jehovah and served the gods of various nations, including those of the children of Ammon, and the anger of Jehovah was kindled against them, and he sold them into the hands of the Philistines and of the children of Ammon. The Ammonites crossed over the Jordan, and fought with Judah, Benjamin, and Ephraim, so that 'Israel was sore distressed.' In answer to Jephthah's messengers (Judg. xi. 12), the king of Ammon charged the Israelites with having taken away that part of his territories which lay between the rivers Arnon and Jabok, which, in Joshua xiii. 25, is called 'half the land of the children of Ammon,' but was in the possession of the Amorites when the Israelites invaded it; and this fact was urged by Jephthah, in order to prove that the charge was ill-founded. Jephthah 'smote them from Aroer to Minnith, even twenty cities, with a very great slaughter' (Judg. xi. 33; Joseph. *Antiq.* v. 7). The Ammonites were again signally defeated by Saul (B.C. 1095) (1 Sam. xi. 11), and, according to Josephus, their king Nahash was slain (*Antiq.* vi. 5). His successor, who bore the same name, was a friend of David, and died some years after his accession to the throne. In consequence of the gross insult offered to David's ambassadors by his son Hanun (2 Sam. x. 4; Joseph. *Antiq.* vii. 6), a war ensued, in which the Ammonites were defeated, and their allies the Syrians were so daunted 'that they feared to help the children of Ammon any more' (2 Sam. x. 19). In the following year David took their metropolis, Rabbah, and great abundance of spoil, which is probably mentioned by anticipation in 2 Sam. viii. 12 (2 Sam. x. 14; xii. 26-31; Joseph. *Antiq.* vii. 7). In the reign of Jehoshaphat (B.C. 896) the Ammonites joined with the Moabites and other tribes belonging to Mount Seir,* to invade Judah; but, by the divine intervention, were led to destroy one another. Jehoshaphat and his people were three days in gathering the spoil (2 Chron. xx. 25). The Ammonites 'gave gifts' to Uzziah (2 Chron. xxvi. 8), and paid a tribute to his son Jotham for three successive years, consisting of 100 talents of silver, 1000 measures of wheat, and as many of barley. When the two and a half tribes were carried away captive, the Ammonites took possession of the towns belonging to the tribe of Gad (Jerem. xlix. 1). 'Bands of the children of Ammon' and of other nations came up with Nebuchadnezzar against Jerusalem (B.C. 607), and joined in exulting over its fall (Ezek. xxv. 3, 6). Yet they allowed some of the fugitive Jews to take refuge among them, and even to intermarry (Jer. xl. 11; Neh. xiii. 13). On the return of the Jews from Babylon the Ammonites manifested their ancient hostility by deriding and opposing the rebuilding of Jerusalem (Neh. iv. 3, 7, 8). Both Ezra and Nehemiah expressed vehement indignation against those Jews who had intermarried with the heathen, and thus transgressed the divine command (Deut. vii. 3; Ezra x.; Neh. xiii. 25). Judas Maccabeus (B.C. 164) fought many battles with the Ammonites, and took Jazer with the towns belonging to it: τὴν Ἰαζὴρ καὶ τὰς θυγατέρας αὐτῆς. Justin Martyr affirms that in his time the Ammonites were numerous: Ἀμανιτῶν ἐστι νῦν πολὺ πλῆθος (*Dial. cum Tryph.* § 119). Origen speaks of their country under the general denomination of Arabia. Josephus says that the Moabites and Ammonites were inhabitants of Cœle-Syria (*Antiq.* i. 11, § 5).

Their national idol was Molech or Milcom, whose worship was introduced among the Israelites by the Ammonitish wives of Solomon (1 Kings xi. 5, 7); and the high places built by that sovereign for this 'abomination' were not destroyed till the reign of Josiah (B.C. 610) (2 Kings xxiii. 13).

Besides Nahash and Hanun, an Ammonitish

---

* In 2 Chron. xx. 1, it is said, 'It came to pass after this also, that the children of Moab and the children of Ammon, and *with them* [*other*] *beside the Ammonites*, came against Jehoshaphat to battle.' Auth. Vers. מֵהָעַמּוֹנִים would be correctly translated '*part* (or *some*)' *of the Ammonites*,' as in Exod. xvii. 5, מִזִּקְנֵי, '*some of the elders*;' 2 Sam. xi. 17; Gen. xxxiii. 15, מִן־הָעָם, '*some of the people*.' But as the children of Ammon had already been mentioned, a doubt arises as to the correctness of the present reading. As the inhabitants of Mount Seir are joined with the Moabites and Ammonites, in verses 10, 22, 23, possibly the word מֵהָאֲדֹמִים, '*some of the Edomites*,' stood in the original text, or, by a slight transposition of two letters, we may read מֵהַמְּעוּנִים, 'some of the Mehunims;' Sept. ἐκ τῶν Μιναίων, a tribe mentioned in 2 Chron. xxvi. 7, ἐπὶ τοὺς Μιναίους. In the 8th verse, for 'the Ammonites gave gifts,' the Sept. reads ἔδωκαν οἱ Μιναῖοι δῶρα; v. Maurer, *Commentarius Grammaticus Criticus in Vet. Test.*, Lips. 1835, i. 240.

king Baalis (בעלים; Sept. Βελεισσά and Βελισά) is mentioned by Jeremiah (xl. 14). Sixteen manuscripts read בעלים, Baalim; and Josephus, Βαάλειμ (*Antiq.* x. 9, § 3).

In the writings of the prophets terrible denunciations are uttered against the Ammonites on account of their rancorous hostility to the people of Israel; and the destruction of their metropolis, Rabbah, is distinctly foretold (Zeph. ii. 8; Jer. xlix. 1-6; Ezek. xxv. 1-5, 10; Amos i. 13-15). These passages will be more properly noticed under the article RABBAH.—J. E. R.

AMNON (אַמְנוֹן, *faithful*), the eldest son of David, by Ahinoam of Jezreel. He was born at Hebron, about B.C. 1056. He is only known for his atrocious conduct towards his half-sister Tamar, which his full-brother Absalom revenged two years after, by causing him to be assassinated while a guest at his table, in B.C. 1032 (2 Sam. xiii.) [ABSALOM].

AMOMUM (ἄμωμον). This word is only found in Rev. xviii. 13, and is even there omitted in some MSS., probably from the homœoteleuton. It denoted an odoriferous plant or seed, used in preparing precious ointment. It differed from the modern amomum of the druggists, but the exact species is not known (see Schleusner's and Robinson's Greek Lexicons).

AMON (אָמוֹן, Jer. xlvi. 25) is the name of an Egyptian god, in whom the classical writers unanimously recognise their own Zeus and Jupiter. The primitive seat of his worship appears to have been at Meroë, from which it descended to Thebes, and thence, according to Herodotus (ii. 54), was transmitted to the Oasis of Siwah and to Dodona; in all which places there were celebrated oracles of this god. His chief temple

and oracle in Egypt, however, were at Thebes, a city peculiarly consecrated to him, and which is probably meant by the No and No Amon of the prophets. He is generally represented on Egyptian monuments by the seated figure of a man with a ram's head, or by that of an entire ram, and of a blue colour. In honour of him, the inhabitants of the Thebaid abstained from the flesh of sheep, but they annually sacrificed a ram to him and dressed his image in the hide. A religious reason for that ceremony is assigned by Herodotus (ii. 42); but Diodorus (iii. 72) ascribes his wearing horns to a more trivial cause. There appears to be no account of the manner in which his oracular responses were given; but as a sculpture at Qarnâq, which Creuzer has copied from the *Description d'Egypte*, represents his portable tabernacle mounted on a boat and borne on the shoulders of forty priests, it may be conjectured, from the resemblance between several features of that representation and the description of the oracle of Jupiter Ammon in Diodorus, xvii. 50, that his responses were communicated by some indication during the solemn transportation of his tabernacle.

As for the power which was worshipped under the form of Amon, Macrobius asserts (*Saturnal.* i. 21) that the Libyans adored the setting sun under that of their Ammon; but he points to the connection between the ram's horns of the god and Aries in the Zodiac. Jablonski, however, has endeavoured to show that Amon represented the sun at the vernal equinox (*Pantheon*, i. 165, sqq.). This again has been questioned by Jomard (in the *Descript. d'Egypte*), who maintains that the ancient vernal equinox was in Taurus, and considers Amon to denote the overflow of the Nile at the autumnal equinox. The precise ground of this objection is not apparent; for the Egyptian year was movable, and in every 119 years the vernal equinox must have fallen in a different sign of the Zodiac (Ideler, *Handbuch der Chronologie*, i. 94). But Creuzer (*Symbolik*, ii. 205) still adheres to Jablonski's opinion; and the fact that Amon bears some relation to the sun seems placed beyond doubt by enchorial inscriptions, in which *Amon Ra* is found, *Ra* meaning *sun* (Kosegarten, *De Prisca Ægyptiorum Literatura*, p. 31). F. S. de Schmidt also, in his essay *De Zodiaci Origine Ægyptia*, p. 33, sqq. (inserted in his *Opuscula quibus Res Ægyptiacæ illustrantur*, Carolsruhæ, 1765), endeavours by other arguments to prove the connection between Amon and Aries. In doing this he points out the coincidence of the festival of Amon, and of the sacrifice of the ram, with the period and with the kind of offering of the Jewish Passover, as if the appointment of the Paschal lamb was in part intended to separate the Jews more entirely from the Egyptians. For this he not only cites the passage of Tacitus, *cæso ariete velut in contumeliam Hammonis* (*Hist.* v. 4), but adduces an extract to the same effect from Rabbi Abrah. Seba; Bähr, however (in his *Symbolik des Mosäischen Cultus*, ii. 641), when objecting to Baur's attempt to draw a similar parallel between the festival of Amon and the Passover, justly remarks that the Hebrew text, besides allowing the Paschal offering to be a *kid*, always distinguishes between a male lamb and a *ram*, and that the latter is not the sacrifice of the Passover (*Ibid.* p. 296).

The etymology of the name is obscure. Eustathius says that, according to some, the word means *shepherd*. Jablonski proposed an etymology by which it would signify *producing light*; and Champollion, in his latest interpretation, assigned it the sense of *hidden*. There is little doubt that the pointed Hebrew text correctly represents the Egyptian name of the god, and, besides what may be gathered from the forms of the name in the classical writers, Kosegarten argues that the enchorial Amn was pronounced Amon, because names in which it forms a part are so written in Greek, as Ἀμονρασωνθήρ. Moreover, Ἀμῶν and

'Αμοῦν are found in Iamblicus and Plutarch; and the latter expressly says that the Greeks changed the native name into Ἄμμων.

There is no reason to doubt that the name of this god really occurs in the passage 'Behold, I will visit Amon of No,' in Jer. xlvi. 25. The context and all internal grounds are in favour of this view. The Sept. has rendered it by 'Αμμών, as it has also called No, in Ezek. xxx. 14, Διόσπολις. The Peshito likewise takes it as a proper name, as אמון does not exist in Syriac in the signification which it bears as a pure Hebrew word. The Targum of Jonathan and the Vulgate, however, have rendered the passage 'the multitude of Alexandria.' The reason of their taking אמון to mean 'multitude' may perhaps be found in the fact that, in Ezek. xxx. 15, we read המון, which does bear that sense. Nevertheless, modern scholars are more disposed to emend the latter reading by the former, and to find Amon, the Egyptian god, in both places.—J. N.

AMON (אָמוֹן, *artificer*), son of Manasseh, and fourteenth king of Judah, who began to reign B.C. 644, and reigned two years. He appears to have derived little benefit from the instructive example which the sin, punishment, and repentance of his father offered; for he restored idolatry, and again set up the images which Manasseh had cast down. He was assassinated in a court conspiracy; but the people put the regicides to death, and raised to the throne his son Josiah, then but eight years old (2 Kings xxi. 19-26; 2 Chron. xxxiii. 21-25).

AMORITES (הָאֱמֹרִי; Sept. 'Αμοῤῥαῖοι), the descendants of one of the sons of Canaan: אמרי; Sept. τὸν 'Αμοῤῥαῖον; Auth. Vers. the Emorite. They were the most powerful and distinguished of the Canaanitish nations. We find them first noticed in Gen. xiv. 7—'the Amorites that dwelt in Hazezon-tamar,' חצצן תמר, *the cutting of the palm-tree*, afterwards called En-gedi, עין־גדי, *fountain of the kid*, a city in the wilderness of Judæa not far from the Dead Sea. In the promise to Abraham (Gen. xv. 21), the Amorites are specified as one of the nations whose country would be given to his posterity. But at that time three confederates of the patriarch belonged to this tribe; Mamre, Aner, and Eshcol (Gen. xiv. 13, 24). When the Israelites were about to enter the promised land, the Amorites occupied a tract on both sides of the Jordan. That part of their territories which lay to the east of the Jordan was allotted to the tribes of Reuben, Gad, and half the tribe of Manasseh. They were under two kings—Sihon, king of Heshbon (frequently called king of the Amorites), and Og, king of Bashan, who 'dwelt at Ashtaroth [and] in [at] Edrei,' בעשתרת באדרעי (Deut. i. 4, compared with Josh. xii. 4; xiii. 12). Before hostilities commenced messengers were sent to Sihon, requesting permission to pass through his land; but Sihon refused, and came to Jahaz and fought with Israel; and Israel smote him with the edge of the sword, and possessed his land from Arnon (Modjeb) unto Jabbok (Zerka) (Num. xxi. 24). Og also gave battle to the Israelites at Edrei, and was totally defeated. After the capture of Ai, five kings of the Amorites, whose dominions lay within the allotment of the tribe of Judah, leagued together to wreak vengeance on the Gibeonites for having made a separate peace with the invaders. Joshua, on being apprised of their design, marched to Gibeon and defeated them with great slaughter (Josh. x. 10). Another confederacy was shortly after formed on a still larger scale; the associated forces are described as 'much people, even as the sand upon the sea-shore in multitude, with horses and chariots very many' (Josh. xi. 4). Josephus says that they consisted of 300,000 armed foot-soldiers, 10,000 cavalry, and 20,000 chariots (*Antiq.* v. 1). Joshua came suddenly upon them by the waters of Merom (the lake Samachonites of Josephus, *Antiq.* v. 6, § 1, and the modern Bahrat-al-Hule), and Israel smote them until they left none remaining (Josh. xi. 8). Still, after their severe defeats, the Amorites, by means of their war-chariots and cavalry, confined the Danites to the hills, and would not suffer them to settle in the plains: they even succeeded in retaining possession of some of the mountainous parts. 'The Amorites *would* (ויואל *obstinaverunt se*, J. H. Michaelis) dwell in Mount Heres in Aijalon, and in Shaalbim, yet the hand of the house of Joseph prevailed, so that they became tributaries. And the coast of the Amorites was from *the going up to Akrabbim*, מעלה עקרבים (*the steep of Scorpions*) from the rock and upwards' (Judg. i. 34-36). It is mentioned as an extraordinary circumstance that in the days of Samuel there was peace between Israel and the Amorites (1 Sam. vii. 14). In Solomon's reign a tribute of bond-service was levied on the remnant of the Amorites and other Canaanitish nations (1 Kings ix. 21; 2 Chron. viii. 8).

A discrepancy has been supposed to exist between Deut. i. 44, and Num. xiv. 45, since in the former the *Amorites* are said to have attacked the Israelites, and in the latter the *Amalekites*; the obvious explanation is, that in the first passage the Amalekites are not mentioned, and the Amorites stand for the Canaanites in the second passage. From the language of Amos (ii 9) it has been inferred that the Amorites in general were men of extraordinary stature, but perhaps the allusion is to an individual, Og, king of Bashan, who is described by Moses as being the last 'of the remnant of the giants.' His bedstead was of iron, 'nine cubits in length and four cubits in breadth' (Deut. iii. 21). Though the Gibeonites in Josh. ix. 7, are called *Hivites*, yet in 2 Sam. xxi. 2, they are said to be 'of the remnant of the *Amorites*,' probably because they were descended from a common stock, and were in subjection to an Amoritish prince, as we do not read of any king of the Hivites.—J. E. R.

AMOS (עָמוֹס), *carried*, or *a burden*; one of the twelve minor prophets, and a contemporary of Isaiah and Hosea. Gesenius conjectures that the name may be of Egyptian origin, and the same as Amasis or Amosis, which means *son of the moon* (*v.* Gesenii *Thesaur. s. v.* עמוס and משה). He was a native of Tekoah, about six miles S. of Bethlehem, inhabited chiefly by shepherds, to which class he belonged, being also a dresser of sycamore-trees. Though some critics have supposed that he was a native of the kingdom of Israel, and took refuge in Tekoah when persecuted by Amaziah; yet a comparison of the passages Amos i. 1; vii. 14, with Amaziah's language vii. 12, leads us to

believe that he was born and brought up in that place. The period during which he filled the prophetic office was of short duration, unless we suppose that he uttered other predictions which are not recorded. It is stated expressly that he prophesied in the days of Uzziah, king of Judah, and in the days of Jeroboam, the son of Joash, king of Israel, two years before the earthquake (Amos i. 1). As Jeroboam died in the fifteenth year of Uzziah's reign, this earthquake, to which there is an allusion in Zechariah (xiv. 5), could not have happened later than the seventeenth year of Uzziah. Josephus indeed (*Antiq.* ix. 10) and some other Jewish writers represent the earthquake as a mark of the divine displeasure against Uzziah (in addition to his leprosy) for usurping the priest's office. This, however, would not agree with the sacred narrative, which informs us that Jotham, his son, acted as regent during the remainder of his reign, was twenty-five years old when he became his successor, and consequently was not born till the twenty-seventh year of his father's reign. As Uzziah and Jeroboam were contemporaries for about fourteen years, from B.C. 798 to 784, the latter of these dates will mark the period when Amos prophesied.

In several of the early Christian writers, Amos the prophet is confounded with Amoz (אמוץ), the father of Isaiah. Thus Clement of Alexandria (*Strom.* i. 21, § 118), *προφητεύουσι δὲ ἐπ' αὐτοῦ Ἀμὼς καὶ Ἡσαΐας ὁ υἱὸς αὐτοῦ*: this mistake arose from their ignorance of Hebrew, and from the name Ἀμὼς being applied to both in the Septuagint. In our Authorized Version the names are, as above, correctly distinguished, though, strange to say, some commentators have asserted that the two individuals are named alike.

When Amos received his commission, the kingdom of Israel, which had been 'cut short' by Hazael (2 Kings x. 33) towards the close of Jehu's reign, was restored to its ancient limits and splendour by Jeroboam the Second (2 Kings xiv. 25). But the restoration of national prosperity was followed by the prevalence of luxury, licentiousness, and oppression, to an extent that again provoked the divine displeasure, and Amos was called from the sheep-folds to be the harbinger of the coming judgments. Not that his commission was limited entirely to Israel. The thunder-storm (as Ruckert poetically expresses it) rolls over all the surrounding kingdoms, touches Judah in its progress, and at length settles upon Israel. Chap. i.; ii. 1-5, form a solemn prelude to the main subject; nation after nation is summoned to judgment, in each instance with the striking idiomatical expression (similar to that in Proverbs xxx. 15, 18, 21, and to the *τρὶς καὶ τετράκις*, the *terque quaterque* of the Greek and Roman poets), 'For three transgressions—and for four—I will not turn away the punishment thereof.' Israel is then addressed in the same style, and in chap. iii. (after a brief rebuke of the twelve tribes collectively) its degenerate state is strikingly portrayed, and the denunciations of divine justice are intermingled, like repeated thunder-claps, to the end of chap. vi. The seventh and eighth chapters contain various symbolical visions, with a brief historical episode (vii. 10-17). In the ninth chapter the majesty of Jehovah and the terrors of his justice are set forth with a sublimity of diction which rivals and partly copies that of the royal Psalmist (comp. vers. 2, 3, with Ps. cix., and ver. 6 with Ps. civ.). Towards the close the scene brightens, and from the eleventh verse to the end the promises of the divine mercy and returning favour to the chosen race are exhibited in imagery of great beauty taken from rural life.

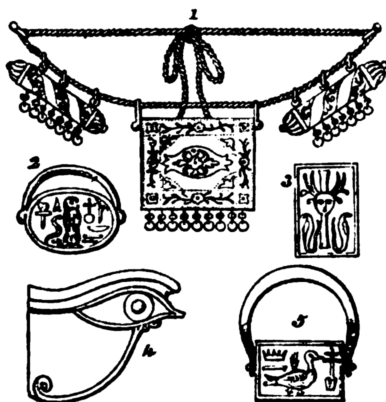
The allusions in the writings of this prophet are numerous and varied; they refer to natural objects, as in iii. 4, 8; iv. 7, 9; v. 8; vi. 12; ix. 3: to historical events, i. 9, 11, 13; ii. 1; iv. 11; v. 26: to agricultural or pastoral employments and occurrences, i. 3; ii. 13; iii. 5, 12; iv. 2, 9; v. 19; vii. 1; ix. 9, 13, 15: and to national institutions and customs, ii. 8; iii. 15; iv. 4; v. 21; vi. 4-6, 10; viii. 5, 10, 14.

Some peculiar expressions occur; such as 'cleanness of teeth,' a parallelism to 'want of bread,' vi. 6. 'God of Hosts' is found only in Amos and the Psalms. 'The high places of Isaac,' vii. 9; 'the house of Isaac,' vii. 16. 'He that createth the wind,' iv. 13. In the orthography there are a few peculiarities, as מתאב for מתעב, vi. 8; בושסכם for בוססכם, v. 11; ישחק for יצחק (found also in Ps. cv., and Jerem. xxxiii.).

The evidence afforded by the writings of this prophet that the existing religious institutions both of Judah and Israel (with the exception of the corruptions introduced by Jeroboam) were framed according to the rules prescribed in the Pentateuch, and the argument hence arising for the genuineness of the Mosaic records, are exhibited very lucidly by Dr. Hengstenberg in the second part of his *Beiträge zur Einleitung ins Alte Testament* (Contributions to an Introduction to the Old Testament)—*Die Authentie des Pentateuches* (The Authenticity of the Pentateuch), i. p. 83-125.

The canonicity of the book of Amos is amply supported both by Jewish and Christian authorities. Philo, Josephus, and the Talmud include it among the minor prophets. It is also in the catalogues of Melito, Jerome, and the 60th canon of the Council of Laodicea. Justin Martyr, in his *Dialogue with Trypho* (§ 22), quotes a considerable part of the 5th and 6th chapters, which he introduces by saying, *ἀκούσατε πῶς περὶ τούτων λέγει διὰ Ἀμὼς ἑνὸς τῶν δώδεκα*—'Hear how he speaks concerning these by Amos, one of the twelve.' There are two quotations from it in the New Testament: the first (v. 25, 26) by the proto-martyr Stephen, Acts vii. 42; the second (ix. 11) by the apostle James, Acts xv. 16.—J. E. R.

AMOSIS, an Egyptian monarch, the founder of the eighteenth dynasty, who ascended the throne in B.C. 1575. The period of his accession, and the change which then took place in the reigning family, strongly confirm the opinion of his being the 'new king who knew not Joseph' (Exod. i. 8); and if it be considered that he was from the distant province of Thebes, it is reasonable to expect that the Hebrews would be strangers to him, and that he would be likely to look upon them with the same distrust and contempt with which the Egyptians usually regarded foreigners (Wilkinson's *Anc. Egyptians*, i. 48; also Sharpe's *Early Hist. of Egypt*, pp. 12, 48) [EGYPT].

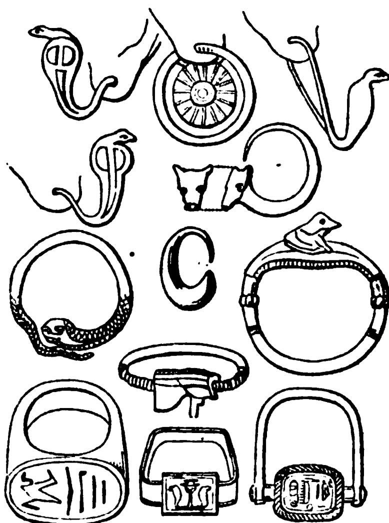


AMPHIPOLIS (Ἀμφίπολις), a city of Greece, through which Paul and Silas passed on their way from Philippi to Thessalonica (Acts xvii. 1). It

was situated on the left bank of the river Strymon, just below its egress from the lake Kerkine (now Takino), and about three miles above its influx into the sea. This situation upon the banks of a navigable river, a short distance from the sea, with the vicinity of the woods of Kerkine, and the gold-mines of Mount Pangæus, rendered Amphipolis a place of much importance, and an object of contest between the Thracians, Athenians, Lacedæmonians, and Macedonians, to whom it successively belonged. It has long been in ruins; and a village of about one hundred houses, called Jeni-keni, now occupies part of its site (Thucyd. i. 100; iv. 102, *sq.*; Herod. vii. 117; Diod. Sic. xvi. 8; Appian. iv. 104, *sq.*; Plin. iv. 17; Liv. xlv. 29; Cellar. *Notit.* i. 1053, *sq.*).

AMRAM, son of Kohath, of the tribe of Levi. He married his father's sister Jochebad, by whom he had Aaron, Miriam, and Moses. He died in Egypt, at the age of 137 years (Exod. vi.).

AMRAPHEL, king of Shinar, one of the four kings who invaded Palestine in the time of Abraham (Gen. xiv. 1, 2, *sq.*) [ABRAHAM; CHEDORLAOMER].

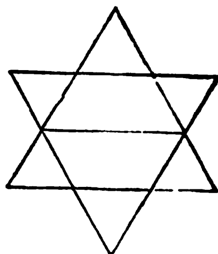


AMULET (probably from the Arabic حمالة, *a pendant*; Isa. iii. 20, לחשים; Talm. קמעות). From the earliest ages the Orientals have believed in the influences of the stars, in spells, witchcraft, and the malign power of the evil eye; and to protect themselves against the maladies and other evils which such influences were supposed to occasion, almost all the ancient nations wore amulets (Plin. *Hist. Nat.* xxx. 15). These amulets consisted, and still consist, chiefly of tickets inscribed with sacred sentences (Shaw, i. 365; Lane's *Mod. Egypt.* ii. 365), and of certain stones (comp. Plin. *Hist. Nat.* xxxvii. 12, 34) or pieces of metal (Richardson, *Dissertation*; D'Arvieux, iii. 208; Chardin, i. 243, *sqq.*; iii. 205 *sqq.*; Niebuhr, i. 65; ii. 162). Not only were persons thus protected, but even houses were, as they still are, guarded from supposed malign influences by certain holy inscriptions upon the doors.

1. Modern Oriental. 2, 3, 4, 5. Ancient Egyptian.

The previous existence of these customs is implied in the attempt of Moses to turn them to becoming uses, by directing that certain passages extracted from the law should be employed (Exod. xiii. 9, 16; Deut. vi. 8; xi. 18). The door-schedules being noticed elsewhere [MEZUZOTH], we here limit our attention to personal amulets. By this religious appropriation the then all-pervading tendency to idolatry were in this matter obviated, although in later times, when the tendency to idolatry had passed away, such written scrolls degenerated into instruments of superstition.

The לחשים of Isa. iii. 20 (Sept. περιδέξια; Vulg. *inaures*; Auth. Vers. *earrings*), it is now allowed, denote *amulets*, although they served also the purpose of ornament. They were probably precious stones, or small plates of gold or silver, with sentences of the law or magic formulæ inscribed on them, and worn in the ears, or suspended by a chain round the neck. 'Earrings' is not perhaps a bad



[Egyptian Ring and Earring Amulets.]

translation. It is certain that earrings were sometimes used in this way as instruments of superstition, and that at a very early period, as in Gen. xxxv. 4, where Jacob takes away the earrings of his people along with their false gods. Earrings, with strange figures and characters, are still used as charms in the East (Chardin, in Harmer, iii. 314). Augustin speaks strongly against earrings that were worn as amulets in his time (*Epist.* 75, *ad Pos.*). Schroeder, however, deduces from the Arabic that these amulets were in the form of serpents, and similar probably to those golden amulets of the same form which the women of the pagan Arabs wore suspended between their breasts, the use of which was interdicted by Mohammed (Schroeder, *De Vestitu Mulierum*, cap. xi. pp. 172, 173; Grotefend, art. *Amulete*, in Ersch and Gruber's *Encyclop.*; Rosenmüller, *ad Isa.* iii. 20; Gesenius, *ad eund.*; and in his *Thesaurus*, art. לחש).

That these *lechashim* were charms inscribed on silver and gold was the opinion of Aben Ezra. The Arabic has *boxes of amulets*, manifestly concluding that they were similar to those ornamental little cases for written charms which are still used by Arab women. This is represented in the first figure of cut 1. Amulets of this kind

are called *hhegab*, and are specially adapted to protect and preserve those written charms, on which the Moslems, as did the Jews, chiefly rely. The writing is covered with waxed cloth, and enclosed in a case of thin embossed gold or silver, which is attached to a silk string, or a chain, and generally hung on the right side, above the girdle, the string or chain being passed over the left shoulder. In the specimen here figured there are three of these hhegabs attached to one string. The square one in the middle is almost an inch thick, and contains a folded paper; the others contain scrolls. Amulets of this shape, or of a triangular form, are worn by women and children; and those of the latter shape are often attached to children's head-dress (Lane's *Modern Egyptians*, ii. 365).

The superstitions connected with amulets grew to a great height in the later periods of the Jewish history. 'There was hardly any people in the whole world,' says Lightfoot (*Hor. Hebr. ad Matt.* xxiv. 24), 'that more used or were more fond of amulets, charms, mutterings, exorcisms, and all kinds of enchantments. . . . The amulets were either little roots hung about the neck of sick persons, or, what was more common, bits of paper (and parchment), with words written on them, whereby it was supposed that diseases were either driven away or cured. They wore such amulets all the week, but were forbidden to go abroad with them on the Sabbath, unless they were 'approved amulets,' that is, were prescribed by a person who knew that at least three persons had been cured by the same means. In these amulets mysterious names and characters were occasionally employed, in lieu of extracts from the law. One of the most usual of these was the cabalistic hexagonal figure known as "the shield of David" and "the seal of Solomon"' (Bartolocc. *Bibliotheca Rabbinica*, i.

576; Lakemacher, *Observatt. Philol.* ii. 143, *sqq.*). The reputation of the Jews was so well established in this respect, that even in Arabia, before the time of Mohammed, men applied to them when they needed charms of peculiar virtue (*Mischat-ul-Masabih*, ii. 377).

ANAB (עֲנָב), one of the cities in the mountains of Judah, from which Joshua expelled the Anakim (Josh. xi. 21; xv. 15). From Main (the Maon of Scripture) Dr. Robinson (*Researches*, ii. 195) observed a place of this name, distinguished by a small tower.

ANAH (עֲנָה; Sept. 'Ανά), son of Zibeon the Hivite, and father of Esau's wife Aholibamah (Gen. xxxvi. 24). While feeding asses in the desert he discovered 'warm springs' (*aquæ calidæ*), as the original ימים is rendered by Jerome, who states that the word had still this signification in the Punic language. Gesenius and most modern critics think this interpretation correct, supported as it is by the fact that warm springs are still found in the region east of the Dead Sea. The Syriac has simply 'waters,' which Dr. Lee seems to prefer. Most of the Greek translators retain the original as a proper name Ἰαμείμ, probably not venturing to translate. The Samaritan text, followed by the Targums, has 'Emims,' *giants*. Our version of 'mules' is now generally abandoned, but is supported by the Arabic and Veneto-Greek versions.

ANAKIM (עֲנָקִים), or Benei-Anak (בְּנֵי עֲנָק) and Benei-Anakim (בְּנֵי־עֲנָקִים), a wandering nation of southern Canaan, descended from Anak, whose name it bore (Josh. xi. 21). It was composed of three tribes, descended from and named after the three sons of Anak—Ahiman, Sesai, and Talmai. When the Israelites invaded Canaan, the Anakim were in possession of Hebron, Debir, Anak, and other towns in the country of the south. Their formidable stature and appearance alarmed the Hebrew spies; but they were eventually overcome and expelled by Caleb, when the remnant of the race took refuge among the Philistines (Num. xiii. 23; Deut. ix. 2; Josh. xi. 21; xiv. 12; Judg. i. 20). This favours the opinion of those who conclude that the Anakim were a tribe of Cushite wanderers from Babel, and of the same race as the Philistines, the Phœnicians, the Philitim, and the Egyptian shepherd-kings.

ANAMME'LECH (עֲנַמֶּלֶךְ, 2 Kings xvii. 31) is mentioned, together with Adrammelech, as a god of the people of Sepharvaim, who colonized Samaria. He was also worshipped by the sacrifice of children by fire. No satisfactory etymology of the name has been discovered. Hyde (*Rel. Vet. Persar.* p. 128) considers the first part of the word to be the Aramæan ענא or ען *sheep*, and the latter to be *king* (although, from his rendering the compound *Pecus Rex*, it is not at all clear in what relation he considered the two elements to stand to each other). He takes the whole to refer to the constellation Cepheus, or to that part of it in which are the stars called by the Arabs the shepherd and the sheep (*ar Râ'i wal Ganam*), which Ulug Beg terms the stars of the flock (*Kawâkib ul Firq*). This theory is erroneously stated both by Gesenius and Winer (by the former in his *Thesaurus*, and by the latter in his *Realwörterbuch*), who make out that the constellation Cepheus itself is called by the Arabs the shepherd and his sheep. Hyde certainly does not say so; and al Qazwînî (in Ideler's *Untersuchungen über die Sternnamen*, p. 42) expressly assigns the name of 'the shepherd' to the star in the left foot of Cepheus; that of 'the sheep' (*al Agnâm*, as he calls it) to those between his feet; and that of 'the flock' to the one on his right shoulder. The most that can be said of Hyde's theory is, that it is not incompatible with the astrology of the Assyrians. Gesenius, in the etymology he proposes, considers the first part of the name to be the Arabic *çanam*, 'image,' with a change of צ into ע, which is not unusual in Aramaic (see Ewald's *Hebr. Grammar*, §. 106). The latest etymology proposed is that by Benfey (*Monatsnamen einiger alter Völker*, p. 188), who suggests that the first part of the word may be

an abbreviation of the name of the Persian goddess *Anahit*, or of that of the Ized *Aniran*. The same obscurity prevails as to the form under which the god was worshipped. The Babylonian Talmud states that his image had the figure of a horse; but Kimchi says that of a pheasant, or quail (Carpzov's *Apparatus*, p. 516).—J. N.

ANANIAS, son of Nebedæus, was made high-priest in the time of the procurator Tiberius Alexander, about A.D. 47, by Herod, king of Chalcis, who for this purpose removed Joseph, son of Camydus, from the high-priesthood (Joseph. *Antiq.* xx. 5, 2). He held the office also under the procurator Cumanus, who succeeded Tiberius Alexander. Being implicated in the quarrels of the Jews and Samaritans, Ananias was, at the instance of the latter (who, being dissatisfied with the conduct of Cumanus, appealed to Ummidius Quadratus, president of Syria), sent in bonds to Rome, to answer for his conduct before Claudius Cæsar. The emperor decided in favour of the accused party. Ananias appears to have returned with credit, and to have remained in his priesthood until Agrippa gave his office to Ismael, the son of Tabi (*Antiq.* xx. 8, 8), who succeeded a short time before the departure of the procurator Felix, and occupied the station also under his successor Festus. Ananias, after retiring from his high-priesthood, 'increased in glory every day' (*Antiq.* xx. 1, 2), and obtained favour with the citizens, and with Albinus, the Roman procurator, by a lavish use of the great wealth he had hoarded. His prosperity met with a dark and painful termination. The assassins (*sicarii*), who played so fearful a part in the Jewish war, set fire to his house in the commencement of it, and compelled him to seek refuge by concealment; but being discovered in an aqueduct, he was captured and slain (*Antiq.* xx. 9, 2; *Bell. Jud.* ii. 17, 9).

It was this Ananias before whom Paul was brought, in the procuratorship of Felix (Acts xxiii.). The noble declaration of the apostle, 'I have lived in all good conscience before God until this day,' so displeased him, that he commanded the attendant to smite him on the face. Indignant at so unprovoked an insult, the apostle replied, 'God shall smite thee, thou whited wall:' a threat which the previous details serve to prove wants not evidence of having taken effect. Paul, however, immediately restrained his anger, and allowed that he owed respect to the office which Ananias bore. After this hearing Paul was sent to Cæsarea, whither Ananias repaired, in order to lay a formal charge against him before Felix, who postponed the matter, detaining the apostle meanwhile, and placing him under the supervision of a Roman centurion (Acts xxiv.).—J. R. B.

ANANIAS, a Christian belonging to the infant church at Jerusalem, who, conspiring with his wife Sapphira to deceive and defraud the brethren, was overtaken by sudden death, and immediately buried. The Christian community at Jerusalem appear to have entered into a solemn agreement, that each and all should devote their property to the great work of furthering the gospel and giving succour to the needy. Accordingly they proceeded to sell their possessions, and brought the proceeds into the common stock of the church. Thus Barnabas (Acts iv. 36, 37) 'having land, sold it, and brought the money, and laid it at the apostles' feet.' The apostles then had the general disposal, if they had not also the immediate distribution, of the common funds. The contributions, therefore, were designed for the sacred purposes of religion (Acts v. 1-11).

As all the members of the Jerusalem church had thus agreed to hold their property in common, for the furtherance of the holy work in which they were engaged, if any one of them withheld a part, and offered the remainder as the whole, he committed two offences—he defrauded the church, and was guilty of falsehood: and as his act related not to secular but to religious affairs, and had an injurious bearing, both as an example, and as a positive transgression against the Gospel while it was yet struggling into existence; Ananias lied not unto man, but unto God, and was guilty of a sin of the deepest dye. Had Ananias chosen to keep his property for his own worldly purposes, he was at liberty, as Peter intimates, so to do; but he had in fact alienated it to pious purposes, and it was therefore no longer his own. Yet he wished to deal with it in part as if it were so, showing at the same time that he was conscious of his misdeed, by presenting the residue to the common treasury as if it had been his entire property. He wished to satisfy his selfish cravings, and at the same time to enjoy the reputation of being purely disinterested, like the rest of the church. He attempted to serve God and Mammon. The original, ἐνοσφίσατο, is much more expressive of the nature of his misdeed than our common version, 'kept back' (part of the price). The Vulgate renders it 'fraudavit;' and both Wiclif and the Rheims version employ a corresponding term, 'defraudid,' 'defrauded.' In the only other text of the New Testament where the word is found (Tit. ii. 10), it is translated 'purloining.' It is, indeed, properly applied to the conduct of persons who appropriate to their own purposes money destined for public uses.

It is the more important to place the crime of Ananias and his wife in its true light, because unjust reflections have been cast upon the apostle Peter (Wolfenb. *Fragm. Zweck Jesu*, p. 256) for his conduct in the case. Whatever that conduct may have been, the misdeed was of no trivial kind, either in itself or in its possible consequences. If, then, Peter reproves it with warmth, he does no more than nature and duty alike required; nor does there appear in his language on the occasion any undue or uncalled for severity. He sets forth the crime in its naked heinousness, and leaves judgment in the hands of Him to whom judgment belongs.

With strange inconsistency on the part of those who deny miracles altogether, unbelievers have accused Peter of cruelly smiting Ananias and his wife with instant death. The sacred narrative, however, ascribes to Peter nothing more than a spirited exposure of their aggravated offence. Their death, the reader is left to infer, was by the hand of God; nor is any ground afforded in the narrative (Acts v. 1-11) for holding that Peter was in any way employed as an immediate instrument of the miracle.

That the death of these evil-doers was miraculous seems to be implied in the record of the transaction, and has been the general opinion of the church. An attempt, however (*Ammon. Krit. Journ. d. Theol. Lit.* i. 249), has been made to explain the fact

by the supposition of apoplexy, caused by the shame and disgrace with which the guilty pair were suddenly overwhelmed at the detection of their baseness. If such an hypothesis might account for the death of Ananias, it could scarcely suffice to explain that of his wife also; for that two persons should be thus taken off by the same physical cause is, in the circumstances, in the highest degree improbable. A mathematical calculation of the doctrine of chances in the case would furnish the best exposure of this anti-supernatural explanation.

The view now given may serve also to show how erroneous is the interpretation of those who, like Tertullian, have maintained that the words of Peter were a species of excommunication which the chief of the apostles fulminated against Ananias and his wife. The thunders of a corrupt church find no sanction in the sacred record.

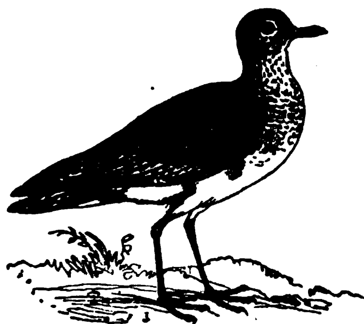
The early Christian writers were divided as to the condition of Ananias and Sapphira in the unseen world. Origen, in his treatise on Matthew, maintains that, being purified by the punishment they underwent, they were saved by their faith in Jesus. Others, among whom are Augustin and Basil, argue that the severity of their punishment on earth showed how great their criminality had been, and left no hope for them hereafter:—pariter et vitam perdiderunt et salutem.—J. R. B.

ANANIAS, a Christian of Damascus (Acts ix. 10; xxii. 12), held in high repute, to whom the Lord appeared in a vision, and bade him proceed to 'the street which is called Straight, and inquire in the house of Judas for one called Saul of Tarsus: for, behold, he prayeth.' Ananias had difficulty in giving credence to the message, remembering how much evil Paul had done to the saints at Jerusalem, and knowing that he had come to Damascus with authority to lay waste the church of Christ there. Receiving, however, an assurance that the persecutor had been converted, and called to the work of preaching the Gospel to the Gentiles, Ananias went to Paul, and, putting his hands on him, bade him receive his sight, when immediately there fell from his eyes as it had been scales; and, recovering the sight which he had lost when the Lord appeared to him on his way to Damascus, Paul, the new convert, arose, and was baptized, and preached Jesus Christ.

Tradition represents Ananias as the first that published the Gospel in Damascus, over which place he was subsequently made bishop; but having roused, by his zeal, the hatred of the Jews, he was seized by them, scourged, and finally stoned to death in his own church.—J. R. B.

ANAPHA (אנפה; Sept. χαραδριός; Vulg. caradryon and caradrium; Eng. Vers. heron, Lev. xi. 19, and Deut xiv. 18), an unclean bird, but the particular bird denoted by the Hebrew word has been much disputed. The kite, woodcock, curlew, peacock, parrot, crane, lapwing, and several others have been suggested. Since the word occurs but twice, and in both instances is isolated, no aid can be derived from a comparison of passages.

Recourse has consequently been had to etymology. The root *anaph* signifies to breathe, to snort, especially from *anger*, and thence, figuratively, *to be angry*. Parkhurst observes that 'as the heron is remarkable for its *angry* disposition, especially when *hurt* or *wounded*, this bird seems to be most probably intended.' But this equally applies to a great number of different species of birds. Bochart supposes it may mean the *mountain falcon*, called ἀνοπαῖα by Homer (*Odys.* i. 320), because of the similarity of the Greek word to the Hebrew. But if it meant *any* kind of *eagle* or *hawk*, it would probably have been reckoned with one or other of those species mentioned in the preceding verses. Perhaps, under all the circumstances, the *traditional* meaning is most likely to be correct, which it will now be attempted to trace.



The Septuagint renders the Hebrew word by χαραδριός. Jerome, who, though professing to translate from the Hebrew, was no doubt well acquainted with the Septuagint, adhered to the same word in a Latin form, *caradryon* and *caradrium*. The Greek and Roman writers, from the earliest antiquity, refer to a bird which they call charadrius. It is particularly described by Aristotle (*Hist. An.* vii. 7), and by Ælian (*Hist. An.* xv. 26). The latter naturalist derives its name from χαράδρα, a hollow or chasm, especially one which contains water, because, he says, the bird frequents such places. It is, moreover, certain, that by the Romans the charadrius was also called icterus, which signifies the jaundice, from a notion that patients affected with that disease were cured by looking at this bird, which was of a yellow colour (Pliny, xxxiv.; Cœl. Aurel. iii. 5), and by the Greeks, χλωρίων; and in allusion to the same fabulous notion, ἴκτερος (Aristotle, *Hist. An.* ix. 13, 15, and 22; Ælian, *Hist. An.* iv. 47). These writers concur in describing a bird, *sometimes* of a *yellow colour*, remarkable for its voracity (from which circumstance arose the phrase χαραδριοῦ βίος, applied to a glutton), migratory, inhabiting watery places, and especially mountain torrents and valleys.

Now, it is certain that the name charadrius has been applied by ornithologists to the same species of birds from ancient times down to the present age. Linnæus, under Order iv. (consisting of waders or shore birds), places the genus Charadrius; in which he includes all the numerous species of *plovers*. The ancient accounts may be advantageously compared with the following description of the genus from Mr. Selby's *British Ornithology*, ii. 230: 'The members of this genus are numerous, and possess a wide geographical distribution: species being found in *every* quarter of the globe. They *visit the east* about April. Some of them, during the greater part of the year, are the inhabitants of open districts and wide wastes, frequenting both dry and moist situations, and only retire toward the coasts during the severity of winter. Others are continually resident upon the banks and about the mouths of rivers (particularly where the shore consists of small gravel or shingle). They live on worms, insects, and their larvæ. The flesh of many that live on the coasts is unpalatable.'

The same writer describes one 'species, charadrius pluvialis, called the *golden* plover from its colour,' and mentions the well-known fact that this species, in the course of moulting, turns completely black. Analogous facts respecting the charadrius have been established by observations in every part of the globe, viz. that they are gregarious and migratory. The habits of the majority are

littoral. They obtain their food along the banks of rivers and the shores of lakes; 'like the gulls, they beat the moist soil with their pattering feet, to terrify the incumbent worms, yet are often found in deserts, in green and sedgy meadows, or on *upland moors*.' Their food consists chiefly of mice, worms, caterpillars, insects, toads, and frogs; which of course places them among the class of birds ceremonially *unclean*.

On the whole, the preponderance of evidence derived from an unbroken chain of well ascertained facts, seems in favour of the conclusion that the Hebrew word *anapha* designates the numerous species of the *plover* (may not this be the genus of birds alluded to as *the* fowls of the mountain, Ps. L. 11; Isa. xviii. 6?). Various species of the genus are known in Syria and Palestine, as the *C. pluvialis* (golden plover, of

[Charadrius pluvialis—winter plumage.]

which a figure is here given), *C. œdicnemus* (stone-curlew), and *C. spinosus* (lapwing). (Kitto's *Physical Hist. of Palestine*, p. 106.) And, in connection with some of the preceding remarks, it is important to observe that in these species a yellow colour is more or less marked.—J. F. D.

ANATHEMA (ἀνάθεμα), literally anything laid up or suspended (from ἀνατίθημι, to lay up), and hence anything laid up in a temple, set apart as sacred. In this general sense the form employed is ἀνάθημα, a word of not unfrequent occurrence in Greek classic authors, and found once in the N. T., Luke xxi. 5. The form ἀνάθεμα, as well as its meaning, appears to be peculiar to the Hellenistic dialect (Valckenaer, *Schol.* tom. i. p. 593). The distinction has probably arisen from the special use made of the word by the Greek Jews. In the Septuagint, ἀνάθεμα is the ordinary rendering of the Hebrew word חרם, *cherem* (although in some instances it varies between the two forms, as in Lev. xxvii. 28, 29), and in order to ascertain its meaning it will be necessary to inquire into the signification of this word.

We find that the חרם was a person or thing consecrated or devoted irrevocably to God, and that it differed from anything merely vowed or sanctified to the Lord in this respect, that the latter could be redeemed (Lev. xxvii. 1-27), whilst the former was irreclaimable (Lev. xxvii. 21, 28): hence, in reference to living creatures, the devoted thing, whether man or beast, must be put to death (Lev. xxvii. 29). The prominent idea, therefore, which the word conveyed was that of a person or thing *devoted to destruction*, or *accursed*. Thus the cities of the Canaanites were anathematized (Num. xxi. 2, 3), and after their complete destruction the name of the place was called Hormah (חרמה; Sept. ἀνάθεμα). Thus, again, the city of Jericho was made an anathema to the Lord (Josh. vi. 17), that is, every living thing in it (except Rahab and her family) was devoted to death; that which could be destroyed by fire was burnt, and all that could not be thus consumed (as gold and silver) was for ever alienated from man and devoted to the use of the sanctuary (Josh. vi. 24). The prominence thus given to the idea of a *thing accursed* led naturally to the use of the word in cases where there was no reference whatever to consecration to the service of God, as in Deut. vii. 26, where an idol is called חרם, or ἀνάθεμα, and the Israelites are warned against idolatry lest they should be anathema like it. In these instances the term denotes the object of the curse, but it is sometimes used to designate the curse itself (*e. g.* Deut. xx. 17, Sept.; comp. Acts xxiii. 14), and it is in this latter sense that the English word is generally employed.

In this sense, also, the Jews of later times use the Hebrew term, though with a somewhat different meaning as to the curse intended. The חרם of the Rabbins signifies excommunication or exclusion from the Jewish church. The more recent Rabbinical writers reckon three kinds or degrees of excommunication, all of which are occasionally designated by the generic term חרם (Elias Levita, in *Sepher Tisbi*). The first of these, נדוי, is merely a temporary separation or suspension from ecclesiastical privileges, involving, however, various civil inconveniences, particularly seclusion from society to the distance of four cubits. The person thus excommunicated was not debarred entering the temple, but instead of going in on the right hand, as was customary, he was obliged to enter on the left, the usual way of departure: if he died whilst in this condition there was no mourning for him, but a stone was thrown on his coffin to indicate that he was separated from the people and had deserved stoning. Buxtorf (*Lex. Chald., Talm. et Rabbin.*, col. 1304) enumerates twenty-four causes of this kind of excommunication: it lasted thirty days and was pronounced without a curse. If the individual did not repent at the expiration of the term (which, however, according to Buxtorf, was extended in such cases to sixty or ninety days), the second kind of excommunication was resorted to. This was called simply and more properly חרם. It could only be pronounced by an assembly of at least ten persons, and was always accompanied with curses. The formula employed is given at length by Buxtorf (*Lex.* col. 828). A person thus excommunicated was cut off from all religious and social privileges: it was unlawful either to eat or drink with him (compare 1 Cor. v. 11). The curse could be dissolved, however, by three common persons, or by one person of dignity. If the excommunicated person still continued impenitent, a yet more severe sentence was, according to the later Rabbins, pronounced against him, which was termed שמתא (Elias Levita, in *Tisbi*). It is described as a complete excision from the church and the giving up of the individual to the judgment of God and to

final perdition. There is, however, reason to believe that these three grades are of recent origin. The Talmudists frequently use the terms by which the first and last are designated interchangeably, and some Rabbinical writers (whom Lightfoot has followed in his *Horæ Hebr. et Talm.*, *ad* 1 Cor. v. 5) consider the last to be a lower grade than the second; yet it is probable that the classification rests on the fact that the sentence was more or less severe according to the circumstances of the case; and though we cannot expect to find the three grades distinctly marked in the writings of the N. T., we may not improbably consider the phrase ἀποσυνάγωγον ποιεῖν, John xvi. 2 (comp. ix. 22; xii. 42), as referring to a lighter censure than is intended by one or more of the three terms used in Luke vi. 22, where perhaps different grades are intimated. The phrase παραδιδόναι τῷ σατανᾷ (1 Cor. v. 5; 1 Tim. i. 20) has been by many commentators understood to refer to the most severe kind of excommunication. Even admitting the allusion, however, there is a very important difference between the Jewish censure and the formula employed by the Apostle. In the Jewish sense it would signify the delivering over of the transgressor to final perdition, whilst the Apostle expressly limits his sentence to the 'destruction of the flesh' (*i. e.* the depraved nature), and resorts to it in order 'that the spirit may be saved in the day of the Lord Jesus.'

But whatever diversity of opinion there may be as to the degrees of excommunication, it is on all hands admitted that the term חרם, with which we are more particularly concerned as the equivalent of the Greek ἀνάθεμα, properly denotes, in its Rabbinical use, an excommunication accompanied with the most severe curses and denunciations of evil. We are therefore prepared to find that the *anathema* of the N. T. always implies execration; but it yet remains to be ascertained whether it is ever used to designate a judicial act of excommunication. That there is frequently no such reference is very clear: in some instances the individual denounces the anathema on himself, unless certain conditions are fulfilled. The noun and its corresponding verb are thus used in Acts xxiii. 12, 14, 21, and the verb occurs with a similar meaning in Matt. xxvi. 74; Mark xiv. 71. The phrase 'to call Jesus anathema' (1 Cor. xii. 3) refers not to a judicial sentence pronounced by the Jewish authorities, but to the act of any private individual who execrated him and pronounced him accursed. That this was a common practice among the Jews appears from the Rabbinical writings. The term, as it is used in reference to any who should preach another gospel 'Let him be anathema' (Gal. i. 8, 9), has the same meaning as, let him be accounted execrable and accursed. In none of these instances do we find any reason to think that the word was employed to designate specifically and technically excommunication either from the Jewish or the Christian church. There remain only two passages in which the word occurs in the N. T., both presenting considerable difficulty to the translator. With regard to the first of these (Rom. ix. 3) Grotius and others understand the phrase ἀνάθεμα εἶναι ἀπὸ τοῦ Χριστοῦ to signify excommunication from the Christian church whilst most of the fathers, together with Tholuck, Rückert, and a great number of modern interpreters, explain the term as referring to the Jewish practice of excommunication. On the other hand, Deyling, Olshausen, De Wette, and many more adopt the more general meaning of accursed. The great difficulty is to ascertain the extent of the evil which Paul expresses his willingness to undergo; Chrysostom, Calvin, and many others understand it to include final separation, not indeed from the love, but from the presence of Christ; others limit it to a violent death; and others, again, explain it as meaning the same kind of curse as that under which the Jews then were, from which they might be delivered by repentance and the reception of the Gospel (Deylingii *Observatt. Sacræ*, P. II. p. 495 and *sqq.*). It would occupy too much space to refer to other interpretations of the passage, or to pursue the investigation of it further. There seems, however, little reason to suppose that a judicial act of the Christian Church is intended, and we may remark that much of the difficulty which commentators have felt seems to have arisen from their not keeping in mind that the Apostle does not speak of his wish as a possible thing, and their consequently pursuing to all its results what should be regarded simply as an expression of the most intense desire.

The phrase ἀνάθεμα μαρὰν ἀθὰ (1 Cor. xvi. 22) has been considered by many to be equivalent to the שמתא of the Rabbins, the most severe form of excommunication. This opinion is derived from the supposed etymological identity of the Syriac phrase מרן אתא, 'the Lord cometh,' with the Hebrew word which is considered by these commentators to be derived from שם אתא, 'the Name (*i. e.* Jehovah) cometh.' This explanation, however, can rank no higher than a plausible conjecture, since it is supported by no historical evidence. The Hebrew term is never found thus divided, nor is it ever thus explained by Jewish writers, who, on the contrary, give etymologies different from this (Buxtorf, *Lex.* col. 2466). It is moreover very uncertain whether this third kind of excommunication was in use in the time of Paul; and the phrase which he employs is not found in any Rabbinical writer (Lightfoot, *Horæ Hebr. et Talm.*, on 1 Cor. xvi. 22 *). The literal meaning of the words is clear, but it is not easy to understand why the Syriac phrase is here employed, or what is its meaning in connection with anathema. Lightfoot supposes that the Apostle uses it to signify that he pronounced this anathema against the Jews. However this may be, the supposition that the anathema, whatever be its precise object, is intended to designate excommunication from the Christian church, as Grotius and Augusti understand it, appears to rest on very slight grounds: it seems preferable to regard it, with Lightfoot, Olshausen, and most other commentators, as simply an expression of detestation. Though, however, we find little or no evidence of the use of the word anathema in the N. T. as

* Augusti (*Handbuch der Christl. Archäol.* vol. iii. p. 11) has fallen into a strange mistake in appealing to Buxtorf and Lightfoot in support of this interpretation: the former speaks very doubtfully on the subject, and the express object of the latter is to controvert it.

the technical term for excommunication, it is certain that it obtained this meaning in the early ages of the church; for it is thus employed in the apostolic canons, in the canons of various councils, by Chrysostom, Theodoret, and other Greek fathers (Suiceri *Thesaurus Eccl. sub vocc.* ἀνάθεμα and ἀφορισμός).—F. W. G.

ANATHOTH (ענתות; Sept. Ἀναθώθ), one of the towns belonging to the priests in the tribe of Benjamin, and as such a city of refuge (Josh. xxi. 18; Jer. i. 1). It occurs also in 2 Sam. xxiii. 27; Ezra ii. 23; Neh. vii. 27; but is chiefly memorable as the birthplace and usual residence of the prophet Jeremiah (Jer. i. 1; xi. 21-23; xxix. 27), whose name it seems to have borne in the time of Jerome, 'Anathoth, quæ hodie appellatur Jeremiæ' (*Onomast. s. v.* Anathoth). The same writer (*Comment. in Jer.* i. 1) places Anathoth three Roman miles north of Jerusalem, which correspond with the twenty stadia assigned by Josephus (*Antiq.* x. 7. 3). Professor Robinson appears to have discovered this place in the present village of *Anata*, at the distance of an hour and a quarter from Jerusalem. It is seated on a broad ridge of hills, and commands an extensive view of the eastern slope of the mountainous tract of Benjamin; including also the valley of the Jordan, and the northern part of the Dead Sea. It seems to have been once a walled town and a place of strength. Portions of the wall still remain, built of large hewn stones, and apparently ancient, as are also the foundations of some of the houses. It is now a small and very poor village. From the vicinity a favourite kind of building-stone is carried to Jerusalem. Troops of donkeys are met with employed in this service, a hewn stone being slung on each side; the larger stones are transported on camels (Robinson, *Researches*, ii. 109; Raumer's *Palästina*, p. 169).

ANCHOR. [SHIP.]

ANDREW (Ἀνδρέας), one of the twelve apostles. His name is of Greek origin, but was in use amongst the Jews, as appears from a passage quoted from the Jerusalem Talmud by Lightfoot (*Harmony*, Luke v. 10). He was a native of the city of Bethsaida in Galilee, and brother of Simon Peter. He was at first a disciple of John the Baptist, and was led to receive Jesus as the Messiah in consequence of John's expressly pointing him out as 'the Lamb of God' (John i. 36). His first care, after he had satisfied himself as to the validity of the claims of Jesus, was to bring to him his brother Simon. Neither of them, however, became at that time stated attendants on our Lord; for we find that they were still pursuing their occupation of fishermen on the sea of Galilee when Jesus, after John's imprisonment, called them to follow him (Mark i. 14, 16). Very little is related of Andrew by any of the evangelists: the principal incidents in which his name occurs during the life of Christ are, the feeding of the five thousand (John vi. 9); his introducing to our Lord certain Greeks who desired to see him (John xii. 22); and his asking, along with his brother Simon and the two sons of Zebedee, for a further explanation of what our Lord had said in reference to the destruction of the temple (Mark xiii. 3). Of his subsequent history and labours we have no authentic record. Tradition assigns Scythia (Euseb. iii. 1, 71), Greece (Theodoret, i. 1425), and Thrace (Hippolytus, ii. 30) as the scenes of his ministry: he is said to have suffered crucifixion at Patræ in Achaia, on a cross of the form called *Crux decussata* (X), and commonly known as 'St. Andrew's cross' (Winer's *Bibl. Realwörterbuch, sub voce*). His relics, it is said, were afterwards removed from Patræ to Constantinople. An apocryphal book, bearing the title of 'The Acts of Andrew,' is mentioned by Eusebius, Epiphanius, and others. It is now completely lost, and seems never to have been received except by some heretical sects, as the Encratites, Origenians, &c. This book, as well as a 'Gospel of St. Andrew,' was declared apocryphal by the decree of Pope Gelasius (Jones, *On the Canon*, vol. i. p. 179 and *sqq.*) [ACTS, SPURIOUS; GOSPELS, SPURIOUS].—F. W. G.

1. ANDRONICUS (Ἀνδρόνικος), the regent-governor of Antioch in the absence of Antiochus Epiphanes, who, at the instigation of Menelaus, put to death the deposed high-priest Onias; for which deed he was himself ignominiously slain on the return of Antiochus (2 Macc. iv.) B.C. 169 [ONIAS].

2. ANDRONICUS, a Jewish Christian, the kinsman and fellow-prisoner of Paul (Rom. xvi. 7).

1. ANER (עָנֵר; Sept. Αὐνάν), ESHCOL, and MAMRE, three Canaanitish chiefs in the neighbourhood of Hebron, who joined their forces with those of Abraham in pursuit of Chedorlaomer and his allies, who had pillaged Sodom and carried Lot away captive (Gen. xiv. 24). These chiefs did not, however, imitate the disinterested conduct of the patriarch, but retained their portion of the spoil [ABRAHAM].

2. ANER, a city of Manasseh, given to the Levites of Kohath's family (1 Chron. vi. 70).

ANETHON (ἄνηθον) occurs in Matt. xxiii. 23, where it is rendered *anise*, 'Woe unto you—for ye pay tithe of mint and *anise* and cummin.' By the Greek and Roman writers it was employed to designate a plant used both medicinally and as an article of diet. The Arabian translators of the Greek medical authors give as its synonyme شبث *shabit*, the name applied in eastern countries to an umbelliferous plant with flattened fruit commonly called 'seed,' which is surrounded with a dilated margin. In Europe the word has always been used to denote a similar plant, which is familiarly known by the name of Dill. Hence there is no doubt that in the above passage, instead of 'anise,' ἄνηθον should have been translated 'dill;' and it is said to be rendered by a synonymous word in every version except our own.

The common dill, or *anethum graveolens*, is an annual plant, growing wild among the corn in Spain and Portugal; and on the coast of Italy, in Egypt, and about Astracan. It resembles *fennel*, but is smaller, has more glaucous leaves, and a less pleasant smell: the fruit or seeds, which are finely divided by capillary segments, are elliptical, broader, flatter, and surrounded with a membraneous disk. They have a warm and aromatic taste, owing to the presence of a pale yellow volatile oil, which itself has a hot taste and a peculiar penetrating odour.

The error in translation here pointed out is not of very great consequence, as both the *anise* and the *dill* are umbelliferous plants, which are

[Anethum graveolens.]

found cultivated in the south of Europe. The seeds of both are employed as condiments and carminatives, and have been so from very early times; but the *anethon* is more especially a genus of eastern cultivation, since either the *dill* or another species is reared in all the countries from Syria to India, and known by the name *shubit;* while the *anise*, though known, appears to be so only by its Greek name ἄνισον. Rosenmüller, moreover, says, 'In the tract *Massroth* (of Tithes), cap. iv. § 5, we read, "The seed, the leaves, and the stem of *dill* (שֶׁבֶת *shaboth*) are, according to Rabbi Eliezer, subject to tithe,"' which indicates that the herb was eaten, as is indeed the case with the eastern species in the present day; and, therefore, to those acquainted with the cultivated plants of eastern countries, the dill will appear more appropriate than anise in the above passage.

ANGELS (Ἄγγελοι, used in the Sept. and New Test. for the Hebrew מַלְאָכִים; sing. מַלְאָךְ), a word signifying both in Hebrew and Greek *messengers*, and therefore used to denote whatever God employs to execute his purposes, or to manifest his presence or his power. In some passages it occurs in the sense of an ordinary messenger (Job i. 14; 1 Sam. xi. 3; Luke vii. 4; ix. 52): in others it is applied to prophets (Isa. xliii. 19; Hag. i. 13; Mal. iii.): to priests (Eccl. v. 6; Mal. ii. 7): to ministers of the New Testament (Rev. i. 20). It is also applied to impersonal agents; as to the pillar of cloud (Exod. xiv. 19): to the pestilence (2 Sam. xxiv. 16, 17; 2 Kings xix. 30): to the winds ('who maketh the winds his angels,' Ps. civ. 4): so likewise, plagues generally, are called 'evil angels' (Ps. lxxviii. 49), and Paul calls his thorn in the flesh an 'angel of Satan' (2 Cor. xii. 7).

But this name is more eminently and distinctively applied to certain spiritual beings or heavenly intelligences, employed by God as the ministers of His will, and usually distinguished as *angels of God* or *angels of Jehovah*. In this case the name has respect to their official capacity as 'messengers,' and not to their nature or condition. The term 'spirit,' on the other hand (in Greek πνεῦμα; in Hebrew רוח), has reference to the nature of angels, and characterizes them as incorporeal and invisible essences. But neither the Hebrew רוח nor the Greek πνεῦμα, nor even the Latin *spiritus*, corresponds exactly to the English *spirit*, which is opposed to matter, and designates what is immaterial; whereas the other terms are not opposed to matter, but to body, and signify not what is immaterial, but what is incorporeal. The modern idea of spirit was unknown to the ancients. They conceived spirits to be incorporeal and invisible, but not immaterial, and supposed their essence to be a pure air or a subtile fire. The proper meaning of πνεῦμα (from πνέω, I blow, I breathe) is air in motion, wind, breath. The Hebrew רוח is of the same import; as is also the Latin *spiritus*, from *spiro*, I blow, I breathe. When, therefore, the ancient Jews called angels *spirits*, they did not mean to deny that they were endued with bodies. When they affirmed that angels were incorporeal, they used the term in the sense in which it was understood by the ancients;—that is, as free from the impurities of gross matter. The distinction between 'a natural body' and 'a spiritual body' is indicated by St. Paul (1 Cor. xv. 44); and we may, with sufficient safety, assume that angels are spiritual bodies, rather than pure spirits in the modern acceptation of the word.

It is disputed whether the term *Elohim* אלהים is ever applied to angels, but the inquiry belongs to another place [Elohim]. It may suffice here to observe that both in Ps. viii. 5, and xcvii. 7, the word is rendered by *angels* in the Sept. and other ancient versions; and both these texts are so cited in Heb. i. 6; ii. 7, that they are called Beni-Elohim, בני אלהים, *Sons of God*. In the Scriptures we have frequent notices of spiritual intelligences, existing in another state of being, and constituting a celestial family, or hierarchy, over which Jehovah presides. The Bible does not, however, treat of this matter professedly and as a doctrine of religion, but merely adverts to it incidentally as a fact, without furnishing any details to gratify curiosity. It speaks of no obligations to these spirits, and indicates no duties to be performed towards them. A belief in the existence of such beings is not, therefore, an essential article of religion, any more than a belief that there are other worlds besides our own: but such a belief serves to enlarge our ideas of the works of God, and to illustrate the greatness of his power and wisdom (Mayer, *Am. Bib. Repos.* xii. 360). The practice of the Jews, of referring to the agency of angels every manifestation of the greatness and power of God, has led some to contend that angels have no real existence, but are mere personifications of unknown powers of nature: and we are reminded that, in like manner, among the Gentiles, whatever was wonderful, or strange, or unaccountable, was referred by them to the agency of some one of their gods. Among the numerous passages in which angels are mentioned, there are, however, a few which cannot, without improper force, be reconciled with this hypothesis. It may be admitted that the passages in which angels are described as speaking and delivering messages, might be interpreted of forcible or apparently supernatural suggestions to the mind: but they are sometimes represented as performing acts which are wholly inconsistent with this notion (Gen. xvi. 7-12; Judg. xiii. 1-21; Matt. xxviii. 2-4); and if Matt. xx. 30, stood alone in its testimony, it ought to

settle the question. Christ there says, that 'in the resurrection they neither marry nor are given in marriage, but are as *the angels of God*.' The force of this passage cannot be eluded by the hypothesis [ACCOMMODATION] that Christ mingled with his instructions the erroneous notions of those to whom they were addressed, seeing that he spoke to Sadducees, who did *not* believe in the existence of angels (Acts xxiii. 8). So likewise, the passage in which the high dignity of Christ is established, by arguing that he is superior to the angels (Heb. i. 4. *sqq.*), would be without force or meaning if angels had no real existence.

That these superior beings are very numerous is evident from the following expressions, Dan. vii. 10, 'thousands of thousands,' and 'ten thousand times ten thousand;' Matt. xxvi. 53, 'more than twelve legions of angels;' Luke ii. 13, 'multitude of the heavenly host;' Heb. xii. 22, 23, 'myriads of angels.' It is probable, from the nature of the case, that among so great a multitude there may be different grades and classes, and even natures—ascending from man towards God, and forming a chain of being to fill up the vast space between the Creator and man—the lowest of his intellectual creatures. This may be inferred from the analogies which pervade the chain of being on the earth whereon we live, which is as much the divine creation as the world of spirits. Accordingly the Scripture describes angels as existing in a society composed of members of unequal dignity, power, and excellence, and as having chiefs and rulers. It is admitted that this idea is not clearly expressed in the books composed before the Babylonish captivity; but it is developed in the books written during the exile and afterwards, especially in the writings of Daniel and Zechariah. In Zech. i. 11, an angel of the highest order, *one who stands before God*, appears in contrast with angels of an inferior class, whom he employs as his messengers and agents (comp. iii. 7). In Dan. x. 13, the appellation שַׂר הָראשׁון, and in xii. 1, שַׂר הגדון are given to Michael. The Grecian Jews rendered this appellation by the term *ἀρχάγγελος*, *Archangel*, which occurs in the New Testament (Jude 9; 1 Thess. iv. 16), where we are taught that Christ will appear to judge the world *ἐν φωνῇ ἀρχαγγέλου*. This word denotes, as the very analogy of the language teaches, a chief of the angels, one superior to the other angels, like *ἀρχιερεύς, ἀρχιστράτηγος, ἀρχισυνάγωγος*. The opinion, therefore, that there were various orders of angels, was not peculiar to the Jews; but was held by Christians in the time of the apostles, and is mentioned by the apostles themselves. The distinct divisions of the angels, according to their rank in the heavenly hierarchy, which we find in the writings of the later Jews, were either almost or wholly unknown in the apostolical period. The appellations *ἀρχαί, ἐξουσίαι, δυνάμεις, θρόνοι, κυριότητες*, are, indeed, applied in Eph. i. 21, Col. i. 16, and elsewhere, to the angels; not, however, to them exclusively, or with the intention of denoting their particular classes; but to them in common with all beings possessed of might and power, *visible* as well as invisible, on *earth* as well as in heaven.

In the Scriptures angels appear with bodies, and in the human form; and no intimation is anywhere given that these bodies are not real, or that they are only assumed for the time and then laid aside. It was manifest indeed to the ancients that the matter of these bodies was not like that of their own, inasmuch as angels could make themselves visible and vanish again from their sight. But this experience would suggest no doubt of the reality of their bodies: it would only intimate that they were not composed of gross matter. After his resurrection, Jesus often appeared to his disciples, and vanished again before them; yet they never doubted that they saw the same body which had been crucified, although they must have perceived that it had undergone an important change. The fact that angels always appeared in the human form, does not, indeed, prove that they really have this form; but that the ancient Jews believed so. That which is not pure spirit must have some form or other: and angels *may* have the human form; but other forms are possible. The question as to the food of angels has been very much discussed. If they do eat, we can know nothing of their actual food; for the manna is manifestly called 'angels' food' (Ps. lxxviii. 25; Wisd. xvi. 20), merely by way of expressing its excellence. The only real question, therefore, is whether they feed at all or not. We sometimes find angels, in their terrene manifestations, eating and drinking (Gen. xviii. 8; xix. 3); but in Judg. xiii. 15, 16, the angel who appeared to Manoah declined, in a very pointed manner, to accept his hospitality. The manner in which the Jews obviated the apparent discrepancy, and the sense in which they understood such passages, appear from the apocryphal book of Tobit (xii. 19), where the angel is made to say: 'It seems to you, indeed, as though I did eat and drink with you; but I use invisible food which no man can see.' This intimates that they were supposed to simulate when they appeared to partake of man's food; but that yet they had food of their own, proper to their natures. Milton, who was deeply read in the 'angelical' literature, derides these questions:—

'So down they sat
And to their viands fell: nor seemingly
The angel, nor in mist (the common gloss
Of theologians), but with keen dispatch
Of real hunger, and concoctive heat
To transubstantiate: what redounds
Transpires through spirits with ease.'

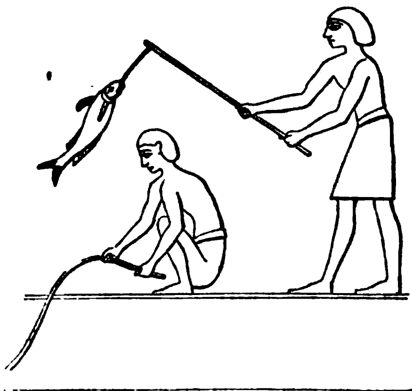
Par. Lost, v. 433-439.

The same angel had previously satisfied the curiosity of Adam on the subject, by stating that

'Whatever was created, needs
To be sustained and fed.'

If this dictum were capable of proof, except from the analogy of *known* natures, it would settle the question. But if angels do *not* need it; if their spiritual bodies are inherently *incapable* of waste or death, it seems not likely that they gratuitously perform an act designed, in all its known relations, to promote growth, to repair waste, and to sustain existence.

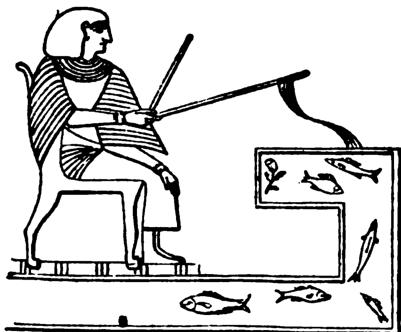
The passage already referred to in Matt. xxii. 30, teaches by implication that there is no distinction of sex among the angels. The Scripture never makes mention of female angels. The Gentiles had their male and female divinities, who were the parents of other gods. But in the Scriptures the angels are all males: and they appear to be so represented, not to mark any distinction of sex, but because the masculine is the more honourable



gender. Angels are never described with marks of age, but sometimes with those of youth (Mark xvi. 5). The constant absence of the features of age indicates the continual vigour and freshness of immortality. The angels never die (Luke xx. 36). But no being besides God himself has essential immortality (1 Tim. vi. 16): every other being therefore is mortal in itself, and can be immortal only by the will of God. Angels, consequently, are not eternal, but had a beginning. As Moses gives no account of the creation of angels in his description of the origin of the world, although the circumstance would have been too important for omission had it then taken place, there is no doubt that they were called into being before, probably very long before the acts of creation which it was the object of Moses to relate.

The preceding considerations apply chiefly to the *existence* and *nature* of angels. Some of their *attributes* may be collected from other passages of Scripture. That they are of superhuman intelligence is implied in Mark xiii. 32: 'But of that day and hour knoweth no man, not *even* the angels in heaven.' That their power is great, may be gathered from such expressions as 'mighty angels' (2 Thess. i. 7); 'angels, powerful in strength' (Ps. ciii. 20); 'angels who are greater [than man] in power and might.' The moral perfection of angels is shown by such phrases as 'holy angels' (Luke ix. 26); 'the elect angels' (1 Tim. v. 21). Their felicity is beyond question in itself, but is evinced by the passage (Luke xx. 36) in which the blessed in the future world are said to be ἰσάγγελοι, καὶ υἱοὶ τοῦ θεοῦ, 'like unto the angels, and sons of God.'

The *ministry* of angels, or that they are employed by God as the instruments of His will, is very clearly taught in the Scriptures. The very name, as already explained, shows that God employs their agency in the dispensations of His Providence. And it is further evident, from certain actions which are ascribed wholly to them (Matt. xiii. 41, 49; xxiv. 31; Luke xvi. 22); and from the Scriptural narratives of other events, in the accomplishment of which they acted a visible part (Luke i. 11, 26; ii. 9, *sq.*; Acts v. 19, 20; x. 3, 19; xii. 7; xxvii. 23), that their agency is employed principally in the guidance of the destinies of man. In those cases also in which the agency is concealed from our view, we may admit the probability of its existence; because we are told that God sends them forth 'to minister to those who shall be heirs of salvation' (Heb. i. 14; also Ps. xxxiv. 8, 91; Matt. xviii. 10). But the angels, when employed for our welfare, do not act independently, but as the instruments of God, and by His command (Ps. ciii. 20; civ. 4; Heb. i. 13, 14): not unto them, therefore, are our confidence and adoration due, but only unto Him (Rev. xix. 10; xxii. 9) whom the angels themselves reverently worship.

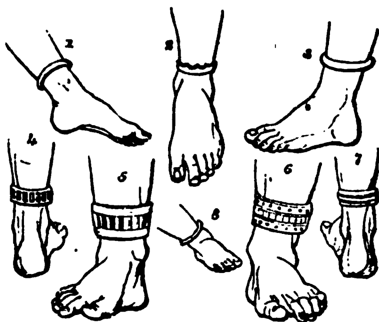


Guardian Angels.—It was a favourite opinion of the Christian fathers that every individual is under the care of a particular angel, who is assigned to him as a guardian. They spoke also of two angels, the one good, the other evil, whom they conceived to be attendant on each individual: the good angel prompting to all good, and averting ill; and the evil angel prompting to all ill, and averting good (*Hermas*, ii. 6). The Jews (excepting the Sadducees) entertained this belief, as do the Moslems. The heathen held it in a modified form—the Greeks having their tutelary *dæmon*, and the Romans their *genius*. There is, however, nothing to support this notion in the Bible. The passages (Ps. xxxiv. 7: Matt. xviii. 10) usually referred to in support of it, have assuredly no such meaning. The former, divested of its poetical shape, simply denotes that God employs the ministry of angels to deliver his people from affliction and danger; and the celebrated passage in Matthew cannot well mean anything more than that the infant children of believers, or, if preferable, the least among the disciples of Christ, whom the ministers of the church might be disposed to neglect from their apparent insignificance, are in such estimation elsewhere, that the angels do not think it below their dignity to minister to them [SATAN] (Storr and Flatt's *Lehrbuch der Ch. Dogmatik*, § xlviii.; Dr. L. Mayer, *Scriptural Idea of Angels*, in *Am Bib. Repository*, xii. 356-388; Moses Stuart's *Sketches of Angelology* in Robinson's *Bibliotheca Sacra*, No. I.; Merbeim, *Hist. Angelor. Spec.*; Schulthess, *Engelwelt*, &c.).

ANGLING. The word חַכָּה, which the Auth. Vers. renders 'angle,' in Isa. xix. 8; Heb. i. 15, is the same that is rendered 'hook,' in Job xli. 1, 12. In fact, 'angling' is described as 'fishing with a hook.' The Scripture contains several allusions to this mode of taking fish. The first of these occurs as early as the time of Job:—'Canst thou draw out leviathan with an hook; or his tongue [*palate*, which is usually pierced by the hook] with a cord [line], which thou lettest down? Canst thou put a hook into his nose, or bore his jaw through with a thorn?' (Job xli. 1, 2). This last phrase obviously refers to the thorns which were sometimes used as hooks, and which are long after mentioned as סירות דוגה, *i.e.* with *the thorns of fishing* (Amos iv. 2), in the Auth. Vers. 'fish-hooks.'

Of the various passages relating to this subject, the most remarkable is that which records, as an important part of the 'burden of Egypt,' that 'the fishers also shall mourn; and all they that cast angle [the hook] into the brooks shall lament, and they that spread nets upon the waters shall languish' (Isa. xix. 8). In this poetical description of a part of the calamities which were to befal Egypt, we are furnished with an account of the

various modes of fishing practised in that country, which is in exact conformity with the scenes depicted in the old tombs of Egypt [FISHING]. Angling appears to have been regarded chiefly as an amusement, in which the Egyptians of all ranks found much enjoyment. 'Not content with the abundance afforded by the Nile, they constructed within their ground spacious sluices or ponds for fish (Isa. xix. 10), like the *vivaria* of the Romans, where they fed them for the table, where they amused themselves by angling, and by the dexterous use of the *bident*. These favourite occupations were not confined to young persons, nor thought unworthy of men of serious habits; and an Egyptian of consequence is frequently represented in the sculptures catching fish in a canal or lake, with the line, or spearing them as they glided past the bank. Sometimes the angler posted himself in a shady spot at the water's edge, and having ordered his servant to spread a mat upon the ground, he sat upon it as he threw the line; and some, with higher notions of comfort, used a chair for the same purpose. The rod was



short, and apparently of one piece; the line usually single, though instances occur of a double line, each furnished with its own hook. The fishermen generally used the net in preference to the line, but on some occasions they used the latter, seated or standing on the bank. It is, however, probable that there were people who could not afford the expense of nets; and the use of the line is generally confined in like manner, at the present day, to the poorer classes, who depend upon skill or good fortune for their subsistence' (Wilkinson's *Anc. Egyptians*, iii. 54).

This last was doubtless the state of many in ancient Palestine, and probably furnished the only case in which angling was there practised, as we find no instance of it for mere amusement. The fish caught in the lake of Tiberias were, some time since, taken exclusively with the rod and line, in the absence of boats upon that water; and probably this is the case still. The Egyptian hooks were of bronze, as appears from the specimens that have been found. Insects, natural or artificial, were not used in angling, ground bait being exclusively employed: and the float does not appear to have been known.

ANIMAL FOOD. [FOOD.]

ANKLETS. This word does not occur in Scripture, but the ornament which it denotes is clearly indicated by 'the tinkling (or *jingling*) ornaments about the feet,' mentioned in the curious description of female attire which we find in Isa. iii. Even in the absence of special notice, we might very safely conclude that an ornament to which the Oriental women have always been so partial was not unknown to the Jewish ladies. In Egypt anklets of gold have been found, which are generally in the shape of simple rings, often however in that of snakes, and sometimes inlaid with enamel or even precious stones. The sculptures show that they were worn by men as well as women (Wilkinson's *Anc. Egyptians*, iii. 375). Their present use among the women of Arabia and Egypt sufficiently illustrates the Scriptural allusion. The Koran (xxiv. 31) forbids women 'to make a noise with their feet,' which, says Mr. Lane (*Mod. Egyptians*, i. 221), 'alludes to the practice of knocking together the anklets, which the Arab women in the time of the prophet used to wear, and which are still worn by many women in Egypt.' Elsewhere (ii. 364) the same writer states, 'Anklets of solid gold and silver, and of the form here sketched (like fig. 3), are worn by some ladies, but are more uncommon than they formerly were. They are of course very heavy, and, knocking together as the woman walks, make a ringing noise.' He thinks that in the text referred to (Isa. iii. 16) the prophet alludes to this kind of anklet, but admits that the description may apply to another kind, of which he thus speaks further on (ii. 368): 'Anklets of solid silver are worn by the wives of some of the richer peasants, and of the sheykhs of villages. Small ones of iron are worn by many children. It was also a common custom among the Arabs for girls or young women to wear a string of bells on their feet. I have seen many little girls in Cairo with small round bells attached to their anklets. Perhaps it is to the sound of ornaments of this kind, rather than of the more common anklet, that Isaiah alludes' (see also Chardin, tom. i. 133, 148, 194). These belled anklets occur also in India among the several sorts which the dancing-girls employ. It is right to add that the anklets which the present writer has himself seen in use among the

1, 2, 5, 6, 7. Ancient Oriental. 3, 4, 8. Modern Oriental.

Arab women in the country of the Tigris and Euphrates are not usually solid, but hollow, so that, in striking against each other, they emit a much more sharp and sonorous sound than solid ones.

1. ANNA (Ἄννα), wife of Tobit, whose his-

tory is contained in the apocryphal book named after him (Tob. i. 9, &c.).

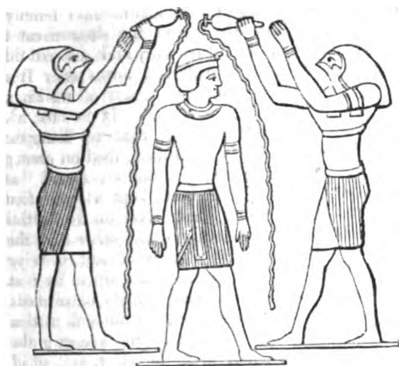
2. ANNA, an aged widow, daughter of Phanuel, of the tribe of Asher. She had married early, but after seven years her husband died, and during her long widowhood she daily attended the morning and evening services of the Temple. Anna was eighty-four years old when the infant Jesus was brought to the Temple by his mother, and entering as Simeon pronounced his thanksgiving, she also broke forth in praise to God for the fulfilment of his ancient promises (Luke ii. 36, 37).

ANNUNCIATION. This word, like many others, has obtained a particular signification in theological writings. As a general term, it expresses the communication of important intelligence by chosen messengers of Heaven; but it became, at an early period of Christianity, restricted to the announcement of the blessed Virgin's miraculous conception. The first formal mention that we meet with of its being commemorated among the festivals of the church, is in the decrees of the Council of Trullo, convened at the close of the seventh century. By one of the acts of this assembly it is ordered to be observed, though occurring in the solemn season of Lent, like the Sabbath and the Lord's day. So highly was it regarded at this time, that authors speak of it as the crown of all festivals, as exhibiting the beginning and head of our salvation. Sermons attributed to St. Athanasius and other fathers have been referred to as proving the observance of the day long before the seventh century; but the best critics consider these discourses as spurious.

The effect of the solemn announcement upon the mind of the blessed Mary was doubtless deep and permanent. It is conjectured by some that her hastening to Elisabeth was the consequence of an eager desire to prove at once the reality of the angelic visitation. The pious writers who have hazarded this opinion seem to have forgotten that such a notion represents the Virgin as more wanting in faith than Zacharias himself, and that it can scarcely be made to agree with the beautiful and devout sentiment, 'Behold the handmaid of the Lord: Be it unto me according to thy word!'—H. S.

ANOINTING. The practice of anointing with perfumed oils or ointments appears to have been very common among the Hebrews, as it was among the ancient Egyptians. The practice, as to its essential meaning, still remains in the East; but perfumed waters are now far more commonly employed than oils or ointments.

In the Scriptures three kinds of anointing are distinguishable:—1. For consecration and inauguration; 2. For guests and strangers; 3. For health and cleanliness. Of these in order.



1. *Consecration and Inauguration.*—The act of anointing appears to have been viewed as emblematical of a particular sanctification; of a designation to the service of God; or to a holy and sacred use. Hence the anointing of the high-priests (Exod. xxix. 29; Lev. iv. 3), and even of the sacred vessels of the tabernacle (Exod. xxx. 26, &c.); and hence also, probably, the anointing of the king, who, as 'the Lord's anointed,' and, under the Hebrew constitution, the viceroy of Jehovah, was undoubtedly invested with a sacred character. This was the case also among the Egyptians, among whom the king was, *ex officio*, the high-priest, and as such, doubtless, rather than in his secular capacity, was solemnly anointed at his inauguration.

The first instance of anointing which the Scriptures record is that of Aaron, when he was solemnly set apart to the high-priesthood. Being first invested with the rich robes of his high office, the sacred oil was poured in much profusion upon his head. It is from this that the high-priest, as well as the king, is called 'the Anointed' (Lev. iv. 3; v. 16; vi. 15; Ps. cxxxiii. 2). In fact, anointing being the principal ceremony of regal inauguration among the Jews, as crowning is with us, 'anointed,' as applied to a king, has much the same signification as 'crowned.' It does not, however, appear that this anointing was repeated at every succession, the anointing of the founder of the dynasty being considered efficient for its purpose as long as the regular line of descent was undisturbed: hence we find no instance of unction as a sign of investiture in the royal authority, except in the case of Saul, the first king of the Jews, and of David, the first of his line; and, subsequently, in those of Solomon and Joash, who both ascended the throne under circumstances in which there was danger that their right might be forcibly disputed (1 Sam. xix. 21; 2 Sam. ii. 4; v. 1-3; 1 Chron. xi. 1, 2; 2 Kings xi. 12-20; 2 Chron. xxiii. 1-21). Those who were inducted into the royal office in the kingdom of Israel appear to have been inaugurated with some peculiar ceremonies (2 Kings ix. 13). But it is not clear that they were anointed at all; and the omission (if real) is ascribed by the Jewish writers to the want of the holy anointing oil which could alone be used on such occasions, and which was in the keeping of the priests of the Temple in Jerusalem. The private anointing which was performed by the prophets (2 Kings ix. 3; comp. 1 Sam. x. 1) was not understood to convey any abstract right to the crown; but was merely a symbolical intimation that the person thus anointed should eventually ascend the throne.

As the custom of inaugural anointing first occurs among the Israelites immediately after they left Egypt, and no example of the same kind is met with previously, it is fair to conclude that the practice and the notions connected with it were acquired in that country. 'With the Egyptians, as with the Jews,' the investiture to any sacred office, as that of king or priest, was confirmed by this external sign; and as the Jewish lawgiver mentions the ceremony of pouring oil upon the head of the high-priest *after* he had put on his entire dress, with the mitre and crown, the Egyptians represent the anointing of their priests and kings *after* they were attired in their full robes, with the cap and crown upon their heads (cut 1). Some of the sculptures introduce a priest pouring oil over the monarch' (Wilkinson's *Anc. Egyptians*, iv. 280).

2. The anointing of our Saviour's feet by 'the woman who was a sinner' (Luke vii. 38), led to the remark that the host himself had neglected to anoint his head (v. 46); whence we learn that this was a mark of attention which those who gave entertainments paid to their guests. As this is the only direct mention of the custom, the Jews are supposed by some to have borrowed

it from the Romans at a late period, and Wetstein and others have brought a large quantity of Latin erudition to bear on the subject. But the careful reader of the Old Testament knows that the custom was an old one, to which there are various

indirect allusions. The circumstances connected with feasts and entertainments are indeed rarely intimated; nor would the present direct reference to this custom have transpired but for the remarks which the act of the woman in anointing the feet of Jesus called forth. Such passages, however, as Ps. xxiii. 5; Prov. xxi. 7; xxvii. 9; Wisd. ii. 7; as well as others in which the *enjoyments* of oil and wine are coupled together, may be regarded as containing a similar allusion. It is, therefore, safer to refer the origin of this custom among the Hebrews to their nearer and more ancient neighbours the Egyptians, than to the Romans or the Greeks, who themselves had probably derived it from the same people. Among the Egyptians the antiquity of the custom is evinced by their monuments, which offer in this respect analogies more exact than classical antiquity, or modern usage, can produce. With them 'the custom of anointing was not confined to the appointment of kings and priests to the sacred offices they held. It was the ordinary token of welcome to guests in every party at the house of a friend; and in Egypt, no less than in Judæa, the metaphorical expression "anointed

with the oil of gladness" was fully understood, and applied to the ordinary occurrences of life. It was customary for a servant to attend every guest as he seated himself (cut 2), and to anoint his head' (Wilkinson's *Anc. Egyptians*, iv. 279; ii. 213).

3. It is probable, however, that the Egyptians, as well as the Greeks and Jews, anointed themselves at home, before going abroad, although they expected the observance of this etiquette on the part of their entertainer. That the Jews thus anointed themselves, not only when paying a visit, but on ordinary occasions, is shown by many passages, especially those which describe the omission of it as a sign of mourning (Deut. xxviii. 40; Ruth iii. 3; 2 Sam. xiv. 2; Dan. x. 3; Amos vi. 6; Mic. vi. 15; Esth. ii. 12; Ps. civ. 15; Isa. lxi. 3; Eccles. ix. 8; Cant. i. 3; iv. 10; also Judith x. 3; Sus. 17; Ecclus. xxxix. 26; Wisd. ii. 7). One of these passages (Ps. civ. 15, 'oil that maketh the face to shine') shows very clearly that not only the hair but the skin was anointed. In our northern climates this usage may not strike us as a pleasant one, but as the peculiar usages of most nations are found, on strict examination, to be in accordance with the peculiarities of their climate and condition, we may be assured that this Oriental predilection for external unction must have arisen from a belief that it contributed materially to health and cleanliness. Niebuhr states that 'in Yemen the anointing of the body is believed to strengthen and protect it from the heat of the sun, by which the inhabitants of this province, as they wear but little clothing, are very liable to suffer. Oil, by closing up the pores of the skin, is supposed to prevent that too copious transpiration which enfeebles the frame; *perhaps, too, these Arabians think a glistening skin a beauty.* When the intense heat comes in, they always anoint their bodies with oil.'

Anointing the Sick.—The Orientals are indeed strongly persuaded of the sanative properties of oil; and it was under this impression that the Jews anointed the sick, and applied oil to wounds (Ps. cix. 18; Isa. i. 6; Mark vi. 13; Luke x. 34; James v. 14). Anointing was used in sundry disorders, as well as to promote the general health of the body. It was hence, as a salutary and approved medicament, that the seventy disciples were directed to 'anoint the sick' (Mark vi. 13); and hence also the sick man is directed by St. James to send for the elders of the church, who were 'to pray for him, anointing him with oil in the name of the Lord.' The Talmudical citations of Lightfoot on Matt. vi. 16, show that the later Jews connected charms and superstitious mutterings with such anointings, and he is therefore probably right in understanding this text to mean—'It is customary for the unbelieving Jews to use anointing of the sick joined with a magical and enchanting muttering; but how infinitely better is it to join the pious prayers of the elders of the church to the anointing of the sick.' Niebuhr assures us that at Sana (and doubtless in other parts of Arabia) the Jews, as well as many of the Moslems, have their bodies anointed whenever they feel themselves indisposed.

Anointing the Dead.—The practice of anointing the bodies of the dead is intimated in Mark xiv. 8, and Luke xxiii. 56. This ceremony was performed after the body was washed, and was designed to check the progress of corruption.

Although, from the mode of application, it is called anointing, the substance employed appears to have been a solution of odoriferous drugs. This (together with the laying of the body in spices) was the only kind of embalment in use among the Jews [BURIAL, EMBALMING].

The composition of the Jewish ointments and perfumes is noticed elsewhere [PERFUMES].

ANT (נְמָלָה; Sept. Μύρμηξ; Vulg. *Formica;* fifth order of insects; *Hymenoptera*, Linn.; occurs Prov. vi. 6; xxx. 25). Ants have only latterly become the subjects of accurate observation. The investigations of Latreille, Gould, Geer, Huber, and Kirby and Spence, have dissipated many erroneous notions respecting them, and revealed much interesting information concerning their domestic polity, language, migrations, affections, passions, virtues, wars, diversions, &c. The following facts are selected as relevant to Scriptural illustration. Ants dwell together in societies; and although they have 'no guide, overseer, or ruler,' yet they have all one soul, and are animated by one object—their own welfare, and the welfare of each other. Each individual strenuously pursues his own peculiar duties; and regards (except in the case of females), and is regarded by, every other member of the republic with equal respect and affection. They devote the utmost attention to their young. The egg is cleaned and licked, and gradually expands under this treatment, till the worm is hatched, which is then tended and fed with the most affectionate care. They continue their assiduity to the pupa, or chrysalis, which is the third transformation. They heap up the pupæ, which *greatly resemble so many grains of wheat, or rather rice*, by hundreds in their spacious lodges, watch them in an attitude of defence, carry them out to enjoy the radiance of the sun, and remove them to different situations in the nest, according to the required degree of temperature; open the pupa, and at the precise moment of the transformation, disenthral the new-born insect of its habiliments.

The most prevalent and inexcusable error, however, respecting ants, has been the belief that they hoard up grains of corn, chiefly wheat, for their supply during winter, having first bitten out the germ to prevent it from growing in their nests. The learned Bochart has collected an immense array of the most eminent authors and naturalists of antiquity (Jewish, Greek, Roman, and Arabian), who all gravely propound this assertion. The same assertion is made in a letter published by the French Academy, and afterwards inserted by Mr. Addison in the *Guardian*, No. 156. He adds, 'any one may make the experiment, and even see that there is no germ in their corn.' Notwithstanding that this notion has been completely exploded during the last hundred years, with regard to European ants, the belief of it constitutes, to this hour, one of our popular errors. Even Solomon himself, whose renowned attainments in natural history included the knowledge of insects (1 Kings iv. 33), has been inconsiderately supposed to have sanctioned the same opinion in the two passages in his writings which refer to the ant. The mistake has no doubt arisen from the great similarity, both in shape, size, and colour, before mentioned, of the pupa or chrysalis of the ant to a grain of corn, and from the ants being observed to carry them about, and to open the cuticle to let out the enclosed insect. Leeuwenhoeck was the first who distinguished, with precision, the precise forms which the ant assumes in the several stages of its development, from the egg to the larva, from the larva to the pupa, and thence to the perfect insect. Swammerdam renewed the inquiry, and discovered the encasement of all the parts of the future ant, and showed that it appeared in such different forms only from the nature of its envelopes, each of which, at its proper period, is cast off. It is now also ascertained beyond a doubt that no European ants, hitherto properly examined, feed on *corn*, or *any other* kind of grain. Bonnet found that, however long they had been kept without food, they would not touch corn. Nor do they attack the roots or stems of corn, nor any other vegetable matter. Nor has any species of ant been yet found with food of *any kind* laid up in its nest. The truth is, that ants are chiefly carnivorous, preying indiscriminately on all the soft parts of other insects, and especially the viscera; also upon worms, whether dead or alive, and small birds or animals. If unable to drag their booty to the nest, they make an abundant meal upon it, and, like the bee, disgorge it, upon their return home, for the use of their companions; and they appear able to retain at pleasure the nutritious juices unchanged for a considerable time. Ants are also extremely fond of saccharine matt , which they obtain from the exudation of trees, or from ripe fruits, &c.; but their favourite food is the saccharine exudation from the body of the aphides, or plant-lice. Every one must have observed these insects on the rose-tree, &c. Each different species of vegetable has its peculiar species of aphis (Reaumur, vi. 566). The aphides insert their tube or sucker between the fibres of vegetables, where they find a most substantial nutriment. This nutriment they retain a considerable time, if no ant approaches them. The ant has the talent of procuring it from the aphides at pleasure. It approaches the aphis, strikes it gently and repeatedly with its antennæ, when it instantly discharges the juice by two tubes, easily discerned to be standing out from its body. These creatures are the *milch kine* of the ants. By a remarkable coincidence, which M. Huber justly considers too much to be ascribed to chance, the aphides and the ants become torpid at the same degree of cold (27 deg. Fahr.), and revive together at the same degree of warmth. He says, 'I am not acquainted with any ants to whom the art of obtaining from the pucerons (aphides) their subsistence is unknown. We might even venture to affirm that these insects are made for their use' (Huber, *Natural History of Ants*, p. 210, &c.).

It is highly probable that the exotic ants subsist by similar means. The accounts given us of the termites, or ants, inhabiting the hottest climates, clearly show that they are carnivorous. Bosman, in his description of Guinea, says that they will devour a sheep in one night, and that a fowl is amusement to them only for an hour. In these situations living animals often become their victims. An Italian missionary at Congo relates that a cow in a stall had been known to be devoured by these devastators (*Encyclopædia Britannica*, 7th ed. art. 'Ant'). In the *Introduction*

to Entomology, by Kirby and Spence, some diffidence is expressed (ii. 46) respecting the inference that *no* exotic ants have magazines of provisions, till their habits shall have been 'more accurately explored.' Still, are we not in possession of sufficient data to form a strong presumption in regard to the ants of *Palestine*, to which Solomon of course alludes in his writings? The ants of the Holy Land certainly have to encounter a degree of *cold* quite as severe as ever occurs in England (*Physical Hist. of Palestine*, 210, 216). Is it not highly probable that the ants at such times become *torpid*, and need no magazine of provisions? And since we learn from the same authority (p. 31) that there are intervals, even in the depth of winter, when the sun shines, and there is no wind, when it is perfectly warm, sometimes almost hot, in the open air, may not the ants of Palestine and their food revive together at such times, as is the case in our own country, where ants may often be seen pursuing their avocations over the snow? With regard to Solomon's words respecting the ant, Kirby and Spence are of opinion 'that if they are properly considered it will be found that the interpretation which seems to favour the ancient error respecting ants has been fathered upon them rather than fairly deduced from them. He does not affirm that the ant, which he proposes to the sluggard as an example, laid up in her magazine stores of grain against winter, but that, with considerable prudence and foresight, she makes use of *proper seasons* to collect a supply of provisions sufficient for her purposes. There is not a word in them implying that she stores up grain or other provisions. She prepares her bread and gathers her food (namely, such food as is suited to her) in summer and harvest (that is, when it is most plentiful), and thus shows her wisdom and prudence by using the advantages offered to her.' A brief examination of the passages (Prov. vi. 6; xxx. 25) with reference to their context, will serve to confirm these observations. In the preceding verses, Solomon has cautioned his readers against incurring dangerous responsibilities on behalf of another. Should this have inadvertently been done, he advises the surety to give no *sleep to his eyes*, nor *slumber to his eyelids*, till he has delivered himself from his rash engagement. He then adds, 'Go to the ant, thou sluggard, consider her ways, and be wise: which having no guide, overseer, or ruler, provideth her meat in the summer, and gathereth her food in the harvest.' The sense is thus ably given by Dr. Hammond: '*As in the matter just mentioned* the least *delay* is pernicious, so *in all things else sluggishness*, or *negligence* of those things *which concern us most nearly*, should ever be avoided; and if we need any instructor on this head, we may go to one of the least and meanest of creatures.' The *moral*, then, intended in Solomon's allusion to the ant, is simply to avail one's self of the *favourable time without delay*. The description which follows, of the sluggard sleeping, evidently *during the day*, the proper season of activity, and of the consequences of his vice, agrees with this interpretation. The other passage (xxx. 25), probably by a different writer, also considers the ant simply as the symbol of *diligence*.

The peculiar use of the terms summer and harvest, among the Jews, may have contributed to the erroneous interpretation. The Jews had no word to signify spring or autumn. They spoke only of summer and winter: by the former they designated the *whole* of the more *genial* time of the year, and by the latter the whole of the less favourable. Hence Solomon uses summer and harvest as synonymous terms (Prov. x. 5; xxvi. 1: see also Jer. viii. 28; Matt. xxiv. 32). In the same way the Romans employed æstas and messis, and the Greeks θέρος and θερίζω.—J. F. D.

ANTEDILUVIANS, the name given collectively to the people who lived before the Deluge. The interval from the Creation to that event is not less, even according to the Hebrew text, than 1657 years, being not more than 691 years shorter than that between the Deluge and the birth of Christ, and only 167 years less than from the birth of Christ to the present time, and equal to about two-sevenths of the whole period from the Creation. By the Samaritan and Septuagint texts (as adjusted by Hales) a much greater duration is assigned to the antediluvian period—namely, 2256 years, which nearly equals the Hebrew interval from the deluge to the birth of Christ, and much exceeds the interval from the birth of Christ to the present time.

All our authentic information respecting this long and interesting period is contained in 49 verses of Genesis (iv. 16, to vi. 8), more than half of which are occupied with a list of names and ages, invaluable for chronology, but conveying no particulars regarding the primeval state of man. The information thus afforded, although so limited in extent, is, however, eminently suggestive, and large treatises might be, and have been, written upon its intimations. Some additional information, though less direct, may be safely deduced from the history of Noah and the first men *after* the Deluge; for it is very evident that society did not begin afresh after that event; but that, through Noah and his sons, the new families of men were in a condition to inherit, and did inherit, such sciences and arts as existed before the Flood. This enables us to understand how settled and civilized communities were established, and large and magnificent works undertaken, within a few centuries after the Deluge.

In the article 'ADAM' it has been shown that the father of men was something more than 'the noble savage,' or rather the grown-up infant, which some have represented him. He was an instructed man;—and the immediate descendants of a man so instructed could not be an ignorant or uncultivated people. It is not necessary indeed to suppose that they possessed at first more cultivation than they required; and for a good while they did not stand in need of that which results from, or is connected with, the settlement of men in organized communities. They probably had this before the Deluge, and at first were possessed of whatever knowledge or civilization their agricultural and pastoral pursuits required. Such were their pursuits from the first; for it is remarkable that of the strictly savage or hunting condition of life there is not the slightest trace before the Deluge. After that event, Nimrod, although a hunter (Gen. x. 9), was not a savage, and did not belong to hunting tribes of men. In fact, savageism is not discoverable before the Confusion of Tongues, and was in all likelihood a degeneracy from a state of cultivation,

eventually produced in particular communities by that great social convulsion. At least that a degree of cultivation was the primitive condition of man, from which savageism in particular quarters was a degeneracy, and that he has not, as too generally has been supposed, worked himself up from an original savage state to his present position, has been powerfully argued by Dr. Philip Lindsley (*Am. Bib. Repos.*, iv. 277-298; vi. 1-27), and is strongly corroborated by the conclusions of modern ethnographical research; from which we learn that, while it is easy for men to degenerate into savages, no example has been found of savages rising into civilization but by an impulse from without, administered by a more civilised people; and that, even with such impulse, the *vis inertiæ* of established habits is with difficulty overcome. The aboriginal traditions of all civilized nations describe them as receiving their civilization from without—generally through the instrumentality of foreign colonists: and history affords no example of a case parallel to that which must have occurred if the primitive races of men, being originally savage, *had civilised themselves.*

All that was peculiar in the circumstances of the antediluvian period was eminently favourable to civilization. The respected contributor [J. P. S.], to whose article [Adam] we have already referred, remarks, in a further communication, that 'The *longevity* of the earlier seventeen or twenty centuries of human existence is a theme containing many problems. It may be here referred to for the purpose of indicating the advantages which must necessarily have therefrom accrued to the mechanical arts. In pottery, mining, metallurgy, cloth-making, the applications of heat and mixtures, &c., it is universally known that there is a tact of manipulation which no instruction can teach, which the possessor cannot even describe, yet which renders him powerful and unfailing within his narrow range, to a degree almost incredible; and when he has reached his limit of life he is confident that, had he another sixty or seventy years to draw upon, he could carry his art to a perfection hitherto unknown. Something like this must have been acquired by the antediluvians; and the paucity of objects within their grasp would increase the precision and success within the range.'

By reason of their length of life, the antediluvians had also more encouragement in protracted undertakings, and stronger inducements to the erection of superior, more costly, more durable, and more capacious edifices and monuments, public and private, than exist at present. They might reasonably calculate on reaping the benefit of their labour and expenditure. The earth itself was probably more equally fertile, and its climate more uniformly healthful, and more auspicious to longevity, and consequently to every kind of mental and corporeal exertion and enterprise, than has been the case since the great convulsion which took place at the Deluge.

But probably the greatest advantage enjoyed by the antediluvians, and which must have been in the highest degree favourable to their advancement in the arts of life, was the uniformity of language. Nothing could have tended more powerfully to maintain, equalize, and promote whatever advantages were enjoyed, and to prevent any portion of the human race from degenerating into savage life.

Of the actual state of society and of the arts before the Deluge some notice has occurred in a previous article [Adam], and other particulars will be found in the articles relating to these subjects.

The opinion that the old world was acquainted with *astronomy*, is chiefly founded on the ages of Seth and his descendants being particularly set down (Gen. v. 6, *sqq.*), and the precise year, month, and day being stated in which Noah and his family, &c. entered the ark, and made their egress from it (Gen. vii. 11; viii. 13). The distinctions of day and night, and the lunar month, were of course observed; and the thirteenth rotation of the moon, compared with the sun's return to his primary position in the heavens, and the effects produced on the earth by his return, would point out the year. The variation between the rotations of the moon and sun easily became discoverable from the difference which in a very few years would be exhibited in the seasons; and hence it may be supposed that, although the calculations of time might be by lunar months or revolutions, yet the return of vegetation would dictate the solar year. The longevity of the antediluvian patriarchs, and the simplicity of their employments, favour this conjecture, which receives additional strength from the fact that the Hebrew for *year*, שנה, implies an *iteration*, a return to the same point, a repetition; and it is also remarkable that the Indians, Chinese, Babylonians, Egyptians, Greeks, and other nations, all deduce their origin from personages said to be versed in astronomy.

The knowledge of *zoology*, which Adam possessed, was doubtless imparted to his children; and we find that Noah was so minutely informed on the subject as to distinguish between clean and unclean beasts, and that his instructions extended to birds of every kind (Gen. vii. 2-4). A knowledge of some essential principles in *botany* is shown by the fact that Adam knew how to distinguish 'seed-bearing herb' and 'tree in which is a seed-bearing fruit,' with 'every green herb' (Gen. i. 29, 30). The trees of life and of knowledge are the only ones mentioned before the Fall; but in the history of Noah the vine, the olive, and the wood of which the ark was made (Gen. vi. 14; viii. 11; ix. 20), are spoken of in such a manner as clearly to intimate a knowledge of their qualities. With *mineralogy* the antediluvians were at least so far acquainted as to distinguish metals; and in the description of the garden of Eden gold and precious stones are noticed (Gen. ii. 12).

That the antediluvians were acquainted with *music* is certain; for it is expressly said that Jubal (while Adam was still alive) became 'the father of those who handle the כנור *kinnur* and the עוגב *hugab*.' The *kinnur* was evidently a stringed instrument resembling a lyre; and the *hugab* was without doubt the pandæan pipe, composed of reeds of different lengths joined together. This clearly intimates considerable progress in the science; for it is not probable that the art of playing on wind and on stringed instruments was discovered at the same time; we may rather suppose that the principles of harmony, having been discovered in the one, were by analogy transferred to the other; and that Jubal,

by repeated efforts, became the first performer on the harp and the pipe [MUSIC].

Our materials are too scanty to allow us to affirm that the antediluvians possessed the means of communicating their ideas by writing or by hieroglyphics, although tradition, and a hint or two in the Scriptures, might support the assertion. With respect to *poetry*, the story of Lamech and his wives (Gen. iv. 19-24) is evidently in verse, and is most probably the oldest specimen of Hebrew poetry extant; but whether it was written before or after the Flood is uncertain, although the probability is that it is one of those previously existing documents which Moses transcribed into his writings.

With regard to *architecture*, it is a singular and important fact that Cain, when he was driven from his first abode, built a city in the land to which he went, and called it Enoch, after his son. This shows that the descendants of Adam lived in houses and towns from the first, and consequently affords another confirmation of the argument for the original cultivation of the human family. What this 'city' was is not mentioned, except in the term itself; and as that term is in the early Scriptures applied to almost every collection of human habitations, we need not attach any very exalted ideas to it in this instance. But if we take into view the requisites necessary to enable Noah to erect so stupendous a fabric as the ark must have been [ARK, NOAH'S], it will not be difficult to conceive that the art of building had reached considerable advancement before the Deluge; nor can one reflect on the building of Babel without a conviction that it must have been through the great patriarchs who lived in the old world that so much knowledge was obtained as to lead to the attempt of erecting a fabric whose summit was intended to reach the clouds. It is not likely that the builders would, by their own intuitive genius, be equal to a task which they certainly were not inspired by Heaven to execute.

The *metallurgy* of the antediluvians has been noticed in 'ADAM;' and to what is there said of *agriculture* we shall only add a reference to the case of Noah, who, immediately after the Flood, became a husbandman, and planted a vineyard. He also knew the method of fermenting the juice of the grape; for it is said he drank of the wine, which produced inebriation (Gen. ix. 20, 21). This knowledge he doubtless obtained from his progenitors anterior to the destruction of the old world.

Pasturage appears to have been coeval with husbandry. Abel was a keeper of sheep, while his brother was a tiller of the ground (Gen. iv. 2); but there is no necessity for supposing that Cain's husbandry excluded the care of cattle. The class of tent-dwelling pastors—that is, of those who live in tents that they may move with their flocks and herds from one pasture-ground to another—did not originate till comparatively late after the Fall; for Jabal, the seventh from Adam in the line of Cain, is said to have been the 'father' or founder of that mode of life (Gen. iv. 20). It is doubtful whether the manufacture of cloth is involved in the mention of tents, seeing that excellent tent-coverings are even at this day made of skins; and we know that skins were the first articles of clothing used by fallen man (Gen. iii. 21). The same doubt applies to the garment with which the sons of Noah covered their inebriated father (Gen. ix. 23). But, upon the whole, there can be little doubt that, in the course of so long a period, the art of manufacturing cloths of hair and wool, if not of linen or cotton, had been acquired.

It is impossible to speak with any decision respecting the form or forms of government which prevailed before the Deluge. The slight intimations to be found on the subject seem to favour the notion that the particular governments were patriarchal, subject to a general theocratical control —God himself *manifestly* interfering to uphold the good and check the wicked. The right of property was recognised, for Abel and Jabal possessed flocks, and Cain built a city. As ordinances of religion sacrifices certainly existed (Gen. iv. 4), and some think that the Sabbath was observed; while some interpret the words, 'Then men began to call upon the name of the Lord' (Gen. iv. 26) to signify that public worship then began to be practised. From Noah's familiarity with the distinction of clean and unclean beasts (Gen. vii. 2), it would seem that the Levitical rules on this subject were by no means new when laid down in the code of Moses.

Marriage, and all the relations springing from it, existed from the beginning (Gen. ii. 23-25); and although polygamy was known among the antediluvians (Gen. iv. 19), it was most probably unlawful; for it must have been obvious that, if more than one wife had been necessary for a man, the Lord would not have confined the first man to one woman. The marriage of the sons of Seth with the daughters of Cain appears to have been prohibited, since the consequence of it was that universal depravity in the family of Seth so forcibly expressed in this short passage, '*All* flesh had corrupted its way upon the earth' (Gen. vii. 11). This sin, described Orientally as an intermarriage of 'the sons of God' with 'the daughters of men' (Gen. vi. 2), appears to have been in its results one of the grand causes of the Deluge; for if the family of Seth had remained pure and obedient to God, he would doubtless have spared the world for their sake; as he would have spared Sodom and Gomorrah had ten righteous men been found there, and as he would have spared his own people the Jews, had they not corrupted themselves by intermarriages with the heathen.

A contributor [J. P. S.] suggests that even the longevity of the antediluvians may have contributed to this ruinous result:—'There was also, probably, a great waste of time. Vastly more time was upon their hands than was needful for clearing woodlands, draining swamps, and other laborious and tedious processes, in addition to their ordinary agriculture and care of cattle; so that the temptations to idleness were likely to be very strong; and the next step would be to licentious habits and selfish violence. The ample leisure possessed by the children of Adam might have been employed for many excellent purposes of social life and religious obedience, and undoubtedly it was so employed by many; but to the larger part it became a snare and the occasion of temptations, so that "the wickedness of man became great, the earth was corrupt before God, and was filled with violence."'

It will be seen that many of the topics only slightly touched upon in this article will fall to be considered more largely under other heads. (*Critica Biblica*, iv. 14-20; P. Lindsley, D.D., *On the Primitive State of Mankind*, in *Am. Bib. Repos*. iv. 277-298; vi. 1-27: see also *Ant. U. Hist*. i. 142-201).

ANTELOPE (יַחְמוּר, *Jachmur*; תְּאוֹ, *Theo, Teo*; דִּישׁוֹן, *Dishon, Pygarg*; צְבִי, *Tsebi, Dorcas*). Although this word does not occur in our version of the Scriptures, yet there can be no doubt that in the Hebrew text several ruminants to which it is applicable are indicated under different denominations. In scientific nomenclature, the term antelope, at first applied to a single species, has gradually become generical, and is now the designation of a tribe, or even of a family of genera, containing a great many species. According to present usage it embraces some species that are of considerable size, so as to be invariably regarded by the natives as having some affinity to cattle, and others delicate and rather small, that may be compared with young deer, to which, in truth, they bear a general resemblance. The origin of the word is involved in great obscurity. In the *Hexaëmeron* of Eustathius, bishop of Antioch, who wrote in the reign of Constantine, we first find the name Ἀνθόλοψ applied to an animal, which he describes as 'very swift, and hunted with difficulty. It had long horns in the shape of saws, with which it sawed trees of considerable size. When thirsty, it approached the Euphrates, and gamboled along its banks among brambles, wherein it was sometimes entangled, and then could be caught and slain.'

It may be doubted whether the word *antholops* was, in the beginning of the fourth century of our era, a local Asiatic Greek paraphrase of the Arabic غزال *gazal*, purporting a similar allusion to fine or blooming eyes; although the fact, if established, would prove that the Grecian residents in Asia viewed the greater antilopidæ of our systems as belonging typically to the gazelle family, as we do now. Certain it is, however, that in the Greek and Latin writers of the middle and later ages, we find the same name, but so variously inflected that we are justified in concluding that it was drawn from some other source than the bishop's *Hexaëmeron*; for it is written *antalopos, analopos, aptalos*: in Albertus Magnus, *calopus* and *panthalops*, which, though evidently Alexandrian Greek, Bochart would make the Coptic name for unicorn. Towards the close of the fourteenth century English heralds introduced the name, and '*tricked out*' their antelope as a supporter of the armorial bearings and cognizance of a younger branch of the Plantagenet family; and although the figures are monstrous, they bear clear indications of being derived at first from the saw-horned, and soon after from a real oryx.

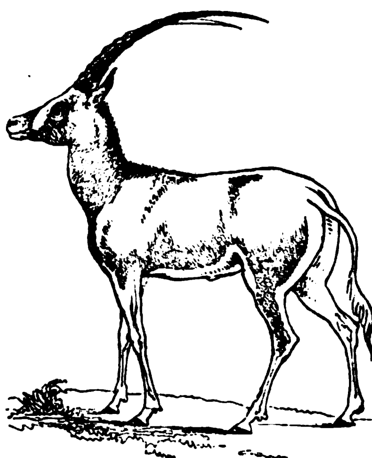
In order to explain somewhat more fully the station of antelopes among the families of ruminants, and point out more strictly the species we have to notice, as well as the general characters of the order, it may be desirable to give a short definition of ruminants, and thereby obviate the necessity of again recurring to them when other species of this section come under consideration. Ruminating animals are possessed of the singular faculty of chewing their food a second time, by means of the peculiar structure of their stomachs—a structure which enables them to force it back again into the mouth after a first deglutition. For this purpose, all ruminants have four stomachs, whereof the three first are so disposed that the aliments can enter at will into any one of them, the œsophagus being placed at the point of their communication. The first and largest is the *paunch*, externally appearing as twofold, but internally divided into four slight partitions. In this is received the fodder simply broken by a first mastication, in which state it is transmitted into the second stomach, bonnet, or *honeycomb bag*, the walls of which are internally shaped like the cells of a honeycomb. Here the herbage is imbibed, and compressed, by its globular form, into small masses or balls, which are thus prepared to be forced upwards again into the mouth for a second trituration—a process always going on when cattle lie down, and are seen grinding their cheek teeth. After this it descends into the third stomach (*manyplies*), which is the smallest, and is longitudinally furnished with folds, somewhat resembling the leaves of a book: from thence it passes into the fourth (*the red*), next in size to the paunch, and pear-shaped, the *stomach* properly so called, where the process of digestion is accomplished. All ruminants, moreover, are distinguished by cloven feet, by the want of incisor teeth in the upper jaw, and by all the grinders being furrowed like ridges on millstones.

This abstract of the characters of ruminating animals is here given because the faculty of chewing the cud, or rumination, cannot exist without the foregoing apparatus; because that apparatus is found, without exception, to belong to all the species having bisulcate feet and the modified dentition before noticed, and belongs to no other class or genus of mammalia. The numerous species of the order are distributed into three grand divisions, viz., 1st. those without horns, like the camel * and the musk; 2nd. those with deciduous horns, or such as are shed yearly, and replaced by a new growth, like the stag; and, 3rd. those which have persistent horns, consisting of a bony core, upon which a horny sheath is fixed, which grows by annual additions of the substance at the base, such as antelopes, goats, sheep, and oxen or neat cattle.

The antelopes, considered as a family, may be distinguished from all others by their uniting the light and graceful forms of deer with the permanent horns of goats, excepting that in general their horns are round, annulated, and marked with striæ, slender, and variously inflected, according to the subdivision or group they belong to. They have usually large, soft, and beautiful eyes, tear-pits beneath them, and round tails. They are often provided with tufts of hair, or brushes, to protect the fore-knees from injury; they have inguinal pores; and are distinguished by very great powers of speed. Among the first of the subordinate groups is the subgenus oryx, already named, consisting of five or six species, whereof we have to notice at least three.

* The camel, although it has cloven feet partially united by a common sole, and is armed with several false molars, is still a true ruminant.

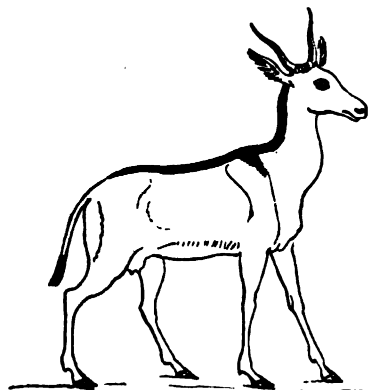
The Jachmur (יחמור, Deut. xiv. 5; 1 Kings iv. 23) is not, as in our Auth. Vers., 'the fallow-deer,' but the *Oryx leucoryx* of the moderns, the true oryx of the ancients, and of Niebuhr, who quotes R. Jona, and points out the Chaldaic *jachmura*, and Persian *kutzkohi* (probably a mistake for *maskandos*), and describes it as a great goat. The eastern Arabs still use the



[The Jachmur. Oryx leucoryx.]

name *jazmur*, although, according to the usage of Oriental nomenclature respecting these animals, the terms *abu* (father) and *bahr* (desert, valley) are generally made parts of generic appellations, which, in the case of the larger antelopes, are commonly associated with *gau* or *bu* (cow or ox), forming the terms *gau-bahrein*, *bekr-el-wash*, *el-walrus*, *el-bukrus*, *abu-harb*, *abu-bahr*; and, particularly west of the Nile, *mahatz*, *targea*; while collectively, *buggera-el-almoor* is used. Most of these denominations, albeit they are laxly applied by the Arabs, show that the animals so named are considered to be more nearly allied to the bovine species than to the gazelles of the country; and the fact of their universal application to the great antelopes, from the Ganges to Morocco, is sufficient to establish the general conclusion, that, in the earliest ages, similar notions led the Hebrews to adopt similar terms; and that, when the Scriptures notice wild oxen, or wild cattle, we are in reality to understand not a bovine, but an antilopine animal, and not always the same species, excepting perhaps in one case, which will be noticed under the word Bull.

The *Oryges* are all about the size of the stag of Europe, or larger, with long, annulated, slender horns, rising in continuation of the plane of the forehead, slightly divergent, regularly but not greatly curved, entirely straight or lyrated, and from three feet to three feet eight inches in length. The head is rather clumsy, and more or less pied with black and white; the neck ewed, or arched, like that of the camel; the carcass bulky, compared with the legs, which are slender, firm, and capable of sustaining great action; the tail extends only to the heel, or hough; the hair on the shoulders and neck is invariably directed forwards, thus, no doubt, keeping the animal cool in flight.



The *Leucoryx*, as the name implies, is white, having a black mark down the nose, black cheeks and jowl, the legs, from the elbow and heel to the pastern joints, black, and the lower half of the thighs usually, and often the lower flank, bright rufous; hence the epithet *hommar*, חמר (*rubere*, to redden). The species now resides in pairs, in small families, and not unfrequently singly, on the mountain-ranges along the sandy districts, in the desert of eastern Arabia, and on the banks of the Lower Euphrates; and may extend as far eastward as the west bank of the Indus, feeding on shrubby acacias, such as *tortilis* and *Ehrenbergi*. It was, no doubt, formerly, if not at present, found in Arabia Petræa, and in the eastern territories of the people of Israel; and from the circumstance of the generical name of wild cow or bull being common to this, as to other allied species, it was equally caught with nets and with the noose, and styled תאו (*tao*, *to*, *theo*). To this species may be referred more particularly some of the notions respecting unicorns, since the forehead being narrow, and the horns long and slender, if one be broken off near the root, the remaining one stands so nearly on the medial line, that, taken in connection with its white-coloured hair, to uncritical inspection, a single-horned animal might appear to be really present. By nature vicious and menacing, from what may be observed in the Egyptian paintings of the industry which imposture exercised, we may conclude that human art, even in early ages, may have contributed to make artificial unicorns; and most probably those seen by some of the earlier European travellers were of this kind.

[Oryx tao, or Nubian oryx.]

תאו, Deut. xiv. 5; Isa. li. 20, (*Oryx tao*, the Nubian oryx, Ham. Smith.) is either a species or a distinct variety of leucoryx. The male, being nearly four feet high at the shoulder, is taller than that of the leucoryx; the horns are longer, the body comparatively lighter, and every limb indicative of vigour and elasticity: on the forehead there is a white spot, distinctly marked by the particular direction of the hair turning downwards before the inner angle of the eye to near the mouth, leaving the nose rufous, and forming a kind of letter A.

Under the eye, towards the cheek, there is a darkish spot, not very distinct; the limbs, belly, and tail are white; the body mixed white and red, most reddish about the neck and lower hams. It is possible that the name *tao* or *teo* is connected with the white spot on the chaffron. This species resides chiefly in the desert west of the Nile, but is most likely not unknown in Arabia; certain it is, that both are figured on Egyptian monuments, the leucoryx being distinguished by horns less curved, and by some indication of black on the face. Here, then, we have a second wild bove; but there is still a third referable to the antilopidæ, though not an oryx, but most likely belonging to the genus damalis and the acronotine group of Griffith's Cuvier. It is the *Antilope defassa* of Sir J. Wilkinson, which we would place by the side of *acronotus bubalis*, if it be not the same, as might be inferred from the figures at Beni Hassan,* in which the elevated withers are very conspicuous, where it is represented actually caught by the noose or lazzo. If the two oryges were not anciently distinguished as

[Antilope defassa of Wilkinson. Acronotus defassa.]

species, then *tao, theo*, would apply to the present, the name indicating the spinal cross; but in that case, it must have existed in early ages as far north at least as the borders of Palestine, which is by no means improbable. This last species would answer completely to the description of wild bull, while there can be no doubt that, in the dialects of some provinces of that country, the oryges of Arabia may still be denominated *reem*, even when bearing both horns; and all are sufficiently vicious, energetic, and capable of mischief, to justify the characters assigned to them in poetical phraseology, agreeably to the amplifying spirit of Aramæan nations.

Oryx addax may have been known to the Hebrews by the name of דישן, *dishon*. It is three feet seven inches at the shoulder, has the same structure as the others, but is somewhat higher at the croup: it has a coarse beard under

[Oryx addax. Dishon or Pygarg.]

the gullet, a black scalp and forehead, divided from the eyes and nose by a white bar on each side, passing along the brows and down the face to the cheek, and connected with one another between the eyes. The general colour of the fur is white, with the head, neck, and shoulders more or less liver-colour grey; but what distinguishes it most from the others are the horns, which in structure and length assimilate with those of the other species, but in shape assume the spiral flexures of the Indian antelope. The animal is figured on Egyptian monuments, and may be the *pygarg* or *dishon*, uniting the characters of a white rump with strepsicerotine horns, and even those which Dr. Shaw ascribes to his '*lidmee*.'

We have now to notice the second group of antilopidæ, classified under the subgenus *gazella*, whereof at least one species, but more probably four or five, still inhabit the uplands and deserts of Egypt, Arabia, and the eastern and southern borders of Palestine. They are named in the Greek

[Tsebi or Dorcas. Ariel or Gazella Arabica.]

Δορκάς, *dorcas*, and in the Hebrew צבי *'sebi*, both terms being applicable to the whole group; and the Hebrew name is by distant nations now used for

* Wilkinson's *Anc. Egyptians*, vol. iii. p. 18, cut 327. In cut 328, No. 3 appears to be *A. Bubalis*, and No. 4, *defassa*, distinguished by lunate, cow-like horns, and a black cross on the shoulders and spine. *A. Bubalis* still comes occasionally to the Nile, and all the ruminants of the wilderness are at times liable to migrate from famine caused by drought or locusts.

allied species which are unknown in Arabia and Syria. Thus the Bechuana Hottentots give the name of tsebi, and the Caffres that of teshe, to the *gazella euchore* or springbok of the Cape. The term *dorcas* was apparently generalized so as to include the roebuck of Europe, which was certainly not, as in our translation, the *tsebi* of Scripture. It appears from Hermolaus that neither Aristotle nor Dioscorides confounded such distinct genera, and that they used the term *dorx* for the species with persistent horns, and *dorcas* for the roebuck, whose horns are annually renewed. This confusion, created by the classical grammarians of antiquity, was further increased by schoolmen and sportsmen constantly confounding fallow-deer with roebuck till within the seventeenth century, as is plainly perceptible in the writings of Gesner, that mine of zoological lore, not sufficiently consulted by Scriptural commentators. The Biblical species clearly included in the section gazella are *Antilope dorcas*, Linn., *Ariel* or *A. Arabica*, Licht.; more remotely, *A. kevella*, *A. corinna*, auctor.; and for Eastern Arabia, *A. cora*, Ham. Smith; while *A. subgutturosa*, Guldenst., may be claimed for the north-eastern countries, where the species exists both in Asia Minor and Armenia, and therefore on the borders of Syria. All these species are nearly allied, the largest not measuring more than two feet in height at the shoulder, and the least, the corinna, not more than about twenty inches. They are graceful and elegant in form, with limbs exceedingly slender, and have large and soft eyes, lyrated horns, black, wrinkled, and striated—most robust in *subgutturosa* and *kevella*, most slender in *corinna*, and smallest in *cora*. Their livery is more or less buff and dun, white beneath, with small tufts of hair or brushes on the fore-knees: they have *all* a dark streak passing from each ear through the eyes to the nostrils, and a band of the same colour from the elbow of the fore-leg along the sides to the flank, excepting the corinna, whose markings are more rufous and general colours lighter. Most, if not all, have a feeble bleating voice, seldom uttered, are unsurpassed in graceful timidity, gregarious in habit, and residents on the open deserts, where they are unceasingly watchful, and prepared to flee with such speed, that greyhounds are liable to be killed by over exertion in the chace. Of the species here enumerated, all, but more especially *A. Arabica*, *A. dorcas*, and *A. cora*, must have been designated by the terms *dorcas* and *tsebi*, and the Arabic *tsabi;* generically, *Gazal*. The Chaldee *tabitha*, and Persic *zabegat*, may refer more immediately to *A. subgutturosa*, the *ahu* of Kæmpfer, *tseiran* of modern Persia, and *jairou* of the Turks.

One or other of these, according to geographical localities, occurs in the Authorized Version under the name of *roe;* in Deut. xii. 15, 22; xiv. 5; xv. 22; 1 Kings iv. 23; 1 Chron. xii. 8; 2 Sam. ii. 8; Prov. vi. 5; vii. 3; viii. 14; Isa. xiii. 14; *dorcas*, Eccles. xxvii. 20.—C. H. S.

ANTHROPOMORPHISM, a term in theology used to denote that figure whereby words derived from *human* objects are employed to express something which relates to the Deity. As a finite being can have no intuitive knowledge of an infinite, so no language of rational creatures can fully express the nature of God and render it comprehensible. All further knowledge of God must be communicated by words used to express ourselves intelligibly concerning human and other terrestrial objects. Such words and phrases have their foundation in a resemblance, which, according to our conceptions, exists between the Deity and mankind. This resemblance, when essential, is such as regards the pure perfections of our minds, that is, such as are unaccompanied with any imperfection, as reason, liberty, power, life, wisdom, and goodness. Those expressions afford an analogical knowledge, from whence arise analogical phrases, which are absolutely necessary whenever we speak of God, and would acquire or communicate some knowledge of his perfections. Such analogical expressions must, however, be understood *properly*, although they give no immediate and intuitive, but only a symbolical knowledge of the Deity. In this sense it is that in Gen. ii. 16; iii. 9; vi. 13; xii. 1; xv.; xvii.; xviii.; Exod. iii. 4, 5—*speech* is *immediately* ascribed to the Deity while addressing Adam, Noah, Abraham, and Moses. The Deity is also in this sense said to speak *mediately* to man, viz. by his messengers. But although the speech here ascribed to the Deity is to be understood in a different manner from the language of men, it is not to be understood in such instances figuratively, or in the anthropomorphitic sense, but *really* and *properly*. 'Either,' says St. Augustin, 'immutable truth speaks to man ineffably of itself to the minds of rational creatures, or speaks by a mutable creature, either by spiritual images to our minds, or by corporeal voices to the bodily senses.' But God speaks not *properly*, but *anthropopathically*, when his decrees and their execution are described in human methods, or in the form of dialogues and conversations, as in the phrase (Gen. i. 2) 'Let there be light, and there was light.' 'This,' says Maimonides, 'is to be understood of the will, not the speech;' and, in like manner, St. Augustin, 'This was performed by the intellectual and eternal, not by the audible and temporal word' (*City of God*, ch. vii.).

Anthropomorphitic phrases, generally considered, are such as ascribe to the Deity mixed perfections and human imperfections. These phrases may be divided into three classes, according to which we ascribe to God:—

1. Human actions (ἀνθρωποποίησις).
2. Human affections, passions, and sufferings (anthropopathy).
3. Human form, human organs, human members (anthropomorphism).

A rational being, who receives impressions through the senses, can form conceptions of the Deity only by a consideration of his own powers and properties. Anthropomorphitic modes of thought are therefore unavoidable in the religion of mankind; and although they can furnish no other than corporeal or sensible representations of the Deity, they are nevertheless true and just when we guard against transferring to God qualities pertaining to the human senses. It is, for instance, a *proper* expression to assert that God *knows* all things; it is improper, that is, tropical or anthropomorphitic, to say that He *sees* all things. Anthropomorphism is thus a species of *accommodation* (which see), inasmuch as by these representations the Deity as it were lowers himself to the comprehension of men. And it is

altogether consonant to his wisdom and benevolence in communicating divine revelations to address mankind in language adapted to their inferior capacities. Therefore it is that this figure is called by the Fathers *Divine Economy* (Theodoret, *Dialog.* 2) and *Condescension* (Gregory of Nazianzus, *Orat.* 1).

'Divine affections,' says Tertullian, 'are ascribed to the Deity by means of figures borrowed from the human form, not as if he were endued with corporeal qualities: when eyes are ascribed to him, it is denoted that he sees [viz. knows] all things; when ears, that he hears all things: the speech denotes the will; nostrils, the perception of prayer; hands, creation; arms, power; feet, immensity; for he has no members, and performs no office for which they are required, but executes all things by the sole act of his will. How can he require eyes, who is light itself? or feet, who is omnipresent? How can he require hands, who is the silent creator of all things? or a tongue, to whom to think is to command. Those members are necessary to men, but not to God, inasmuch as the counsel of men would be inefficacious unless his thoughts put his members in motion;—but not to God, whose operations follow his will without effort.'

In the same manner human affections, as grief, repentance, anger, revenge, jealousy, &c., are ascribed to the Deity. These affections are not, properly speaking, in the mind of God, who is infinitely happy and immutable, but are ascribed to him anthropopathically by way of similitude. For instance, when God forgives the penitent what he had denounced against the wicked who continue in sin, he is said to act as men do in similar cases. Thus St. Augustin observes, 'By repentance is signified a change of events. For as a man when he repents bewails the crime which he had committed, so, when God alters anything unexpectedly, that is, beyond man's expectation, he, figuratively, is said to have repented of the punishment when man repents of the sin' (Ps. cx.). Thus also, when ignorance is ascribed to the Deity (Gen. iv. 9), the same Father remarks, 'He inquires, not as if really ignorant, but as a judge interrogates a prisoner;' and Luther, in reference to the passage (Ps. ii. 4) where laughter is ascribed to the Deity, thus observes, 'Not that God laughed as men do, but to point out the absurdity of men's undertaking impossibilities; meaning, that the matter was as ridiculous as it would be for a fool with a long stick to attempt to thrust the sun out of the firmament, and to rejoice as if he had performed his task to admiration' (*Works*, ii. Ep. ps. 37).

Anthropomorphitic phrases are found throughout the whole Scriptures of the Old and New Testaments. In the infancy of mankind conceptions derived from the human senses were universal, and the Deity is constantly spoken of in anthropomorphitic phrases. We find these ideas more pure after the times of Moses, who forbade the making of any representation of the Deity (see Decalogue). The conceptions of men became still less sensuous in the times of the Prophets, who propounded still clearer notions of the sublime perfections of the Deity. But even under the Christian dispensation anthropomorphitic modes of expression were unavoidable; for although Christianity imparts purer and more spiritual sentiments than the former revelations, the inspired teachers could not express themselves without the aid of images derived from human objects, if they would make their communications in regard to divine things intelligible to their hearers, who were habituated to the anthropomorphitic expressions of the Old Testament. Such a mode of teaching was therefore indispensable in itself, and tended to promote the instruction and enlightenment of mankind; 'the attention was more easily kept up among the sensuous hearers and readers of the sayings and writings of Jesus and his apostles; the truths, figuratively presented, made a deeper impression on the mind; it introduced variety into the discourse; the affections were moved, and religious instruction the more readily communicated' (see Seiler's *Biblical Hermeneutics*, part i. sect. 2, § 54-62, London, 1835, and Glass's *Philologia Sacra*).—W. W.

ANTICHRIST. The meaning attached to this word has been greatly modified by the controversies of various churches and sects. In Scripture, however, and the early Christian writers, it has an application sufficiently distinct from partial interpretations. Antichrist, according to St. John, is the ruling spirit of error, the enemy of the truth of the Gospel as it is displayed in the divinity and holiness of Christ. This is the primary meaning of the term, and we are led at once to consider it as the proper title of Satan. But the same apostle speaks of the existence of many antichrists; whence we learn that it is applicable to any being who opposes Christ in the high places of spiritual wickedness. St. Paul speaks of 'the man of sin' as not yet revealed, and it is supposed by most interpreters that *antichrist* is to be understood as the object alluded to by the apostle; but if we attend strictly to his words, the antichrist of whom he spoke must have been then, and at the time when he was writing, 'opposing and exalting himself above all that is called God,' although awaiting some distant season for the open display of his power and wickedness. Justin Martyr, in his *Dialogue with Trypho*, describes him as exercising his wrath against Christians with especial fury in the period immediately preceding the Second Advent. Cyril of Jerusalem represents him as reigning three years and six months preparatory to the entire destruction of his dominion at the second coming of Christ. The same Father says that he will deceive both Jews and Gentiles; the former, by representing himself as the Messiah; the latter, by his magical arts and incantations. St. Chrysostom observes, on the passage in the Second Epistle to the Thessalonians, that antichrist will not lead men to idolatry, but will rather abolish the worship of false gods as well as that of the true God, commanding the world to worship himself alone as the only Deity.

These views of the early writers, as well as the expressions of Scripture, have been perverted by many men of warm imaginations to the worst purposes of controversy. The effects of general corruption have often been charged upon offices and individuals; and the appellation of *antichrist* as readily applied to them as if it had actually been coupled in Scripture with their name and titles.—H. S.

ANTILEGOMENA (ἀντιλεγόμενα, *contradicted* or *disputed*), an epithet applied by the early

Christian writers to denote those books of the New Testament which, although known to all the ecclesiastical writers, and sometimes publicly read in the churches, were not for a considerable time admitted to be genuine, or received into the canon of Scripture. These books are so denominated in contradistinction to the *Homologoumena*, or universally acknowledged writings. The following is a catalogue of the *Antilegomena*:—*The Second Epistle of St. Peter.—The Epistle of St. James.—The Epistle of St. Jude.—The Second and Third Epistles of St. John.—The Apocalypse*, or *Revelation of St John.—The Epistle to the Hebrews.*

The earliest notice which we have of this distinction is that contained in the *Ecclesiastical History* of Eusebius, the learned bishop of Cæsarea, who flourished A.D. 270-340. He seems to have formed a triple, or, as it appears to some, a quadruple division of the books of the New Testament, terming them—1, the *homologoumena* (received); 2, the *antilegomena* (controverted); 3, the *notha* (spurious); and, 4, those which he calls the *utterly spurious*, as being not only spurious in the same sense as the former, but also *absurd* or *impious*. Among the *spurious* he reckons the *Acts of Paul*, the *Shepherd of Hermas*, the *Revelation of Peter*, the *Epistle of Barnabas*, and the *Instructions of the Apostles*. He speaks doubtfully as to the class to which the Apocalypse belongs, for he himself includes it among the *spurious:* he then observes that some reject it, while others reckon it among the *acknowledged* writings (homologoumena). Among the spurious writings he also enumerates the Gospel according to the Hebrews. He adds, at the same time, that all these may be classed among the *antilegomena*. His account is consequently confused, not to say contradictory. Among the *utterly spurious* he reckons such books as the heretics brought forward under pretence of their being genuine productions of the apostles, such as the so-called *Gospels of Peter, Thomas*, and *Matthias*, and the *Acts of Andrew, John*, and the other apostles. These he distinguishes from the *antilegomena*, as being works which not one of the ancient ecclesiastical writers thought worthy of being cited. Their style he considers so remote from that of the apostles, and their contents so much at variance with the genuine doctrines of Scripture, as to show them to have been the inventions of heretics, and not worthy of a place even among the *spurious* writings. These latter he has consequently been supposed to have considered as the compositions of orthodox men, written with good intentions, but calculated by their titles to mislead the ignorant, who might be disposed to account them as apostolical productions, to which honour they had not even a dubious claim. (See Eusebius, *Hist. Eccles.* iii. 5, 25.)

The same historian has also preserved the testimony of Origen, who, in his *Commentary on St. John* (cited by Eusebius), observes: 'Peter, upon whom the church of Christ is built, against which the gates of hell shall not prevail, has left one epistle undisputed; it may be, also, a second, but of this there is some doubt. What shall we say of him who reclined on the breast of Jesus, John, who has left one Gospel, in which he confesses that he could write so many that the whole world could not contain them? He also wrote the Apocalypse, being commanded to conceal, and not to write, the voices of the seven thunders. He has also left us an epistle consisting of very few lines (στίχοι); it may be also a second and third are from him, but all do not concur in their genuineness; both together do not contain an hundred *stichi*' (for the signification of this word, see *Christian Remembrancer*, vol. iii. p. 465, *et seq.*). And again, in his *Homilies*, 'The epistle with the title "*To the Hebrews*," has not that peculiar style which belongs to an apostle who confesses that he is but *rude in speech*, that is, in his phraseology. But that this epistle is more pure Greek in the composition of its phrases, every one will confess who is able to discern the difference of style. Again, it will be obvious that the ideas of the apostle are admirable, and not inferior to any of the books acknowledged to be apostolic. Every one will confess the truth of this who attentively reads the apostle's writings. . . . . . . I would say, that the thoughts are the apostle's, but that the diction and phraseology belong to some one who has recorded what the apostle has said, and as one who has noted down at his leisure what his master dictated. If, then, any church considers this epistle as coming from Paul, let him be commended for this, for neither did these eminent men deliver it for this without cause: but who it was that really wrote the epistle God only knows. The account, however, that has been current before our time is, according to some, that Clement, who was bishop of Rome, wrote the epistle; according to others, that it was written by Luke, who wrote the *Gospel* and the *Acts*.' (Euseb. *Hist. Eccles.* vi. 25.)

Upon other occasions Origen expresses his doubts in regard to the antilegomena, as, where, in his commentary on St. John's Gospel, he speaks of the reputed (φερομένη) *Epistle of James*, and in his commentary on Matthew, where he uses the phrase, 'If we acknowledge the Epistle of Jude;' and of the Second and Third Epistles of John he observes that 'all do not acknowledge them as *genuine*:' by which epithet, we presume, he means, written by the persons to whom they are ascribed. It is remarkable that Eusebius (ii. 23; iii. 25) classes the Epistle of James, the Acts of Paul, the Shepherd of Hermas, and the Epistle of Barnabas, at one time with the *spurious*, and at another with the *antilegomena*. By the word spurious, in this instance at least, he can mean no more than that the genuineness of such books was disputed; as for instance the *Gospel of the Hebrews*, which was received by the Ebionites as a genuine production of the evangelist Matthew. This is the work of which Jerome made a transcript, as he himself informs us, from the copy preserved by the zeal of Pamphilus in the Cæsarean Library. He also informs us that he translated it into Greek, and that it was considered by most persons as the original Gospel of St. Matthew (*Dialog. contra Pelag.* iii. 2, and *Comment. in Matt.* xii.). Whether the Shepherd of Hermas was ever included among the antilegomena seems doubtful. Eusebius informs us that 'it was disputed, and consequently not placed among the *homologoumena*. By others, however, it is judged most necessary, especially to those who need an elementary introduction: hence we know that it has been already in public use in our churches, and I have also understood, by tradition, that some of the most ancient writers have made use

of it' (iii. 3). Origen speaks of *The Shepherd* as 'commonly used by the church, but not received as divine by the unanimous consent of all.' He therefore cites it, not as authority, but simply by way of illustration (lib. x. *in Epist. ad Roman.*).

Eusebius further informs us that in his own time there were some in the church of Rome who did not regard the Epistle to the Hebrews as the production of the apostle Paul (vi. 25; iii. 3). Indeed, it was through the influence of Jerome that the church of Rome, at a much later period, was with much difficulty brought to acknowledge it as canonical. 'The most ancient Latin or Western church did not rank it among the canonical writings, though the epistle was well known to them, for Clement of Rome has quoted from it many passages. It is true that some Latin writers in the fourth century received it, among whom was Jerome himself; yet even in the time of Jerome the Latin church had not placed it among the canonical writings' (Marsh's Michaelis, vol. iv. p. 266). "The reputed Epistle to the Hebrews,' says Jerome, 'is supposed not to be Paul's on account of the difference of style, but it is believed to have been written by Barnabas, according to Tertullian, or by Luke the evangelist; according to others, by Clement, afterwards bishop of the Roman church, who is said to have reduced to order and embellished Paul's sentiments in his own language; or at least that Paul, in writing to the Hebrews, had purposely omitted all mention of his name, in consequence of the odium attached to it, and wrote to them eloquently in Hebrew, as a Hebrew of the Hebrews, and that what he thus eloquently wrote in Hebrew was still more eloquently written in Greek, and that this was the cause of the difference in style' (*Ex Catalog.*). And again, in his epistle to Dardanus: 'I must acquaint our people that the epistle which is inscribed "To the Hebrews" is acknowledged as the apostle Paul's, not only by the churches of the East, but by all the Greek ecclesiastical writers, although most [of the Latins?] conceive it to be either written by Barnabas or Clement, and that it matters nothing by whom it was written, as it proceeds from a churchman (ecclesiastici viri), and is celebrated by being daily read in the churches. But if *the custom of the Latins does not receive it among the canonical Scriptures*, nor the Greek churches the Apocalypse of St. John, *I*, notwithstanding, receive them both, not following the custom of the present age, but the authority of ancient writers, not referring to them as they are in the habit of doing with respect to apocryphal writings, and citations from classical and profane authors, but as canonical and ecclesiastical.' 'Peter also,' says Jerome, 'wrote two epistles called Catholic; the second of which is denied by most, on account of the difference of style (*Ex Catalog.*). Jude is rejected by most in consequence of the citation from the apocryphal book of Enoch. Notwithstanding, it has authority by use and antiquity, and is accounted among the Holy Scriptures' (Ibid.); and in his *Letter to Paulinus*: 'Paul wrote to seven churches, but the Epistle to the Hebrews is by most excluded from the number;' and in his commentary on Isaiah, he observes that 'the Latin usage does not receive the Epistle to the Hebrews among the canonical books.'

Contemporary with St. Jerome was his antagonist Ruffinus, who reckons *fourteen* epistles of Paul, two of Peter, one of James, three of John, and the Apocalypse.

It seems doubtful whether, antecedent to the times of Jerome and Ruffinus, any councils, even of single churches, had settled upon the canon of Scripture, and decided the question respecting the antilegomena, for the removal of doubts among their respective communities; for it seems evident that the general or œcumenical Council of Nice, which met in the year 325, formed no catalogue. The first catalogue, indeed, which has come down to us is that of an anonymous writer of the third century. He reckons thirteen epistles of St. Paul, accounts the Epistle to the Hebrews the work of an Alexandrian Marcionite, mentions the Epistle of Jude, two of John, and the Revelations of John and Peter, saying with respect to them, that 'some among us are opposed to their being read in the church' (see Hugg's *Introduction*, sect. xiv.). But soon after the Council of Nice, public opinion turned gradually in favour of the antilegomena, or controverted books; for we then find them for the first time cited without any marks of doubt as to their canonicity. Thus, in the year 348, Cyril of Jerusalem enumerates fourteen epistles of Paul and seven Catholic epistles. Gregory of Nazianzus, who, according to Cave (*Historia Literaria*), was born about the time of the Nicene Council, and died in 389, enumerates all the books now received, except the Apocalypse.

Epiphanius, who was chosen bishop of Constantia in A.D. 367 or 368, and composed his Catalogue of Ecclesiastical Writers in 392, cites, in his *Panarium*, the different books of the New Testament in a manner which shows that he received all that are in the present canon. Of the Apocalypse he says that it was 'generally or by most received;' and, speaking of the Alogians, who rejected all John's writings, he observes, 'If they had rejected the Apocalypse only, it might have been supposed that they had acted from a nice critical judgment, as being circumspect in regard to an apocryphal or mysterious book: but to reject all John's writings was a sign of an anti-Christian spirit.' Amphilochius also, bishop of Iconium, in Lycaonia, who was contemporary with Epiphanius, and is supposed to have died soon after the year 394, after citing the fourteen epistles of Paul, in his *Iambics*, adds, 'But some say the Epistle to the Hebrews is spurious, not speaking correctly, for it is a genuine gift. Then the Catholic Epistles, of which some receive seven, others only three, one of James, one of Peter, one of John; while others receive three of John, two of Peter, and Jude's. The Revelation of John is approved by some, while many say it is spurious.'

The eighty-fifth of the *Apostolical Canons*, a work falsely ascribed to Clement of Rome, but written at latest in the fourth century, enumerates *fourteen* Epistles of St. Paul, *one* of Peter, *three* of John, one of *James*, one of Jude, two of Clement, and the (so called) *Apostolical Constitutions*, among the canonical books of Scripture. This latter book, adds the pseudo-Clement, it is not fit to publish before all, 'because of the mysteries contained in it.'

The first council that is supposed to have

given a list of the canonical books is the much agitated Council of Laodicea, supposed to have been held about the year 360 or 364, by thirty or forty bishops of Lydia and the neighbouring parts; but the 59th article, which gives a catalogue of the canonical books, is not generally held to be genuine. Its genuineness, indeed, has been questioned by both Roman Catholic and Protestant historians. In his Introduction to the Old Testament, Jahn refers to this canon as the work of 'an anonymous framer.' Among the canonical books included in the pretended 59th canon of this council are the seven Catholic epistles, viz., one of James, two of Peter, three of John, one of Jude, fourteen of Paul, in the following order, viz.: Romans, 1 and 2 Corinthians, Galatians, Ephesians, Philippians, Colossians, 1 and 2 Thessalonians, Hebrews, 1 and 2 Timothy, Titus, and Philemon. The Apocalypse is not named.

We now come to the times of Jerome and Augustin, whose opinions had great influence in settling the canon of Scripture. We have already seen Jerome's sentiments on this subject; and in regard to the books of the New Testament Augustin entertained the same views. He was present in the year 393 at the Council of Hippo, which drew up a catalogue of all the books of Scripture, agreeing in all points, so far as the New Testament was concerned, with the canon universally received, with the exception perhaps of the Hebrews, for the ancient doubt still appears through the wording of the acts of this council. They commence with enumerating only *thirteen* epistles of Paul, and then add 'one, by the same author, to the Hebrews.' They then mention *two* of Peter, three of John, one of James, and the Apocalypse, with a proviso that the churches beyond the sea be consulted with respect to this canon. And to the same effect the Council of Carthage, held in the year 397, having adopted the same catalogue, the bishops assembled in council add: 'But let this be known to our brother and fellow-priest (consacerdoti) Boniface [bishop of Rome], or to the other bishops of those parts, that we have received those [books] from the Fathers to be read in the church.' The same catalogue is repeated in the Epistle of Innocent I., bishop of Rome, to St. Exupere, bishop of Toulouse, in the year 404, which, by those who acknowledge its genuineness, is looked upon as a confirmation of the decrees of Hippo and Carthage. It was still more formally confirmed in the Roman synod presided over by Pope Gelasius in 494, 'if, indeed,' to use the words of the learned Roman Catholic Jahn, '*the acts of this synod are genuine*' (see his Introduction). But, however this may be, the controversy had now nearly subsided, and the antilegomena were henceforward put on a par with the acknowledged books, and took their place beside them in all copies of the Scriptures. Indeed, subsequently to the eras of the councils of Hippo and Carthage, we hear but a solitary voice raised here and there against the genuineness of the *antilegomena*. Theodore, bishop of Mopsuestia, for instance, the celebrated Syrian commentator and preacher, who died about A.D. 428, is accused by Leo of Byzantium of having 'abrogated and antiquated the Epistle of St. James, and afterwards other Catholic epistles' (see Canisii *Thesaurus*, i. p. 577). And Cosmas Indicopleustes, so called from the voyage which he made to India about the year 535 to 547, in his *Christian Topography*, has the following observations in reference to the authority of these books: 'I forbear to allege arguments from the Catholic epistles, because from ancient times the church has looked upon them as of doubtful authority. . . . . . Eusebius Pamphilus, in his *Ecclesiastical History*, says that at Ephesus there are two monuments, one of John the Evangelist, and another of John, an Elder, who wrote two of the Catholic epistles, the second and third inscribed after this manner, "The Elder to the elect lady," and "The Elder to the beloved Gaius," and both he and Irenæus say that but two are written by the apostles, the first of Peter, and the first of John. . . . . Among the Syrians are found only the three before mentioned, viz., the Epistle of James, the Epistle of Peter, and the Epistle of John; they have not the rest. It does not become a perfect Christian to confirm anything by doubtful books, when the books in the Testament acknowledged by all (homologoumena) have sufficiently declared all things to be known about the heavens, and the earth, and the elements, and all Christian doctrine.'

The most ancient Greek manuscripts which have come down to our times contain the *antilegomena*. From this circumstance it is extremely probable that the copies from which they were transcribed were written after the controversies respecting their canonicity had subsided. The Alexandrian manuscript in the British Museum contains all the books now commonly received, together with some others, with a table of contents, in which they are cited in the following order:—'Seven Catholic Epistles, fourteen of Paul, the Revelation of John, the First Epistle of Clement, the Second Epistle of Clement, and the Psalms of Solomon (which latter have, however, been lost from the MS.).' It is observable that Eusebius classes the First Epistle of Clement among the Homologoumena, or universally received books; but by this he probably meant no more than that it was acknowledged by all to be the genuine work of Clement. The Alexandrian manuscript is now generally believed to have been written either in the fourth or early in the fifth century. The order of all the epistles is the same as in our modern Bibles, except that the Epistle to the Hebrews is placed after the Second Epistle to the Thessalonians. In the Vatican manuscript B, which in respect of antiquity disputes the precedence with the Alexandrian, the Apocalypse is wanting, but it contains the remaining *antilegomena*.

The Syrian canon of the New Testament did not include all the *antilegomena*. All the manuscripts of the Syrian version (the Peschito, a work of the second century) which have come down to us omit the Second Epistle of Peter, the Second and Third of John, that of Jude, and the Apocalypse. Nor are these books received to this day either by the Jacobite or Nestorian Christians. These are all wanting in the Vatican and Medicean copies, written in the years 548 and 586, and in the beautiful manuscript of the Peschito, preserved in the British Museum, which is most accurately described by the Rev. J. Forshall, in the catalogue of the Oriental Manuscripts, and the writing of which was concluded at the monastery of Bethkoki, A.D. 768. It is written

on 197 leaves of vellum, in the Estrangelo character.

In the inquiring age immediately preceding the Reformation the controversy respecting the *antilegomena* was revived, especially by Erasmus and Cardinal Cajetan; by the latter, however, upon principles so questionable as to expose him to the charge of assailing the authority of the Epistle to the Hebrews with the same weapons which the emperor Julian had employed to impugn the authority of St. Matthew's Gospel. The doubts thus raised were in a great measure silenced by the decree of the Council of Trent, although there have not been wanting learned Roman Catholic divines since this period who, have ventured to question at least the Pauline authorship of the Epistle to the Hebrews. It is well known that Luther, influenced in this instance not so much by historico-critical as by dogmatical views, called the Epistle of St. James 'an epistle of straw' (*Epistola straminea*). He also wished the *antilegomena* to be distinguished from the other books in his translation of the Bible. In consequence of this, the Epistle to the Hebrews, the Epistles of James and Jude, and the Apocalypse have no numbers attached to them in the German copies of the Bible up to the middle of the seventeenth century: and it is observed by M. Tholuck (*Commentary on Hebrews*, in *Biblical Cabinet*), that 'the same plan should have been adopted with respect to 2nd Peter and 2nd and 3rd John, but it did not seem proper to detach them from the *Homologoumena* which belonged to them. Thus he wished at the same time to point out what were the 'right noble chief books of Scripture.' We are informed by Father Paul Sarpi (*History of the Council of Trent*, book ii. chap. xliii. tom. i. p. 235; and chap. xlvii. p. 240) that one of the charges collected from the writings of Luther in this council was, 'that no books should be admitted into the canon of the Old Testament which were not in the canon of the Jews, and that from the New should be excluded the Epistle to the Hebrews, the Epistle of James, the Second Epistle of Peter, the Second and Third of John, and the Apocalypse.' M. Tholuck states that the 'Evangelical churches, both Lutheran and Reformed, adopted the same canon with respect to the New Testament as that of the Council of Trent' (*Comment. on Heb.* vol. i. Introd. chap i. § 3, and note *b*). Some, or all, of the *antilegomena* have been again impugned in recent times, especially in Germany, as the reader will find noticed under their several heads.—W. W.

ANTI-LIBANUS. [LEBANON.]

ANTIOCH (Ἀντιόχεια). Two places of this name are mentioned in the New Testament. 1. A city on the banks of the Orontes, 300 miles north of Jerusalem, and about 30 from the Mediterranean. It was situated in the province of Seleucis, called Tetrapolis (Τετράπολις). from containing the four cities, Antioch, Seleucia, Apamea, and Laodicea: of which the first was named after Antiochus, the father of the founder; the second after himself; the third after his wife Apamea, and the fourth in honour of his mother. The same apppellation (Tetrapolis) was given also to Antioch, because it consisted of four townships or quarters, each surrounded by a separate wall, and all four by a common wall. The first was built by Seleucus Nicator, who peopled it with inhabitants from Antigonia; the second by the settlers belonging to the first quarter; the

third by Seleucus Callinicus; and the fourth by Antiochus Epiphanes (Strabo, xvi. 2; iii. 354). It was the metropolis of Syria (*Antiochiam, Syriæ caput.* Tac. *Hist.* ii. 79), the residence of the Syrian kings (the Seleucidæ) (1 Macc. iii. 37; vii. 2), and afterwards became the capital of the Roman provinces in Asia. It ranked third, after Rome and Alexandria, among the cities of the empire (Joseph. *De Bell. Jud.* iii. 2, § 4), and was little inferior in size and splendour to the latter, or to Seleucia (Strabo, xvi. 2.; vol. iii. p. 355, ed. Tauch.). Its suburb Daphne was celebrated for its grove and fountains (Strabo, xvi. 2.; vol. iii. p. 356, ed. Tauch.), its asylum (ἄσυλον τόπον, 2 Macc. iv. 33) and temple dedicated to Apollo and Diana. 'The temple and the village were deeply bosomed in a thick grove of laurels and cypresses which reached as far as a circumference of ten miles, and formed in the most sultry summers a cool and impenetrable shade. A thousand streams of the purest water, issuing from every hill, preserved the verdure of the earth and the temperature of the air' (Gibbon, ch. xxiii.). Hence Antioch was called Epidaphnes (Ἀντιοχείᾳ τῇ ἐπὶ Δάφνῃ, Joseph. *Antiq. Jud.* xvii. 2; *Epidaphnes cognominata*, Plin. *Hist. Nat.* v. 18). It was very populous; within 150 years after its erection the Jews slew 100,000 persons in it in one day (1 Macc. xi. 47). In the time of Chrysostom the population was computed at 200,000, of whom one-half, or even a greater proportion, were professors of Christianity (τὸ πλέον τῆς πόλεως χριστιανόν, Chrysos. *Adv. Jud. Orat.* t. i. p. 588; *Hom. in S. Ignat.* t. ii. p. 597; *In Matt. Hom.* 85, t. vii. p. 810). Chrysostom also states that the church at Antioch maintained 3000 poor, besides occasionally relieving many more (*In Matt. Hom.* t. vii. p. 658). Cicero speaks of the city as distinguished by men of learning and the cultivation of the arts (*Pro Archia*, 3). A multitude of Jews resided in it. Seleucus Nicator granted them the rights of citizenship, and placed them on a perfect equality with the other inhabitants (Joseph. *Antiq.* xii. 3, § 1). These privileges were continued to them by Vespasian and Titus—an instance (Josephus remarks) of the equity and generosity of the Romans, who, in opposition to the wishes of the Alexandrians and Antiocheans, protected the

Jews, notwithstanding the provocations they had received from them in their wars. They were also allowed to have an Archon or Ethnarch of their own (Joseph. *De Bell. Jud.* vii. 3). Antioch is called *libera* by Pliny (*Hist. Nat.* v. 18), having obtained from Pompey the privilege of being governed by its own laws. This fact is commemorated on a coin bearing the inscription, ΑΝΤΙΟΧΕΩΝ ΜΗΤΡΟΠΟΛ. ΑΥΤΟΝΟΜΟΥ.

The Christian faith was introduced at an early period into Antioch, and with great success (Acts xi. 19, 21, 24). The name '*Christians*' was here first applied to its professors (Acts xi. 26). Antioch soon became a central point for the diffusion of Christianity among the Gentiles, and maintained for several centuries a high rank in the Christian world. A controversy which arose between certain Jewish believers from Jerusalem and the Gentile converts at Antioch respecting the permanent obligation of the rite of circumcision was the occasion of the first apostolic council or convention (Acts xv.). Antioch was the scene of the early labours of the apostle Paul, and the place whence he set forth on his first missionary labours (Acts xi. 26; xiii. 2). Ignatius was the second bishop or overseer of the church, for about forty years, till his martyrdom in A.D. 107. In the third century three councils (the last in A.D. 269) were held at Antioch relative to Paul of Samosata, who was bishop there about A.D. 260 (Neander's *Allgemeine Geschichte*, &c. i. 3, p. 1013; Gieseler's *Lehrbuch*, i. 242; Mosheimii *Commentarii*, p. 702). In the course of the fourth century a new theological school was formed at Antioch, which aimed at a middle course in Biblical Hermeneutics, between a rigorously literal and an allegorical method of interpretation. Two of its most distinguished teachers were the presbyters Dorotheus and Lucian, the latter of whom suffered martyrdom in the Dioclesian persecution, A.D. 312 (Neander's *Allgemeine Geschichte*, i. 3, p. 1237; Gieseler's *Lehrbuch*, i. 272; Lardner's *Credibility*, pt. ii. ch. 55, 58). Libanius (born A.D. 314), the rhetorician, the friend and panegyrist of the emperor Julian, was a native of Antioch (Lardner's *Testimonies of Ancient Heathens*, ch. 49; Gibbon's *Decline and Fall*, &c. ch. 24). It had likewise the less equivocal honour of being the birthplace of his illustrious pupil, John Chrysostom (born A.D. 347; died A.D. 407) (Lardner's *Credibility*, pt. ii. ch. 118; Neander's *Allgemeine Geschichte*, ii. 3, pp. 1410-56).

As the ecclesiastical system became gradually assimilated to the political, the churches in those cities which held the highest civil rank assumed a corresponding superiority in relation to other Christian communities. Such was the case at Rome, Alexandria, and Antioch, and, in the course of time, at Constantinople and Jerusalem, where the term Exarch was applied to the resident bishop, but shortly exchanged for that of Patriarch (Neander, *Allg. Gesch.* ii. 1, p. 346-51). At the present time there are three prelates in Syria who claim the title of patriarchs of Antioch, namely: (1) the patriarch of the Greek church; (2) of the Syrian Monophysites; (3) of the Maronites (Murdoch's Mosheim, edited by Soames, p. 304-11).

Few cities have undergone and survived greater vicissitudes and disasters than Antioch. In A.D. 260 Sapor, the Persian king, surprised and pillaged it, and multitudes of the inhabitants were slain or sold as slaves. It has been frequently brought to the verge of utter ruin by earthquakes (A.D. 340, 394, 396, 458, 526, 528); by that of A.D. 526 no less than 250,000 persons were destroyed, the population being swelled by an influx of strangers to the festival of the Ascension. The emperor Justinian gave forty-five centenaries of gold (180,000*l.*) to restore the city. Scarcely had it resumed its ancient splendour (A.D. 540) when it was again taken and delivered to the flames by Chosroes. In A.D. 658 it was captured by the Saracens. Its 'safety was ransomed with 300,000 pieces of gold, but the throne of the successors of Alexander, the seat of the Roman government in the East, which had been decorated by Cæsar with the titles of free and holy and inviolate, was degraded under the yoke of the caliphs to the secondary rank of a provincial town' (Gibbon, ch. 51). In A.D. 975 it was retaken by Nicephorus Phocas. In A.D. 1080 the son of the governor Philaretus betrayed it into the hands of Soliman. Seventeen years after the Duke of Normandy entered it at the head of 300,000 Crusaders; but as the citadel still held out, the victors were in their turn besieged by a fresh host under Kerboga and twenty-eight emirs, which at last gave way to their desperate valour (Gibbon, ch. 58). In A.D. 1268 Antioch was occupied and ruined by Boadocbar or Bibars, sultan of Egypt and Syria; this first seat of the Christian name being dispeopled by the slaughter of 17,000 persons, and the captivity of 100,000. About the middle of the fifteenth century the three patriarchs of Alexandria, Antioch, and Jerusalem convoked a synod, and renounced all connection with the Latin church.

Antioch at present belongs to the Pashalic of Haleb (Aleppo), and bears the name of انطاكية *Antakia*. The inhabitants are said to have amounted to twenty thousand before the earthquake of 1822, which destroyed four or five thousand. On the south-west side of the town is a precipitous mountain-ridge, on which a considerable portion of the old Roman wall of Antioch is still standing, from 30 to 50 feet high and 15 feet in thickness. At short intervals 400 high square towers are built up in it, containing a staircase and two or three chambers, probably for the use of the soldiers on duty. At the east end of the western hill are the remains of a fortress, with its turrets, vaults, and cisterns. Toward the mountain south-south-west of the city some fragments of the aqueducts remain. After heavy rains antique marble pavements are visible in many parts of the town; and gems, carnelians, and rings are frequently found. The present town stands on scarcely one-third of the area enclosed by the ancient wall, of which the line may be easily traced; the entrance to the town from Aleppo is by one of the old gates, called Bab Bablous, or Paul's gate, not far from which the members of the Greek church assemble for their devotions in a cavern dedicated to St. John (Madox's *Excursions*, ii. 74; Monro's *Summer Ramble*, ii. 140-143).—J. E. R.

2. ANTIOCH *in* (or *near*) *Pisidia* (Ἀντιόχεια τῆς Πισιδίας), being a border city, was considered at different times as belonging to different pro-

vinces. Ptolemy places it in Pamphylia, and Strabo in Phrygia. It was founded by Seleucus Nicanor, and its first inhabitants were from Magnesia on the Mæander. After the defeat of Antiochus (III.) the Great by the Romans, it came into the possession of Eumenes, king of Pergamos, and was afterwards transferred to Amyntas. On his death the Romans made it the seat of a proconsular government, and invested it with the privileges of a *Colonia Juris Italici*, which included a freedom from taxes and a municipal constitution similar to that of the Italian towns (Ulpianus, lib. 50: *In Pisidia juris Italici est Colonia Antiochensium*). When Paul and Barnabas visited this city (Acts xiii. 14), they found a Jewish synagogue and a considerable number of proselytes (οἱ φοβούμενοι τὸν Θεόν, v. 16; τῶν σεβομένων προσηλύτων, v. 43; τὰς σεβομένας γυναῖκας, v. 50), and met with great success among the Gentiles (v. 48), but, through the violent opposition of the Jews, were obliged to leave the place, which they did in strict accordance with their Lord's injunction (v. 51, compared with Matt. x. 14; Luke ix. 5).

Till within a very recent period Antioch was supposed to have been situated where the town of *Ak-Sheker* now stands; but the researches of the Rev. F. Arundell, British chaplain at Smyrna in 1833, confirmed by the still later investigations of Mr. Hamilton, secretary of the Geographical Society, have determined its site to be adjoining the town of Yalobatch; and consequently that Ak-Sheker is the ancient Philomelion described by Strabo (xii. 8.; vol. iii. p. 72, ed. Tauch.). 'In Phrygia Paroreia is a mountainous ridge stretching from east to west; and under this on either side lies a great plain, and cities near it; to the north Philomelion, and on the other side Antioch, called Antioch near Pisidia: the one is situated altogether on the plain; the other on an eminence, and has a colony of Romans.' According to Pliny, Antioch was also called Cæsarea (*Insident verticem Pisidæ, quondam Solymi appellati, quorum colonia Cæsarea, eadem Antiochia*, v. 24). Mr. Arundell observed the remains of several temples and churches, besides a theatre and a magnificent aqueduct; of the latter twenty-one arches still remained in a perfect state. Mr. Hamilton copied several inscriptions, all, with one exception, in Latin. Of one the only words not entirely effaced were ANTIOCHEAE CAESARI.

Antioch was noted in early times for the worship of Men Arcæus, or Lunus. Numerous slaves and extensive estates were annexed to the service of the temple; but it was abolished after the death of Amyntas (Strabo, xii. 8; iii. 72). Arundell's *Discoveries in Asia Minor*, London, 1834, i. 268-312; Hamilton's *Researches in Asia Minor, Pontus, and Armenia*, London, 1842, i. 472-474; ii. 437-439; 'Laborde's work on *Syria and Asia Minor* contains a good view of the aqueduct'—*Coins of Antioch*, v. Calmet's Plates, vii.—J. E. R.

ANTIOCHUS. Of the many kings who bore this name, Antiochus, called Epiphanes, has the chief claim on our attention in a Biblical Cyclopædia, since in the Books of Maccabees and in the prophecies of Daniel his person is so prominent. Nevertheless, it will be our business to set forth, not that which readers of the Bible can gather for themselves, but such preliminary and collateral information as will tend to throw light on the position of the Jews towards the Syrian monarchy.

The name Antiochus may be interpreted *he who withstands*, or *lasts out;* and denotes military prowess, as do many other of the Greek names. It was borne by one of the generals of Philip, whose son, Seleucus, by the help of the first Ptolemy, established himself (B.C. 312) as ruler of Babylon. The year 312 is in consequence the era from which, under that monarchy, time was computed, as, for instance, in the Books of Maccabees. For eleven years more the contest in Asia continued, while Antigonus (the '*one-eyed*') was grasping at universal supremacy. At length, in 301, he was defeated and slain in the decisive battle of Ipsus, in Phrygia. Ptolemy, son of Lagus, had meanwhile become master of southern Syria; and Seleucus was too much indebted to him to be disposed to eject him by force from this possession. In fact, the three first Ptolemies (B.C. 323-222) looked on their extra-Egyptian possessions as their sole guarantee for the safety of Egypt itself against their formidable neighbour, and succeeded in keeping the mastery, not only of Palestine and Cœle-Syria, and of many towns on that coast, but of Cyrene and other parts of Libya, of Cyprus, and other islands, with numerous maritime posts all round Asia Minor. A permanent fleet was probably kept up at Samos (Polyb. v. 35, 11), so that their arms reached to the Hellespont (v. 34, 7); and for some time they ruled over Thrace (xviii. 34, 5). Thus Syria was divided between two great powers, the *northern* half falling to Seleucus and his successors, the *southern* to the Ptolemies; and this explains the titles 'king of the north' and 'king of the south,' in the 11th chapter of Daniel. The line dividing them was drawn somewhat to the north of Damascus, the capital of Cœle-Syria.

The first Seleucus built a prodigious number of cities with Greek institutions, not, like Alexander, from military or commercial policy, but to gratify ostentation, or his love for Greece. This love, indeed, led him to fix his capital, not at Babylon, where Alexander would have placed it, but in the north of Syria (see ANTIOCH); and in extreme old age his life fell a sacrifice to his romantic passion for revisiting his native Macedonia. To people his new cities was often a difficult matter; and this led to the bestowal of premiums on those who were willing to become citizens. Hence we may account for the extraordinary privileges which the Jews enjoyed in them all, having equal rights with Macedonians. At the same time (whether from the example which Alexander had set or from the force of circumstances) that age displayed remarkable tendencies to religious fusion everywhere; insomuch that—if, with Josephus, we may trust to the letter in the 1st book of Maccabees (xii. 21)—even the Lacedæmonians put in their claim to be regarded as children of Abraham. [See SPARTA, on the authenticity of this correspondence.] But there was still another cause which recommended the Jews to the Syrian kings. A nation thus diffused through their ill-compacted empire, formed a band most useful to gird its parts together. To win the hearts of the Jews, was to win the allegiance of a brave brotherhood, who would be devoted to their protector, and who could never make common cause with any

spirit of local independence. For this reason Antiochus the Great, and doubtless his predecessors also, put peculiar trust in Jewish garrisons. In a letter which Josephus has transcribed (*Antiq.* xii. 3, 4) he orders the removal of 2000 Jews of Mesopotamia and Babylonia, with all their goods, into Lydia and Phrygia, for garrison service: and although the authenticity of the letter may be suspicious, it at any rate proves the traditionary belief that the earlier kings of the house of Seleucus had transported troops of Jewish families westward for military purposes.

[Antiochus the Great.]

Again: through the great revolution of Asia, the Hebrews of Palestine were now placed nearly on the frontier of two mighty monarchies; and it would seem that the rival powers *bid* against one another for their good will—so great were the benefits showered upon them by the second Ptolemy. Even when a war broke out for the possession of Cœle-Syria, under Antiochus the Great and the fourth Ptolemy (B.C. 218, 217), though the people of Judæa, as part of the battle-field and contested possession, were exposed to severe suffering, it was not the worse for their ultimate prospects. Antiochus at least, when at a later period (B.C. 198) left master of southern Syria, did but take occasion to heap on the Jews and Jerusalem new honours and exemptions (Joseph. *Antiq.* xii. 3, 3). In short, in days in which no nation of those parts could hope for political independence, there was none which seemed so likely as the Hebrew nation to enjoy an honourable social and religious liberty.

The Syrian empire, as left by Antiochus the Great to his son, was greatly weaker than that which the first Seleucus founded. Scarcely, indeed, had the second of the line begun to reign (B.C. 280) when four sovereigns in Asia Minor established their complete independence:—the kings of Pontus, Bithynia, Cappadocia, and Pergamus. In the next reign—that of Antiochus Theos—the revolt of the Parthians under Arsaces (B.C. 250) was followed speedily by that of the distant province of Bactriana. For thirty years together the Parthians continued to grow at the expense of the Syrian monarchy. The great Antiochus passed a life of war (B.C. 223-187). In his youth he had to contend against his revolted satrap of Media, and afterwards against his kinsman Achæus, in Asia Minor. We have already noticed his struggles in Cœle-Syria against the Ptolemies. Besides this, he was seven years engaged in successful campaigns against the Parthians and the king of Bactriana; and, finally, met unexpected and staggering reverses in war with the Romans, so that his last days were inglorious and his resources thoroughly broken. Respecting the reign of his son, Seleucus Philopator (B.C. 187-176), we know little, except that he left his kingdom tributary to the Romans (Livy, xiii. 6) [see also SELEUCUS PHILOPATOR]. In Daniel, xi. 20, he is named *a raiser of taxes*, which shows what was the chief direction of policy in his reign. De Wette renders the words rather differently ('der einen eintreiber die Krone des Reiches [Judäa] durchziehen lässt'), yet perhaps with the same general meaning. Seleucus having been assassinated by one of his courtiers, his brother Antiochus Epiphanes hastened to occupy the vacant throne, although the natural heir, Demetrius, son of Seleucus, was alive, but a hostage at Rome. In Daniel, xi. 21, it is indicated that he gained the kingdom *by flatteries;* and there can be no doubt that a most lavish bribery was his chief instrument. According to the description in Livy (xli. 20), the magnificence of his largesses had almost the appearance of insanity.

A prince of such a temper and in such a position, whose nominal empire was still extensive, though its real strength and wealth were departing, may naturally have conceived, the first moment that he felt pecuniary need, the design of plundering the Jewish temple. At such a crisis, the advantage of the deed might seem to overbalance the odium incurred: yet, as he would convert every Jew in his empire into a deadly enemy, a second step would become necessary—

[Antiochus Epiphanes.]

to crush the power of the Jews, and destroy their national organization. The design, therefore, of prohibiting circumcision and their whole ceremonial, would naturally ally itself to the plan of spoliation, without supposing any previous enmity against the nation on his part. Just then, however, a candidate for the high-priesthood gave an impetus to this course of events, by setting the example of assuming Greek manners in the hope of gaining the king's favour; as is narrated in the 1st book of Maccabees. We have written enough to show how surprising to the Jews must have been the sudden and almost incredible change of policy on the part of the rulers of Syria; and how peculiarly aggravated enmity Antiochus Epiphanes must in any case have drawn on himself. Instead of crushing his apparently puny foes, he raised up heroes against himself [MACCABEES], who, helped by the civil wars of his successors, at length achieved the deliverance of their people; so that in the 170th year of the Seleucidæ (B.C. 143) their independence was formally acknowledged, and they began to date from this period (1 Macc. xiii. 42) as a new birth of their nation. Whether Antiochus Epiphanes committed all the atrocities alleged in the *second* book of Maccabees may be doubted; but having started amiss, with no principle to guide or restrain him, it is certain

that he was capable of adding cruelty to iniquity, to whatever amount the necessity of the moment might prompt. The intensity of Tacitus's hatred of the Jews is lamentably displayed in his remarks on this king, *Hist.* v. 8: 'Rex Antiochus, demere superstitionem et mores Græcorum dare adnixus, quominus *teterrimam gentem in melius mutaret*, Parthorum bello prohibitus est.'

The change of policy, from conciliation to cruel persecution, which makes the reign of Epiphanes an era in the relation of the Jews to the Syrian monarchy, has perhaps had great permanent moral results. It is not impossible that perseverance in the conciliating plan might have sapped the energy of Jewish national faith: while it is certain that persecution kindled their zeal and cemented their unity. Jerusalem, by its sufferings, became only the more sacred in the eyes of its absent citizens; who vied in replacing the wealth which the sacrilegious Epiphanes had ravished. According to 1 Maccab. vi. 1-16, this king died shortly after an attempt to plunder a temple at Elymais; and Josephus follows that account. Appian (*Syr.* 66) adds that he actually plundered it. Strabo, however (xvi. 1), and Justin (xxxii. 2) tell the story of Antiochus *the Great*, and represent him as losing his life in the attempt. Polybius and Diodorus decide nothing, as the fragments which notice the deed ascribe it merely to 'the king Antiochus.' Nevertheless, Josephus appeals to Polybius as agreeing with him; and the editors of Polybius so understand the matter. On the whole, it would appear that this attempt is rightly assigned to Epiphanes: it is not likely to have been two events, though the stories do not agree as to the name of the deity of the temple. We ought, however, to add, that Winer (*Real-Wörterbuch*) is disposed to believe that father and son both ended their lives with the same act; and this view of the case is also taken in Dr. W. Smith's *Dictionary of Greek and Roman Biography*.

An outline of the deeds of the kings of Syria in war and peace, down to Antiochus Epiphanes, is presented in the 11th chapter of Daniel; in which Epiphanes and his father are the two principal figures. Nothing but ignorance or a heated imagination can account for some modern expositors referring that chapter to the events of the eighteenth century after Christ. The wars and treaties of the kings of Syria and Egypt from B.C. 280 to B.C. 165 are described so minutely and so truly, in vv. 6-36, as to force all reasonable and well-informed men to choose between the alternatives,—either that it is a most signal and luminous prediction, or that it was written after the event.

Besides Antiochus Epiphanes, the book of Maccabees mentions his son, called Antiochus Eupator, and another young Antiochus, son of Alexander Balas, the usurper; both of whom were murdered at a tender age. In the two last chapters of the book a fourth Antiochus appears,—called by the Greeks *Sidetes*, from the town of Sida, in Pamphylia. This is the last king of that house, whose reputation and power were not unworthy of the great name of Seleucus. In the year B.C. 134 he besieged Jerusalem, and having taken it next year, after a severe siege, he pulled down the walls, and reduced the nation once more to subjection, after only ten years' independence. His moderation and regard for their religious feelings are contrasted by Josephus with the impiety of Epiphanes (*Antiq.* xiii. 8, 2-31). It is remarkable that, though the beginning of his quarrel with the Jewish high-priest is narrated in the first book of Maccabees, the story is cut short abruptly.

The most compact and unbroken account of the kings of this dynasty is to be found in Appian's book (*De Rebus Syriacis*), at the end. The dates of the following table are taken from Clinton's *Fasti Hellenici*, vol. iii. Appendix, ch. iii.:—

1. Seleucus Nicator, B.C. 312—280.
2. Antiochus Soter, his son, 280—261.
3. Antiochus Theus, his son, 261—247.
4. Seleucus Callinicus, his son, 247—226.
5. (Alexander, or) Seleucus Ceraunus, his son, 226—223.
6. Antiochus the Great, his brother, 223—187.
7. Seleucus Philopator, his son, 187—176.
8. Antiochus Epiphanes, his brother, 176—164.
9. Antiochus Eupator, his son (a minor), 164—162.
10. Demetrius Soter, son of Seleucus Philopator, 162—150.
11. Alexander Balas, *a usurper*, who pretends to be son of Antiochus Epiphanes, and is acknowledged by the Romans, 152—146.

[12. Antiochus Theus, or Alexander (a minor), son of the preceding. He is murdered by the usurper Trypho, who contests the kingdom till 140.]

12. Demetrius Nicator, son of Demetrius Soter, reigns 146—141, when he was captured by the Parthians.
13. Antiochus Sidetes, his brother, 141—128.*

F. W. N.

ANTIPAS (Ἀντίπας), a person named as 'a faithful witness,' or martyr, in Rev. ii. 13.

2. ANTIPAS, or HEROD-ANTIPAS. [HERODIAN FAMILY.]

ANTIPATER. [HERODIAN FAMILY.]

ANTIPATRIS (Ἀντιπατρίς), a city built by Herod the Great, on the site of a former place called Caphar-saba (Χαβαρζαβᾶ or Καφαρσαβᾶ, Joseph. *Antiq.* xiii. 15. 1). The spot was well watered, and fertile; a stream flowed round the city, and in its neighbourhood were groves of large trees (*Antiq.* xvi. 5. 2). Caphar-saba was 120 stadia from Joppa; and between the two places Alexander Balas drew a trench, with a wall and wooden towers, as a defence against the approach of Antiochus (*Antiq.* xiii. 15. 1; *De Bell. Jud.* i. 4. 7). Antipatris also lay between Cæsarea and Lydia, its distance from the former place being twenty-six Roman miles (*Itin. Hieros.* p. 600). These circumstances indicate that Antipatris was in the midst of a plain, and not at Arsuf, where the Crusaders supposed they had found it (Will. Tyr. ix. 19; xiv. 16; Vitracus, c. 23; Brocard, c. 10; comp. Reland, *Palæst.* pp. 569, 570). On the road from Ramlah to Nazareth, north of Ras-el Ain, Prokesch (*Reise ins Heilige Land.* Wien, 1831) came to a place called Kaffr Saba; and the position which Brighaus assigns to this town in his map is almost in exact agreement with the position assigned to Antipatris in the *Itin. Hieros.* Perceiving this, Professor Raumer (*Palästina*, pp. 144, 462) happily conjectured that this Kaffr

* Kings of the same family reigned in Antioch until Pompey reduced Syria to the form of a Roman province, B.C. 63.

Saba was no other than the reproduced name of Caphar-saba, which, as in many other instances, has again supplanted the foreign, arbitrary, and later name of Antipatris. This conjecture has been confirmed by Professor Robinson, who gives Kefr Sâba as the name of the village in question (*Researches*, iii. 46-48). St. Paul was brought from Jerusalem to Antipatris by night, on his route to Cæsarea (Acts xxiii. 31).

ANTIQUITIES, a term the meaning of which is somewhat arbitrary and unsettled, but, as limited to the nations and people with whom the Bible has to do, may be considered as embracing whatever relates to the religious, political, social, domestic, and individual life, not only of the Hebrew race, but also of those kingdoms, tribes, and persons that were connected with, or more or less influenced by, the chosen people. With the exception of history and biography, the science of Biblical antiquities comprises whatever institutions, laws, customs, observances, rites and ceremonies—in a word, every influence which tended to give 'form and pressure' to the Israelitish nation in the several stages of its development prior to the capture of Jerusalem by the Romans, and to the Christian church during the earlier ages. An accurate knowledge of the subjects embraced under Biblical antiquities is of the greatest importance to a divine, as being indispensable to a correct and complete acquaintance with the subject matter, the modes of thought, life, and action presented in those books and writings, which, as an expositor of the divine oracles, he is called on first to understand himself, and then to expound to others. Godwyn, in the dedication of his work on the subject, well remarks, 'That many have no better acquaintance with Christ and his apostles, is because they are such strangers with Moses and Aaron. Were customes antiquated thorowly knowne, many difficulties in Scripture would appear elegancies, and the places which now through obscurity dishearten the reader would then become sweet invitements to an unwearied assiduity in perusing the sacred oracles.'

The Scriptures themselves are the great source whence a knowledge of Hebrew and Christian antiquities may be drawn; and whoever wishes to have an accurate and a thorough acquaintance with the subject must, with this express purpose in view, make the holy record the object of a careful, sustained, and systematic study. To such an effort it is that scholars owe in the main the views they have formed and the treatises they have written. An intelligent student of the Old and New Testaments may gain no inconsiderable acquaintance with Biblical antiquities, even unaided by the researches of theological scholars. Much of the Old Testament is, in the best sense of the term, picture writing; and the history of the Saviour carries us into the very bosom of domestic life. The knowledge which is acquired from these sources is peculiarly valuable, from the stamp of truth which every part of it bears. Few, however, have the disposition, the leisure, or the ability for the requisite study; and therefore the aid of the scholar and divine is desirable, if not indispensable.

But besides what may be learned from the Scriptures themselves, much remains to be known which they do not and cannot teach; for, like all other books relating to ages long bygone, they contain allusions, phraseology, modes of thought and speech, which can be understood either not at all, or but imperfectly, without light derived from extraneous sources; and that the rather because the Hebrews were not a literary people, and the aim of the sacred penmen was far higher than to achieve intellectual reputation.

The heathen writers afford very scanty materials for illustrating Biblical antiquities, so ignorant or prejudiced were they on topics of that kind. Indirect information and undesigned testimonies may be here and there extracted from their writings, but in general they communicate no useful information except on geographical and kindred subjects. The least barren of them is the earliest prose-writer extant, Herodotus, who, in his second book and part of the third, furnishes snatches of information which may be of service, especially in conjunction with the light which recent discoveries in Egyptian antiquities have so happily thrown on the Biblical records (*The Egypt of Herodotus*, by John Kenrick, M.A., 1841; *Manners and Customs of the Ancient Egyptians*, by Sir J. G. Wilkinson, 1837, 1841).

The study of Biblical antiquities, viewed as an aid in the interpretation of the books of the Old Testament, began probably on the return from the Babylonish exile, when a lengthened past already stretched out to the Israelitish nation as they looked back towards their origin; and, from the new circumstances in which they were placed, and the new modes of thought and action to which they had become habituated, they must have found many things in their sacred books which were as difficult to be understood as they were interesting to their feelings. The ideas, views, and observations which thence resulted were held, taught, transmitted, and from age to age augmented by Jewish doctors, whose professed duty was the expounding of the law of the Fathers; and after having passed through many generations by oral communication, were at length, in the second and some subsequent centuries of the Christian era, committed to writing [TALMUD]. This source of information, as being traditionary in its origin, and disfigured by ignorance, prejudice, and superstition, must, to be of any service, be used with the greatest care and discrimination. It seems, however, to have fallen into somewhat undue depreciation, but has been successfully employed by recent writers in delineating a picture of the age in which our Lord appeared (*Das Jahrhundert des Heils*, durch A. F. Gfrorer, Stuttgard, 1838). In the first century Josephus wrote two works of unequal merit, on *The Jewish War*, and *The Antiquities of the Jews*, which, notwithstanding some credulity and bad faith on the part of the author, afford valuable information, particularly in relation to the manners, customs, and opinions of his own times. Had another work of which the writer speaks (preface to the *Antiquities*) come down to these days, which appears to have been a sort of philosophical treatise on the Mosaic laws and institutions, giving probably, after the manner of Michaelis in his *Mosaisches Recht*, the *rationale* of the several observances enjoined, some considerable light might have been thrown on the antiquities of the nation; though the known propensity of Josephus to the allegorical method of interpretation diminishes the regret experienced at its loss. The works of Philo, the celebrated Alexan-

drian teacher, which were also produced in the first century, have their value too much abated by his love of the same allegorical method; which he was led to pursue mainly by his desire to bring the mind of the Hebrew nation into harmony with Oriental, and especially Grecian, systems of philosophy, of which Philo was a diligent student and a great admirer.

Little advantage is to be gained by the study of writers among the modern Jews; for till a very recent period no sound intellectual activity was found among this singular and most interesting race. Inspired, however, by the spirit of the eighteenth century, Mendelssohn opened to his fellow-believers a new era, and introduced a manner of thinking and writing which prepared the way for many valuable Jewish productions, and gave an impulse to the mind of 'the nation,' the best outward results of which are only beginning to be seen.

The study of classical antiquity, which commenced at the revival of letters, was not without an influence on Biblical archæology; but this branch of knowledge is chiefly indebted for its most valuable results to the systematic study of the Bible, and the cultivation of the long-neglected Hebrew language, which the interests of the Reformation both needed and called forth. It was not, however, till within the last century that the intelligent spirit which had been applied to the examination of classical antiquity in Germany, so directed the attention of Oriental scholars to the true way of prosecuting and developing a knowledge of Hebrew and Christian antiquities, as to bring forth treatises on the subject which can be regarded as satisfactory in the present advanced state of general scholarship.

In no one thing has the mental activity of recent times contributed more to the science of Biblical antiquities than by leading well-informed travellers to penetrate into Eastern countries, especially Syria, since, by communicating to the world the fruits of their enterprise, they have been enabled to present to no small extent a picture of what these lands and their inhabitants must have been of old, permanence being one of the chief characteristics of the Oriental mind. From Shaw (*Travels in Barbary and the Levant*) and Harmer (*Observations on various Passages of Scripture*) down to the invaluable work recently published by Professor Robinson (*Biblical Researches in Palestine*, 1841), a numerous series of publications have been put forth, which have contributed to throw very great light on Jewish and Christian antiquity.

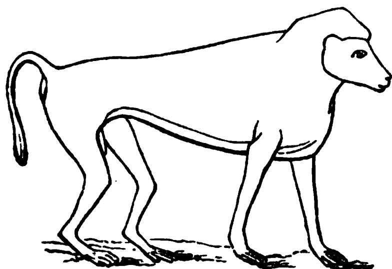
The earliest treatise in the English language expressly on the subject of Jewish antiquities was written by Th. Godwyn, B.D. (*Moses and Aaron, Civil and Ecclesiastical Rites used by the Ancient Hebrews observed*, &c. 4to. 1614). This work passed through many editions in England; was translated into Latin by J. H. Reiz (1679): furnished with a preface and two dissertations by Witsius (1690); was illustrated, amended, and enlarged by Hottinger (1710); and further annotated on by Carpzovius, 1748. Considering the age in which it appeared, Godwyn's work well deserved the reputation which it gained: and for a condensed, but accurate and learned view of the subject on which it treats, may be still studied with advantage. In 1724-5, Thomas Lewis gave to the public his *Origines Hebrææ, or Antiquities of the Hebrew Republic*, 4 vols. 8vo., which is a very elaborate and carefully compiled treatise, composed of materials drawn from the best authorities, both Jewish and Christian. A work of much value, as affording fuller views on some topics, and written in an easy style, is a posthumous publication by Dr. Jennings, entitled *Jewish Antiquities, or a Course of Lectures on the three First Books of Godwyn's Moses and Aaron*, London, 1766; edited, with a preface of some value, by Philip Furneaux. Fleury's work (Dr. Adam Clarke's edition) on *The Manners of the Ancient Israelites, containing an Account of the peculiar Customs, Laws, Policy, and Religion of the Israelites*, offers a pleasing and useful introduction to the study of the Old Testament Scriptures. A valuable and (for ordinary purposes) complete treatise may be found by the English student in *Biblical Antiquities*, by John Jahn, D.D., translated by T. C. Upham; reprinted from the American translation, at Oxford in 1836, and at London in 1841. Those who wish to enter more fully into the subject may consult the original, of which the foregoing is an abridgment (*Biblisches Archäologie*). A carefully compiled and well-written work may be found in *The Antiquities of the Jews from authentic Sources, and their Customs illustrated by Modern Travels*, by W. Brown, D.D. 2 vols. 8vo. Lond. 1820. Much important matter is presented in *Academical Lectures on the Jewish Scriptures and Antiquities*, by J. G. Palfrey, D.D. LL.D. 2 vols. 8vo. Boston (U. S.), 1840.

Without attempting to enumerate the several works which German scholars have produced on the subject, we may mention as worthy of special attention, G. L. Bauer's *Kurzgefasstes Lehrbuch der Hebr. Alterthümer des A. u. N. T.*; the second edition, by E. F. K. Rosenmüller, Leipsic, 1835, should be obtained; J. Mt. A. Scholz's *Handbuch der Bibl. Archäologie*, Bonn u. Wien, 1834. De Wette (*Lehrbuch der Hebr. Jüdisch. Archäologie*, Leips. 1830) has also published a work on the subject which has reached a second edition, and possesses no few of the excellencies which characterise the writings of its accomplished author.

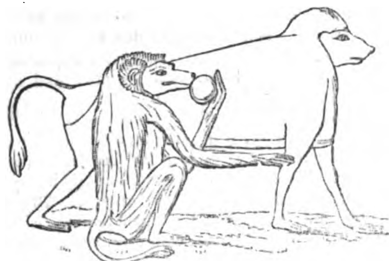
Helon's Pilgrimage to Jerusalem may serve as a connecting link between Jewish and Christian antiquities, being almost equally useful for both, as it presents a picture of Judaism in the century which preceded the advent of our Saviour. The English translation (by the Rev. John Kenrick, M.A.) from the German original is accompanied by valuable notes and a preface, in which may be found a brief outline of the sources of Biblical archæology. The work is conceived and executed in the form of a story or novel, and possesses no ordinary interest, independently of its high theological value, as affording a living picture of the customs, opinions, and laws of the Jewish people. In French there is a somewhat similar work by M. de Montbron, under the unsuitable title of *Essais sur la Littérature des Hébreux*, 4 tomes, 12mo. Paris, 1819, in which a number of short tales illustrative of ancient Hebrew usages and opinions, are prefaced by a large and elaborate Introduction, and followed by a great number of learned and curious notes.

Among the fathers of the Christian church, Jerome, who was long resident in Palestine, has left in various works very important information

respecting the geography, natural history, and customs of the country. Most of the fathers, indeed, furnish, directly or indirectly, valuable notices respecting Christian antiquity, and in a body constitute the source whence for the most part writers and scholars of later ages have drawn their materials. The reader may with advantage consult *Some Account of the Writings and Opinions of Clement of Alexandria*, by John, Bishop of Lincoln, 1835; also, *Some Account of the Writings and Opinions of Justin Martyr*, by the same, Cambridge, 1829. A useful compendium, as giving specimens of the writings, and therein views of the opinions, manners, rites, and observances of the early Christian church, may be found in *Bibliothèque Choisie des Pères de l'Eglise Grecque et Latine*, par M. N. S. Guillon, Paris, 1828.



For a long period after the revival of learning the subject of Christian antiquities received no specific attention, but was treated more or less summarily in general histories of the Church of Christ; as, for instance, in the great Protestant work, *Ecclesiast. Historia per aliquot viros in urbe Magdeburg*, 1559-74; and on the part of the Catholics, by Baronius, *Annales Ecclesiast. à Christo nato ad annum* 1198 (Rom. 1558). If any exception is to be made to this general statement, it is on behalf of Roman Catholic writers, whose works, however, are too inaccurate and prejudiced to be of any great value in these times. The first general treatise on Christian antiquity proceeded from the pen of an English divine, Jos. Bingham, *Origines Ecclesiasticæ, or the Antiquities of the Christian Church*, London, 1708-22, 10 vols. 8vo.; which was translated into Latin by Grischow (1738), and into German (1778). The writer was, from an early period of his life, a diligent student of Christian antiquity, as exhibited in the writings of the fathers; and having filled his mind with the copious materials which he there met with, he undertook 'to give such a methodical account of the antiquities of the Christian church, as others have done of the Greek and Roman and Jewish antiquities; not by writing an historical or continued chronological account of all transactions as they happened in the church, but by reducing the ancient customs, usages, and practices of the church under certain proper heads. 'I was moved with a sort of emulation to see so many learned men employed in publishing the antiquities of Greece and Rome, whilst we had nothing that could be called a complete collection of the antiquities of the church' (Preface, ed. London, 1834). The work corresponds in no slight degree to the learning, care, and time bestowed upon it; but, besides being somewhat in the rear of the learning of the day, it has its value diminished by the High Church notions of the writer, as well as by the strength of his prejudices against the Roman Catholics. A useful compendium, written in a liberal spirit, and compiled chiefly from German sources, has lately been published in this country (*A Manual of Christian Antiquities*, by Rev. J. E. Riddle, M.A. London, 1839), in which (Preface, § 2, and Appendix H) may be found a concise but detailed account of the literature of Christian antiquities. A more complete catalogue of works, embracing each particular branch, is given in Winer's valuable book, *Handbuch der Theologischen Literatur*, 2 vols. 8vo. Leipsig, 1838. Among the best Continental treatises on the general subject of Christian antiquities may be mentioned those of Augusti, *Handbuch d. Christl. Archäol.*, Leipsig, 1836-7, 3 vols. 8vo.; Böhmer, *Die Christl.-kirchl. Alterthum Wissenschaft*, Bresl. 1836, 8vo.; Siegel, *Handbuch der Christl.-kirchl. Alterthümer*, Leipsig, 1836-7, 3 vols. 8vo. —J. R. B.



ANTONIA, a fortress in Jerusalem, on the north side of the area of the temple, often mentioned by Josephus in his account of the later wars of the Jews. It was originally built by the Maccabees, under the name of Baris, and was afterwards rebuilt with great strength and splendour by the first Herod. In a more particular description, Josephus states (*De Bell. Jud.* v. 5. 8) that the fortress stood upon a rock or hill 50 cubits high, at the north-west corner of the temple area, above which its wall rose to the height of 40 cubits. Within it had the extent and appearance of a palace, being divided into apartments of every kind, with galleries and baths, and broad halls or barracks for soldiers; so that, as having everything necessary within itself, it seemed a city, while in magnificence it resembled a palace. At each of the four corners was a tower. Three of these were 50 cubits high; but the fourth, at the south-east corner, was 70 cubits high, and overlooked the whole temple, with its courts. The fortress communicated with the northern and western porticoes of the temple area, and had flights of stairs descending into both, by which the garrison could at any time enter the courts of the Temple, and prevent tumults. On the north it was separated from the hill Bezetha by a deep trench, lest it should be approachable from that quarter, and the depth of the trench added much to the apparent elevation of the towers (*De Bell. Jud.* v. 4, 2).

This fortress is called ἡ παρεμβολή in the New Testament (Acts xxi. 34, 37), and is the 'castle' into which Paul was carried from the temple by the soldiers: from the stairs of which he addressed the people collected in the adjacent court (Acts xxi. 31-40). Professor Robinson (*Researches*, i. 422) conceives that the deep and otherwise inexplicable excavation called 'the pool of Bethesda' was part of the trench below the north wall of this fortress; in which case, as he remarks, its extent must have been much more considerable than has usually been supposed.

APE (קוֹף *koph;* Gr. κῆπος, κῆβος, κῆφος; whence the Latinized name *Cephus*). In the Hebrew and Semitic cognate tongues, and in the classical languages, these names, under various modifications, designate the Simiadæ, including, no doubt, species of Cercopithecus, Macacus, and Cynocephalus, or Guenons, apes, and baboons; that is, all the animals of the quadrumanous order known to the Hebrews, Arabs, Egyptians, and the classical writers. Accordingly, we find Pliny and Solinus speaking of Ethiopian Cephi exhibited at Rome: and in the upper part of the celebrated Prænestine mosaic representing the inundation of the Nile, figures of Simiadæ occur in the region which indicates Nubia; among others, one in a tree, with the name KHIΠEN beside it, which may be taken for a Cercopithecus of the Guenon group. But in the triumphal procession of Thothmes III.

at Thebes, nations from the interior of Africa, probably from Nubia, bear curiosities and tribute, among which the Camelopardalis or Giraffe and six quadrumana may be observed. The smallest

[Apes from Rosellini's Monumenti dell' Egitto.]

and most effaced animals may be apes, but the others, and in particular the three figured and coloured from careful drawings, in Plate xxi. of Rosellini's work, are undoubtedly Macaci or Cynocephali, that is, species of the genus baboon, or baboon-like apes. Naturalists and commentators, not deterred by the interminable list of errors which the practice has occasioned, are often unnecessarily anxious to assign the names of animals noticed in Scripture and in the ancient classics, to species characterized by the moderns; although the original designations are to be taken in a familiar sense, and often extend even beyond a generical meaning. In the instance before us we have the futility of this practice fully exemplified; for Buffon presumed his Mona (Cercopithecus Mona) to be the Kebos of the Greeks, and not without plausibility, since the western Arabs, it seems, apply the word Moune to all long-tailed apes. Linnæus referred Cephus to his Simia Cephus, now Cercopithecus Cephus, or Moustache Guenon, of a different group; while Lichtenstein referred it to his Simia, or rather, as now arranged, Cercopithecus Diana. But as none of these are known to inhabit eastern Africa, it is more probable that the Keipen of the Prænestine mosaic is in reality the Cercopithecus Griseovirides, or Grivet of Cuvier, which, with equal pretensions in regard to form, has the advantage of being a native of Ethiopia and Nubia, and belongs, with the two last mentioned, to the group which has been called Callitrix.

But these considerations do not serve to point out the Koph of Scripture; for that animal, named only twice (1 Kings x. 22, and 2 Chron. ix. 21), is in both cases associated with תוכיים, *Thoukiim*, perhaps erroneously rendered 'peacocks.' Now neither peacocks nor pheasants are indigenous in Africa: they belong to India and the mountains of high Asia, and therefore the version 'peacocks,' if correct, would decide, without doubt, not only that Koph denotes none of the Simiadæ above noticed, but also that the fleet of Tarshish* visited India or the Australasian islands. Thoukiim, apparently meaning crested, indicates birds, perhaps parrots, but cannot refer to the pintado or Guinea hen, the Numidia of naturalists and the Meleagris of the ancients; nor to the Pterocles or Sandgrouse, both being familiarly known in Upper Egypt, and the last mentioned, in particular, abundant in Arabia and Palestine. The interpretation proposed by Hase, which would convert Kophim into Succim—*dwellers in caves*, is inadmissible, such a description being quite inapplicable to long-tailed monkeys. Like the whole order of quadrumana, they are constituted not for troglodyte, but arboreal life, or to be dwellers in trees; baboons alone venturing beyond woody covers in steep rocky situations, and sometimes finding shelter in clefts. For these reasons we conclude that the Hebrew *koph*, and names of the same root, were, by the nations in question, used generically in some instances and specifically in others, though the species were not thereby defined, nor on that account identical.

Baboons, we have already shown, were known to the Egyptians, and cannot well have escaped observation among the people of Palestine, since they resided close upon the great caravan-routes, which, as is well known, were frequented from the earliest antiquity by showmen exhibiting wild beasts. In Egypt, however, a baboon was the type of some abstract power in nature or in metaphysics; as such the animal was idolized, and figures of a cynocephalus were invariably placed on the summit of weighing-scales, where they still appear on the monuments.

[Macacus Arabicus.]

If there be truth, as the following authorities show, in the existence of a large ape or baboon in Yemen, and even in Mesopotamia, the untractable and brutal character of the whole genus would be sufficient to sanction the Arabic name *Saadan*, and the Hebrew שׂעירים, *Sadim;* which indicate the satyrs of the desert, noticed in Mr. Rich's *Memoir on the Ruins of Babylon*, p. 30,

* If the voyage extended to the Spice Islands, then, indeed, both peacocks and ourang-outans were at hand.

where they are denominated *Sied Assad*, and described as found in woody places near Semana, on the Euphrates. Thus we have the שְׂעִירִם, *Sayrim*, or 'hairy ones' of Levit. xvii. 7, in accordance with Pliny, who conceived satyrs to be large apes. In the Prænestine mosaic, before quoted, a baboon is figured which, we are assured, had the name CATYPOC, or Satyrus, by its side.* The only species of ape of the baboon form known in Arabia is the Mocko of Edwards, noticed in our illustrated series of drawings as Macacus Arabicus, a species nearly allied to Cynocephalus Hamadryas on the one hand, and to Mac. Silenus on the other—all three powerful, fierce, and libidinous animals. Mac. Arabicus may ultimately prove to be a true baboon, and the same as Simia cynomolgus of Hasselquist. It is a remarkable species for stature and aspect, having the dog-like nose and approximating eyes of baboons; the skin of the face of a reddish colour; the snout, lips, and chin black; the forehead low, and the sides of the head furnished with bushy, long, white hair; the breast, arms, and shoulders similarly covered, but the loins and lower extremities of a fine chestnut; the tail of the same colour, of no great length, tufted at the end, and all the hands black. It is found from the straits of Bab-el-Mandeb, through Southern Arabia to the Euphrates, and even beyond the junction of that river with the Tigris. Like other large and formidable Simiadæ, it is less solicitous about the vicinity of trees, because it is armed with powerful canines; holds its enemy firmly grasped, and fights, not singly, but assisted by the whole troop: it frequents scrubby underwood near water, but becomes more rare eastward of Yemen.† Comparing the characters of this species, we find it by configuration, colours, and manners peculiarly adapted to the purposes of idolatry in its grossest and most debasing aspect. The Hebrew people, already familiar with a similar worship in Egypt, may have copied the native tribes in the wilderness, and thus drawn upon themselves the remonstrance in Levit. xvii. 7, where the allusion to these animals is very descriptive, as is that in Isa. xiii. 21; and again, xxxiv. 14, where the image is perfect, when we picture to ourselves the 'hairy ones' lurking about the river in the juniper and liquorice jungle, as described by Mr. Rich.

It is not unlikely that the baboon idol may have had goat's horns, since we find the same attribute on rams' heads in Egypt; on lions' heads on coins of Tarsus, and on horses' and elephants' heads on medals of Syrian kings. The Greek mythologists, ignorant of the baboon figure, may have preferred an imaginary compound of man and goat to that of the cynocephalus, which they confounded with the hyæna, or, in their love of ideal beauty, may have considered it too disgusting even for an idol. Perhaps the most ancient form of the Arabian Urolalt was that of a baboon, male or female, the name apparently having some reference to red, and to the Indian monkey-worship (see Gesner, *s. v.* 'Hyæna'). Urolalt and monkey-worship are connected with a solar mythus.—C. H. S.

* This name does not occur in the copies in our possession, and, we fear, was lost in the breaking up of the mosaic, which is now preserved fragmentally in different museums.

† See Edwards's *Gleanings*, and Pennant's *History of Quadrupeds*, 4to. vol. i. p. 195. The information in the text is derived from an officer who was in the Honourable East India Company's surveying service.

APELLES (Ἀπελλῆς), a Christian at Rome, whom Paul salutes in his Epistle to the Church there (Rom. xvi. 10), and calls τὸν δόκιμον ἐν Χριστῷ, 'approved in Christ,' *i. e.* an approved Christian. Origen doubts whether he may not have been the same person with Apollos; but this is far from likely [APOLLOS]. According to the old church traditions Apelles was one of the seventy disciples, and bishop either of Smyrna or Heracleia (Epiph. *Cont. Hæres.* p. 20; Fabrici *Lex. Evangelii*, pp. 115, 116, &c.). The name itself is notable from Horace's 'Credat Judæus Apella, non ego' (*Sat.* i. 5), by which he less probably means a circumcised Jew in general, as many think, than a particular Jew of that name, well-known at Rome.

APHARSACHITES or APHARSATHCHITES (אֲפַרְסְכָיֵא or אֲפַרְסַתְכָיֵא; Sept. Ἀφαρσαθαχαῖοι), the name of the nation to which belonged one portion of the colonists whom the Assyrian king planted in Samaria (Ezra iv. 9; v. 6). Schulthess (*Parad.* p. 362) identifies the 'Apharsachites' with the Persian, or rather Median 'Paratacene' of the Greek geographers (Strabo xi. 522; xv. 732; Plin. xvi. 29). This conclusion is strengthened by the fact that the A is often prosthetic in Strabo; as in xv. 764, where the names Mardi and Amardi are interchanged.

APHEK (אֲפֵק; Sept. Ἀφέκ); the name signifies *strength*; hence a citadel or fortified town. There were at least three places so called, viz.:

1. APHEK, a city in the tribe of Asher (Josh. xiii. 4; xix. 30), called אפיק in Judg. i. 33, where we also learn that the tribe was unable to gain possession of it. This must be the same place with the Ἄφακα which Eusebius (*Constant.* iii. 55) and Sozomen (pp. 2, 5) place in Lebanon, on the river Adonis, where there was a famous temple of Venus. A village called Afka is still found in Lebanon, situated at the bottom of a valley, and may possibly mark the site of this Aphek (Burckhardt, i. 70; Richter, p. 107).

2. APHEK, a town near which Benhadad was defeated by the Israelites (1 Kings xx. 26, *sq.*), which seems to correspond to the Aphaca of Eusebius (*Onomast.* in Ἄφακα), situated to the east of the Sea of Galilee, and which is mentioned by Burckhardt, Seetzen, and others under the name of Feik.

3. APHEK, a city in the tribe of Issachar, not far from Jezreel, where the Philistines twice encamped before battles with the Israelites (1 Sam. iv. 1; xxix. 1; comp. xxviii. 4). Either this or the first Aphek, but most probably this, was the *Aphek* mentioned in Josh. xii. 18, as a royal city of the Canaanites.

APHEKAH (אֲפֵקָה), a town in the mountains of Judah (Josh. xv. 23).

APHEREMA (Ἀφαίρεμα), one of the three toparchies added to Judæa by the kings of Syria (1 Macc. xi. 34). This is perhaps the Ephræm or Ephraim mentioned in John xi. 54.

APHSES, head of the eighteenth sacerdotal family of the twenty-four into which the priests were divided by David for the service of the temple (1 Chron. xxiv. 15).

APOCRYPHA (ἀπόκρυφα, sc. βιβλία, *hidden, secreted, mysterious*), a term in theology, applied in various senses to denote certain books claiming a sacred character. The word occurs Mark iv. 22: 'There is nothing hid, which shall not be manifested, neither was anything kept secret (ἀπόκρυφον), but that it should come abroad;' also Luke viii. 17; and Col. ii. 3: 'In whom are hid (ἀπόκρυφοι) all the treasures of wisdom and knowledge.' It is first found, as denoting a certain class of books, in Clemens Alexandrinus, *Stromata*, 13, c. 4, ἐκ τινὸς ἀποκρύφων.

In the early ages of the Christian Church this term was frequently used to denote books of an uncertain or anonymous author, or of one who had written under an assumed name. Its application, however, in this sense is far from being distinct, as, strictly speaking, it would include *canonical* books whose authors were unknown or uncertain, or even *pseudepigraphal.* 'Let us omit,' says St. Augustine, 'those fabulous books of Scripture, which are called *apocryphal*, because their secret origin was unknown to the fathers. We do not deny that Enoch, the seventh from Adam, wrote something, as Jude asserts in his canonical Epistle that he did; but it is not without a purpose that they are not found in the Jewish canon preserved in the Temple. The books, therefore, which are published in his name are rightly judged by prudent men not to be his, as more recent works were given out as written by apostles, which, however, have been separated, upon diligent investigation, from the canon of Scripture, under the name of *apocryphal.*' And again: 'From such expressions as "The Book of the Wars of the Lord" men have taken occasion to forge books called *apocryphal.*' And in his book against Faustus, he says: 'Apocryphal books are not such as are of authority, and are kept secret; but they are books whose original is obscure, and which are destitute of proper testimonials, their authors being unknown, and their characters either heretical or suspected.' Origen also, on Matt. xxii. had applied the term apocryphal in a similar way: 'This passage is to be found in no canonical book' (*regulari*, for we have Origen's work only in the Latin translation by Rufinus), 'but in the *apocryphal* book of Elias' (*secretis Eliæ*). And, 'This is plain, that many examples have been adduced by the apostles and evangelists, and inserted in the New Testament, which we do not read in the canonical Scriptures which we possess, but which are found in the *Apocrypha*' (Origen, *Præf. in Cantic.*). So also Jerome, referring to the words (Eph. v. 14) 'Awake, thou that sleepest, and arise from the dead,' observes that 'the apostle cited this from *hidden* (reconditis) prophets, and such as seem to be apocryphal, as he has done in several other instances.' Epiphanius thought that this term was applied to such books as were not placed in the Ark of the Covenant, but put away in some other place (see Suicer's *Thesaurus* for the true reading of the passage in this Father). Under the term *apocryphal* have been included books of a religious character, which were in circulation among private Christians, but were not allowed to be read in the public assemblies; such as 3 and 4 Esdras, and 3 and 4 Maccabees.

In regard to the New Testament, the term has been usually applied to books invented by heretics to favour their views, or by Catholics under fictitious signatures. Of this description were many spurious or apocryphal gospels (which see). It is probably in reference to such that Basil, Cyril of Jerusalem, and Jerome gave cautions against the reading of apocryphal books; although it is possible, from the context, that the last-named Father alludes to the books which were also called *Ecclesiastical*, and afterwards *Deutero-canonical.* The following passage from his Epistle to Læta, on the education of her daughter, will serve to illustrate this part of our subject:—'Let her first learn the Psalter, and give her hours of leisure to those holy songs. From the Proverbs of Solomon she will gather practical instruction; Ecclesiastes will teach her to despise the world; in Job she will find examples of virtue and endurance. Then let her go to the Gospels, and never lay them down. The Acts of the Apostles, with the Epistles, must be imbibed with all the ardour of her heart. When her mind is thoroughly stored with these treasures, she may commit the Prophets to her memory, together with the Heptateuch, and the books of Kings and Chronicles, with those of Esdras and Esther. The Song of Solomon she may read last without danger: if she reads it earlier, she may not discern that a spiritual union is celebrated under carnal words. All *apocryphal* books should be avoided; but if she ever wishes to read them, *not to establish the truth of doctrines, but with a reverential feeling for the truths they signify*, she should be told that they are not the works of the authors by whose names they are distinguished, that they contain much that is faulty, and that it is a task requiring great prudence to find gold in the midst of clay. The works of Cyprian should ever be in her hands. She may run over the epistles of Athanasius, and the books of Hilary, without any danger of stumbling. Let her pleasure be in such treatises and writers of such character as most evince the piety of an unwavering faith. All other authors she should read to judge of what they say, not simply to follow their instructions.' And to the same effect Philastrius:—'Among whom are the Manichees, Gnostics [&c.], who, having some *apocryphal* books under the apostles' names (*i. e.* some separate Acts), are accustomed to despise the canonical Scriptures; but these *secret* Scriptures, that is, *apocryphal*, though they ought to be read by the perfect for their morals, ought not to be read by all, as ignorant heretics have added and taken away what they wished.' He then proceeds to say that the books to which he refers are the *Acts of Andrew*, written by 'the disciples who were his followers,' &c.: *Quos conscripserunt discipuli tunc sequentes apostolum* (*Hæres.* 40).

In the *Bibliothèque Sacrée*, by the Rev. Dominican Fathers Richard and Giraud (Paris, 1822), the term is defined to signify—(1) anonymous or pseudepigraphal books; (2) those which are not publicly read, although they may be read with edification in private; (3) those which do not pass for authentic and of divine authority, although they pass for being composed by a sacred author or an apostle, as the *Epistle of Barnabas*;

and (4) dangerous books composed by ancient heretics to favour their opinions. They also apply the name 'to books which, after having been contested, are put into the canon by consent of the churches, as Tobit, &c.' And Jahn applies it in its most strict sense, and that which it has borne since the fourth century, to books which, from their inscription, or the author's name, or the subject, might easily be taken for inspired books, but are not so in reality. It has also been applied, by Jerome, to certain books not found in the Hebrew canon, but yet publicly read from time immemorial in the Christian church for edification, although not considered of authority in controversies of faith. These were also termed Ecclesiastical books, and consisted of the books of Tobit, Wisdom, Ecclesiasticus, Baruch, the two first books of Maccabees, the seven last chapters (according to Cardinal Hugo's division) of the book of Esther, and those (so called) parts of the book of Daniel which are not found in Hebrew, viz. the Song of the Children, the Speech of Azariah, the History of Susannah, and the Fable (as Jerome calls it) of Bel and the Dragon. These have been denominated, for distinction's sake, the deutero-canonical books, in as much as they were not in the original or Hebrew canon. In this sense they are called by some the Antilegomena of the Old Testament. 'The uncanonical books,' says Athanasius, or the author of the *Synopsis*, 'are divided into *antilegomena* and *apocrypha*' [DEUTERO-CANONICAL].

Of Spurious and Apocryphal Books, as distinct from Antilegomena or Ecclesiastical.—Among this class are doubtless to be considered the 3rd and 4th books of Esdras; and it is no doubt in reference to these that, in his letter to Vigilantius, Athanasius speaks of a work of Esdras which he says that he had never even read. Playing upon the name of Vigilantius, he adds, 'You sleep vigilantly (tu vigilans dormis), and write in your sleep; proposing to me an *apocryphal* book, which is read by you and others like you, under the name of *Esdras*, wherein it is written that no one should be prayed for after his death (*See* 4 Esdras, viii. 36-41).....Why take in hand what the Church does not receive? Read, if you like, all the feigned revelations of all the patriarchs and prophets, and when you have learned them, sing them in the women's weaving-shops, and propose them to be read in your taverns, that you may the more readily by them allure the unlettered rabble to drink.'

Of the same character are also the Book of Enoch, the Testament of the Twelve Patriarchs, the Assumption of Moses, &c.; which, as well as 3 and 4 Esdras, being by many considered as the fictions of Christians of the second and third centuries, it is doubtful whether they ought to be classed in the Apocrypha of the Old or of the New Testament. Origen, however, believed the New Testament to have contained citations from books of this kind written before the times of the apostles; and, in reference to such, observes, in his preface to the *Canticles*, 'This, however, is manifest, that many passages are cited either by the apostles or the evangelists, and inserted in the New Testament, which we do not read in those Scriptures of the Jews which we call canonical, but which are nevertheless found in *apocryphal* books, or are taken from them. But this will give no authority to apocryphal writings, for the bounds which our fathers have fixed are not to be removed; and possibly the apostles and evangelists, full of the Holy Ghost, might know what should be taken out of those Scriptures and what not. But we, who have not such a measure of the Spirit, cannot, without great danger, presume to act in that manner.' Then, in his *Letter to Apianus*, he observes, that there were many things kept from the knowledge of the public, but which were preserved in the hidden or *apocryphal* books, to which he refers the passage (Heb. xi. 37), 'They were sawn asunder.' Origen probably alludes here to that description of books which the Jews called גנוזים, a word of the same signification with *apocrypha*, and applied to books laid aside, or not permitted to be publicly read, or considered, even when divinely inspired, not fit for indiscriminate circulation: among the latter were the first chapter of Genesis, the Song of Solomon, and our last eight chapters of the prophet Ezekiel.

The books which we have here enumerated, such as the Book of Enoch, &c., which were all known to the ancient Fathers, have descended to our times; and, although incontestably spurious, are of considerable value from their antiquity, as throwing light upon the religious and theological opinions of the first centuries. The most curious are the 3rd and 4th books of Esdras, and the Book of Enoch, which has been but recently discovered, and has acquired peculiar interest from its containing the passage cited by the apostle Jude [ENOCH]. Nor are the apocryphal books of the New Testament destitute of interest. Although the spurious Acts extant have no longer any defenders of their genuineness, they are not without their value to the Biblical student, and have been applied with success to illustrate the style and language of the genuine books, to which they bear a close analogy. The American translator of Mosheim's *Ecclesiastical History* terms them 'harmless and ingenious fictions, intended either to gratify the fancy or to silence the enemies of Christianity.'

Some of the apocryphal books have not been without their defenders in modern times. The *Apostolical Canons* and *Constitutions*, and the various *Liturgies* ascribed to St. Peter, St. Mark, &c., and published by Fabricius, in his *Codex Apocryphus Novi Testamenti*, were considered by the learned and eccentric William Whiston, and the no less learned Grabe, to be of equal authority with any of the confessedly genuine apostolic compositions (see Whiston's *Primitive Christianity* and Grabe's *Spicilegium*).

They are, however, regarded by most as originally not of an earlier date than the second century, and as containing interpolations which betray the fourth or fifth: they can, therefore, only be considered as evidence of the practice of the Church at the period when they were written. They have generally been appealed to by the learned as having preserved the traditions of the age immediately succeeding the apostolic; and, from the remarkable coincidence which is observable in the most essential parts of the so-called Apostolic Liturgies, it is by no means improbable that, notwithstanding their interpolations, they contain the leading portions of the most ancient Christian forms of worship.

Most of the apocryphal Gospels and Acts

noticed by the fathers, and condemned in the catalogue of Gelasius, which are generally thought to have been the fictions of heretics in the second century, have long since fallen into oblivion. Of those which remain, although some have been considered by learned men as genuine works of the apostolic age, yet the greater part are universally rejected as spurious, and as written in the second and third centuries. A few are, with great appearance of probability, assigned to Leucius Clarinus, supposed to be the same with Leontius and Seleucus, who was notorious for similar forgeries at the end of the third century. The authorship of the *Epistle of Barnabas* is still a matter of dispute; and there appears but too much reason to believe that there existed grounds for the charge made by Celsus against the early Christians, that they had interpolated or forged the ancient Sibylline Oracles.

In the letter of Pope Innocent I. to St. Exupere, bishop of Toulouse, written about the year 405, after giving a catalogue of the books forming the canon of Scripture (which includes five books of Solomon, Tobit, and two books of Maccabees), he observes:—'But the others, which are written under the name of Matthias, or of James the Less, or those which were written by one Leucius under the name of Peter and John, or those under the name of Andrew by Xenocheris and Leonidas the philosopher, or under the name of Thomas; or if there be any others, you must know that they are not only to be rejected, but condemned.' These sentiments were afterwards confirmed by the Roman Council of seventy bishops, held under Pope Gelasius, in 494, in the acts of which there is a long list of apocryphal Gospels and Acts, the greater part of which are supposed to have perished. The acts of this council, however, are not generally considered to be genuine.

But, whatever authority is to be ascribed to these documents, it cannot be denied that the early Church evinced a high degree of discrimination in the difficult task of distinguishing the genuine from the spurious books. 'It is not so easy a matter,' says the learned Jeremiah Jones, 'as is commonly imagined, rightly to settle the canon of the New Testament. For my own part, I declare, with many learned men, that in the whole compass of learning I know no question involved with more intricacies and perplexing difficulties than this' (*New and Full Method*, vol. i. p. 15). Referring to the same subject, the pious Richard Baxter had also observed, 'Few Christians among us, for ought I find, have any better than the Popish implicit faith in this point, nor any better arguments than the Papists have to prove the Scripture to be the word of God. They have received it by tradition. Godly ministers and Christians tell them so: it is impious to doubt of it; therefore they believe it...... It is strange to consider how we all abhor that piece of Popery, as most injurious to God of all the rest, which resolves our faith into the authority of the Church, and yet that we do content ourselves with the same kind of faith, only with this difference—the Papists believe Scripture to be the word of God, because their Church saith so; and we, because our Church or our leaders say so.... Many a thousand do profess Christianity, and zealously hate the enemies thereof, upon the same grounds, to the same end, and from the same corrupt principles, as the Jews did hate and kill Christ. It is the religion of the country, where every man is reproached that believes otherwise. ..... Had they been born and bred in the religion of Mahomet, they would have been as zealous for him.' (*Saint's Rest*, p. 2.) 'If the question be,' says Mr. Jones, 'why Barnabas's Epistle be rejected and Jude's received—why the Gospel of Peter is excluded and the Epistle of Peter admitted into the canon as the word of God, &c., alas! how little shall we have given in answer, unless what Baxter says, "We believe as the Church does!"' Mr. Jones conceives that testimony and tradition are the principal means of ascertaining whether a book be canonical or apocryphal. Inquiries of this kind, however, must of necessity be confined to the few; and it is only to those who have time and opportunity that the foregoing observations can apply. The mass of Christians, who have neither time nor other means of satisfying themselves, must confide, in questions of this kind, either in the judgment of the learned, or the testimony at least, if not the authority, of the Church; and it ought to be a matter of much thankfulness to the private Christian, that the researches of the most learned and diligent inquirers have conspired, in respect to the chief books of Scripture, in adding the weight of their evidence to the testimony of the Church Universal.

The following are the principal apocryphal (or spurious) books of the Old Testament, which have descended to our times. The greater number of them can scarcely be considered as properly belonging to the Apocrypha of the Old Testament, as they have been most probably written since the Christian era, and not before the second century:—Third and fourth Esdras, the Book of Enoch, the apocryphal book of Elias the Prophet, the third, fourth, and fifth books of Maccabees (received by the Greek Church), the Ascension of Isaiah, the Assumption of Moses, with a few others.

The best accounts of the apocryphal books will be found in Fabricii *Codex Pseudepigraphus V.T.* Hamburg and Leipzig, 1713 and 1741, and *Codex Apocryphus N. T.*, Hamburg, 1713-1722; *Auctarium Codicis Apocryphi N. T. Fabriciani*, edidit And. Birch, Copenhagen, 1804. *A New and Full Method of Settling the Canon of the N. T.*, by the Rev. Jeremiah Jones, Oxford, 1726—last edition, Oxford, 1827. Du Pin, *Prolegomena*, Amst. 1701, and *Canon of the Old and New Testaments*, London, 1700; and especially *Codex Apocryphus N. T., e libris ineditis maximè Gallicanis, Germanicis, et Italicis, collectus, recensitus, notisque et prolegomenis illustratus, opera et studio* T. C. Thilo, tom. i. Lips. 1832, 8vo.: the remaining two volumes are not yet published. Vol. i. contains: 1. The history of Joseph the Carpenter, Arab. and Lat. 2. The Gospel of the Infancy. 3. The Protevangelion of James, and the Gospel of Thomas the Israelite, Greek and Lat. 4. The Gospel of the Nativity of Mary, and the History of the Nativity of Mary and the Saviour, Lat. 5. The Gospel of Marcion, collected by Dr. Hahn, from ancient Greek MSS. 6. The Gospel of Nicodemus, Gr. and Lat. 7. Apprehension and Death of Pilate, Gr. 8. The mutilated and altered Gospel of St. John, preserved in the archives of the Templars of St. John of Jerusalem in Paris,

with Griesbach's text. 9. An Apocryphal Book of the Apostle John. Lat. [Acts, Gospels, Epistles, and Revelations, *Spurious*].—W. W.

APOLLONIA (Ἀπολλωνία), a city of Macedonia, in the province of Mygdonia (Plin. iv. 17), situated between Amphipolis and Thessalonica, thirty Roman miles from the former, and thirty-six from the latter (*Itiner. Anton.*). St. Paul passed through Amphipolis and Apollonia in his way to Thessalonica (Acts xvii. 1).

APOLLONIUS. Three persons of this name occur in the history of the Maccabees.—1. Apollonius, a general whom Antiochus Epiphanes sent into Judæa, and who took Jerusalem, but who was eventually defeated and slain by Judas Maccabæus, B.C. 166 (1 Macc. iii. 10, 11).—2. Apollonius, governor of Cœle-Syria, and general of Demetrius Nicanor, who was defeated by Jonathan on behalf of Alexander Balas, B.C. 148 (1 Macc. x. 69-76).—3. Apollonius, one of the governors left by Lysias in Judæa, after the treaty between the Jews and Antiochus Eupator (2 Macc. xii. 2) [Maccabees].

APOLLOS (Ἀπολλῶς), a Jew of Alexandria, is described as a *learned*, or, as some understand it, an *eloquent man* (ἀνὴρ λόγιος), well versed in the Scriptures and the Jewish religion (Acts xviii. 24). About A.D. 56 he came to Ephesus, where, in the synagogues, 'he spake boldly the things of the Lord, knowing only the baptism of John' (ver. 25); by which we are probably to understand that he knew and taught the doctrine of *a* Messiah, whose coming John had announced, but knew not that *Jesus* was the Christ. His fervour, however, attracted the notice of Aquila and Priscilla, whom Paul had left at Ephesus; and they instructed him in this higher doctrine, which he thenceforth taught openly, with great zeal and power (ver. 26). Having heard from his new friends, who were much attached to Paul, of that apostle's proceedings in Achaia, and especially at Corinth, he resolved to go thither, and was encouraged in this design by the brethren at Ephesus, who furnished him with letters of introduction. On his arrival there he was very useful in watering the seed which Paul had sown, and was instrumental in gaining many new converts from Judaism. There was perhaps no apostle or apostolical man who so much resembled Paul in attainments and character as Apollos. His immediate disciples became so much attached to him, as well nigh to have produced a schism in the Church, some saying, 'I am of Paul;' others, 'I am of Apollos;' others, 'I am of Cephas' (1 Cor. iii. 4-7, 22). There must, probably, have been some difference in their mode of teaching to occasion this; and from the First Epistle to the Corinthians it would appear that Apollos was not prepared to go so far as Paul in abandoning the figments of Judaism, and insisted less on the (to the Jews) obnoxious position that the Gospel was open to the Gentiles. There was nothing, however, to prevent these two eminent men from being perfectly united in the bonds of Christian affection and brotherhood. When Apollos heard that Paul was again at Ephesus, he went thither to see him; and as he was there when the first Epistle to the Corinthians was written (A.D. 59), there can be no doubt that the apostle received from him his information concerning the divisions in that church, which he so forcibly reproves. It strongly illustrates the character of Apollos and Paul, that the former, doubtless in disgust at those divisions with which his name had been associated, declined to return to Corinth; while the latter, with generous confidence, urged him to do so (1 Cor. xvi. 12). Paul again mentions Apollos kindly in Tit. iii. 13, and recommends him and Zenas the lawyer to the attention of Titus, knowing that they designed to visit Crete, where Titus then was. Jerome is of opinion (*Comment.* in loc.) that he remained at Crete until he heard that the divisions at Corinth had been healed by means of St. Paul's letter; and that he then returned to that city, of which he afterwards became bishop. This has an air of probability; and the authority on which it rests is better than any we have for the different statements which make him bishop of Duras, of Colophon, of Iconium (in Phrygia), or of Cæsarea.

APOSTLE (Gr. Ἀπόστολος, from ἀποστέλλω, *to send forth*). In Attic Greek the term is used to denote *a fleet*, or *naval armament*. It occurs only once in the Sept. (1 Kings xiv. 6), and there, as uniformly in the New Testament, it signifies *a person sent by another, a messenger*. It has been asserted that the Jews were accustomed to term the collector of the half-shekel, which every Israelite paid annually to the Temple, an apostle; and we have better authority for asserting that they used the word to denote one who carried about encyclical letters from their rulers. Œcumenius states that *ἀποστόλους δὲ εἰσέτι καὶ νῦν ἔθος ἐστὶν Ἰουδαίους ὀνομάζειν τοὺς ἐγκύκλια γράμματα παρὰ τῶν ἀρχόντων αὐτῶν ἀνακομιζομένους*, 'It is even yet a custom among the Jews to call those who carry about circular letters from their rulers by the name of apostles.' To this use of the term Paul has been supposed to refer (Gal. i. 1) when he asserts that he was 'an apostle, not of men, neither by men'—an apostle, not like those known among the Jews by that name, who derived their authority and received their mission from the chief priests or principal men of their nation. The import of the word is strongly brought out in John xiii. 16, where it occurs along with its correlate, 'The servant is not greater than his Lord, neither *he who is sent* (ἀπόστολος) greater than he who sent him.'

The term is generally employed in the New Testament as the descriptive appellation of a comparatively small class of men, to whom Jesus Christ entrusted the organization of his church and the dissemination of his religion among mankind. At an early period of his ministry 'he ordained twelve' of his disciples 'that they should be with him.' 'These he named apostles.' Some time afterwards 'he gave to them power against unclean spirits to cast them out, and to heal all manner of disease;' 'and he sent them to preach the kingdom of God' (Mark iii. 14; Matt. x. 1-5; Mark vi. 7; Luke vi. 13; ix. 1). To them he gave 'the keys of the kingdom of God,' and constituted them princes over the spiritual Israel, that 'people whom God was to take from among the Gentiles, for his name' (Matt. xvi. 19; xviii. 18; xix. 28; Luke xxii. 30). Previously to his death he promised to them the Holy Spirit, to fit them to be the founders and governors of the Christian church (John xiv. 16, 17, 26; xv. 26, 27; xvi. 7-15). After his resurrection he so-

lemnly confirmed their call, saying, Καθὼς ἀπέσταλκέ με ὁ Πατήρ, κἀγὼ πέμπω ὑμᾶς—'As the Father hath sent me, so send I you;' and gave them a commission to 'preach the gospel to every creature' (John xx. 21-23; Matt. xviii. 18-20). After his ascension he, on the day of Pentecost, communicated to them those supernatural gifts which were necessary to the performance of the high functions he had commissioned them to exercise; and in the exercise of these gifts, they, in the Gospel history and in their epistles, with the Apocalypse, gave a complete view of the will of their Master in reference to that new order of things of which he was the author. They 'had the mind of Christ.' They spoke 'the wisdom of God in a mystery.' That mystery 'God revealed to them by his Spirit,' and they spoke it 'not in words which man's wisdom teacheth, but which the Holy Ghost teacheth.' They were 'ambassadors for Christ,' and besought men, 'in Christ's stead, to be reconciled to God.' They authoritatively taught the doctrine and the law of their Lord; they organized churches, and required them to 'keep the traditions,' *i. e.* the doctrines and ordinances *delivered* to them' (Acts ii.; 1 Cor. ii. 16; ii. 7, 10, 13; 2 Cor. v. 20; 1 Cor. xi. 2). Of the twelve originally ordained to the apostleship, one, Judas Iscariot, 'fell from it by transgression,' and Matthias, 'who had companied' with the other Apostles 'all the time that the Lord Jesus went out and in among them,' was by lot substituted in his place (Acts i. 17-26). Saul of Tarsus, afterwards termed Paul, was also miraculously added to the number of these permanent rulers of the Christian society (Acts ix.; xx. 4; xxvi. 15-18; 1 Tim. i. 12; ii. 7; 2 Tim. i. 11).

The characteristic features of this highest office in the Christian church have been very accurately delineated by M'Lean, in his *Apostolic Commission*. 'It was essential to their office—1. That they should have seen the Lord, and been eye and ear witnesses of what they testified to the world (John xv. 27). This is laid down as an essential requisite in the choice of one to succeed Judas (Acts i. 21, 22). Paul is no exception here; for, speaking of those who saw Christ after his resurrection, he adds, 'and last of all he was seen of me' (1 Cor. xv. 8). And this he elsewhere mentions as one of his apostolic qualifications: 'Am I not an apostle? have I not seen the Lord?' (1 Cor. ix. 1). So that his 'seeing that Just One and hearing the word of his mouth' was necessary to his being 'a witness of what he thus saw and heard' (Acts xxii. 14, 15). 2. They must have been immediately called and chosen to that office by Christ himself. This was the case with every one of them (Luke vi. 13; Gal. i. 1), Matthias not excepted; for, as he had been a chosen disciple of Christ before, so the Lord, by determining the lot, declared his choice, and immediately called him to the office of an apostle (Acts i. 24-26). 3. Infallible inspiration was also essentially necessary to that office (John xvi. 13; 1 Cor. ii. 10; Gal. i. 11, 12). They had not only to explain the true sense and spirit of the Old Testament (Luke xxiv. 27; Acts xxvi. 22, 23; xxviii. 23), which were hid from the Jewish doctors, but also to give forth the New Testament revelation to the world, which was to be the unalterable standard of faith and practice in all succeeding generations (1 Pet. i. 25; 1 John iv. 6). It was therefore absolutely necessary that they should be secured against all error and mistake, by the unerring dictates of the spirit of truth. Accordingly Christ promised and actually bestowed on them the Spirit to 'teach them all things,' to 'bring all things to their remembrance whatsoever he had said to them' (John xiv. 26), to 'guide them into all truth,' and to 'show them things to come' (John xvi. 13). Their word therefore must be received, 'not as the word of men, but as it is in truth, the word of God' (1 Thes. ii. 13), and as that whereby we are to distinguish 'the spirit of truth from the spirit of error' (1 John iv. 6). 4. Another apostolic qualification was the power of working miracles (Mark xvi. 20; Acts ii. 43), such as speaking with divers tongues, curing the lame, healing the sick, raising the dead, discerning of spirits, conferring these gifts upon others, &c. (1 Cor. xii. 8-11). These were the credentials of their divine mission. 'Truly,' says Paul, 'the signs of an apostle were wrought among you in all patience, in signs and wonders and mighty deeds' (2 Cor. xii. 12). Miracles were necessary to confirm their doctrine at its first publication, and to gain credit to it in the world as a revelation from God, and by these 'God bare them witness' (Heb ii. 4). 5. To these characteristics may be added the *universality* of their mission. Their charge was not confined to any particular visible church, like that of ordinary pastors, but, being the oracles of God to men, they had 'the care of all the churches' (2 Cor. xi. 28). They had a power to settle their faith and order as a model to future ages, to determine all controversies (Acts xvi. 4), and to exercise the rod of discipline upon all offenders, whether pastors or flock (1 Cor. v. 3-6; 2 Cor. x. 8; xiii. 10).

It must be obvious, from this scriptural account of the apostolical office, that the Apostles had, in the strict sense of the term, no successors. Their qualifications were supernatural, and their work, once performed, remains in the infallible record of the New Testament, for the advantage of the Church and the world in all future ages. They are the only authoritative teachers of Christian doctrine and law. All official men in Christian churches can legitimately claim no higher place than expounders of the doctrines and administrators of the laws found in their writings. Few things have been more injurious to the cause of Christianity than the assumption on the part of ordinary office-bearers in the Church of the peculiar prerogatives of 'the holy apostles of our Lord Jesus.' Much that is said of the latter is not at all applicable to the former; and much that admits of being applied, can be so, in accordance with truth, only in a very secondary and extenuated sense.

It is the opinion of the learned Suicer (*Thesaurus*, art. Ἀπόστολος) that the appellation 'apostle' is in the New Testament employed as a general name for Christian ministers or pastors, who are '*sent* by God,' in a qualified use of that phrase, to preach the word of God. But this opinion does not seem to rest on any solid foundation. It is true indeed that the word is used in this loose sense by the Fathers. Thus we find Archippus, Philemon, Apphia, the seventy disciples (Luke x. 1-17), termed apostles; and even

Mary Magdalene is said γενέσθαι τοῖς ἀποστόλοις ἀπόστολος, to become an apostle to the Apostles. No satisfactory evidence, however, can be brought forward of the term being thus used in the New Testament. Andronicus and Junia (Rom. xvi. 7) are indeed said to be ἐπίσημοι ἐν τοῖς ἀποστόλοις, 'of note among the Apostles;' but these words by no means necessarily imply that these persons were apostles; they may, and probably do, signify merely that they were persons well known and much esteemed by the Apostles. The Συνεργοί, the fellow-workers of the Apostles, are by Chrysostom denominated Συναπόστολοι.

The argument founded on 1 Cor. iv. 9, compared with ver. 6, to prove that Apollos is termed an apostle, cannot bear a close examination. The only instance in which it seems probable that the word, as expressive of an office in the Christian church, is applied to an individual whose call to that office is not made the subject of special narration, is to be found in Acts xiv. 4, 14, where Barnabas, as well as Paul, is termed an apostle. At the same time it is by no means absolutely certain that the term *apostles*, or messengers, does not in this place refer rather to the mission of Paul and Barnabas by the prophets and teachers at Antioch, under the impulse of the Holy Ghost (Acts xiii. 1-4), than to that direct call to the Christian apostleship which we know Paul received, and which, if Barnabas had received, we can scarcely persuade ourselves that no trace of so important an event should have been found in the sacred history, but a passing hint, which admits, to say the least, of being plausibly accounted for in another way. We know that on the occasion referred to, 'the prophets and teachers, when they had fasted and prayed, and laid their hands on Barnabas and Saul (ἀπέλυσαν), sent them away;' so that, in the sense in which we will immediately find the words occurring, they were ἀπόστολοι—of the prophets and teachers.

The word 'apostle' occurs once in the New Testament (Heb. iii. 1) as a descriptive designation of Jesus Christ: 'The apostle of our profession,' *i. e.* the apostle whom we profess or acknowledge. The Jews were in the habit of applying the term שָׁלִיחַ, from שָׁלַח, *to send*, to the person who presided over the synagogue, and directed all its officers and affairs. The Church is represented as 'the house or family of God,' over which he had placed, during the Jewish economy, Moses, as the superintendent,—over which he has placed, under the Christian economy, Christ Jesus. The import of the term *apostle*, is—divinely-commissioned superintendent; and of the whole phrase, '*the apostle of our profession*,' the divinely-commissioned superintendent, whom WE Christians acknowledge, in contradistinction to the divinely-appointed superintendent Moses, whom the Jews acknowledged.

In 2 Cor. viii. 23, we meet with the phrase ἀπόστολοι ἐκκλησιῶν, rendered in our version 'the messengers of the churches.' Who these apostles were, and why they received this name, is obvious from the preceding context. The churches of Macedonia had made a liberal contribution for the relief of the impoverished and persecuted saints of Judæa, and had not merely requested the Apostle 'to receive the gift, and take on him the fellowship of ministering to the saints,' but at his suggestion had appointed some individuals to accompany him to Jerusalem with their alms. These 'apostles or messengers of the churches' were those 'who were chosen of the churches to travel with the Apostle with this grace [gift], which was administered by him,' to the glory of their common Lord (2 Cor. viii. 1-4, 19). Theophylact explains the phrase thus: οἱ ὑπὸ τῶν ἐκκλησιῶν πεμφθέντες καὶ χειροτονηθέντες, 'those sent and chosen by the churches.'

With much the same meaning and reference Epaphroditus (Phil. ii. 25) is termed ἀπόστολος—a messenger of the Philippian Church—having been employed by them to carry pecuniary assistance to the Apostle (Phil. iv. 14-18). Theophylact's exposition is as follows:—'Απόστολον ὑμῶν—τὸν παρ' ὑμῶν ἀποσταλέντα πρός με—δι' αὐτοῦ γὰρ ἦσαν στείλαντες αὐτῷ τὰ πρὸς χρείαν.

It is scarcely worth while to remark that the Creed, commonly called the The Apostles', though very ancient, has no claim to the name, except as it contains apostolical doctrine. A full and satisfactory account of it will be found in Lord King's *History of the Apostles' Creed, with Critical Observations on its several Articles.* The Canons and Constitutions, called apostolical, are generally admitted to be forgeries, probably of the fifth century.

In the early ecclesiastical writers we find the term ὁ ἀπόστολος, 'the Apostle,' used as the designation of a portion of the canonical books, consisting chiefly of the Pauline Epistles. 'The Psalter' and 'the Apostle' are often mentioned together. It is also not uncommon with these writers to call Paul 'The Apostle,' κατ' ἐξοχήν.—J. B.

APPEAL. The right of appeal to superior tribunals has generally been considered an essential concomitant of inferior judicatories. When, from the paucity of the population or any other cause, the subjects of litigation are few, justice is usually administered by the first authority in the state, from whose award no appeal can lie. But when the multiplication of causes precludes the continuance of this practice, and one or more inferior courts take cognizance of the less important matters, the right of appeal to the superior tribunal is allowed, with increasing restrictions as, in the course of time, subjects of litigation multiply, and as the people become weaned from the notion that the administration of justice is the proper function of the chief civil magistrate.

In the patriarchal times, as among the Bedouins, the patriarch or head of the tribe, that is to say, the Sheikh, administered justice; and as there was no superior power, there could be no appeal from his decisions. The only case of procedure against a criminal which occurs during the patriarchal period is that in which Judah commanded the supposed adulterous Tamar to be brought forth and burnt (Gen. xxxviii. 24). But here the woman was his daughter-in-law, and the power which Judah exercised was that which a man possessed over the females of his own immediate family. If the case had been between man and man, Judah could have given no decision, and the matter would, without doubt, have been referred to Jacob.

In the desert Moses at first judged all causes himself; and when, finding his time and strength

unequal to this duty, he, at the suggestion of Jethro, established a series of judicatories in a numerically ascending scale (Exod. xviii. 13-26), he arranged that cases of difficulty should be referred from the inferior to the superior tribunals, and in the last instance to himself. Although not distinctly stated, it appears from various circumstances that the clients had a right of appeal, similar to that which the courts had of reference. When the prospective distribution into towns, of the population which had hitherto remained in one compact body, made other arrangements necessary, it was directed that there should be a similar reference of difficult cases to the metropolitan court or chief magistrate ('the judge that shall be in those days') for the time being (Deut. xvi. 18; xvii. 8-12). That there was a concurrent right of appeal, appears from the use Absalom made of the delay of justice, which arose from the great number of cases that came before the king his father (2 Sam. xv. 2-4). These were doubtless appeal cases, according to the above direction; and M. Salvador (*Institutions de Moïse*, ii. 53) is scarcely warranted in deducing from this instance that the clients had the power of bringing their cases *directly* to the supreme tribunal.

Of the later practice, before and after the time of Christ, we have some clearer knowledge from Josephus and the Talmudists. It seems that a man could carry his case by appeal through all the inferior courts to the Grand Sanhedrim at Jerusalem, whose decision was in the highest degree absolute and final. The Jews themselves trace the origin of these later usages up to the time of Moses: they were at all events based on early principles, and therefore reflect back some light upon the intimations respecting the right of appeal which we find in the sacred books (*Mishna, de Synedr.* ch. x.; *Talm. Hieros.* ch. xviii.; *Talm. Bab.* ch. iii. and x.; Maimon. *de Synedr.* ch. x.; Selden, *de Synedr.* b. iii. ch. 10; Lewis, *Origines Hebrææ*, b. i. c. 6; Pastoret, *Législation des Hébreux*, ch. x.; Salvador, *Hist. des Institutions de Moïse*, liv. iv. ch. 2).

The most remarkable case of appeal in the New Testament belongs to another class. It is the celebrated appeal of St. Paul from the tribunal of the Roman procurator Festus to that of the emperor; in consequence of which he was sent as a prisoner to Rome (Acts xxv. 10, 11). Such an appeal having been once lodged, the governor had nothing more to do with the case: he could not even dismiss it, although he might be satisfied that the matter was frivolous, and not worth forwarding to Rome. Accordingly, when Paul was again heard by Festus and king Agrippa (merely to obtain materials for a report to the emperor), it was admitted that the apostle might have been liberated if he had not appealed to Cæsar (Acts xxvi. 32). Paul might therefore seem to have taken a false step in the matter, did we not consider the important consequences which resulted from his visit to Rome.

It may easily be seen that a right of appeal which, like this, involved a long and expensive journey, was by no means frequently resorted to. In lodging his appeal Paul exercised one of the high privileges of Roman citizenship which belonged to him by birth (Acts xxii. 28). How the rights of Roman citizenship might be acquired by a Jewish native of Cilicia will be explained elsewhere [CITIZENSHIP]. The right of appeal connected with that privilege originated in the Valerian, Porcian, and Sempronian laws, by which it was enacted that if any magistrate should order flagellation or death to be inflicted upon a Roman citizen, the accused person might appeal to *the judgment of the people*, and that meanwhile he should suffer nothing at the hands of the magistrate until the people had judged his cause. But what was originally the prerogative of the people had in Paul's time become that of the emperor, and appeal therefore was made to *him*. Hence Pliny (*Ep.* x. 97) mentions that he had sent to Rome some Christians, who were Roman citizens, and had appealed unto Cæsar. This privilege could not be disallowed by any magistrate to any person whom the law entitled to it. Indeed, very heavy penalties were attached to any refusal to grant it, or to furnish the party with facilities for going to Rome.

APPHIA (Ἀπφία), the name of a woman (Philemon 2) who is supposed by Chrysostom and Theodoret to have been the wife of Philemon.

APPII-FORUM (Ἀππίου φόρον), a market-town in Italy, 43 Roman miles from Rome (*Itiner. Anton.* p. 107), on the great road (*via Appia*) from Rome to Brundusium, constructed by Appius Claudius. The remains of an ancient town, supposed to be Appii-Forum, are still preserved at a place called Casarillo di Santa Maria, on the border of the Pontine marshes. Its vicinity to the marshes accounts for the badness of the water, as mentioned by Horace (*Sat.* i. 5, 7). When St. Paul was taken to Italy, some of the Christians of Rome, being apprised of his approach, journeyed to meet him as far as 'Appii-Forum and the Three Taverns' (ἄχρις Ἀππίου φόρου καὶ Τριῶν Ταβερνῶν, Acts xxviii. 15). The 'Three Taverns' were eight or ten miles nearer to Rome than Appii-Forum. The probability is that some of the Christians remained at the 'Three Taverns,' where it was known the advancing party would rest, while some others went on as far as Appii-Forum to meet Paul on the road. The 'Three Taverns' was certainly a place for rest and refreshment (Cic. *ad Attic.* ii. 11, 13), perhaps on account of the bad water at Appii-Forum. It must be understood that Tres Tabernæ was, in fact, the name of a town; for in the time of Constantine, Felix, bishop of Tres Tabernæ, was one of the nineteen bishops who were appointed to decide the controversy between Donatus and Cæcilianus (*Optat. de Schism. Donat.*, l. i. p. 26). As to the tabernæ themselves, from which the place took its name, it is probable that they were *shops* for the sale of all kinds of refreshments, rather than inns or places of entertainment for travellers. The ruins of this place still exist under the same name.

APPLE, APPLE-TREE. [TAPPUACH.]

APPLES OF SODOM. [SODOM, APPLES OF.]

AQUILA (Ἀκύλας), a Jew with whom Paul became acquainted on his first visit to Corinth; a native of Pontus, and by occupation a tent-maker. He and his wife Priscilla had been obliged to leave Rome in consequence of an edict issued by the Emperor Claudius, by which all Jews were banished from Rome (*Judæos, impulsore Chresto, assidue tumultuantes Roma expulit*:—Sueton. *Claud.* c. 25; Neander's *History of the*

Planting of the Christian Church, vol. i. p. 231; Lardner's *Testimonies of Heathen Authors*, ch. viii.). This decree was made not by the senate, but the emperor, and lasted only during his life, if even so long. Whether Aquila and Priscilla were at that time converts to the Christian faith cannot be positively determined; Luke's expression, προσῆλθεν αὐτοῖς, Acts xviii. 2, as Kuinoel observes, rather implies that Paul sought their society on grounds of friendship, than for the purpose of persuading them to embrace Christianity. On the other hand, if we suppose that they were already Christians, Paul's 'joining himself to them' is highly probable; while, if they were still adherents to Judaism, they would have been less disposed than even unconverted Gentiles to form an intimacy with the Apostle. At all events, they had embraced Christianity before Paul left Corinth; for we are informed that they accompanied him to Ephesus, and meeting there with Apollos, who 'knew only the baptism of John,' they 'instructed him in the way of God more perfectly' (Acts xviii. 25, 26). From that time they appear to have been zealous promoters of the Christian cause. Paul styles them his 'helpers in Christ Jesus,' and intimates that they had exposed themselves to imminent danger on his account ('who have for my life laid down their own necks,' Rom. xvi. 3, 4), though of the time and place of this transaction we have no information. When Paul wrote his epistle to the Romans they were at Rome; but some years after they returned to Ephesus, for Paul sends salutations to them in his Second Epistle to Timothy (2 Tim. iv. 19; Lardner's *Credibility*, part ii. ch. 11). Their occupation as tent-makers probably rendered it necessary for them to keep a number of workmen constantly resident in their family, and to these (to such of them at least as had embraced the Christian faith) may refer the remarkable expression, '*the Church that is in their house*,' τὴν κατ' οἶκον αὐτῶν ἐκκλησίαν (see Biscoe, quoted in Lardner's *Credibility*, part ii. ch. 11). Origen's explanation of these words is very similar: 'Magna enim gratia in hospitalitatis officio non solum apud Deum, sed et apud homines invenitur. Quæ tamen res quoniam non solum in voluntate et proposito dominorum, sed et grato ac fideli constitit ministerio famulorum, idcirco *omnes qui ministerium istud cum ipsis fideliter adimplebant, domesticam eorum nominavit Ecclesiam*' (*In Ep. ad Rom. Comment.* lib. x.; *Opera*, t. vii. p. 431, ed. Berol. 1837).

Dr. Neander suggests that as Aquila would require extensive premises for his manufactory, he, perhaps, set apart one room for the use of a section of the Church in whatever place he fixed his residence, and that as his superior Christian knowledge and piety qualified him for the office of a διδάσκαλος, he gave religious instruction to this small assembly. The salutations to individuals which *follow* the expression in Rom. xvi. 5, show that they were not referred to in it, and are quite inconsistent with the supposition that the *whole* church met in Aquila's house. Nor is it probable that the collective body of Christians in Rome or elsewhere would alter their place of meeting on Aquila's return. The same eminent critic brings forward as an illustration of the expression the examination of Justin Martyr before the Prefect Rusticus. 'Where do you assemble? ποῦ συνέρχεσθε; said the Prefect. Justin replied, Wherever it suits each one's preference and ability: you take for granted that we all meet in the same place; but it is not so, for the God of the Christians is not circumscribed by place, but, being invisible, fills heaven and earth, and is everywhere worshipped and glorified by the faithful. Rusticus then said: Tell me where you meet together, or in what place you collect your disciples? Justin said: I am staying at the house of one Martinus, and I know no other place of meeting besides this (καὶ οὐ γινώσκω ἄλλην τινὰ συνέλευσιν), and if any one wished to come to me, I communicated to him the words of truth.' The persons who thus visited Justin might be called ἡ κατ' οἶκον τοῦ Ἰουστίνου ἐκκλησία (Neander's *Allgemeine Geschichte der Christlichen Religion und Kirche*, I. ii. pp. 402, 503; Justini Martyris *Opera*, *Append*. pars ii. p. 586, Parisiis, 1742).

The Greeks call Aquila bishop and apostle, and honour him on July 12. The festival of Aquila and Priscilla is placed in the Roman Calendar, where he is denoted Bishop of Heraclea, on July 8, (Calmet).—J. E. R.

AR (עָר; Sept. Ἤρ), the capital city of the Moabites (Num. xxi. 28; Deut. ii. 9, 18, 29), near the river Arnon (Deut. ii. 18, 24; Num. xxi. 13-15). It appears to have been burnt by King Sihon (Num. xxi. 28), and Isaiah, in describing the future calamities of the Moabites, says, 'In the night Ar of Moab is laid waste and brought to silence' (Isa. xv. 1). In his comment on this passage, Jerome states that in his youth there was a great earthquake, by which Ar was destroyed in the night-time. This he evidently regards as a fulfilment of the prediction, which, however, had probably some less remote reference. Latterly the name of the city was Græcised into Areopolis.

This city was also called Rabbah or Rabbath, and, to distinguish it from Rabbath of Ammon, Rabbath-Moab. Ptolemy calls it Rabmathon; Steph. Byzantinus, Rabathmoma; and Abulfeda (*Tab. Syr.*, p. 90), Rabbath, and also Mab. The site still bears the name of Rabbah. The spot has been visited and described by Seetzen, Burckhardt, Legh, Macmichael, and Irby and Mangles. It is about 17 miles east of the Dead Sea, 10 miles south of the Arnon (Modjeb), and about the same distance north of Kerek. The ruins of Rabbah are situated on a low hill, which commands the whole plain. They present nothing of interest except two old Roman temples and some tanks. Irby and Mangles (*Letters*, p. 457) remark, with surprise, that the whole circuit of the town does not seem to have exceeded a mile. Burckhardt says, 'half an hour in circuit,' and that no trace of walls could be found: but it is obvious from the descriptions that the city whose ruins they saw was a comparatively modern town, less important and extensive than the ancient metropolis of Moab.

ARABAH (עֲרָבָה; Sept. Ἄραβα), a Hebrew word, signifying in general *a desert plain*, or *steppe*. In the Authorized Version it is translated 'the plain,' but in the original it appears to be supplied with the article on purpose, as the proper name (הערבה ha-Arabah, *the* Arabah),

of the great plain or valley in its whole extent, which is *partly* occupied by the Jordan and its lakes, and is prolonged from the Dead Sea to the Elanitic Gulf. The name has come down to the present day in the same form in Arabic, *el-Arabah* (العربة); but it is now restricted to the part between the lake and the gulf. The more extended application of the name by the Hebrews is successfully traced by Professor Robinson from Gesenius: 'In connection with the Red Sea and Elath' (Deut. i. 1; ii. 8). 'As extending to the lake of Tiberias' (Josh. xii. 3; 2 Sam. iv. 7; 2 Kings xxv. 4). 'Sea of the Arabah, the Salt Sea' (Josh. iii. 16; xii. 3; Deut. iv. 49). 'The *arboth* (plains) of Jericho' (Josh. v. 10; 2 Kings xxv. 5). 'Plains (*arboth*) of Moab,' *i. e.* opposite Jericho, probably pastured by the Moabites, though not within their proper territory (Deut. xxiv. 1, 8; Num. xxii. 1) [ARABIA; JORDAN, VALLEY OF].

ARABIA, an extensive region occupying the south-western extremity of Asia, between 12° 45′ and 31½° N. lat., and 32½° and 60° E. long. from Greenwich; having on the W. the Isthmus of Suez and the Red Sea (called from it the *Arabian Gulf*), which separate it from Africa; on the S. the Indian Ocean; and on the E. the Persian Gulf and the Euphrates. The boundary to the north has never been well defined, for in that direction it spreads out into interminable deserts, which meet those of Palestine and Syria on the west, and those of *Irāk-Arabi* (*i. e.* Babylonia) and Mesopotamia on the east; and hence some geographers include that entire wilderness in Arabia. The form of the peninsula is that of a trapezoid, whose superficial area is estimated at four times the extent of France. It is one of the few countries of the south where the descendants of the aboriginal inhabitants have neither been extirpated nor expelled by northern invaders. They have not only retained possession of their ancestral homes, but have sent forth colonies to all the adjacent regions, and even to more distant lands, both in Africa and Asia. 'There is no people,' says Ritter (*Erdkunde*, th. ii. p. 172), 'who are less circumscribed to the territory usually assigned to them than the Arabs; their range outstrips geographical boundaries in all directions.'

With the history of no country save that of Palestine are there connected so many hallowed and impressive associations as with that of Arabia. Here lived and suffered the holy patriarch Job; here Moses, when 'a stranger and a shepherd,' saw the burning, unconsuming bush; here Elijah found shelter from the rage of persecution; here was the scene of all the marvellous displays of divine power and mercy that followed the deliverance of Israel from the Egyptian yoke, and accompanied their journeyings to the Promised Land; and here Jehovah manifested himself in visible glory to his people. From the influence of these associations, combined with its proximity to Palestine, and the close affinity in blood, manners, and customs between the northern portion of its inhabitants and the Jews, Arabia is a region of peculiar interest to the student of the Bible; and it is chiefly in its relation to subjects of Bible study that we are now to consider it. It was well remarked by Burckhardt (who knew Arab life and character better than any other European traveller that has yet appeared) that 'the sacred historian of the children of Israel will never be thoroughly understood, so long as we are not minutely acquainted with everything relating to the Arab Bedouins and the countries in which they move and pasture.'

In early times the Hebrews included a part of what we call Arabia among the countries they vaguely designated as קדם *Kedem*, 'the East,' the inhabitants being numbered among the בני קדם *Beni-Kedem*, 'Sons of the East,' *i. e.* Orientals. But there is no evidence to show (as is asserted by Winer, Rosenmüller, and other Bible-geographers) that these phrases are ever applied to the *whole* of the country known to us as Arabia. They appear to have been commonly used in speaking of those parts which lay due *east* of Palestine, or on the north-east and south-east; though occasionally they do seem to point to tracts which lay indeed to the south and south-west of that country, but to the east and south-east of Egypt. Hence Joseph Mede (who is followed by Bellermann, *Handbuch d. Bib. Literat.* th. iii. p. 220) is of opinion that the phraseology took its rise at the period when the Israelites were in Egypt, and was retained by them as a mode of speech after they were settled in Canaan. That conjecture would, doubtless, considerably extend the meaning of the term; yet even then it could scarcely embrace the extreme south of Arabia, a queen in which (on the supposition of Yemen being identical with Sheba) is, in the New Testament, styled not 'a queen of the East,' but Βασίλισσα Νότου, 'a queen of the South.' Accordingly we find that whenever the expression *kedem* has obviously a reference to Arabia, it invariably points to its *northern* division only. Thus in Gen. xxv. 6, Abraham is said to have sent away the sons of Hagar and Keturah to the *Erets-Kedem—Kedemah*, *i. e.* the East

country, eastward; and none of them, so far as we know, were located in peninsular Arabia; for the story which represents Ishmael as settling at Mecca is an unsupported native tradition. The patriarch Job is described (Job i. 3) as 'the greatest of all the men of the east,' and though opinions differ as to the precise locality of the land of Uz, all are agreed that it was in some part of Arabia, but certainly not in Arabia Felix. In the Book of Judges (vi. 3; vii. 12; viii. 10) among the allies of the Midianites and Amalekites (tribes of the north) are mentioned the '*Beni-Kedem*,' which Josephus translates by Ἄραβας, the Arabs. In Isa. xi. 14, the parallelism requires that by 'sons of the east' we understand the *Nomades* of Desert Arabia, as corresponding to the Philistines 'on the west;' and with these are conjoined the Edomites, Moabites, and Ammonites, who were all northern Arabians. The command was given (Jer. xlix. 28) to the Babylonians 'to smite the Beni-Kedem,' who are there classed with the Kedarenes, descendants of Ishmael (comp. 1 Kings iv. 30). In more modern times a name of similar import was applied to the Arabs generally; they were called *Saracens* (Sharakiyun, *i. e.* Orientals) from the word *shark*, 'the east,' whence also is derived the term sirocco, the east wind. The name of Saracens came into use in the west in a vague and undefined sense after the Roman conquest of Palestine, but does not seem to have been adopted as a general designation till about the eighth century. It is to be remarked here that though in Scripture *Kedem* most commonly denotes Northern Arabia, it is also used of countries farther east, *e. g.* of the native country of Abraham (Isa. xli. 2; comp. Gen. xxix. 1), of Balaam (Num. xxiii. 7), and even of Cyrus (Isa. xlvi. 11); and, therefore, though the Magi who came to Jerusalem (Matt. ii. 1) were ἀπὸ ἀνατολῶν, 'from the east,' it does not thence follow that they were natives of Arabia.

We find the name ערב (عرب) *Arab*, first beginning to occur about the time of Solomon. It designated a portion of the country, an inhabitant being called Arabi, an Arabian (Isa. xiii. 20), or in later Hebrew, Arbi (Neh. ii. 19), the plural of which was Arbim (2 Chr. xxi. 16), or Arbiim (*Arabians*) (2 Chr. xvii. 11). In some places these names seem to be given to the Nomadic tribes generally (Isa. xiii. 20; Jer. iii. 2) and their country (Isa. xxi. 13). The kings of Arabia from whom Solomon (2 Chr. ix. 14) and Jehosaphat (2 Chr. xvii. 11) received gifts were, probably, Bedouin chiefs; though in the place parallel to the former text (1 Kings x. 15), instead of *Arab* we find *Ereb*, rendered in Jer. xxv. 20, 24, 'mingled people,' but which Gesenius, following the Chaldee, understands to mean 'foreign allies.' It is to be remarked, however, that in all the passages where the word *Arab* occurs it designates only a small portion of the territory known to us as Arabia. Thus in the account given by Ezekiel (xxvii. 21) of the Arabian tribes that traded with Tyre, mention is specially made of *Arab* (comp. Jer. xxv. 24). In 2 Chr. xxi. 16; xxii. 1; xxvi. 7; Neh. iv. 7, we find the Arabians classed with the Philistines, the Ethiopians (*i. e.* the Asiatic Cushites, of whom they are said to have been neighbours), the Mehunims, the Ammonites, and Ashdodites. At what period this name *Arab* was extended to the whole region it is impossible to ascertain. From it the Greeks formed the word Ἀραβία, which occurs twice in the New Testament; in Gal. i. 17, in reference probably to the tract adjacent to Damascene Syria, and in Gal. iv. 25, in reference to the peninsula of Mount Sinai. Among the strangers assembled at Jerusalem at the Pentecost there were Ἄραβες, Arabs (Acts ii. 11), the singular being Ἄραψ.

As to the etymology of the name *Arab* various opinions have been expressed. Hezel (*Bib. Real Lex.*) and Bellermann (*Handbuch d. Bib. Liter.* th. iii. p. 219) absurdly derive it from a transposition of letters in the name of Eber, the father of Joktan; Pococke follows the native writers in thinking the name was taken from Araba, a district of Yemen, so called from Yárab, Joktan's son; some suppose that as this country was called by the Israelites *Kedem*, 'the east,' so by the Shemitic tribes who dwelt beyond the Euphrates it was termed *Arab* in the sense of 'the west;' while others derive it from the same word in the sense of 'mixed people,' or 'merchants.' But dismissing these conjectures as groundless and unsatisfactory, the most obvious etymology of the name is from ערבה *Arabah*, a *steppe*, *i. e.* a desert plain or wilderness. That was, in point of fact, the name given by the ancient Hebrews to the tract of country extending northward from Elath, on the Arabian Gulf, to the Dead Sea (Deut. i. 1; ii. 8), and even as far as the Lake of Tiberias (Josh. xii. 3). It was called *Ha-Arabah*, commonly rendered in our version by 'the plain' (hence the Dead Sea was styled the 'sea of the Arabah,' Josh. iii. 16); and it included the plains (*Arboth*) of Jericho and Moab (Josh. v. 10; Deut. xxxiv. 1, 8). In the list of the cities of Judah contained in the book of Joshua we find (xv. 61), 'in the wilderness, Beth-Arabah,' in the Hebrew בית הערבה, *i. e.* 'the house of the plain.' It had been mentioned at v. 6, as on the northern borders; and hence, at xviii. 22, it appears also as a city of Benjamin, one of whose boundaries, it is said at v. 18, 'passed over against [the] Arabah northward, and went down into [the] Arabah.' Now it is a remarkable circumstance that the southern part of this great valley is still known by the name of *Wady-el-'Arabah*, and there is no improbability in the conjecture that this designation, which was applied at so early a period as the days of Moses to one particular district, was gradually extended to the entire region. No designation, indeed, could be more comprehensive or correct; for, looking to Arabia as a whole, it may fitly be described as one vast desert of arid and barren plains, intersected by chains of rocky mountains, where the *oases*, or 'spots of living green' (probably a corruption of the Arabic word *wady*, a valley or watercourse), exist but in a very small proportion to the sterility and desolation which reign around.

The modern name, *Jeshirat-el-Arab*, i. e. 'the peninsula of the Arabs,' applies to the southern part of the region only. Another native appellation is *Beled-el-Arab*, i. e. 'the land of the Arabs:' the Persians and Turks call it *Arabistân*. Mr. Lane informs us that in Egypt the term *Arab* is now generally limited to the Bedawees, or people of the desert; but formerly it was used to desig-

nate the townspeople and villagers of Arabian origin, while those of the desert were called Aarab or Aarabees: the former now call themselves *Ow-lâd-el-Arab*, or sons of the Arabs.

The early Greek geographers, such as Eratosthenes and Strabo, mention only two divisions of this vast region, *Happy* and *Desert* Arabia. But after the city of Petra, in Idumæa, had become celebrated as the metropolis of a commercial people, the Nabathæans, it gave name to a third division, viz. Arabia *Petræa* (improperly translated *Stony* Arabia); and this threefold division, which first occurs in the geographer Ptolemy, who flourished in the second century, has obtained throughout Europe ever since. It is unknown, however, to native or other Eastern geographers, who reckon Arabia Deserta as chiefly belonging to Syria and to Irak-Arabi, or Babylonia, while they include a great part of what we call Arabia Petræa in Egypt.

1. Arabia Felix (in Gr. Ἀραβία ἡ Εὐδαίμων, the *Arabia Eudæmon* of Pliny), i. e. *Happy Arabia*. The name has commonly been supposed to owe its origin to the variety and richness of the natural productions of this portion of the country, compared with those of the other two divisions. Some, however, regard the epithet 'happy' as a translation of its Arabic name يمن *Yemen*, which, though primarily denoting the land of the *right hand*, or *south*,* also bears the secondary sense of 'happy, prosperous.' This part of Arabia lies between the Red Sea on the west and the Persian Gulf on the east, the boundary to the north being an imaginary line drawn between their respective northern extremities, Akaba and Basra or Bussora. It thus embraces by far the greater portion of the country known to us as Arabia, which, however, is very much a *terra incognita;* for the accessible districts have been but imperfectly explored, and but little of the interior has been as yet visited by any European traveller.

Arabia may be described generally as an elevated table-land, the mountain ranges of which are by some regarded as a continuation of those of Syria, but Ritter (*Erdkunde*, th. i. p. 172) views them as forming a distinct and independent *plateau*, peculiar to the country. In Arabia Felix the ridges, which are very high in the interior, slope gently on the east towards the Persian Gulf, and on the north-east towards the vast plains of the desert. On the west the declivities are steeper, and on the north-west the chains are connected with those of Arabia Petræa. Commencing our survey at the north end of the Red Sea, the first province which lies along its shore is the *Hedjaz*, which Niebuhr and others reckon as belonging to Arabia Petræa, but which the editor of Burckhardt's *Travels in Arabia* has shown to belong properly to Arabia Felix. This was the cradle of Mohammedan superstition, containing both Mecca, where the prophet was born, and Medina, where he was buried; and hence it became the Holy Land of the Moslem, whither they resort in pilgrimage from all parts of the East. It is on the whole a barren tract, consisting chiefly of rugged mountains and sandy plains. Still more unproductive, however, is the long, flat, dreary belt, of varying width, called *Tehâma*, which runs along the coast to the south of Hedjaz, and was at no distant period covered by the sea. But next to this comes *Yemen* (the name of a particular province, as well as of the whole country), the true Arabia Felix of the ancients, 'Araby the Blest' of modern poets, and doubtless the finest portion of the peninsula. Yet if it be distinguished for fertility and beauty, it is chiefly in the way of contrast, for it is far from coming up to the expectations which travellers had formed of it. Here is Sanaa (supposed to be the *Uzal* of Scripture), the seat of an imaum; Mareb, which some identify with Sheba; Mocha, the chief mart for coffee; and Aden, a place rapidly increasing in importance since taken possession of by Britain, with a view to secure her navigation of the Red Sea. Turning from the west to the south coast of the peninsula, we next come to the extensive province of *Hhadramaut* (the Hazarmaveth of the Bible), a region not unlike Yemen in its general features, with the exception of the tracts called Mahhrah and Sahar, which are dreary deserts. The south-east corner of the peninsula, between Hhadramaut and the Persian Gulf, is occupied by the important district of *Oman*, which has recently become better known to us than most other parts of Arabia Felix by the travels and researches of Lieut. Wellsted (*Travels in Arabia*, London, 1838, 2 vols. 8vo.). Oman has been in all ages famous for its trade; and the present imaum of Muscat, a politic and enterprising prince, has greatly extended it, and thereby increased and consolidated his own power by forming commercial alliances with Great Britain, the United States, and other foreign nations. Along the Persian Gulf northward stretches the province of *Lahsa*, or rather *El Hassa*, to which belong the Bahrein Islands, famous for their pearls. The districts we have enumerated all lie along the coasts, but beyond them in the south stretches the vast desert of Akhaf, or Roba-el-Khali, *i. e.* 'the empty abode,' a desolate and dreary unexplored waste of sand. To the north of this extends the great central province of *Nedsched* or *Nejd*. Ritter regards it as forming nearly a half of the entire peninsula. It may be described as having been the great *officina gentium* of the south, as were Scandinavia and Tartary of the north; for it is the region whence there issued at different periods those countless hordes of Arabs which overran a great part of Asia and Africa. Here too was the origin and the seat of the Wahabees (so formidable until subdued in 1818 by Mehemet Ali, pasha of Egypt), their chief town being Dereyeh.

The *geological* structure and *mineralogical* productions of this part of Arabia are in a great measure unknown. In the mountains about Mecca and Medina the predominant rocks are of grey and red granite, porphyry, and limestone. This is also the case in the great chain that runs southward towards Maskat; only that in the ridge that rises behind the Tehama there is found

* This phraseology may have originated in the worship of the rising sun at the Kaaba, or ancient temple of Mecca, when the worshipper had the east *before* him, the west *behind* him, the south on his *right*, and the north on his *left:* hence Syria is called *Esh-Sham*, the *left*. Yet the Hebrews had the same idiom.

schistus and basalt instead of granite. Traces of volcanic action may be perceived around Medina, as also at Aden and in many other parts of the peninsula. Hot-springs are of frequent occurrence on the Hadjee or pilgrim road to Mecca. The ancients believed that Arabia yielded both gold and precious stones, but Niebuhr doubts if this ever was the case. The most valuable ore found now is the lead of Oman: what is called the Mocha stone is a species of agate that comes from India. The native iron is coarse and brittle; at Loheia and elsewhere there are hills of fossil salt. The *botany* of Yemen was investigated by Forskäl, one of the fellow-travellers of Niebuhr. Arabia Felix has always been famous for frankincense, myrrh, aloes, balsam, gums, cassia, &c.; but it is doubtful whether the last-mentioned and other articles supposed to be indigenous were not imported from India. Here are found all the fruits of temperate and warm climates, among which the *date*, the fruit of the palm-tree, is the most common, and is, along with the species of grain called *dhourra*, the staple article of food. But the most valuable vegetable production is coffee (Arab. *kahweh*, an old term for wine, the fruit being called *bunn*); for Yemen, if not its native country, is the *habitat* where it has reached the greatest state of perfection. Cultivation here is not confined to the plains, but is carried up the sides of the mountains, which are laid out in terraces and supplied with water by means of artificial reservoirs. In the *animal* kingdom Arabia possesses, in common with the adjacent regions, the camel (the 'living ship of the desert'), panthers, lynxes, hyænas, jackals, gazelles, asses (wild and tame), monkeys, &c. But the glory of Arabia is its *horse*. As in no other country is that animal so much esteemed, so in no other are its noble qualities of swiftness, endurance, temper, attachment to man, so finely developed. Of the insect tribes, the locust, both from its numbers and its destructiveness, is the most formidable scourge to vegetation. The Arabian seas swarm with fish, sea-fowl, and shells; coral abounds in the Red Sea, and pearls in the Persian Gulf.

2. Arabia Deserta, called by the Greeks Σκηνῖτις Ἀραβία, or ἡ Ἔρημος Ἀραβία, and by the Arabs البادية *El-Badiah*, i. e. the Desert. This takes in that portion of the country which lies north of Arabia Felix, and is bounded on the north-east by the Euphrates, on the north-west by Syria, and on the west by Palestine and Arabia Petræa. The Arabs divide this 'great wilderness' into three parts, so called from their proximity to the respective countries, viz. *Badiah esh Sham* (Syria), *Badiah el Jeshirah* (the peninsula, *i. e.* Arabia), and *Badiah el Irâk* (Babylonia). From this word Badiah comes the name of the nomadic tribes by whom it is traversed, viz. *Bedawees* (better known to us by the French corruption of *Bedouins*), who are not, however, confined to this portion of Arabia, but range throughout the entire region. So far as it has yet been explored, Desert Arabia appears to be one continuous, elevated, interminable *steppe*, occasionally intersected by ranges of hills. Sand and salt are the chief elements of the soil, which in many places is entirely bare, but elsewhere yields stinted and thorny shrubs or thinly-scattered saline plants. That part of the wilderness called *El Hhammad* lies on the Syrian frontier, extending from the Hauran to the Euphrates, and is one immense dead and dreary level, very scantily supplied with water, except near the banks of the river, where the fields are irrigated by wheels and other artificial contrivances.

The sky in these deserts is generally cloudless, but the burning heat of the sun is moderated by cooling winds, which, however, raise fearful tempests of sand and dust. Here, too, as in other regions of the East, occasionally prevails the burning, suffocating south-east wind, called by the Arabs *El Hharûr* (the Hot), but more commonly *Samûm*, and by the Turks *Samyeli* (both words meaning 'the Poisonous'), the effects of which, however, have by some travellers been greatly exaggerated. This is probably 'the east wind' and the 'wind from the desert' spoken of in Scripture. Another phenomenon, which is not peculiar, indeed, to Desert Arabia, but is seen there in greatest frequency and perfection, is what the French call the *mirage*, the delusive appearance of an expanse of water, created by the tremulous, undulatory movement of the vapours raised by the excessive heat of a meridian sun. It is called in Arabic *serab*, and is no doubt the Hebrew *sarab* of Isa. xxxv. 7, which our translators have rendered 'the parched ground.'

3. Arabia Petræa (Gr. Πετραία) appears to have derived its name from its chief town *Petra* (*i. e.* a rock), in Heb. *Selah;* although (as is remarked by Burckhardt) the epithet is also appropriate on account of the rocky mountains and stony plains which compose its surface. It embraces all the north-western portion of the country; being bounded on the east by Desert and Happy Arabia (for we have included the Hedjaz in the latter), on the north by Palestine and the Mediterranean, on the west by Egypt, and on the south by the Red Sea. This division of Arabia has been of late years visited by a great many travellers from Europe, and is consequently much better known than the other portions of the country. Confining ourselves at present to a general outline, we refer for details to the articles Sinai, Exodus, Edom, Moab, &c. Beginning at the northern frontier, there meets the elevated plain of Belka, to the east of the Dead Sea, the district of Kerak (Kir), the ancient territory of the Moabites, their kinsmen of Ammon having settled to the north of this, in Arabia Deserta. The north border of Moab was the brook Arnon, now the Wady-el-Môjib; to the south of Moab, separated from it by the Wady-el-Ahsy, lay Mount Seir, the dominion of the Edomites, or *Idumæa*, reaching as far as to Elath on the Red Sea. The great valley which runs from the Dead Sea to that point consists, first, of El-Ghor, which is comparatively low, but gradually rises by a succession of limestone cliffs into the more elevated plain of *El-Arabah*, formerly mentioned. 'We were now,' says Professor Robinson (*Biblical Researches*, vol. ii., p. 502), 'upon the plain, or rather the rolling desert, of the *Arabah;* the surface was in general loose gravel and stones, everywhere furrowed and torn with the beds of torrents. A more frightful desert it had hardly been our lot to behold. The mountains beyond presented a most uninviting and hideous aspect; precipices and naked conical peaks of chalky

and gravelly formation rising one above another without a sign of life or vegetation.' It was once believed that through this great valley the Jordan anciently flowed, before the catastrophe of the cities of 'the plain (Arabah);' but from the depressed level of the Dead Sea (recently found by Lieut. Symonds to be no less than 1337 feet below that of the Mediterranean), from the great elevation of the Arabah, the long descent northward, and the run of the watercourses in the same direction, the hypothesis is found to be no longer tenable.* The structure of the mountains of Edom on the east of the Arabah is thus described by Robinson (vol. ii. p. 551): 'At the base low hills of limestone or argillaceous rocks; then the lofty masses of porphyry, constituting the body of the mountain; above these sandstone broken up into irregular ridges and grotesque groups of cliffs; and again, farther back and higher than all, long elevated ridges of limestone without precipices. East of all these stretches off indefinitely the high plateau of the great eastern desert. The character of these mountains is quite different from those on the west of the Arabah. The latter, which seemed to be not more than two-thirds as high, are wholly desert and sterile; while these on the east appear to enjoy a sufficiency of rain, and are covered with tufts of herbs and occasional trees.' This mountainous region is divided into two districts: that to the north is called *Jebâl* (*i. e.* mountains, the Gebal of Ps. lxxxiii. 7); that to the south *Esh-Sherah*, which has erroneously been supposed to be allied to the Hebrew 'Seir;' whereas the latter (written with a ע) means 'hairy,' the former denotes 'a tract or region.' To the district of Esh-Sherah belongs Mount Hor, the burial-place of Aaron, towering above the Wady Mousa (valley of Moses), where are the celebrated ruins of Petra (the ancient capital of the Nabathæo-Idumæans), brought to light by Seetzen and Burckhardt, and now familiar to English readers by the illustrations of Irby and Mangles, Laborde, &c. As for the mountainous tract immediately west of the Arabah, Dr. Robinson describes it as a desert limestone region, full of precipitous ridges, through which no travelled road has ever passed.

To the west of Idumæa extends the 'great and terrible wilderness' of *Et-Tîh*, i. e. 'the Wandering,' so called from being the scene of the wanderings of the children of Israel. It consists of vast interminable plains, a hard gravelly soil, and irregular ridges of limestone hills. The researches of Robinson and Smith furnish new and important information respecting the geography of this part of Arabia and the adjacent peninsula of Sinai. It appears that the middle of this desert is occupied by a long central basin, extending from Jebel-et-Tîh (*i. e.* the mountain of the wandering, a chain pretty far south) to the shores of the Mediterranean. This basin descends towards the north with a rapid slope, and is drained through all its length by Wady-el-Arish, which enters the sea near the place of the same name, on the borders of Egypt. 'West of this basin other wadys run by themselves down to the sea. On the east of the same central basin is another similar and parallel one between it and the Arabah (the two being separated by the chain El-Ojmeh and its continuation), drained throughout by the Wady-el-Jerâfeh, which, having its head in or near the Tîh, falls into the Arabah not far from El-Mukrâh. North of this last basin the tract between the Arabah and the basin of the Arish is filled up by ranges or clusters of mountains, from which, on the east, short wadys run to the Arabah, and on the west longer ones to Wady-el-Arish, until, farther north, these latter continue by themselves to the sea nearer Gaza.'

This description of the formation of the northern desert will enable us to form a more distinct conception of the general features of the peninsula of Sinai, which lies south of it, being formed by the two arms of the Red Sea, the Gulfs of Akaba and Suez. If the parallel of the north coast of Egypt be extended eastward to the great Wady-el-Arabah, it appears that the desert, south of this parallel, rises gradually towards the south, until on the summit of the ridge Et-Tîh, between the two gulfs, it attains, according to Russegger, the elevation of 4322 feet. The waters of all this great tract flow off northward either to the Mediterranean or the Dead Sea. The Tîh forms a sort of offset, and along its southern base the surface sinks at once to the height of only about 3000 feet, forming the sandy plain which extends nearly across the peninsula. After this the mountains of the peninsula proper commence, and rise rapidly through the formations of sandstone, grünstein, porphyry, and granite, into the lofty masses of St. Catherine and Um Shaumer, the former of which, according to Russegger, has an elevation of 8168 Paris feet, or nearly double that of the Tîh. Here the waters all run eastward or westward to the Gulfs of Akaba and Suez.

The soil of the Sinaitic peninsula is in general very unproductive, yielding only palm-trees, acacias, tamarisks (from which exudes the gum called *manna*), coloquintida, and dwarfish, thorny shrubs. Among the animals may be mentioned the mountain-goat (the *beden* of the Arabs), gazelles, leopards, a kind of marmot called *wober*, the *sheeb*, supposed by Col. Hamilton Smith to be a species of wild wolf-dog, &c.: of birds there are eagles, partridges, pigeons, the *katta*, a species of quail, &c. There are serpents, as in ancient times (Num. xxi. 4, 6), and travellers speak of a large lizard called *dhob*, common in the desert, but of unusually frequent occurrence here. The peninsula is inhabited by Bedouin Arabs, and its entire population was estimated by Burckhardt at not more than 4000 souls.

Though this part of Arabia must ever be memorable as the scene of the journeying of the Israelites from Egypt to the Promised Land, yet very few of the spots mentioned in Scripture can now be identified; nor after the lapse of so many centuries ought that to be occasion of surprise. According to Niebuhr, Robinson, &c. they crossed the Red Sea near Suez, but the tradition of the country fixes the point of transit eight or ten miles south of Suez, opposite the place called Ayoun Mousa, *i. e.* the Fountains of Moses, where Robinson recently found seven wells, some of

* Yet Mr. Beek, in a paper read to the Geographical Society (May 9, 1842), thinks the progress of the Jordan to the Red Sea was arrested by volcanic eruptions, which, while they formed the chasm now filled by the Dead Sea, upraised the ridge called El Saté.

which, however, were mere excavations in the sand. About 15½ hours (33 geographical miles) south-east of that is the Well of Hawârah, the *Marah* of Scripture, whose bitter water is pronounced by the Arabs to be the worst in these regions. Two or three hours south of Hawârah the traveller comes to the Wady Ghŭrŭndel, supposed to be the *Elim* of Moses. From the plain of El-Kaa, which Robinson takes to be the desert of Sin (not to be confounded with that of *Zin*, which belonged to the great desert of Kadesh), they would enter the Sinaitic range probably along the upper part of Wady Feiran and through the Wady-esh-Sheikh, one of the principal valleys of the peninsula. The Arabs call this whole cluster of mountains *Jebel-et-Tûr;* the Christians generally designate it as '*Sinai*,' and give the name of *Horeb* to a particular mountain, whereas in Scripture the names are used interchangeably. To which of the lofty peaks Moses ascended that he might receive the Law and thence publish it to the people, can only be matter of conjecture. Tradition fixed on the Jebel Mousa, *i. e.* 'the mountain of Moses,' at the foot of which is the convent of Mount Sinai, and opposite to it stands Mount St. Catharine, which is a thousand feet higher, and has on that account by some been taken for the true Sinai. Professor Robinson is inclined to identify the venerated spot with the *Râs Es-Sufsâfeh*, the highest peak on the northern brow of Horeb, which 'raises its bold and awful front in frowning majesty' above the extensive plain of Er-Râhah, where there was ample room for the encampment of the 'many thousands of Israel.' Others have thought of the *Jebel Serbâl*, a magnificent mountain, nine or ten hours north-west of the convent, and supposed by Burckhardt to be the highest of all the peaks, but since ascertained by Rüppell to be 1700 feet lower than St. Catharine.

Having now taken a rapid survey of this extensive region in its three divisions, let us advert to the people by whom it was at first settled, and by whose descendants it is still inhabited. There is a prevalent notion that the Arabs, both of the south and north, are descended from Ishmael; and the passage in Gen. xvi. 12, 'he (Ishmael) shall dwell in the presence of all his brethren,' is often cited as if it were a prediction of that national independence which, upon the whole, the Arabs have maintained more than any other people. But this supposition (in so far as the true meaning of the text quoted is concerned) is founded on a misconception of the original Hebrew, which runs literally, 'he shall dwell *before the faces* of all his brethren,' *i. e.* (according to the idiom above explained, in which 'before the face' denotes *the east*), the habitation of his posterity shall be 'to the east' of the settlements of Abraham's other descendants. This seems also to be the import of Gen. xxv. 18, where, in reference to Ishmael, it is said in our version, 'he died in the presence of all his brethren;' but the true sense is, 'the lot of his inheritance fell to him *before the faces* (*i. e.* to the east) of all his brethren.' These prophecies found their accomplishment in the fact of the sons of Ishmael being located, generally speaking, to the east of the other descendants of Abraham, whether by Sarah or by Keturah.

But the idea of the southern Arabs being of the posterity of Ishmael is entirely without foundation, and seems to have originated in the tradition invented by Arab vanity, that they, as well as the Jews, are of the seed of Abraham—a vanity which, besides disfiguring and falsifying the whole history of the patriarch and his son Ishmael, has transferred the scene of it from Palestine to Mecca. If we go to the most authentic source of ancient ethnography, the book of Genesis, we there find that the vast tracts of country known to us under the name of Arabia gradually became peopled by a variety of tribes of different lineage, though it is now impossible to determine the precise limits within which they fixed their permanent or nomadic abode. We shall here exhibit a tabular view of these races in chronological order, *i. e.* according to the successive æras of their respective progenitors:—

I. Hamites, *i. e.* the posterity of *Cush*, Ham's eldest son, whose descendants appear to have settled in the south of Arabia, and to have sent colonies across the Red Sea to the opposite coast of Africa; and hence *Cush* became a general name for 'the south,' and specially for Arabian and African Ethiopia. The sons of Cush (Gen. x. 7) were Seba, Havilah, Sabtah, Raamah or Ragma (his sons, Sheba and Dedan), and Sabtheca.

II. Shemites, including the following:

A. *Joktanites*, *i. e.* the descendants of Joktan (called by the Arabs *Kachtan*), the second son of Eber, Shem's great-grandson (Gen. x. 25, 26). According to Arab tradition Kachtan (whom they also regard as a son of Eber), after the confusion of tongues and dispersion at Babel, settled in Yemen, where he reigned as king. Ptolemy speaks of an Arab tribe called *Katanites*, who may have derived their name from him; and the richest Bedouins of the southern plains are the *Kahtan* tribe on the frontiers of Yemen. Joktan had thirteen sons, some of whose names may be obscurely traced in the designations of certain districts in Arabia Felix. Their names were Almodad, Shaleph, Hhazarmaveth (preserved in the name of the province of Hhadramaut, the Hebrew and Arabic letters being the same), Jarach, Hadoram, Usal (believed by the Arabs to have been the founder of Sanaa in Yemen), Dikla, Obal, Abimael, Sheba (father of the Sabæans, whose chief town was Mariaba or Mareb; their queen Balkis supposed to be the queen who visited Solomon*), Ophir (who gave name to the district that became so famous for its gold), Havilah, and Jobab.

B. *Abrahamites*, divided into—

(*a*) *Hagarenes* or *Hagarites*, so called from Hagar the mother; otherwise termed *Ishmaelites* from her son; and yet in course of time these names appear to have been applied to different tribes, for in Psalm lxxxiii. 6, the Hagarenes are

* The honour of being the country of the queen of Sheba is also claimed by Abyssinia; but if (as Bruce informs us) there was also a Saba in African Ethiopia, and if these opposite coasts of the Red Sea formed at times but one kingdom, the two opinions are not irreconcilable.

expressly distinguished from the Ishmaelites (comp. 1 Chron. v. 10, 19, 22, and the apocryphal book of Baruch i. 35; iii. 23). The twelve sons of Ishmael (Gen. xxv. 13-15), who gave names to separate tribes, were Nebaioth (the Nabathæans in Arabia Petræa), Kedar (the Kedarenes, sometimes also used as a designation of the Bedouins generally, and hence the Jewish rabbins call the Arabic language '*the Kedarene*'), Abdeel, Mibsam, Mishma, Dumah, Massa, Hadad or Hadar, Thema, Jetur, Naphish (the Ituræans and Naphishæans near the tribe of Gad: 1 Chron. v. 19, 20), and Kedmah. They appear to have been for the most part located near to Palestine on the east and south-east.

(β) *Keturahites, i.e.* the descendants of Abraham and his concubine Keturah, by whom he had six sons (Gen. xxv. 2): Simram, Jokshan (who, like Raamah, son of Cush, was also the father of two sons, Sheba and Dedan), Medan, Midian, Jishbak, and Shuach. Among these, the posterity of *Midian* became the best known. Their principal seat appears to have been in the neighbourhood of the Moabites, but a branch of them must have settled in the peninsula of Sinai, for Jethro, the father-in-law of Moses, was a priest of Midian (Exod. iii. 1; xviii. 5; Num. x. 29). To the posterity of Shuach belonged Bildad, one of the friends of Job.

(γ) *Edomites, i.e.* the descendants of Esau, who possessed Mount Seir and the adjacent region, called from them Idumæa. They and the Nabathæans formed in later times a flourishing commercial state, the capital of which was the remarkable city called Petra.

C. *Nahorites*, the descendants of Nahor, Abraham's brother, who seem to have peopled the land of *Uz*, the country of Job, and of *Buz*, the country of his friend Elihu the Buzite, these being the names of Nahor's sons (Gen. xxii. 21).

D. *Lotites*, viz.:

(α) *Moabites*, who occupied the northern portion of Arabia Petræa, as above described; and their kinsmen, the—

(β) *Ammonites*, who lived north of them, in Arabia Deserta.

Besides these, the Bible mentions various other tribes who resided within the bounds of Arabia, but whose descent is unknown, *e.g.* the Amalekites, the Kenites, the Horites, the inhabitants of Maon, Hazor, Vedan, and Javan-Meusal (Ezek. xxvii. 19), where the English version has, 'Dan also and Javan going to and fro.'

In process of time some of these tribes were perhaps wholly extirpated (as seems to have been the case with the Amalekites), but the rest were more or less mingled together by intermarriages, by military conquests, political revolutions, and other causes of which history has preserved no record; and thus amalgamated, they became known to the rest of the world as the 'ARABS,' a people whose physical and mental characteristics are very strongly and distinctly marked. In both respects they rank very high among the nations; so much so, that some have regarded them as furnishing the *prototype*—the primitive model form—the standard figure of the human species. This was the opinion of the famous Baron de Larrey, surgeon-general of Napoleon's army in Egypt, who, in speaking of the Arabs on the east side of the Red Sea, says (in a *Memoir for the Use of the Scientific Commission to Algiers*, Paris, 1838) 'They have a physiognomy and character which are quite peculiar, and which distinguish them generally from all those which appear in other regions of the globe.' In his dissections he found 'their physical structure in all respects more perfect than that of Europeans; their organs of sense exquisitely acute; their size above the average of men in general; their figure robust and elegant (the colour brown); their intelligence proportionate to that physical perfection, and, without doubt, superior, other things being equal, to that of other nations.'

The inhabitants of Arabia have, from remote antiquity, been divided into two great classes, viz. the *townsmen* (including villagers), and the *men of the desert*, such being, as we remarked, the meaning of the word '*Bedawees*' or Bedouins, the designation given to the 'dwellers in the wilderness.' From the nature of their country, the latter are necessitated to lead the life of *nomades*, or wandering shepherds; and since the days of the patriarchs (who were themselves of that occupation) the extensive *steppes*, which form so large a portion of Arabia, have been traversed by a pastoral but warlike people, who, in their mode of life, their food, their dress, their dwellings, their manners, customs, and government, have always continued, and still continue, almost unalterably the same. They consist of a great many separate tribes, who are collected into different encampments dispersed through the territory which they claim as their own; and they move from one spot to another (commonly in the neighbourhood of pools or wells) as soon as the stinted pasture is exhausted by their cattle. It is only here and there that the ground is susceptible of cultivation, and the tillage of it is commonly left to peasants, who are often the vassals of the Bedawees, and whom (as well as all 'townsmen') they regard with contempt as an inferior race. Having constantly to shift their residence, they live in movable tents (comp. Isa. xiii. 20; Jer. xlix. 29), from which circumstance they received from the Greeks the name of Σκηνῖται, *i.e.* dwellers in tents (Strabo, xvi. p. 747; Diod. Sic. p. 254; Ammian. Marcell. xxiii. 6). The tents are of an oblong figure, not more than six or eight feet high, twenty to thirty long, and ten broad; they are made of goat's or camel's hair, and are of a brown or *black* colour (such were the tents of Kedar, Cant. i. 5), differing in this respect from those of the Turcomans, which are white. Each tent is divided by a curtain or carpet into two apartments, one of which is appropriated to the women, who are not, however, subject to so much restraint and seclusion as among other Mohammedans. The tents are arranged in an irregular circle, the space within serving as a fold to the cattle at night. The heads of tribes are called *sheikhs*, a word of various import, but used in this case as a title of honour; the government is hereditary in the family of each sheikh, but elective as to the particular individual appointed. Their allegiance, however, consists more in following his example as a leader than in obeying his commands; and, if dissatisfied with his government,

they will depose or abandon him. As the independent lords of their own deserts, the Bedawees have from time immemorial demanded tribute or presents from all travellers or caravans (Isa. xxi. 13) passing through their country; the transition from which to robbery is so natural, that they attach to the latter no disgrace, plundering without mercy all who are unable to resist them, or who have not secured the protection of their tribe. Their watching for travellers 'in the ways,' *i. e.* the frequented routes through the desert, is alluded to Jer. iii. 2; Ezra viii. 31; and the fleetness of their horses in carrying them into the 'depths of the wilderness,' beyond the reach of their pursuers, seems what is referred to in Isa. lxiii. 13, 14. Their warlike incursions into more settled districts are often noticed (*e. g.* Job i. 15; 2 Chron. xxi. 16; xxvi. 7). The acuteness of their bodily senses is very remarkable, and is exemplified in their astonishing sagacity in tracing and distinguishing the footsteps of men and cattle, a faculty which is known by the name of *athr*. The law of *thar*, or blood-revenge, sows the seeds of perpetual feuds; and what was predicted (Gen. xvi. 12) of the posterity of Ishmael, the 'wild-ass man' (a term most graphically descriptive of a Bedawee), holds true of the whole people. Yet the very dread of the consequences of shedding blood prevents their frequent conflicts from being very sanguinary: they show bravery in repelling a public enemy, but when they fight for plunder, they behave like cowards. Their bodily frame is spare, but athletic and active, inured to fatigue and capable of undergoing great privations: their minds are acute and inquisitive; and though their manners are somewhat grave and formal, they are of a lively and social disposition. Of their moral virtues it is necessary to speak with caution. They were long held up as models of good faith, incorruptible integrity, and the most generous hospitality to strangers; but many recent travellers deny them the possession of these qualities; and it is certain that whatever they may have been once, the Bedawees, like all the unsophisticated 'children of nature,' have been much corrupted by the influx of foreigners, and the national character is in every point of view lowest where they are most exposed to the continual passage of strangers. It is, however, no part of our present design to enter on a more minute account of this singular and interesting people; information regarding many of their peculiarities which throw light on Scripture will be found under other heads. Let every one who wishes to study Arab life in the desert consult the romance of *Antar*, translated by Hamilton, and Burckhardt's *Notes on the Bedouins*; and with respect to the manners and customs of the more settled inhabitants, many curious details will be found in Lane's *Modern Egyptians*, and in the notes to his new Translation of the *Thousand and One Nights*; for since the downfal of the Arab empire of Bagdad, Cairo has been the chief of Arabian cities, and there Arab manners exist in their most refined form. The population of the entire peninsula of Arabia has been estimated at from eleven to twelve millions, but the data are precarious.

The principal source of the wealth of ancient Arabia was its *commerce*. So early as the days of Jacob (Gen. xxxvii. 28) we read of a mixed caravan of Arab merchants (Ishmaelites and Midianites) who were engaged in the conveyance of various foreign articles to Egypt, and made no scruple to add Joseph, 'a slave,' to their other purchases. The Arabs were, doubtless, the first navigators of their own seas, and the great carriers of the produce of India, Abyssinia, and other remote countries to Western Asia and Egypt. Various Indian productions thus obtained were common among the Hebrews at an early period of their history (Exod. xxx. 23, 25). The traffic of the Red Sea was to Solomon a source of great profit; and the extensive commerce of *Sabæa* (Sheba, now Yemen) is mentioned by profane writers as well as alluded to in Scripture (1 Kings x. 10-15). In the description of the foreign trade of Tyre (Ezek. xxvii. 19-24) various Arab tribes are introduced (comp. Isa. lx. 6; Jer. vi. 20; 2 Chron. ix. 14). The Nabathæo-Idumæans became a great trading people, their capital being Petra. The transit-trade from India continued to enrich Arabia until the discovery of the passage to India by the Cape of Good Hope; but the invention of steam-navigation has now restored the ancient route for travellers by the Red Sea.

The settlers in Arabia are by native writers divided into two classes: the old tribes (who belonged to the fabulous period of history, and are long since extinct); and the present inhabitants. The latter are classed either among the 'pure or genuine,' or the *Mostarabi*, the mixed or naturalized Arabs. A 'pure' Arab boasts of being descended from Kachtan (the Joktan of Scripture, Gen. x. 29), and calls himself *al Arab al Araba*, 'an Arab of the Arabs,' a phrase of similar emphasis with St. Paul's 'Hebrew of the Hebrews' (Phil. iii. 5). The mixed Arabs are supposed to be descended from Ishmael by a daughter of Modad, king of Hedjaz, the district where the Ismaelites chiefly settled. The Kachtanites, on the other hand, occupied the southern part of the peninsula, for Kachtan's great-grandson Saba gave name to a kingdom, one of whose queens (called by the Arabians Balkis) visited Solomon (1 Kings x. 1). A son of Saba was Himyar, who gave name to the famous dynasty of the *Himyarites* (improperly written Homerites), that seem to have reigned for many centuries over Sabæa and part of Hhadramaut. In the latter province Lieut. Wellsted recently discovered ruins called Nakab-el-Hajar ('the excavation in the rock'), consisting of a massive wall, thirty to forty feet high, flanked with square towers. Within the entrance on the face of the building he found an inscription in characters eight inches long, which Gesenius supposes to be the ancient Himyaritic writing. Arabia, in ancient times, generally preserved its independence, unaffected by those great events which changed the destiny of the surrounding nations; and in the sixth century of our æra, the decline of the Roman empire and the corruptions and distractions of the Eastern church favoured the impulse given by a wild and warlike fanaticism. Mahomet arose, and succeeded in gathering around his standard the nomadic tribes of central Arabia; and in less than fifty years that standard waved triumphant 'from the straits of Gibraltar to the hitherto unconquered regions

beyond the Oxus.' The khalifs transferred the seat of government successively to Damascus, Kufa, and Bagdad; but amid the distractions of their foreign wars, the chiefs of the interior of Arabia gradually shook off their feeble allegiance, and resumed their ancient habits of independence, which, notwithstanding the revolutions that have since occurred, they for the most part retain. At present, indeed, the authority of Mehemet Ali, the Pasha of Egypt, is acknowledged over a great portion of the northern part of Arabia, while in the south the Imam of Maskat exercises dominion over a much greater extent of country than did any of his predecessors.—N. M.

ARABIC LANGUAGE. That important family of languages, of which the Arabic is the most cultivated and most widely-extended branch, has long wanted an appropriate common name. The term *Oriental* languages, which was exclusively applied to it from the time of Jerome down to the end of the last century, and which is even now not entirely abandoned, must always have been an unscientific one, inasmuch as the countries in which these languages prevailed are only the *east* in respect to Europe; and when Sanscrit, Chinese, and other idioms of the remoter East were brought within the reach of our research, it became palpably incorrect. Under a sense of this impropriety, Eichhorn was the first, as he says himself (*Allg. Bibl. Biblioth.* vi. 772), to introduce the name *Semitic* languages, which was soon generally adopted, and which is the most usual one at the present day. Nevertheless, Stange (in his *Theolog. Symmikta*) justly objected to this name as violating the statements of the very Mosaic account (Gen. x.) on which the propriety of its use professed to be based. For, according to that genealogical table, some nations, which in all probability did not speak a language belonging to this family, are descended from Shem; and others, which did speak such a language, are derived from Ham. Thus 'Elam and Asshur are deduced from Shem (ver. 22); and the descendants of Cush in Arabia and Ethiopia, as well as all the Canaanites, from Ham (ver. 7, *sq.*). In modern times, however, the very appropriate designation *Syro-Arabian* languages has been proposed by Dr. Prichard, in his *Physical History of Man.* This term, besides being exempt from all the above-mentioned objections on the score either of latitude or inadequacy, has the advantage of forming an exact counterpart to the name by which the only other great family of languages with which we are likely to bring the Syro-Arabian into relations of contrast or accordance, is now universally known —the *Indo-Germanic.* Like it, by taking up only the two extreme members of a whole sisterhood according to their geographical position when in their native seats, it embraces all the intermediate branches under a common band; and, like it, it constitutes a name which is not only at once intelligible, but one which in itself conveys a notion of that affinity between the sister dialects, which it is one of the objects of comparative philology to demonstrate and to apply.

Of this family, then, the Arabic forms, together with the Ethiopic, the southern branch. In it we find the full and adult development of the genius of the Syro-Arabian languages. In the abundance of its roots, in the manifold variety of its formations, in the syntactical delicacies of its construction, it stands pre-eminent as a language among all its sisters. Every class of composition also: the wild and yet noble lyrics of the son of the desert, who had 'nothing to glory in but his sword, his guest, and his fervid tongue;' the impassioned and often sublime appeals of the Qurân; the sentimental poetry of a Mutanabbi; the artless simplicity of their usual narrative style, and the philosophic disquisition of an Ibn Chaldûn; the subtleties of the grammarian and scholiast; medicine, natural history, and the metaphysical speculations of the Aristotelian school—all have found the Arabic language a fitting exponent of their feeling and thought. And, although confined within the bounds of the Peninsula by circumstances to which we owe the preservation of its pure antique form, yet Islam made it the written and spoken language of the whole of Western Asia, of Eastern and Northern Africa, of Spain, and of some of the islands of the Mediterranean; and the ecclesiastical language of Persia, Turkey, and all other lands which receive the Mohammedan faith; in all which places it has left sensible traces of its former occupancy, and in many of which it is still the living or the learned idiom. Such is the Arabic language; so important its relations to the literary and civil history of a large portion of the human race: the more important also to us as bridging over that wide chasm which intervenes between the extinction of classical literature and the revival of that spirit to which the literature of all modern languages owes its origin. Into these general views of the Arabic language, however, it is not the province of this work to enter: an able article in the *Penny Cyclopædia*, by the late lamented Dr. Rosen, will satisfy those who desire such information. Our object here is to show the mode and the importance of its bearings upon Biblical philology.

The close affinity, and consequently the incalculable philological use, of the Arabic with regard to the Hebrew language and its other sisters, may be considered partly as a question of theory, and partly as one of fact. The former would regard the concurrent records which the Old Testament and their own traditions have preserved of the several links by which the Arabs were connected with different generations of the Hebrew line, and the evidences which Scripture offers of persons speaking Arabic being intelligible to the Hebrews; the latter would observe the demonstrable identity between them in the main features of a language, and the more subtle, but no less convincing traces of resemblance even in the points in which their diversity is most apparent.

The following are the theoretical grounds:— first, the Arabs of Jemen are derived from Qahtân, the Joktan of Gen. x. 25, whom the Arabs make the son of 'Eber (Pococke's *Specimen Hist. Arab.* p. 39, *sq.*). These form the *pure* Arabs. Then Ishmael intermarried with a descendant of the line of Qahtân, and became the progenitor of the tribes of Hig'âz. These are the *insititious* Arabs. These two roots of the nation correspond with the two great dialects into which the language was once divided: that of Jemen, under the name of the Himjarite, of which all

that has come down to us (except what may have been preserved in the Ethiopic) is a few inscriptions; and that of Hig'âz, under that of the dialect of Mudhar, or, descending a few generations in the same line, of Quraish—the dialect of the Qurân and of all their literature. Then, Abraham sent away his sons by Keturah, and they also became the founders of Arabic tribes. Lastly, the circumstance of Esau's settling in Mount Seir, where the Idumæans descended from his loins, may be considered as a still later medium by which the idioms of Palestine and Arabia preserved their harmony. Secondly, Olaus Celsius (in his *Hist. Ling. et Erudit. Arab.*) cites the fact of the sons of Jacob conversing with the Ishmaelite caravan (Gen. xxxvii. 28), and that of Moses with his father-in-law the Midianite (Exod. iv. 18). To these, however, Schelling (in his *Abhandl. v. d. Gebrauch der Arab. Sprache*, p. 14) objects that they are not conclusive, as the Ishmaelites, being merchants, might have acquired the idiom of the nations they traded with, and as Moses might owe an acquaintance with Arabic to his residence in Egypt. Nevertheless, one of Celsius's inferences derives considerable probability from the only instance of mutual intelligibility which J. D. Michaelis has adduced (in his *Beurtheilung der Mittel die ausgestorbene Hebr. Sprache zu verstehen*, p. 156), namely, that Gideon and his servant went down by night to the camp of 'Midian, Amalek, and all the Bene Qedem,' to overhear their conversation with each other, and understood what they heard (Judg. viii. 9-14). Lastly, Schultens (*Oratio de Reg. Sabæor.*, in his *Opp. Minora*) labours to show that the visit of the queen of Sheba to Solomon is a strong proof of the degree of proximity in which the two dialects then stood to each other. These late traces of resemblance, moreover, are rendered more striking by the notice of the early diversity between Hebrew and *Aramaic* (Gen. xxxi. 47). The instance of the Ethiopian chamberlain in Acts viii. 28, may not be considered an evidence, if Heinrichs, in his note ad loc. in *Nov. Test. edit. Kopp.*, is right in asserting that he was reading the Septuagint version, and that Philip the deacon was a Hellenist.

Thus springing from the same root as the Hebrew, and possessing such traces of affinity to so late a period as the time of Solomon, this dialect was further enabled, by several circumstances in the social state of the nation, to retain its native resemblance of type until the date of the earliest extant written documents. These circumstances were, the almost insular position of the country, which prevented conquest or commerce from debasing the language of its inhabitants; the fact that so large a portion of the nation adhered to a mode of life in which every impression was, as it were, stereotyped, and knew no variation for ages (a cause to which we may also in part ascribe the comparatively unimportant changes which the language has undergone during the 1400 years in which we can follow its history); and the great and just pride which they felt in the purity of their language, which, according to a valuable testimony of Burckhardt, a competent judge of the learned as well as the living idiom, is still a characteristic of the Bedouins (*Notes on the Bedouins*, p. 211). These causes preserved the language from foreign influences at a time when, as the Qurân and a national literature had not yet given it its full stature, such influences would have been most able to destroy its integrity. During this interval, nevertheless, the language received a peculiarly ample development in a certain direction. The limited incidents of a desert life still allowed valour, love, generosity, and satire to occupy the keen sensibilities of the chivalrous Bedouin. These feelings found their vent in ready verse and eloquent prose; and thus, when Islam first called the Arabs into the more varied activity and more perilous collision with foreign nations, which resulted from the union of their tribes under a common interest to hold the same faith and to propagate it by the sword, the language had already received all the development which it could derive from the pre-eminently creative and refining impulses of poetry and eloquence.

However great may be the amount of resemblance between Arabic and Hebrew which a due estimate of all the theoretical grounds for the affinity, and for the diversity, between them would entitle us to assume, it is certain that a comparison of the actual state of both in their purest form evinces a degree of proximity which exceeds expectation. Not only may two-thirds of the Hebrew roots (to take the assertion of Aurivillius, in his *Dissertationes*, p. 11, ed. J. D. Michaelis) be found in Arabic under the same letters, and either in the same or a very kindred sense, provided we know that the last radical of the לה roots in Hebrew is *Waw* or *Ja* in Arabic; and that those whose first radical is *Jod* in Hebrew is *Waw* in Arabic; and that the letters ת ח ד צ ט ע correspond to تحد صطع, and that either when the latter have a diacritical point or not; but, if we allow for the changes of ג into غ, ו into ء and ي, ז into ذ, י into و, ס and שׂ into ش, ץ into ظ, and שׂ into س and ث, we shall be able to discover nearly nine-tenths of the Hebrew roots in Arabic. To this great fundamental agreement in the vocabulary (the wonder of which is somewhat diminished by a right estimate of the immense disproportion between the two languages as to the number of roots) are to be added those resemblances which relate to the mode of inflexion and construction. Thus, in the verb, its two wide tenses, the mode by which the persons are denoted at the end in the Perfect, and at the beginning (with the accessory distinctions at the end) in the Imperfect, its capability of expressing the gender in the second and third persons, and the system on which the conjugations are formed; and in the noun, the correspondence in formations, in the use of the two genders, and in all the essential characteristics of construction; the possession of the definite article; the independent and affixed pronouns; and the same system of separable and attached particles—all these form so broad a basis of community and harmony between the two dialects, as could hardly be anticipated, when we consider the many centuries which separate the earliest written extant documents of each.

The diversities between them, which consist

almost entirely of fuller developments on the side of the Arabic, may be summed up under the following heads:—A much more extensive system of conjugations in the verb, the dual in both tenses, and four forms of the Imperfect (three of which, however, exist potentially in the ordinary imperfect, the jussive, and the cohortative of the Hebrew: see Ewald's *Hebr. Gram.* § 290, 293); the full series of infinitives; the use of auxiliary verbs; in the noun, the formations of the plural called *broken* or *internal* plurals, and the flexion by means of terminations analogous to three of our cases; and a perfectly defined system of metre. The most important of these differences consists in that final vowel after the last radical, by which some of the forms of the imperfect and the several cases in the noun are indicated; and it is a matter of some moment to determine whether they are to be ascribed to the genuine natural expansion of the language, or are only an attempt of the grammarians to introduce Greek inflexions into Arabic. The latter opinion has been seriously propounded by Hasse, in a paper in his *Magazin für Biblisch-Orientalische Litteratur*, i. 230; and even Gesenius has expressed himself to the same effect (*Gesch. d. Hebr. Spr.* p. 95). Nevertheless, the notion springs from a forgetfulness of the fact that the date of the early poems, the Hamasa and the Mu'allaqât, is much anterior to the period when any such foreign influence as Hasse alludes to could have had effect; and from an ignorance of the absolute necessity of all those flexional vowels to preserve the *metre* of the poetry. If any productions of Arabic genius are old—if any are national in the highest sense, both as to substance and form, it is those poems. And so essential a part of their form is the metre according to which they were conceived, that it is incontestable that their metrical disposition and their existence are coeval. When Hasse, then, 'candidly admits that these terminations of case were in use as early as the second century of the Hig'ra,' he merely admits his ignorance of the fact that the earliest remains of Arabic literature, those which are older by centuries than the Qurân, are composed in a form which is unintelligible unless read according to the nicest distinctions of this vocalization of the final syllables. This error is, moreover, akin to a not uncommon statement, that Al Chalîl, who lived in the second century of the Hig'ra (Freytag's *Darstellung d. Arab. Verskunst*, p. 18), invented the art of Prosody: which is as true as that Aristotle invented the art of Poetry, merely because he abstracted the laws of composition from the masterpieces of Greek genius.

The Arabic alphabet also presents some remarkable differences. As a representation of sounds, it contains all the Hebrew letters; but in consequence of the greater extent of the nation as a source of dialectual varieties of pronunciation, and also in consequence of the more developed and refined state of the language, the value of some of them is not exactly the same, and the characters that correspond to ע ט צ ד ח ת are used in a double capacity, and represent both halves of those sounds which exist unseparated in the Hebrew. The present order of the letters also is different, although there are evidences in their numerical value, when so used, and in the memorial words given in Ewald's *Grammatica Critica Ling. Arab.* § 67, that the arrangement was once the same in both. In a palæographical point of view, the characters have undergone many changes. The earliest form was that in the Himjarite alphabet. The first specimens of this character (which Arabic writers call *al Musnad*, i. e. *stilted, columnar*) were given by Seetzen in the *Fundgruben des Orients*. Since then Professor Rödiger has produced others, and illustrated them in a valuable paper in the *Zeitschrift für die Kunde des Morgenlandes*, i. 332. The letters of this alphabet have a striking resemblance to those of the Ethiopic, which were derived from them. In Northern Arabia, on the other hand, and not very long before the time of Muhammad, the Syrian character called *Estrangelo* became the model on which the Arabic alphabet called the *Kufic* was formed. This heavy, angular Kufic character was the one in which the early copies of the Qurân were written; and it is also found in the ancient Muhammadan coinage as late as the seventh century of the Hig'ra. From this, at length, was derived the light, neat character called *Nischi*, the one in which the Arabs continue to write at the present day, and which we have endeavoured to represent in our printed books. The introduction of this character is ascribed to Ibn Muqla, who died in the year 327 of the Hig'ra. (See the table given in the article ALPHABET.) Lastly, it is worthy of notice that all the letters of the Arabic alphabet are only consonants; that, in an unpointed text, the *long* vowels are denoted by the use of Alif, Waw, and Ja, as *matres lectionis;* and that the *short* vowels are not denoted at all, but are left to be supplied according to the *sense* in which the reader takes the words; whereas, in a pointed text, *three* points only suffice to represent the whole vocalization; the equivalents to which, according to the way in which they are expressed in this work, are *a*, *i*, *u*, pronounced as in Italian.

The manifold uses of the Arabic language in Biblical philology (exclusive of the advantages it affords for comparing the Arabic versions) may in part be gathered from the degree of its affinity to the Hebrew; and, indeed, chiefly to the Hebrew before the exile, after which period the Aramaic is the most fruitful means of illustration (Mahn, *Darstellung der Lexicographie*, p. 391). But there are some peculiarities in the relative position of the two dialects which considerably enhance the value of the aid to be derived from the Arabic. The Hebrew language of the Old Testament has preserved to us but a small fragment of a literature. In the limited number of its roots (some of which even do not occur in the primary sense), in the rarity of some formations, and in the antique rudimentary mode in which some of its constructions are denoted, are contained those difficulties which cannot receive any other illustration than that which the sister dialects, and most especially the Arabic, afford. For this purpose, the resemblances between them are as useful as the diversities. The former enable us to feel certain on points which were liable to doubt: they confirm and establish an intelligent conviction that the larger portion of our knowledge of the meaning of words, and of the force of constructions in Hebrew, is on a sure foundation; because we recognise the same in a kindred form, and in a literature so voluminous as to afford us frequent opportunities of

testing our notions by every variety of experience. The diversities, on the other hand (according to a mode of observation very frequent in comparative anatomy), show us what exists potentially in the rudimentary state, by enabling us to see how a language of the same genius has, in the further progress of its development, felt the necessity of denoting externally those relations of formation and construction which were only dimly perceived in its antique and uncultivated form. Thus, to adduce a single illustration from the Arabic *cases* in the noun:—The precise relation of the words *mouth* and *life*, in the common Hebrew phrases, 'I call my mouth,' and 'he smote him his life' (Ewald's *Hebr. Gram.* § 482), is easily intelligible to one whom Arabic has familiarised with the perpetual use of the so-called accusative to denote the accessory descriptions of *state*. Another important advantage to be derived from the study of Arabic, is the opportunity of seeing the grammar of a Syro-Arabian language explained by native scholars. Hebrew grammar has suffered much injury from the mistaken notions of men, who, understanding the *sense* of the written documents by the aid of the versions, have been exempted from obtaining any independent and inward feeling of the genius of the language, and have therefore not hesitated to accommodate it to the grammar of our Indo-Germanic idioms. In Arabic, however, we have a language, every branch of the philosophical study of which has been successfully cultivated by the Arabs themselves. Their own lexicographers, grammarians, and scholiasts (to whom the Jews also are indebted for teaching them the grammatical treatment of Hebrew) have placed the language before us with such elaborate explanation of its entire character, that Arabic is not only by far the most accessible of the Syro-Arabian dialects, but may even challenge comparison, as to the possession of these advantages, with the Greek itself.—J. N.

ARABIC VERSIONS. As Christianity never attained any extensive or permanent influence among the Arabs as a nation, no entire nor publicly sanctioned Arabic version of the Bible has been discovered. But, as political events at length made the Arabic language the common vehicle of instruction in the East, and that to Jews, Samaritans, and Christians, independent versions of single books were often undertaken, according to the zeal of private persons, or the interests of small communities. The following is a classified list of only the most important among them:—

I. Arabic versions formed immediately on the original texts.

A. Rabbi Saadjah Haggaôn, a native of Faijûm, and rector of the academy at Sora, who died A.D. 912, is the author of a version of some portions of the Old Testament. Erpenius and Pocock, indeed, affirm that he translated the whole (Walton's *Prolegomena*, ed. Wrangham, ii. 546); but subsequent inquirers have not hitherto been able, with any certainty, to assign to him more than a version of the Pentateuch, of Isaiah, of Job, and of a portion of Hosea.

That of the Pentateuch first appeared, in Hebrew characters, in the folio Tetraglott Pentateuch of Constantinople, in the year 1546. The exact title of this exceedingly rare book is not given by Wolf, by Masch, nor by De Rossi (it is said to be found in Adler's *Biblisch-kritische Reise*, p. 221); but, according to the title of it which O. G. Tychsen cites from Rabbi Shabtai (in Eichhorn's *Repertorium*, x. 96), Saadjah's name is expressly mentioned there as the author of that Arabic version. Nearly a century later an Arabic version of the Pentateuch was printed in the Polyglott of Paris, from a MS. belonging to F. Savary de Breves; and the text thus obtained was then reprinted in the London Polyglott, with a collection of the various readings of the Constantinopolitan text, and of another MS. in the appendix. For it was admitted that Saadjah was the author of the Constantinopolitan version; and the identity of that text with that of the Paris Polyglott was maintained by Pocock (who nevertheless acknowledged frequent interpolations in the latter), and had been confirmed even by the collation which J. H. Hottinger had instituted to establish their diversity. The identity of all these texts was thus considered a settled point, and long remained so, until J. D. Michaelis published (in his *Orient. Bibl.*, ix. 155, *sq.*) a copy of a Latin note which Jos. Ascari had prefixed to the very MS. of De Breves, from which the Paris Polyglott had derived its Arabic version. That note ascribed the version to 'Saidius Fajumensis, Monachus Coptites;' and thus Saadjah's claim to be considered the author of the version in the Polyglotts was again liable to question. At length, however, Schnurrer (in his *Dissertat. de Pentat. Arab. Polygl.* in his *Dissert. Philologico-criticæ*) printed the *Arabic* preface of that MS., proved that there was no foundation for the 'Monachus Coptites,' and endeavoured to show that Sa'îd was the Arabic equivalent to the Hebrew Sa'adjah, and to re-establish the ancient opinion of the identity of the two texts. The results which he obtained appear (with the exception of a feeble attempt of O. G. Tychsen to ascribe the version to *Abu Sa'îd*, in the *Repertorium*) to have convinced most modern critics; and indeed they have received much confirmation by the appearance of the version of Isaiah. This version of the Pentateuch, which is an honourable monument of the Rabbinical Biblical philology of the tenth century, possesses, in the independence of its tone, and in some peculiarities of interpretation, the marks of having been formed on the original text. It leans, of course, to Jewish exegetical authorities generally; but often follows the Sept., and as often appears to express views peculiar to its author. Carpzov has given numerous examples of its mode of interpretation in his *Crit. Sacr.* p. 646, *sq.* It is also marked by a certain loose and paraphrastic style of rendering, which makes it more useful in an exegetical than in a critical point of view. It is difficult, however, to determine how much of this diffuseness is due to Saadjah himself. For, not only is the printed text of his version more faulty, in this respect, than a Florentine MS., some of the readings of which Adler has given in Eichhorn's *Einleit. ins A. T.*, ii. 245; but it has suffered a systematic interpolation. A comparison of the Constantinopolitan text with that of the Polyglotts shows that where the former retains those terms of the Hebrew in which action or passion is ascribed to God—the so-called ἀνθρωποπάθειαι—the latter has the 'Angel of God,' or some other

mode of evading direct expressions. These interpolations are ascribed by Eichhorn to a Samaritan source; for Morinus and Hottinger assert that the custom of omitting or evading the anthropomorphisms of the Hebrew text is a characteristic of the Samaritan versions.

A version of Isaiah, which in the original MS. is ascribed to Saadjah, with several extrinsic evidences of truth, and without the opposition of a single critic, appeared under the title, *R. Saadiæ Phijumensis Versio Jesaiæ Arabica e MS. Bodley. edidit atque Glossar. instruxit*, H. E. G. Paulus, fasc. ii., Jena, 1791, 8vo. The text was copied from a MS. written in Hebrew characters, and the difficulty of always discovering the equivalent Arabic letters into which it was to be transposed, has been one source of the inaccuracies observable in the work. Gesenius (in his *Jesaias*, i. 88, sq.) has given a summary view of the characteristics of this version, and has shown the great general agreement between them and those of the version of the Pentateuch, in a manner altogether confirmatory of the belief in the identity of the authors of both.

His version of Job exists in MS. at Oxford, where Gesenius took a copy of it (*Jesaias*, p. x.).

That of Hosea is only known from the citation of ch. vi. 9, by Kimchi (Pococke's *Theolog. Works*, ii. 280).

B. The version of Joshua which is printed in the Paris and London Polyglotts, the author and date of which are unknown.

C. The version of the whole passage from 1 Kings xii. to 2 Kings xii. 16, inclusive, which is also found in the same Polyglotts. Professor Rödiger has collected the critical evidences which prove that this whole interval is translated from the Hebrew; and ascribes the version to an unknown Damascene Jew of the eleventh century. Likewise, the passage in Nehemiah, from i. to ix. 27, inclusive, as it exists in both Polyglotts, which he asserts to be the translation of a Jew (resembling that of Joshua in style), but with subsequent interpolations by a Syrian Christian. (See his work *De Origine Arabicæ Libror. V. T. Historic. Interpretationis*, Halle, 4to.)

D. The very close and almost slavish version of the Pentateuch, by some Mauritanian Jew of the thirteenth century, which Erpenius published at Leyden in 1622—the so-called *Arabs Erpenii*.

E. The Samaritan Arabic version of Abu Sa'ïd. According to the author's preface affixed to the Paris MS. of this version (No. 4), the original of which is given in Eichhorn's *Bibl. Biblioth.* iii. 6, Abu Sa'ïd was induced to undertake it, partly by seeing the corrupt state to which ignorant copyists had reduced the version then used by the Samaritans, and partly by discovering that the version which they used, under the belief that it was that of Abu'l Hasan of Tyre, was in reality none other than that of Saadjah Haggaôn. His national prejudice being thus excited against an accursed Jew, and the 'manifest impiety' of some of his interpretations, he applied himself to this translation, and accompanied it with notes in order to justify his renderings, to explain difficulties, and to dispute with the Jews. His version is characterized by extreme fidelity to the Samaritan text (*i. e.* in other words, to the Hebrew text with the differences which distinguish the Samaritan recension of it), retaining even the order of the words, and often sacrificing the proprieties of the Arabic idiom to the preservation of the very terms of the original. It is certainly not formed on the Samaritan *version*, although it sometimes agrees with it; and it has such a resemblance to the version of Saadjah as implies familiarity with it, or a designed use of its assistance; and it exceeds both these in the constant avoidance of all anthropomorphic expressions. Its date is unknown, but it must have been executed between the tenth and thirteenth centuries, because it was necessarily posterior to Saadjah's version, and because the Barberini copy of it was written A.D. 1227. It is to be regretted that this version, although it would be chiefly available in determining the readings of the Samaritan Pentateuch, is still unpublished. It exists in MS. at Oxford (one of the copies there being the one cited by Castell in the Appendix to the London Polyglott), at Paris, Leyden, and at Rome, in the celebrated Barberini Triglott (the best description of which is in De Rossi's *Specimen Var. Lect. et Chald. Estheris Additamenta*, Tübingen, 1783). Portions only have been printed: the earliest by J. H. Hottinger, in his *Promtuarium*, p. 98; and the two longest by De Sacy, with an interesting dissertation, in Eichhorn's *Bibl. Biblioth.* x., and by Van Vloten, in his *Specim. Philolog. continens descrip. cod. MS. Biblioth. Lugd.-Bat. Partemque Vers. Sam. Arab. Pentat.*, Leidæ, 1803.

F. A version of the Gospels, which was first printed at Rome in 1590, then in the Arabic New Testament of Erpenius in 1616, and afterwards in the Paris Polyglott (the text of which last is the one copied in that of London). The first two of these editions are derived from MSS., and the variations which distinguish the tex of Paris from that of Rome are also supposed to have been obtained from a MS. The agreement and the diversity of all these texts are equally remarkable. The agreement is so great as to prove that they all represent only one and the same version, and *that* one based immediately on the Greek. The diversities (exclusive of errors of copyists) consist in the irregular changes which have been made in every one of these MSS., separately, to adapt it indiscriminately to the Peshito or Coptic versions. This surprising amalgamation is thus accounted for by Hug: When the prevalence of the Arabic language had rendered the Syriac and Coptic obsolete, the Syrians and Copts were obliged to use an Arabic version. They therefore took some translation in that language, but first adapted it to the Peshito and Memphitic versions respectively. As the Peshito and Coptic versions still continued to be read first in their churches, and the Arabic translation immediately afterwards, as a kind of Targum, it became usual to write their national versions and this amended Arabic version in parallel columns. This mere juxtaposition led to a further adulteration in each case. Afterwards, two of these MSS. which had thus suffered different adaptations, were brought together by some means, and mutually corrupted each other—by which a third text, the hybrid one of our Arabic version, was produced. The age of the original Arabic text is uncertain; but the circumstance of its adoption by the Syrians and Copts places it near the seventh century (Bertholdt's *Einleit.* i. 692, *sq.*).

6. The version of the Acts, of the Epistles of Paul, of the Catholic Epistles, and of the Apocalypse, which is found in both the Polyglotts. The author is unknown, but he is supposed to have been a native of Cyrene, and the date to be the eighth or ninth century (Bertholdt, *ibid.*).

II. Arabic versions founded on the LXX.

A. The Polyglott version of the Prophets, which is expressly said in the inscription in the Paris MS. to have been made from the Greek by an Alexandrian priest. Its date is probably later than the tenth century.

B. That of the Psalms (according to the Syrian recension) which is printed in Justiniani's *Psalt. Octaplum*. Genoa, 1516, and in *Liber. Psalmor. a Gabr. Sionita et Vict. Scialac.* Rome, 1614.

C. That version of the Psalms which is in use by the Malkites, or Orthodox Oriental Christians, made by 'Abdallah ben al Fadhl, before the twelfth century. It has been printed at Aleppo in 1706, in London in 1725, and elsewhere.

D. The version of the Psalms (according to the Egyptian recension) which is found in both the Polyglotts.

III. Arabic versions formed on the Peshito.

A. The Polyglott version of Job, of Chronicles, and (according to Rödiger, who ascribes them to Christian translators in the thirteenth and fourteenth centuries) that of Judges, Ruth, Samuel, 1 Kings i. to xi., and 2 Kings xii. 17, to xxv.

B. The version of the Psalms printed at Qashaia, near Mount Lebanon, in 1610. (The *Einleitungen* of Eichhorn, Bertholdt, and De Wette contain ample researches, or references, for the further investigation of this extensive subject.)—J. N.

ARAD, an ancient city on the southernmost borders of Palestine, whose inhabitants drove back the Israelites as they attempted to penetrate from Kadesh into Canaan (Num. xxi. 1, where the Auth. Vers. has 'King Arad,' instead of 'King of Arad'), but were eventually subdued by Joshua, along with the other southern Canaanites (Josh. xii. 14, comp. x. 41; also Judg. i. 16). Eusebius and Jerome place Arad twenty Roman miles from Hebron, which would be equal to about eight hours with camels. This accords well with the situation of a hill called Tell 'Arad, which Dr. Robinson observed on the road from Petra to Hebron. He describes it as 'a barren-looking eminence rising above the country around.' He did not examine the spot, but the Arabs said there were no ruins upon or near it, but only a cavern. The name alone is, however, too decisive to admit a doubt that the hill marks the site of the ancient Arad.

ARADUS. [ARVAD.]

ARAM (אֲרָם, probably from רָם, *high*, *q. d.* the Highlands') was the name given by the Hebrews to the tract of country lying between Phoenicia on the west, Palestine on the south, Arabia Deserta and the river Tigris on the east, and the mountain-range of Taurus on the north. Many parts of this extensive territory have a much lower level than Palestine, but it might receive the designation of 'highlands,' because it does rise to a greater elevation than that country at most points of immediate contact, and especially on the side of Lebanon. Aram, or Aramæa, seems to have corresponded generally to the *Syria* and *Mesopotamia* of the Greeks and Romans (see those articles). We find the following divisions expressly noticed in Scripture:—1. ARAM-DAMMESEK, ארם דמשק, the 'Syria of Damascus' conquered by David, 2 Sam. viii. 5, 6, where it denotes only the territory around Damascus; but elsewhere 'Aram,' in connection with its capital 'Damascus,' appears to be used in a wider sense for Syria Proper (Isa. vii. 1, 8; xvii. 3; Amos i. 5). At a later period Damascus gave name to a district, the *Syria Damascena* of Pliny (v. 13). To this part of Aram the 'land of Hadrach' seems to have belonged (Zech. ix. 1). 2. ARAM-MAACHAH, ארם מעכה (1 Chron. xix. 6), or simply *Maachah* (2 Sam. x. 6, 8), which, if formed from מעך, to 'press together,' would describe a country enclosed and hemmed in by mountains, in contradistinction to the next division, 'Aram-beth-Rechob,' *i. e.* Syria the wide or broad, בית being used in Syriac for a 'district of country.' Aram-Maachah was not far from the northern border of the Israelites on the east of the Jordan (comp. Deut. iii. 14, with Josh. xiii. 11, 13). In 2 Sam. x. 6, the text has 'king Maachah,' but it is to be corrected from the parallel passage in 1 Chron. xix. 7, 'king of Maachah.' 3. ARAM-BETH-RECHOB, ארם בית רחוב, the meaning of which may be that given above, but the precise locality cannot with certainty be determined. Some connect it with the Beth-rehob of Judg. xviii. 28, which Rosenmüller identifies with the Rehob of Num. xiii. 21, situated 'as men come to Hamath,' and supposes the district to be that now known as the *Ardh-el-Hhule* at the foot of Anti-Libanus, near the sources of the Jordan. A place called Rehob is also mentioned in Judg. i. 31; Josh. xix. 28, 30; xxi. 31; but it is doubtful if it be the same. Michaelis thinks of the Rechoboth-ha-Nahar (lit. *streets*, *i. e.* the village or town on the river Euphrates) of Gen. xxxvi. 37; but still more improbable is the idea of Bellermann and Jahn that Aram-beth-Rechob was beyond the Tigris in Assyria. 4. ARAM-ZOBAH, ארם צובה, or, in the Syriac form, צובא *Zoba* (2 Sam. x. 6). Jewish tradition has placed Zobah at Aleppo (see the *Itinerary* of Benjamin of Tudela), whereas Syrian tradition identifies it with Nisibis, a city in the north-east of Mesopotamia. Though the latter opinion long obtained currency under the authority of Michaelis (in his *Dissert. de Syria Sobæa*, to be found in the *Comment. Soc. Gotting.* 1769), yet the former seems a much nearer approximation to the truth. We may gather from 2 Sam. viii. 3, x. 16, that the eastern boundary of Aram-Zobah was the Euphrates, but Nisibis was far beyond that river; besides that in the title of the sixtieth Psalm (supposing it genuine) Aram-Zobah is clearly distinguished from Aram-Naharaim, or Mesopotamia. It is true, indeed, that in 2 Sam. x. 16, it is said that Hadarezer, king of Zobah, brought against David 'Aramites from beyond the river;' but these were auxiliaries, and not his own subjects. The people of Zobah are uniformly spoken of as near neighbours of the Israelites, the Damascenes, and other Syrians; and in one place (2 Chron. viii. 3) Hamath is called Hamath-Zobah, as pertaining to that district. We, therefore, conclude that Aram-Zobah extended from the Euphrates west-

ward, perhaps as far north as to Aleppo. It was long the most powerful of the petty kingdoms of Aramæa, its princes commonly bearing the name of Hadadezer or Hadarezer. 5. Aram-Naharaim, ארם נהרים, i. e. *Aram of the Two Rivers*, called in Syriac 'Beth-Nahrin,' *i. e.* 'the land of the rivers,' following the analogy by which the Greeks formed the name Μεσοποταμία, 'the country between the rivers.' For that Mesopotamia is here designated is admitted universally, with the exception only of Mr. Tilston Beke, who, in his *Origines Biblicæ*, among many other paradoxical notions, maintains that 'Aram-Naharaim' is the territory of Damascus. The rivers which enclose Mesopotamia are the Euphrates on the west and the Tigris on the east; but it is doubtful whether the Aram-Naharaim of Scripture embraces the whole of that tract or only the northern portion of it (comp. Gen. xxiv. 10; Deut. xxiii. 4; Judg. iii. 8). A part of this region of Aram is also called *Padan-Aram*. פדן ארם, the plain of Aram (Gen. xxv. 20; xxviii. 2, 6. 7; xxxi. 18; xxxiii. 18), and once simply *Padan* (Gen. xlviii. 7), also *Sedeh-Aram*, שדה ארם, the field of Aram (Hos. xii. 13), whence the 'Campi Mesopotamiæ' of Quintus Curtius (iii. 2. 3; iii. 8. 1; iv. 9. 6). But that the whole of Aram-Naharaim did not belong to the flat country of Mesopotamia appears from the circumstance that Balaam, who (Deut. xxiii. 4) is called a native of Aram-Naharaim, says (Numb. xxiii. 7) that he was brought 'from Aram, out of the *mountains* of the east.' The Septuagint, in some of these places, has Μεσοποταμία Συρίας, and in others Συρία Ποταμῶν, which the Latins rendered by Syria Interamna

But though the districts now enumerated be the only ones *expressly named* in the Bible as belonging to Aram, there is no doubt that many more territories were included in that extensive region, *e. g.* Geshur, Hul, Arpad, Riblah, Tadmor, Hauran, Abilene, &c., though some of them may have formed part of the divisions already specified. A native of Aram was called ארמי *Arami*, an Aramæan, used of a Syrian (2 Kings v. 20), and of a Mesopotamian (Gen. xxv. 20). The feminine was *Aramiah*, an Aramitess (1 Chron. vii. 14), and the plural *Aramim* (2 Kings viii. 29). It appears from the ethnographic table in the tenth chapter of Genesis (vers. 22, 23) that Aram was a son of Shem, and that his own sons were Uz, Hul, Gether, and Mash. If these gave names to districts, Uz was in the north of Arabia Deserta, unless its name was derived rather from Huz, son of Nahor, Abraham's brother (Gen. xxii. 21). Hul was probably Cœle-Syria; Mash, the Mons Masius north of Nisibis in Mesopotamia; Gether is unknown. Another Aram is mentioned (Gen. xxii. 21) as the grandson of Nahor and son of Kemuel, but he is not to be thought of here. The descent of the Aramæans from a son of Shem is confirmed by their language, which was one of the branches of the Semitic family, and nearly allied to the Hebrew. Many writers, who have copied without acknowledgment the words of Calmet, maintain that the Aramæans came from Kir, appealing to Amos ix. 7; but while that passage is not free from obscurity, it seems evidently to point, not to the aboriginal abode of the people, but to the country whence God would recover them when banished. The prophet had said (Amos i. 5) that the people of Aram should go into captivity to Kir (probably the country on the river Kur or Cyrus), a prediction of which we read the accomplishment in 2 Kings xvi. 9; and the allusion here is to their future restoration. Hartmann thinks Armenia obtained its name from Aram. Traces of the name of the Aramæans are to be found in the Ἄριμοι and Ἀραμαῖοι of the Greeks (Strabo, xiii. 4. 6; xvi. 4. 27; comp. Homer's *Iliad*, ii. 783) [see Assyria]. They were so noted for idolatry, that in the language of the later Jews ארמיותא was used as synonymous with heathenism (see the *Mishna* of Surenhusius, ii. 401; Onkelos on Levit. xxv. 47). Castell, in his *Lexic. Heptaglott.* col. 229, says the same form of speech prevails in Syriac and Ethiopic. The Hebrew letters ר *resh* and ד *daleth* are so alike, that they were often mistaken by transcribers; and hence in the Old Testament ארם *Aram* is sometimes found instead of אדם *Edom*, and *vice versâ*. Thus in 2 Kings xvi. 6, according to the text, the Aramæans are spoken of as possessing Elath on the Red Sea; but the Masoretic marginal reading has 'the Edomites,' which is also found in many manuscripts, in the Septuagint and Vulgate, and it is obviously the correct reading.—N. M.

ARAMAIC LANGUAGE (אֲרָמִית. 2 Kings xviii. 26; Dan. ii. 4). The Aramaic language—that whole, of which the Chaldee and Syriac dialects form the parts—constitutes the northern and least developed branch of the Syro-Arabian family. Its cradle was probably on the banks of the Cyrus, according to the best interpretation of Amos ix. 7; but Mesopotamia, Babylonia, and Syria form what may be considered its home and proper domain. Political events, however, subsequently caused it to supplant Hebrew in Palestine; and then it became the prevailing form of speech from the Tigris to the shore of the Mediterranean, and, in a contrary direction, from Armenia down to the confines of Arabia. After obtaining such a wide dominion, it was forced, from the ninth century onwards, to give way before the encroaching ascendency of Arabic; and it now only survives, as a living tongue, among the Syrian Christians in the neighbourhood of Mosul.

According to historical records which trace the migrations of the Syro-Arabians from the East to the South-west, and also according to the comparatively ruder form of the Aramaic language itself, we might suppose that it represents, even in the state in which we have it, some image of that aboriginal type which the Hebrews and Arabians, under more favourable social and climatical influences, subsequently developed into fulness of sound and structure. But it is difficult for us now to discern the particular vestiges of this archaic form; for, not only did the Aramaic not work out its own development of the original elements common to the whole Syro-Arabian sisterhood of languages, but it was pre-eminently exposed, both by neighbourhood and by conquest, to harsh collision with languages of an utterly different family. Moreover, it is the only one of the three great Syro-Arabian branches which has no fruits of a purely national literature to boast of. We possess no monument whatever of its own genius; not any work which may be considered the

product of the political and religious culture of the nation, and characteristic of it—as is so emphatically the case both with the Hebrews and the Arabs. The first time we see the language, it is used by Jews as the vehicle of Jewish thought; and although, when we next meet it, it is employed by native authors, yet they write under the literary impulses of Christianity, and under the Greek influence on thought and language which necessarily accompanied that religion. These two modifications, which constitute and define the so-called Chaldee and Syriac dialects, are the only forms in which the normal and standard Aramaic has been preserved to us.

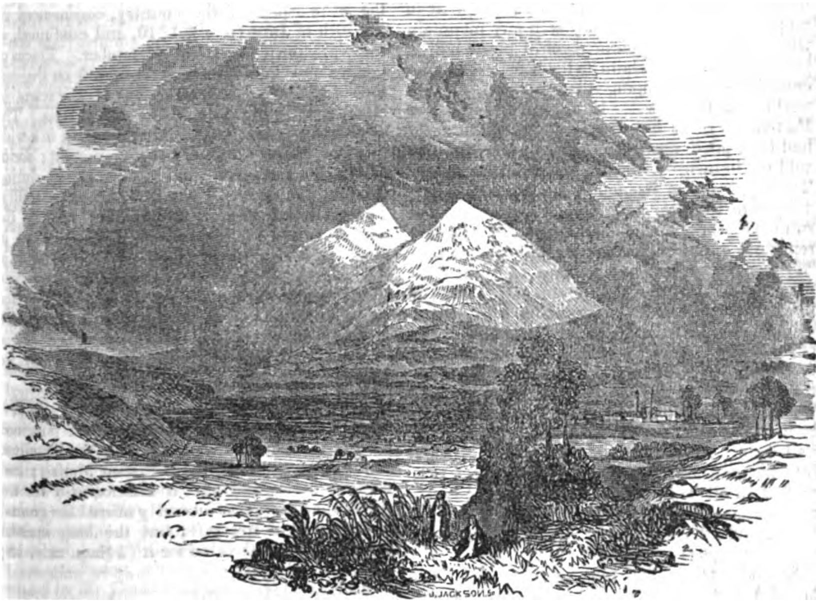
It is evident, from these circumstances, that, up to a certain period, the Aramaic language has no other history than that of its relations to Hebrew. The earliest notice we have of its separate existence is in Gen. xxxi. 47, where Laban, in giving his own name to the memorial heap, employs words which are genuine Aramaic both in form and use. The next instance is in 2 Kings xviii. 26, where it appears that the educated Jews understood Aramaic, but that the common people did not. A striking illustration of its prevalence is found in the circumstance that it is employed, as the language of official communication, in the edict addressed by the Persian court to its subjects in Palestine (Ezra iv. 17). The later relations of Aramaic to Hebrew consist entirely of gradual encroachments on the part of the former. The Hebrew language was indeed always exposed, particularly in the north of Palestine, to Aramaic influences; whence the Aramaisms of the book of Judges and of some others are derived. It also had always a closer conjunction, both by origin and by intercourse, with Aramaic than with Arabic. But in later times great political events secured to Aramaic the complete ascendency; for, on the one hand, after the deportation of the ten tribes, the repeopling their country with colonists chiefly of Syrian origin generated a mixed Aramaic and Hebrew dialect (the Samaritan) in central Palestine; and on the other, the exile of the remaining two tribes exposed them to a considerable, although generally overrated, Aramaic influence in Babylon, and their restoration, by placing them in contact with the Samaritans, tended still further to dispossess them of their vernacular Hebrew. The subsequent dominion of the Seleucidæ, under which the Jews formed a portion of a Syrian kingdom, appears to have completed the series of events by which the Aramaic supplanted the Hebrew language entirely.

The chief characteristics in form and flexion which distinguish the Aramaic from the Hebrew language are the following:—As to the consonants, the great diversity between the forms of the same root as it exists in both languages, arises principally from the Aramaic having a tendency to avoid the sibilants. Thus, where ז, ש, and צ are found in Hebrew, Aramaic often uses ד, ת, and ט; and even ע for צ. Letters of the same organ are also frequently interchanged, and generally so that the Aramaic, consistently with its characteristic roughness, prefers the harder sounds. The number of vowel-sounds generally is much smaller: the verb is reduced to a monosyllable, as are also the segolate forms of nouns. This deprives the language of some distinct forms which are marked in Hebrew; but the number and variety of nominal formations is also in other respects much more limited. The verb possesses no vestige of the conjugation *Niphal*, but forms all its passives by the prefix את. The third person plural of the perfect has two forms, to mark the difference of gender. The use of the imperfect with *vav consequutivum* is unknown. There is an imperative mood in all the *passives*. Each of the active conjugations, *Pael* and *Aphel*, possesses two participles, one of which has a passive signification. The participle is used with the personal pronoun to form a kind of present tense. The classes of verbs לה and לא, and other weak forms, are almost indistinguishable. In the noun, again, a word is rendered *definite* by appending the vowel *â* to the *end* (the so-called *status emphaticus*); but thereby the distinction between simple feminine and definite masculines is lost in the singular. The plural masculine ends in *în*. The relation of *genitive* is most frequently expressed by the prefix ד, and that of the *object* by the preposition ל.

All these peculiarities are common to both the dialects of Aramaic, and may therefore be considered to constitute the fundamental character of the language. The statement of the points in which they differ from each other, and an account of their literary remains, of their palæographical history, and of the subordinate dialects which have been derived from them, are reserved for other articles [CHALDEE LANGUAGE].—J. N.

ARARAT (אררט) occurs nowhere in Scripture as the name of a mountain, but only as the name of a country, upon the 'mountains' of which the ark rested during the subsidence of the flood (Gen. viii. 4). In almost every part of the East, where there is the tradition of a deluge, the inhabitants connect the resting-place of the 'great vessel' with some conspicuous elevation in their own neighbourhood. Thus we are informed by the lamented Sir A. Burnes (*Travels to Bokhara*, vol. i. p. 117), that on the road to Peshawur and Cabul, the Sufued Koh, or 'White Mountain,' rears its crest on one side, and the towering hill of Noorgill, or Kooner, on the other. Here the Afghans believe the ark of Noah to have rested after the Deluge. Another sacred mountain in the East is Adam's Peak, in the island of Ceylon, and it is a curious circumstance, that in Gen. viii. 4, the Samaritan Pentateuch has 'Sarandib,' the Arabic name of Ceylon. In the Sibylline verses it is said that the mountains of Ararat were in Phrygia; but Bochart has ingeniously conjectured that the misconception arose from the city of Apamea there having been called *Kibotos* (the Greek word for *an ark*), because inclosed in the shape of an ark by three rivers. Shuckford, after Sir Walter Raleigh, would place Ararat far to the east, in part of the range anciently called Caucasus and Imaus, and terminating in the Himmaleh mountains, north of India; and to this opinion a late writer (Kirby) inclines in his *Bridgewater Treatise* (p. 45). Dr. Pye Smith also, when advocating the local and partial nature of the Deluge, seeks for a less elevated mountain than the Armenian Ararat, and lays hold of this among other hypotheses (*The Relation between Scripture and Geological Science*, p. 302); whereas Kirby embraces it for the very opposite reason, viz., because, holding the universality of

the Flood, he thinks that mountain is not high enough to account for the long period that elapsed (Gen. viii. 5) before the other mountains became visible. Now it is evident that these and such-like theories have been framed in forgetfulness of what the Bible has recorded respecting the locality of Ararat. We may be unable to fix with precision where that region lay, but we can without difficulty decide that it was neither in Afghanistan nor Ceylon, neither in Asia Minor nor in Northern India.



The only other passages where 'Ararat' occurs are 2 Kings xix. 37 (Isa. xxxvii. 38) and Jer. li. 27. In the former it is spoken of as the country whither the sons of Sennacherib, king of Assyria, fled, after they had murdered their father. The apocryphal book of Tobit (i. 21) says it was εἰς τὰ ὄρη Ἀραράθ, 'to the mountains of Ararath.' This points to a territory which did not form part of the immediate dominion of Assyria, and yet might not be far off from it. The description is quite applicable to Armenia, and the tradition* of that country bears, that Sennacherib's sons were kindly received by king Paroyr, who allotted them portions of land bordering on Assyria, and that in course of time their posterity also established an independent kingdom, called Vaspurakan (Avdall's *Transl.* of Chamich's *Hist. of Armenia* (vol i. p. 33, 34). The other Scripture text (Jer. li. 27) mentions Ararat, along with Minni and Ashkenaz, as kingdoms summoned to arm themselves against Babylon. In the parallel place in Isa. xiii. 2-4, the invaders of Babylonia are described as 'issuing from the mountains;' and if by *Minni* we understand the *Minyas* in Armenia, mentioned by Nicholas of Damascus (Josephus, *Antiq* i. 3. 6), and by *Ashkenaz* some country on the *Euxine* Sea, which may have had its original name, *Axenos*, from Ashkenaz, a son of Gomer, the progenitor of the Cimmerians (Gen. x. 2, 3)—then we arrive at the same conclusion, viz., that Ararat was a mountainous region north of Assyria, and in all probability in Armenia. In Ezek. xxxviii. 6, we find Togarmah, another part of Armenia, connected with Gomer, and in Ezek. xxvii. 14, with Meshech and Tubal, all tribes of the north. With this agree the traditions of the Jewish and Christian churches, and likewise the accounts of the native Armenian writers, who inform us that Ararad was the name of one of the ancient provinces of their country, supposed to correspond to the modern pashaliks of Kars and Bayazeed, and part of Kurdistan. According to the tradition preserved in Moses of Chorene, the name of Ararat was derived from Arai, the eighth of the native princes, who was killed in a battle with the Babylonians, about B.C. 1750; in memory of which the whole province was called *Aray-iarat*, *i. e.* the ruin of Arai.

But though it may be concluded with tolerable certainty that the land of Ararat is to be identified with a portion of Armenia, we possess no historical data for fixing on any one mountain in that country as the resting-place of the ark. Indeed it may be fairly questioned whether the phrase in Gen. viii. 4, ותנח התבה, 'and the ark rested,' necessarily means that the ark actually *grounded* on the top of a mountain; it may merely imply that after it had been driven and tossed to and fro on the waste of waters, it at length settled, *i. e.* attained a measure of comparative repose, and became more stationary *over* (על) the mountains of Ararat, when the waters began to subside. That this *may* be the import of the expression will be denied by none who are acquainted with the genius of the Hebrew language, and with the latitude of meaning attachable to the verb נוח, which (as is observed by Taylor in his *Concordance*) includes whatever comes under the idea of 'remaining quietly in a place without being disturbed.' A vessel enjoys more real rest when becalmed, than when she grounds on the top of a submarine mountain in a troubled sea. What gives plausibility to our conjecture is the fact that whether the 'rest' was obtained on the bosom of the now calmer deep, or by coming into contact with the dry land, it was nearly *three months* after this before 'the tops of the mountains were seen' (Gen. viii. 5); the same mountains being evidently intended as those spoken of in the previous verse, viz. the mountains of Ararat. Now, as the waters were all the while abating (v. 3), it is much easier to reconcile this latter statement with the idea of the ark being still afloat, than with the common belief that it lay on a mountain peak; besides, that by this interpretation we get rid of otherwise inexplicable difficulties. If our supposition be correct, then, for anything that appears to the contrary, the ark did not touch the earth until the waters were abated to a level with the lower valleys or plains, and, consequently, the inmates were not left upon a dreary elevation of 16,000 or 17,000 feet, never till of late deemed accessible to human footsteps, and their safe descent from which, along with all the 'living creatures' committed to their care, would have been a greater miracle than their deliverance from the flood. By this explanation also we obviate the geological objection against the mountain, now called Ararat, having been submerged, which would imply a universal deluge, whereas by the 'mountains of Ararat' may be understood some lower chain in Armenia, whose height would not be incompatible with the notion of a partial flood. Finally, we on this hypothesis solve the question:—If the descendants of Noah settled near the resting-place of the ark in Armenia, how could they be said to approach the plain of Shinar (Gen. xi. 2), or Babylonia, *from the East?* For, as we read the narrative, the precise resting-place of the ark is nowhere mentioned; and though for a time stationary 'over' the mountains of Ararat, it may, before the final subsidence of the waters, have been carried considerably to the east of them.

The ancients, however, attached a peculiar sacredness to the tops of high mountains, and hence the belief was early propagated that the ark must have rested on some such lofty eminence. The earliest tradition fixed on one of the chain of mountains which separate Armenia on the south from Mesopotamia, and which, as they also inclose Kurdistan, the land of the Kurds, obtained the name of the Kardu, or Carduchian range, corrupted into Gordiæan and Cordyæan. This

* A similar tradition is reported by the Armenian historian, Moses of Chorene, but he dates the event in the reign of Skaïord, the father of Paroyr.

opinion prevailed among the Chaldæans, if we may rely on the testimony of Berosus as quoted by Josephus (*Antiq.* i. 3. 6): 'It is said there is still some part of this ship in Armenia, at the mountain of the Cordyæans, and that people carry off pieces of the bitumen, which they use as amulets.' The same is reported by Abydenus (in Euseb. *Præp. Evang.* ix. 4), who says they employed the wood of the vessel against diseases. Hence we are prepared to find the tradition adopted by the Chaldee paraphrasts, as well as by the Syriac translators and commentators, and all the Syrian churches. In the three texts where 'Ararat' occurs, the *Targum* of Onkelos has קרדו *Kardu*; and, according to Buxtorf, the term 'Kardyan' was in Chaldee synonymous with 'Armenian.' At Gen. viii. 4, the Arabic of Erpenius has Jibal-el-Karud (the Mountain of the Kurds), which is likewise found in the 'Book of Adam' of the Zabæans. For other proofs that this was the prevalent opinion among the Eastern churches, the reader may consult Eutychius, (*Annals*,) and Epiphanius (*Hæres.* 18). It was no doubt from this source that it was borrowed by Mahomet, who in his Koran (xi. 46) says, 'The ark rested on the mountain Al-Judi.' That name was probably a corruption of Giordi, *i. e.* Gordiæan (the designation given to the entire range), but afterwards applied to the special locality where the ark was supposed to have rested. This is on a mountain a little to the east of Jezirah ibn Omar (the ancient Bezabde) on the Tigris. At the foot of the mountain there was a village called *Karya Thaminin*, *i. e.* the Village of the Eighty—that being the number (and not eight) saved from the flood according to the Mo-

hammedan belief. The historian Elmacin mentions that the emperor Heraclius went up, and visited this as 'the place of the ark.' Here, or in the neighbourhood, was once a famous Nestorian monastery, 'the Monastery of the Ark,' destroyed by lightning in A.D. 776. The credulous Jew, Benjamin of Tudela, says that a mosque was built at Mount Judi, 'of the remains of the ark,' by the Khalif Omar. Macdonald Kinneir, in describing his journey from Jezirah along the left bank of the Tigris to Nahr Van, says, 'We had a chain of mountains running parallel with the road on the left hand. This range is called the Juda Dag (*i. e.* mountain) by the Turks, and one of the inhabitants of Nahr Van assured me that he had frequently seen the remains of Noah's ark on a lofty peak behind that village.' (Comp. Rich's *Kurdistan*, vol. ii. p. 124.) A French savant, Eugene Boré, who lately visited those parts, says the Mohammedan dervishes still maintain here a perpetually burning lamp in an oratory. (*Revue Française*, vol. xii.; or the *Semeur* of October 2, 1839.)

After the disappearance of the Nestorian monastery, the tradition which fixed the site of the ark on Mount Judi appears to have declined in credit, or been chiefly confined to Mahometans, and gave place (at least among the Christians of the West) to that which now obtains, and according to which the ark rested on a great mountain in the north of Armenia—to which (so strongly did the idea take hold of the popular belief) was, in course of time, given the very name of Ararat, as if no doubt could be entertained that it was the Ararat of Scripture. We have seen, however, that in the Bible Ararat is nowhere the name of a mountain, and by the native Armenians the mountain in question was never so designated; it is by them called *Măcis*, and by the Turks *Aghur-dagh*, *i. e.* 'The Heavy or Great Mountain.' The *Vulgate* and Jerome indeed, render Ararat by 'Armenia,' but they do not particu-

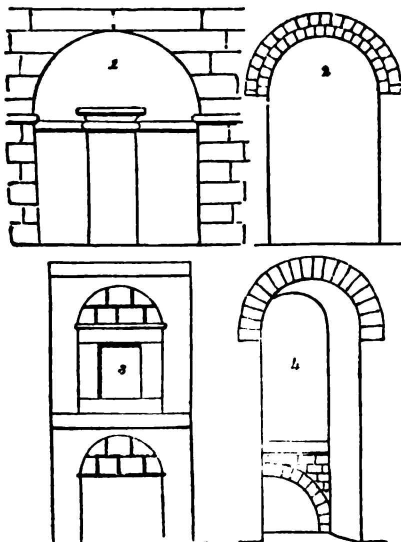
larize any one mountain. Still there is no doubt of the antiquity of the tradition of this being (as it is sometimes termed) the 'Mother of the World.' The Persians call it Kuhi Nuch, 'Noah's Mountain.' The Armenian etymology of the name of the city of Nakhchevan (which lies east of it) is said to be 'first place of descent or lodging,' being regarded as the place where Noah resided after descending from the mount. It is mentioned by Josephus under a Greek name of similar import, viz. 'Αποβατήριον, and by Ptolemy as *Naxuana*.

The mountain thus known to Europeans as Ararat consists of two immense conical elevations (one peak considerably lower than the other), towering in massive and majestic grandeur from the valley of the Aras, the ancient Araxes Smith and Dwight give its position N. 57° W. of Nakhchevan, and S. 25° W. of Erivan (*Researches in Armenia*, p. 267); and remark, in describing it before the recent earthquake, that in no part of the world had they seen any mountain whose imposing appearance could plead half so powerfully as this a claim to the honour of having once been the stepping-stone between the old world and the new. 'It appeared,' says Ker Porter, 'as if the hugest mountains of the world had been piled upon each other to form this one sublime immensity of earth and rocks and snow. The icy peaks of its double heads rose majestically into the clear and cloudless heavens; the sun blazed bright upon them, and the reflection sent forth a dazzling radiance equal to other suns. My eye, not able to rest for any length of time upon the blinding glory of its summits, wandered down the apparently interminable sides, till I could no longer trace their vast lines in the mists of the horizon; when an irrepressible impulse immediately carrying my eye upwards, again refixed my gaze upon the awful glare of Ararat.' To the same effect Morier writes:—'Nothing can be more beautiful than its shape, more awful than its height. All the surrounding mountains sink into insignificance when compared to it. It is perfect in all its parts; no hard rugged feature, no unnatural prominences, everything is in harmony, and all combines to render it one of the sublimest objects in nature.'

Several attempts had been made to reach the top of Ararat, but few persons had got beyond the limit of perpetual snow. The French traveller Tournefort, in the year 1700, long persevered in the face of many difficulties, but was foiled in the end. Between thirty and forty years ago the Pasha of Bayazeed undertook the ascent with no better success. The honour was reserved to a German, Dr. Parrot, in the employment of Russia, who, in his *Reise zum Ararat* (Journey to Ararat) gives the following particulars:—'The summit of the Great Ararat is in 39° 42′ north lat., and 61° 55′ east long. from Ferro. Its perpendicular height is 16,254 Paris feet above the level of the sea, and 13,350 above the plain of the Araxes. The Little Ararat is 12,284 Paris feet above the sea, and 9561 above the plain of the Araxes.' After he and his party had failed in two attempts to ascend, the third was successful, and on the 27th September (o. s.), 1829, they stood on the summit of Mount Ararat. It was a slightly convex, almost circular platform, about 200 Paris feet in diameter, composed of eternal ice, unbroken by a rock or stone: on account of the immense distances, nothing could be seen distinctly. The mountain was, it is said, afterwards ascended by a Mr. Antonomoff, but the fact both of his and Parrot's having reached the top is stoutly denied by the natives, and especially by the inmates of the neighbouring convent of Echmiadzin, who have a firm persuasion that in order to preserve the ark no one is permitted to approach it. This is based on the tradition that a monk, who once made the attempt, was, when asleep from exhaustion, unconsciously carried down to the point whence he had started; but at last, as the reward of his fruitless exertions, an angel was sent to him with a piece of the ark, which is preserved as the most valuable relic in the cathedral of Echmiadzin.

Since the memorable ascent of Dr. Parrot, Ararat has been the scene of a fearful calamity. An earthquake, which in a few moments changed the entire aspect of the country, commenced on the 20th of June (o. s.), 1840, and continued, at intervals, until the 1st of September. Traces of fissures and landslips have been left on the surface of the earth, which the eye of the scientific observer will recognise after many ages. The destruction of houses and other property in a wide tract of country around was very great; fortunately, the earthquake having happened during the day, the loss of lives did not exceed fifty. The scene of greatest devastation was in the narrow valley of Akorhi, where the masses of rock, ice, and snow, detached from the summit of Ararat and its lateral points, were thrown at one single bound from a height of 6000 feet to the bottom of the valley, where they lay scattered over an extent of several miles. (See Major Voskoboinikof's Report, in the *Athenæum* for 1841, p. 157).—N. M.

ARAUNAH (אֲרַוְנָה), or ORNAN (אָרְנָן), a man of the Jebusite nation, which possessed Jerusalem before it was taken by the Israelites. His threshing-floor was on Mount Moriah; and when he understood that it was required for the site of the Temple, he liberally offered the ground to David as a free gift; but the king insisted on paying the full value for it (2 Sam. xxiv. 18; 1 Chron. xxi. 18).



ARBA. [HEBRON.]

ARBELA. [BETH-ARBEL.]

ARCE, or ARKE, by change of pronunciation REKEM; the same as Petra, the capital of Arabia Petræa [PETRA].

ARCH. Arches with vaulted chambers and domed temples figure so conspicuously in modern Oriental architecture, that, if the arch did not exist among the ancient Jews, their towns and houses could not possibly have offered even a faint resemblance to those which now exist: and this being the case, a great part of the analogical illustrations of Scripture which modern travellers and Biblical illustrators have obtained from this source must needs fall to the ground. It is therefore of importance to ascertain whether the arch did or did not exist in those remote times to which most of the history of at least the Old Testament belongs. Nothing against its existence is to be inferred from the fact that no word signifying an arch can be found in the Hebrew Scriptures (for the word so rendered in

Isa. xl. 16, has not that meaning). The architectural notices in the Bible are necessarily few and general; and we have at this day histories and other books, larger than the sacred volume, in which no such word as 'arch' occurs. There is certainly no absolute proof that the Israelites employed arches in their buildings; but if it can be shown that arches existed in Egypt at a very early period, we may safely infer that so useful an invention could not have been unknown in Palestine.

Until within these few years it was common to ascribe a comparatively late origin to the arch; but circumstances have come to light one after another, tending to throw the date more and more backward, until at length it seems to be admitted that in Egypt the arch already existed in the time of Joseph. The observations of Rosellini and of Sir J. G. Wilkinson led them irresistibly to this conclusion, which has also been recently adopted by Mr. Cockerell (Lect. iii., in *Athenæum* for Jan. 28, 1843) and other architects.

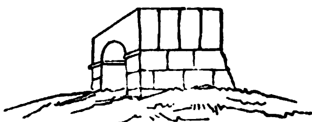
It is shown by Sir J. G. Wilkinson that the arch existed in brick in the reign of Amenoph I., as early as B.C. 1540; and in stone in the time of the second Psamaticus, B.C. 600. This evidence is derived from the ascertained date of arches now actually existing; but the paintings at Beni-Hassan afford ground for the conclusion that vaulted buildings were constructed in Egypt as early as the reign of Osirtasen I., who is presumed to have been contemporary with Joseph. Indeed, although the evidence from facts does not ascend beyond this, the evidence from analogy and probability can be carried back to about B.C. 2020 (Wilkinson's *Anc. Egyptians*, ii. 116; iii. 316). Sir J. G. Wilkinson suggests the probability that the arch owed its invention to the small quantity of wood in Egypt, and the consequent expense of roofing with timber. The proofs may be thus arranged in chronological order:—

The evidence that arches were known in the time of the first Osirtasen is derived from the drawings at Beni-Hassan (Wilkinson, ii. 117).

In the secluded valley of Dayr el Medeeneh, at Thebes, are several tombs of the early date of Amenoph I. Among the most remarkable of these is one whose crude brick roof and niche, bearing the name of the same Pharaoh, prove the existence of the arch at the remote period of B.C. 1540 (Wilkinson, *Topography of Thebes*, p. 81). Another tomb of similar construction bears the ovals of Thothmes III., who reigned about the time of the Exode (*Anc. Egyptians*, iii. 319). At Thebes there is also a brick arch bearing the name of this king (Hoskins, *Travels in Ethiopia*).

To the same period and dynasty (the 18th) belong the vaulted chambers and arched doorways (see cut, fig. 4) which yet remain in the crude brick pyramids at Thebes (Wilkinson, *Anc. Egyptians*, iii. 317).

In ancient Egyptian houses it appears that the roofs were often vaulted, and built, like the rest of the house, of crude brick; and there is reason to believe that some of the chambers in the pavilion of Rameses III. (about B.C. 1245), at Medeenet Haboo, were arched with stone, since the devices in the upper part of the walls show that the fallen roofs had this form (see cut, fig. 3).



The most ancient *actually existing* arches of stone occur at Memphis, near the modern village of Saqqara. Here there is a tomb with two large vaulted chambers, whose roofs display in every part the name and sculptures of Psamaticus II. (about B.C. 600). The chambers are cut in the limestone rock, and this being of a friable nature, the roof is secured by being, as it were, lined with an arch, like our modern tunnels.

To about the same period—that of the last dynasty before the Persian invasion—belong the remarkable doorways of the enclosures surrounding the tombs in the Assaséef, which are composed of two or more concentric semicircles of brick (fig. 2) (Wilkinson, *Anc. Egyptians*, iii. 319).

Although the oldest *stone* arch whose age has been positively ascertained does not date earlier

than the time of Psamaticus, we cannot suppose that the use of stone was not adopted by the Egyptians for that style of building previous to his reign, even if the arches in the pyramids in Ethiopia should prove not to be anterior to the same era. 'Nor does the absence of the arch in temples and other large buildings excite our surprise, when we consider the style of Egyptian monuments; and no one who understands the character of their architecture could wish for its introduction. In some of the small temples of the Oasis the Romans attempted this innovation, but the appearance of the chambers so constructed fails to please; and the whimsical caprice of Osirei (about B.C. 1385), also introduced an imitation of the arch in a temple at Abydus. In this building the roof is formed of single blocks of stone, reaching from one architrave to the other, which, instead of being placed in the usual manner, stand upon their edges, in order to allow room for hollowing out an arch in their thickness; but it has the effect of inconsistency,

without the plea of advantage or utility.' Another imitation of the arch occurs in a building at Thebes, constructed in the style of a tomb. The chambers lie under a friable rock, and are cased with masonry, to prevent the fall of its crumbling stone; but, instead of being roofed on the principle of the arch, they are covered with a number of large blocks, placed horizontally, one projecting beyond that immediately below it, till the uppermost two meet in the centre, the interior angles being afterwards rounded off to form the appearance of a vault (fig. 1). The date of this building is about B.C. 1500, and consequently many years after the Egyptians had been acquainted with the art of vaulting (Wilkinson, *Anc. Egyptians*, ii. 321).

Thus as the temple architecture of the Egyptians did not admit of arches, and as the temples are almost the only *buildings* that remain, it is not strange that arches have not oftener been found. The evidence offered by the paintings, the tombs, and the pyramids is conclusive for the existence and antiquity of arches and vaults of brick and stone; and if any remains of houses and palaces had now existed, there is little doubt that the arch would have been of frequent occurrence. We observe that Sir J. G. Wilkinson, in portraying an Egyptian mansion (*Anc. Egyptians*, ii. 131), makes the grand entrance an archway.

After this it seems unreasonable to doubt that the arch was known to the Hebrews also, and was employed in their buildings. Palestine was indeed better wooded than Egypt; but still that there was a deficiency of wood suitable for building and for roofs is shown by the fact that large importations of timber from the forests of Lebanon were necessary (2 Sam. vii. 2, 7; 1 Kings v. 6; 1 Chron. xxii. 4; 2 Chron. ii. 3; Ezra iii. 7; Cant. i. 17), and that this imported timber, although of no very high quality, was held in great estimation.

ARCHELAUS, son of Herod the Great, and his successor in Idumæa, Judæa, and Samaria (Matt. ii. 22) [HERODIAN FAMILY].

ARCHERY. [ARMS.]

ARCHIPPUS (Ἄρχιππος), a Christian minister, whom St. Paul calls his 'fellow-soldier,' in Philem. 2, and whom he exhorts to renewed activity in Col. iv. 17. From the latter reference it would seem that Archippus had exercised the office of Evangelista sometimes at Ephesus, sometimes elsewhere; and that he finally resided at Colosse, and there discharged the office of presiding presbyter or bishop when St. Paul wrote to the Colossian church. The exhortation given to him in this Epistle has, without sufficient grounds, been construed into a rebuke for past negligence.

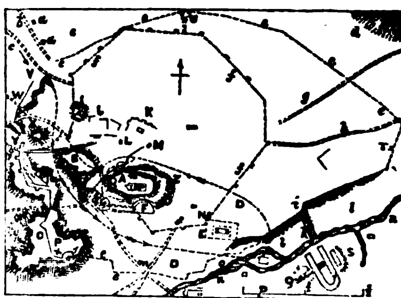
ARCHISYNAGOGUS (Gr. ἀρχισυνάγωγος, called also ἄρχων τῆς συναγωγῆς (Luke viii. 41), and simply ἄρχων (Matt. ix. 18); Heb. ראש הכנסת, chief or ruler of the synagogue). In large synagogues there appears to have been a college or council of elders (זקנים = πρεσβύτεροι, Luke vii. 3) to whom the care of the synagogue and the discipline of the congregation were committed, and to all of whom this title was applied (Mark v. 22; Acts xiii. 15; xviii. 8, compared with v. 17). Their duties were to preside in the public services, to direct the reading of the Scriptures and the addresses to the congregation (Vitringa, *De Synagoga Vetere*, lib. 3, part i. c. 7; comp. Acts xiii. 15), to superintend the distribution of alms (Vitr. c. 13), and to punish transgressors either by scourging (Vitr. c. 11; compare Matt. x. 17; xxiii. 34; Acts xxii. 19) or by excommunication (Vitr. c. 9). In a more restricted sense the title is sometimes applied to the president of this council, whose office, according to Grotius (*Annotationes in Matt.* ix. 18; *Luc.* xiii. 14) and many other writers, was different from and superior to that of the elders in general. Vitringa (p. 586), on the other hand, maintains that there was no such distinction of office, and that the title thus applied merely designates the presiding elder, who acted on behalf of and in the name of the whole.—F. W. G.

ARCHITECTURE. It was formerly common to claim for the Hebrews the invention of scientific architecture; and to allege that classical antiquity was indebted to the Temple of Solomon for the principles and many of the details of the art. A statement so strange, and even preposterous, would scarcely seem to demand attention at the present day; but as it is still occasionally reproduced, and as some respectable old authorities can be cited in its favour, it cannot be passed altogether in silence. The question belongs properly, however, to another head [TEMPLE]. It may here suffice to remark that temples previously existed in Egypt, Babylon, Syria and Phœnicia, from which the classical ancients were far more likely to borrow the ideas which they embodied in new and beautiful combinations of their own. But there are few notions, however untenable, which have not some apparent foundation in fact. So in the present case, it is shown, first, that a resemblance of plan and detail can be traced between certain heathen temples and the Temple at Jerusalem; and, secondly, it is alleged that this could not be owing to imita-

tion in the latter, because the *tabernacle* (of which the Temple was a sort of imitation) was a divine suggestion, being framed according to a pattern shown to Moses on the Mount (Exod. xxv. 40). This is the sole ground on which the claim made for the Hebrew architecture can be rested. But 'a pattern' is not necessarily or probably a new thing; in the usual sense it is almost always a new combination or adaptation of existing materials. And it may be shown, not only from historical probability, but from actual examples [ARK], that nothing more than this is here to be understood—nothing more than that Moses was instructed how best to apply the materials of existing sacred architecture (more especially that of Egypt) to the object in view. The pattern was necessary to make him understand how this application was to be made, and to render it clear to him what parts of existing structures should be rejected or retained. Indeed, this is proved by the Scripture itself; for David, in his charge to Solomon concerning the Temple, says 'All this the Lord made me understand in writing by his hand upon me, even all the works of this pattern' (1 Chron xxviii. 19). Now, whatever be the meaning of this (and the authorized translation is purposely retained), it must mean nearly the same thing as in the parallel passage respecting the tabernacle. Yet it is on all hands admitted that the Temple, of which this is said, was an application and extension of ideas already existing in the tabernacle. This text, therefore, must not be taken in the sense of complete origination. And if we are forbidden to understand the terms as proving the complete originality of the Temple, by what rule of Scripture interpretation are we compelled to understand precisely similar terms as proving the complete originality of the tabernacle?

Mr. Cockerell, in one of his recent 'Lectures' (*Athenæum*, Jan 21, 1843), strongly upholds those high claims of Jewish architecture which all Biblical scholars now admit to be untenable, and which sound historians and antiquarians have long repudiated. It has therefore been deemed necessary thus particularly to refer to the matter, lest the authority of a high name in architecture should tend to revive pretensions which had almost become obsolete. Yet even Mr. Cockerell endeavours to correct one 'common error' on the subject, which, he states, is 'the attempt to trace this resemblance *in the styles* or the orthographic figure of the parts and orders—the mere vesture of the scheme; and the failure in straining the texts and examples (Corinthian or Doric) to a perfect correspondence . . . . . but the comparison of *the plans* makes the tabernacle the type of the Greek and Roman temple,' &c.

There has never in fact been any people for whom a peculiar style of architecture could with less probability be claimed than for the Israelites. On leaving Egypt they could only be acquainted with Egyptian art. On entering Canaan they necessarily occupied the buildings of which they had dispossessed the previous inhabitants; and the succeeding generations would naturally erect such buildings as the country previously contained. The architecture of Palestine, and as such, eventually that of the Jews, had doubtless its own characteristics, by which it was suited to the climate and condition of the country; and in the course of time many improvements would no doubt arise from the causes which usually operate in producing change in any practical art. From the want of historical data and from the total absence of architectural remains, the degree in which these causes operated in imparting a peculiar character to the Jewish architecture cannot now be determined; for the oldest ruins in the country do not ascend beyond the period of the Roman domination. It does, however, seem probable that among the Hebrews architecture was always kept within the limits of a mechanical craft, and never rose to the rank of a fine art. Their usual dwelling-houses differed little from those of other Eastern nations, and we nowhere find anything indicative of exterior embellishment. Splendid edifices, such as the palace of David and the Temple of Solomon, were completed by the assistance of Phœnician artists (2 Sam. v. 11; 1 Kings v. 6, 18; 1 Chron. xiv. 1). After the Babylonish exile, the assistance of such foreigners was likewise resorted to for the restoration of the Temple (Ezra iii. 7). From the time of the Maccabæan dynasty, the Greek taste began to gain ground, especially under the Herodian princes (who seem to have been possessed with a sort of mania for building), and was shown in the structure and embellishment of many towns, baths, colonnades, theatres and castles (Joseph. *Antiq.* xv. 8. 1; xv. 19. 4; xv. 10. 3; *De Bell. Jud.* i. 4. 1). The Phœnician style, which seems to have had some affinity with the Egyptian, was not, however, superseded by the Grecian; and even as late as the Mishna (*Bava Bathra*, iii. 6), we read of Tyrian windows, Tyrian porches, &c. [HOUSE].



With regard to the instruments used by builders—besides the more common, such as the axe, saw, &c., we find incidental mention of the מחוגה or compass, the אנך or plumb-line (Amos vii. 7), the קו or measuring-line (see the several words). Winer's *Biblisches Realwörterbuch*, art. 'Baukunst;' Steigletz's *Geschicht der Baukunst der Alten*, 1792; Hirt's *Gesch. des Bauk. bei der Alten;* Schmidt's *Bibl. Mathematicus;* Bellermann's *Handbuch*, &c.

ARCHITRICLINUS (Ἀρχιτρίκλινος, *master of the triclinium*, or dinner-bed—ACCUBATION), very properly rendered in John ii. 8, 9, 'master of the feast,' equivalent to the Roman *Magister Convivii*. The Greeks also denoted the same social officer by the title of *Symposiarch* (συμποσίαρχος). He was not the giver of the feast, but one of the guests specially chosen to direct the entertainment, and promote harmony and good fellowship among the company. In the apocryphal Ecclesiasticus (xxxv. 1, 2) the duties of this officer among the Jews are indicated. He is there, however, called ἡγούμενος:—'If thou be made the master [of a feast], lift not thyself up, but be among them as one of the rest; take diligent care for them, and so sit down: and when thou hast done all thy office, take thy place, that thou mayest be merry with them, and receive a crown for thy well ordering of the feast.'

AREOPAGUS, an Anglicized form of the original words (ὁ Ἄρειος πάγος), signifying, in reference to place, Mars Hill, but, in reference to persons, the Council which was held on the hill. The Council was also termed ἡ ἐν Ἀρείῳ πάγῳ

βουλή (or ἡ βουλὴ ἡ ἐν Ἀρείῳ πάγῳ), the Council on Mars Hill; sometimes ἡ ἄνω βουλή, the Upper Council, from the elevated position where it was held; and sometimes simply, but emphatically, ἡ βουλή, the Council; but it retained, till a late period, the original designation of Mars Hill, being called by the Latins Scopulus Martis, Curia Martis (Juvenal, *Sat.* ix. 101), and still more literally, Areum Judicium (Tacit. *Annal.* ii. 55). The place and the Council are topics of interest to the Biblical student, chiefly from their being the scene of the interesting narrative and sublime discourse found in Acts xvii., where it appears that the apostle Paul, feeling himself moved, by the evidences of idolatry with which the city of Athens was crowded, to preach Jesus and the resurrection, both in the Jewish synagogues and in the market-place, was set upon by certain Epicurean and Stoic philosophers, and led to the Areopagus, in order that they might learn from him the meaning and design of his new doctrine. Whether or not the Apostle was criminally arraigned, as a setter forth of strange gods, before the tribunal which held its sittings on the hill, may be considered as undetermined, though the balance of evidence seems to incline to the affirmative. Whichever view on this point is adopted, the dignified, temperate, and high-minded bearing of Paul under the peculiar circumstances in which he was placed are worthy of high admiration, and will appear the more striking the more the associations are known and weighed which covered and surrounded the spot where he stood. Nor does his eloquent discourse appear to have been without good effect; for though some mocked, and some procrastinated, yet others believed, among whom was a member of the Council, 'Dionysius, the Areopagite,' who has been represented as the first bishop of Athens, and is said to have written books on the 'Celestial Hierarchy;' but their authenticity is questioned.

The accompanying plan will enable the reader to form an idea of the locality in which the Apostle stood, and to conceive in some measure the impressive and venerable objects with which he was environed. Nothing, however, but a minute description of the city in the days of its pride, comprising some details of the several temples, porticoes, and schools of learning which crowded on his sight, and which, whilst they taught him that the city was 'wholly given to idolatry,' impressed him also with the feeling that he was standing in the midst of the highest civilization, both of his own age and of the ages that had elapsed, can give an adequate conception of the position in which Paul was placed, or of the lofty and prudent manner in which he acted. The history in the Acts of the Apostles (xvii. 22) states that the speaker stood in the midst of Mars Hill. Having come up from the level parts of the city, where the markets (there were two, the old and the new) were, he would probably stand with his face towards the north, and would then have immediately behind him the long walls which ran down to the sea, affording protection against a foreign enemy. Near the sea, on one side, was the harbour of Peiræus, on the other that designated Phalerum, with their crowded arsenals, their busy workmen, and their gallant ships. Not far off in the ocean lay the island of Salamis, ennobled for

ever in history as the spot near which Athenian valour chastised Asiatic pride, and achieved the liberty of Greece. The apostle had only to turn towards his right hand to catch a view of a small but celebrated hill rising within the city near that on which he stood, called the Pnyx, where, standing on a block of bare stone, Demosthenes and other distinguished orators had addressed the assembled people of Athens, swaying that arrogant and fickle democracy, and thereby making Philip of Macedon tremble, or working good or ill for the entire civilized world. Immediately before him lay the crowded city, studded in every part with memorials sacred to religion or patriotism, and exhibiting the highest achievements of art. On his left, somewhat beyond the walls, was beheld the Academy, with its groves of plane and olive-trees, its retired walks and cooling fountains, its altar to the Muses, its statues of the Graces, its temple of Minerva, and its altars to Prometheus, to Love, and to Hercules, near which Plato had his country-seat, and in the midst of which he had taught, as well as his followers after him. But the most impressive spectacle lay on his right hand, for there, on the small and precipitous hill named the Acropolis, were clustered together monuments of the highest art, and memorials of the national religion, such as no other equal spot of ground has ever borne. The Apostle's eyes, in turning to the right, would fall on the north-west side of the eminence, which was here (and all round) covered and protected by a wall, parts of which were so ancient as to be of Cyclopean origin. The western side, which alone gave access to what, from its original destination, may be termed the fort, was, during the administration of Pericles, adorned with a splendid flight of steps, and the beautiful Propylæa, with its five entrances and two flanking temples, constructed by Mnesicles of Pentelican marble, at a cost of 2012 talents. In the times of the

Roman emperors there stood before the Propylæa equestrian statues of Augustus and Agrippa. On

the southern wing of the Propylæa was a temple of Wingless Victory; on the northern, a Pinacotheca, or picture gallery. On the highest part of the platform of the Acropolis, not more than 300 feet from the entrance-buildings just described, stood (and yet stands, though shattered and mutilated) the Parthenon, justly celebrated throughout the world, erected of white Pentelican marble, under the direction of Callicrates, Ictinus, and Carpion, and adorned with the finest sculptures from the hand of Phidias. Northward from the Parthenon was the Erechtheum, a compound building, which contained the temple of Minerva Polias, the proper Erechtheum (called also the Cecropium), and the Pandroseum. This sanctuary contained the holy olive-tree sacred to Minerva, the holy salt-spring, the ancient wooden image of Pallas, &c., and was the scene of the oldest and most venerated ceremonies and recollections of the Athenians. Between the Propylæa and the Erechtheum was placed the colossal bronze statue of Pallas Promachos, the work of Phidias, which towered so high above the other buildings, that the plume of her helmet and the point of her spear were visible on the sea between Sunium and Athens. Moreover, the Acropolis was occupied by so great a crowd of statues and monuments, that the account, as found in Pausanias, excites the reader's wonder, and makes it difficult for him to understand how so much could have been crowded into a space which extended from the south-east corner to the south-west only 1150 feet, whilst its greatest breadth did not exceed 500 feet. On the hill itself where Paul had his station, was, at the eastern end, the temple of the Furies, and other national and commemorative edifices. The court-house of the council, which was also here, was, according to the simplicity of ancient customs, built of clay. There was an altar consecrated by Orestes to Athene Areia. In the same place were seen two silver stones, on one of which stood the accuser, on the other, the accused. Near them stood two altars erected by Epimenides, one to Insult (Ὕβρεως, Cic. *Contumeliæ*), the other to Shamelessness (Ἀναιδείας, Cic. *Impudentiæ*).

The court of Areopagus was one of the oldest and most honoured, not only in Athens, but in the whole of Greece, and, indeed, in the ancient world. Through a long succession of centuries, it preserved its existence amid changes corresponding with those which the state underwent, till at least the age of the Cæsars (Tacitus, *Ann.* ii. 55). The ancients are full of eulogies on its value, equity, and beneficial influence; in consequence of which qualities it was held in so much respect that even foreign states sought its verdict in difficult cases. Like everything human, however, it was liable to decline, and, after Greece had submitted to the yoke of Rome, retained probably little of its ancient character beyond a certain dignity, which was itself cold and barren; and however successful it may in earlier times have been in conciliating for its determinations the approval of public opinion, the historian Tacitus (*ut supra*) mentions a case in which it was charged with an erroneous, if not a corrupt, decision.

The origin of the court ascends back into the darkest mythical period. From the first its constitution was essentially aristocratic; a character which to some extent it retained even after the democratic reforms which Solon introduced into the Athenian constitution. By his appointment the nine archons became for the remainder of their lives Areopagites, provided they had well discharged the duties of their archonship, were blameless in their personal conduct, and had undergone a satisfactory examination. Its power and jurisdiction were still further abridged by Pericles, through his instrument Ephialtes. Following the political tendencies of the state, the Areopagus became in process of time less and less aristocratical, and parted piecemeal with most of its important functions. First its political power was taken away, then its jurisdiction in cases of murder, and even its moral influence gradually departed. During the sway of the Thirty Tyrants its power, or rather its political existence, was destroyed. On their overthrow it recovered some consideration, and the oversight of the execution of the laws was restored to it by an express decree. Isocrates endeavoured by his Ἀρεοπαγιτικὸς λόγος to revive its ancient influence. The precise time when it ceased to exist cannot be determined; but evidence is not wanting to show that in later periods its members ceased to be uniformly characterized by blameless morals.

It is not easy to give a correct summary of its several functions, as the classic writers are not agreed in their statements, and the jurisdiction of the court varied, as has been seen, with times and circumstances. They have, however, been divided into six general classes (*Real-Encyclopädie* von Pauly, *in voc.*): I. Its judicial function; II. Its political; III. Its police function; IV. Its religious; V. Its educational; and VI. (only partially) Its financial. In relation to these functions, such details only can be given here as bear more or less immediately on its moral and religious influence, and may serve to assist the student of the Holy Scriptures in forming an opinion as to the relation in which the subject stands to the Gospel, and its distinguished missionary, the apostle Paul.

Passing by certain functions, such as acting as a court of appeal, and of general supervision, which under special circumstances, and when empowered by the people, the Areopagus from time to time discharged, we will say a few words in explanation of the points already named, giving a less restricted space to those which concern its moral and religious influence. Its judicial function embraced trials for murder and

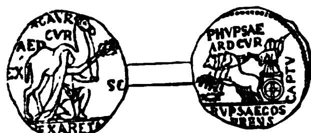
manslaughter (φόνου δίκαι, τὰ φονικά), and was the oldest and most peculiar sphere of its activity. The indictment was brought by the second or king-archon (ἄρχων βασιλεύς), whose duties were for the most part of a religious nature. Then followed the oath of both parties, accompanied by solemn appeals to the gods. After this the accuser and the accused had the option of making a speech (the notion of the proceedings of the Areopagus being carried on in the darkness of night rests on no sufficient foundation), which, however, they were obliged to keep free from all extraneous matter (ἔξω τοῦ πράγματος), as well as from mere rhetorical ornaments. After the first speech, the accused was permitted to go into voluntary banishment, if he had no reason to expect a favourable issue. Theft, poisoning, wounding, incendiarism, and treason, belonged also to this department of jurisdiction in the court of the Areopagus.

Its political function consisted in the constant watch which it kept over the legal condition of the state, acting as overseer and guardian of the laws (ἐπίσκοπος καὶ φύλαξ τῶν νόμων).

Its police function also made it a protector and upholder of the institutions and laws. In this character the Areopagus had jurisdiction over novelties in religion, in worship, in customs, in everything that departed from the traditionary and established usages and modes of thought (πατρίοις νομίμοις), which a regard to their ancestors endeared to the nation. This was an ancient and well-supported sphere of activity. The members of the court had a right to take oversight of festive meetings in private houses. In ancient times they fixed the number of the guests, and determined the style of the entertainment. If a person had no obvious means of subsisting, or was known to live in idleness, he was liable to an action before the Areopagus; if condemned three times, he was punished with ἀτιμία, the loss of his civil rights. In later times the court possessed the right of giving permission to teachers (philosophers and rhetoricians) to establish themselves and pursue their profession in the city.

Its strictly religious jurisdiction extended itself over the public creed, worship, and sacrifices, embracing generally everything which could come under the denomination of τὰ ἱερά—sacred things. It was its special duty to see that the religion of the state was kept pure from all foreign elements. The accusation of impiety (γραφὴ ἀσεβείας)—the vagueness of which admitted almost any charge connected with religious innovations—belonged in a special manner to this tribunal, though the charge was in some cases heard before the court of the Heliastæ. The freethinking poet Euripides stood in fear of, and was restrained by, the Areopagus (Euseb. *Prep. Evang.* vi. 14; Bayle *s. v. Eurip.*). Its proceeding in such cases was sometimes rather of an admonitory than punitive character.

Not less influential was its moral and educational power. Isocrates speaks of the care which it took of good manners and good order (τῆς εὐκοσμίας, εὐταξίας). Quintilian relates that the Areopagus condemned a boy for plucking out the eyes of a quail—a proceeding which has been both misunderstood and misrepresented (*Penny Cyclop.* in voc.), but which its original narrator approved, assigning no insufficient reason, namely, that the act was a sign of a cruel disposition, likely in advanced life to lead to baneful actions: 'Id signum esse perniciosissimæ mentis, multisque malo futuræ si adolevisset' (Quint. v. 9). The court exercised a salutary influence in general over the Athenian youth, their educators and their education.



Its financial position is not well understood; most probably it varied more than any other part of its administration with the changes which the constitution of the city underwent. It may suffice to mention, on the authority of Plutarch (*Themis.* c. 10), that in the Persian war the Areopagus had the merit of completing the number of men required for the fleet, by paying eight drachmæ to each.

In the following works corroboration of the facts stated in this article, and further details, with discussions on doubtful points, may be found:—Meursius, *Areopagus, sive de Senatu Areopagitico*, in *Thes. Gron.* t. v. p. 207; Sigonius, *De Rep. Ath.* iii. 2. p. 1568; De Canaye, *Recherches sur l'Aréopage*, pp. 273-316; *Mém. de l'Acad. des Inscr.* t. x.; Schede, *De Areop.* and Schwab *Num quod Areop. in plebiscita aut confirmanda aut rejicienda jus exercuerit legitimum*, Stutt. 1818; Meier, *Von der Blutgerichtsbarkeit des Areopag.*; Matthiä, *De Jud. Ath.* in *Misc. Philol.* Krebs, *de Ephetis*. Notices on the subject may also be found in the works of Tittman, Heffter, Hudtwalcker, Wachsmuth, Pauly, and Winer.—J. R. B.

AREOPOLIS. [Ar; Aroer.]

ARETAS (Ἀρέτας; Arab. حرث, *v.* Pocock, *Spec. Hist. Arab.* p. 58, or, in another form, حارث = חורש, Pococke, i. c. 70, 76, 77, 89), the common name of several Arabian kings. 1. The first of whom we have any notice was a contemporary of the Jewish high-priest Jason and of Antiochus Epiphanes about B.C. 170 (2 Macc. v. 8). 'In the end, therefore, he (Jason) had an unhappy return, being accused before *Aretas, the king of the Arabians*.' 2. Josephus (*Antiq.* xiii. 13. 3) mentions an Aretas, king of the Arabians (called Obedas, Ὀβέδας, xiii. 13. 5), contemporary with Alexander Jannæus (died B.C. 79) and his sons. After defeating Antiochus Dionysus, he reigned over Cœle-Syria, 'being called to the government by those that held Damascus (κληθεὶς εἰς τὴν ἀρχὴν ὑπὸ τῶν τὴν Δαμασκὸν ἐχόντων) by reason of the hatred they bore to Ptolemy Mennæus' (*Antiq.* xiii. 15. 2). He took part with Hyrcanus in his contest for the sovereignty with his brother Aristobulus, and laid siege to Jerusalem, but, on the approach of the Roman general Scaurus, he retreated to Philadelphia (*De Bell. Jud.* i. 6. 3) Hyrcanus and Aretas were pursued and defeated by Aristobulus at a place called Papyron, and lost above 6000 men. Three or four years after, Scaurus, to whom Pompey had committed the government of Cœle-Syria, invaded Petræa, but finding it difficult to obtain provisions for his army, he consented to withdraw on the offer of 300 talents from Aretas (Joseph. *Antiq.* xiv. 5. 1). Havercamp has given an engraving of a denarius intended to commemorate this event, on which Aretas appears in a supplicating posture, and

taking hold of a camel's bridle with his left hand, and with his right hand presenting a branch of the frankincense-tree, with this inscription, M. SCAVRVS. EX. S. C., and beneath, REX ARETAS (Joseph. *De Bell. Jud.* i. 8. 1). 3. Aretas, whose name was origin-

ally Æneas, succeeded Obodas (Ὀβόδας). He was the father-in-law of Herod Antipas. The latter made proposals of marriage to the wife of his half-brother Herod-Philip, Herodias, the daughter of Aristobulus their brother, and the sister of Agrippa the Great. (On the apparent discrepancy between the Evangelists and Josephus, in reference to the name of the husband of Herodias, see Lardner's *Credibility*, &c. pt. i. b. ii. ch. 5; *Works*, ed. 1835, i. 408-416.) In consequence of this, the daughter of Aretas returned to her father, and a war (which had been fomented by previous disputes about the limits of their respective countries) ensued between Aretas and Herod. The army of the latter was totally destroyed; and on his sending an account of his disaster to Rome, the emperor immediately ordered Vitellius to bring Aretas prisoner alive, or, if dead, to send his head (Joseph. *Antiq.* xviii. 5. 1). But while Vitellius was on his march to Petra, news arrived of the death of Tiberius, upon which, after administering the oath of allegiance to his troops, he dismissed them to winter-quarters and returned to Rome. It must have been at this juncture that Aretas took possession of Damascus, and placed a governor in it (ἐθνάρχης) with a garrison. For a knowledge of this fact we are indebted to the apostle Paul. 'In Damascus the governor under Aretas the king kept the city of the Damascenes with a garrison, desirous to apprehend me; and through a window in a basket was I let down by the wall, and escaped his hands' (2 Cor. xi. 32, compared with Acts ix. 24). We are thus furnished with a chronological mark in the Apostle's history. From Gal. i. 18, it appears that Paul went up to Jerusalem from Damascus three years after his conversion. The emperor Tiberius died in A.D. 37; and as the affairs of Arabia were settled in the second year of Caligula, Damascus was then most probably reoccupied by the Romans. If, then, Paul's flight took place in A.D. 39, his conversion must have occurred in A.D. 36 (Neander's *History of the Planting of the Christian Church*, i. 107, English trans.; Lardner's *Credibility*, &c. Supplement, ch. xi.; *Works*, ed. 1835, v. 497).—J. E. R.

ARGAZ (ארגז; Sept. θέμα), the receptacle, called in the Authorized Version, a 'coffer' (1 Sam. vi. 8, 11, 15), which the Philistines placed beside the ark when they sent it home, and in which they deposited the golden mice and emerods that formed their trespass-offering. Gesenius and Lee agree in regarding it as the same, or nearly the same thing, as the Arabian رجازة, *rijaza*, which Jauhari describes as 'a kind of wallet, into which stones are put: it is hung to one of the two sides of the haudaj [a litter borne by a camel or mule] when it inclines towards the other.' Dr. Lee, however, thinks that the Hebrew word denotes the wallet itself; whereas Gesenius is of opinion that it means a *coffer* or small box, to which, from its analogous use, the same name was applied.

ARGOB (ארגוב; Sept. Ἀργόβ), a district in Bashan, east of the Lake of Gennesareth, which was given to the half-tribe of Manasseh (Deut. iii. 4, 13; 1 Kings iv. 13). The name Argob may be traced in *Ragab* or *Ragaba*, a city of the district (Joseph. *Antiq.* xiii. 18. 5; *Mishna*, tit. *Menachoth*, viii. 3), which Eusebius places 15 Roman miles west of Gerasa. Burckhardt supposed that he had found the ruins of this city in those of El Hossn, a remarkable but abandoned position on the east side of the lake (*Syria*, p. 279); but Mr. Bankes conceives this El Hossn to have been the site of Gamala (*Quarterly Review*, xxvi. 389).

1. ARIEL (אריאל; Sept. Ἀριήλ), a word meaning 'lion of God,' and correctly enough rendered by 'lion-like,' in 2 Sam. xxiii. 20; 1 Chron. xi. 22. It was applied as an epithet of distinction to bold and warlike persons, as among the Arabians, who surnamed Ali 'The Lion of God.'

2. ARIEL. The same word is used as a local proper name in Isa. xxix. 1, 2, applied to Jerusalem—'as victorious under God'—says Dr. Lee; and in Ezek. xliii. 15, 16, to the altar of burnt-offerings. Here Gesenius and others, unsatisfied with the Hebrew, resort to the Arabic, and find the *Ari* in ارة *fire-hearth*, which, with אל *God*, supplies what they consider a more satisfactory signification. It is thus applied, in the first place, to the altar, and then to Jerusalem as containing the altar.

ARIMATHEA, the birth-place of the wealthy Joseph, in whose sepulchre our Lord was laid (Matt. xxvii. 57; John xix. 38). Luke (xxiii. 51) calls it 'a city of the Jews;' which may be

explained by 1 Macc. xi. 34, where King Demetrius thus writes—'We have ratified unto them [the Jews] the borders of Judæa, with the three governments of Aphereum, Lydda, and *Ramathaim*, that are added unto Judæa from the country of Samaria.' Eusebius (*Onomast.* s. v.) and Jerome (*Epit. Paulæ*) regard the Arimathea of Joseph as the same place as the Ramathaim of Samuel, and place it near Lydda or Diospolis. Hence it has by some been identified with the existing Ramleh, because of the similarity of the

name to that of Ramah (of which Ramathaim is the dual); and because it is near Lydda or Diospolis. Professor Robinson, however, disputes this conclusion on the following grounds—1. that Abulfeda alleges Ramleh to have been built after the time of Mohammed, or about A.D. 716, by Suleiman Abd-al Malik; 2. that Ramah and Ramleh have not the same signification; 3. that Ramleh is in a plain, while Ramah implies a town on a hill. To this it may be answered, that Abulfeda's statement may mean no more than that Suleiman *rebuilt* the town, which had previously been in ruins, just as Rehoboam and others are said to have *built* many towns which had existed long before their time; and that the Moslems seldom built towns but on old sites and out of old materials; so that there is not a town in all Palestine which is with certainty known to have been founded by them. In such cases they retained the old names, or others resembling them in sound, if not in signification, which may account for the difference between Ramah and Ramleh. Neither can we assume that a place called Ramah could not be in a plain, unless we are ready to prove that Hebrew proper names were *always* significant and appropriate. This they probably were not. They were so in early times, when towns were few; but not eventually, when towns were numerous, and took their names arbitrarily from one another without regard to local circumstances. Further, if Arimathea, by being identified with Ramah, was necessarily in the mountains, it could not have been 'near Lydda,' from which the mountains are seven miles distant. This matter, however, belongs more properly to another place [RAMAH; RAMATHAIM-ZOPHIM]; and it is alluded to here merely to show that Dr. Robinson's objections have not entirely destroyed the grounds for following the usual course of describing Ramleh as representing the ancient Arimathea.

Ramleh is in N. lat. 31° 59', and E. long. 35° 28', 8 miles S.E. from Joppa, and 24 miles N.W. by W. from Jerusalem. It lies in the fine undulating plain of Sharon, upon the eastern side of a broad low swell rising from a fertile though sandy plain. Like Gaza and Jaffa, this town is surrounded by olive-groves and gardens of vegetables and delicious fruits. Occasional palm-trees are also seen, as well as the kharob and the sycamore. The streets are few; the houses are of stone, and many of them large and well built. There are five mosques, two or more of which are said to have once been Christian churches; and there is here one of the largest Latin convents in Palestine. The place is supposed to contain about 3000 inhabitants, of whom two-thirds are Moslems, and the rest Christians, chiefly of the Greek church, with a few Armenians. The inhabitants carry on some trade in cotton and soap. The great caravan-road between Egypt and Damascus, Smyrna, and Constantinople passes through Ramleh, as well as the most frequented road for European pilgrims and travellers between Joppa and Jerusalem (Robinson, iii. 27; Raumer, p. 215). The tower, of which a figure is here given, is the most conspicuous object in or about the city. It stands a little to the west of the town, on the highest part of the swell of land; and is in the midst of a large quadrangular enclosure, which has much the appearance of having once been a splendid khan. The tower is wholly isolated, whatever may have been its original destination.

It is about 120 feet in height, of Saracenic architecture, square, and built with well-hewn stone. The windows are of various forms, but all have pointed arches. The corners of the tower are supported by tall slender buttresses; while the sides taper upwards by several stories to the top. It is of solid masonry, except a narrow staircase within, winding up to an external gallery, which is also of stone, and is carried quite round the tower a few feet below the top (Robinson, iii. 32). In the absence of any historical evidence that the enclosure was a khan, Dr. Robinson resorts to the Moslem account of its having belonged to a ruined mosque. The tower itself bears the date 718 A.H. (A.D. 1310), and an Arabian author (Mejr-ed-Din) reports the completion at Ramleh, in that year, of a minaret unique for its loftiness and grandeur, by the sultan of

Egypt, Nazir Mohammed ibn Kelawan (Robinson, iii. 38; also Volney, ii. 281). Among the plantations which surround the town occur, at every step, dry wells, cisterns fallen in, and vast vaulted reservoirs, which show that the city must in former times have been upwards of a league and a half in extent (Volney, ii. 280).

The town is first mentioned under its present name by the monk Bernard, about A.D. 870. About A.D. 1150 the Arabian geographer Edrisi (ed. Jaubert, p. 339) mentions Ramleh and Jerusalem as the two principal cities of Palestine. The first Crusaders on their approach found Ramleh deserted by its inhabitants; and with it and Lydda they endowed the first Latin bishopric in Palestine, which took its denomination from the latter city. From the situation of Ramleh between that city and the coast, it was a post of much importance to the Crusaders, and they held possession of it generally while Jerusalem was in their hands, and long afterwards. In A.D. 1266 it was finally taken from the Christians by the Sultan Bibars. Subsequently it is often mentioned in the accounts of travellers and pilgrims, most of whom rested there on their way to Jerusalem. It seems to have declined very fast from the time that it came into the possession of the Crusaders. Benjamin of Tudela (*Itin.* p. 79, ed. Asher), who was there in A.D. 1173, speaks of it as having been *formerly* a considerable city. Belon (*Observat.* p. 311), in 1547, mentions it as almost deserted, scarcely twelve houses being inhabited, and the fields mostly untilled. This desertion must have occurred after 1487; for, *Le Grant Voyage de Hierusalem*, fol. xiv., speaks of it as a peopled town (though partly ruined), and of the 'seigneur de Rama' as an important personage. By 1674 it had somewhat revived, but it was still rather a large unwalled village than a city, without any good houses, the governor himself being miserably lodged (Nau, *Voyage Nouveau*, liv. i. ch. 6). A century later it remained much in the same state, the governor being still ill-lodged, and the population scarcely exceeding 200 families (Volney, ii. 220). Its recent state must, therefore, indicate a degree of comparative prosperity, the growth of the present century.

ARISTARCHUS (Ἀρίσταρχος), a faithful adherent of St. Paul, whose name repeatedly occurs in the Acts and Epistles (Acts xix. 29; xx. 4; xxvii. 2; Col. iv. 10; Philem. 24). He was a native of Thessalonica, and became the companion of St. Paul, whom he accompanied to Ephesus, where he was seized and nearly killed in the tumult raised by the silversmiths. He left that city with the Apostle, and accompanied him in his subsequent journeys, even when taken as a prisoner to Rome: indeed, Aristarchus was himself sent thither as a prisoner, or became such while there, for Paul calls him his 'fellow-prisoner' (Col. iv. 10). The traditions of the Greek church represent Aristarchus as bishop of Apamea in Phrygia, and allege that he continued to accompany Paul after their liberation, and was at length beheaded along with him at Rome in the time of Nero. The Roman martyrologies make him bishop of Thessalonica. But little reliance is to be placed on accounts which make a bishop of almost every one who happens to be named in the Acts and Epistles; and, in the case of Aristarchus, it is little likely that one who constantly travelled about with St. Paul exercised any stationary office.

ARISTOBULUS (Ἀριστόβουλος), a person named by Paul in Rom. xvi. 10, where he sends salutations to his household. He is not himself saluted; hence he may not have been a believer, or he may have been absent or dead. Nothing certain is known respecting him. But tradition has not neglected him: it represents him as brother of Barnabas, and one of the seventy disciples, and alleges that he was ordained a bishop by Barnabas, or by Paul, whom he followed in his travels; and that he was eventually sent into Britain, where he laboured with much success, and where he at length died.

Aristobulus is a Greek name, adopted by the Romans, and in very common use among them. It was also adopted by the Jews, and was borne by several persons in the Maccabean and Herodian families—viz. 1. ARISTOBULUS, son and successor of John Hyrcanus [MACCABEES]. 2. ARISTOBULUS, second son of Alexander Jannæus, and younger brother of Hyrcanus, with whom he disputed the succession by arms [MACCABEES]. 3. ARISTOBULUS, grandson of the preceding, and the last of the Maccabean family, who was murdered by the contrivance of Herod the Great, B.C. 34 [MACCABEES]. 4. ARISTOBULUS, son of Herod the Great by Mariamne [HERODIAN FAMILY].

ARITHMETIC, or, as the word, derived from the Greek ἀριθμος, signifies, the science of numbers or reckoning, was unquestionably practised as an art in the dawn of civilization; since to put things, or their symbols, together (addition), and to take one thing from another (subtraction), must have been coeval with the earliest efforts of the human mind; and what are termed multiplication and division are only abbreviated forms of addition and subtraction. The origin, however, of the earliest and most necessary of the arts and sciences is lost in the shades of antiquity, since it arose long before the period when men began to take specific notice and make some kind of record of their discoveries and pursuits. In the absence of positive information we seem authorised in referring the first knowledge of arithmetic to the East. From India, Chaldæa, Phœnicia, and Egypt, the science passed to the Greeks, who extended its laws, improved its processes, and widened its sphere. To what extent the Orientals carried their acquaintance with arithmetic cannot be determined. The greatest discovery in this department of the mathematics, namely, the establishment of our system of ciphers, or of figures considered as distinct from the letters of the alphabet, belongs undoubtedly not to Arabia, as is generally supposed, but to the remote East, probably India. It is to be regretted that the name of the discoverer is unknown, for the invention must be reckoned among the greatest of human achievements. Our numerals were made known to these western parts by the Arabians, who, though they were nothing more than the medium of transmission, have enjoyed the honour of giving them their name. These numerals were unknown to the Greeks, who made use of the letters of the alphabet for arithmetical purposes.

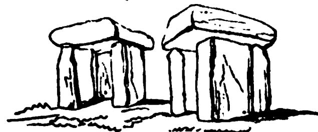
The Hebrews were not a scientific, but a religious and practical nation. What they borrowed from others of the arts of life they used without

surrounding it with theory or expanding and framing it into a system. So with arithmetic, by them called מנה, from a word signifying to determine, limit, and thence to number. Of their knowledge of this science little is known more than may be fairly inferred from the pursuits and trades which they carried on, for the successful prosecution of which some skill at least in its simpler processes must have been absolutely necessary; and the large amounts which appear here and there in the sacred books serve to show that their acquaintance with the art of reckoning was considerable. Even in fractions they were not inexperienced (Gesenius, *Lehrgeb.* p. 704). For figures, the Jews, after the Babylonish exile, made use of the letters of the alphabet, as appears from the inscriptions on the so-called Samaritan coins (Eckhel, *Doctr. Num.* i. iii. 468); and it is not unlikely that the ancient Hebrews did the same, as well as the Greeks, who borrowed their alphabet from the Phœnicians, neighbours of the Israelites, and employed it instead of numerals.—J. R. B.

ARK, NOAH'S (תֵּבָה *tebah*; Arab. يابوت; Sept. *κιβωτός, a chest*; Joseph. *λάρναξ, a coffer*; Vulg. *arca*, Gen. vi. 14). The word here employed is different from that (ארון *aron*) which is applied to the 'ark' of the covenant and other receptacles which we know to have been chests or coffers. But it is the same that is applied to the 'ark' in which Moses was hid (Exod. ii. 3), the only other part of Scripture in which it occurs. In the latter passage the Septuagint renders it *θίβη*, a *ship*, in the former, *κιβωτός*, a *chest*. The truth seems to be, that ארון denotes any kind of chest or coffer: while the exclusive application of תבה to the vessels of Noah and of Moses, would suggest the probability that it was restricted to such chests or arks as were intended to float upon the water, of whatever description. The identity of the name with that of the wicker basket in which Moses was exposed on the Nile, has led some to suppose that the ark of Noah was also of wicker-work, or rather was wattled and smeared over with bitumen (Auth. Vers. 'pitch,' Gen. vi. 14). This is not *impossible*, seeing that vessels of considerable burthen are thus constructed at the present day; but there is no sufficient authority for carrying the analogy to this extent.

Vast labour and ingenuity have been employed by various writers, in the attempt to determine the form of Noah's ark and the arrangement of its parts. The success has not been equal to the exertion; for, on comparing the few simple facts in the Scripture narrative, every one feels how slight positive data there are for the minute descriptions and elaborate representations which such writers have given. That form of the ark which repeated pictorial representations have rendered familiar—a kind of house in a kind of boat—has not only no foundation in Scripture, but is contrary to reason. The form thus given to it is fitted for progression and for cutting the waves; whereas the ark of Noah was really destined to float idly upon the waters, without any other motion than that which it received from them. If we examine the passage in Gen. vi. 14-16, we can only draw from it the conclusion that the ark was not a boat or ship; but, as Professor Robinson describes it, 'a building in the form of a parallelogram, 300 cubits long, 50 cubits broad, and 30 cubits high. The length of the cubit, in the great variety of measures that bore this name, it is impossible to ascertain and useless to conjecture. So far as the *name* affords any evidence, it also goes to show that the ark of Noah was not a regularly-built vessel, but merely intended to float at large upon the waters. We may, therefore, probably with justice, regard it as a large, oblong, floating house, with a roof either flat or only slightly inclined. It was constructed with three stories, and had a door in the side. There is no mention of windows *in the side*, but *above*, *i. e.* probably in the flat roof, where Noah was commanded to make them of a cubit in size (Gen. vi. 16). That this is the meaning of the passage seems apparent from Gen. viii. 13, where Noah removes the covering of the ark in order to ascertain whether the ground was dry; a labour unnecessary surely, had there been windows in the sides of the ark' (Add. to *Calmet's Dict.* s. v. Ark).

The purpose of this ark was, to preserve certain persons and animals from the Deluge with which God intended to overwhelm the land, in punishment for man's iniquities. The persons were eight—Noah and his wife, with his three sons and their wives (Gen. vii. 7; 2 Pet. ii. 5). The animals were, one pair of every 'unclean' animal, and seven pairs of all that were 'clean.' By 'clean,' we understand fit, and by 'unclean,' unfit for food or for sacrifice. Of birds there were seven pairs (Gen. vii. 2, 3). Those who have written professedly and largely on the subject, have been at great pains to provide for all the existing species of animals in the ark of Noah, showing how they might be distributed, fed, and otherwise provided for. But they are very far from having cleared the matter of all its difficulties; which are much greater than they, in their general ignorance of natural history, were aware of. These difficulties, however, chiefly arise from the assumption that the species of *all the earth* were collected in the ark. The number of such species has been vastly underrated by these writers—partly from ignorance, and partly from the desire to limit the number for which they imagined they required to provide. They have usually satisfied themselves with a provision for three or four hundred species at most. 'But of the existing mammalia considerably more than one thousand species are known; of birds, fully five thousand; of reptiles, very few kinds of which can live in water, two thousand; and the researches of travellers and naturalists are making frequent and most interesting additions to the number of these and all other classes. Of insects (using the word in the popular sense) the number of species is immense; to say one hundred thousand would be moderate: each has its appropriate habitation and food, and these are necessary to its life; and the larger number could not live in water. Also the innumerable millions upon millions of animalcules must be provided for; for they have all their appropriate and diversified places and circumstances of existence' (Dr. J. Pye Smith, *On the Relation between the Holy Scriptures and some Parts of Geological Science*, p. 135). Nor do these numbers form the only difficulty; for, as the same writer observes:—'All land animals have their



geographical regions, to which their constitutional natures are congenial, and many could not live in any other situation. We cannot represent to ourselves the idea of their being brought into one small spot, from the polar regions, the torrid zone, and all the other climates of Asia, Africa, Europe, America, Australia, and the thousands of islands, their preservation and provision, and the final disposal of them, without bringing up the idea of miracles more stupendous than any which are recorded in Scripture.'

These are some of the difficulties which arise on the supposition that all the species of animals existing in the world were assembled together and contained in the ark. And if the object, as usually assumed, was to preserve the species of creatures which the Deluge would otherwise have destroyed, the provision for beasts and birds only, must have been altogether inadequate. What then would have become of the countless reptiles, insects, and animalcules to which we have already referred? and it is not clear that some provision must not also have been necessary for fishes and shell animals, many of which cannot live in fresh water, while others cannot live in salt.

The difficulty of assembling in one spot, and of providing for in the ark, the various mammalia and birds alone, even without including the otherwise essential provision for reptiles, insects, and fishes, is quite sufficient to suggest some error in the current belief. We are to consider the different kinds of accommodation and food which would be required for animals of such different habits and climates, and the necessary provision for ventilation and for cleansing the stables or dens. And if so much ingenuity has been required in devising arrangements for the comparatively small number of species which the writers on the ark have been willing to admit into it; what provision can be made for the immensely larger number which, under the supposed conditions, would really have required its shelter?

There seems no way of meeting these difficulties but by adopting the suggestion of Bishop Stillingfleet, approved by Matthew Poole, Dr. J. Pye Smith, Le Clerc, Rosenmüller, and others, namely, that, as the object of the Deluge was to sweep man from the earth, it did not extend beyond that region of the earth which man then inhabited, and that only the animals of that region were preserved in the ark. The question, as regards the universality of the Deluge, will be considered elsewhere [DELUGE]; and for the portion of the matter involved in the present inquiry, we must be content to produce the sentiments of Bishop Stillingfleet, who wrote in plain soberness long before geology was known as a science, and when, therefore, those discoveries were altogether unthought of by which, in our day, such warm controversies have been excited. The bishop expresses his belief that the Flood was universal as to mankind, and that all men, except those preserved in the ark, were destroyed; but he sees no evidence from Scripture that the whole earth was then inhabited; he does not think that it can ever be proved to have been so; and he asks, what reason there can be to extend the Flood beyond the occasion of it? He grants that, as far as the Flood extended, all the animals were destroyed; 'but,' he adds, 'I see no reason to extend the destruction of these beyond the compass of the earth which men then inhabited; the punishment of the beasts was occasioned by, and could not but be concomitant with, the destruction of mankind. But (the occasion of the Deluge being the sin of man, who was punished in the beasts that were destroyed for his sake, as well as in himself) where the occasion was not, as where there were animals and no men, there seems no necessity for extending the Flood thither' (*Origines Sacræ*, b. iii. ch. iv.). The bishop further argues that the reason for preserving living creatures in the ark was, that there might be a stock of the tame and domesticated animals that should be immediately 'serviceable for man after the flood: which was certainly the main thing looked at in the preservation of them in the ark, that men might have all of them ready for use after the Flood; which could not have been, had not the several kinds been preserved in the ark, although we suppose them not destroyed in all parts of the world.'

As Noah was the progenitor of all the nations of the earth, and as the ark was the second cradle of the human race, we might expect to find in all nations traditions and reports more or less distinct respecting him, the ark in which he was saved, and the Deluge in general. Accordingly no nation is known in which such traditions have not been found. They have been very industriously brought together by Banier, Bryant, Faber, and other mythologists [DELUGE; NOAH]. Our present concern is only with the ark. And as it appears that an ark, that is, a boat or chest, was carried about with great ceremony in most of the ancient mysteries, and occupied an eminent station in the holy places, it has with much reason been concluded that this was originally intended to represent the ark of Noah, which eventually came to be regarded with superstitious reverence. On this point the historical and mythological testimonies (as collected in the authors to whom we have referred) are very clear and conclusive. The tradition of a deluge, by which the race of man was swept from the face of the earth, has been traced among the Chaldæans, Egyptians, Phœnicians, Assyrians, Persians, Greeks, Romans, Goths, Druids, Chinese, Hindoos, Burmese, Mexicans, Peruvians, Brazilians, Nicaraguans, the inhabitants of Western Caledonia, and the islanders of the Pacific; and among most of them also the belief has prevailed that certain individuals were preserved in an ark, ship, boat, or raft, to replenish the desolated earth with inhabitants. Nor are these traditions uncorroborated by coins and monuments of stone. Of the latter there are the sculptures of Egypt and of India; and, as hinted in a previous article [ALTAR], it is not unlikely that those of the monuments called Druidical, which bear the name of kist-vaens, and in which the stones are

disposed in the form of a chest or house, were intended as memorials of the ark. At least, it has been shown by Davis (*Celtic Researches*) that

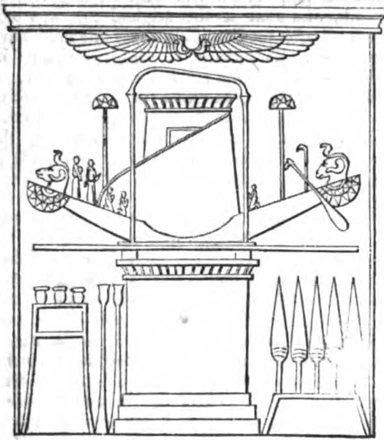
the ark was not only typified among the Celts by rafts and islands, but by a stone ark or chest, which is precisely the meaning of *kist* (chest) *vaen*.

Being anxious to touch as lightly as possible upon the vast and curious subject of Arkite worship, we shall confine our medallic illustrations to the two famous medals of Apamea. There were six cities of this name, of which the most celebrated was that of Syria; next to it, in importance, was the one in Phrygia, called also Κιβωτός, *Kibotos*, which, as we have seen, means an ark or hollow vessel. This latter city was built on the river Marsyas; and there seems to have been a notion that the ark rested on the adjoining hills of Celænæ: and the Sibylline oracles, wherever they were written, also include these hills under the name of Ararat, and mention the same tradition. The medals in question belong, the one to the elder Philip, and the other to Pertinax. In the former it is extremely interesting to observe that on the front of the ark is the name of Noah, ΝΩΕ, in

Greek characters. The designs on these medals correspond remarkably, although the legends somewhat vary. In both we perceive the ark floating on the water, containing the patriarch and his wife, the dove on wing, the olive-branch, and the raven perched on the ark. These medals also represent Noah and his wife on *terra firma*, in the attitude of rendering thanks for their safety. On the pannel of the ark, in the coin of Pertinax, is the word ΝΗΤΩΝ, perhaps a provincialism for Νῆσος, 'an island,' or Νέω, 'to revive.' On the exergue of the same medal we read distinctly ΑΠΑ-ΜΕΩΝ, as we do also in that of the other, the first syllable terminating the first line. The genuineness of these medals has been established beyond all question by the researches of Bryant and the critical inspection of Abbé Barthélemy. There is another medal, struck in honour of the emperor Hadrian, which bears the inscription ΑΠΑΜΕΩΝ ΚΙΒΩΤΟΣ ΜΑΡΣΥΑΣ, 'the ark and the marsyas of the Apameans.' The coincidences which these medals offer are at least exceedingly curious; and they are scarcely less illustrative of the prevailing belief to which we are referring, if, as some suppose, the figures represented are those of Deucalion and Pyrrha.

ARK OF THE COVENANT (אָרוֹן; Sept. and New Test. κιβωτός). The word here used for ark is, as already explained, different from that which is applied to the ark of Noah. It is the common name for a chest or coffer, whether applied to the ark in the tabernacle, to a coffin, to a mummy-chest (Gen. l. 26), or to a chest for money (2 Kings xii. 9, 10). Our word *ark* has the same meaning, being derived from the Latin *arca*, a chest. The distinction between *aron* and the present word has already been suggested. The sacred chest is distinguished from others as ארון אלהים the 'ark of God' (1 Sam. iii. 3): ארון הברית 'ark of the covenant' (Josh. iii. 6): and ארון העדות 'ark of the law' (Exod. xxv. 22). This ark was a kind of chest, of an oblong shape, made of shittim (acacia) wood, a cubit and a half broad and high, two cubits long, and covered on all sides with the purest gold. It was ornamented on its upper surface with a border or rim of gold; and on each of the two sides, at equal distances from the top, were two gold rings, in which were placed (to remain there perpetually) the gold-covered poles by which the ark was carried, and which continued with it after it was deposited in the tabernacle. The lid or cover of the ark (כפרת, *ἱλαστήριον*, *ἐπίθημα*) was of the same length and breadth, and made of the purest gold. Over it, at the two extremities, were two cherubim, with their faces turned towards each other, and inclined a little towards the lid (otherwise called the *mercy-seat*). Their wings, which were spread out over the top of the ark, formed the throne of God, the King of Israel, while the ark itself was his footstool (Exod. xxv. 10-22; xxxvii. 1-9).

This ark was the most sacred object among the Israelites: it was deposited in the innermost and holiest part of the tabernacle, called 'the holy of holies' (and afterwards in the corresponding apartment of the Temple), where it stood so that one end of each of the poles by which it was carried (which were drawn out so far as to allow the ark to be placed against the back wall), touched the veil which separated the two apartments of the tabernacle (1 Kings viii. 8). In the ark were deposited the tables of the law (Exod. xxv. 16). A quantity of manna was laid up beside the ark in a vase of gold (Exod. xvi. 32, 36; 1 Kings viii. 9); as were also the rod of Aaron (Num. xvii. 10), and a copy of the book of the law (Deut. xxxi. 26).



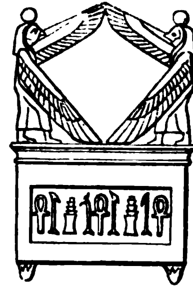
Nothing is more apparent throughout the historical Scriptures than the extreme sanctity which attached to the ark, as the material symbol of the Divine presence. During the marches of the Israelites it was covered with a purple pall, and borne by the priests, with great reverence and care, in advance of the host (Num. iv. 5, 6; x. 33). It was before the ark, thus in advance, that the waters of the Jordan separated; and it remained in the bed of the river, with the attendant priests, until the whole host had passed over; and no

sooner was it also brought up than the waters resumed their course (Josh. iii.; iv. 7, 10, 11, 17, 18). The ark was similarly conspicuous in the grand procession round Jericho (Josh. vi. 4, 6, 8, 11, 12). It is not wonderful therefore that the neighbouring nations, who had no notion of spiritual worship, looked upon it as the God of the Israelites (1 Sam. iv. 6, 7), a delusion which may have been strengthened by the figures of the cherubim on it. After the settlement of the Jews in Palestine, the ark remained in the tabernacle at Shiloh, until, in the time of Eli, it was carried along with the army in the war against the Philistines, under the superstitious notion that it would secure the victory to the Hebrews. They were, however, not only beaten, but the ark itself was taken by the Philistines (1 Sam. iv. 3-11), whose triumph was, however, very short lived, as they were so oppressed by the hand of God, that, after seven months, they were glad to send it back again (1 Sam. v. 7). After that it remained apart from the tabernacle, at Kirjath-jearim (vii. 1, 2), where it continued until the time of David, who purposed to remove it to Jerusalem; but the old prescribed mode of removing it from place to place was so much neglected as to cause the death of Uzzah, in consequence of which it was left in the house of Obededom (2 Sam. vi. 1-11); but after three months David took courage, and succeeded in effecting its safe removal, in grand procession, to Mount Zion (ver. 12-19). When the Temple of Solomon was completed, the ark was deposited in the sanctuary (1 Kings viii. 6-9). The passage in 2 Chron. xxxv. 3, in which Josiah directs the Levites to restore the ark to the holy place, is understood by some to imply that it had either been removed by Amon, who put an idol in its place, which is assumed to have been the 'trespass' of which he is said to have been guilty (2 Chron. xxxiii. 23); or that the priests themselves had withdrawn it during idolatrous times, and preserved it in some secret place, or had removed it from one place to another. But it seems more likely that it had been taken from the holy of holies during the purification and repairs of the Temple by this same Josiah, and that he, in this passage, merely directs it to be again set in its place. What became of the ark when the Temple was plundered and destroyed by the Babylonians is not known, and all conjecture is useless. The Jews believe that it was concealed from the spoilers, and account it among the hidden things which the Messiah is to reveal. It is certain, however, from the consent of all the Jewish writers, that the old ark was not contained in the second temple, and there is no evidence that any new one was made. Indeed the absence of the ark is one of the important particulars in which this temple was held to be inferior to that of Solomon. The most holy place is therefore generally considered to have been empty in the second temple (as Josephus states, *De Bell. Jud.* v. 14); or at most (as the Rabbins allege) to have contained only a stone to mark the place which the ark should have occupied. The silence of Ezra, Nehemiah, the Maccabees, and Josephus, who repeatedly mention all the other sacred utensils, but never name the ark, seems conclusive on the subject. But notwithstanding this weight of testimony, there are writers, such as Prideaux (*Connection*, i. p. 207), who contend that the Jews could not properly carry on their worship without an ark, and that if the original ark was not recovered after the Captivity, a new one must have been made. This matter is fully investigated in Calmet's *Dissertation sur l'Arche d'Alliance*.

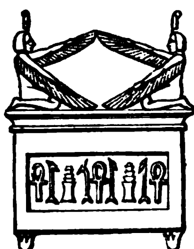
We now come to consider the design and form of the ark, on which it appears to us that clear and unexpected light has been thrown by the discoveries which have of late years been made in Egypt, and which have unfolded to us the rites and mysteries of the old Egyptians. The subject may be opened in the following words, from the two volumes on the *Religion and Agriculture of the Ancient Egyptians*, which have been published by Sir J. G. Wilkinson since we first had occasion to notice this subject (see *Pictorial Hist. of Palestine*, pp. 247-250):—'One of the most important ceremonies was the "procession of shrines," which is mentioned in the Rosetta stone, and frequently occurs on the walls of the temples. The shrines were of two kinds: the one a sort of canopy; the other an ark or sacred boat, which may be termed the great shrine. This was carried with grand pomp by the priests, a certain number being selected for that duty, who supported it on their shoulders by means of long staves, passing through metal rings at the side of the sledge on which it stood, and brought it into the temple, where it was deposited upon a stand or table, in order that the prescribed ceremonies might be discharged before it. The stand was also carried in procession by another set of priests, following the shrine, by means of similar staves; a method usually adopted for carrying large statues and sacred emblems, too heavy or too important to be borne by one person. The same is stated to have been the custom of the Jews in some of their religious processions (comp. 1 Chron. xv. 2, 15; 2 Sam. xv. 24; and Josh. iii. 12), as in carrying the ark to its place, into the oracle of the house, to the most holy place, when the Temple was built by Solomon (1 Kings viii. 6).' ....'Some of the arks or boats contained the emblems of Life and Stability, which, when the veil was drawn aside, were partially seen; and others presented the sacred beetle to the sun, overshadowed by the wings of two figures of the goddess Thenei, or Truth, which call to mind the cherubim of the Jews' (*Anc. Egyptians*, v. pp. 271, 275).

In reading this passage, more points of resemblance than occurred to Sir J. G. Wilkinson will strike the Biblical student, and will attract his close attention to the subject. In the above description three objects are distinguished:—1. The 'stand;' 2. The boat or 'ark;' 3. The 'canopy.' This last is not, as the extract would suggest, an alternative for the second; but is most generally seen with and in the boat. This is shown in the first cut, which exhibits all the parts together, and at rest.

The points of resemblance to the Jewish ark in the second cut are many and conspicuous: as, in the 'stand,' which, in some of its forms, and leaving out the figures represented on the sides, bears so close a resemblance to the written description of the Hebrew ark, that it may safely be taken as an authentic illustration of its form. Then the cherubim of the Hebrew ark find manifest representatives in the figures facing each other, with wings spread inwards and meeting



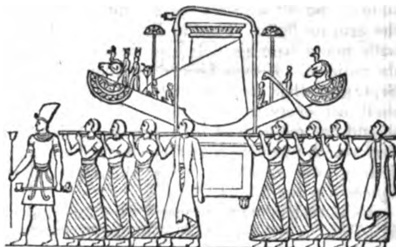
each other, which we find within a canopy or shrine which sometimes rests immediately upon this 'stand,' but more generally in the boat, which itself rests thereon. These are shown in



the annexed cut (3), in which the winged figures are, in their position, if not in their form, remarkably analogous. We direct attention also to the hovering wings above, which are very conspicuous in all such representations. This part of the subject is interesting; but, as it will obtain separate attention [CHERUBIM], we omit particular notice of it here. Other analogies occur in the persons who bear the shrine—the priests; and in the mode of carrying it, by means of poles inserted in rings; and it is observable that, as in the Hebrew ark, these poles were not withdrawn, but remained in their place when the shrine was at rest in the temple. Such are the principal resemblances. The chief difference is, the entire absence, in the Jewish ark, of the boat, in which most of the idolatrous objects were assembled. There are, indeed, circumstances which might suggest the idea that the 'mercy-seat' was not, as commonly supposed, the lid of the ark, but such a covering or canopy as we see in the Egyptian shrines. The ground relied upon as showing that it was the lid, namely, that its dimensions were the same as those of the ark, applies equally to the canopy, the bottom of which is usually of the same dimensions as the top of the stand or chest which answers to the Jewish ark. The fact, however, that the cherubim stood *upon* the mercy-seat, seems to show that it was the lid, and not the canopy; and the absence of this must therefore be taken as another difference. To show the effect of these conclusions, we take the stand, as already represented (in cut 2), and we place thereon, without alteration (but without the canopy), the winged figures as they appear in

an Egyptian shrine (the same as in cut 3); and we need not point out that the representation, thus formed without any alteration of the parts, affords a most striking resemblance to one of the two forms of the ark with the cherubim above, which scholars and artists, wholly unacquainted with Egyptian antiquities, have drawn from the descriptions of the Jewish ark which we find in Exodus, as represented in the annexed cut (5).

Again, we take the same ark, and place thereon the figures of another shrine (6); and we com-



pare this with another of the common forms of the Jewish ark as drawn from the descriptions (7).

These resemblances and differences appear to us to cast a strong light, not only on the form, but on the purpose of the Jewish ark. The discoveries of this sort which have lately been made in Egypt, have added an overwhelming weight of proof to the evidence which previously existed, that the 'tabernacle made with hands,' with its utensils and ministers, bore a designed external resemblance to the Egyptian models; but purged of the details and peculiarities which were the most open to abuse and misconstruction. That the Israelites during the latter part of their sojourn in Egypt followed the rites and religion of the country, and were (at least many of them) gross idolaters, is distinctly affirmed in Scripture (Josh. xxiv. 14; Ezek. xxiii. 3, 8, 19); and is shown by their ready lapse into the worship of the 'golden calf;' and by the striking fact that they actually carried about with them one of these Egyptian shrines or tabernacles in the wilderness (Amos v. 26). From their conduct and the whole tone of their sentiments and character it appears that this stiff-necked and rebellious people were incapable (as a nation) of adhering to that simple form of worship and service which is most pleasing to God.

The parts of the Egyptian shrine which are omitted in the ark are the *boat* and the *canopy:* the boat, probably because it was not only intimately connected by its very form with the Arkite worship, to which the previous article alludes, but because it was the part which was absolutely crowded with idolatrous images and associations; and the canopy, probably because it often shrouded the image of a god, whereas its absence made it manifest that only the symbolic cherubim rested on the ark. The parts retained were the stand or chest, which was not an object of idolatrous regard even among the Egyptians, and the winged figures, which were purely symbolical, and not idolatrous representations.

ARKITES (אַרְקִים; Sept. Ἀρουκαῖος), the inhabitants of Arka, mentioned in Gen. x. 17; 1 Chron. i. 15, as descended from the Phœnician or Sidonian branch of the great family of Canaan. This, in fact, as well as the other small northern states of Phœnicia, was a colony from the great parent state of Sidon. Arka, or Acra, their chief town, lay between Tripolis and Antaradus, at the western base of Lebanon (Joseph. *Antiq.* i. 6. 2; Jerome, *Quæst. in Gen.* x. 15). Josephus (*Antiq.* viii. 2. 3) makes Baanah—who in 1 Kings iv. 16, is said to have been superintendent of the tribe of Asher—governor of Akra by the sea; and if, as commonly supposed, the capital of the Arkites is intended, their small state must, in the time of Solomon, have been under the Hebrew yoke. Subsequently Akra shared the lot of the other small Phœnician states in that quarter; but in later times it formed part of Herod Agrippa's kingdom. The name and site seem never to have been unknown, although for a time it bore the name of Cæsarea Lebani from having been the birth-place of Alexander Severus (Mannert, p. 391). It is repeatedly mentioned by the Arabian writers (Michaelis, *Spicil.* pt. ii. p. 23; Schultens, *Vita Saladini;* Abulfeda, *Tab. Syriæ*, p. 11). It lay 32 R. miles from Antaradus, 18 miles from Tripoli, and, according to Abulfeda, a parasang from the sea. In a position corresponding to these intimations, Shaw (*Observat.* p. 270), Burckhardt (*Syria*, p. 162), and others noticed the site and ruins. Burckhardt, in travelling from the north-east of Lebanon to Tripoli, at the distance of about four miles south of the Nahr-el-kebir (Eleutherus), came to a hill called Tel-Arka, which, from its regularly flattened conical form and smooth sides, appeared to be artificial. He was told that on its top were some ruins of habitations and walls. Upon an elevation on its east and south sides, which commands a beautiful view over the plain, the sea, and the Anzeyry mountains, are large and extensive heaps of rubbish, traces of ancient dwellings, blocks of hewn stone, remains of walls, and fragments of granite columns. These are no doubt the remains of Arka; and the hill was probably the acropolis or citadel, or the site of a temple.

ARM. This word is frequently used in Scripture in a metaphorical sense to denote power. Hence, to 'break the arm' is to diminish or destroy the power (Ps. x. 15; Ezek. xxx. 21; Jer. xlviii. 25). It is also employed to denote the infinite power of God (Ps. lxxxix. 13; xlviii. 2; Isa. liii. 1; John xii. 38). In a few places the metaphor is, with great force, extended to the action of the arm, as:—'I will redeem you with a stretched out arm' (Exod. vi. 5), that is, with a power fully exerted. The figure is here taken from the attitude of ancient warriors baring and outstretching the arm for fight. Thus in Isa. lii. 10, 'Jehovah hath made bare his holy arm in the sight of all the nations.' Bishop Lowth has shown, from the Sept. and other versions, that in Isa. ix. 20, 'they shall eat every one the flesh of his own arm,' should be 'the flesh of his neighbour;' similar to Jer. xix. 9, meaning that they should harass and destroy one another. (See Wemyss's *Clavis Symbolica*, pp. 23, 24.)

ARMAGEDDON, properly 'the mountain of Megiddo,' a city on the west of the river Jordan, rebuilt by Solomon (1 Kings ix. 15). Both Ahaziah and Josias died there. In the mystical language of prophecy, the word mountain represents the Church, and the events which took place at Megiddo are supposed to have had a typical reference to the sorrows and triumphs of the people of God under the gospel. 'In that day,' says Zechariah, xii. 11, 'shall there be a great mourning in Jerusalem, as the mourning of Hadadrimmon in the valley of Megiddon;' referring to the death of Josias. But the same spot witnessed, at an earlier period, the greatest triumph of Israel, when 'fought the kings of Canaan in Taanach by the waters of Megiddo' (Judg. v. 19). 'He gathered them together into a place called in the Hebrew tongue Armageddon,' is the language of the Apocalypse; and the word has been translated by some as 'the mountain of destruction,' by others as 'the mountain of the gospel;' many ingenious speculations having been employed on the passage in which it occurs, but with little satisfaction to the more sober readers of divine revelation.—H. S.

ARMENIA, a country of Western Asia, is not mentioned in Scripture under that name, but is supposed to be alluded to in the three following Hebrew designations, which seem to refer either to the country as a whole, or to particular districts. I. *Ararat* אררט, the land upon (or over) the mountains of which the ark rested at the Deluge (Gen. viii. 4); whither the sons of Sennacherib fled after murdering their father (2 Kings xix. 37; Isa. xxxvii. 38); and one of the 'kingdoms' summoned, along with Minni and Ashkenaz, to arm against Babylon (Jer. li. 27). That there was a province of Ararad in ancient Armenia, we have the testimony of the native historian, Moses of Chorene. It lay in the centre of the kingdom, was divided into twenty circles, and, being the principal province, was commonly the residence of the kings or governors. For other particulars respecting it, and the celebrated mountain which in modern times bears its name, see the article Ararat. II. *Minni* מני is mentioned in Jer. li. 27, along with Ararat and Ashkenaz, as a kingdom called to arm itself against Babylon. The name is by some taken for a contraction of 'Armenia,' and the Chald. in the text in Jeremiah has הורמיני. There appears a trace of the name Minni in a passage quoted by Josephus (*Antiq.* i. 3. 6) from Nicolas of Damascus, where it is said that 'there is a great mountain in Armenia, *ὑπὲρ τὴν Μινυάδα*, called Baris, upon which it is reported that many who fled at the time of the Deluge were saved; and that one who was carried in an ark came on shore upon the top of it; and that the remains of the timber were a great while preserved. This might be the man about whom Moses, the legislator of the Jews, wrote.' Saint-Martin, in his erudite work entitled *Mémoires sur l'Arménie* (vol. i. p. 249), has the not very probable conjecture that the word 'Minni' may refer to the Manavazians, a distinguished Armenian tribe, descended from Manavaz, a son of Haik, the capital of whose country was Manavazagerd, now Melazgerd. In Ps. xlv. 8, where it is said 'out of the ivory palaces *whereby* they made thee glad,' the Hebrew word rendered 'whereby' is *minni*, and hence some take it for the proper name, and would translate 'palaces of Armenia,' but the interpretation is forced and incongruous. III. *Thogarmah* תוגרמה, in some MSS. *Thorgamah*, and found with great variety of orthography in the Septuagint and Josephus. In the ethnographic table in the tenth chapter of Genesis (ver. 3; comp. 1 Chron. i. 6) Thogarmah is introduced as the youngest son of Gomer (son of Japhet), who is supposed to have given name to the Cimmerians on the north coast of the Euxine Sea, his other sons being Ashkenaz and Riphat, both progenitors of northern tribes, among whom also it is natural to seek for the posterity of Thogarmah. The prophet Ezekiel (xxxviii. 6) also classes along with Gomer 'the house of Thogarmah and the sides of the north' (in the Eng. Vers. 'of the north quarters'), where, as also at Ezek. xxvii. 14, it is placed beside Meshech and Tubal, probably the tribes of the Moschi and Tibareni in the Caucasus. Now, though Josephus and Jerome find Thogarmah in Phrygia, Bochart in Cappadocia, the Chaldee and the Jewish rabbins in Germany, &c.; yet a comparison of the above passages leads to the conclusion that it is rather to be sought for in Armenia, and this is the opinion of Eusebius, Theodoret, and others of the fathers. It is strikingly confirmed by the traditions of that and the neighbouring countries. According to Moses of Chorene (Whiston's edition, i. 8, p. 24), and also King Wachtang's *History of Georgia* (in Klaproth's *Travels in the Caucasus*, vol. ii. p. 64), the Armenians, Georgians, Lesghians, Mingrelians, and Caucasians are all descended from one common progenitor, called Thargamos, a son of Awanan, son of Japhet, son of Noah (comp. Eusebius, *Chron.* ii. 12). After the dispersion at Babel, he settled near Ararat, but his posterity spread abroad between the Caspian and Euxine seas. A similar account is found in a Georgian chronicle, quoted by another German traveller, Guldenstedt, which states that Targamos was the father of eight sons, the eldest of whom was Aos, the ancestor of the Armenians. They still call themselves 'the house of Thorgom,' the very phrase used by Ezekiel, בית תוגרמה, the corresponding Syriac word for 'house' denoting 'land or district.' From the house or province of Thogarmah the market of Tyre was supplied with horses and mules (Ezek. xxvii. 14); and Armenia, we know, was famed

of old for its breed of horses. The Satrap of Armenia sent yearly to the Persian court 20,000 foals for the feast of Mithras (Strabo, xi. 13. 9; Xenoph. *Anabas*. iv. 5. 24; Herod. vii. 40).

The Ἀρμενία of the Greeks (sometimes aspirated Ἁρμενία) is the *Arminiya* or *Irminiya* of the Arabs, the *Ermenistan* of the Persians. Moses of Chorene derives the name from Armenagh, the second of the native princes; Hartmann draws it from Aram (see that article), a son of Shem, who also gave name to Aramæa or Syria; but the most probable etymology is that of Bochart, *viz.*, that it was originally הר מני, Har-Minni or Mount Minni, *i. e* the High-land of Minyas, or, according to Wahl (in his work on Asia, p. 807), the Heavenly Mountain (*i. e.* Ararat), for *mino* in Zend, and *myno*, *myny*, in Parsee, signify 'heaven, heavenly.' In the country itself the name Armenia is unknown; the people are called Haik, and the country Hayotz-zor, the Valley of the Haiks—from Haik, the fifth descendant of Noah by Japhet, in the traditionary genealogy of the country (comp. Ritter's *Erdkunde*, th. ii. p. 714).

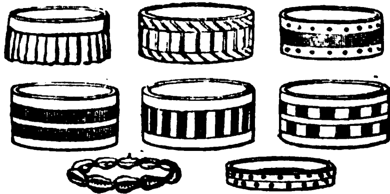
The boundaries of Armenia may be described generally as the southern range of the Caucasus on the north, and a branch of the Taurus on the south; but in all directions, and especially to the east and west, the limits have been very fluctuating. It forms an elevated table-land, whence rise mountains which (with the exception of the gigantic Ararat) are of moderate height, the *plateau* gradually sinking towards the plains of Irān on the east, and those of Asia Minor on the west. The climate is generally cold, but salubrious. The country abounds in romantic forest and mountain scenery, and rich pasture-land, especially in the districts which border upon Persia. Ancient writers notice the wealth of Armenia in metals and precious stones. The great rivers Euphrates and Tigris both take their rise in this region, as also the Araxes, and the Kur or Cyrus. Armenia is commonly divided into *Greater* and *Lesser*, the line of separation being the Euphrates; but the former constitutes by far the larger portion, and indeed the other is often regarded as pertaining rather to Asia Minor. There was anciently a kingdom of Armenia, with its metropolis Artaxata: it was sometimes an independent state, but most commonly tributary to some more powerful neighbour. Indeed at no period was the whole of this region ever comprised under one government, but Assyria, Media, Syria, and Cappadocia shared the dominion or allegiance of some portion of it, just as it is now divided among the Persians, Russians, Turks, and Kurds; for there is no doubt that that part of Kurdistan which includes the elevated basins of the lakes of Van and Oormiah anciently belonged to Armenia. The unfortunate German traveller Schulz (who was murdered by a Kurdish chief) discovered in 1827, near the former lake, the ruins of a very ancient town, which he supposed to be that which is called by Armenian historians *Shamiramakert* (*i. e.* the town of Semiramis), because believed to have been built by the famous Assyrian queen. The ruins are covered with inscriptions in the arrow-headed character; in one of them Saint-Martin thought he deciphered the words *Khshéarsha* son of *Dareioush* (Xerxes son of Darius). In later times Armenia was the border-country where the Romans and Parthians fruitlessly strove for the mastery; and since then it has been the frequent battle-field of the neighbouring states. Towards the end of the last war between Russia and Turkey, large bodies of native Armenians emigrated into the Russian dominions, so that their number in what is termed Turkish Armenia is now considerably reduced. By the treaty of Turkomanshee (21st Feb. 1828) Persia ceded to Russia the Khanats of Erivan and Nakhshivan. The boundary-line (drawn from the Turkish dominions) passes over the Little Ararat; the line of separation between Persian and Turkish Armenia also begins at Ararat; so that this famous mountain is now the central boundary-stone of these three empires.

Christianity was first established in Armenia in the fourth century; the Armenian church has a close affinity to the Greek church in its forms and polity; it is described by the American missionaries who are settled in the country as in a state of great corruption and debasement. The total number of the Armenian nation throughout the world is supposed not to exceed 2,000,000. Their favourite pursuit is commerce, and their merchants are found in all parts of the East. For the *history* of the country, see Moses of Chorene, Father Chamich, and the *Hist. of Vartan*, translated by Neumann. For the *topography*, Morier, Ker Porter, Smith and Dwight, Southgate, &c., and especially the vols. of the *Journal of the Geographical Society*, containing the researches of Monteith, Ainsworth, and others.—N. M.

ARMENIAN LANGUAGE. The Armenian or Haikan language, notwithstanding the great antiquity of the nation to which it belongs, possesses no literary documents prior to the fifth century of the Christian era. The translation of the Bible, begun by Miesrob in the year 410, is the earliest monument of the language that has come down to us. The dialect in which this version is written, and in which it is still publicly read in their churches, is called the old Armenian. The dialect now in use — the modern Armenian—in which they preach and carry on the intercourse of daily life, not only departs from the elder form by dialectual changes in the native elements of the language itself, but also by the great intermixture of Persian and Turkish words which has resulted from the conquest and subjection of the country. It is, perhaps, this diversity of the ancient and modern idioms which has given rise to the many conflicting opinions that exist as to the relation in which the Armenian stands to other languages. Thus Cirbied and Vater both assert that it is an original language, that is, one so distinct from all others in its fundamental character as not to be classed with any of the great families of languages. Eichhorn, on the other hand (*Sprachenkunde*, p. 349), affirms that the learned idiom of the Armenian undoubtedly belongs to the Medo-Persian family. Whereas Pott (*Untersuchungen*, p. xxxii.) says that, notwithstanding its many points of relation to that family, it cannot strictly be considered to belong to it; and Gatterer actually classed it as a living sister of the Basque, Finnish, and Welsh languages.

As to form, it is said to be rough and full of consonants; to possess *ten* cases in the noun—a

number which is only exceeded by the Finnish; to have no dual; to have no mode of denoting gender in the noun by change of form, but to be obliged to append the words *man* and *woman* as the marks of sex—thus, to say *prophet-woman* for *prophetess* (nevertheless, modern writers use the syllable *ouhi* to distinguish the feminine; Wahl, *Geschichte d. Morgenl. Sprachen*, p. 100); to bear a remarkable resemblance to Greek in the use of the participle, and in the whole syntactical structure; and to have adopted the Arabian system of metre.



The history of its alphabetical character is briefly this: until the third century of our era, the Armenians used either the Persian or Greek alphabet (the letter in Syrian characters, mentioned by Diodor. xix. 23, is not considered an evidence that they wrote *Armenian* in Syrian characters, as that letter was probably Persian). In the fifth century, however, the translation of the Bible created the necessity for characters which would more adequately represent the peculiar sounds of the language. Accordingly, after a fruitless attempt of a certain Daniel, and after several efforts on his own part, Miesrob saw a hand in a dream write the very characters which now constitute the Armenian alphabet. The 38 letters thus obtained are chiefly founded on the Greek, but have partly made out their number by deriving some forms from the Zend alphabet. The order of writing is from left to right. Miesrob employed these letters in his translation of the Bible, and thus ensured their universal and permanent adoption by the nation (Gesenius; article *Palæographie*, in Ersch and Gruber).—J. N.

ARMENIAN VERSION. The Armenian version of the Bible was undertaken in the year 410 by Miesrob, with the aid of his pupils Joannes Ecelensis and Josephus Paluensis. It appears that the patriarch Isaac first attempted, in consequence of the Persians having destroyed all the copies of the Greek version, to make a translation from the Peshito; that Miesrob became his coadjutor in this work; and that they actually completed their translation from the Syriac. But when the above-named pupils, who had been sent to the ecclesiastical council at Ephesus, returned, they brought with them an accurate copy of the Greek Bible. Upon this, Miesrob laid aside his translation from the Peshito, and prepared to commence anew from a more authentic text. Imperfect knowledge of the Greek language, however, induced him to send his pupils to Alexandria, to acquire accurate Greek scholarship; and, on their return, the translation was accomplished. Moses of Chorene, the historian of Armenia, who was also employed, as a disciple of Miesrob, on this version, fixes its *completion* in the year 410; but he is contradicted by the date of the Council of Ephesus, which necessarily makes it subsequent to the year 431.

In the Old Testament this version adheres exceedingly closely to the LXX. (but, in the book of Daniel, has followed the version of Theodotion). Its most striking characteristic is, that it does not follow any known recension of the LXX. Although it more often agrees with the Alexandrine text, in readings which are peculiar to the latter, than it does with the Aldine or Complutensian text; yet, on the other hand, it also has followed readings which are only found in the two last. Bertholdt accounts for this mixed text by assuming that the copy of the Greek Bible sent from Ephesus contained the Lucian recension, and that the pupils brought back copies according to the Hesychian recension from Alexandria, and that the translators made the latter their standard, but corrected their version by aid of the former (*Einleit.* ii. 560). The version of the New Testament is equally close to the Greek original, and also represents a text made up of Alexandrine and Occidental readings.

This version was afterwards revised and adapted to the Peshito, in the sixth century, on the occasion of an ecclesiastical union between the Syrians and Armenians. Again, in the thirteenth century, an Armenian king Hethom or Haitho, who was so zealous a Catholic that he turned Franciscan monk, adapted the Armenian version to the Vulgate, by way of smoothing the way for a union of the Roman and Armenian churches. Lastly, the bishop Uscan, who printed the first edition of this version at Amsterdam, in the year 1666, is also accused of having interpolated the text as it came down to his time, by adding all that he found the Vulgate contained *more* than the Armenian version. The existence of the verse 1 John v. 7, in this version, is ascribed to this supplementary labour of Uscan. It is clear from what has been said, that the critical uses of this version are limited to determining the readings of the LXX. and of the Greek text of the New Testament which it represents, and that it has suffered many alterations which diminish its usefulness in that respect.—J. N.

ARMLET. Although this word has the same meaning as *bracelet*, yet the latter is practically so exclusively used to denote the ornament of the wrist, that it seems proper to distinguish by *armlet* the similar ornament which is worn on the upper arm. There is also this difference between them, that in the East bracelets are generally worn by women, and armlets only by men. The armlet, however, is in use among men only as one of the insignia of sovereign power. There are three different words which the Auth. Vers. renders by bracelet. These are, 1. אצעדה *etzadah*, which occurs in Num. xxxi. 50; 2 Sam. i. 10; and which being used with reference to men only, we take to be the *armlet*. 2. צמיד *tzamid*, which is found in Gen. xxiv. 22; Num. xxxi. 50; Ezek. xvi. 11. Where these two words occur together (as in Num. xxxi. 50), the first is rendered by 'chain' and the second by 'bracelet.' 3. שׁרית *shiryah*, which occurs only in Isa. iii. 19. The first we take to mean armlets worn by men; the second, bracelets worn by women and sometimes by men;

and the third, a peculiar bracelet of chain-work worn only by women. It is observable that the

two first occur in Num. xxxi. 50, which we suppose to mean that the men offered their own armlets and the bracelets of their wives. In the only other passage in which the first word occurs it denotes the royal ornament which the Amalekite took from the *arm* of the dead Saul, and brought with the other regalia to David. There is little question that this was such a distinguishing band of jewelled metal as we still find worn as a mark of royalty from the Tigris to the Ganges. The Egyptian kings are represented with armlets, which were also worn by the Egyptian women. These, however, are not jewelled, but of plain or enamelled metal, as was in all likelihood the case among the Hebrews. In modern times the most celebrated armlets are those which form part of the regalia of the Persian kings, and which formerly belonged to the Mogul emperors of India. These ornaments are of dazzling splendour, and the jewels in them are of such large size and immense value that the pair are reckoned to be worth a million of our money. The principal stone of the left armlet is famous in the East by the name of the *Deviâ-e-nur*, or *Sea of light*. It weighs 186 carats, and is considered the diamond of finest lustre in the world. The principal jewel of the left armlet, although of somewhat inferior size (146 carats) and value, is renowned as the *Tág-e-mah*, 'Crown of the moon.' The imperial armlets, generally set with jewels, may also be observed in most of the portraits of the Indian emperors [BRACELET].

ARMON (עַרְמוֹן; Chaldee, דְּלוּת; Syriac, ܕܠܒܐ; Arabic, دلب; Sept. πλάτανος; Vulg. *platanus*; Luth. *ahorn*; A. V. '*chestnut-tree*'), a tree, which is named thrice in the Scriptures. It occurs among the 'speckled rods' which Jacob placed in the watering-troughs before the sheep (Gen. xxx. 37): its grandeur is indicated in Ezek. xxxi. 8, as well as in Ecclus. xxiv. 19: it is noted for its magnificence, shooting

[Platanus Orientalis—Plane-tree.]

its high boughs aloft. This description agrees well with the plane-tree (*Platanus Orientalis*), which is adopted by all the ancient translators, to which the balance of critical opinion inclines, and which actually grows in Palestine. The beech, the maple, and the chestnut have been adopted, in different modern versions, as representing the Hebrew Armon; but scarcely any one now doubts that it means the plane-tree. It may be remarked that this tree is in Genesis associated with others—the willow and the poplar—whose habits agree with it; they are all trees of the low grounds, and love to grow where the soil is rich and humid. This is strikingly illustrated by the fact that Russel (*N. H. of Aleppo*, i. 47) expressly names the plane, the willow, and the poplar (along with the ash), as trees which grow in the same situations near Aleppo.

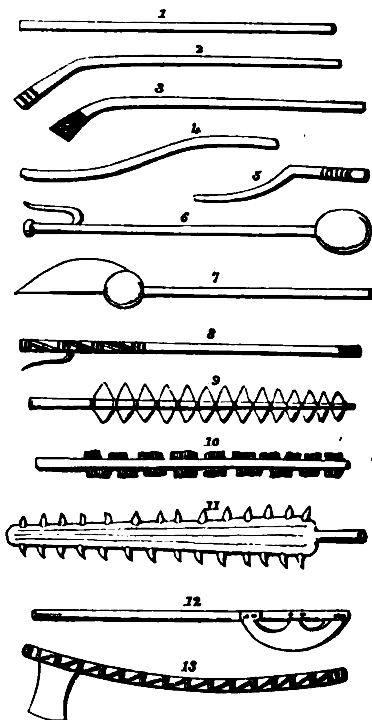
But this congruity would be lost if the chestnut were understood, as that tree prefers dry and hilly situations. There is a latent beauty also in the passage in Ezekiel, where, in describing the greatness and glory of Assyria, the prophet says, 'The Armon-trees were not like his boughs, nor any tree in the garden of God like unto him for beauty.' This not only expresses the grandeur of the tree, but is singularly appropriate from the fact that the plane-trees (*chenars*, as they are called) in the plains of Assyria are of extraordinary size and beauty, in both respects exceeding even those of Palestine. It consists with our own experience that one may travel far in Western Asia without meeting such trees, and so many together, as occur in the chenar-groves of Assyria and Media.

The Oriental plane-tree ranks in the Linnæan class and order *Monœcia Polyandria*, and in the natural order among the *Platanaceæ*. Westernmost Asia is its native country, although, according to Professor Royle, it extends as far eastward as Cashmere. The stem is tall, erect, and covered with a smooth bark which annually falls off. The flowers are small and scarcely distinguishable: they come out a little before the leaves. The wood of the plane-tree is fine-grained, hard, and rather brittle than tough; when old, it is said to acquire dark veins, and to take the appearance of walnut-wood.

In those situations which are favourable to its growth, huge branches spread out in all directions from the massive trunk, invested with broad, deeply-divided, and glossy green leaves. This body of rich foliage, joined to the smoothness of the stem, and the symmetry of the general growth, renders the plane-tree one of the noblest objects in the vegetable kingdom. It has now, and had also of old (Plin. *Nat. Hist.* xii. 1), the reputation of being the tree which most effectually excludes the sun's beams in summer, and most readily admits them in winter—thus affording the best shelter from the extremes of both seasons.

For this reason it was planted near public buildings and palaces, a practice which the Greeks and Romans adopted; and the former delighted to adorn with it their academic walks and places of public exercise. In the East, the plane seems to have been considered sacred, as the oak was formerly in Britain. This distinction is in most countries awarded to the most magnificent species of tree which it produces [TREES, SACRED]. In Palestine, for instance, where the plane does not appear to have been very common, the terebinth seems to have possessed pre-eminence [ELAH]. No one is ignorant of the celebrated story of Xerxes arresting the march of his grand army

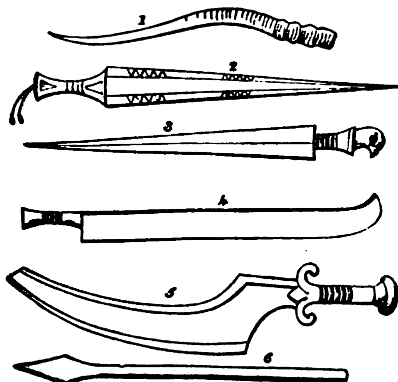
before a noble plane-tree in Lydia, that he might render honour to it, and adorn its boughs with golden chains, bracelets, and other rich ornaments —an action misunderstood, and egregiously misrepresented by Ælian (*Var. Hist.* ii. 14).



The Oriental plane endures our own climate well, and grows to a fine tree; but not to the enormous size which it sometimes attains in the East. Several grand old plane-trees have been mentioned. Pausanias (l. viii. c. 23) notices a noble plane in Arcadia, the planting of which was ascribed, by tradition, to Menelaus; so that if this tradition were entitled to credit (and it claims little), it must, when he wrote, although in a sound state, have been above 1300 years old. Pliny, in his curious chapter on this tree (*Nat. Hist.* xii. 1), mentions one in Lycia, in the trunk of which had been gradually formed an immense cavern, eighty feet in circumference. L. Mutianus, thrice consul, and governor of the province, with eighteen other persons, often dined and supped commodiously within it. If nothing more were known of this L. Mutianus, we should like him for the pleasure, not unmingled with regret, with which he records the satisfaction which he occasionally derived from hearing the rain patter upon the leaves overhead, while he and his company sat dry and safe within: it was the music of their feast. Caligula also had a tree of this sort at his villa near Velitræ, the hollow of which accommodated fifteen persons at dinner with a proper suite of attendants. The emperor called it '*his nest;*' and it is highly probable that his friend Herod Agrippa may occasionally have been one of the fifteen birds who nestled there along with him. Modern travellers also notice similar trees. Belon (*Obs. Sing.* l. ii. p. 105), La Roque (*Voy. de Syrie*, pp. 197-199), and others, mention the groves of noble planes which adorn the plain of Antioch; and the last-named traveller records a night's rest which he enjoyed under planes of great beauty in a valley of Lebanon (p. 76). That they are among the principal trees in the plantations near Aleppo has already been observed, on the authority of Russel.

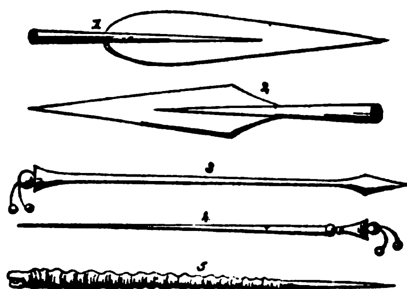
[Branch of Platanus Orientalis.

Buckingham names them among the trees which line the Jabbok (*Travels in Palestine*, ii. 108). Evelyn (in his *Sylva*) seems to ascribe the introduction of the plane-tree into England to the great Lord Bacon, who planted some which were still flourishing at Verulam in 1706. This was, perhaps, the first plantation of any note; but it appears from Turner's *Herbal* (published in 1551), that the tree was known and cultivated in this country before the chancellor was born. (Besides the authorities quoted, see Hiller, *Hierophyticon*, cap. 43; Celsius, *Hierobotanicon*, 512-516; and Winer's *Realwörterbuch*, in 'Ahorn').



ARMS, ARMOUR. In order to give a clear view of this subject, we shall endeavour to show succinctly, and from the best authorities now available, what were the weapons, both offensive and defensive, used by the ancient Asiatics; and then, under other proper heads, explain the composition and tactical condition of their armies; their systems of fortification; and, finally, their method of conducting sieges and battles; and their usages of war as regards spoil, captives, &c.

1, 2, 3. Clubs.
4, 5. Crooked Billets, or throwing-bats.
6. Mace.
7. Battle-axe.
8. Hardwood Sword.
9. Sharks-teeth Sword.
10. Flint Sword.
11. Saw-fish Sword.
12, 13. Egyptian Battle-axes.

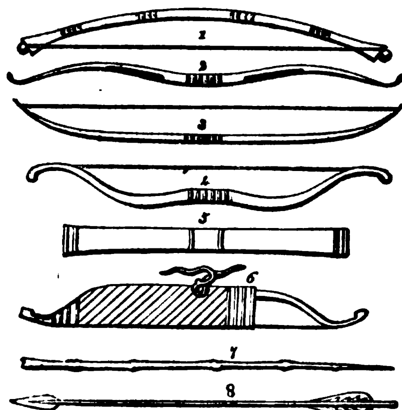


The instruments at first employed in the chace, or to repel wild beasts, but converted by the wicked to the destruction of their fellow-men, or used by the peaceable to oppose aggression, were naturally the most simple. Among these were the club and the throwing-bat. The first consisted originally of a heavy piece of wood, variously shaped, made to strike with, and, according to its form, denominated a mace, a bar, a hammer, or a maul. This weapon was in use among the He-

brews; for, in the time of the kings, wood had already been superseded by metal; and the שבט ברזל *shevet barzel*, rod of iron (Ps. ii. 9), is supposed to mean a mace, or gavelock, or crowbar. It is an instrument of great power when used by a strong arm; as when Van Amburgh, with one in his hand, compels a tiger's ferocity to submit to his will. (See Wilkinson's *Manners and Customs of the Ancient Egyptians*, vol. i. p. 327, fig. 3, 4; and mace, fig. 1, 2. The throwstick or lissan occurs p. 329.) The other was also known, if, as is probable, מפיץ *maphietz* (Prov. xxv. 18) be a maul, a martel, or a war-hammer. It is likely metal was only in general use at a later period, and that a heavy crooked billet continued long to serve both as a missile and a sword. The throwstick, made of thorn-wood, is the same instrument which we see figured on Egyptian monuments. By the native Arabs it is still called *lissan*, and was anciently known among us by the name of crooked billet. These instruments, supplied with a sharp edge, would naturally constitute a battle-axe, and a kind of sword; and such in the rudest ages we find them, made with flints set into a groove, or with sharks' teeth firmly secured to the staff with twisted sinews. On the earliest monuments of Egypt, for these ruder instruments is already seen substituted a piece of metal with a steel or bronze blade fastened into a globe, thus forming a falchion-axe; and also a lunate-blade, riveted in three places to the handle, forming a true battle-axe (Wilkinson, vol. i. p. 325, 326); and there were, besides, true bills or axes in form like our own.

1. Horn Dagger. 4, 5. Tulwar Swords.
2, 3. Swords. 6. Quarter-pike.

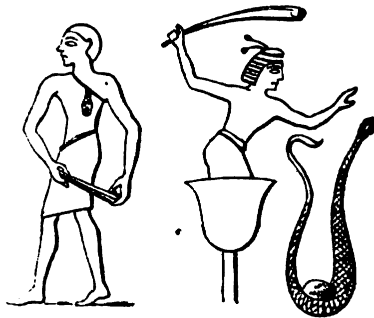
Next came the dirk or poniard, which, in the Hebrew word חרב *cherev*, may possibly retain some allusion to the original instrument made of the antelope's horn, merely sharpened, which is still used in every part of the East where the material can be procured. From existing figures, the dirk appears to have been early made of metal in Egypt, and worn stuck in a girdle (Wilkinson, i. 319); but, from several texts (1 Sam. xvii. 39; 2 Sam. xx. 8; and 1 Kings xx. 11), it is evident that the real sword was slung in a belt, and that 'girding' and 'loosing the sword' were synonymous terms for commencing and ending a war. The blades were, it seems, always short (one is mentioned of a cubit's length); and the dirk-sword, at least, was always double-edged. The sheath was ornamented and polished. In Egypt there were larger and heavier swords, more nearly like modern tulwars, and of the form of an English round-pointed table-knife. But while metal was scarce, there were also swords which might be called quarter-pikes, being composed of a very short wooden handle, surmounted by a spear-head. Hence the Latin telum and ferrum continued in later ages to be used for gladius. In Nubia, swords of heavy wood are still in use.



1, 2. Spear-heads. 3, 4. Datra.
5. Oryx horn spear-head.

The spear, רמח *ramach*, was another offensive weapon common to all the nations of antiquity, and was of various size, weight, and length. Probably the shepherd Hebrews, like nations similarly situated in northern Africa, anciently made use of the horn of an oryx, or a leucoryx, above three feet long, straightened in water, and sheathed upon a thorn-wood staff. When sharpened, this instrument would penetrate the hide of a bull, and, according to Strabo, even of an elephant: it was light, very difficult to break, resisted the blow of a battle-axe, and the animals which furnished it were abundant in Arabia and in the desert east of Palestine. At a later period, the head was of brass, and afterwards of iron. Very ponderous weapons of this kind were often used in Egypt by the heavy infantry; and, from various circumstances, it may be inferred that among the Hebrews and their immediate neighbours, commanders in particular were distinguished by heavy spears. Among these were generally ranked the most valiant in fight and the largest in stature; such as Goliath, 'whose spear was like a weaver's beam' (1 Sam. xvii. 7), and whose spear's head weighed six hundred shekels of iron; which by some is asserted to be equal to twenty-five pounds weight. The spear had a point of metal at the but-end to fix it in the ground, perhaps with the same massy globe above it, which is still in use, intended to counterbalance the point. It was with this ferrel that Abner slew Asahel (2 Sam. ii. 22, 23). The form of the head and length of the shaft differed at different times, both in Egypt and Syria, and were influenced by the fashions set by various conquering nations.

The javelins, named חנית *chaneth*, and כידון *kedon*, may have had distinct forms: from the context, where chaneth first occurs, it appears to have been a species of dart carried by light troops (1 Sam. xiii. 22; Ps. iv.); while the kedon, which was heavier, was most likely a kind of pilum. In

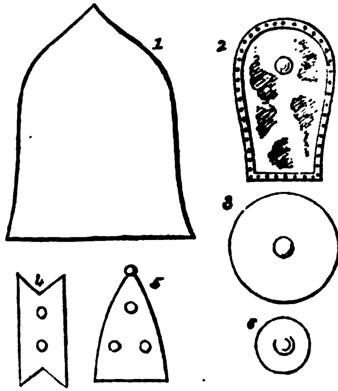


most nations of antiquity the infantry, not bearing a spear, carried two darts, those lightly armed using both for long casts, and the heavy-armed only one for that purpose; the second, more ponderous than the other, being reserved for throwing when close to the enemy, or for handling in the manner of a spear. This explanation may throw light on the fact of the chaneth being named in connection with the צנה *tsenna*, or larger buckler (1 Chron. xii. 34), and may reconcile what is said of the kedon (Job xxxix. 23; xli. 29, and Josh. viii. 10). While on the subject of the javelin, it may be remarked that, by the act of casting one at David (1 Sam. xix. 9, 10), Saul virtually absolved him from his allegiance; for by the customs of ancient Asia, preserved in the usages of the Teutonic and other nations, the *Sachsen recht*, the custom of the East Franks, &c., to throw a dart at a freedman, who escaped from it by flight, was the demonstrative token of manumission given by his lord or master; he was thereby sent out of hand, manumissus, well expressed in the old English phrase 'scot-free.' But for this act of Saul, David might have been viewed as a rebel.

1, 2, 3, 4. Bows. 5, 6. Quivers. 7, 8. Arrows.

But the chief offensive weapon in Egypt, and, from the nature of the country, it may be inferred, in Palestine also, was the war-bow, קשתות *keshtoth*, and קשת *kesheth*, the arrows being denominated חצים *hhitzem*, חץ *hhitz*. From the simple implements used by the first hunters, consisting merely of an elastic reed, a branch of a tree, or rib of palm, the bow became in the course of time very strong and tall, was made of brass, of wood backed with horn, or of horn entirely, and even of ivory; some being shaped like the common English bow, and others, particularly those used by riding nations, like the buffalo horn. There were various modes of bending this instrument, by pressure of the knee, or by the foot, דרך, treading the bow, or by setting one end against the foot, drawing the middle with the hand of the same side towards the hip, and pushing the upper point forward with the second hand, till the thumb passed the loop of the string beyond the nock. The horned bows of the cavalry, shaped like those of the Chinese, occur on monuments of antiquity. They cannot be bent from their form of a Roman C to that of what is termed a Cupid's bow ︶︵︶, but by placing one end under the thigh; and as they are short, this operation is performed by Tahtar riders while in the saddle. This was the Parthian bow, as is proved by several Persian bas-reliefs, and may have been in use in the time of the Elamites, who were a mounted people. These bows were carried in cases to protect the string, which was composed of deer sinews, from injury, and were slung on the right hip of the rider, except when on the point of engaging. Then the string was often cast over the head, and the bow hung upon the breast, with the two nocks above each shoulder, like a pair of horns. The hhitzim, or arrows, were likewise enclosed in a case or quiver, תלי *tele*, hung sometimes on the shoulder, and at other times on the left side; and six or eight flight-arrows were commonly stuck in the edge of the cap, ready to be pulled out and put to the string. The infantry always carried the arrows in a quiver on the right shoulder, and the bow was kept unbent until the moment of action. On a march it was carried on the shield arm, where there was frequently also a horn bracer secured below the elbow to receive the shock from the string when an arrow was discharged. The flight or long-range arrows were commonly of reed, not always feathered, and mostly tipped with flint points; but the shot or aimed arrows, used for nearer purposes, were of wood tipped with metal, about 30 inches long, and winged with three lines of feathers, like those in modern use: they varied in length at different periods, and according to the substance of the bows.

The last missile instrument to be mentioned is the sling, קלע *kala* (Job xli. 28), an improvement upon the simple act of throwing stones. It was the favourite weapon of the Benjamites, a small tribe, not making a great mass in an order of battle, but well composed for light troops. They could also boast of using the sling equally well with the left hand as with the right. The sling was made of plaited thongs, somewhat broad in the middle, to lodge the stone or leaden missile, and was twirled two or three times round before the stone was allowed to take flight.



[Egyptian Slingers and Sling.]

Stones could not be cast above 400 feet, but leaden bullets could be thrown as far as 600 feet. The force as well as precision of aim which might be attained in the use of this instrument was remarkably shown in the case of David; and several nations of antiquity boasted of great skill in the practice of the sling.

All these hand-weapons were in use at different periods, not only among the Hebrews and Egyptians, but likewise in Assyria, Persia, Greece, and Macedonia; in which last country the sarissa carried by the heavy infantry of the phalanx differed from the others only in the great length of the shaft. The Roman pilum was a kind of dart, distinguished from those of other nations chiefly by its weight, and the great proportional length of the metal or iron part, which constituted one half of the whole, or from two and a half to three feet. Much of this length was hollow, and received nearly twenty inches of the shaft within it: the point was never hooked like that of common darts, because the weapon being nearly indestructible, the soldiers always reckoned upon advancing in battle and recovering it without trouble when thrown; whereas, if it had been hooked or hamate, they could not have wrenched it out of hostile shields or breastplates without trouble and delay.

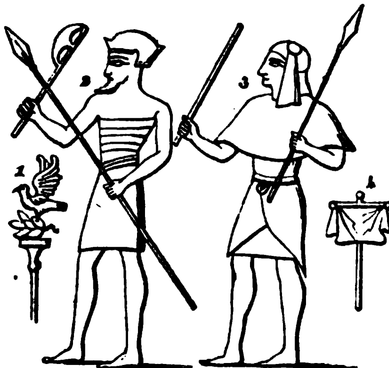
DEFENSIVE ARMS.–The most ancient defensive piece was the shield, buckler, roundel, or target, composed of a great variety of materials, very different in form and size, and therefore in all

1. The Tsenna, or Great Shield. 2. Common Egyptian Shield. 3. Target. 4, 5. Ancient Shields of unknown tribes. 6. Roundel.

nations bearing a variety of names. The Hebrews used the word צנה *tsenna*, for a great shield; defence, protection (Gen. xv. 1; Ps. xlvii. 9; Prov. xxx. 5), which is commonly found in connection with spear, and was the shelter of heavily-armed infantry; מגן *magin*, a buckler, or smaller shield, which, from a similar juxtaposition with sword, bow and arrows, appears to have been the defence of the other-armed infantry and of chiefs; and סחרה *sohairah*, *parma*, a roundel, which may have been appropriated to archers and slingers; and there were שלטים *shelatim*, and שלטי *shelti*, synonymous with *magin*, only different in ornament. In the more advanced eras of civilization shields were made of light wood not liable to split, covered with bull-hide of two or more thicknesses and bordered with metal: the lighter kinds were made of wicker-work or osier, similarly, but less solidly covered; or of double ox-hide cut into a round form. There were others of a single hide, extremely thick from having been boiled; their surface presented an appearance of many folds, like round waves up and down, which might yield, but could rarely be penetrated.

We may infer that at first the Hebrews borrowed the forms in use in Egypt, and that their common shields were a kind of parallelogram, broadest and arched at the top and cut square beneath, bordered with metal, the surface being covered with raw hide with the hair on. The lighter shields may have been soaked in oil and dried in the shade to make them hard; no doubt, hippopotamus, rhinoceros, and elephant skin shields were brought from Ethiopia and purchased in the Phœnician markets; but small round hand-bucklers of whale-skin, still used by Arabian swordsmen, came from the Erythræan sea. During the Assyrian and Persian supremacy the Hebrews may have used the square, oblong, and round shields of these nations, and may have subsequently copied those of Greece and Rome. The princes of Israel had shields of precious metals: all were managed by a wooden or leathern handle, and often slung by a thong over the neck. With the larger kinds a testudo could be formed by pressing the ranks close together; and while the outside men kept their shields before and on the flanks, those within raised theirs above the head, and thus produced a kind of surface, sometimes as close and fitted together as a pantile roof, and capable of resisting the pressure even of a body of men marching upon it.

The tsenna was most likely what in the feudal ages would have been called a *pavise*, for such occurs on the Egyptian monuments. This weapon was about five feet high, with a pointed arch above, and square below, resembling the feudal knight's shield, only that the point was reversed. This kind of large-sized shield, however, was best fitted for men without any other armour, when combating in open countries, or carrying on sieges; for it may be remarked in general that the military buckler of antiquity was large in proportion as other defensive armour was wanting. Shields were hung upon the battlements of walls, and, as still occurs, chiefly above gates of cities by the watch and ward. In time of peace they were covered to preserve them from the sun, and in war uncovered; this sign was poetically used to denote coming hostilities, as in Isa. xxii. 6, &c. In Europe, where the Crusaders could imitate the Saracens, but not introduce their climate, shields were carved in stone upon towers and gates, as at York, &c. The Eastern origin of this practice seems to be attested by the word *Zinne*, which, in German, still denotes a battlement, something pointed, a summit, and conveys the idea of a pavise with the point uppermost, a shape such as Arabian battlements often assume.



The Helmet was next in consideration, and in the earliest ages was made of osier, or rushes, in the form of a beehive, or of a skull-cap. The skins of the heads of animals—of lions, bears, wild boars, bulls, and horses—were likewise adopted, and were adorned with rows of teeth, manes, and bristles. Wood, linen cloth in many folds, and a kind of felt, were also in early use, and helmets of these materials may be observed worn by the nations of Asia at war with the conqueror kings of Egypt, even before the departure of Israel. At that time also these kings had helmets of metal, of rounded or pointed forms, adorned with a figure

of the serpent *Kneph*; and an allied nation, perhaps the Carian, reported to have first worn a military crest, bears on the skull-cap of their brazen helmets a pair of horns with a globe in the middle—the solar arkite symbol. The nations of

farther Asia, however, used the woollen or braided caps, still retained, and now called kaouk and fez, around which the turban is usually wound. These were almost invariably supplied with long lappets to cover the ears and the back of the head, and princes usually wore a radiated crown on the summit. This was the form of the Syrian, and probably of the Assyrian helmets, excepting that the last mentioned were of brass, though they still retained the low cylindrical shape. The כובע *koba*, some helmet of this kind, was worn by the trained infantry, who were spearmen among the Hebrews; but archers and slingers had round skull-caps of skins, felts, or quilted stuffs, such as are still in use among the Arabs. The form of Greek and Roman helmets, both of leather and of brass, is well known; they were most likely adopted also by the Hebrews and Egyptians during their subjection to those nations, but require no further notice here.

Body Armour.—The most ancient Persian idols are clad in shagged skins, such as the Ægis of Jupiter and Minerva may have been, the type being taken from a Cyrenæan or African legend, and the pretended red goat-skin may be supposed to have been that of a species of gnu (*Catoblepas Gorgon*, Ham. Smith), an animal fabled to have killed men by its sight,' and therefore answering to the condition both of a kind of goat and of producing death by the sight alone. In Egypt cuirasses were manufactured of leather, of brass, and of a succession of iron hoops, chiefly covering the abdomen and the shoulders; but a more ancient national form was a kind of thorax, tippet, שריון *shereyon*, or square, with an opening in it for the head, the four points covering the breast, back, and both upper arms. This kind in particular was affected by the royal band of relatives who surrounded the Pharaoh, were his subordinate commanders, messengers, and body-guards, bearing his standards, ensign-fans, and sun-screens, his portable throne, his bow and arrows. Beneath this square was another piece, protecting the trunk of the body, and both were in general covered with a red-coloured cloth or stuff. On the eldest fictile vases a shoulder-piece likewise occurs, worn by Greek and Etruscan warriors. It covers the upper edge of the body armour, is perforated in the middle to allow the head to pass, but hangs

1. Egyptian tigulated. 2. Sleeve of ring-mail, Ionian.

equal on the breast and back, square on the shoulders, and is evidently of leather. (See the figure of Menelaus discovering Helen in the sack of Troy. Millin, *Mon. inédits*.) This piece of armour occurs also on the shoulders of Varangi (northmen, who were the body-guards of the Greek emperors); but they are studded with roundels or bosses, as they appear figured in mosaic or fresco on the walls of the cathedral of Ravenna, dating from the times of Justinian. The late Roman legionaries, as published by Du Choul, again wear the tippet armour, like that of the Egyptians, and one or other of the above forms may be found on figures of Danes in illuminated manuscripts of the eleventh century.

By their use of metal for defensive armour, the Carians appear to have created astonishment among the Egyptians, and therefore may be presumed to have been the first nation so protected in western Asia; nevertheless, in the tombs of the kings near Thebes, a tigulated hauberk is represented, composed of small three-coloured pieces of metal; one golden, the others reddish and green. It is this suit which

Denon represents as composed of rings set on edge; but they are all parallelograms, with the lower edge forming the segment of a circle, and each piece, beside the fastening, has a button and a vertical slit above it, giving flexibility by means of the button of each square working in the aperture of the piece beneath it. This kind of armour may be meant by the word תחרא *techera*, the closest interpretation of which appears to be *decussatio*, *tigulatio*, a tiling. The expression in 2 Chron. xviii. 33, may be that Ahab was struck in one of the grooves or slits in the squares of his techera, or between two of them where they do not overlap; or perhaps, with more probability, between the metal hoops of the trunk of the shereyon before mentioned, where the thorax overlaps the abdomen. The term קשקשים *kaskasim*, 'scales,' in the case of Goliath's armour, denotes the squamous kind, most likely that in which the pieces were sewed upon a cloth, and not hinged to each other, as in the techera. It was the defensive armour of Northern

[Parthian Horseman.]

and Eastern nations, the Persian Cataphracti, Parthians, and Sarmatians. But of true annular or ringed mail, Denon's figure being incorrect, we doubt if there is any positive evidence, excepting where rings were sewn separately upon cloth, anterior to the sculpture at Takt-i-Boostan, or the close of the Parthian era. The existence of mail is often incorrectly inferred from our translators using the word wherever flexible armour is to be mentioned. The techera could not well be worn without an under-garment of some density to resist the friction of metal; and this may have been a kind of sagum, the shereyon of the Hebrews, under another form—the dress Saul put upon David before he assumed the breastplate and girdle. The Roman sagum offers a parallel instance. Under that name it was worn at first à *loricâ*, then beneath it, and at last again without, but the stuff itself made into a kind of felt.

The Cuirass and *Corslet*, strictly speaking, were of prepared leather (corium), but often also composed of quilted cloths: the former in ancient times generally denoted a suit with leathern appendages at the bottom and at the shoulder, as used by the Romans; the latter, one in which the barrel did not come down below the hips, and usually destitute of leathern vittæ, which was nationally Greek. In later ages it always designates a breast and back piece of steel. It is, however, requisite to observe, that in estimating the meaning of Hebrew names for armour of all kinds, they are

1, 2. Early Greek. 4, 5. Roman.
3. Greek. 6. Barbarian.

liable to the same laxity of use which all other languages have manifested; for in military matters, more perhaps than in any other, a name once adopted remains the same, though the object may be changed by successive modifications, till there remains but little resemblance to that to which the designation was originally applied. The objects above denominated appendages and vittæ (in the feudal ages, lambrequins), were straps of leather secured to the lower rim of the barrel of a suit of armour, and to the openings for arm-holes: the first were about three and a half inches in width; the second, two and a half. They were ornamented with embroidery, covered with rich stuffs and goldsmiths' work, and made heavy at the lower extremity, to cause them always to hang down in proper order; but those on the arm-holes had a slight connection, so as to keep them equal when the arm was lifted. These vittæ were rarely in a single row, but in general formed two or three rows, alternately covering the opening between those underneath, and then protecting the thighs nearly to the knee, and half the upper arm. In the Roman service, under the suit of armour, was the sagum, made of red serge or baize, coming down to the cap of the knee and folding of the arm, so that the vittæ hung entirely upon it. Other nations had always an equivalent to this, but not equally long; and in the opinion of some, the Hebrew *shereyon* served the same purpose.

The Roman and Greek suits were, with slight difference, similarly laced together on the left, or shield side; and on the shoulders were bands and clasps, comparatively narrow in those of the Romans, which covered the joinings of the breast and back pieces on the shoulders, came from behind, and were fastened to a button on each breast. At the throat the suit of armour had always a double

edging, often a band of brass or silver; in the Roman, and often in the Greek, adorned with a lion's or a Gorgon's head. It was here that, in the time of Augustus, and probably much earlier, the warriors distinguished for particular acts of valour wore insignia; a practice only revived by the moderns under the names of crosses and decorations. The Romans, it appears, had *phialæ* and *phaleræ* of honour, terms which have been supposed to signify bracelets and medals; but all opinion on the subject was only conjectural previously to the discovery, on the borders of the Rhine, of a monumental bas-relief, raised by the freedman of Marcus Cælius Lembo, tribune of the (xiix) 18th legion, who fell in the disastrous

overthrow of Varus. The effigy is of three-quarter length, in a full suit of armour, with a laurel crown on the head, a Gallic twisted torque round the neck; and from the lion-head shoulder-clasps of the cuirass hang two embossed bracelets, having beneath them a label with three points, from which are suspended five medals of honour; one large, on the pit of the stomach, representing a face of Medusa; and two on each side, one beneath the other; and all as far as can be seen charged with lions' faces and lions' heads in profile. The monument is now in the museum of the university at Bonn.

The girdle, or more properly the baldric or belt (*cingula* or *balteus*), was used by the Hebrews under the name of אזור *izor:* it was of leather, studded with metal plates or bullæ; when the armour was slight, broad, and capable of being girt upon the hips; otherwise it supported the sword scarf-wise from the shoulder.

Greaves were likewise known, even so early as the time of David, for Goliah wore them. They consisted of a pair of shin-covers of brass or strong leather, bound by thongs round the calves and above the ankles. They reached only to the knees, excepting among the Greeks, whose greaves, elastic behind, caught nearly the whole leg, and were raised in front above the knees. The Hebrew word סאון *soin*, in Isaiah ix. 5, is supposed to mean a half-greave, though the passage is altogether obscure. Perhaps the war-boot may be explained by the war-shoe of Egypt with a metal point; and then the words might be rendered, 'For every greave of the armed foot is with confused noise and garments rolled in blood,' &c., instead of 'Every battle of the warrior,' &c. But, after all, this is not quite satisfactory.—C. H. S.

ARNON (ארנון; Sept. 'Αρνῶν), a river forming the southern boundary of trans-Jordanic Palestine, and separating it from the land of Moab (Num. xxi. 13, 26; Deut. ii. 24; iii. 8, 16; Josh. xii. 1; Isa. xvi. 2; Jer. xlviii. 20). Burckhardt was the first to give a satisfactory account of this river, under the name of Wady Modjeb, which it now bears. It rises in the mountains of Gilead, near Katrane, whence it pursues a circuitous course of about eighty miles to the Dead Sea. It flows in a rocky bed, and, at the part visited by Burckhardt, in a channel so deep and precipitous as to appear inaccessible; yet along this, winding among huge fragments of rock, lies the most frequented road, and, not being far from Dibon, probably that taken by the Israelites. The descent into the valley from the south took Irby and Mangles (*Letters*, p. 461) one hour and a half; the descent from the north took Burckhardt (*Syria*, p.372) thirty-five minutes. The last-named traveller declares that he had never felt such suffocating heat as he experienced in this valley from the concentrated rays of the sun and their reflection from the rocks. The stream is almost dried up in summer; but huge masses of rock, torn from the banks, and deposited high above the usual channel, evince its fulness and impetuosity in the rainy season. Irby and Mangles suppose that it is this which renders the valley of the Arnon less shrubby than that of most other streams in the country. 'There are, however, a few tamarisks, and here and there are oleander growing about it.' Near this place the old Roman road comes down upon the stream; and here there remains a single high arch of a bridge, all the others having disappeared.

AROER (ערוער; Sept. 'Αροήρ), a town on the north side of the river Arnon, and therefore on the southern border of the territory conquered from the Amorites, which was assigned to the tribes of Reuben and Gad (Deut. ii. 36; Josh. xii. 2; xiii. 9). The Amorites had previously dispossessed the Ammonites of this territory; and although, in the texts cited, the town seems to be given to Reuben, it is mentioned as a Moabitish city by Jeremiah (xlviii. 19). Burckhardt found the ruins of this town under the name of Araayr, on the edge of a precipice overlooking the river (*Travels in Syria*, 372). They are merely alluded to by him, and have not been noticed by other travellers. Aroer is always named in conjunction with 'the city that is in the midst of the river;' whence Dr. Mansford (*Script. Gaz.*) conjectures that, like Rabbath Ammon [which see], it consisted of two parts, or distinct cities; the one on the bank of the river, and the other in the valley beneath, surrounded, either naturally or artificially, by the waters of the river.

2. AROER, one of the towns 'built,' or probably rebuilt, by the tribe of Gad (Num. xxxii. 34). It is said in Josh. xiii. 25, to be 'before Rabbah' [of Ammon]; but, as Raumer well remarks (*Palästina*, p. 249), this could not possibly have been in the topographical sense of the words (in which *before* means *east of*), seeing that Aroer, as a town on the eastern border of Gad, must have been west of Rabbah. But to a person in Palestine Proper, or coming from the Jordan, Aroer would be *before* Rabbah in the ordinary sense; and it appears to have been thus understood by Burckhardt

(*Syria*, 355), who, in journeying from Szalt towards Rabbath Ammon, notices a ruined site, called Ayra, as 'one of the towns built by the tribe of Gad.' This Ayra, about seven miles south-west from Szalt, is probably the same with the *Array*-el-Emir, visited by Legh (p. 246), on his way from Heshbon to Szalt, and which in Berghaus's celebrated map of Palestine is placed two German (nine English) miles W.N.W. of Rabbah. Aroer of Gad is also mentioned in Judg. xi. 33, and 2 Sam. xxiv. 5.

3. AROER, a city in the tribe of Judah (1 Sam. xxx. 28).

4. AROER, a city in the south of Judah, to which David sent presents after recovering the spoil of Ziklag (1 Sam. xxx. 26, 28). At the distance of twenty geographical miles S. by W. from Hebron, Dr Robinson came to a broad Wady where there are many pits for water, which are called 'Ararah, and which gave name to the valley. In the valley and on the western hill are evident traces of an ancient village or town, consisting only of foundations of unhewn stones, now much scattered, but yet sufficiently distinct to mark them as foundations. Small fragments of pottery are also everywhere visible. The identity of name satisfies the traveller that he had here found the Aroer of Judah.

ARPHAD, or Arpad (ארפד; Sept. Ἀρφάδ), a Syrian city, having its own king, and in Scripture always associated with Hamath, the Epiphania of the Greeks (2 Kings xviii. 34; xix. 34; Isa. x. 9; xxxvi. 19). It has very commonly been confounded with the Phœnician Arvad or Aradus [Arvad]. Michaelis and others seek Arphad in Raphanæ or Raphaneæ of the Greek geographers (Ptolem. v. 15; Steph. Byzant. in Ἐπιφάνεια; Joseph. *De Bell. Jud.* vii. 1. 3; vii. 5. 1), which was a day's journey west of Hamath (Mannert, vi. p. 431). Some, however, are content to find this Arphad in the Arpha which Josephus (*De Bell. Jud.* iii. 3. 6) mentions as situated on the north-eastern frontier of the northernmost province of Herod Agrippa's tetrarchy. But all these explanations are purely conjectural, and Arphad must still be numbered among unascertained Scriptural sites.

ARPHAXAD (ארפכשד; Sept. Ἀρφαξάδ), the son of Shem, and father of Salah; born one year after the Deluge, and died B.C. 1904, aged 438 years (Gen. xi. 12, &c.).

ARROW. This word is frequently used as the symbol of calamity or disease inflicted by God (Job, vi. 4; xxxiv. 6; Ps. xxxviii. 2; Deut. xxxii. 23; comp. Ezek. v. 16; Zech. ix. 14). The metaphor thus applied was also in use among the heathen: thus, Ovid—

'Non mea sunt summa leviter destricta sagitta
Pectora: descendit vulnus ad ossa meum.'

It derived its propriety and force from the popular belief that all diseases were immediate and special inflictions from Heaven.

Lightnings are, by a very fine figure, described as the arrows of God (Ps. xviii. 14; cxliv. 6; Habak. iii. 11; comp. Wisd. v. 21; 2 Sam. xxii. 15).

'Arrow' is occasionally used to denote some sudden or inevitable danger; as in Ps. xci. 5:—'The arrow that flieth by day.' It is also figurative of anything injurious, as a deceitful tongue (Ps. cxxix. 4; Jer. ix. 7); a bitter word (Ps. lxiv. 3); a false testimony (Prov. xxv. 18). As symbolical of oral wrong, the figure may perhaps have been derived from the darting 'arrowy tongue' of serpents.

The arrow, however, is not always symbolical of evil. In Ps. cxxvii. 4, 5, well-conditioned children are compared to 'arrows in the hands of a mighty man;' *i. e.* instruments of power and action. The arrow is also used in a good sense to denote the efficient and irresistible energy of the word of God in the hands of the Messiah (Ps. xlv. 6; Isa. xliv. 2, and Lowth's note thereon).—Wemyss's *Clavis Symbolica*, &c.

ARROWS. [Arms.]

ARROWS, DIVINATION BY. [Divination.]

ARTAXERXES, Artachshast (ארתחשסתא as it is most frequently written) is the title under which more than one Persian king is mentioned in the Old Testament. The Hebrew form is a slight corruption of ארתחשתר, which letters De Sacy has deciphered in the inscriptions of Nakshi Rustam, and which he vocalizes *Artahshetr* (*Antiq. d. l. Perse*, p. 100). Gesenius pronounces them *Artachshatr;* and, by assuming the easy change of *r* into *s*, and the transposition of the *s*, makes Artachshast very closely represent its prototype. The word is a compound, the first element of which, *arta*—found in several Persian names—is generally admitted to mean *great;* the latter part De Sacy conceived to be the Zend *Khshethro*, *King*, to which Gesenius and Pott assent. Thus the sense of *great warrior*, which Herodotus (vi. 98) assigned to the Greek form Artaxerxes, accords with that which etymology discovers in the original Persian title (particularly when we consider that, as the king could only be chosen from the soldier-caste—from the *Kshatriyas*—warrior and king are so far cognate terms); although Pott, according to his etymology of *Xerxes*, takes Artaxerxes to be more than equivalent to Artachshatr—to be 'magnus regum rex' (*Etym. Forsch.* i. p. lxvii.).

The first Artachshasht (ארתחששתא, and once pointed *Artachshashta;* Sept. Ἀρθασασθά) is mentioned in Ezra iv. 7-24, as the Persian king who, at the instigation of the adversaries of the Jews, obstructed the rebuilding of the Temple, from his time to that of Darius, king of Persia. According to the arguments adduced in the art. Ahasuerus, this king is the immediate predecessor of Darius Hystaspis, and can be no other than the Magian impostor, Smerdis, who seized on the throne B.C. 521, and was murdered after a usurpation of less than eight months (Herod. iii. 61-78). Profane historians, indeed, have not mentioned him under the *title* of Artaxerxes; but neither do Herodotus and Justin (the latter of whom calls him *Oropasta*, i. 9) agree in his *name;* so that this fact is not, of itself, enough to invalidate any deductions which are in other respects sound.

As to the second Artachshast (ארתחשסתא; Sept. Ἀρθασασθά), in the seventh year of whose reign Ezra led a second colony of the Jewish exiles back to Jerusalem (Ezra vii. 1, *sq.*), the opinions are divided between Xerxes and his son Artaxerxes Longimanus. The arguments brought forward by the advocates for Xerxes, among whom

are J. D. Michaelis, Jahn, and De Wette, are briefly as follows: That, as the preceding portion of the book of Ezra relates to Darius Hystaspis, it is most natural to expect that the next following section should refer to his successor, Xerxes; that, on the supposition that Artaxerxes is here meant, we not only have to explain how the reign of Xerxes, who had been so favourable to the Jews, is entirely omitted here, but also how the narrative can make such a tremendous leap as from the sixth year of Darius to the seventh of Artaxerxes, a period of fifty-eight years; that, on that supposition, the interval between the seventh year of his reign, when Ezra set out, allows too short a space for the affairs of the colony to have reached that state of disorder in which Nehemiah found them on his arrival at Jerusalem, in the twentieth year of his reign; and, lastly, that Josephus calls the king in question Xerxes (*Antiq. Jud.* xi. 5).

The supporters of the other alternative—that the king here meant is Artaxerxes Longimanus—among whom are J. H. Michaelis, Eichhorn, and Bertholdt, rest on the following reasons, as stated chiefly by Bertholdt: That the coherence between the several portions of the book of Ezra is by no means so strict as to make the first argument conclusive; as, even assuming that *Xerxes* is the person referred to, there is still a gap of thirty-six years between the end of ch. vi. and the beginning of ch. vii.; that the objection, that the interval between the arrivals of Ezra and Nehemiah in Jerusalem is too short (on the supposition that the former left Babylon in the reign of Artaxerxes) to account for the confusion in which the latter found the colony, loses its force, if we consider that the progress of the infant state was necessarily slow in its difficult position, and if we also conceive Ezra's efforts to have been more directed to reform the religious than the civil state of the Jews; that the appeal to Josephus is of no avail, as he calls the king in whose reign Nehemiah returned Xerxes also, which is decidedly incorrect, since Nehemiah went back to Persia in the thirty-second year of the king (xiii. 6), and Xerxes only reigned twenty-one years; that the Apocryphal Esdras, in its version of this history, calls the king Artaxerxes; that, in taking our Artachshast to be Artaxerxes Longimanus, we have the support of a considerable resemblance in the two names; and lastly, that (if Xerxes *is* the Achashverosh of the books of Esther and Ezra) we not only avoid the evil attending the other alternative—the evil of being obliged to recognise him under two widely different names in almost contemporaneous books—but also find Artaxerxes under one and the same name in the books of Ezra and Nehemiah. This last argument proceeds on the assumption that the Artachshast of whom Ezra and Nehemiah speak is the same person; and, as Ezra and Nehemiah were decidedly contemporaries (Neh. viii. 9), the reasons here adduced may derive some additional force from the arguments brought forward below.

The third ARTACHSHAST (the forms in the Hebrew and Sept. are the same as in the last case) is the Persian king who, in the twentieth year of his reign, considerately allowed Nehemiah to go to Jerusalem for the furtherance of purely national objects, invested him with the government of his own people, and allowed him to remain there for twelve years (Neh. ii. 1, *sq.*; v. 14). It is almost unanimously agreed that the king here intended is Artaxerxes Longimanus, who reigned from the year 464 to 425 B.C. The date of Nehemiah's departure is, therefore, the year 444 B.C. Some few have indeed maintained (and it seems principally for the purpose of reconciling Neh. xiii. 28, with Josephus, *Antiq.* xi. 8) that the king here referred to is Artaxerxes Mnemon, who reigned from the year B.C. 404 to 359; and J. D. Michaelis (*Anmerk. f. Ungel.*) admits that he should not know how to refute any one who advocated that opinion. Bertholdt, however (*Einleit.* iii. 1014), endeavours to find a conclusive argument in the fact that Eliashib, who was the high-priest when Nehemiah arrived at Jerusalem (iii. 1), was the grandson of the high-priest Jeshua, who accompanied the first colony under Zerubbabel (xii. 1, 10). He argues, namely, that the three generations which elapsed between the accession of Cyrus and the arrival of Nehemiah, and which in the ordinary computation amount to ninety-nine years, tally so exactly with the ninety-two years which intervene between the first year of Cyrus and the twentieth year of Artaxerxes Longimanus, as to render it far more probable that the latter is the Artachshast of the book of Nehemiah; whereas, on the supposition that Artaxerxes Mnemon is the person meant, Eliashib and his father and grandfather must have enjoyed the high-priesthood between them for the incredible period of 154 years.—J. N.

ARTEMAS (Ἀρτεμᾶς). This name (which is a contraction for Artemidorus) occurs only once (Tit. iii. 12), as that of an esteemed disciple whom St. Paul designed to send into Crete to supply the place of Titus, whom he invited to visit him at Nicopolis. When the Epistle was written, the Apostle seems not to have decided whether he should send Artemas or Tychicus for this purpose.

ARTEMIS (Ἄρτεμις, Acts xix. 24), the Diana of the Romans, is a goddess known under various modifications, and with almost incompatible attributes. As the tutelary divinity of Ephesus, in which character alone she concerns us here, she was undoubtedly a representative of the same power presiding over conception and birth which was adored in Palestine under the name of ASHTORETH. She is therefore related to all the cognate deities of that Asiatic Juno-Venus, and partakes, at least, of their connection with the *moon*. Creuzer has combined a number of testimonies in order to show how her worship was introduced into Ephesus from the coasts of the Black Sea; and endeavours to point out the several Medo-Persian, Egyptian, Libyan, Scythian, and Cretan elements of which she is compounded (*Symbolik*, ii. 115, *sq.*).

Her earliest image, which was said to have fallen from heaven, was probably very rude, and, to judge from its representation on ancient coins, little more than a head with a shapeless trunk, supported by a staff on each side. There is some dispute as to the material of which her image was made. Most authorities say it was of ebony, the black colour being, as Creuzer thinks, symbolical. Pliny relates that Mucianus, who had seen it, affirms that it was of the wood of the vine, and that it was so old that it had survived seven restorations of the temple (*Hist. Nat.* xvi. 79). According to Xenophon, it was of gold (*Anab.*

v. 8). The later image with the full development of attributes, of which we give a representation below, is, as Creuzer says, a Pantheon of Asiatic and Egyptian deities. Even in it, however, we see how little influence Greek art had in modifying its antique rudeness. It is still more like a mummy than a Greek statue. Some of the most significant attributes in this figure are—The turreted head, like that of Cybele; the nimbus behind it representing the moon; the zodiacal signs of the bull, the twins, and the crab on her bosom; below them, two garlands, one of flowers and the other of acorns; the numerous breasts; the lions, stags, and cows in various parts; the bees and flowers on the sides; and others described in Millin's *Galerie Mythol.* i. 26. Her priests were called Megabyzi, and were eunuchs.

The Arabic version of the Acts renders Artemis, in the chapter cited, by *Az Zuharat*, which is the Arabic name for the planet Venus.—J. N.

ARTICLES. In the later development of languages, logical fulness and accuracy are attained at the expense of conciseness and delicacy; and, if not before, at least in this stage the small words called *articles* are uniformly produced. If we confined our view to the languages which are derived from Latin, we might easily believe that the presence of these parts of speech is a symptom and proof that the later and logical stage is already reached: for in French, Italian, Spanish, and Portuguese, derivatives from the Latin *ille* and *unus* fulfil the part of the English *the* and *a*. Nor is the lesson taught by the Greek language apparently very different: for in its earliest extant specimens (the poems of Homer), the word ὁ, ἡ, τὸ is far oftener used as a demonstrative or relative pronoun, than as the definite article. We seem to be able to trace its growth and establishment in this later function; and we are tempted to infer from its appearing so much earlier in Greek than in Latin, that this is owing to the earlier development of logical acuteness in the Greek mind. Finally, in modern Greek, the old numeral εἷς, ἑνός, *one*, has given birth to a new indefinite article, ἕνας, perfectly analogous to the Italian *uno*, French *un*, and English *a*.

We are here perhaps in danger of building up a theory too rapidly. It is true, that in languages generally, the early and poetical style is defective in articles, while the late, prosaic, and logical style is even redundant with them. Nevertheless, we cannot safely infer a high logical cultivation, much less the attainment of the secondary stage of development, from the presence of articles in a language. Hebrew has possessed a definite article as long as it can be traced back; but it would be too much to impute it to an unusually strong and premature argumentative acuteness in the nations of Canaan, whose speech the family of Isaac adopted. That there is a germ of truth in this matter, we believe; but until the relation of the Syro-Arabian to the older languages which they supplanted is better understood, it is hazardous to engage in any of these speculations.

So much can be stated as fact. If a language has as yet no definite article, it will gradually form one out of its demonstrative pronoun, provided that it be not tied down to a fixed state by imitating classical models. Under the same circumstances, there is a tendency to generate an indefinite article out of the numeral *one*. Closely akin to the last is the use of the word that properly means *single*, in the sense of the indefinite article—a change which can be traced in the Bagdad dialect of Arabic.

In the Hebrew language the definite article, as printed in our books, appears under the form הַ (*ha*), accompanied by a redoubling of the following consonant, if it be such a consonant as Hebrew euphony allows to be doubled. It is not to be questioned that the real word, when isolated, was הַל (*hal*), corresponding to the Arabic ال (*ăl* or *el*), especially as the final *l* in the Arabic article also is, in numerous cases, assimilated to the consonant which follows. The Hebrews have one demonstrative form אֵלֶּה (*èlle*) *these*, which approaches remarkably near to the Arabic; and there is some reason for regarding הַל as a composite, or at least an elongated form, of which הוּא (*hu*) *he*, is the root. To this attach themselves two different consonants to denote the ideas of THAT and THIS, L and DH, which latter becomes Z or D in different dialects. The DH is found in pure Arabic (as, indeed, in English, strange to think!); but in Hebrew it is Z, in Chaldee D, in German D, in Greek T; though, in these Eu-

ropean tongues the idea of THAT predominates over THIS. The L is found in Latin (*ille*, that); and the old Latin words *olli*, *oltra*, are thought to indicate that *yon*, *yonder*, is its primitive sense. Just so, הָלְאָה (*hal'â*) for ultra, *beyond*. As regards the *form* of the Hebrew article, it thus appears that the root *ho* or *hu* first took to itself the terminating *l*, and then in pronunciation gradually rubbed it off again.

The radical element of the Greek article vacillates between *ho* and *to*; and a general survey of all the kindred languages makes it probable that these are mere varieties of the same root. In Latin and in Zend the *h* maintains its place throughout; in Sanscrit the Greek *ho* and *to* change into *sa* and *ta*, this relation of *h* to *s* being notoriously common. In Lithuanian only *ta* is found; and the *seo*, *dha*, of the Anglo-Saxon, sufficiently establish the connection of *sa* with *ta*; for the sound *th*, by mere lisping, naturally degenerates into either *s* or *t*, and *dh* into *z* or *d*. We are thus nearly brought to a conviction that the two elements *hu* and *dha* of the Syro-Arabian languages were, at a much earlier stage, variations of but one root. Nor is this opinion absurd; so many are the proofs of the extreme antiquity of the *material* which is so differently worked up in extant languages. In fact, the root *hu* (this) shows itself likewise in the Welsh tongue.

The Chaldee branch of the Syro-Arabian has a peculiarity of its own, in compensation for the definite article. This consists in the annexation of the vowel א at the end of nouns, to produce what is called the emphatic state; which is practically, it seems, equivalent in sense to the English *the*. Whether this termination has any etymological relation to the Hebrew article is uncertain. In Arabic, especially in its modern Syrian dialect, a very similar elongation of nouns is common, with a view of giving specification or individuality to that which was collective: as تين (*tîn*), fig or figs; تينة (*tîna*), A fig; سمن (*semn*), butter; سمنة (*semna*), A piece of butter. This, however, agrees more nearly to the indefinite than to the definite article; nor does its *construct* form indicate relationship to the Chaldee termination.

It belongs to grammars of the special languages to discuss the uses of the article, and only a few general remarks can find place here. The chief peculiarity in Hebrew occurs with words joined in what is technically called 'regimen' or 'construction;' in which case *a single* article between the two nouns serves to define both of them. Thus, בֶּן הַמֶּלֶךְ (*ben hal-melk*) means, *the* son of *the* king. If the Hebrews wish to join two nouns in this relation, so as to define the latter and leave the former undefined, they are forced to abandon the construct form, and to employ the preposition לְ, which in this case is to be rendered *of*, not *for*. Thus, '*A* Psalm *of* David' is מִזְמוֹר לְדָוִד (*mizmor li David*). This remark, we believe, was made first by Ewald.

The importance which some critics have given to the Greek article, in regard to the Trinitarian controversy, is truly extraordinary. Even Mr. Scholefield, as professor of Greek at Cambridge, did not hesitate to assert that, in Ephes. v. 5, the words ἐν τῇ βασιλείᾳ τοῦ Χριστοῦ καὶ Θεοῦ, should be translated, 'in the kingdom of (him who is) Christ and God.' It seems to have been taken for granted, that, contrary to the practice of all other nations, the Greeks allowed themselves no latitude as to the use of the article; and this, though proof to the contrary is so close at hand, both in the New Testament and in classical writers. It is undoubtedly more perspicuous, when two nouns are in apposition or immediate connection, to repeat the article if they refer to different objects; just as we should say, *The king and general*, if one person were intended, but *the king and the general*, if they were two persons. But such rules often give way, in cases where no ambiguity is apprehended. Thus, Hebr. ix. 19, τὸ αἷμα τῶν μόσχων καὶ τράγων, 'the blood of *the* calves and goats,' for 'of *the* calves and *the* goats.' This is equally common in the classics; as in the opening words of Thucydides: 'Thucydides of Athens wrote the history of the war of *the* Peloponnesians and Athenians,' τὸν πόλεμον τῶν Πελοποννησίων καὶ Ἀθηναίων. Another rule which some have sought to establish is, that when a noun is followed by another noun in the genitive, the latter must take the article, if the former has it. But neither is this universally true; for instance, Heb. ix. 13, εἰ γὰρ τὸ αἷμα ταύρων καὶ τράγων, 'for if *the* blood of bulls and goats,' &c.

It seems to be a general result of the history of the article, that in elevated style there is a tendency to drop it, because such style generally savours of the antique and the poetical. Thus, οὐρανὸς καὶ γῆ παρελεύσεται, 'Heaven and earth shall pass away,' is more elevated than '*The* heaven and *the* earth,' &c. But beside and in contrast to this, every language possesses numerous familiar formulas or special words, from which the article is dropped; and to become acquainted with these is always very difficult. In daily life they abound, not only after prepositions, but as nominative cases: thus, to sit *at table*; to travel *by ship*; 'No fear lest *dinner* cool.' A dim perception of this fact seems to have led to the universal rule (as some have wished to make it), that the article may always be omitted after a preposition.

In the above, we have naturally said little of the *indefinite* article, because it occurs but a few times in the New Testament (μία, *one*, put for *A*), and never in the Hebrew of the Old Testament. Otherwise, though of less importance to language, its history appears to be governed by the same general laws which regulate that of the definite article.—F. W. N.

ARVAD (אַרְוַד; Ἄραδος, 1 Macc. xv. 23), or, as it might be spelt, ARUAD, whence the present name Ruad, a small island and city on the coast of Syria, called by the Greeks Aradus, by which name it is mentioned in 1 Macc. xv. 23. It is a small rocky island, opposite the mouth of the river Eleutherus, to the north of Tripolis, about one mile in circumference and two miles from the shore. Strabo (xvi. p. 753) describes it as a rock rising in the midst of the waves (πέτρα περίκλυστος); and modern travellers state that it is steep on every side. Strabo also describes the houses as exceedingly lofty, and they were doubtless so built, on account of the scantiness of the site: hence,

for its size, it was exceedingly populous (Pomp. Mela, l. ii. c. 7). Those of the Arvadites whom the island could not accommodate found room in the town and district of Antaradus, on the opposite coast, which also belonged to them. Arvad is *not* the same as Arpad or Arphad, as most books of Biblical Geography allege.

ARVADITES (אַרְוָדִי; Sept. Ἀράδιοι, Gen. x. 18; 1 Chron. i. 16), the inhabitants of the island Aradus [ARVAD], and doubtless also of the neighbouring coast. The Arvadites were descended from Arvad, one of the sons of Canaan (Gen. x. 18). Strabo (xvi. p. 731) describes the Arvadites as a colony from Sidon. They were noted mariners (Ezek. xxvii. 8, 11; Strabo, xvi. p. 754), and formed a distinct state, with a king of their own (Arrian, *Exped. Alex.* ii. p. 90); yet they appear to have been in some dependence upon Tyre, for the prophet represents them as furnishing their contingent of mariners to that city (Ezek. xxvii. 8, 11). The Arvadites took their full share in the maritime traffic for which the Phœnician nation was celebrated, particularly after Tyre and Sidon had fallen under the dominion of the Græco-Syrian kings. They early entered into alliance with the Romans, and Aradus is named among the states to which the consul Lucius formally made known the league which had been contracted with Simon Maccabæus (1 Macc. xv. 23).

ARUBOTH. [ARABAH.]

ARUMAH, otherwise RUMAH, a city near Shechem, where Abimelech encamped (Judg. ix. 41).

ASA (אָסָא, *healing* or *physician;* Sept. Ἀσά), son of Abijah, grandson of Rehoboam, and third king of Judah. He began to reign two years before the death of Jeroboam, in Israel, and he reigned forty-one years, from B.C. 955 to 914. As Asa was very young at his accession, the affairs of the government were administered by his mother, or, according to some (comp. 1 Kings xv. 1, 10), his grandmother Maachah, who is understood to have been a granddaughter of Absalom [MAACHAH]. She gave much encouragement to idolatry; but the young king, on assuming the reins of government, zealously rooted out the idolatrous practices which had grown up during his minority and under the preceding reigns; and only the altars in the 'high places' were suffered to remain (1 Kings xv. 11-13; 2 Chron. xiv. 2-5). He neglected no human means of putting his kingdom in the best possible military condition, for which ample opportunity was afforded by the peace which he enjoyed in the ten first years of his reign. And his resources were so well organized, and the population had so increased, that he was eventually in a condition to count on the military services of 580,000 men (2 Chron. xiv. 6-8). In the eleventh year of his reign, relying upon the Divine aid, Asa attacked and defeated the numerous host of the Cushite king Zerah, who had penetrated through Arabia Petræa into the vale of Zephathah, with an immense host, reckoned at a million of men (which Josephus reduces, however, to 90,000 infantry and 100,000 cavalry, *Antiq.* viii. 12. 1), and 300 chariots (2 Chron. xiv. 9-15). As the triumphant Judahites were returning, laden with spoil, to Jerusalem, they were met by the prophet Azariah, who declared this splendid victory to be a consequence of Asa's confidence in Jehovah, and exhorted him to perseverance. Thus encouraged, the king exerted himself to extirpate the remains of idolatry, and caused the people to renew their covenant with Jehovah (2 Chron. xv. 1-15). It was this clear knowledge of his dependent political position, as the vice-gerent of Jehovah, which won for Asa the highest praise that could be given to a Jewish king—that he walked in the steps of his ancestor David (1 Kings xv. 11).

Nevertheless, towards the latter end of his reign the king failed to maintain the character he had thus acquired. When Baasha, king of Israel, had renewed the war between the two kingdoms, and had taken Ramah, which he was proceeding to fortify as a frontier barrier, Asa, the conqueror of Zerah, was so far wanting to his kingdom and his God as to employ the wealth of the Temple and of the royal treasures to induce the king of Syria (Damascus) to make a diversion in his favour by invading the dominions of Baasha. By this means he recovered Ramah, indeed; but his treasures were squandered, and he incurred the rebuke of the prophet Hanani, whom he cast into prison, being, as it seems, both alarmed and enraged at the effect his address was calculated to produce upon the people. Other persons (who had probably manifested their disapprobation) also suffered from his anger (1 Kings xv. 16-22; 2 Chron. xvi. 1-10). In the three last years of his life Asa was afflicted with a grievous 'disease in his feet;' and it is mentioned to his reproach that he placed too much confidence in his physicians. At his death, however, it appeared that his popularity had not been substantially impaired; for he was honoured with a funeral of unusual cost and magnificence (1 Chron. xvi. 11-14). He was succeeded by his son Jehoshaphat.

ASAHEL (עֲשָׂהאֵל, *God's creature;* Sept. Ἀσαήλ), son of David's sister Zeruiah, and brother of Joab and Abishai. He was noted for his swiftness of foot; and after the battle at Gibeon he pursued and overtook Abner, who, with great reluctance, in order to preserve his own life, slew him with a backthrust of his spear, B.C. 1055 [ABNER] (2 Sam. ii. 18-23).

ASAPH (אָסָף, *assembler;* Sept. Ἀσάφ), a Levite, son of Barachias (1 Chron. vi. 39; xv. 17), eminent as a musician, and appointed by David to preside over the sacred choral services which he organized. The 'sons of Asaph' are afterwards mentioned as choristers of the temple (1 Chron. xxv. 1, 2; 2 Chron. xx. 14; xxix. 13; Ezra ii. 41; iii. 10; Neh. vii. 44; xi. 22); and this office appears to have been made hereditary in his family (1 Chron. xxv. 1, 2). Asaph was celebrated in after times as a prophet and poet (2 Chron. xxix. 30; Neh. xii. 16), and the titles of twelve of the Psalms (lxxiii. to lxxxiii.) bear his name. The merits of this appropriation are elsewhere examined [PSALMS].—There were two other persons named Asaph: one who occupied the distinguished post of mazkir (מַזְכִּיר) or 'recorder' to king Hezekiah (2 Kings xviii. 18; Isa. xxxvi. 3); another who was keeper of the royal forests under Artaxerxes (Neh. ii. 8).

ASCENSION. The event spoken of under this title is among those which Christians of every

age have contemplated with most profound satisfaction. It was in his ascension that Christ exhibited the perfect triumph of humanity over every antagonist, whether in itself, or in the circumstances under which it may be supposed to exist. The contemplation of this, the entrance of the Redeemer into glory, inspired the prophets of old with the noblest views of his kingdom. 'Thou hast ascended on high; thou hast led captivity captive; thou hast received gifts for men; yea, for the rebellious also, that the Lord God might dwell among them' (Ps. lxviii. 18); and 'Lift up your heads, O ye gates; and be ye lift up, ye everlasting doors, and the king of glory shall come in' (Ps. xxiv. 9). That something of vast importance, in respect to the completion of the great scheme of salvation, was involved in this event, appears from the words of our Lord himself, 'Touch me not; for I am not yet ascended to my Father: but go to my brethren, and say unto them, I ascend unto my Father, and your Father; and to my God and your God' (John xx. 17). Nor was it till this had taken place that he poured out the grace of the Spirit upon his church, or began the higher exercises of his office as a mediating priest. In the primitive church, the feast of the Ascension, called also by St. Chrysostom the Assumption of Christ, was considered, like the solemn days of the Nativity and the Passion, as of apostolic origin. St. Chrysostom, in his homily on the subject, calls it an illustrious and refulgent day, and describes the exaltation of Christ as the grand proof of God's reconciliation to mankind (*Opp.* t. ii. p. 457).—H. S.

ASENATH (אָסְנַת; Sept. Ἀσενέθ), the daughter of Potipherah, priest of On, whom the king of Egypt bestowed in marriage upon Joseph, with the view probably of strengthening his position in Egypt by this high connection. The considerations suggested by this marriage belong to another place [JOSEPH]; attention is here only required to *the name*, which, in common with other words of foreign origin, has attracted considerable notice. No better etymology of Asenath has been proposed than that by Jablonski, who (*Panth. Egypt.* i. 56, and *Opuscul.* ii. 208) regards the forms Asenath and Ἀσενέθ as representative of a Coptic compound *Asheneit*. The latter part of this word he takes to be the name of Neith, the titular goddess of Sais, the Athene of the Greeks; and considers the whole to mean *worshipper of Neith*. Gesenius, in his *Thesaurus*, suggests that the original Coptic form was *Asneith*, which means, *who belongs to Neith*—quæ Neithæ est.' That the name refers to this goddess is the generally received opinion (in modern times, Von Bohlen alone has, in his *Genesis*, proposed an unsatisfactory Semitic etymology): it is favoured by the fact that the Egyptians, as Jablonski has shown, were accustomed to choose names expressive of some relation to their gods; and it appears liable to no stronger objection than the doubt, whether the worship of Neith existed at so early a period as that of the composition of the book of Genesis.

ASH. [OREN.]

ASHDOD (אַשְׁדּוֹד; Sept. Ἄζωτος), the AZOTUS of the Greeks and Romans, and so called in 1 Macc. iv. 15; Acts viii. 40 (see also Plin. *Hist. Nat.* v. 14; Ptolem. v. 16); a city on the summit of a grassy hill, near the Mediterranean coast, nearly mid-way between Gaza and Joppa, being 18 geog. miles N. by E. from the former, and 21 S. from the latter; and more exactly mid-way between Askelon and Ekron, being 10 geog. miles N. by E. from the former, and S. by W. from the latter. Ashdod was a city of the Philistines, and the chief town of one of their five states (Josh. xiii. 3; 1 Sam. vi. 17). It was the seat of the worship of Dagon (1 Sam. v. 5; 1 Macc. xi. 4), before whose shrine in this city it was that the captured ark was deposited and triumphed over the idol (1 Sam. v. 1-9). Ashdod was assigned to Judah; but many centuries passed before it and the other Philistine towns were subdued [PHILISTINES]; and it appears never to have been permanently in possession of the Judahites, although it was dismantled by Uzziah, who built towns in the territory of Ashdod (1 Chron. xxvi. 6). It is mentioned to the reproach of the Jews after their return from captivity, that they married wives of Ashdod; the result of which was that the children of these marriages spoke a mongrel dialect, compounded of Hebrew and the speech of Ashdod (Neh. xiii. 23, 24). These facts indicate the ancient importance of Ashdod. It was indeed a place of great strength; and being on the usual military route between Syria and Egypt, the possession of it became an object of importance in the wars between Egypt and the great northern powers. Hence it was secured by the Assyrians before invading Egypt (Isa. i. 1, *sq.*); and at a later date it was taken by Psammetichus, after a siege of twenty-nine years, the longest on record (Herodot. ii. 157). The destruction of Ashdod was foretold by the prophets (Jer. xxv. 20; Amos i. 8; iii. 9; Zeph. ii. 4; Zach. ix. 6); and was accomplished by the Maccabees (1 Macc. v. 68; x. 77-84; xi. 4). It is enumerated among the towns which Pompey joined to the province of Syria (Joseph. *Antiq.* xiv. 4. 4, *De Bell Jud.* i. 7. 7), and among the cities ruined in the wars, which Gabinius ordered to be rebuilt (*Antiq.* xiv. 5. 3). It was included in Herod's dominion, and was one of the three towns bequeathed by him to his sister Salome (*De Bell. Jud.* vii. 8. 1). The evangelist Philip was found at Ashdod after he had baptized the Ethiopian eunuch (Acts viii. 40). Azotus early became the seat of a bishopric; and we find a bishop of this city present at the councils of Nice, Chalcedon, A.D. 359, Seleucia, and Jerusalem, A.D. 536 (Reland, *Palæstina*, p. 609).

Ashdod subsisted as a small unwalled town in the time of Jerome. It was in ruins when Benjamin of Tudela visited Palestine (*Itin.* ed. Asher, i. 79); but we learn from William of Tyre and Vitriacus that the bishopric was revived by the Latin Christians, at least titularly, and made suffragan of Treves. Sandys (*Travailes*, p. 151) describes it as 'a place of no reckoning;' and Zuallart (*Voyage*, iv. p. 132) speaks of it as an Arab village. And this seems to be its present condition, for Irby and Mangles (p. 180) describe it as inhabited. The site is marked by ancient ruins, such as broken arches, and partly buried fragments of marble columns: there is also what appeared to these travellers to be a very ancient khan, the principal chamber of which had obviously, at some former period, been used

in a Christian chapel. The place is still called اسدود *Esdud.*

ASHER (אָשֵׁר, *happiness;* Sept. Ἀσήρ), one of the sons of Jacob by Zilpah, the handmaid of Leah (Gen. xxx. 13; xxxv. 26), and founder of one of the twelve tribes (Num. xxvi. 44-47). Asher had four sons and one daughter (Gen. xlix. 20; Deut. xxxiii. 24). On quitting Egypt the number of adult males in the tribe of Asher was 41,500, which made it the ninth of the tribes (excluding Levi) in numbers—Ephraim, Manasseh, and Benjamin only being below it. But before entering Canaan an increase of 11,900—an increase exceeded only by Manasseh—raised the number to 53,400, and made it the fifth of the tribes in population (comp. Num. i. 40, 41; xxvi. 47). The inheritance of this tribe lay in a very fruitful country, on the sea-coast, with Lebanon north, Carmel and the tribe of Issachar south, and Zebulon and Naphtali east. It is usually stated that the whole of the Phœnician territories, including Sidon, were assigned to this tribe. But there are various considerations which militate against this conclusion (see the arguments on both sides in *Pictorial Bible,* Num. xxvi. 24; Josh. xix. 24; Judg. i. 31), and tend to show that the assigned frontier-line was drawn out to the sea south of Sidon. The strongest text for the inclusion of Sidon (Tyre was not then founded) is that in which it is mentioned to the reproach of the Asherites, that they did not drive out the Sidonians (Judg. i. 31). This Michaelis is disposed to reject as an interlopation; but J. Kitto (*Pict. Bib.* in loc.) conceives it to denote that the Asherites were unable to expel the Sidonians, who by that time had encroached southward into parts of the coast actually assigned to the Asherites; and he strengthens this by referring to the subsequent foundation of Tyre, as evincing the disposition of the Sidonians to colonize the coast south of their own proper territories. The Asherites were for a long time unable to gain possession of the territories actually assigned them, and 'dwelt among the Canaanites, the inhabitants of the land' (Judg. i. 32); and, 'as it is not usual to say of a larger number that it dwells among the smaller, the inference is, that they expelled but comparatively few of the Canaanites, leaving them, in fact, a majority of the population' (Bush, note on Judg. i. 32).

ASHES, in the symbolical language of Scripture, denote human frailty (Gen. xviii. 27), deep humiliation (Esth. iv. 1; Jonah iii. 6; Matt. xi. 21; Luke x. 13; Job xlii. 6; Dan. ix. 3). To sit in ashes was a token of grief and mourning (Job ii. 8; Lam. iii. 16; Ezek. xxvii. 30), as was also strewing them upon the head (2 Sam. xiii. 19; Isa. xli. 3) [MOURNING]. 'Feeding on ashes,' in Ps. cii. 9, appears to express grief, as of one with whose food the ashes with which he is covered mingle. But in Isa. xliv. 20, 'feeding on ashes,' which afford no nourishment, is judged to denote ineffectual means, labour to no purpose. Compare Hos. xii. 1.

ASHIMA (אֲשִׁימָא, 2 Kings xvii. 30; Sept. Ἀσιμάθ) is only once mentioned in the Old Testament as the god of the people of Hamath. The Babylonian Talmud, in the treatise 'Sanhedrin' (cited in Carpzov's *Apparatus,* p. 516), and the majority of Jewish writers, assert that Ashima was worshipped under the form of a *goat without wool;* the Talmud of Jerusalem says, under that of a *lamb.* Elias Levita, a learned Rabbi of the sixteenth century, assigns the word the sense of *ape;* in which he was, in all probability, deceived by the resemblance in sound to the Latin *simia.* Jurieu and Calmet have proposed other fanciful conjectures. The opinion, however, that this idol had the form of a goat appears to be the one best supported by arguments as well as by authorities. Thus Pfeiffer (in his *Dubia Vexata,* ad loc.) suggests that ashima may be brought into relation with the word אשמה, which the Samaritan version uses in the sense of some species of goat, as a translation of the original אקו in Deut. xiv. 5. On this ground we might conjecture that the word ashima actually *means* a goat without wool, by deriving it from אשם, which, though it usually signifies *to be guilty,* yet occurs in the sense of *to be laid waste, to be bare,* as a cognate of ישם and שמם: so that ashima would mean *bare, bald.* Besides, as a goat, the Egyptian god Mendes would afford an excellent parallel to Ashima; as likewise the Greek Pan (cf. Lev. xvii. 7).

It is worthy of mention that the name of this idol furnished Aben Ezra with an opportunity of displaying the inveterate hatred of the Jews against the Samaritans. In his preface to the book of Esther, he asserts that the Samaritan text of Gen. i. 1, begins with the words 'In the beginning Ashima created.' It need hardly be said that there is no trace of this reading either in the Samaritan text or version. Aben Ezra's own words are cited at length in Hottinger's *Exercit. Antimorin.* p. 40.—J. N.

ASHKENAZ (אַשְׁכְּנַז; Sept. Ἀσχανάζ; Gen. x. 3); and ASHCHENAZ (Jer. li. 27), the proper name of a son of Gomer, son of Japhet, and of a tribe of his descendants. In Jeremiah it is placed with Ararat and Minni, provinces of Armenia; whence it is probable that Ashkenaz was a province of Armenia; or at least that it lay not far from it, near the Caucasus, or towards the Black Sea. The commentators have been all bound to something like this conclusion by the passage in Jeremiah, and nothing more satisfactory is now attainable. The various fanciful attempts to trace the name may be seen in Winer (*Bib. Realwört.,* s. v. 'Askenas'). The modern Jews fancy the name denotes the Germans.

ASHPENAZ, chief of the eunuchs of king Nebuchadnezzar, to whose care Daniel and his companions were consigned, and who changed their names (Dan. i. 3, 7).

ASHTAROTH (עַשְׁתָּרוֹת; Sept. Ἀσταρώθ), and ASHTAROTH-CARNAIM (עַשְׁתְּרוֹת קַרְנַיִם; Sept. Ἀσταρὼθ καὶ Καρναΐν), a town of Bashan (Deut. i. 4; Josh. ix. 10) which was included in the territory of the half-tribe of Manasseh (Josh. xiii. 31), and was assigned to the Levites (1 Chron. vi. 71). It is placed by Eusebius 6 miles from Edrei, the other principal town of Bashan, and 25 miles from Bostra. The town existed in the time of Abraham (Gen. xiv. 5); and as its name of Ashtaroth appears to be derived from the worship of the moon under that name [see the following article], there is little need to look further than the crescent of that luminary and its symbolical image for an explanation of the addition CAR-

NAIM, or rather KARNAIM, 'horned.' In 2 Macc. xii. 26, mention is made of the temple of Atergatis (Ashtaroth) in Carnion, which is described as a strongly fortified town of difficult access, but which was taken by Judas Maccabæus, who slew 25,000 of the people therein (2 Macc. xii. 21, 26). Astaroth-Carnaim is now usually identified with Mezareib, the situation of which corresponds accurately enough with the distances given by Eusebius. Here is the first castle on the great pilgrim road from Damascus to Mecca. It was built about 340 years ago by the Sultan Selim, and is a square structure, about 100 feet on each side, with square towers at the angles and in the centre of each face, the walls being 40 feet high. The interior is an open yard with ranges of warehouses against the castle wall to contain stores of provisions for the pilgrims. There are no dwellings beyond the castle, and within it only a few mud huts upon the flat roofs of the warehouses, occupied by the peasants who cultivate the neighbouring grounds. Close to this building on the north and east side are a great number of springs, whose waters at a short distance collect into a lake or pond about a mile and a half in circumference. In the midst of this lake is an island, and at an elevated spot at the extremity of a promontory advancing into the lake, stands a sort of chapel, around which are many ruins of ancient buildings. There are no other ruins. (Burckhardt, p. 242; Buckingham's *Arab Tribes*, p. 162.)

'ASHTORETH (עַשְׁתֹּרֶת, 1 Kings xi. 5; Sept. 'Ἀστάρτη) is the name of a goddess of the Sidonians (1 Kings xi. 5, 33), and also of the Philistines (1 Sam. xxxi. 10), whose worship was introduced among the Israelites during the period of the judges (Judg. ii. 13; 1 Sam. vii. 4), was celebrated by Solomon himself (1 Kings xi. 5), and was finally put down by Josiah (2 Kings xxiii. 13). She is frequently mentioned in connection with Baal, as the corresponding female divinity (Judg. ii. 13); and, from the addition of the words, 'and all the host of heaven,' in 2 Kings xxiii. 4 (although Ashêrah occurs there, and not 'Ashtoreth, which will be accounted for below), it is probable that she represented one of the celestial bodies. There is also reason to believe that she is meant by the 'queen of heaven,' in Jer. vii. 18; xliv. 17; whose worship is there said to have been solemnised by burning incense, pouring libations, and offering cakes. Further, by comparing the two passages, 2 Kings xxiii. 4, and Jer. viii. 2, which last speaks of the 'sun and moon and all the host of heaven, whom they served,' we may conclude that the *moon* was worshipped under the names of queen of heaven and of 'Ashtoreth, provided the connection between these titles is established. This constitutes nearly the sum of all the indications in the Old Test. concerning 'Ashtoreth.

According to the testimonies of profane writers, the worship of this goddess, under different names, existed in all countries and colonies of the Syro-Arabian nations. She was especially the chief female divinity of the Phœnicians and Syrians—the Baaltis (*i. e.* בעלתי *domina mea*, equivalent to the Greek address, Δέσποινα!) to Baal; 'Ἀστάρτη ἡ μεγίστη, as Sanchoniathon calls her (ed. Orelli, p. 34). She was known to the Babylonians as Mylitta (*i. e.* possibly מולדתא, the emphatic state of the feminine participle active of Aphel, *genetrix*), Herod. i. 131; to the Arabians as Alitta, or Alilat, Herod. iii. 8 (*i. e.* according to Pocock's etymology—*Specim.* p. 110—al Ilahat, *the goddess* [which may, however, also mean the *crescent moon*—see Freytag's *Lex. Ar.*]; or al Hilâl, *the moon;* or, according to Kleuker's suggestion, al Walîd, *genetrix*. See Bergmann, *De Relig. Arab. Anteislamica*. Argentor. 1834. p. 7). The supposed Punic name Tholath, תלת, which Münter, Hamaker, and others considered to mean *genetrix*, and to belong to this goddess, cannot be adduced here, as Gesenius has recently shown that the name has arisen from a false reading of the inscriptions (see his *Monum. Ling. Phœnic.* p. 114). But it is not at all open to doubt that this goddess was worshipped at ancient Carthage, and probably under her Phœnician name.

The classical writers, who usually endeavoured to identify the gods of other nations with their own, rather than to discriminate between them, have recognised several of their own divinities in Ashtoreth. Thus she was considered to be *Juno* (Βῆλθις ἢ Ἥρα ἢ Ἀφροδίτη, Hesychius; 'Juno sine dubitatione a Pœnis Astarte vocatur,' Augustin. *Quæst. in Jud.* xvi.); or *Venus*, especially Venus Urania (Cicer. *Nat. Deor.* iii. 23; Ἀστάρτη δὲ ἐστιν ἡ παρ' Ἕλλησιν Ἀφροδίτη προσαγορευομένη, Theodoret. *in Libr.* iii. *Reg. Quæst.* L.; and the numerous inscriptions of Bona Dea Cœlestis, Venus Cœlestis, &c., cited in Münter's *Religion der Karthager*, p. 75); or *Luna* (Οὐρανίαν Φοίνικες Ἀστροάρχην ὀνομάζουσι, σελήνην εἶναι θέλοντες, Herodian, v. 13; Lucian *De Dea Syra*, iv.).

The *fact* that there is a connection between all these divinities cannot escape any student of ancient religions; but it is not easy to discover the precise link of that connection. Winer ingeniously suggests (*Bibl. Realwört.*) that Ashtoreth was confounded with Juno, because she is the female counterpart to Baal, the chief god of the Syrians—their Jupiter, as it were; and with Venus, because the same lascivious rites were common to her worship, and to that of Ashtoreth and her cognate Mylitta (Creuzer's *Symbolik*, ii. 23). But so great is the intermixture and confusion between the gods of pagan religions, 'pro diversitate nominis, non pro numinis varietate,' as Ambrose says, that Münter further identifies Ashtoreth—due allowance being made for difference of time and place—with the female Kabîr, Axiokersa, with the Egyptian Isis, with the Paphian Venus, with the Taurian and Ephesian Diana, with the Bellona of Comana, with the Armenian Anâhîd, and with the Samian, Maltesian, and Lacinian Juno. She has also been considered to be the same as the Syrian *fish-deities* [ATERGATIS].

As for the power of nature, which was worshipped under the name of Ashtoreth, Creuzer and Münter assert that it was the principle of conception and parturition—that subordinate power which is fecundated by a superior influence, but which is the agent of all births throughout the universe. As such, Münter maintains, in his *Religion der Babylonier*, p. 21, in opposition to the remarks of Gesenius in his *Jesaias*, iii. 337—that the *original* form under which Ashtoreth was worshipped

was the *moon*; and that the transition from that to the *planet* Venus (which we will immediately notice) was unquestionably an innovation of a later date. It is evident that the moon alone can be properly called the queen of heaven; as also that the dependent relation of the moon to the sun makes it a more appropriate symbol of that sex, whose functions as female and mother, throughout the whole extent of animated nature, were embodied in Ashtoreth [BAAL].

The rites of her worship, if we may assume their resembling those which profane authors describe as paid to the cognate goddesses, in part agree with the few indications in the Old Test., in part complete the brief notices there into an accordant picture. The *cakes* mentioned in Jer. vii. 18, which are called in Hebrew כונים *Kavvanim*, were also known to the Greeks by the name χαβῶνες, and were by them made in the shape of a sickle, in reference to the new moon. Among animals, the dove, the crab, and, in later times, the lion, were sacred to her; and among fruits, the pomegranate. No blood was shed *on* her altar; but male animals, and chiefly *kids*, were sacrificed to her (Tacit. *Hist.* ii. 3). Hence some suppose that the reason why Judah promised the harlot a kid, was that she might sacrifice it to Ashtoreth (see Tuch's note to Gen. xxxviii. 17). The most prominent part of her worship, however, consisted of those libidinous orgies, which Augustine, who was an eye-witness of their horrors in Carthage, describes with such indignation (*De Civit. Dei*, ii. 3). Her priests were eunuchs in women's attire (the peculiar name of whom is קדשים, *sacri*, *i. e.* cinædi, Galli—1 Kings xiv. 24), and women (קדשות, *sacræ*, *i. e.* meretrices—Hos. iv. 14, which term ought to be distinguished from ordinary harlots, זונות), who, like the Bayaderes of India, prostituted themselves to enrich the temple of this goddess. The prohibition in Deut. xxiii. 18 appears to allude to the dedication of such funds to such a purpose.

As for the places consecrated to her worship, although the numerous passages in which the authorized version has erroneously rendered אשרה by *grove*, are to be deducted (as is explained below), there are yet several occasions on which *gardens* and *shady trees* are mentioned as peculiar seats of (probably, *her*) lascivious rites (Isa. i. 29; lxv. 3; 1 Kings xiv. 23; Hos. iv. 13; Jer. ii. 20; iii. 13). She also had celebrated temples (1 Sam. xxxi. 10).

As to the form and attributes with which Ashtoreth was represented, the oldest known image, that in Paphos, was a white conical stone, often seen on Phœnician remains in the figure which Tacitus describes, *l. c.* as 'Simulacrum non effigie humana; continuus orbis latiore initio tenuem inambitum, metæ modo, exsurgens, et ratio in obscuro.' Münter is unwilling to consider this a Lingam symbol; nevertheless, there appears to be some room for disputing his opinion. In Canaan she was probably represented as a *cow*. It is said in the book of Tobit i. 5, that the tribes which revolted sacrificed τῇ Βάαλ τῇ δαμάλει, where the feminine article with Βάαλ is to be remarked. In Phœnicia, she had the head of a cow or bull, as she is seen on coins. Sanchoniathon states that 'Astarte adopted the head of a bull as a symbol of her sovereignty;' he also

accounts for the *star* which is her most usual emblem, by saying that 'when she passed through the earth, she found a fallen star, which she consecrated in Tyre (*l. c.* p. 34). At length, she was figured with the human form, as Lucian expressly testifies of the Syrian goddess—which is substantially the same as Ashtoreth; and she is so found on coins of Severus, with her head surrounded with rays, sitting on a lion, and holding a thunderbolt and a sceptre in either hand. What Kimchi says of her being worshipped under the figure of a *sheep* is a mere figment of the Rabbins, founded on a misapprehension of Deut. vii. 13. As the words עשתרות צאן there occurring may be legitimately taken as the *loves* of the flock (*Veneres* pecoris), *i. e.* either the *ewes* or the *lambs*, the whole foundation of that opinion, as well as of the notion that the word *means* sheep, is unsound.

The word Ashtoreth cannot be plausibly derived from any root, or combination of roots, in the Syro-Arabian languages. The best etymology, that approved by Gesenius, deduces it from the Persian *sitârah*, *star*, with a prosthetic guttural. The latest etymology is that suggested by Sir W. Betham, in his *Etruria Celtica*, ii. 22, who resolves *Astarte* into the Irish elements: As, *out of*; tar, *beyond*; te, *deity—the goddess of long voyages!* Ashtoreth is feminine as to form; its plural Ashtaroth also occurs (and is sometimes erroneously taken to be the proper name of the goddess); but it is understood to denote a plurality of *images* (like the Greek Ἑρμαί), or to belong to that usage of the plural which is found in words denoting *lord* (Ewald's *Hebr. Gram.* § 361).

To come now to ASHERAH (אֲשֵׁרָה, Judg. vi. 25): Selden was the first who endeavoured to show that this word—which in the LXX. and Vulgate is generally rendered *grove*, in which our authorized version has followed them—must in *some* places, for the sake of the sense, be taken to mean a *wooden image* of Ashtoreth (*De Diis Syris*, ii. 2). Not long after, Spencer made the same assertion (*De Leg. Hebræor* L. ii. 16). Vitringa then followed out the same argument, in his note to Isa. xvii. 8. Gesenius, at length, has treated the whole question so elaborately in his *Thesaurus*, as to leave little to be desired, and has evinced that Asherah is a *name*, and also denotes an image of this goddess.

Some of the arguments which support this partial, or, in Gesenius's case, total rejection of the signification *grove*, for אשרה, are briefly as follows. It is argued that Asherah almost always occurs with words which denote *idols* and *statues of idols*; that the verbs which are employed to express the making an Asherah, are incompatible with the idea of a grove, as they are

such as *to build, to shape, to erect* (except in one passage, where, however, Gesenius still maintains that the verb there used means *to erect*); that the words used to denote the destruction of an Asherah are those of *breaking to pieces, subverting;* that the *image* of Asherah is placed in the Temple (2 Kings xxi. 7); and that Asherah is coupled with Baal in precisely the same way as Ashtoreth is: comp. Judg. ii. 13; x. 6; 1 Kings xviii. 19; 2 Kings xxiii. 4; and particularly Judg. iii. 7, and ii. 13, where the plural form of both words is explained as of itself denoting *images* of this goddess. Besides, Selden objects that the signification *grove* is even incongruous in 2 Kings xvii. 10, where we read of '*setting up* groves *under every green tree*.' Moreover, the LXX. has rendered Asherah by *Astarte*, in 2 Chron. xv. 16 (and the Vulgate has done the same in Judges iii. 7), and, conversely, has rendered *Ashtaroth* by groves, in 1 Sam. vii. 3.

On the strength of these arguments most modern scholars assume that Asherah is a *name* for Ashtoreth, and that it denotes more especially the relation of that goddess to the *planet* Venus, as the lesser star of good fortune. It appears, namely, to be an indisputable fact that both Baal and Ashtoreth, although their primary relation was to the sun and moon, came in process of time to be connected, in the religious conceptions of the Syro-Arabians, with the planets Jupiter and Venus, as the two stars of good fortune [See the article Meni]. Although the mode of transition from the one to the other is obscure, yet many kindred circumstances illustrate it. For instance, the connection between Artemis and Selene; that between *Juno* and the planet Venus, mentioned in Creuzer ii. 566; the fact that, in the Zendavesta, Anâhîd is the name of the genius of the same planet; and that אסתרא *astro* (which word is only an Aramaic form of the same *sitarah* which, as was remarked above, furnishes the best derivation for Ashtoreth) is also the name of the same planet in the religious books of the Tsalians (Norberg's *Onomast. Cod. Nasaræi*, p. 20). It is in reference to this connection, too, that a *star* is so often found among the emblems with which Ashtoreth is represented on ancient coins. Lastly, whereas the word Asherah cannot, in the sense of *grove*, be legitimately deduced from the primitive or secondary signification of any Syro-Arabian root אשר, as a name of the goddess of good fortune, it admits of a derivation as natural in a philological point of view, as it is appropriate in signification. The verb אשר means *to prosper;* and Asherah is the feminine of an adjective signifying *fortunate, happy*.—J. N.

ASIA. The ancients had no divisions of the world into parts or quarters; and hence the word Asia, in the extended modern sense, does not occur in Scripture. It does not indeed occur at all, in any sense, in the Hebrew Scriptures, but is found in the books of the Maccabees and in the New Testament. It there applies, in the *largest* sense, to that peninsular portion of Asia which, since the fifth century, has been known by the name of Asia Minor; and, in a narrower sense, to a certain portion thereof which was known as Asia Proper. Thus, it is now generally agreed,—1. that 'Asia' denotes the whole of Asia Minor, in the texts Acts xix. 26, 27; xx. 4, 16, 18; xxvii. 2, &c.: but, 2. that only Asia Proper, the Roman or Proconsular Asia, is denoted in Acts ii. 9; vi. 9; xix. 10, 22; 2 Tim. i. 15; 1 Pet. i. 6; Rev. i. 4, 11. Asia Minor comprehended Bithynia, Pontus, Galatia, Cappadocia, Cicilia, Pamphylia, Pisidia, Lycaonia, Phrygia, Mysia, Troas (all of which are mentioned in the New Testament), Lydia, Ionia, Æolis (which are sometimes included under Lydia), Caria, Doris, and Lycia. Asia Proper, or Proconsular Asia, comprehended the provinces of Phrygia, Mysia, Caria, and Lydia (Cicero, *Pro Flacc.* 27; *Ep. Fam.* ii. 15). But it is evident that St. Luke uses the term Asia in a sense still more restricted; for in one place he counts Phrygia (Acts ii. 9, 10), and in another Mysia (xvi. 6, 7), as provinces distinct from Asia. Hence it is probable that in many, if not all, of the second set of references the word Asia denotes only Ionia, or the entire western coast, of which Ephesus was the capital, and in which the seven churches were situated. This is called Asia also by Strabo.

ASIARCHÆ (Ἀσιάρχαι, Acts xix. 31; Vulg. *Asiæ principes;* Tertull. *præsides sacerdotales;* Auth. Vers. 'certain of the chief of Asia'). These asiarchæ, who derived their appellation from the name of the province over which they presided (as Syriarch, 2 Macc. xii. 2, Lyciarch, Cariarch, &c.), were in Proconsular Asia the chief presidents of the religious rites, whose office it was to exhibit solemn games in the theatre every year, in honour of the gods and of the Roman emperor. This they did at their own expense (like the Roman ædiles), whence none but the most opulent persons could bear the office, although only of one year's continuance. The appointment was much as follows: at the beginning of every year (*i. e.* about the autumnal equinox) each of the cities of Asia held a public assembly, in order to nominate one of their citizens as asiarch. A person was then sent to the general council of the province, at some one of the principal cities, as Ephesus, Smyrna, Sardis, &c., to announce the name of the individual who had been selected. Of the persons thus nominated by the cities the council designated ten. As the Ἀσιάρχαι are repeatedly mentioned in the plural, some suppose that the whole ten presided as a college over the sacred rites (comp. Strabo, xiv. p. 649). But in Eusebius (*Hist. Eccles.* iv. 15) Polycarp is said to have suffered martyrdom when 'Philip was *asiarch* and Statius Quadratus proconsul of Asia;' from which and other circumstances it is deemed more probable that, as in the case of the Irenarch, the names of the ten nominated by the general council were submitted to the proconsul, who chose one of the number to be asiarch. Kuinoel (at Acts xix. 31) admits that one chosen by the proconsul was pre-eminently the asiarch, but conceives that the other nine acted as his assessors and also bore that title. Others, however, think the plurality of asiarchs sufficiently accounted for by supposing that those who *had* served the office continued to bear the title, as was the case with the Jewish high-priests; but the other branch of the alternative is usually preferred. Winer judiciously remarks, that in the course of time changes may have been made in the office, which our fragmentary information does not enable us to trace; and he contends that the solitary testimony of Eusebius amounts to no more than that one asiarch, Philip, then and there pre-

sided at the public games, but not that the arrangements of all the games were made and provided by that one asiarch. (See Kuinoel, Hammond, Bloomfield, &c., on Acts xix. 31; and Winer's *Biblisches Realwörterbuch*, s. v. 'Asiarchæ,' with the authorities there cited.)

ASKELON (אַשְׁקְלוֹן; Sept. Ἀσκάλων), a city of the Philistines, and the seat of one of their five states (Judg. xiv. 19; 1 Sam. vi. 17; 2 Sam. i. 20). It was situated on the Mediterranean coast, between Gaza and Ashdod, twelve geog. miles north of the former, and ten S. by W. from the latter, and thirty-seven W.S.W. from Jerusalem. It was the only one of the five great Philistine towns that was a maritime port, and stood out close to the shore. Askelon was assigned to the tribe of Judah (Josh. xiii. 13; comp. Judg. i. 18); but it was never for any length of time in possession of the Israelites. The part of the country in which it stood abounded in aromatic plants, onions, and vines (Plin. xix. 32; Strabo, xvi. p. 759; Dioscor. i. 124; Colum. xii. 10; Alex. Trall. viii. 3). It was well fortified (Joseph. *De Bell. Jud.* iii. 21; comp. Mela, i. 11), and early became the seat of the worship of Decerto (Diod. Sic. ii. 4). After the time of Alexander it shared the lot of Phœnicia and Judæa, being tributary sometimes to Egypt, and at other times to Syria (1 Macc. x. 86; xi. 60; xii. 33; Joseph. *Antiq.* xii. 4. 5). The magnificent Herod was born at Askelon, and although the city did not belong to his dominion, he adorned it with fountains, baths, and colonnades (*De Bell. Jud.* i. 12. 11); and after his death Salome, his sister, resided in a palace at Askelon, which Cæsar bestowed upon her (*Antiq.* xvii. 11. 5). It suffered much in the Jewish war with the Romans (*De Bell. Jud.* ii. 18. 5; iii. 2. 1-3); for its inhabitants were noted for their dislike of the Jews, of whom they slew 2500 who dwelt there (ii. 18. 5; iii. 2. 1). After this Askelon again revived, and in the middle ages was noted not only as a stronghold, but as a wealthy and important town (Will. Tyr. xvii. 21). As a sea-port merely it never could have enjoyed much advantage, the coast being sandy and difficult of access. The town bears a prominent part in the history of the Crusades. After being several times dismantled and re-fortified in the times of Saladin and Richard, its fortifications were at length totally destroyed by the Sultan Bibars A.D. 1270, and the port filled up with stones, for fear of future attempts on the part of the Crusaders (Wilkin. *Gesch. der Kreuz.* vii. 586). This, no doubt, sealed the ruin of the place. Sandys (*Travailes*, p. 151, A.D. 1610) describes it as 'now a place of no note, more than that the Turke doth keepe there a garrison.' Fifty years after (A.D. 1660), Von Troilo found it still partially inhabited. But its desolation has long been complete, and little now remains of it but the walls, with numerous fragments of granite pillars. The situation is described as strong; the thick walls, flanked with towers, were built on the top of a ridge of rock that encircles the town, and terminates at each end in the sea. The ground within sinks in the manner of an amphitheatre (Richardson, ii. 202-204; Eli Smith, in *Missionary Herald* for 1827, p. 341). The place still bears the name of Askulan عسقلان.

ASMODEUS (Ἀσμοδαῖος; Tob. iii. 8), a demon or evil spirit, mentioned in the Apocryphal book of Tobit as having beset Sarah, the daughter of Raguel, and killed the seven husbands whom she had married before Tobit (Tob. iii. 8; vi. 14; viii. 2, 3). The Rabbins have a number of absurd traditions respecting Asmodeus, which may be seen in the original edition of Calmet and in Lightfoot (*Hor. Hebr.* ad Luc. xi. 15). They call him, as well as Beelzebub, 'the prince of devils,' whence the two names have been supposed to refer to the same demon. But this title they also give to 'the angel of death,' as the destroyer of all mankind: hence some derive the name Asmodeus from the Hebrew שמד *shamad*, to exterminate, which identifies it with Ashmodai and also Abaddon (see the word), the same as Apollyon, the angel of death. This is likely, and thus the story in Tobit means no more than that the seven husbands died successively on their marriage with Sarah.

ASMONEANS. [MACCABEES.]

ASNAPPER (אָסְנַפַּר; Sept. Ἀσσεναφάρ), the name of the king, or possibly Assyrian satrap, who sent the Cuthean colonies into Palestine (Ezra iv. 10). Taking him for king of Assyria, he is generally identified with Esar-haddon, although some believe the name to denote Salmaneser. The title רבא ויקירא (Auth. Vers. 'most noble') which is given to him belonged to the satraps.

ASPALATHUS (ἀσπάλαθος), a word which occurs only in Ecclus. xxiv. 15, of the Apocrypha, where the substance which it indicates is enumerated with other spices and perfumes to which wisdom is compared. Though this drug is not mentioned in the canonical Scriptures, it is probable that it may have been one of the substances comprehended under the general name of spices. It was no doubt one of the substances employed by the ancients as a perfume and incense, as it is described by Dioscorides (i. c. 19), as well as enumerated by Theophrastus (ix. c. 7), and by both among aromatic substances. It forms one of the ingredients of the cyphi, or compound incense made use of by the Egyptian priests, as related both by Plutarch and Dioscorides. The substance which was called aspalathus has not been very clearly ascertained, though several plants have been indicated as yielding it. *Lignum Rhodium* is sometimes considered to be one of the kinds of aspalathus described by Dioscorides, but this is a produce of the Canary Islands and of the plant called Convolvulus scoparius. From it the perfumers of Paris obtain *l'Huile de bois de Rhodes*. By others aspalathus, which has been supposed to be the same thing as Syrian aloe, or that of Rhodes and of Candia, is thought to have been yielded by species of the genus which has been called Aspalathus, and especially by the species A. creticus, which is now called Anthyllis Hermanniæ; but there does not seem to be sufficient proof of this. Others again have held that aspalathus was a kind of agallochum [AHALIM], and Dr. Harris (sub. Lign.—aloe) seems to have thought that he got rid of a difficulty by suggesting that *ahalim*, which we have shown to be agallochum, should be rendered ASPALATHA. Arab authors, as Avicenna and Serapion, give *Dar-shishan* as the Arabic synonyme of aspalathus. They

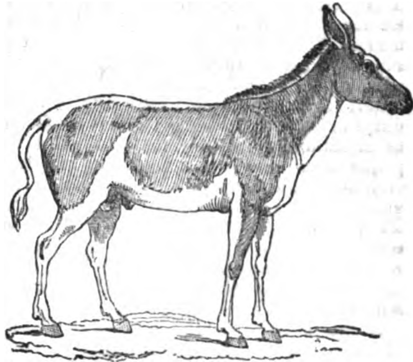
quote some of their own countrymen as authorities respecting it, in addition to Galen and Dioscorides. Hence it would appear to have been a product of the East rather than of the West, as for such they usually give only the Greek name or its translation, and quote only Greek authorities. Avicenna, in addition to his description, says that some think it may be the root of Indian nard. Hence it may justly be inferred that *Dar-shishan*, which the Arabians thought to be aspalathus, must have come to them from India, or they would not have hazarded this supposition. In India the name *Dar-shishan* is applied to the bark of a tree which is called *kaephul* or *kyphul*. This tree is a native of the Himalayan mountains from Nepal to the Sutlej, and has been figured and described by Dr. Wallich, in his *Tentamen Floræ Nepalensis*, p. 59, t. 45, by the name *Myrica sapida*, in consequence of its fruit, which is something like that of the arbutus, being edible. The leaves, on being rubbed, have a pleasantly aromatic though faint smell. The bark forms an article of commerce from the hills to the plains, being esteemed in the latter as a valuable stimulant medicine. It may be seen mentioned by the name ka-i-phul in Gladwin's translation of the Persian *Ulfaz-i-Udwieh*, No. 884, as a synonyme of *Dar-sheeshan*, which is described as an aromatic bark, while at No. 157 *Dar-sheeshan* is considered to be a synonyme of اشتلايوس *ishtelayoos*, which seems to be a corruption of aspalathos from the errors of transcribers in the diacritical points. Kaephul has, moreover, been long celebrated by Sanscrit authors, and it may therefore have easily formed one of the early articles of commerce from the East to the West, together with the Nard, the Costus, and the Lycium of these mountains.—J. F. R.

ASPHALTUM (חֵמָר *chemar;* Arab. حمر *chomar;* Sept. ἄσφαλτος; Auth. Vers. 'pitch'). Luther, like the modern Rabbins, erroneously translates the Hebrew by 'clay.' The Hebrew and Arabic names probably refer to the reddish colour of some of the specimens (Dioscorides, i. 99). The Greek name, whence the Latin Asphaltum, is doubtless derived from the Lake Asphaltites (Dead Sea), whence it was abundantly obtained. Usually, however, asphaltum, or compact bitumen, is of a shining black colour; it is solid and brittle, with a conchoidal fracture, altogether not unlike common pitch. Its specific gravity is from 1 to 1·6, and it consists chiefly of bituminous oil, hydrogen gas, and charcoal. It is found partly as a solid dry fossil, intermixed in layers of plaster, marl, or slate, and partly as liquid tar flowing from cavities in rocks or in the earth, or swimming upon the surface of lakes or natural wells (Burckhardt, ii. 77). To judge from Gen. xiv. 10, mines of asphaltum must have existed formerly on the spot where subsequently the Dead Sea, or Lake Asphaltites, was formed, such as Mariti (*Travels*, iv. 27) discovered on the western shore of that sea. The Palestine earth-pitch, however, seems to have had the preference over all the other sorts (Plin. xxviii. 23; Discor. i. p. 100). It was used among the ancients partly for covering boats, paying the bottoms of vessels (comp. Niebuhr, ii. p. 336; Gen. vi. 14; Exod. ii. 3; Joseph. *De Bell. Jud.* iv. 8. 4; Buckingham, *Mesopot.* p. 346), and partly as a substitute for mortar in buildings; and it is thought that the bricks of which the walls of Babylon were built (Gen. xi. 3; Strabo, xvi. p. 743; Herod. i. 179; Plin. xxxv. 51; Ammian. Marcell. xxiii. 6; Virtruv. viii. 3; comp. Joseph. *Antiq.* i. 4. 3) had been cemented with hot bitumen, which imparted to them great solidity. In ancient Babylon asphaltum was made use of also for fuel, as the environs have from the earliest times been renowned for the abundance of that substance (Diod. Sic. ii. 12; Herod. i. 179; Dion. Cass. lxviii. 26; Strabo, xiv. 8. 4; Plut. *Alex.* c. 35; Theodoret, *Quaest. in Genes.* 59; Ritter, *Geogr.* ii. 345; Buckingham, *Mesopot.* p. 346). Neither were the ancient Jews unacquainted with the medicinal properties of that mineral (Joseph *De Bell. Jud.* ibid.)

Asphaltum was also used among the ancient Egyptians for embalming the dead. Strabo (xvi.) and many other ancient and modern writers assert, that only the asphalt of the Dead Sea was used for that purpose; but it has in more recent times been proved, from experiments made on mummies, that the Egyptians employed slaggy mineral pitch in embalming the dead. This operation was performed in three different ways: first with slaggy mineral pitch alone; second with a mixture of this bitumen and a liquor extracted from the cedar, called *cedoria;* and third with a similar mixture, to which resinous and aromatic substances were added (Haüy. *Mineral.* ii. p. 315).

Asphaltum is found in masses on the shore of the Dead Sea, or floating on the surface of its waters. Dr. Shaw (*Travels in Barbary and the Levant*) was told that this bitumen, for which the Dead Sea is so famous, rises at certain times from the bottom of the sea in large pieces of semiglobular form, which, as soon as they touch the surface, and the external air operates upon them, burst asunder in a thousand pieces, with a terrible crash, like the *pulvis fulminans* of the chemists. This, however, he continues, only occurs along the shore; for in deep water, it is supposed that these eruptions show themselves in large columns of smoke, which are often seen to rise from the lake. The fact of the ascending smoke has been much questioned by naturalists; and although apparently confirmed by the testimonies of various travellers, collected by Büsching, in his *Erdbeschreibung*, it is not confirmed by the more observant travellers of recent years. Pococke (*Description of the East*, &c. ii. § 46) presumes that the thick clumps of asphalt collected at the bottom of the lake have been brought up by subterraneous fire, and afterwards melted by the agitation of the waters. Also Strabo (xvi. p. 764) speaks of subterraneous fires in those parts (comp. Burckhardt, *Syria*, 394).

Dr. Robinson, when in the neighbourhood, heard from the natives the same story which had previously been told to Seetzen and Burckhardt, namely—that the asphaltum flows down the face of a precipice on the eastern shore of the lake, until a large mass is collected, when, from its weight or some shock, it breaks off and falls into the sea (Seetzen, in Zach's *Monatl. Correspond.* xviii. 441; Burckhardt, p. 394; Robinson, ii. 229). This, however, he strongly doubts, for assigned reasons, and it is agreed that nothing of



the kind occurs on the western shore. The Professor rather inclines to receive the testimony of the local Arabs, who affirm that the bitumen only appears after earthquakes. They allege that after the earthquake of 1834 huge quantities of it were cast upon the shore, of which the Jehalin Arabs alone took about 60 kuntars (each of 98 lbs.) to market; and it was corroboratively recollected by the Rev. Eli Smith, that a large amount had that year been purchased at Beirut by the Frank merchants. There was another earthquake on January 1, 1837, and soon after a large mass of asphaltum (compared by one person to an island, and by another to a house) was discovered floating on the sea, and was driven aground on the western side, near Usdum. The neighbouring Arabs assembled, cut it up with axes, removed it by camels' loads, and sold it at the rate of four piastres the *rutl*, or pound; the product is said to have been about 3000 dollars. Except during these two years, the Sheik of the Jehalin, a man fifty years old, had never known bitumen appear in the sea, nor heard of it from his fathers (Robinson's *Bib. Researches*, ii. p. 230). This information may serve to illustrate the account of Josephus, that 'the sea in many places sends up black masses of asphaltum, which float on the surface, having the form and size of headless oxen' (*De Bell. Jud.* ix. 8. 4); and that of Diodorus (ii. 48), who states that the bitumen is thrown up in masses, covering sometimes two or three *plethra*, and having the appearance of islands.—E. M.

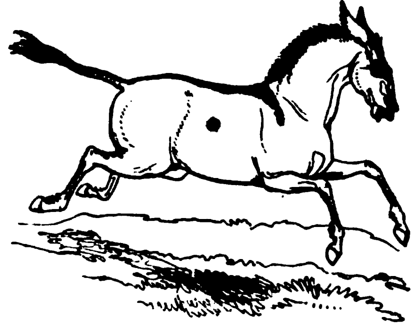
ASS (חֲמוֹר *chamor*), Equus Asinus of Linnæus; by some formed into a subgenus, containing that group of the Equidæ which are not striped like Zebras, and have forms and characters distinguishable from true horses, such as a peculiar shape of body and limbs, long ears, an upright mane, a tail only tufted at the end, a streak along the spine, often crossed with another on the shoulders, a braying voice, &c.

Besides the ordinary term *Chamor*, the Hebrews likewise used אתון *Athon, Aton, Atun;* עירים *Oirim;* פרא *Para;* and ערוד *Orad, Oredia.* By these words, no doubt, though not with the strict precision of science, different species and distinct races of the group, as well as qualities of sex and age, were indicated; but the contexts in general afford only slight assistance in discriminating them; and reliance on cognate languages is often unavailing, since we find that similar words frequently point to secondary and not to identical acceptations.

1. CHAMOR we take to be the name of the common working ass of Western Asia; an animal of small stature, frequently represented on Egyptian monuments with panniers on the back, usually of a reddish colour (the Arabic Hamar and Chamara denoting red), and the same as the Turkish Hymar. It appears to be a domesticated race of the wild ass of Arabia, Mesopotamia, and Southern Persia, where it is denominated Gour: in Scripture it is distinguished by the name of ערוד *Orud* (Job xxxix. 5), and in the Chaldee of Daniel, ערדיא *Oredia* (v. 21); both terms being most likely derived from the braying voice of the animal.

In its natural state it never seeks woody, but upland pasture, mountainous and rocky retreats; and it is habituated to stand on the brink of precipices (a practice not entirely obliterated in our own domestic races), whence, with protruded ears, it sur-

[Domestic Ass of Western Asia.]



veys the scene below, blowing and at length braying in extreme excitement. This habit is beautifully depicted by Jeremiah, when speaking of the Para (xvii. 6) and Orud (xlviii. 6), where, instead of ערער *Oror*, heath, we should read ערוד *Orud*, wild ass; for there is no heath, *erica*, in Asia.

עירים *Oir, Oirim;* in the Chaldee עילי *Ili;* Auth. Vers. young ass, colt; but this rendering does not appear on all occasions to be correct, the word being sometimes used where the Oirim or Ourim carry loads and till the ground, which seems to afford evidence of, at least, full growth (Isa. xxx. 6, 24). אתון *Aton*, Atunuth, is unsatisfactorily rendered 'she-ass,' unless we suppose it to refer to a breed of greater beauty and importance than the common, namely, the silver grey of Africa; which being large and indocile, the females were anciently selected in preference for riding, and on that account formed a valuable kind of property. From early ages a white breed of this race was reared at Zobeir, the ancient Bassora, and capital of the Orcheni, from which place civil dignitaries still obtain their white asses and white mules. It is now the fashion, as it was during the Parthian empire, and probably in the time of the Judges, to dapple this breed with spots of orange or crimson or of both colours together; and we agree with the Editor of the *Pictorial Bible* (note on Judg. v. 10) that this is the meaning of the word צחר *Tzachor* (chequered ?); an interpretation which is confirmed by the Babylonian Sanhedrim, who, in answer to King Sapor's offer of a horse to convey the Jewish Messiah, say: 'non est tibi equus centimaculus, qualis est ejus (Messiæ) asinus.' Horses and asses thus painted occur frequently in Oriental illuminated MSS., and although the taste may be puerile, we conceive that it is the record of remote conquest achieved by a nation of Central Asia mounted on spotted or clouded horses, and revived by the Parthians, who were similarly equipped. See *Introduction to Hist. of Horse and the Tangum Horse, Naturalist's Library*, vol. xii. No other primæval invasion from the east by horsemen on Tzachor animals than that of the so-called Centaurs is recorded: their era coincides nearly with that of the Judges.

By the law of Moses the ass was declared unclean, and therefore was not used as food, excepting, as it would appear, in cases of extreme famine. This inference, however, is drawn from a case where the term 'ass's head' may be explained to mean not literally the head of an ass, but a certain measure or weight so called, as in 1 Sam. xvi. 20, where it is said that Jesse sent to Saul 'an ass of bread;' for, in our version, 'laden with' is an addition to the text. Although therefore the famine in Samaria may possibly have compelled the people to eat asses, and a head may have been very dear, still the expression may denote the measure or weight which bore the same name. The prohibition, however, had more probably an economical than a religious purpose: hunting was thus discouraged, and no horses being used, it was of importance to augment the number and improve the qualities of the ass.

As this animal was most serviceable to man, its name was held in respect rather than contempt. The slander, therefore, current among the Romans and directed against the Jews, that they adored the head of an ass in secret, may not have originated in direct malice or misinterpretation, but have arisen out of some Gnostic fancies, in which the Alexandrian Jews, who had nearly forsaken the Scriptures in search of the magical delusions of the Cabala, and new semi-Christians in that city, so deeply indulged during the first centuries of our era. Hence the Ophite sect figured in the circles of Behemoth, the last genius or Eon (?), under the name of Onoel, shaped like an ass; and there exists an engraved Abraxa, or talisman, of Gentile or Gnostic origin, bearing the whole-length form of a man in flowing robes with an ass's head, and holding an open book with the inscription, 'Deus Christianorum menenychites.' It is not likely that mere malice would engrave its spite upon amulets, although, if Jablonski be correct, the ass was held in contempt in Egypt, and therefore in Alexandria; but among the Arabs and Jews we have 'the voice of one crying in the wilderness,' a solemn allusion derived from the wild ass, almost the only voice in the desert; and in the distinguishing epithet of Mirvan II., last Ommiad caliph, who was called Hymar-al-Gezerah, or wild ass of Mesopotamia—proofs that no idea of contempt was associated with the prophet's metaphor, and that, by such a designation, no insult was intended to the person or dignity of the prince. In more remote ages Tartak or Tarhak was an ass-god of the Avim, and Yauk was the Arabian name of another equine divinity, or a different name for the same Tartak, whose form may possibly be preserved to the present day in the image of the Borak, or mystical camel, which, according to the Koran, bore Mohammed, and is now carried in processions at the Nourous. It is shaped like a horse, having a white body with red legs, a peacock's tail, and a woman's instead of an ass's head.

2. פרא *Para*, rendered likewise 'wild ass,' is a derivative of the same root which in Hebrew has produced פרש *Paras*, horse, and פרשים *Parasim*, horsemen, Persians, and Parthians. Though evidently a generical term, the Scripture uses it in a specific sense, and seems to intend by it the horse-ass, or wild mule, which the Greeks denominated Hemionos, and the moderns Djiggetai; though we think there still remains some commixture in the descriptions of the species and those of the Koulan, or wild ass of Northern Asia. Both are

[Wild Ass.]

nearly of the same stature, and not unlike in the general distribution of colours and markings, but the Hemionos is distinguished from the other by its neighing voice and the deficiency of two teeth in the jaws. The species is first noticed by Aristotle, who mentions nine of these animals as being brought to Phrygia by Pharnaces the satrap, whereof three were living in the time of his son Pharnabazus. This was while the Onager still roamed wild in Cappadocia and Syria, and proves that it had until then been considered the same species, or that from its rarity it had escaped discrimination; but no doubt remains that it was the Gourkhur, or horse-ass, which is implied by the name Hemionos. The allusion of Jeremiah, in speaking of the Para (xiv. 6), most forcibly depicts the scarcity of food when this species, inured to the desert and to want of water, are made the prominent example of suffering.

They were most likely used in traces to draw chariots: the animals so noticed in Isa. xxi. 7 and by Herodotus are the same which Pliny, Strabo, and Arnobius make the Caramanians and Scythians employ in the same way. We claim the Para, and not the Orud, to be this species, because the Hemionos, or at least the Gourkhur, does not bray, as before noticed; and because, notwithstanding its fierceness and velocity, it is actually used at present as a domestic animal at Lucknow, where it was observed by Duvaucel. The Hemionos is little inferior to the wild horse; in shape it resembles a mule, in gracefulness a horse, and in colour it is silvery, with broad spaces of flaxen or bright bay on the thigh, flank, shoulder, neck, and head; the ears are wide like the zebra's, and the neck is clothed with a vertical dark mane prolonged in a stripe to the tuft of the tail. The company of this animal is liked by horses, and, when domesticated, it is gentle: it is now found wild from the deserts of the Oxus and Jaxartes to China and Central India. In Cutch it is never known to drink, and in whole districts which it frequents water is not to be found: and, though the natives talk of the fine flavour of the flesh, and the Gour in Persia is the food of heroes, to an European its smell is abominable. For detailed remarks on all the species of Equidæ we refer to vol. xii. of the *Naturalist's Library*, where, however, there are several typographical errors in the Hebrew names.

MULE (פרד *Pered*, a slight alteration from

Para, before referred to) occurs in 2 Sam. xiii. 29; 1 Kings i. 33; x. 25; and in other places.

[Mules: from an Egyptian Painting.—Brit. Museum.]

This animal is sufficiently well known to require no particular description. Where, or at what period, breeding mules was first commenced is totally unknown, although, from several circumstances, Western Asia may be regarded as the locality; and the era as coinciding with that of the first kings of Israel. In the time of David, to be allowed to ride on the king's own mule was an understood concession of great, if not sovereign authority, and several years before the mention of this event all the king's sons already rode upon mules. It does not appear that the Hebrew people, at this early period at least, bred mules; they received them from Armenia, the large Persian race being considered the offspring of the Onager and mare; but the most beautiful were no doubt brought from the vicinity of Bassora, as before noticed. The claim of Anah, son of Zibeon, to the discovery of breeding mules, as asserted in the Talmuds, may be regarded as an expression of national vanity. It rests on Gen. xxxvi. 24, where ימם *Jemim*, or *Ha-yimim* is rendered *mules:* but it more probably means *water*.

רכש *Reches* (Esth. viii. 10, 14; 1 Kings iv. 28) we take to be one of the many names for running camels; at Herat still called Badees; in Arabia, Deloul, Oo Shaary, and Hedjeens used to carry expresses; or post horses, anciently Asiandi or Astandi, now Chupper or Chuppaw, which, according to Xenophon, existed in Persia in the time of Cyrus, and are still in use under different appellations over all Asia.—C. H. S.

ASSHUR, a son of Shem, who gave his name to Assyria (Gen. x. 11-22) [ASSYRIA].

ASSIDÆANS (חֲסִידִים *chasidim*, 1 Macc. vii. 13, Ἀσιδαῖοι, the *pious*, or *righteous*); a name derived from the root חסד, a word used to denote a very good or a very bad action, but more frequently the former. As a description of a particular body of men it does not occur in the canonical Scriptures, nor in Josephus; but in the First Book of Maccabees, as above, it is applied to the body of zealous and devoted men who rose at the signal for armed resistance given by Mattathias, the father of the Maccabees, and who, under him and his successors, upheld with the sword the great doctrine of the unity of God, and stemmed the advancing tide of Grecian manners and idolatries.

The Jews at a later period gave the name of Chasidim to those pious persons who devoted themselves to a life of austerities and religious exercises, in the hope of hastening the coming of the Messiah, and of making an atonement for their own sins and for the sins of others. The name of Chasidim has also been assumed by a Jewish sect which originated in Poland about a hundred years since, and which still subsists. There is an account of it in the *Penny Cyclopædia*, art. 'Assidians.' The ideas connected with this later appropriation of the term have, by an obvious association, been carried back to and connected with the Chasidim or Assidæans who joined Mattathias, and who have generally been regarded as a sect subsisting at that time. No such sect, however, is mentioned by Josephus in treating of the affairs of that period; and the texts which refer to them (1 Macc. ii. 42; vii. 13; 2 Macc. xiv. 18) afford no sufficient evidence that the Assidæans formed a sect distinct from other pious and faithful Jews. The analogous Hebrew term Chasidim occurs in various passages of Scripture appellatively for good and pious men (Ps. cxlv. 10; cxlix. 1; Isa. lvii. 1; Mic. vii. 2), but is never applied to any sect or body of men. Upon the whole, in the entire absence of collateral information, it seems the safest course to conclude that the Assidæans were a body of eminently zealous men, devoted to the Law, who joined Mattathias very early, and remained the constant adherents of him and his son Judas—not, like the mass of their supporters, rising occasionally and then relapsing into the ordinary pursuits of life. It is possible that, as Jennings conjectures (*Antiq.* p. 298), the name ἀσιδαῖοι, or 'saints,' came to be applied to them by their enemies as a term of reproach, like 'Puritans' formerly in this country, and 'saints' very often in the present day.

ASSOS (Ἄσσος), a town of Lesser Mysia, or of Adramyttium, opposite the island of Lesbos, or Mitylene. Paul came hither on foot from Troas, to meet with his friends, in order to take shipping for Mitylene (Acts xx. 13, 14). It is now a miserable village, called Beiram, built high upon the rocks on the side towards the land (Richter, p. 465, *sq.*).

ASSYRIA. We must here distinguish between the *country* of Assyria, and the Assyrian *empire*. They are both designated in Hebrew by אשור Asshur, the people being also described by the same term, only that in the latter sense it is masculine, in the former, feminine. In the Septuagint it is commonly rendered by Ἀσσοὺρ or Ἀσσυρίους, and in the Vulgate by *Assur* and *Assyrii*, and seldom or never by Ἀσσυρία, or Assyria. Let it be noted, that the Asshurim (Ἀσσουριείμ) of Gen. xxv. 3, were an Arab tribe; and that at Ezek. xxvii. 6, the word *ashurim* (in our version 'Ashurites') is only an abbreviated form of *teashur*, box-wood.

I. ASSYRIA PROPER was a region east of the Tigris, the capital of which was Nineveh. It derived its name from the progenitor of the aboriginal inhabitants—*Asshur*, the second son of Shem (Gen. x. 22; 1 Chron. i. 17), a different person from Asshur, son of Hezron, and Caleb's grandson (1 Chron. ii. 4; iv. 5). Its limits in early times are unknown; but when its monarchs enlarged their dominions by conquest, the name of this metropolitan province was extended to the whole empire. Hence, while Homer calls the inhabitants of the country north of Palestine *Arimoi* (evidently the Aramim or Ara-

means of the Hebrews), the Greeks of a later period, finding them subject to the Assyrians, called the country Assyria, or (by contraction) *Syria*, a name which it has ever since borne. It is on this account that, in classical writers, the names Assyria and Syria are so often found interchanged; and a recent commentator on Isaiah is of opinion that this too is the case in Scripture; for by 'Assyria,' in Isa. xix. 23-25, he understands the prophet to mean 'Syria' (Henderson *on Isaiah*, Lond. 1840, p. 173). The same conjecture had been hazarded by Hitzig (*Begriff d. Kritik Alt. Test.* Heidelberg, 1831, p. 98); but it may be questioned whether in Hebrew 'Asshur' and 'Aram' are ever confounded. The same, however, cannot be affirmed of those parts of the Assyrian empire which lay *east* of the Euphrates, but west of the Tigris. The Hebrews, as well as the Greeks and Romans, appear to have spoken of them in a loose sense as being in Assyria, because in the Assyrian empire. Thus Isaiah (vii. 20) describes the Assyrians as those 'beyond the river,' *i. e.* east of the Euphrates, which river, and not the Tigris, is introduced at viii. 7, as an image of their power. In Gen. xxv. 18, the locality of the Ishmaelites is described as being east of Egypt, 'as thou goest to Assyria,' which, however, could only be reached through Mesopotamia or Babylonia; and this idea best reconciles the apparent incongruity of the statement in the same book (ii. 14), that the Hiddekel, or Tigris, runs 'on the east of Assyria,' *i. e.* of the Assyrian provinces of Mesopotamia and Babylonia; for there can be no doubt that, not only during the existence of the Assyrian monarchy, but long after its overthrow, the name of Assyria was given to those provinces, as having once formed so important a part of it. For example, in 2 Kings xxiii. 29, Nebuchadnezzar is termed the king of Assyria, though resident at Babylon (comp. Jer. ii. 18; Lament. v. 6; Judith i. 7; ii. 1); yea, in Ezra vi. 22, Darius, king of Persia, is called king of Assyria (comp. Plin. *Hist. Nat.* xix. 19); and, on a similar principle, in 2 Macc. i. 19, the Jews are said to have been carried captive to Persia, *i. e.* Babylonia, because, as it had formerly been subject to the Assyrians, so it was afterwards under the dominion of Persia. (Comp. Herodotus, i. 106, 178; iii. 5; vii. 63; Strabo, ii. 84; xvi. 1; Arrian, vii.; *Exped. Alex.* vii. 21. 2; Ammianus Marcellinus, xxiii. 20; xxiv. 2; Justin, i. 2. 13.) One writer, Dionysius Periegeta (v. 975), applies the designation of Assyria even to Asia Minor, as far as the Black Sea.

Yet, ultimately, this name again became restricted to the original province east of the Tigris, which was called by the Greeks Ἀσσυρία (Ptolemy, vi. 1), and more commonly Ἀτουρία (Strabo, xvi. p. 507), or Ἀτυρία (Dion Cassius, lxviii. 28), the latter being only a dialectic variety of pronunciation, derived from the Aramæan custom of changing *s* into *t*. A trace of the name is supposed to be preserved in that of a very ancient place اثور *Athur*, on the Tigris, from four to six hours N.E. of Mosul. Rich, in his *Residence in Kurdistan* (vol. ii. p. 129), describes the ruins as those of the 'city of Nimrod,' and states that some of the better informed of the Turks at Mosul 'said it was *Al Athur*, or *Ashur*, from which the whole country was denominated.'

According to Ptolemy, Assyria was in his day bounded on the north by Armenia, the Gordiæan or Carduchian mountains, especially by Mount Niphates; on the west by the river Tigris and Mesopotamia; on the south by Susiana, or Chuzistan, in Persia, and by Babylonia; and on the east by a part of Media, and mounts Choathras and Zagros (Ptolemy, vi. 1; Pliny, *Hist. Nat.* v. 13; Strabo, xvi. p. 736). It corresponded to the modern Kurdistan, or country of the Kurds (at least to its larger and western portion), with a part of the pashalik of Mosul. 'Assyria,' says Mr. Ainsworth (*Researches in Assyria, Babylonia, and Chaldæa*, Lond. 1838), 'including Taurus, is distinguished into *three* districts: by its *structure*, into a district of plutonic and metamorphic rocks, a district of sedentary formations, and a district of alluvial deposits; by *configuration*, into a district of mountains, a district of stony or sandy plains, and a district of low watery plains; *by natural productions*, into a country of forests and fruit-trees, of olives, wine, corn, and pasturage, or of barren rocks; a country of mulberry, cotton, maize, tobacco, or of barren clay, sand, pebbly or rocky plains; and into a country of date-trees, rice, and pasturage, or a land of saline plants.' The northern part is little else than a mass of mountains, which, near Julamerk, rise to a very great height, Mount Jewar being supposed to have an elevation of 15,000 feet; in the south it is more level, but the plains are often burnt up with scorching heat, while the traveller, looking northward, sees a snowy alpine ridge hanging like a cloud in mid air. On the west this country is skirted by the great river Tigris, the Hiddekel of the Hebrews (Gen. ii. 14; Dan. x. 4), the Dijlat of the Arabs, noted for the impetuosity of its current. Its banks, once the residence of mighty kings, are now desolate, covered, like those of its twin-river the Euphrates, with relics of ancient greatness, in the ruins of fortresses, mounds, and dams, which had been erected for the defence or irrigation of the country. Niebuhr describes a large stone dam at the castle of Nimrod, eight leagues below Mosul, as a work of great skill and labour, and now venerable for its antiquity; and some suppose that it was from the circumstance of so many canals from the Tigris watering the country, and rendering it fruitful, that that river received the Arabic name of *Nahr-as-salam*, the River of Peace, *i. e.* prosperity. It leaves the high land at some distance above Tekrit, rushing with great velocity through a pass in the Hamrine mountains. In its progress along Assyria, the Tigris receives from that country, besides other rivers, two rapid mountain-streams, the Great and Little Zab (*Arab.* Dhab, *i. e.* Wolf), called by the Greeks the Lykos, or Wolf, and the Capros, or Wild Boar. The greater Zab (called by the Kurds *Zerb*), used to be laid down as a different river from the Hakkary, but Dr. Grant found them to be identical; and he likewise detected an error of Kinneir, in representing the Bitlis-su as the same as the Khabûr, whereas they are different streams. (See Grant's *Nestorians*, p. 46.)

The most remarkable feature, says Ainsworth, in the vegetation of Taurus, is the abundance of trees, shrubs, and plants in the northern, and their comparative absence in the southern district. Besides the productions above enumerated, Kurdistan yields gall-nuts, gum-arabic, mastich,

manna (used as sugar), madder, castor-oil, and various kinds of grain, pulse, and fruit. An old traveller, Rauwolf, who passed by Mosul in 1574, dwells with admiration on the finely-cultivated fields, on the Tigris, so fruitful in corn, wine, and honey, as to remind him of the Assyrian Rabshakeh's description of his native country in 2 Kings xviii. 32. Rich informs us that a great quantity of honey, of the finest quality, is produced; the bees (comp. Isa. vii. 18, 'the bee in the land of Assyria') are kept in hives of mud. The naphtha springs, on the east of the Tigris, are less productive than those in Mesopotamia, but they are much more numerous. The zoology of the mountain district includes bears (black and brown), panthers, lynxes, wolves, foxes, marmots, dormice, fallow and red deer, roebucks, antelopes, &c., and likewise goats, but not (as was once supposed) of the Angora breed. In the plains are found lions, tigers, hyænas, beavers, jerboas, wild boars, camels, &c.

Ptolemy divides Assyria into *six* provinces. Farthest north lay *Arrapachitis*, so called, as Rosenmüller conjectures, from Arphachsad, Asshur's brother (Gen. x. 22-24; but see Vater *on Genesis*, i. 151). South of it was *Calakine*, by Strabo written *Calachene;* perhaps the Chalach of 2 Kings xvii. 6; xviii. 11. Next came *Adiabene*, so called from the above-mentioned rivers Dhab or Diab; it was so important a district of Assyria, as sometimes to give name to the whole country [ADIABENE]. In Aramæan it is called *Chadyab*, or *Hadyab*. North-east of it lay *Arbelitis*, in which was Arbela (now *Arbil*, of which see an account in Rich's *Kurdistan*, vol. ii. p. 14; and Appendix, No. i. and ii.), famous for the battle in which Alexander triumphed over Darius. South of this lay the two provinces of *Apolloniatis* and *Sittakene*. The capital of the whole country was Nineveh, the Ninos of the Greeks (Herodot. i. 102), the Hebrew name being supposed to denote 'the abode of Ninos,' the founder of the empire. Its site is believed to have been on the east bank of the Tigris, opposite the modern town of Mosul, where there is now a small town called Nebbi Yunus (*i. e.* the prophet Jonah), the ruins around which were explored by Rich, and are described in his work on Kurdistan [NINEVEH]. In Gen. x. 11, 12, three other cities are mentioned along with Nineveh, viz. *Rechoboth Ir*, *i. e.* the city of Rehoboth, the locality of which is unknown. *Calach* (in our version Calah), either a place in the province of Calachene above mentioned, or the modern Hulwân, called by the Syrians Chalach; and *Resen*, 'a great city between Nineveh and Calach,' which Bochart identifies with the Larissa of Xenophon (*Anabasis*, iii. 47), and Michaelis with a place called Ressin (Rish-Ain, caput fontis?), destroyed by the Arabs A.D. 772. Rich notices an old place and convent of that name near Mosul (ii. 81). At the town of Al Kosh, N. of Mosul, tradition places the birth and burial of the prophet Nahum, and the Jews resort thither in pilgrimage to his tomb. But though he is styled an El-koshite (Nah. i. 1), his denunciations against Assyria and Nineveh were evidently uttered in Palestine; and St. Jerome fixes his birth-place at Helkesei, a village in Galilee. Still it is possible that he was the descendant of one of the Israelites carried captive by Salmanassar, king of Assyria, 'to Chalach and to Chabor on the river Gozan (or rather to Chabor a river of Gozan), and to the cities of the Medes' (2 Kings xvii. 6; xv. 29; xviii. 9; 1 Chron. v. 26). Of Chalach we have already spoken. In Chabor some recognise the mountain-tract in Assyria, called by Ptolemy Chaboras, in which rises the river Khabur, which pursues a south-western course past Zaku to the Tigris; while others rather identify the river Chabor with the Khabur of Mesopotamia, which, after a similar course, joins the Euphrates at Kerkisiyeh, and is the same as the Chebar (that being the Syriac form), on the banks of which Ezekiel saw 'visions of God' (Ezek. i. 3). Indeed it may be doubted whether any of the localities specified were in Assyria Proper, with the exception of Chalach; and if with some we place it at Hulwân, then it was in Babylonian Irâk. Major Rawlinson has recently endeavoured to show that Chalach was neither at Hulwân nor at the neighbouring town of Zohab, but at a place caled Sir-e-Pool-e-Zohab, eight miles S. of the latter, where he found not only Sassanian ruins and mounds like those of Babylon and Nineveh, but bas-reliefs and a royal tomb precisely like those of Persepolis. (See the *Journal of the Geograph. Soc.* vol. ix. part i. p. 35, Lond. 1839.) The country of Kir, to which the Assyrians transported the Damascene Syrians (2 Kings xvi. 9; Amos i. 5), was probably the region about the river Kur (the Cyrus of the Greeks), *i. e.* Iberia and Georgia.

The greater part of the country which formed Assyria Proper is under the nominal sway of the Turks, who compose a considerable proportion of the population of the towns and larger villages, filling nearly all public offices, and differing in nothing from other Osmanlis. The pasha of Mosul is nominated by the Porte, but is subject to the pasha of Bagdad; there is also a pasha at Solymaneah and Akra; a bey at Arbil, a musellim at Kirkook, &c. But the aboriginal inhabitants of the country, and of the whole mountain-tract that here divides Turkey from Persia, are the *Kurds*, the Carduchii of the Greeks; from them a chain of these mountains were anciently called the Carduchian or Gordyæan, and from them now the country is designated Kurdistan. Klaproth, in his *Asia Polyglotta* (Paris, 1823, 4to. p. 75), derives the name from the Persian root *kurd*, *i. e.* strong, brave. They are still, as of old, a barbarous and warlike race, occasionally yielding a formal allegiance, on the west, to the Turks, and, on the east, to the Persians, but never wholly subdued; indeed, some of the more powerful tribes, such as the Hakkary, have maintained an entire independence. Some of them are stationary in villages, while others roam far and wide, beyond the limits of their own country, as nomadic shepherds; but they are all, more or less, addicted to predatory habits, and are regarded with great dread by their more peaceful neighbours. They profess the faith of Islam, and are of the Soonee sect. All travellers have remarked many points of resemblance between them and the ancient Highlanders of Scotland. (See Mr. Ainsworth's second work, *Travels and Researches in Asia Minor, Mesopotamia*, &c. 2 vols. Lond. 1842.

The Christian population is scattered over the whole region, but is found chiefly in the north. It includes Chaldæans, who form that branch of

the Nestorians that adheres to the church of Rome, a few Jacobites, or monophysite Syrians, Armenians, &c. But the most interesting portion is the ancient church of the primitive *Nestorians*, a lively interest in which has lately been excited in the religious world by the publications of the American missionaries, especially by a work entitled *The Nestorians*, by Asahel Grant, M.D. Lond. 1841. Besides the settlements of this people in the plain of Ooroomiah to the east, and in various parts of Kurdistan, where they are in a state of vassalage, there has been for ages an independent community of Nestorians in the wildest and most inaccessible part of the country. It lies at nearly equal distances from the lakes of Van and Ooroomiah, and the Tigris, and is hemmed in on every side by tribes of ferocious Kurds; but, entrenched in their fastnesses, the Nestorians have defied the storms of revolution and desolation that have so often swept over the adjacent regions; and in their character of bold and intrepid, though rude and fierce mountaineers, have so entirely maintained their independence unto the present day, as to bear among their neighbours the proud title of *Ashiret*, 'the tributeless.' The second part of Dr. Grant's work is taken up with an elaborate attempt to prove that this interesting people are the descendants of the 'lost' ten tribes of Israel. But for a satisfactory refutation of this hypothesis, we refer the reader to an able paper by Dr. E. Robinson, in the *Amer. Bibl. Reposit.* for Oct. 1841, and Jan. 1842. [ISRAEL.] Comp. an article by the Rev. J. Perkins in the same valuable Miscellany for Jan. 1841; also his *Residence in Persia*, New York, 1843; and the recent work of Ainsworth. Another peculiar race that is met with in this and the neighbouring countries is that of the Yezidees, whom Grant and Ainsworth would likewise connect with the ten tribes; but it seems much more probable that they are an offshoot from the ancient Manichees, their alleged worship of the Evil Principle amounting to no more than a reverence which keeps them from speaking of him with disrespect. (See Homes in the *Amer. Bibl. Reposit.* for April, 1842.) Besides the dwellers in towns, and the agricultural population, there are a vast number of wandering tribes, not only of Kurds, but of Arabs, Turkomans, and other classes of robbers, who, by keeping the settled inhabitants in constant dread of property and life, check every effort at improvement; and, in consequence of this, and the influence of bad government, many of the finest portions of the country are little better than unproductive wastes. A copy of a famous history of Kurdistan, entitled *Tarikh-al-Akrad* (Akrad being the collective name of the people), was procured by Mr. Rich when in the country, and is now, along with the other valuable Oriental MSS. of that lamented traveller, preserved in the British Museum.—N. M.

2. THE ASSYRIAN EMPIRE. No portion of ancient history is involved in greater obscurity than that of the empire of Assyria. In attempting to arrange even the facts deducible from Scripture, a difficulty presents itself at the outset, arising from the ambiguity of the account given of the origin of the earliest Assyrian state in Gen. x. 11. After describing Nimrod, son of Cush, 'as a mighty one in the earth,' the historian adds (ver. 10), 'And the beginning of his kingdom (or rather, the first theatre of his dominion) was Babeh, and Erech, and Accad, and Calneh, in the land of Shinar,' *i. e. Babylonia*. Then follow the words:—מן־הארץ ההוא יצא אשור ויבן את־נינוה, which may be rendered as in the English version: 'Out of that land went forth Asshur and builded Nineveh,' or (as it is in the margin) 'out of that land he (*i. e.* Nimrod) went out into Assyria and builded Nineveh.' It is objected to the latter translation, that had the writer meant to say 'to Assyria,' he would have used a preposition, or added the ה *locale*, and written אשורה. But verbs signifying 'to go to a place' are construed with the noun in the accusative; and Noldius, in his *Concordance of Hebrew Particles* (edit. Tymp., p. 223), gives instances of the ה *locale* being sometimes omitted (comp. in Heb. 2 Sam. x. 2, with 1 Chr. xiii. 13; xix. 2). Looking at the entire context, and following the natural current of the writer's thoughts, we shall find the *second* translation yields the most congruous sense. Moses is enumerating the descendants of Ham, and it is not likely that he would interrupt the details to give an account of Asshur, a son of Shem, whose posterity are not introduced till ver. 21. Besides, in the circumstance of Asshur leaving one country to settle in another, there was nothing remarkable, for that was the case with almost all Noah's grandchildren. But if we understand it of Nimrod, both the connection and the sense will be manifest. The design obviously is to represent him as a potent monarch and ambitious conqueror. His brethren, the other sons of Cush, settled in the south, but he, advancing northward, first seized on Babylonia, and proceeding thence into Assyria (already partially colonized by the Asshurites, from whom it took its name), he built Nineveh and the other strongholds mentioned, in order to secure his conquests. This view is confirmed by a passage in Mic. v. 6, where, predicting the overthrow of Assyria by the Medes and Babylonians, the Prophet says, 'They shall devour the land of Asshur with the sword: even the land of Nimrod in the entrances thereof.' (Comp. v. 5.)

It likewise agrees with the native tradition (if we can depend on the report of Ctesias), that the founder of the Assyrian monarchy and the builder of Nineveh was one and the same person, viz. Ninus, from whom it derived its name (*q. d.* Nin's Abode), and in that case the designation of Nimrod (the Rebel) was not his proper name, but an opprobrious appellation imposed on him by his enemies. Modern tradition likewise connects Nimrod with Assyria; for while, as we have seen, the memory of Asshur is preserved in the locality of *Athur*, that place is also termed the 'city of Nimrûd,' and (as the above-mentioned dam on the Tigris is styled Nimrod's Castle) Rich informs us that 'the inhabitants of the neighbouring village of Deraweish consider him as their founder.' He adds, that the village story-tellers have a book they call the 'Kisseh-Nimrud,' or Tales of Nimrod.

It is true that the Authorized Version of Gen. x. 11 is countenanced by most of the ancient translators and by Josephus; but on the other hand, the one we have preferred is that of the Targums of Onkelos and Jerusalem, and of St. Jerome; and (among the moderns) of Bochart, Hyde, Marsham, Wells, Faber, Hales, and many

them. Yet, though Nimrod's 'kingdom' embraced the lands both of Shinar and Asshur, we are left in the dark as to whether Babylon or Nineveh became the permanent seat of government, and consequently, whether his empire should be designated that of Babylonia or that of Assyria. No certain traces of it, indeed, are to be found in Scripture for ages after its erection. In the days of Abraham, we hear of a king of Elam (*i. e.* Elymais, in the south of Persia) named Chedorlaomer, who had held in subjection for twelve years five petty princes of Palestine (Gen. xiv. 4), and who, in consequence of their rebellion, invaded that country along with three other kings, one of whom was 'Amraphel, king of *Shinar*.' Josephus says 'the Assyrians had then dominion over Asia;' and he styles these four kings merely commanders in the Assyrian army. It is possible that Chedorlaomer was an Assyrian viceroy, and the others his deputies; for at a later period the Assyrian boasted, 'Are not my princes altogether kings?' (Isa. x. 8). Yet some have rather concluded from the narrative, that by this time the monarchy of Nimrod had been broken up, or that at least the seat of government had been transferred to Elam. Be this as it may, the name of Assyria as an independent state does not again appear in Scripture till the closing period of the age of Moses. Balaam, a seer from the northern part of Mesopotamia, in the neighbourhood of Assyria, addressing the Kenites, a mountain tribe on the east side of the Jordan, 'took up his parable,' *i. e.* raised his oracular, prophetic chant, and said, 'Durable is thy dwelling-place! Yea in a rock puttest thou thy nest: nevertheless, wasted shall be the Kenite, until Asshur shall lead them captive.' In this verse, besides the play upon the word *ken* (the Hebrew for a nest), the reader may remark the striking contrast drawn between the permanent nature of the abode, and the transient possession of it by the occupants. The prediction found its fulfilment in the Kenites being gradually reduced in strength (comp. 1 Sam. xv. 6), till they finally shared the fate of the Transjordanite tribes, and were swept away into captivity by the Assyrians (1 Chr. v. 26; 2 Kings xvi. 9; xix. 12, 13; 1 Chr. ii. 55.) But as a counterpart to this, Balaam next sees a vision of retaliatory vengeance on their oppressors, and the awful prospect of the threatened devastations, though beheld in far distant times, extorts from him the exclamation, 'Ah! who shall live when God doeth this? For ships shall come from the coast of Chittim, and shall afflict ASSHUR, and shall afflict Eber, but he also [the invader] shall perish for ever.'

This is not without obscurity; but it has commonly been supposed to point to the conquest of the regions that once formed the Assyrian empire, first by the Macedonians from Greece, and then by the Romans, both of whose empires were in their turn overthrown.

In the time of the Judges, the people of Israel became subject to a king of Mesopotamia, Chushan-rishathaim (Judg. iii. 8), who is by Josephus styled King of the Assyrians; but we are left in the same ignorance as in the case of Chedorlaomer, as to whether he was an independent sovereign or only a vicegerent for another. The eighty-third Psalm (ver. 9), mentions Ashur as one of the nations leagued against Israel; but as the date of that composition is unknown, nothing certain can be founded on it. The first king of Assyria alluded to in the Bible, is he who reigned at Nineveh when the prophet Jonah was sent thither (Jon. iii. 6). Hales supposes him to have been the father of Pul, the first Assyrian monarch *named* in Scripture, and dates the commencement of his reign B.C. 821. By that time the metropolis of the empire had become 'an exceeding great' and populous city, but one pre-eminent in wickedness (Jon. i. 2; iii. 3; iv. 11).

The first expressly recorded appearance of the Assyrian power in the countries west of the Euphrates is in the reign of Menahem, king of Israel, against whom 'the God of Israel stirred up the spirit of *Pul* (or *Phul*), king of Assyria' (1 Chron. v. 26), who invaded the country, and exacted a tribute of a thousand talents of silver 'that his hand' *i. e.* his favour, 'might be with him to confirm the kingdom in his hand' (2 Kings xv. 19, 20). Newton places this event in the year B.C. 770, in the twentieth year of Pul's reign, the commencement of which he fixes in the year B.C. 790. As to his name, we find the syllable *Pal*, *Pel*, or *Pul* entering into the names of several Assyrian kings (*e. g. Pileser*, Sardana*pal*-us); and hence some connect it with the Persian '*bala*,' *i. e.* high, exalted, and think it may have been part of the title which the Assyrian monarchs bore. Hales conjectures that Pul may have been the second *Belus* of the Greeks, his fame having reached them by his excursions into Western Asia. About this period, we find the prophet Hosea making frequent allusions to the practice both of Israel and Judæa, to throw themselves for support on the kings of Assyria. In ch. v. 13; x. 6, our version speaks of their specially seeking the protection of a 'king Jareb,' but the original there is very obscure; and the next Assyrian monarch mentioned by name is *Tiglath-pileser*. The supposition of Newton is adopted by Hales, that at Pul's death his dominions were divided between his two sons, Tiglath-pileser and Nabonassar, the latter being made ruler at Babylon, from the date of whose government or reign the celebrated *era of Nabonassar* took its rise, corresponding to B.C. 747. The name of the other is variously written Tiglath and Tilgath, Pileser and Pilneser: the etymology of the first is unknown (some think it has a reference to the river Dijlath, *i. e.* the Tigris). Pileser signifies in Persian 'exalted prince.' When Ahaz, king of Judah, was hard pressed by the combined forces of Pekah, king of Israel, and Rezin, king of Damascene-Syria, he purchased Tiglath-pileser's assistance with a large sum, taken out of his own and the Temple treasury. The Assyrian king accordingly invaded the territories of both the confederated kings, and annexed a portion of them to his own dominions, carrying captive a number of their subjects (2 Kings xv. 29; xvi. 5-10; 1 Chr. v. 26; 2 Chr. xxviii. 16; Isa. vii 1-11; comp. Amos i. 5; ix. 7). His successor was *Shalman* (Hos. x. 4), *Shalmaneser* or *Salmanassar*, the Enemessar of the apocryphal book Tobit (ch. i. 2). He made Hoshea, king of Israel, his tributary vassal (2 Kings xvii. 3); but finding him secretly negotiating with So or Sobaco (the Sabakoph of the monuments), king of Egypt, he laid siege to the Israelitish capital,

Samaria, took it after an investment of three years (B.C. 719), and then reduced the country of the ten tribes to a province of his empire, carrying into captivity the king and his people, and settling Cuthæans from Babylonia in their room (2 Kings xvii. 3-6; xviii. 9-11). Hezekiah, king of Judah, seems to have been for a time his vassal (2 Kings xviii. 7); and we learn from the Tyrian annals, preserved by Menander of Ephesus (as cited by Josephus, *Antiq.* x. 14. 2), that he subdued the whole of Phœnicia, with the exception of insular Tyre, which successfully resisted a siege of five years. The empire of Assyria seems now to have reached its greatest extent, having had the Mediterranean for its boundary on the west, and including within its limits Media and Kir on the north, as well as Elam on the south (2 Kings xvi. 9; xvii. 6; Isa. xx. 6). In the twentieth chapter of Isaiah (ver. 1), there is mention of a king of Assyria, *Sargon*, in whose reign Tartan besieged and took Ashdod in Philistia; and as Tartan is elsewhere spoken of (2 Kings xviii. 17) as a general of Sennacherib, some have supposed that Sargon is but another name of that monarch, while others would identify him either with Shalmaneser, or with Esarhaddon, Sennacherib's successor. But the correctness of all these conjectures may fairly be questioned; and we adhere to the opinion of Gesenius (*Comment. on Isa.* in loc.), that Sargon was a king of Assyria, who succeeded Shalmaneser, and had a short reign of two or three years. He thinks the name may be equivalent to *Ser-jauneh*, 'Prince of the Sun.' Von Bohlen prefers the derivation of *sergun*, 'gold-coloured.' His attack on Egypt may have arisen from the jealousy which the Assyrians entertained of that nation's influence over Palestine ever since the negotiation between its king So, and Hoshea, king of Israel. From many incidental expressions in the book of Isaiah we can infer that there was at this time a strong Egyptian party among the Jews, for that people are often warned against relying for help on Egypt, instead of simply confiding in Jehovah (Isa. xxx. 2; xxxi. 1; comp. xx. 5, 6). The result of Tartan's expedition against Egypt and Ethiopia was predicted by Isaiah while that general was yet on the Egyptian frontier at Ashdod (Isa. xx. 1-4); and it is not improbable that it is to this Assyrian invasion that the prophet Nahum refers when he speaks (iii. 8-10) of the subjugation of No, *i. e.* No-Ammun, or Thebes, the capital of Upper Egypt, and the captivity of its inhabitants. The occupation of the country by the Assyrians, however, must have been very transient, for in the reign of Sargon's successor, *Sennacherib*, or *Sancherib*, we find Hezekiah, king of Judah, throwing off the Assyrian yoke, and allying himself with Egypt (2 Kings xviii. 7, 21). This brought against him Sennacherib with a mighty host, which, without difficulty, subdued the fenced cities of Judah, and compelled him to purchase peace by the payment of a large tribute. But 'the treacherous dealer dealt very treacherously' (Isa. xxxiii. 1); and, notwithstanding the agreement, proceeded to invest Jerusalem. In answer, however, to the prayers of the 'good king' of Judah, the Assyrian was diverted from his purpose, partly by the 'rumour' (Isa. xxxvii. 6) of the approach of Tirhakah, king of Ethiopia, and partly by the sudden and miraculous destruction of a great part of his army (2 Kings xviii. 13-37; xix.; Isa. xxxvi. and xxxvii.). He himself fled to Nineveh, where, in course of time, when worshipping in the temple of his god Nisroch, he was slain by his sons Adrammelech and Sharezer, the parricides escaping into the land of Armenia—a fact which is preserved in that country's traditionary history [ARARAT]. Regarding the period of Sennacherib's death chronologists differ. Hales, following the apocryphal book of Tobit (i. 21), places it fifty-five days after his return from his Jewish expedition; but Gesenius (*Comment. on Isa.* p. 999) has rendered it extremely probable that it did not take place till long after. He founds this opinion chiefly on a curious fragment of Berosus, preserved in the Armenian translation of the *Chronicle* of Eusebius. It states that, after Sennacherib's brother had governed Babylon as the Assyrian viceroy, the sovereignty was successively usurped by Acises, Merodach, or Berodach Baladan (Isa. xxxix. 1; 2 Kings xx. 12), and Elibus or Belibus. But, after three years, Sennacherib regained dominion in Babylonia, and appointed as viceroy his own son Assordan, the Esarhaddon of Scripture. This statement serves to explain how there was in Hezekiah's time a king at Babylon, though, both before and after, it was subject to Assyria. The only objection to it is, that Isaiah relates the murder of Sennacherib before Merodach Baladan's embassy to Jerusalem. But to this Gesenius replies that that arrangement is followed by the prophet in order to conclude the history of the Assyrian monarch, so as not to have to return to it again. Sennacherib is obviously the king of Arabia and Assyria mentioned by Herodotus under the name of *Sanacharibos*, of whom he relates (ii. 141) that 'he attacked Egypt with a mighty army, but that on his arrival at Pelusium his camp became infested during night with so vast a number of mice, that their quivers and bows, together with what secured their shields to their arms, were gnawed in pieces; and finding themselves, in the morning, defenceless, they fled in confusion, and lost great numbers of their men. There is now to be seen (he adds) in the temple of Vulcan a marble statue of this king, having a mouse in his hand, and with this inscription, "Whoever thou art, learn from my fortune to reverence the gods."' The king of Egypt was Sethos, or So, priest of Vulcan. Prideaux and others suppose that we have here a corruption of the story of the miraculous destruction of the Assyrian army before Jerusalem, but the point is open to doubt. Gesenius is inclined to identify Sennacherib with the Sardanapalus to whom Arrian (*Exped. of Alex.* ii. 5) and Strabo (xiv. 4. 8) ascribe the erection of the cities of Anchiale and Tarsus in Cilicia, after his successful suppression of a revolt of the Greeks there. But there is much confusion in the ancient accounts of Sardanapalus, and some have supposed that the name was a royal title, common to all the Assyrian kings, *q. d. Sar-danabala*, *i. e.* wise, exalted prince. As to the etymology of 'Sennacherib,' Von Bohlen suggests its affinity to the Persian 'Sängerb,' *i. e.* 'splendour of the conqueror.'

Sennacherib was succeeded by his son Esarhaddon, or Assarhaddon, who had been his father's viceroy at Babylon (2 Kings xix. 37; Isa. xxxvii.

38). He is the Sacherdon, or Sarchedon, of Tobit (i. 21), and the Asaradinus of Ptolemy's Canon. Hales regards him as the first Sardanapalus. The only notice taken of him in Scripture is that he settled some colonists in Samaria (Ezra iv. 2), and as (at ver. 10) that colonization is ascribed to the 'great and noble Asnapper,' it is supposed that that was another name for Esarhaddon, but it may have been one of the great officers of his empire. It seems to have been in his reign that the captains of the Assyrian host invaded and ravaged Judah, carrying Manasseh, the king, captive to Babylon. The subsequent history of the empire is involved in almost as much obscurity as that of its origin and rise. The Medes had already shaken off the yoke, and the Chaldæans soon appear on the scene as the dominant nation of Western Asia; yet Assyria, though much reduced in extent, existed as an independent state for a considerable period after Esarhaddon. Hales, following Syncellus, makes him succeeded by a prince called Ninus (B.C. 667), who had for his successor Nebuchodonosor (B.C. 658), for the transactions of whose reign, including the expedition of his general Holofernes into Judæa, Hales relies on the apocryphal book of Judith, the authority of which, however, is very questionable. The *last* monarch was Sarac, or Sardanapalus II. (B.C. 636), in whose reign Cyaxares, king of Media, and Nabopolassar, viceroy of Babylon, combined against Assyria, took Nineveh, and, dividing what remained of the empire between them, reduced Assyria Proper to a province of Media (B.C. 606).

In this brief sketch of the history of the Assyrian empire, we have mainly followed the writers of the Old Testament, from whom alone any consistent account can be derived. The original sources of profane history on this subject are Herodotus and Ctesias, but every attempt to reconcile their statements with those of Scripture, or even with each other, has hitherto failed. The former fixes the duration of the Assyrian dominion in Upper Asia at 520 years (Herod. i. 95); while the latter again assigns to the Assyrian empire, from Ninus to Sardanapalus, no less a period than 1305 years (Diodor. Sicul. ii. 21). The authority of Ctesias, however, is very generally discredited (it was so even by Aristotle), though he has recently found a defender in Dr. Russell, in his *Connection of Sacred and Profane History*. The truth is (as is remarked by the judicious Heeren) that the accounts of both these historians are little better than mere traditions of ancient heroes and heroines (witness the fables about Semiramis!), without any chronological data, and entirely in the style of the East. To detail all the fanciful hypotheses which have been propounded, with the view of forming out of them a consistent and coherent narrative, forms no part of our present design. The curious in these speculations we refer to the essays of Pezron, Sevin, Freret, and Debrosse, in the *Mémoires de l'Acad. des Inscriptions*; Fourmont, *Réflexions Antiques sur les Histoires des Anciens Peuples*; Volney, *Recherches Nouvelles sur l'Hist. Ancienne*—a very valuable elucidation of the chronology of Herodotus.

The political constitution of the Assyrian empire was no doubt similar to that of other ancient states of the East, such as Chaldæa and Persia. The monarch, called 'the great king' (2 Kings xviii. 19; Isa. xxxvi. 4), ruled as a despot, surrounded with his guards, and only accessible to those who were near his person (Diod. Sicul. ii. 21, 23). Under him there were provincial satraps, called in Isa. x. 8, 'princes,' of the rank and power of ordinary kings. The great officers of the household were commonly eunuchs (comp. Gesenius on Isa. xxxvi. 2). The religion of the Assyrians was, in its leading features, the same as that of the Chaldæans, *viz.* the symbolical worship of the heavenly bodies, especially the planets. In Scripture there is mention of Nisroch, Adrammelech, Anammelech, Nebchaz, Tartak, &c., as the names of idols worshipped by the natives either of Assyria Proper or of the adjacent countries which they had subdued (see Gesenius *On Isaiah*, vol. ii. p. 347). The language did not belong to the Semitic, but to the Medo-Persian family. As Aramaic, however, was spoken by a large part of the western population, it was probably understood by the great officers of state, which accounts for Rabshakeh addressing Hezekiah's messengers in Hebrew (2 Kings xviii. 26), though the Rabbins explain the circumstance by supposing that he was an apostate Jew.—N. M.

ASTARTE. [ASHTORETH.]

ASTRONOMY (ἀστήρ and νόμος), that science which treats of the laws of the stars, or heavenly bodies, considered in reference to their magnitude, movements, and respective influence one upon another. Astronomy may be divided into empirical and scientific; the first being founded on the apparent phenomena and movements of the heavenly bodies, the second upon their real phenomena and movements. The knowledge of the ancients was limited to the first; or if they possessed any truths connected with the second, they were nothing more than bold or fortunate guesses, which were not followed out to their legitimate consequences, nor formed into a systematic whole.

The cradle of astronomy is to be found in Asia. The few and imperfect notices which have come down to these times, give a concurrent testimony in favour of this statement; and therewith agrees the fact, that the climate, the mode of life, and the occupations of the Oriental nations that were first civilized, prompted them to watch and observe the starry heavens. The Chaldæans are accounted to have excelled in astronomical knowledge.

Pliny, in his celebrated enumeration (*Hist. Nat.* vii. 57) of the inventors of the arts, sciences, and conveniences of life, ascribes the discovery of astronomy to Phœnician mariners: 'Siderum observationem in navigando Phœnices;' and in the same chapter he speaks of astronomical observations found on burnt bricks (*coctilibus laterculis*) among the Babylonians, which ascend to above 2200 years B.C. Alexander sent to Aristotle from Babylon a series of astronomical observations, extending through 1900 years. The astronomical knowledge of the Chinese and Indians goes up to a still earlier period (Plin. *Hist. Nat.* vi. 17-21). From the remote East astronomy travelled in a westerly direction. The Egyptians at a very early period had some acquaintance with it. To them is to be ascribed a pretty near determination of the length of the year, as consisting of 365 days 6 hours

(Herodotus, ii. 4). The Egyptians were the teachers of the Greeks.

Some portion of the knowledge which prevailed on the subject would no doubt penetrate to and become the inheritance of the Hebrews; who do not, however, appear to have possessed any views of astronomy which raised their knowledge to the rank of a science, or made it approach to a more correct theory of the mechanism of the heavens than that which was generally held. Nor, if the Bible is taken as the witness, do the ancient Israelites appear to have had extensive knowledge in the matter. They possessed such an acquaintance with it as tillers of the ground and herdsmen might be expected to form while pursuing their business, having, as was natural, their minds directed to those regions of the heavens which night after night brought before their eyes: accordingly, the peculiar Oriental names of the constellations are derived from circumstances connected with a nomade people. A peculiarity of the greatest importance belongs to the knowledge which the Israelites display of the heavens, namely, that it is thoroughly imbued with a religious character; nor is it possible to find in any other writings, even at this day, so much pure and elevated piety, in connection with observations on the starry firmament, as may be gathered even in single books of the Bible (Amos v. 8; Psalm xix.).

As early as the days of the patriarchs the minds of pious men were attracted and enraptured by the splendour of the skies (Gen. xxxvii. 9); and imagery borrowed from the starry world soon fixed itself firmly in human speech. The sun and moon were distinguished from other heavenly bodies, in consequence of their magnitude and their brilliancy, as being the lights of heaven and earth (Gen. i. 16); and from the course of the moon time was divided into parts, or months, of which the oldest form of the year, the lunar, was made up. Every new moon was greeted with religious festivities. While, however, the sun in his power, the moon walking in brightness, and all the stars of light conspired to excite devotion, their influence on the hearts of the ancient Israelites, who were happily instructed in a knowledge of the true God, the one Jehovah, the sole Creator of the world, stopped short of that idolatrous feeling, and was free from those idolatrous practices to which, among nations of less religious knowledge—and especially among their own neighbours, the Babylonians, for instance—it is unhappily known to have led.

As early as the time of the composition of perhaps the oldest book in the Bible, namely, that of Job, the constellations were distinguished one from another, and designated by peculiar and appropriate names (Job ix. 9; xxxviii. 31). In the Bible are found, 1. (הילל) the morning star, the planet Venus (Isa. xiv. 12; Rev. ii. 28); 2. כימה (Job ix. 9; xxxviii. 35; Amos v. 8), the Pleiades; 3. כסיל, Orion, a large and brilliant constellation, which stands in a line with the Pleiades. The Orientals seem to have conceived of Orion as a huge giant who had warred against God, and as bound in chains to the firmament of heaven (Job xxxviii. 31); and it has been conjectured that this notion is the foundation of the history of Nimrod (Gesen. *Comment. zu Isaiah*, i. 457); 4. עש (Job ix. 9), the Great Bear, which has still the same name among the Arabians (Niebuhr, b. 113). In the common version No. 4 is rendered 'Arcturus,' No. 3 'Orion,' and No 2 'Pleiades.' See Job xxxviii. 32, where the sons of Arcturus are the three stars in the tail of the Bear, which stand in a curved line to the left. 5. נחש (Job xxvi. 13, 'the crooked serpent'), Draco, between the Great and the Little Bear; a constellation which spreads itself in windings across the heavens; 6. Διόσκουροι (Acts xxviii. 11), Gemini, or the Twins, on the belt of the Zodiac, which is mentioned in 2 Kings xxiii. 5, under the general name of 'the planets'—מזלות; a word which signifies dwellings, stations in which the sun tarries in his apparent course through the heavens. (Compare Gen. xxxvii. 9.) The entire body of the stars was called 'the host of heaven' צבא השמים (Isa. xl. 26; Jer. xxxiii. 22).

No trace is found in the Old Testament of a division of the heavenly bodies into planets, fixed stars, and comets; but in Jude 13, the phrase 'wandering stars' (ἀστέρες πλανῆται) is employed figuratively.

After the Babylonish exile, the Jews were compelled, even for the sake of their calendar, to attend at least to the course of the moon, which became an object of study, and delineations were made of the shapes that she assumes (*Mischna rosch hasch.* ii. 8).

At an early period of the world the worship of the stars arose from that contemplation of them which in every part of the globe, and particularly in the East, has been found a source of deep and tranquil pleasure. 'Men by nature' 'deemed either fire or wind, or the swift air, or the circle of the stars, or the violent water, or the lights of heaven, to be the gods which govern the world;' 'with whose beauty being delighted, they took them to be gods' (Wisdom xiii. 2). Accordingly, the religion of the Egyptians, of the Chaldees, Assyrians, and the ancient Arabians, was nothing else than star-worship, although in the case of the first its origin is more thickly veiled. The sun, moon, and seven planets (these, that is, of the fixed stars which shine with especial brightness) excited most attention, and won the greatest observance. We thus find among the Babylonians Jupiter (Belus, גד, Isa. lxv. 11), Venus (מני, Isa. lxv. 11, where the first is rendered in the common version 'that troop,' the second 'that number'). Both these were considered good principles. Mercury, honoured as the secretary of heaven, is also found in Isa. xlvi. 1, 'Nebo stoopeth;' Saturn (כיון, Amos v. 26); Mars (נרגל, 2 Kings xvii. 30): the two last were worshipped as principles of evil. The character of this worship was formed from the notions which were entertained of the good or ill which certain stars occasioned. Astrology found its sphere principally in stars connected with the birth of individuals. Thus Herodotus (ii. 82) states that among the Egyptians every day was under the influence of some god (some star), and that according to the day on which each person was born, so would be the events he would meet with, the character he would bear, and the period of his death. Astrology concerned itself also with the determination of lucky and unlucky days: so in Job iii. 3, 'Let the day perish wherein I was born;' and Gal. iv. 10, 'Ye observe days, and

months, and times, and years.' The Chaldæans, who studied the stars at a very early period, were much given to astrology, and were celebrated for their skill in that pretended science (Isa. xlvii. 13). In Daniel ii. 27; v. 11, the calculators of nativities (נזרין) are named. Diodorus Siculus (ii. 30, 31) says of the Chaldæans, 'They assert that the greatest attention is given to the five stars called planets, which they name interpreters; so called because, while the other stars have a fixed path, they alone, by forming their own course, show what things will come to pass, thus interpreting to men the will of the gods; for to those who study them carefully they foretell events, partly by their rising, partly by their setting, and also by their colour. Sometimes they show heavy winds, at others rains, at others excess of heat. The appearance of comets, eclipses of the sun, earthquakes, and, in general, anything extraordinary, has in their opinion an injurious or a beneficial effect, not only on nations and countries, but kings, and even common individuals: and they consider that those stars contribute very much of good or of ill in relation to the births of men: and in consequence of the nature of these things, and of the study of the stars, they think they know accurately the events that befal mortals.' Comets were for the most part considered heralds of evil tidings (Joseph. *De Bell. Jud.* vi. 5. 3). The Orientals of the present day hold astrology in honour (Niebuhr, p. 120); and stipendiary astrologers form a part of their court (Kämpfer, *Amœn.* p. 57, 82). On the subject of this article may be consulted Hammer, *Ueber die Sternbilder der Araber*; Ideler, *Untersuchungen über den Ursprung, &c. der Sternamen*, Berlin, 1809; also his *Unter. über die Astron. beobacht der Alten.* Berlin, 1806; and Weidler, *Hist. Astronom.* Viteb. 714.—J. R. B.

ATAD, the person on whose threshing-floor the sons of Jacob and the Egyptians who accompanied them performed their final act of solemn mourning for Jacob (Gen. L. 11); on which account the place was afterwards called Abel-Mizraim, 'the mourning of the Egyptians.'

ATAD. [THORN].

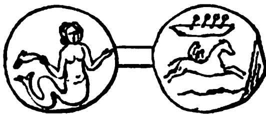
ATAROTH (עֲטָרוֹת). Several places of this name (which means *crowns*) occur in the Scriptures. 1. *Ataroth-beth-Joab*, in the tribe of Judah (1 Chron. ii. 54). 2. *Ataroth*, on the borders of Ephraim (Josh. xvi. 2, 7), which some identify with, and others distinguish from, the *Ataroth-Addar* of the same tribe mentioned in Josh. xvi. 5; xviii. 13. 3. *Ataroth*, in the tribe of Gad, beyond the Jordan (Num. xxxii. 3, 34). 4. *Ataroth-Shophan*, in the same tribe (Num. xxxii. 35), which some identify with the preceding; but it appears more likely that the addition was used to distinguish the one from the other. Eusebius and Jerome (*Onomasticon*, *s. v.* Ataroth, Ἀταρώθ) mention two places in the tribe of Benjamin called Ataroth; but they do not occur in Scripture. The site of one of these appears to have been discovered by Professor Robinson (*Bib. Researches*, ii. 314) under the name of *Atara*. Another place of the same name (Atara) be found about six miles N. by W. of Bethel, which appears to represent the Ataroth of Ephraim (Josh. xvi. 2, 7). It is now a large village on the summit of a high hill (Robinson, iii. 8).

ATBACH (אַטְבַּח) is not a real word, but a fictitious cabbalistic term, denoting by its very letters the mode of changing one word into another by a peculiar commutation of letters. The system on which it is founded is this: as all the letters have a numerical value, they are divided into three classes, in the first of which every pair makes the number *ten*; in the second, *a hundred*; and in the third, *a thousand*.

Thus: אט, בח, גז, דו, every pair making ten.
יצ, כפ, לע, מס, „ a hundred.
קץ, רף, שן, תם, „ a thousand

Three letters only cannot enter into any of these numerical combinations, ה, נ, and ך. The first two are nevertheless coupled together; and the last is suffered to stand without commutation. The commutation then takes place between the two letters of every pair; and the term *Atbach* thus expresses that א is taken for ט, and ב for ח, and conversely. To illustrate its application, the obscure word מנון, in Prov. xxix. 21, may be turned by Atbach into סהדה, *testimony*. Buxtorf, *De Abbreviaturis*, s. v.

ATHBASH (אַתְבַּשׁ) is a similar term for a somewhat different principle of commutation. In this, namely, the letters are also mutually interchanged by pairs; but every pair consists of a letter from each end of the alphabet, in regular succession. Thus, as the technical term Athbash shows, א and ת, and ב and ש, are interchangeable; and so on throughout the whole series. By writing the Hebrew alphabet twice in two parallel lines, but the second time in an inverse order, the two letters which form every pair will come to stand in a perpendicular line. This system is also remarkable on account of Jerome having so confidently applied it to the word *Sheshak*, in Jer. xxv. 26. His words are, 'Quomodo *Babel* intelligatur *Sesach*, non magnopere laborabit qui Hebrææ linguæ parvam saltem habuerit scientiam.' He then propounds the same system of commutation as that called Athbash (without giving it that name however, and without adducing any higher authority for assuming this mode of commutation, than the fact that it was customary to learn the Greek alphabet first straight through, and then, by way of ensuring accurate retention, to repeat it by taking a letter from each end, alternately), and makes ששך to be the same as בבל. (See Rosenmüller's *Scholia*, ad loc.) Hottinger possessed an entire Pentateuch explained on the principle of Athbash (*Thesaur. Philol.* p. 450).



There is also another system of less note, called ALBAM (אלבם), which is only a modification of the preceding. For, in it, the alphabet is divided into halves, and one portion placed over the other in the natural order, and the pairs are formed out of those letters which would then stand in a row together.

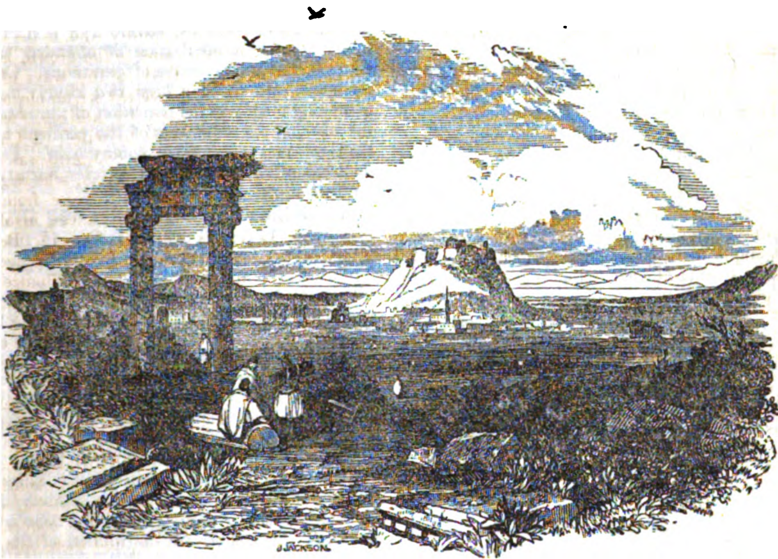
All these methods belong to that branch of the Cabbala which is called תמורה, *commutation*.—J. N.

ATERGATIS (Ἀτεργάτης, or Ἀταργάτις) is the name of a Syrian goddess, whose temple (Ἀτεργατεῖον) is mentioned in 2 Macc. xii. 26. That temple appears, by comparing 1 Macc. v. 43, to have been situated at Ashteroth-Karnaim. Her worship also flourished at Mabûg (*i. e.* Bam-

byce, afterwards called Hierapolis) according to Pliny (*Hist. Nat.* v. 19).

There is little doubt that Atergatis is the same divinity as Derketo. Besides internal evidences of identity, Strabo incidentally cites Ctesias to that effect (xvi. p. 1132); and Pliny uses the terms 'Prodigiosa Atergatis, Græcis autem Derceto dicta' (l. c.). We read that Derketo was worshipped in Phœnicia and at Ascalon under the form of a woman with a fish's tail, or with a woman's face only and the entire body of a fish; that fishes were sacred to her, and that the inhabitants abstained from eating them in honour of her. These facts are found in Lucian (*De Dea Syria*, xiv.), and, together with a mythological account of their origin, in Diodorus (ii. 4). Further, by combining the passage in Diodorus with Herodotus (i. 105), we may legitimately conclude that the Derketo of the former is the Venus Urania of the latter. Atergatis is thus a name under which they worshipped some modification of the same power which was adored under that of Ashtoreth. That the Ἀτεργατεῖον of 2 Macc. xii. 26 was at Ashteroth-Karnaim, shows also an immediate connection with Ashtoreth. Whether, like the latter, she bore any particular relation to the moon, or to the planet Venus, is not evident. Macrobius makes Adargatis to be the *earth* (which as a symbol is analogous to the *moon*), and says that her image was distinguished from that of the sun by rays 'sursum versum inclinatis, monstrando radiorum vi superne missorum enasci quæcunque terra progenerat' (*Saturnal.* i. 23). Creuzer maintains that those representations of this goddess which contain parts of a fish are the most ancient; and endeavours to reconcile Strabo's statement that the Syrian goddess of Hierapolis was Atergatis, with Lucian's express notice that the former was represented under the form of an entire woman, by distinguishing between the forms of different periods (*Symbolik*, ii. 68). This fish-form shows that Atergatis bears some relation, perhaps that of a female counterpart, to DAGON.

No satisfactory etymology of the word has been discovered. That which assumes that Atergatis is אדיר דג *addîr dag*, i. e. magnificent fish, which has often been adopted from the time of Selden down to the present day, cannot be taken exactly in that sense. The syntax of the language requires, as Michaelis has already objected to this etymology (*Orient. Biblioth.* vi. 97), that an adjective placed before its subject in this manner must be the *predicate* of a proposition. The words therefore would mean 'the fish *is* magnificent' (Ewald's *Hebr. Gram.* § 554). Michaelis himself, as he found that the Syriac name of some idol of Haran was תרעתא, which might mean *aperture*, asserts that that is the Syriac form of Derketo, and brings it into connection with the great *fissure* in the earth, mentioned in Lucian (l. c. xiii.), which swallowed up the waters of the flood (see his edition of Castell's *Lex. Syr.* p. 975). On the other hand, Gesenius (*Thesaur.* sub voce דגון) prefers considering Derketo to be the Syriac דרכתא, for דגתא *fish*; and it is certain that such an intrusion of the Resh is not uncommon in Aramaic.—J. N.



ATHALIAH (עֲתַלְיָה or עֲתַלְיָהוּ *whom Jehovah remembered*; Sept. Γοθολία), daughter of Ahab, king of Israel, doubtless by his idolatrous wife Jezebel. She is also called the daughter of Omri (2 Chron. xxii. 2), who was the father of Ahab; but by a comparison of texts it would appear that she is so called only as being his grand-daughter. Athaliah became the wife of Jehoram, the son of Jehoshaphat, king of Judah. This marriage may fairly be considered the act of the parents; and it is one of the few stains upon the character of the good Jehoshaphat that he was so ready, if not anxious, to connect himself with the idolatrous house of Ahab. Had he not married the heir of his crown to Athaliah, many evils and much bloodshed might have been spared to the royal family and to the kingdom. When Jehoram came to the crown, he, as might be expected, 'walked in the ways of the house of Ahab,' which the sacred writer obviously attributes to this marriage, by adding, 'for he had the daughter of Ahab to wife' (2 Chron. xxi. 6). This king died B.C. 885, and was succeeded by his youngest son Ahaziah, who reigned but one year, and whose death arose from his being, by blood and by circumstances, involved in the doom of Ahab's house [AHAZIAH]. Before this Athaliah had acquired much influence in public affairs, and had used that influence for evil; and when the tidings of her son's untimely death reached Jerusalem, she resolved to seat herself upon the throne of David, at whatever cost. To this end she caused all the male branches of the royal family to be massacred (2 Kings xi. 1); and by thus shedding the blood of her own grandchildren, she undesignedly became the instrument of giving completion to the doom on her father's house, which Jehu had partially accomplished, B.C. 884. One infant son of Ahaziah, however, was saved by his aunt Jehosheba, wife of the high-priest Jehoiada, and was concealed within the walls of the temple, and there brought up so secretly that his existence was unsuspected by Athaliah. But in the seventh year (B.C. 878) of her blood-stained and evil reign, the sounds of unwonted commotion and exulting shouts within the Temple courts drew her thither, where she beheld the young Joash standing as a crowned king by the pillar of inauguration, and acknowledged as sovereign by the acclamations of the assembled multitude. Her cries of 'Treason!' failed to excite any movement in her favour, and Jehoiada, the high-priest, who had organized this bold and successful attempt, without allowing time for pause, ordered the Levitical guards to remove her from the sacred precincts to instant death (2 Kings xi.; 2 Chron. xxi. 6; xxii. 10-12; xxiii.).

ATHENS. This celebrated city, as the birthplace of Plato, and through him so widely influential on Judaism and Christianity, deserves something else than a geographical notice here. We shall briefly allude to the stages of her history, and remark on some of the causes of her pre-eminent greatness in arms, arts, and intellectual subtlety.

The earlier and more obscure period of the Gre-

eian province named Attica reaches down nearly to the final establishment of democracy in it. Yet we know enough to see that the foundations of her greatness were then already laid. Even the unfertile soil and dry atmosphere of Attica, in connection with the slender appetite of the people, have been thought as favourable to their mental development, as the fertility of the neighbouring Bœotia was injurious to its voracious inhabitants. The barrenness of the soil, moreover, prevented invaders from coveting it; so that through a course of ages the population remained unchanged, and a moral union grew up between the several districts. To a king named Theseus (whose deeds are too much mixed with fable to be narrated as history) is ascribed the credit of uniting all the country-towns of Attica into a single state, the capital of which was Athens. This is the first political event that we can trust as historical, although its date and circumstances are by no means free from obscurity.

The population of this province was variously called Pelasgian, Achaian, and Ionian, and probably corresponds most nearly to what was afterwards called Æolian (Prichard, *Phys. Hist. of Man*, iii. p. 494). The first name carries the mind back to an extremely primitive period. When the Dorians, another tribe of Greeks of very different temperament, invaded and occupied the southern peninsula, great numbers of its Achaian inhabitants took refuge in Attica. Shortly after, the Dorians were repulsed in an inroad against Athens, an event which has transmitted to legendary renown the name of King Codrus; and thenceforward Athens was looked upon as the bulwark of the Ionian tribes against the barbarous Dorians. Overloaded with population, Attica now poured forth colonies into Asia; some of which, as Miletus, soon rose to great eminence, and sent out numerous colonies themselves; so that Athens was reverenced as a mother of nations, by powerful children scattered along the western and northern coasts of Anatolia.

Dim tradition shows us isolated priesthoods and elective kings in the earliest times of Attica; these however gradually gave way to an aristocracy, which in a series of years established themselves as a hereditary ruling caste. But a country 'ever unravaged' (and such was their boast) could not fail to increase in wealth and numbers; and after two or three centuries, while the highest commoners pressed on the nobles, the lowest became overwhelmed with debt. The disorders caused by the strife of the former were vainly sought to be stayed by the institutions of Draco; the sufferings of the latter were ended, and the sources of violence dried up, by the enactments of Solon. Henceforth the Athenians revered *the laws of Solon* (νόμοι) as the groundwork of their whole civil polity; yet they retained by the side of them *the ordinances of Draco* (θεσμοί) in many matters pertaining to religion. The date of Solon's reforms was probably B.C. 594.

The usurpation of Pisistratus and his sons made a partial breach in the constitution; but upon their expulsion, a more serious change was effected by Cleisthenes, head of the noble house of the Alcmæonidæ (B.C. 508), almost in the same year in which Tarquin was expelled from Rome. An entirely new organization of the Attic tribes was framed, which destroyed whatever remained of the power of the nobles as an order, and established among the freemen a democracy, in fact, as well as in form. Out of this proceeded all the good and all the evil with which the name of Athens is associated; and though greatness which shot up so suddenly could not be permanent, there can be no difficulty in deciding that the good greatly preponderated.

Very soon after this commenced hostilities with Persia; and the self-denying, romantic, successful bravery of Athens, with the generous affability and great talents of her statesmen, soon raised her to the head of the whole Ionian confederacy. As

long as Persia was to be feared, Athens was loved; but after tasting the sweets of power, her sway degenerated into a despotism, and created at length, in the war called the Peloponnesian, a coalition of all Dorian and Æolian Greece against her (B.C. 431). In spite of a fatal pestilence and the revolt of her Ionian subjects, the naval skill of Athenian seamen and the enterprise of Athenian commanders proved more than a match for the hostile confederacy; and when Athens at last fell (B.C. 404), she fell by the effects of internal sedition more truly than by Spartan lances or Persian gold, or even by her own rash and over-grasping ambition. The demoralizing effects of this war on all Greece were infinitely the worst result of it, and they were transmitted to succeeding generations. It was substantially a *civil* war in every province; and, as all the inhabitants of Attica were every summer forced to take refuge in the few fortresses they possessed, or in Athens itself, the simple countrymen became transformed into a hungry and profligate town rabble.

From the earliest times the Ionians loved the lyre and the song, and the hymns of poets formed the staple of Athenian education. The constitution of Solon admitted and demanded in the people a great knowledge of law, with a large share in its daily administration. Thus the acuteness of the lawyer was grafted on the imagination of the poet. These are the two intellectual elements out of which Athenian wisdom was developed; but it was stimulated and enriched by extended political action and political experience. History and Philosophy, as the words are understood in modern Europe, had their birth in Athens about the time of the Peloponnesian war. Then first, also, the Oratory of the bar and of the popular assembly was systematically cultivated, and the elements of mathematical science were admitted into the education of an accomplished man. This was the period of the youth of Plato, whose philosophy was destined to leave so deep an impress on the Jewish and Christian schools of Alexandria. Its great effort was to unite the contemplative mysticism of Eastern sages with the accurate science of Greece; to combine, in short, the two qualities—intellectual and moral, argumentative and spiritual—into a single harmonious whole: and whatever opinion may be formed of the success which attended the experiment, it is not wonderful that so magnificent an aim attracted the desires and riveted the attention of thoughtful and contemplative minds for ages afterwards.

In the imitative arts of Sculpture and Painting, as well as in Architecture, it need hardly be said that Athens carried off the palm in Greece: yet, in all these, the Asiatic colonies vied with her. Miletus took the start of her in literary composition; and, under slight conceivable changes, might have become the Athens of the world. But all details on these subjects would be here out of place.

That Athens after the Peloponnesian war never recovered the political place which she previously held, can excite no surprise—that she rose so high toward it was truly wonderful. Sparta and Thebes, which successively aspired to the 'leadership' of Greece, abused their power as flagrantly as Athens had done, and, at the same time, more coarsely. The never-ending cabals, the treaties made and violated, the coalitions and breaches, the alliances and wars, recurring every few years, destroyed all mutual confidence, and all possibility of again uniting Greece in any permanent form of independence; and, in consequence, the whole country was soon swallowed up in the kingdom of Macedonia. With the loss of civil liberty, Athens lost her genius, her manly mind, and whatever remained of her virtue: she long continued to produce talents, which were too often made tools of iniquity, panders to power, and petty artificers of false philosophy.

A Christian church existed in Athens soon after the apostolic times; but as the city had no political importance, the church never assumed any eminent position.—F. W. N.

ATONEMENT. The Greek word is *καταλλαγή*, translated, Rom. v. 11, *atonement*, but in other places, *reconciliation* (See Rom. xi. 15; 2 Cor. v. 18, 19). In ecclesiastical writers, and in the canons of Councils, *καταλλαγή* is employed to signify the reconciliation of offenders to the Church after a due course of penitence. Of this there are said to have been two kinds: the one consisting merely in the remission of punishment; the other, in the restoration of the penitent to all the rights and privileges of communion. For the doctrine of Atonement, see articles SACRIFICE, REDEMPTION.—H. S.

ATONEMENT, DAY OF (יוֹם כִּפּוּר, *day of pardon*, Lev. xxiii 27; xxv. 9). In the Talmud this day is called תַּעֲנִית גָּדוֹל, *great fasting*, or merely יוֹמָא, THE day; a circumstance which has suggested to some commentators the notion that by *ἡμέρα* (Heb. vii. 27) the apostle intended this *atonement day*. Though perhaps originally meant as a temporary day of expiation for the sin of the golden calf (as some would infer from Exod. xxxiii.), yet it was permanently instituted by Moses as a day of atonement for sins in general; and this day—the 10th of Tishri (our September)—is indeed the only fast ordained by Moses, though the later Jews, in commemoration of some disastrous events, especially those which occurred at and after the destruction of the two temples, instituted a few more fast days, which they observed with scarcely less rigour and strictness than the *one* ordained by Moses for the purpose of general absolution. This great fast, like all others among the Jews, commenced at sunset of the previous day, and lasted twenty-four hours, that is, from sunset to sunset, or, as the Rabbins will have it, until three stars were visible in the horizon. The ceremonies observed on this occasion are minutely described in Leviticus xvi., and were of a very laborious character, especially for the high-priest, who had to prepare himself during the previous seven days in nearly solitary confinement for the peculiar services that awaited him, and abstain during that period from all that could render him unclean, or disturb his devotions. The most remarkable ceremony of the day was the entrance of the high-priest into the Sanctuary, a thing not allowed on any other day, and to which Paul alludes, Heb. ix. 7. According to the Talmud (*Tract.* יומא) and Maimonides (הלכות יום הכפורים, chap. iv.), the entrance of the high-priest into the Sanctuary took place four different times. The first time he was pro-

vided with the golden censer and the vessel filled with incense, when, after having entered, he placed the former between the two poles of the Tabernacle, and put the incense upon the coals. This done, he went out (according to the Talmud, *ibid.*, backwards, so as not to turn his back on the Sanctuary). At his second entrance, he took with him the blood of the bullock which he had offered in expiation for his own sins and those of the other priests, placed himself between the poles of the Tabernacle, dipped his finger in the blood, and sprinkled it seven times below and once above the mercy-seat. This done, he left the bason with the blood behind, and withdrew again. The third time, he entered with the blood of the ram which he had offered for the sins of the nation, with which he sprinkled towards the veil of the Tabernacle eight times; and having mixed it with the blood of the bullock, he sprinkled again towards the horns of the altar of incense seven times, and once above it towards the east, after which he poured out the whole on the floor of the altar of burnt offering, having again left the Sanctuary, and taken with him the basons of blood. The fourth time, he entered merely to fetch back the censer and vessel of incense; and having returned, he washed his hands and performed the other ceremonies of the day.

That the high-priest entered more than once into the Sanctuary during this solemnity is certainly clear from the various rites which he had to perform there, as described in Lev. xvi. 12, 14, 15. Nor does the assertion of the Talmud contradict Heb. ix. 7, where the Apostle tells us that the high-priest had entered only *once* on that day, since the expression, ἅπαξ τοῦ ἐνιαυτοῦ, may refer to the *one day* in the year when such a service alone took place.

The other duties of the high-priest on that day consisted in frequent washings, changing his clothes, lighting the lamps, burning incense, &c.; which operations commenced soon after midnight of the 10th of the seven month (Tishri). The ceremonies of worship peculiar to this day alone (besides those which were common to it with all other days) were: 1. That the high-priest, in his pontifical dress, confessed his own sins and those of his family, for the expiation of which he offered a bullock, on which he laid them; 2. That two goats were set aside, one of which was by lot sacrificed to Jehovah, while the other (Azazel), which was determined by lot to be set at liberty, was sent to the desert burdened with the sins of the people (Lev. xvi.). According to the Talmud, both goats were to be alike in colour, stature, and age (at the time of their being set aside for the purposes of that day). For the peculiar ceremonies of the day, as regards the sacrifices, sprinkling of the blood, smoking the incense, &c., see Maimonides' עבודת יום הכפורים (*Worship of the Day of Atonement*), and D. Danzen's two *Dissertationes de Functione Pontificis Maximi in Adyto Anniversario.*

On this day also the high-priest gave his blessing to the whole nation; and the remainder of the day was spent in prayers and other works of penance.

Of the numerous meanings assigned to the word עזאזל (Azazel), we should be inclined to prefer those which render it expressive of the destination of the goat, or which derive it from the Arabic عزل (to remove). עזאזל would then be equivalent to غزازل (solitude, desert); since we find a similar form in חצוצרה from חצר. In the Talmud also (*Mishna*, tit. *Yomah*, iv. 2) this scape-goat goes by the name of שעיר המשתלח, the *removed* or *sent-off goat*, though it is uncertain whether this is meant as a translation of the word *Azazel*, or is merely an epithet derived from one of the destinations of the goat (V. Ch. Hermanzen, *Observat. de nomine Azazel*, 1833).

Among the present orthodox Jews, for the scape-goat of old a cock seems to have been substituted, which they call כפרה (pardon, atonement); and which, on the eve of the day of Atonement, they turn three times round their head, each time saying (in Hebrew) that the cock is to be sacrificed instead of them, after which it is slaughtered and eaten. Towards evening of the 9th of Tishri, and before they take the last meal for the next twenty-four hours, they repair to the synagogue, and each inflicts upon his neighbour thirty-nine blows with a piece of leather: this infliction is called מלכות, in expiation of those sins which are punished by the law of Moses with flogging. Most of the Jews on that day (of atonement) wear a white gown—the same shrouds in which they are buried; while *all* of them are obliged to stand the whole day without shoes, or even slippers. For many more ceremonies observed among the present Jews on the day of Atonement, see B. Picard, *Cérémonies et Coutumes Religieuses, &c.* t. i. c. 6, p. 18.—E. M.

ATTALEIA (Ἀττάλεια), a maritime city of Pamphylia, in Asia Minor, near the mouth of the river Catarrhactes. It derived its name from its founder, Attalus Philadelphus, king of Pergamos (Strabo, xiv. p. 667). It was visited by Paul and Barnabas, A.D. 45 (Acts xiv. 25). It still exists under the name of Adalia, and extensive and important ruins attest the former consequence of the city (Leake's *Asia Minor*, p. 193).

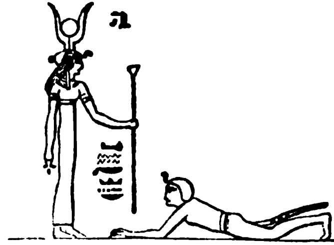
ATTITUDES. The allusions in Scripture to attitudes and postures expressive of adoration, supplication, and respect, are very numerous. From these we learn enough to perceive that the usages of the Hebrews in this respect were very nearly, if not altogether, the same as those which are still practised in the East, and which the paintings and sculptures of Egypt show to have been of old employed in that country. These sources supply ample materials for illustration, which it may be well to arrange under those heads into which such acts naturally divide themselves.

ADORATION AND HOMAGE.—The Moslems in their prayers throw themselves successively, and according to an established routine, into the various postures (nine in number) which they deem the most appropriate to the several parts of the service. For the sake of reference and comparison, we have introduced them all at the head of this article; as we have no doubt that the Hebrews employed on one occasion or another nearly all the various postures which the Moslems exhibit on one occasion. This is the chief difference. In public and common worship the Hebrews prayed *standing* (1 Kings viii. 54; Ezra ix. 5; Dan. vi. 10; 2 Chron. vi. 13); but in their separate and private acts of

worship they assumed the position which, according to their modes of doing homage or showing respect, seemed to them the most suitable to their present feelings or objects. It would appear, however, that some form of kneeling was most usual in private devotions.

Standing in public prayer is still the practice of the Jews. This posture was adopted from the synagogue by the primitive Christians; and is still maintained by the Oriental Churches. This appears, from their monuments, to have been the custom also among the ancient Persians and Egyptians, although the latter certainly sometimes kneeled before their gods. In the Moslem worship, four of the nine positions (1, 2, 4, 8) are standing ones; and that posture which is repeated in three out of these four (2, 4, 8), may be pointed out as the proper Oriental posture of reverential standing, with folded hands. It is the posture in which people stand before kings and great men.

While in this attitude of worship, the hands were sometimes stretched forth towards heaven in supplication or invocation (1 Kings viii. 22; 2 Chron. vi. 12, 29; Isa. i. 15). This was perhaps not so much the conventional posture (1) in the Moslem series, as the more natural posture of standing adoration with outspread hands, which we observe on the Egyptian monuments. The uplifting of one hand



(the right) only in taking an oath was so common, that to say, 'I have lifted up my hand,' was equivalent to 'I have sworn' (Gen. xiv. 22; comp. xli. 44; Deut. xxxii. 40). This posture

was also common among other ancient nations; and we find examples of it in the sculptures of Persia (fig. 1) and Rome (fig. 2).

Kneeling is very often described as a posture of worship (1 Kings viii. 54; Ezra ix. 5; Dan. vi. 10; 2 Chron. vi. 13; comp. 1 Kings xix. 18; Luke xxii. 41; Acts vii. 60). This is still an Oriental custom, and three forms of it occur (5, 6, 9) in the Moslem devotions. It was also in use, although not very frequent, among the ancient Egyptians; who likewise, as well as the Hebrews (Exod. xxxiv. 18; 2 Chron. xxix. 29; Isa. i. 15) sometimes prostrated themselves upon

the ground. The usual mode of prostration among the Hebrews by which they expressed the most intense humiliation, was by bringing not only the body but the head to the ground.

The ordinary mode of prostration at the present time, and probably anciently, is that shown in one of the postures of Moslem worship (5), in which the body is not thrown flat upon the ground, but rests upon the knees, arms, and head. In order to express devotion, sorrow, compunction or humiliation, the Israelites threw dust upon their heads (Josh. vii. 6; Job ii. 12; Lam. ii. 10; Ezek. xxiv. 7; Rev. xviii. 19), as was done also by the ancient Egyptians, and is still done by the modern Orientals. Under similar circumstances it was usual to smite the breast (Luke xviii. 13). This was also a practice among the Egyptians (Herod. ii. 85), and the monuments at

Thebes exhibit persons engaged in this act while they kneel upon one knee.

In 1 Chron. xvii. 16 we are told that 'David the king came and *sat* before the Lord,' and in that posture gave utterance to eloquent prayer, or rather thanksgiving, which the sequel of the chapter contains. Those unacquainted with Eastern manners are surprised at this. But there is a mode of sitting in the East which is highly respectful and even reverential. It is that which occurs in the Moslem forms of worship (9). The person first kneels, and then sits back upon his heels. Attention is also paid to the position of the hands, which they cross, fold, or hide in the opposite sleeves. The variety of this formal sitting which the following figure represents is highly

respectful. The prophet Elijah must have been in this or some other similar posture when he inclined himself so much forward in prayer that his head almost touched his knees (1 Kings xviii. 42).

SUPPLICATION, when addressed externally to man, cannot possibly be exhibited in any other forms than those which are used in supplication to God. Uplifted hands, kneeling, prostration, are common to both. On the Egyptian

monuments, suppliant captives, of different nations, are represented as kneeling or standing with outspread hands. This also occurs in the sculptures of ancient Persia (Persepolis). The first of the Egyptian figures is of peculiar interest, as representing an inhabitant of Lebanon. *Prostration*, or *falling at the feet* of a person, is often mentioned in Scripture as an act of supplication or of reverence, or of both (1 Sam. xxv. 24; 2 Kings iv. 37; Esth. viii. 3; Matt. xviii. 29; xxviii. 9; Mark v. 22; Luke viii. 41; John xi. 32; Acts x. 25). In the instance last referred to, where Cornelius threw himself at the feet of Peter, it may be asked why the apostle forbade an act which was not unusual among his own people, alleging as the reason—'I myself also am a man.' The answer is, that among the Romans, prostration was *exclusively* an act of adoration, rendered only to the gods, and therefore it had in him a significance which it would not have had in an Oriental (Kuinoel, *ad Act.* x. 26). This custom is still very general among the Orientals; but, as an act of reverence merely, it is seldom shown except to kings: as expressive of alarm or supplication, it is more frequent.

Sometimes in this posture, or with the knees bent as before indicated, the Orientals bring their forehead to the ground, and before resuming an erect position either kiss the earth, or the feet, or border of the garment of the king or prince before whom they are allowed to appear. There

is no doubt that a similar practice existed among the Jews; especially when we refer to the original words which describe the acts and attitudes of salutation, as נפל ארצה *to bend down to the earth*, השתחוה ארצה *to fall prostrate on the earth*, כרע אפים ארצה *to fall with the face to the earth*, and connect them with allusions to the act of kissing the feet, or the hem of the garment (Matt. ix. 20; Luke vii. 38, 45). *Kissing the hand* of another as a mark of affectionate respect, we do not remember as distinctly mentioned in Scripture. But as the Jews had the other forms of Oriental salutation, we may conclude that they had this also, although it does not happen to have been specially noticed. It is observed by servants or pupils to masters, by the wife to her husband, and by children to their father, and sometimes their mother. It is also an act of homage paid to the aged by the young, or to learned and religious men by the less instructed or less devout. Kissing one's own hand is mentioned as early as the time of Job (xxxi. 27), as an act of homage to the heavenly bodies. It was properly a salutation, and as such an act of adoration to them. The Romans in like manner kissed their hands as they passed the temples or statues of their gods [ADORATION].

It appears from 1 Sam. x. 1; 1 Kings xix. 18; Ps. ii. 12, that there was a peculiar kiss of homage, the character of which is not indicated. It was probably that kiss upon the forehead expressive of high respect which was formerly, if not now, in use among the Bedouins (*Antar*, ii. 119).

BOWING.—In the Scriptures there are different words descriptive of various postures of respectful bowing; as קדד *to incline or bow down the head*, כרע *to bend down the body very low*, ברך *to bend the knee*, also *to bless*. These terms indicate a conformity with the existing usages of the East, in which the modes of bowing are equally diversified, and, in all likelihood, the same. These are—

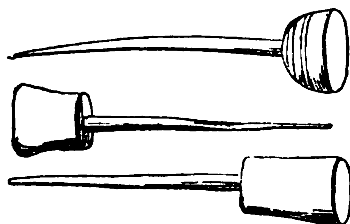
2. placing the right hand upon the breast, with or without an inclination of the head or of the body;

1. touching the lips (is this the kissing of the hand noticed above?) and the forehead with the right hand, with or without an inclination of the head or of the body, and with or without previously touching the ground; 3. bending the body very low, with folded arms; 4. bending the body and resting the hands on the knees: this is one of the postures of prayer, and is indicative of the highest respect in the presence of kings and princes. In the Egyptian paintings we see persons drop their arms towards the ground while bowing to a superior, or standing respectfully with the right hand resting on the left shoulder.

It is observable that, as before noticed, the word ברך, *barak*, means *to bless* and *to bend the knee*, which suggests the idea that it was usual for a person to receive a blessing in a kneeling posture. We know also that the person who gave the blessing laid his hands upon the head of the person blessed (Gen. xlviii. 14). This is exactly the case at the present day in the East, and a picture of the existing custom would furnish a perfect illustration of the patriarchal form of blessing. This may be perceived from the annexed engraving, which, with some of the other attitudes given in this article, is from Lane's *Translation of the Arabian Nights Entertainments*—a work which, in its notes and pictorial illustrations, affords a more complete picture of the persons, manners, and habits of the people of south-western Asia and of Egypt, than all the books of travels put together.

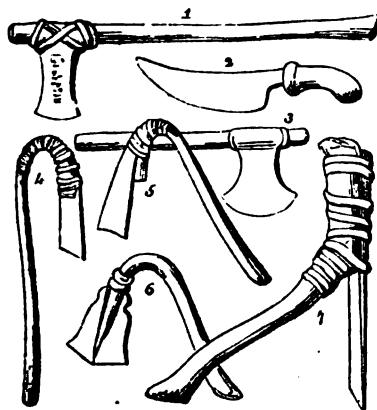
AVA (עַוָּא; Sept. Ἀϊά, 2 Kings xvii. 24), also IVAH (עִוָּה; Sept. Ἀβά, 2 Kings xviii. 34; xix. 13; Isa. xxxvii. 13), the capital of a small monarchical state conquered by the Assyrians, and from which king Shalmaneser sent colonies into Samaria. Some take it for the river, or rather the town which gave name to the river Ahava of Ezra viii. 21 (Bellermann, *Handbuch*, iii. 374). Iken (*Dissertt. Philol. Theolog.* p. 152) would identify it with the Phœnician town Avatha, mentioned in the *Notitia Vet. Dignitatum Imper. Rom.* (but the reading here is rather doubtful: Reland, *Palæst.* p. 232, *sqq.*); or with the town of Abeje, between Beirut and Sidon, which Paul Lucas mentions as the seat of a Druse prince. But these are mere conjectures. Michaelis derives the name from ܥܘܐ or عوي, latrare, and supposes it to be the land of the Avites between Tripoli and Beirut, because they are described as worshippers of נבחז *Nibhaz* (2 Kings xvii. 31), an idol which he compares with the great stone dog that formerly stood in that quarter, on which account the Lycus obtained its name of Nahr-el-Kelb, Dog-river (comp. Mannert, vi. 1. 380). It is most probable, however, that Ava was a Syrian or Mesopotamian town, of which no trace can now be found either in the ancient writers or in the Oriental topographers.

AVEN (אָוֶן; Sept. Ὤν), a plain, 'the plain of the sun,' of Damascene Syria (Amos i. 5). It is usually supposed to be the same as the plain of Baalbec, or valley of Baal, where there was a magnificent temple dedicated to the sun. Being between Lebanon and Anti-Lebanon, it is supposed by Rosenmüller and others to be the same plain or valley that is mentioned as 'the valley of Lebanon' in Josh. xi. 17. Some, however, influenced by the Septuagint, would rather seek Aven in the plain of On, four leagues from Damascus towards the desert.



AUGUSTUS (*Venerable*), the title assumed by Octavius, who, after his adoption by Julius Cæsar, took the name of Octavianus (*i. e. Ex-*Octavius), according to the Roman fashion; and was the first peacefully acknowledged emperor of Rome. He was emperor at the birth and during half the life-time of our Lord; but his name has no connection with Scriptural events, and occurs only once (Luke ii. 1) in the New Testament. The successors of the first Augustus took the same name or title, but it is seldom applied to them by the Latin writers. In the eastern part of the empire the Greek Σεβαστὸς (which is equivalent) seems to have been more common, and hence is used of Nero (Acts xxv. 21). In later times (after Diocletian) the title of Augustus was given to one of the two heirs-apparent of the empire, and Cæsar to their younger colleagues and heirs-apparent.

AVIM (עַוִּים; Sept. Εὐαῖοι), called also AVITES and HIVITES, a people descended from Canaan (Gen. x. 17), who originally occupied the southernmost portion of that territory in Palestine along the Mediterranean coast, which the Caphtorim or Philistines afterwards possessed (Deut. ii. 23). As the territory of the Avim is mentioned in Josh. xiii. 3, in addition to the five Philistine states, it would appear that it was not included in theirs, and that the expulsion of the Avim was by a Philistine invasion prior to that by which the five principalities were founded. The territory began at Gaza, and extended southward to 'the river of Egypt' (Deut. ii. 23), forming what was the sole Philistine kingdom of Gerar in the time of Abraham, when we



do not hear of any other Philistine states. There were then Avim, or Hivites, at Shechem (Gen. xxxiv. 2), and we afterwards find them also at Gibeon (Josh. ix. 7), and beyond the Jordan, at the foot of Mount Hermon (Josh. xi. 3); but we have no means of knowing whether these were original settlements of the Avim, or were formed out of the fragments of the nation which the Philistines expelled from southern Palestine. The original country of the Avim is called Hazerim in Deut. ii. 23 [GERAR; PHILISTINES].

AURANITIS. [HAURAN.]

AWL (מַרְצֵעַ; Sept. ὀπήτιον). The Hebrew word, which denotes an awl or other instrument for boring a small hole, occurs in Exod. xxi. 6; Deut. xv. 17. Considering that the Israelites had at that time recently withdrawn from their long sojourn in Egypt, there can be no doubt that the instruments were the same as those of that country, the forms of which, from actual specimens in the British Museum, are shown in the annexed cut. They are such as were used by the sandal-makers and other workers in leather.

AXE. Several instruments of this description are so discriminated in Scripture as to show that the Hebrews had them of different forms and for various uses. 1. גרזן *garzen*, which occurs in Deut. xix. 5; xx. 19; 1 Kings vi. 7; Isa. x. 15. From these

passages it appears that this kind was employed in felling trees, and in hewing large timber for building. The conjecture of Gesenius, that in 1 Kings v. 7, it denotes the axe of a stonemason is by no means conclusive. The first text supposes a case of the head slipping from the helve in felling a tree. This would suggest that it was shaped like fig. 3, which is just the same instrument as our common hatchet, and appears to have been applied by the ancient Egyptions to the same general use as with us. The reader will observe the contrivance in all the others (wanting in this) of fastening the head to the haft by thongs. 2. מעצד *maatzad*, which occurs only in Isa. xliv. 12; and Jer. x. 3. From these passages it appears to have been a lighter implement than the former, or a kind of adze, used for fashioning or carving wood into shape; it was, probably, therefore, like figs. 4 to 7, which the Egyptians employed for this purpose. Some texts of Scripture represent them as being employed in carving images—the use to which the prophets refer. The differences of form and size, as indicated in the figures, appear to have been determined with reference to light or heavy work: fig. 3 is a finer carving-tool. 3. קרדם *qardom;* this is the commonest name for an axe or hatchet. It is this of which we read in Judg. ix. 48; Ps. lxxiv. 5; 1 Sam. xiii. 20, 21; Jer. xlvi. 22. It appears to have been more exclusively employed than the *garzen* for felling trees, and had therefore probably a heavier head. In one of the Egyptian sculptures the inhabitants of Lebanon are represented as felling pine-trees with axes like fig. 1. As the one used by the Egyptians for the same purpose was also of this shape, there is little doubt that it was also in use among the Hebrews.

The word rendered 'axe' in 2 Kings vi. 5 is literally 'iron;' but as an axe is certainly intended, the passage is valuable as showing that the axe-heads among the Hebrews were of iron. Those which have been found in Egypt are of bronze, which was very anciently and generally used for the purpose. But this does not prove that they had none of iron; it seems rather to suggest that those of iron have been consumed by the corrosion of three thousand years, while those of bronze have been preserved. All our figures are from actual specimens now in the British Museum.

AZANIAH (עָזְנִיָּה; Sept. Ἁλιαίετος, Vulg. *halyetus* and *haliætos*, Auth. Vers. 'ospray'), an unclean bird; but there is a difference of opinion as to the particular species intended. The etymology of the Hebrew word would seem to point to some bird remarkably *powerful*, *fierce*, or *impudent*. Bochart supposes the *black eagle* to be meant, but reasons upon the *mere conjecture* that by the word μελαναίετος is intended ἁλιαίετος (*Hieroz.* tom. iii. p. 188, &c.).

The *traditional meaning* strongly favours the English rendering. The following is, the line through which it is traced:—The modern systems of ornithology for the most part retain the *names of birds* given to them by Linnæus in his *Systema Naturæ*. 'The system of Willughby is without doubt the basis on which the ornithological classification of Linnæus is founded' (Neville Wood's *Ornithologist's Textbook*, p. 3). Mr. Ray, giving an account of the assistance he rendered Mr. Willughby in *that* undertaking, says, 'Concerning the *names of birds* we did not much trouble ourselves, but have for the most part followed Gesner and Aldrovandus, being unwilling to disturb what is settled, or dispossess names that may, for their use, plead prescription' (Preface to the Eng. ed. of Willughby's *Ornithology*); and it is well known that Gesner and Aldrovandus derived their names and descrip-

tions of birds from their predecessors, including Aristotle and Pliny. In the same preface, Mr. Ray observes, 'Gesner and Aldrovandus wrote mere pandects of birds, comprising *whatever* had *before been written by others*.' This continuation

[Ospray. Falco Haliætus.]

of the same names of many at least of the same birds, from Aristotle to the present day, is, in the instance of the haliætos, or ospray, peculiarly clear and unbroken; and the same striking *descriptions* also of the bird so designated accompany its name from the earliest times.

The following statement places the matter in a clear light:—Aristotle, about B.C. 300, describes the ἁλιαίετος as 'a species of eagle dwelling near seas and lakes; and remarks, it sometimes happens to it, that having seized its prey, and not being able to carry it, it is drowned in the deep' (*Hist. Animal.* ix. c. 32). The word is rendered alietus in the ancient translation, aquila marina and haliætus by Gaza (Ven. A.D. 1476), and aquila marina, nisus haliætus, and haliætus by Scaliger. About the time of Aristotle, the ablest of all the Septuagint translators renders the Hebrew word azaniah by ἁλιαίετος. The same word is found in the writings of Pliny (A.D. 70) with the following description, 'There remains (to be mentioned) the haliætos, having the most penetrating vision of all (eagles); soaring (or balancing itself) on high, and upon perceiving a fish in the sea, rushing down headlong, and with its breast dashing aside the waters, seizing its prey' (*Hist. Nat.* x. 3). The same word is adopted by Jerome as answering to the Hebrew azaniah, A.D. 380, and the haliætus is described in the very words of Aristotle and Pliny by Aldrovandus (lib. xii. Bonon. 1594, p. 194); the transference of names into the Linnæan system has already been traced (see *Systema Naturæ*, vol. i. p. 129, Holmiæ, 1767). The word, according to its etymology, signifies sea-eagle, and the traditional English word is ospray. The following accounts from modern naturalists are strikingly in accordance with the ancient descriptions:—

Species of the haliætus, or sea-eagle, occur in Europe, *Asia*, Africa, America, and Australia (Selby's *British Ornithology*).

Mr. Macgillivray describes 'its savage scream of anger when any one approaches the neighbourhood of its nest, its intimidating gestures, and even its attempts to molest individuals who have ventured among its native crags.'

Mr. Selby (*Illustrations of British Ornithology*, 1825) respecting the ospray, observes, 'It is strictly piscivorous, and is found only in the vicinity of lakes, rivers, or such pools as abound with fish. It is a *powerful* bird, often weighing five pounds; the limbs are *very muscular* in proportion to its general dimensions; its feet are admirably adapted for retaining firm hold of *its slippery* prey.' Mr. Montagu (*Ornithological Dictionary*, 1802, article 'Ospray') remarks, 'Its principal food is fish, which it often catches with great dexterity, by *pouncing upon them* with *vast rapidity, and carrying them off in its talons*.' In the supplement to his work, Exeter, 1813, many additional facts are related respecting the ospray, which, together with the foregoing reasons, serve to identify it with the haliætus of the ancients (see also Grandsagne's edition of Pliny, with Notes and Excursus by Cuvier, Parisiis, 1828, p. 215).—J. F. D.

AZARIAH (עֲזַרְיָה, *whom Jehovah aids*, answering to the German name *Gotthelf.*; Sept. Ἀζαρίας), a very common name among the Hebrews, and hence borne by a considerable number of persons mentioned in Scripture.

1. AZARIAH, a high-priest (1 Chron. vi. 9), perhaps the same with Amariah, who lived under Jehoshaphat king of Judah (2 Chron. xix. 11), about B.C. 896.

2. AZARIAH, son of Johanan, a high-priest (1 Chron. vi. 10), whom some suppose the same as Zechariah, son of Jehoiada, who was killed B.C. 840 (2 Chron. xxiv. 20-22).

3. AZARIAH, the high-priest who opposed king Uzziah in offering incense to Jehovah (2 Chron. xxvi. 17).

4. AZARIAH, a high-priest in the time of Hezekiah (2 Chron. xxxi. 10).

5. AZARIAH, the father of Seraiah, who was the last high-priest before the Captivity (1 Chron. vi. 14).

6. AZARIAH, son of the high-priest Zadok; but it is uncertain if he succeeded his father (1 Kings iv. 2).

7. AZARIAH, captain of king Solomon's guards (1 Kings iv. 5).

8. AZARIAH, otherwise called Uzziah, king of Judah [UZZIAH].

9. AZARIAH, a prophet who met king Asa on his return from a great victory over the Cushite king Zerah (2 Chron. xxiii. 1) [ASA].

10. AZARIAH, a person to whom the high-priest Jehoiada made known the secret of the existence of the young prince Joash, and who assisted in placing him on the throne (2 Chron. xv. 1).

11. AZARIAH, one of the two sons of king Jehoshaphat (2 Chron. xxi. 2).

12. AZARIAH, one of the 'proud men' who rebuked Jeremiah for advising the people that remained in Palestine, after the expatriation to Babylon, not to retire into Egypt; and who took the prophet himself and Baruch along with them to that country (Jer. xliii. 2-7).

13. AZARIAH, the Chaldæan name of Abednego, one of Daniel's three friends who were cast into the fiery furnace (Dan. i. 7; iii. 9).

AZZAH (עַזָּה), a mode of spelling the Hebrew name which is elsewhere rendered Gaza. The difference arises from the uncertain power of the first letter ע, which, in proper names, some use as the consonant G; while others regard only the vowel sound connected with it, which in this case is A [ALPHABET]. The name occurs in this form in Deut. ii. 23; Jer. xxv. 20; which last clearly shows that Gaza is intended.

B.

BA'AL. The word בַּעַל *ba'al*, as it signifies *lord*, *master*, is a generic term for *god* in many of the Syro-Arabian languages. As the idolatrous nations of that race had several gods, this word, by means of some accessory distinction, became applicable as a name to many different deities. There is no evidence, however, that the Israelites ever called Jehovah by the *name* of Baal; for the passage in Hos. ii. 16, which has been cited as such, only contains the word *baal* as the sterner, less affectionate representative of *husband*.

1. BAAL (הַבַּעַל, with the definite article, Judg. ii. 13; Sept. ὁ Βάαλ, but also ἡ Βάαλ, Jer. xix. 5; xxxix. 35; Rom. xi. 4) is appropriated to the chief male divinity of the Phœnicians, the principal seat of whose worship was at Tyre. The idolatrous Israelites adopted the worship of this god (almost always in conjunction with that of Ashtoreth) in the period of the Judges (Judg. ii. 13); they continued it in the reigns of Ahaz and Manasseh, kings of Judah (2 Chron. xxviii. 2; 2 Kings xxi. 3); and, among the kings of Israel, especially in the reign of Ahab, who, partly through the influence of his wife, the daughter of the Sidonian king Ethbaal, appears to have made a systematic attempt to suppress the worship of God altogether, and to substitute that of Baal in its stead (1 Kings xvi. 31); and in that of Hoshea (2 Kings xvii. 16), although Jehu and Jehoiada once severally destroyed the temples and priesthood of the idol (2 Kings x. 18, *sq.*; xi. 18).

We read of altars, images, and temples erected to Baal (1 Kings xvi. 32; 2 Kings iii. 2). The altars were generally on heights, as the summits of hills or the roofs of houses (Jer. xix. 5; xxxii. 29). His priesthood, the proper term for which seems to be כְּמָרִים, were a very numerous body (1 Kings xviii. 19), and were divided into the two classes of prophets and of priests (unless the term 'servants,' which comes between those words, may denote a third order—a kind of Levites; 2 Kings x. 19). As to the rites by which he was worshipped, there is most frequent mention of incense being offered to him (2 Kings xxiii. 5), but also of bullocks being sacrificed (1 Kings xviii. 26), and even of children, as to Moloch (Jer. xix. 5). According to the description in 1 Kings xviii., the priests, during the sacrifice, danced (or, in the sarcastic expression of the original, *limped*) about the altar, and, when their prayers were not answered, cut themselves with knives until the blood flowed, like the priests of Bellona (Lucan. *Pharsal.* i. 565; Tertull. *Apologet.* ix.; Lactant. *Div. Instit.* i. 21). We also read of homage paid to him by bowing the knee, and by kissing his image (1 Kings xix. 18; comp. Cicero, *In Verrem*, iv. 43), and that his worshippers used to swear by his name (Jer. xii. 16).

As to the power of nature which was adored under the form of the Tyrian Baal, many of the passages above cited show evidently that it was one of the heavenly bodies; or, if we admit that resemblance between the Babylonian and Persian religions which Münter assumes, not one of the heavenly bodies really, but the *astral spirit* residing in one of them; and the same line of induction as that which is pursued in the case of Ashtoreth, his female counterpart, leads to the conclusion that it was the *sun*. Nevertheless, the same difference of opinion between Gesenius and Münter as that on the subject of Ashtoreth meets us here in the case of Baal, and of the Babylonian Bel, which we shall, in what follows, regard as being essentially the same god. The former—who has stated his arguments in his *Thesaurus*, in his *Jesaias*, and at some length in the *Allgemeine Encyclopædie*, vols. viii. & xvi.—maintains that the idolatry of Babylon was astrological, and that, from the connection between Aramæan and Phœnician religious ideas, Baal and Bel were representatives of the *planet Jupiter*, as the greater star of good fortune. He builds much on the facts, that the Arabian idolaters worshipped this planet under the name of Mushteri, and sacrificed a sucking-child to him on a Thursday (*dies Jovis*), and that his temple was pyramidal (see Norberg's *Onomast. Cod. Nas.* p. 28); that Bel is also the name of this planet in the Tsabian books; and that the Romans called the Babylonian Bel by the name of Jupiter. He asserts that the words 'to Baal, to the sun,' in 2 Kings xxiii. 5, so far from proving the idendity of Baal and the sun, rather directly oppose it; and, as it is impossible to deny that the sun was worshipped by the Phœnicians, he evades the force of the passage from Sanchoniathon, cited below, by arguing that, even allowing that the sun was the chief Tyrian god according to the entire religious system, it does not follow that he was necessarily the Baal κατ' ἐξοχήν, the most worshipped god of Tyre or Babylon: just as, in the middle ages, the excessive worship of patron saints and of the Virgin Mary was compatible with a theoretical acknowledgment of the Supreme Being.

Münter, on the other hand, in his *Religion der Babylonier*, does not deny the astrological character of the Babylonian religion, but maintains that, together with and besides that, there existed in very early times a cosmogonical idea of the *primitive power of nature*, as seen in the two functions of *generation* and of *conception* or parturition; that this idea is most evident in the Kabiric religion, but that it exists all over the East; and that the sun and moon were the fittest representatives of these two powers. He does not admit that the Tsabian books or Efraem Syrus, are any authority for the religious notions of the Babylonians at a period so remote from their own time, and especially when they are opposed by better and older testimonies. Among these, he relies much on the statement of Sanchoniathon (p. 14, ed. Orelli), that the Phœnicians considered

the sun to be 'μόνος οὐρανοῦ κύριος,' calling him 'Beelsamen, which is the Zeus of the Greeks.' Balsamen (i. e. בעל שמין *lord of the heavens*) also occurs in Plautus (*Pœnul.* act. v. s. 2. 67), where Bellermann, Lindemann, and Gesenius recognise it to be the same name. Isidorus Hispalensis has the words, 'Apud Assyrios Bel vocatur, quadam sacrorum suorum ratione, et Saturnus et Sol' (*Orig.* viii. 11). We moreover find בעל חמן (*i. e. deus solaris*, from חמה, the *sun*, Job xxx. 28, with the adjective ending *ân*; see Ewald's *Hebr. Gram.* § 341) in several Carthaginian inscriptions (in Gesen. *Mon. Ling. Phœn.* p. 164), which is an evidence that the Carthaginians worshipped the sun.

As to Gesenius's assertion that 2 Kings xxiii. 5 is opposed to the identity of Baal and the sun, a consideration of the whole passage would seem to show he has judged hastily. The words are, 'which burnt incense to Baal, to the sun, and to the moon, and to the zodiacal signs, and to all the host of the heavens.' Now the omission of the *and* before the sun appears decidedly to favour the notion that the sun is an apposition to Baal, and not a distinct member of the same coordinate series. This view might, perhaps, recommend itself to those who appreciate the peculiar use of *and* in the Hebrew syntax. Besides, *solar images* (as he himself interprets חמנים) are mentioned in 2 Chron. xxxiv. 4, as being placed on the altars of the Baals; which is not well reconcilable with any other theory than that of the identity of Baal and the sun.

In a certain sense, every argument which goes to show that Ashtoreth was the moon is also, on account of the close conjunction between her and Baal, as valid a reason for Baal being the sun; for the two gods are such exact correlates, that the discovery of the true meaning of the one would lead, by the force of analogy, to that of the other. Nevertheless, as has been already observed in the article Ashtoreth, it must be admitted that the astrological view did subsequently prevail, and that the planets Jupiter and Venus became mysteriously connected with some modifications of the same powers which were primarily worshipped under the cosmogonical ideas of Bel and Mylitta, sun and moon. This relation between Baal and the planet Jupiter is noticed in the article Gad. For the relation between Baal and Moloch, and that between Baal and Melkarth, the Tyrian Hercules, see Moloch and Hercules.

2. Baal Berith (בעל ברית, *covenant-lord;* Sept. Vat. Βααλβερίθ; Alexand. Βάαλ διαθήκης; Judg. ix. 4) is the name of a god worshipped by the people of Shechem (Judg. viii. 33; ix. 4, 46), who, on account of the signification of the name, has been compared to the Ζεὺς Ὅρκιος of the Greeks, and the Latin *Deus Fidius*. Bochart and Creuzer think that this name means 'God of Berytus;' but, as the name of that town is probably to be recognised in the ברותה of Ezek. xlvii. 16, there is hardly any ground for their opinion.

3. Baal Peor (בעל פעור, or sometimes only פעור, respectively represented in the Sept. by Βεελφεγώρ, and Φογώρ) appears to have been properly the idol of the Moabites (Num. xxv. 1-9; Deut. iv. 3; Jos. xxii. 17; Ps. cvi. 28; Hos. ix. 10); but also of the Midianites (Num. xxxi. 15, 16).

It is the common opinion that this god was worshipped by obscene rites; and, from the time of Jerome downwards, it has been usual to compare him to Priapus. Selden and J. Owen (*De Diis Syris*, i. 5; *Theologoumena*, v. 4) seem to be the only persons who have disputed whether any of the passages in which this god is named really warrant such a conclusion. The utmost that those passages express is the fact that the Israelites received this idolatry from the women of Moab, and were led away to eat of their sacrifices (cf. Ps. cvi. 28); but it is very possible for that sex to have been the means of seducing them into the adoption of their worship, without the idolatry itself being of an obscene kind. It is also remarkable that so few authors are agreed even as to the general character of these rites. Most Jewish authorities (except the Targum of Jonathan on Num. xxv.) represent his worship to have consisted of rites which are filthy in the extreme, but not lascivious (see Braunius, *De Vestit. Sacerd.* i. p. 7, for one of the fullest collections of Jewish testimonies on this subject). If, however, it could be shown that this god was worshipped by libidinous rites, it would be one more confirmation of the relation between Baal and the *sun;* as, then, Baal Peor would be a masculine phasis of the same worship as that of which Mylitta is, both in name and rites, the female representative. The sense assigned by the Rabbins to the verb פער is now generally considered untenable. Peor (*hiatus*) is supposed to have been the original name of the mountain; and Baal Peor to be the designation of the god worshipped there. The verb נצמד, *to be bound, coupled*, which is only used in the Old Testament to denote being joined to Baal Peor, has been supposed to express either some obscene rite, or some mere symbol of initiation in the worship of this god. The Sept. renders it by ἐτελέσθησαν; and J. D. Michaelis first tried to reconcile the primitive sense of *binding* with the notion of initiation, by taking it to mean binding-on *fillets*. Gesenius, however, points to the same verb in Ethiopic, in the sense of *to serve, to worship;* and maintains that that is its force here. Nevertheless, Hitzig, in his note to Hos. ix. 10, still tries to show that the verb may mean *to wear a band*, as symbol of initiation; and argues that ינזרו, there used, as contrasted with the appropriate word יצמדו, implies the correspondence between the נזר and the צמיד (cf. 2 Sam. i. 10). Some identify this god with Chemosh.

4. Baalzebub (בעל זבוב, *Fly-lord;* Sept. τῷ Βάαλ μυῖαν θεόν, always; where more than one emendation appears necessary) occurs in 2 Kings i. 2-16, as the god of the Philistines at Ekron, whose oracle Ahaziah sent to consult. There is much diversity of opinion as to the signification of this name, according as authors consider the title to be one of honour, as used by his worshippers, or one of contempt. The former class find a parallel to him in the Ζεὺς Ἀπόμυιος of Elis, and suppose that he was regarded as the god who delivered his worshippers from the annoyance of flies. We are unable, however, to discern the appositeness of this parallel. The name *Fly-lord* appears rather to mean the god

of flies, than the averter and destroyer of flies. As this name is the one used by Ahaziah himself, it is difficult to suppose that it was not the proper and reverential title of the god; and the more so, as Beelzebul, in Matt. x. 25, seems to be the contemptuous corruption of it. Any explanation, therefore, of the symbolical sense in which flies may have been regarded in ancient religions, and by which we could conceive how his worshippers could honour him as the *god of flies*, would appear to us much more compatible with his name than the only sense which can be derived from the Greek parallel. This receives some confirmation, perhaps, from the words of Josephus (*Antiq.* ix. 2), who says, 'Ahaziah sent to the god *Fly*, for that is the name of the god' (τῷ θεῷ).

The analogy of classical idolatry would lead us to conclude that all these Baals are only the same god under various modifications of attributes and emblems; but the scanty notices to which we owe all our knowledge of Syro-Arabian idolatry do not furnish data for any decided opinion on this subject.—J. N.

BAAL is often found as the first element of compound names of places. In this case, Gesenius thinks that it seldom, if ever, has any reference to the god of that name; but that it denotes the place which *possesses*, which is the *abode* of the thing signified by the latter half of the compound—as if it was a synonyme of בית. The best support of this opinion is the fact that *baal* and *beth* are used interchangeably of the same place; as Baalshalisha and Baaltamar are called by Eusebius Bethshalisha and Bethtamar.
J. N.

BAALAH, BAALE-JUDAH, KIRJATH-BAAL [KIRJATH JEARIM].

BAALAH (בַּעֲלָה, Josh. xv. 29), BALAH (בָּלָה, Josh. xix. 3), BILHAH (בִּלְהָה, 1 Chron. iv. 29), a town in the tribe of Simeon, usually confounded with Baalath; but, as the latter was in Dan and this in Simeon, they would appear to have been distinct.

BAALATH (בַּעֲלָת; Sept. Γεβεελάν), a town in the tribe of Dan (Josh. xix. 44), apparently the same that was afterwards rebuilt by Solomon (1 Kings ix. 18). Many have conjectured this Baalath to be the same as Baalbek; but in that case it must have lain in northernmost Dan, whereas the possession of it is ascribed to that tribe when its territory was wholly in the south of Judah, and many years before the migration (recorded in Judg. xviii.) which gave Dan a northern territory. Correspondingly, Josephus places the Baalath of Solomon (which he calls *Baleth*) in the southern part of Palestine, near to Gazara (*Antiq.* viii. 2), within the territory which would have belonged to Dan, had it acquired possession of the lands originally assigned to it. The Talmud affirms that Baalath lay so near the line of separation between Dan and Judah, that the fields only were in the former tribe, the buildings being in the latter.

BAALATH-BEER (בַּעֲלַת בְּאֵר; Sept. Βαλέκ), probably the same as the Baal of 1 Chron. iv. 33—a city of Simeon; called also Ramath-Negeb, or Southern Ramath (Josh. xix. 8; comp. 1 Sam. xxx. 27).

BAAL-GAD (בַּעַל גָּד; Sept. Βαλαγάδ), a city 'in the valley of Lebanon under Mount Hermon' (Josh. xi. 17; xii. 7). We are also informed that among those parts of Palestine which were unsubdued by the Hebrews at the death of Joshua, was 'all Lebanon towards the sun-rising, from Baal-gad, under Mount Hermon, unto the entering into Hamath' (Josh. xiii. 5). This position of Baal-gad is not unfavourable to the conclusion which some have reached, that it is no other than the place which, from a temple consecrated to the sun, that stood there, was called by the Greeks *Heliopolis*, *i.e.* city of the sun; and which the natives called and still call Baalbek, a word apparently of the same meaning. The honour of being identified with Baalbek has also been claimed for the Baalath which Solomon built or fortified: but this claim has already been disposed of [BAALATH]; and no weight is to be attached to the local traditions which claim Solomon as the founder of Baalbek, seeing that it is the practice of the natives to ascribe to that great king every grand ancient work of unknown date which the country contains. It is also to be observed that those who contend for Baalath admit its possible identity with Baal-gad, and hence there are no conflicting claims to adjust. Even those who suppose the Baal-hamon of the Canticles (viii. 11) to be Baalbek, conceive that to be a later name for Baal-gad; and hence the only question that remains is, whether Baal-gad be not the more ancient name of the place afterwards known as Heliopolis and Baalbek.

Baalbek, in the Syrian language, signifies *the city of Baal*, or of the sun; and, as the Syrians never borrowed names from the Greeks, or translated Greek names, it is certain that when the Greeks came into Syria they found the place bearing this name or some other signifying 'city of the sun,' since they termed it Heliopolis, which is doubtless a translation of the native designation. We entertain no doubt that it was then called Baalbek by the natives. Now the question is, whether this word has the same meaning as Baal-gad, and if not, whether any circumstances can be pointed out as likely to occasion the change of name. If we take Baal for the name of the idol, then, as in the case of Baalbek, the last member of the word must be taken as a modifying appellation, not as in itself a proper name; and as Gad means *a troop*, *a multitude*, or *a press of people*, Baal-gad will mean *Baal's crowd*, whether applied to the inhabitants, or to the place as a resort of pilgrims. The syllable *bek* has precisely the same meaning in the Arabic.

If this should not seem satisfactory, we may conclude that *Baal* was so common an element in the composition of proper names, that it is not sufficiently distinctive to bear the stress of such an interpretation; and may rather take it to signify (as Gesenius says it always does in geographical combinations) the place where a thing is found. According to this view Baal-gad would mean *the place of Gad*. Now Gad was an idol (Isa. lxv. 11), supposed to have been the god or goddess of good fortune (comp. Sept. Τύχη; Vulg. *Fortuna*), and identified by the Jewish commentators with the planet *Jupiter*

[GAD]. But it is well known that Baal was identified with Jupiter as well as with the sun; and it is not difficult to connect Baalbek with the worship of Jupiter. John of Antioch affirms that the great temple at Baalbek was dedicated to Jupiter; and in the celebrated passage of Macrobius (*Saturnal.* i. 23), in which he reports that the worship of the sun was brought by Egyptian priests to Heliopolis in Syria, he expressly states that they introduced it under the name of Jupiter (sub nomine *Jovis*). This implies that the worship of Jupiter was already established and popular at the place, and that heliolatry previously was not; and therefore we should rather expect the town to have borne some name referring to Jupiter than to the sun; and may be sure that a name indicative of heliolatry must have been posterior to the introduction of that worship by the Egyptians; and, as we have no ground for supposing that this took place before or till long after the age of Joshua, it could not then be called by any name corresponding to Heliopolis.

We have touched upon this matter because it presents the subject in its Biblical relations, which receive comparatively little attention in works of general reference. To such works, as well as to the travels named at the end of this article, we may refer for ample descriptions of the ruins, &c., which require but slight notice here, seeing that it is barely probable that the site is even named in the Scriptures.

Baalbek is pleasantly situated on the lowest declivity of Anti-Libanus, at the opening of a small valley into the plain El-Bekaa. Through this valley runs a small stream, divided into numberless rills for irrigation. The place is in N. lat. 34° 1′ 30″, and E. long. 36° 11′, distant 109 geog. miles from Palmyra, and 38½ from Tripoli.

Its origin appears to be lost in the most remote antiquity, and the historical notices of it are

very scanty; the silence of the classical writers respecting it would alone seem to imply that it had previously existed under another name. In the absence of more positive information we can only conjecture that its situation on the high-road of commerce between Tyre, Palmyra, and the farther East, must have contributed largely to the wealth and magnificence which it manifestly attained. It is mentioned under the name of Heliopolis by Josephus (*Antiq.* xiv. 3. 4), and also by Pliny (*Hist. Nat.* v. 22). Two Roman inscriptions of the time of Antoninus Pius give sanction to the statement of John of Antioch, who alleges that this emperor built a great temple to Jupiter at Heliopolis, which was one of the wonders of the world (*Hist. Chron.* lib. xi.). From the reverses of Roman coins we learn that Heliopolis was constituted a colony by Julius Cæsar; that it was the seat of a Roman garrison in the time of Augustus; and obtained the *Jus Italicum* from Severus. Some of the coins of later date contain curious representations of the temple.

After the age of Constantine the splendid temples of Baalbek were probably consigned to neglect and decay, unless indeed, as some appearances indicate, they were then consecrated to Christian worship. From the accounts of Oriental writers Baalbek seems to have continued a place of importance down to the time of the Moslem invasion of Syria. They describe it as one of the most splendid of Syrian cities, enriched with stately palaces, adorned with monuments of ancient times, and abounding with trees, fountains, and whatever contributes to luxurious enjoyment. On the advance of the Moslems, it was reported to the emperor Heraclius as protected by a citadel of great strength, and well able to sustain a siege. After the capture of Damascus it was regularly

invested by the Moslems, and—containing an overflowing population, amply supplied with provisions and military stores—it made a courageous defence, but at length capitulated. Its importance at that period is attested by the ransom exacted by the conquerors, consisting of 2000 ounces of gold, 4000 ounces of silver, 2000 silk vests, and 1000 swords, together with the arms of the garrison. It afterwards became the mart for the rich pillage of Syria: but its prosperity soon received a fatal blow from the khalif of Damascus, by whom it was sacked and dismantled, and the principal inhabitants put to the sword (A.D. 748). During the Crusades, being incapable of making any resistance, it seems to have quietly submitted to the strongest. In the year 1400 it was pillaged by Timour Beg, in his progress to Damascus, after he had taken Aleppo. Afterwards it fell into the hands of the Metaweli—a barbarous predatory tribe, who were nearly exterminated when Djezzar Pasha permanently subjected the whole district to Turkish supremacy.

The ruins of Heliopolis lie on an eastern branch

of the mountain, and are called, by way of eminence, the Castle. The most prominent objects visible from the plain are a lofty portico of six columns, part of the great temple, and the walls and columns of another smaller temple a little below, surrounded by green trees. There is also a singular and unique circular temple, if it may be so called, of which we give a figure. These, with a curious column on the highest point within the walls (which may possibly have been a clepsydra, or water-dial), form the only erect portions of the ruins. These ruins have been so often and so minutely described by scores of travellers, as well as in many works of general reference, that, since their identification as a Scriptural site is uncertain, a few additional observations only may suffice. The ruins at Baalbek in the mass are apparently of three successive eras: first, the gigantic hewn stones, in the face of the platform or basement on which the temple stands, and which appear to be remains of older buildings, perhaps of the more ancient temple which occupied the site. Among these are at least twenty standing upon a basement of rough stones, which would be called enormous anywhere but here. These celebrated blocks, which in fact form the great wonder of the place, vary from 30 to 40 feet in length; but there are three, forming an upper course 20 feet from the ground, which together measure 190 feet, being severally of the enormous dimensions of 63 and 64 feet in length, by 12 in breadth and thickness (Addison's *Damascus and Palmyra*, ii. 55). 'They are,' says Richter (*Wallfahrten*, p. 281), 'the largest stones I have ever seen, and might of themselves have easily given rise to the popular opinion that Baalbek was built by angels at the command of Solomon. The whole wall, indeed, is composed of immense stones, and its resemblance to the remains of the Temple of Solomon, which are still shown in the foundations of the mosque Es-Sakkara on Mount Moriah, cannot fail to be observed.' This was also pointed out by Dr. Richardson. In the neighbouring quarries, from which they were cut, one stone, hewn out but not carried away, is of much larger dimensions than any of those which have been mentioned. To the second and third eras belong the Roman temples, which, being of and about the time of Antoninus Pius, present some of the finest specimens of Corinthian architecture in existence, and possess a wonderful grandeur and majesty from their lofty and imposing situation (Addison, ii. 57).

Among the ornaments of these buildings Richter finds confirmation of the following statement of Macrobius—'Isis and Horus often unequivocally appear. The winged globes surrounded with serpents show that the priests of Baalbek received their ideas of divinity from On, the Heliopolis of Egypt.' Speaking generally of these remains, Burckhardt says, 'The entire view of the ruins of Palmyra, when seen at a certain distance, is infinitely more striking than those of Baalbek, but there is not any one spot in the ruins of Tadmor so imposing as the interior view of the temple of Baalbek' (*Syria*, p. 13). He adds that the architecture of Baalbek is richer than that of Tadmor. Mr. Addison remarks that 'the ruins, though so striking and magnificent, are yet, however, quite second-rate when compared with the Athenian ruins, and display in their decoration none of the bold conceptions and the genius which characterize the Athenian architecture.'

The present Baalbek is a small village to the east of the ruins, in a sad state of wretchedness and decay. It is little more than a heap of rubbish, the houses being built of mud and sun-dried bricks. The population of 5000, which the place is said to have contained in 1751, is now reduced to barely 2000 persons; the two handsome mosques and fine serai of the Emir, mentioned by Burckhardt, are no longer distinguishable; and travellers may now inquire in vain for the grapes, the pomegranates, and the fruits which were formerly so abundant (Iken. *Dissert. de Baal-Hamon et Baal-Gad*, in *Dissertt. Philologico-Theolog.* tom. i. p. 136; Wood and Dawkins, *Ruins of Baalbec*, Lond. 1757; Pococke, *Description of the East*; Maundrell, *Journey from Aleppo to Damascus*; the Travels of Volney, Burckhardt, Richardson, Hogg, Addison, Lord Lindsay; Richter, *Wallfahrten ein Morgenlande*; Schubert, *Reise in das Morgenland*, Erlangen, 1841; see also Rosenmüller, *Biblical Geography*, ii. pp. 252-257).

BAAL-GUR, or GUR-BAAL. We read in 2 Chron. xxvi. 7, that 'the Lord assisted Uz-

ziah against the Philistines, and (ועל־הערביים היושבים בגור־בעל) against the Arabians that dwelt in Gur-Baal.' The Septuagint renders this by καὶ ἐπὶ τοὺς Ἄραβας τοὺς κατοικοῦντας ἐπὶ τῆς Πέτρας—'and the Arabians that dwelt above Petra.' It was doubtless some town of Arabia-Petræa.

BAAL-HAMON (בַּעַל הָמוֹן; Sept. Βεελαμών), a place where Solomon is said to have had a vineyard (Cant. viii. 11). Rosenmüller conceives that if this Baal-Hamon was the name of a place that actually existed, it may be reasonably supposed identical with Baal-Gad or Heliopolis; for Hamon may have been a corruption of Amon, the Hebrew way of pronouncing the Ammon of the Egyptians (see Nah. iii. 8), whom the Greeks identified with Jupiter (*Bib. Geog.* ii. p. 253). We are not inclined to lay much stress on this conjecture. There was a place called Hamon, in the tribe of Asher (Josh. xix. 28), which Ewald thinks was the same as Baal-Hamon. The book of Judith (viii. 3) places a Balamon (Βαλαμών) or Belamon (Βελαμών) in central Palestine, which suggests another alternative.

BAAL-HAZOR (בַּעַל חָצוֹר; Sept. Βελασώρ), the place where Absalom kept his flocks, and held his sheep-shearing feast (2 Sam. xiii. 23). The Targum makes it 'the plain of Hazor.' It is said to have been 'beside Ephraim,' not in the tribe of that name, but near the city called Ephraim which was in the tribe of Judah, and is mentioned in 2 Chron. xiii. 19; John xi. 54. This Ephraim is placed by Eusebius eight miles from Jerusalem on the road to Jericho; and is supposed by Reland to have been between Bethel and Jericho (*Palæstina*, i. 377).

BAAL-HERMON (בַּעַל הֶרְמוֹן). The Septuagint makes two names of this in 1 Chron. v. 23, Βαάλ, Ἑρμών; and in Judg. iii. 3, where the original has 'Mount Baal-Hermon,' it has ὄρους τοῦ Ἀερμών, Mount Hermon. It seems to have been a place in or near Mount Hermon, and not far from Baal-gad, if it was not, as some suppose, the same place.

BAAL-MEON (בַּעַל מְעוֹן; Sept. Βεελμεών; Num. xxxii. 38; 1 Chron v. 8; otherwise BETH-MEON, Jer. xlviii. 23, and BETH-BAAL-MEON, Josh. xiii. 17), a town in the tribe of Reuben beyond the Jordan, but which was in the possession of the Moabites in the time of Ezekiel (xxv. 9). At the distance of two miles south-east of Heshbon, Burckhardt found the ruins of a place called *Myoun*, or (as Dr. Robinson corrects it) *Mâ'în*, which is doubtless the same, although Eusebius makes the distance greater.

BAAL-PERAZIM (בַּעַל פְּרָצִים; Sept. Βαάλ Φαρασίν). This name, meaning 'place of breaches,' which David imposed upon a place in or near the valley of Rephaim, where he defeated the Philistines (2 Sam. v. 20; comp. 1 Chron. xiv. 11; Isa. xxviii. 21), is important as being the only one with the prefix Baal of which we know the circumstances under which it was imposed; and we are thus enabled to determine that the word was sometimes at least used appellatively without any reference to the name of the idol Baal or to his worship.

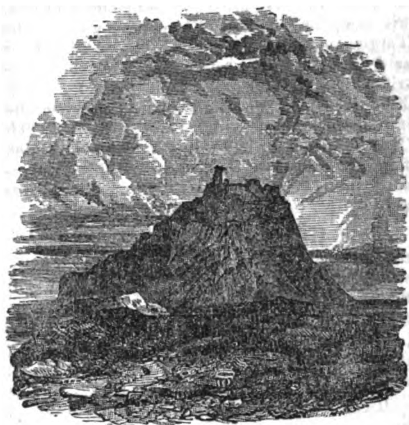
BAAL-SHALISHA (בַּעַל שָׁלִשָׁה; Βαιθσαρισά, Cod. Alex. Βαιθσαρισάθ, 2 Kings iv. 42), a place in the district of Shalisha (1 Sam. ix. 4). Eusebius and Jerome describe it as a city fifteen Roman miles north from Diospolis, near Mount Ephraim.

BAAL-TAMAR (בַּעַל תָּמָר; Sept. Βαάλ Θαμάρ), a place near Gibeah, in the tribe of Benjamin, where the other tribes fought with the Benjamites (Judg. xx. 33). Eusebius calls it *Bethamar*, thus affording an instance of that interchange of *Beth* and *Baal* which is also exemplified in the preceding article and in Baal-Meon.

BAAL-ZEPHON (בַּעַל צְפוֹן; Sept. Βεελσεπφῶν), a town belonging to Egypt, on the border of the Red Sea (Exod. xiv. 2; Num. xxxiii. 7). Forster (*Epist. ad J. D. Michaelem*, p. 28) believes it to have been the same place as Heroopolis (Ἡρωωπόλις) on the western gulf of the Red Sea (Plin. *Hist. Nat.* v. 12; Strabo, xvii. p. 836; Ptolem. iv. 5), where Typhon (which Forster makes in Coptic ΔΩΨΩΝ; but, *contrà*, see Rosenmüller, *Alterthum.* iii. 261) was worshipped. But according to Manetho (Joseph. *Contra Apion.* i. 26), the name of Typhon's city was Avaris (Αὔαρις). In fact, nothing is known of the situation of Baal-zephon; and whatever conjectures may be formed respecting it must be connected with a consideration of the route taken by the Israelites in leaving Egypt, for it was 'over against Baal-zephon' that they were encamped before they passed the Red Sea [EXODUS]

BABEL, TOWER OF. From the account given in Genesis xi. 1-9, it appears that the primitive fathers of mankind having, from the time of the Deluge, wandered without fixed abode settled at length in the land of Shinar, where they took up a permanent residence. As yet they had remained together without experiencing those vicissitudes and changes in their outward lot which encourage the formation of different modes of speech, and were, therefore, of one language. Arrived however in the land of Shinar, and finding materials suitable for the construction of edifices, they proceeded to make and burn bricks, and using the bitumen, in which parts of the country abound, for cement, they built a city and a tower of great elevation. A divine interference, however, is related to have taken place. In consequence, the language of the builders was confounded, so that they were no longer able to understand each other. They therefore 'left off to build the city,' and were scattered 'abroad upon the face of all the earth.' The narrative adds that the place took its name of Babel (confusion) from this confusion of tongues. That the work was subsequently resumed, and in process of time completed, is known on the best historical vouchers.

Versions more or less substantially correct of this account are found among other nations. The Chaldæans themselves relate (Abydenus, quoted by Eusebius, *Prepar. Evang.* i. 14) that 'the first men, relying on their size and strength, raised a tower reaching towards heaven in the place where Babylon afterwards stood, but that the winds assisting the gods brought the building down on the heads of the builders, out of the



ruins of which Babylon itself was built. Before this event, men had spoken the same tongue, but afterwards, by the act of the gods, they were made to differ in their speech.' Plato also reports a tradition that, in the golden age, men and animals made use of one common language, but too ambitiously aspiring to immortality, were, as a punishment, confounded in their speech by Jupiter. In the details of the story of the war of the Titans against the Gods may also be traced some traditionary resemblance to the narrative of the Bible. 'The Sibyl,' says Josephus (*Antiq.* i. 4) 'also makes mention of this town, and of the confusion of language, when she says thus:—"When all men were of one language, some of them built a high tower as if they would thereby ascend up to heaven, but the gods sent storms of wind, and overthrew the tower; and gave every one his peculiar language; and for this reason it was that the city was called Babylon."'

The same writer assigns as the reason of this overthrow and confusion, the displeasure of God at seeing them act so madly under the influence of Nimrod, 'a bold bad man,' who, in order to alienate the minds of the people from God, and to take revenge for the Deluge which had destroyed their forefathers, induced them to build a tower too high for the waters to be able to reach. Aben Ezra has given a more probable explanation. 'Those,' he says, 'who built the Tower of Babel were not so insensate as to imagine they could by any such means reach to heaven; nor did they fear another Deluge, since they had the promise of God to the contrary, but they wished for a city which should be a common residence and a general rendezvous, serving in the wide and open plains of Babylonia to prevent the traveller from losing his way; in order that whilst they took measures for their own convenience and advantage, they might also make themselves a name with future ages.'

The sacred narrative (Gen. xi. 4) assigns as the reason which prompted men to the undertaking, simply a desire to possess a building so large and high as might be a mark and rallying point in the vast plains where they had settled, in order to prevent their being scattered abroad, and thus the ties of kindred be rudely sundered, individuals be involved in peril, and their numbers be prematurely thinned at a time when population was weak and insufficient. The idea of preventing their being scattered abroad by building a lofty tower is applicable in the most remarkable manner to the wide and level plains of Babylonia, where scarcely one object exists different from another to guide the traveller in his journeying, and which, in those early days, as at present, were a sea of land, the compass being then unknown.

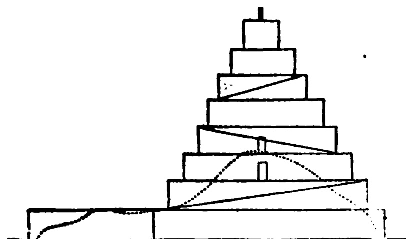
Such an attempt agrees with the circumstances in which the sons of Noah were placed, and is in itself of a commendable nature. But that some ambitious and unworthy motives were blended with these feelings is clearly implied in the sacred record, which, however, is evidently conceived and set forth in a dramatic manner (ver. 6, 7), and may wear around an historical substance somewhat of a poetical dress (Bauer, *Mythol.* i. 223). The apostate Julian has attempted to turn the narrative into ridicule; but even if viewed only as an attempt to account for the origin of diversity of languages, and of the dispersion of the human family, it challenges consideration and respect. The opinion of Heeren (*Asiatic Nations*, vol. ii. p. 146) is far different and more correct: 'there is,' says he, 'perhaps nowhere else to be found a narrative so venerable for its antiquity, or so important in the history of civilization, in which we have at once preserved the traces of primæval international commerce, the first political associations, and the first erection of secure and permanent dwellings.' A comparison of this narrative with the absurd or visionary pictures which the Greeks and Romans give of the primitive condition of mankind, will gratify the student of the Bible and confirm the faith of the Christian, by showing the marked difference there is between the history contained in Genesis and the fictions of the poet, or the traditions of the mythologist.

After the lapse of so many centuries, and the occurrence in 'the land of Shinar' of so many revolutions, it is not to be expected that the identification of the Tower of Babel with any actual ruin should be easy, or lead to any very certain result. The majority of opinions, however, among the learned, make it the same as the temple of Belus described by Herodotus, which is found in the dilapidated remains of the Birs Nimrud.

Herodotus describes the temple in his own simple but graphic manner (i. 181). 'In the other division of the city is the temple of the god Belus, with brazen gates, remaining till my own time, quadrangular, and in all of two stadia. In the middle of the sacred enclosure there stands a solid tower of a stadium both in depth and width; upon this tower another tower is raised, and another upon that, to the number of eight towers. An ascent to them has been made on the outside, in a circle extending round all the towers. When you reach about halfway you find resting places. In the last tower is a large temple, and in the temple lies a large bed well furnished, and near it stands a golden table; but there is no image within; nor does any one remain there by night, only a native female, one whom the god has chosen in preference to all others, as say the Chaldæans who are priests of that god. And these persons also say, asserting what I do not believe, that the god himself frequents the temple and reposes on the

couch. And there belongs to the temple in Babylon another shrine lower down, where there stands a large golden image of the god, and near it is placed a large golden table, and the pedestal and throne are gold, and, as the Chaldæans say, these things were made for eight hundred talents of gold. And out of the shrine is a golden altar; and there is another great altar where sheep-offerings are sacrificed, for it is not permitted to sacrifice upon the golden altar, except sucklings only; but upon the greater altar the Chaldæans offer every year a thousand talents' worth of frankincense at the time when they celebrate the festival of the god. And there was at that time in the temple a statue of twelve cubits of solid gold: but I did not see it, and relate merely what was told me by the Chaldæans. Darius Hystaspis wished to have this statue, but did not dare to take it, but Xerxes his son took it and slew the priest who forbade him to move the statue. Thus is this sacred place adorned; and there are also in it many private offerings.' These offerings, made by individuals, consisting of statues, censers, cups, and sacred vessels of massy gold, constituted a property of immense value. On the top Semiramis placed three golden statues of Jupiter, Juno, and Rhea. The first was 40 feet high, and weighed 1000 Babylonish talents. The statue of Rhea was of the same weight; the goddess was seated on a golden throne with lions at each knee, and two serpents of silver. The statue of Juno was erect like that of Jupiter, weighing 800 talents; she grasped a serpent by the head with her right hand, and held in her left a sceptre enriched with gems. A table of beaten gold was common to these three divinities, weighing 500 talents. On the table were two goblets of 30 talents, and two censers of 500 talents each, and three vases of prodigious magnitude. The total value of the precious articles and treasures contained in this proud achievement of idolatry has been computed to exceed one hundred and twenty millions sterling.

From the Holy Scriptures it appears that when Nebuchadnezzar conquered Jerusalem and levelled most of the city with the ground, 'he brought away the treasures of the temple, and the treasures of the king's house, and put them all into the temple of Bel at Babylon.' The brazen and other vessels which Solomon had caused to be made for the service of Jehovah are said to have been broken up by order of the Assyrian monarch, and formed into the famous gates of brass which so long adorned the superb entrances into the great area of the temple of Belus.



The purposes to which this splendid edifice was appropriated may have been partly gathered from the preceding statements. These purposes varied in some degree with the changes in opinions and manners which successive ages brought. The signal disappointment inflicted on its original founders show, that even in its origin there was connected with it something signally displeasing to God. It seems, indeed, always to have existed in derogation of the divine glory. Consecrated at the first, as it probably was, to the immoderate ambition of the monotheistic children of the Deluge, it passed to the Sabian religion and thus falling one degree from purity of worship, became a temple of the sun and the rest of the host of heaven, till, in the natural progress of corruption, it sank into gross idolatry; and, as the passage from Herodotus shows, was polluted by the vices which generally accompanied the observances of heathen superstition. In one purpose it undoubtedly proved of service to mankind. The Babylonians were given to the study of astronomy. This ennobling pursuit was one of the peculiar functions of the learned men, denominated by Herodotus, Chaldæans, the priests of Belus; and the temple was crowned by an astronomical observatory, from the elevation of which the starry heavens could be most advantageously studied over plains so open and wide, and in an atmosphere so clear and bright, as those of Babylonia.

To Nimrod the first foundations of the tower are ascribed: Semiramis enlarged and beautified it, but it appears that the temple of Bel, in its most renowned state, was not completed till the time of Nebuchadnezzar, who, after the accomplishment of his many conquests, consecrated this superb edifice to the idolatrous object to whom he ascribed his victories. That the observatory on the tower was erected in remote times, there is good reason to believe. Prideaux mentions the circumstance that when Alexander made himself master of Babylon, Calisthenes, the philosopher, who attended him thither, found astronomical observations ascending upwards 1900 years.

The appearance of the tower is deeply impressive, rising suddenly as it does out of a wide desert plain, with its rent, fragmentary, and fire-blasted pile, masses of vitrified matter lying around, and the whole hill itself on which it stands caked and hardened out of the materials with which the temple had been built. Its dreary aspect seems to justify the name which the remnant of the captivity, still abiding amongst the waters of Babylon, give to the place, namely, 'Nebuchadnezzar's Prison'—an appellation which may have been assigned from the circumstance of that monarch's being confined there, under the care of the priesthood, during the period of his madness; or from the king of Israel's having been incarcerated within its precincts by Nebuchadnezzar, after his last conquest of Jerusalem (2 Kings xxv.). A very considerable space round the tower, forming a vast court or area, is covered with ruins, affording abundant vestiges of former buildings; exhibiting uneven heaps of various sizes, covered with masses of broken brick, tiles, and vitrified fragments—all bespeaking some signal overthrow in former days. The towerlike ruin on the summit is a solid mass 28 feet broad, constructed of the most beautiful brick masonry. It is rent from the top nearly halfway to the bottom. It is perforated in ranges of square openings. At its base lie several immense unshapen masses of fine brick work—some changed to a state of the hardest vitrification, affording evidence of the action of fire which seems to have been the lightning of heaven.

The base of the tower, at present, measures 2082 feet in circumference. Hardly half of its former altitude remains. Of the original pyramidal form, the erections of Semiramis and Nebuchadnezzar appear to have begun at the stage of the former overthrow. An elevation is subjoined according to the description of the structure given by historians; the dotted line marks the height of the present remains. From its summit, the view in the distance

presents to the south an arid desert plain; to the west the same trackless waste; towards the north-east marks of buried ruins are visible to a vast

distance. The bricks which compose the town are mostly stamped with several lines of inscription, in the Cuneiform or Babylonian character. Some extend to four or even seven lines, but the dimensions of all are the same. The bricks of Babylon are of two kinds, sun-dried and fire-burnt. The former are larger and of a coarser make than the latter; their solidity is equal to that of the hardest stone. They are composed of clay mixed with chopped straw or broken reeds, in order to increase their compactness. This is the sort of brick which the children of Israel made while in Egyptian bondage. The unburnt bricks commonly form the interior or mass of a building. This is the case with the great tower, while it was faced with the more beautiful fabric made in the furnace or kiln.—J. R. B.

BABYLON, from the Greek Βαβυλών; the name in Hebrew is בָּבֶל Babel, from the confusion of tongues (Gen. xi. 1-9). Another derivation deduces the word from בָּאב בֵּל, 'the court or city of Belus.' In Daniel iv. 27 the place is appropriately termed 'Babylon the Great;' and by Josephus also (*Antiq.* viii. 6. 1), ἡ μεγάλη Βαβυλών. This famous city was the metropolis of the province of Babylon and of the Babylonio-Chaldæan empire. It was situated in a wide plain on the Euphrates, which divided it into two nearly equal parts. According to the book of Genesis, its foundations were laid at the same time with those of the tower of Babel. In the revolutions of centuries it underwent many changes, and received successive reparations and additions. The ancients were not agreed as to the authors or times of these, and any attempt to determine them now with strict accuracy must be fruitless. Semiramis and Nebuchadnezzar are those to whom the city was indebted for its greatest augmentations and its chief splendour. Its site has been with much probability ascertained to be near Hillah, about forty miles from Bagdad.

According to Herodotus, the walls of Babylon were sixty miles in circumference, built of large bricks cemented together with bitumen, and raised round the city in the form of an exact square; hence they measured fifteen miles along each face. They were 87 feet thick and 350 feet high (Quintus Curtius says four horse-chariots could pass each other on them without danger), protected on the outside by a vast ditch lined with the same material, and proportioned in depth and width to the elevation of the walls. The city was entered by twenty-five gates on each side, made of solid brass, and additionally strengthened by 250 towers, so placed that between every two gates were four towers, and four additional ones at the four corners. From all the gates proceeded streets running in straight lines, each street being fifteen miles in length, fifty in number, and crossing each other at right angles. Other minor divisions occurred, and the whole city contained 676 squares, each two miles and a quarter in circumference. The river ran through the city from north to south; and on each side was a quay of the same thickness as the walls of the city, and 100 stadia in length. In these quays were gates of brass, and from each of them steps descending into the river. A bridge was thrown across the river, of great beauty and admirable contrivance, a furlong in length and 30 feet in breadth. As the Euphrates overflows during the summer months, through the melting of the snows on the mountains of Armenia, two canals were cut to turn the course of the waters into the Tigris, and vast artificial embankments were raised on each side of the river. On the western side of the city an immense lake forty miles square was excavated to the depth, according to Herodotus, of 35 feet, and into this lake the river was turned till the work was completed. At each end of the bridge was a palace, and these had a subterraneous communication.

The account given by Quintus Curtius (v. 1) of the entrance of Alexander into Babylon may serve to enliven the narrative, and at the same time make the impression on the reader's mind more distinct. 'A great part of the inhabitants of Babylon stood on the walls, eager to catch a sight of their new monarch; many went forth to meet him. Among these Bagophanes, keeper of the citadel and of the royal treasure, strewed the entire way before the king with flowers and crowns; silver altars were also placed on both sides of the road, which were loaded not merely with frankincense, but all kinds of odoriferous herbs. He brought with him for Alexander gifts of various kinds—flocks of sheep and horses: lions also and panthers were carried before him in their dens. The Magi came next, singing in their usual manner their ancient hymns. After them came the Chaldæans, with their musical instruments, who are not only the prophets of the Babylonians, but their artists. The first are wont to sing the praises of the kings; the Chaldæans teach the motions of the stars and the periodic vicissitudes of the times and seasons. Then followed last of all the Babylonian knights, whose equipment, as well as that of their horses, seemed designed more for luxury than magnificence. The king, Alexander, attended by armed men, having ordered the crowd of the townspeople to proceed in the rear of his infantry, entered the city in a chariot and repaired to the palace. The next day he carefully surveyed the household treasure of Darius, and all his money. For the rest, the beauty of the city and its age turned the eyes not only of the king, but of every one, on itself, and that with good reason.' Within a brief period after this, Alexander lay a corpse in the palace.

The greatest circumference ascribed by the ancients to the city walls is 480 stadia, the most moderate 360. The smallest computation supposes an area for the city of which we can

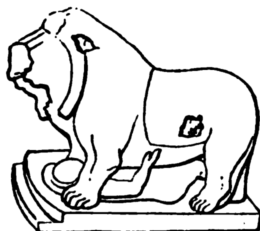
now scarcely form an idea. Its population however may not have been in proportion to its extent. The place was probably what in these days would be considered an enclosed district rather than a compact city. Quintus Curtius reports that the buildings were not continuous, and that within the precincts of the city was arable and pasture land sufficient to produce food for the population, as a resource against a siege.

One or two additional facts may aid in conveying a full idea of this great and magnificent city. When Cyrus took Babylon by turning the Euphrates into a neighbouring lake, the dwellers in the middle of the place were not for some time aware that their fellow-townsmen who were near the walls had been captured. This, says Herodotus (i. 191), was owing to the magnitude of the city, and to the circumstance that at the time the inhabitants were engaged in carousals, it being a festive occasion. Nor, according to Xenophon, did the citizens of the opposite quarter learn the event till three hours after sunrise—the city having been taken in the night. Alexander had to employ 10,000 men during two months, to remove the accumulated ruins precipitated by order of Xerxes nearly 200 years before. From the fallen towers of Babylon have arisen not only all the present cities in its vicinity, but others which, like itself, have long since gone down into the dust. Since the days of Alexander four capitals, at least, have been built out of its remains—Seleucia by the Greeks, Ctesiphon by the Parthians, Al Maidan by the Persians, and Kufa by the Caliphs; with towns, villages, and caravansaries without number. The necessary fragments and materials were transported along the rivers and the canals.

The antiquity of the canals of Babylonia dates from the most remote periods of the Chaldæo-Babylonian monarchy. The ancient kings of Assyria and Babylonia well understood the value of canals, and their empire arose upon alluvial plains, amid a system of irrigation and draining which spread like a net-work over the land. It may be sufficient to specify the Nahr Malikah, or Royal Canal, the origin of which has been referred both to Nimrod and Cush. Abydenus, however, attributes it to Nebuchadnezzar. From the account of Herodotus it appears to have been of sufficient breadth and depth to be navigable for merchant vessels. It is not, therefore, surprising that some writers have considered it as the ancient bed of the Euphrates.

The soil around Babylon is of a light yielding nature, easily wrought for canals and other purposes, whether of art or war. Cyrus, therefore, would find no great difficulty in digging a trench about the city sufficient to contain the waters of the river (*Cyrop.* vii.). Alexander (Strabo, xvi. p. 510), in enlarging one of the canals and forming basins for his fleet, laid open the graves of many buried kings and princes—which shows how readily the soil yields and gives way before the labours of man.

The new palace built by Nebuchadnezzar was prodigious in size and superb in embellishments. Its outer wall embraced six miles; within that circumference were two other embattled walls, besides a great tower. Three brazen gates led into the grand area, and every gate of consequence throughout the city was of brass. In accordance with this fact are the terms which Isaiah (xlv. 1, 2) employs when, in the name of Jehovah, he promises Cyrus that the city should fall before him, 'I will open before him the two-leaved gates: I will break in pieces the gates of brass'—a prophecy which was fulfilled to the letter when Cyrus made himself master of the place in the dead of the night. Having first by means of its canals turned the river into the great dry lake west of Babylon, and then marched through the emptied channel, he made his way to the outer walls of the fortified palace on its banks; when finding the brazen gates incautiously left open by the royal guards while engaged in carousals, he entered with all his train; 'the Lord of Hosts was his leader,' and Babylon, as an empire, was no more.



The palace was splendidly decorated with statues of men and animals, with vessels of gold and silver, and furnished with luxuries of all kinds brought thither from conquests in Egypt, Palestine, and Tyre. Its greatest boast were the hanging gardens, which acquired even from Grecian writers the appellation of one of the wonders of the world. They are attributed to the gallantry of Nebuchadnezzar, who constructed them in compliance with a wish of his queen Amytis to possess elevated groves such as she had enjoyed on the hills around her native Ecbatana. Babylon was all flat; and to accomplish so extravagant a desire an artificial mountain was reared, 400 feet on each side, while terraces one above another rose to a height that overtopped the walls of the city, that is, above 300 feet in elevation. The ascent from terrace to terrace was made by corresponding flights of steps, while the terraces themselves were reared to their various stages on ranges of regular piers, which, forming a kind of vaulting, rose in succession one over the other to the required height of each terrace, the whole being bound together by a wall of 22 feet in thickness. The level of each terrace or garden was then formed in the following manner: the top of the piers was first laid over with flat stones, 16 feet in length and 4 feet in width; on these stones were spread beds of matting, then a thick layer of bitumen; after which came two courses of bricks, which were covered with sheets of solid lead. The earth was heaped on this platform; and in order to admit the roots of large trees, prodigious hollow piers were built and filled with mould. From the Euphrates, which flowed close to the foundation, water was drawn up by machinery. The whole, says Q. Curtius (v. 5.), had, to those who saw it from a distance, the appearance of woods overhanging mountains. Such was the completion of Nebuchadnezzar's work, when he found himself at rest in his house, and flourished in his palace. The king spoke and said, 'Is not this great Babylon that I have built for the house of the kingdom by the might of my power, and the honour of my majesty' (Dan. iv.), a picture which is amply justified by the descriptions of heathen writers. Nowhere could the king have taken so comprehensive a view of the city he had so magnificently constructed and adorned as when walking on the highest terrace of the gardens of his palace.

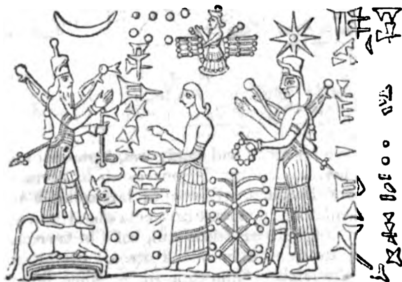
The remains of this palace are found in the vast mound or hill called by the natives Kasr. It is of irregular form, 800 yards in length and 600 yards in breadth. Its appearance is constantly undergoing change from the continual digging which takes place in its inexhaustible

quarries for brick of the strongest and finest material. Hence the mass is furrowed into deep

ravines, crossing and recrossing each other in every direction. Every vestige, however, discovered in it declares it to have been composed of buildings far superior to all the rest in the Eastern quarter. In this mass Rich found a lion of colossal dimensions, standing on a pedestal of a coarse kind of grey granite and of rude workmanship; in the mouth was a circular aperture, into which a man might introduce his fist. Hollows

caused by excavation occur in the mound, in which persons have lost their lives. Considerable fragments of wall are still standing; and also detached masses, composed of furnace-burnt bricks of a beauty and freshness truly admirable. The bricks used in the construction of the palace appear to have been exclusively of the burnt kind. The face of every brick is invariably placed downwards. On the north side of the Kasr, amongst the mouldering fragments, and elevated on a sort of ridge, stands the famous solitary tree, called by the Arabs Atheleh; it bears every mark of antiquity in appearance, situation, and tradition. Its trunk was originally enormous; but, worn away by the lapse of ages, it is now but a ruin amid ruins: never theless it bears spreading and ever-green branches, which are peculiarly beautiful, being adorned with long tress-like tendrils resembling heron feathers, growing from a central stem. These slender and delicate sprays bending towards the ground give the whole the appearance of a weeping willow, while their gentle waving in the wind whenever a breeze blows, produces a low and melancholy sound. This tree is revered by the Arabs as holy, from a tradition current among them, that the Almighty himself preserved it here from the earliest time, to form a refuge for the Caliph Ali, who fainting with fatigue from the battle of Hillah, found secure repose under its shade.

In digging in the extensive mounds which constitute the ruins of Babylon, an endless succession of curious objects is found from time to time. One or two may be specified:—a large cylinder of baked clay, covered with a cuneiform

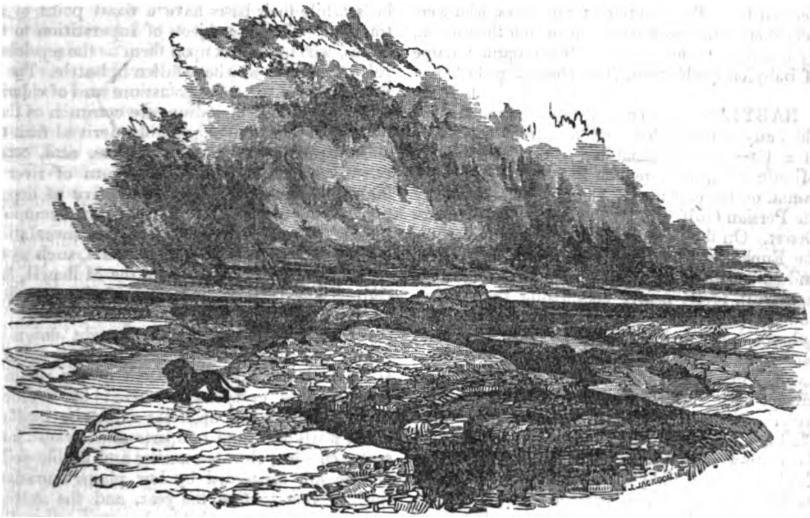


inscription; an agate seal finely cut, representing a priest surrounded by various symbols of the Sabian worship; a small dog in bronze, with a collar of pure gold round his neck, about three inches in height. Small figures, both in bronze and clay, are frequently picked up all over the ruins of Babylon. One of a larger kind is a fragment seen lying midway between Hillah and the site of Seleucia, consisting of the lower half of the statue of a man in a sitting posture; the legs are naked, and closed together in the Egyptian style; the hands rest on the thighs. It is cut in a bluish basalt. That so few comparatively of these relics are now visible is not surprising, since, as Babylon had plundered Egypt, Assyria, and Judæa of their statues, their gold and silver, and even the architectural ornaments of their palaces, so in its turn this rich treasury of the antiquities of all nations became the prey of successive conquerors; and plunderers completed the work of spoliation. One or two

drawings are here given of relics discovered on this site. The first represents a cylinder presenting a very remarkable group of personages, and an inscription in cuneiform characters of a peculiar kind. The figures are connected with the rites of the lunar deity, who was worshipped by the Persians and the Chaldæans under the

names of Mylitta and Abytta, or Araites and Aranus. According to Maimonides, this Babylonish deity had numerous bands of young women devoted to her service; and here is seen a priestess introducing a virgin to her temple to receive the benediction of the priests. These dedicated females, Herodotus says, sat once in their lives in the shrine of Venus, their heads bound with garlands and their bodies with cords. Thus exposed, if any stranger threw gold into her lap, she was obliged to retire with him into the temple, when her charms became the victim of its impure rites. The money was then laid on the altar to be consecrated to the goddess. These outrages seem to be referred to by Moses in the law, when he says, 'Thou shalt not bring the hire of a harlot into the house of the Lord thy God.' The second cut is from a cylinder of white agate. The engraving is of good workmanship. The hieroglyphics are the sun, moon, five planets, and the archaspand, or seven balls, indicative of the seven celestial powers or intelligences, always attendant on the Chaldæan and Persian great deity. The figure beneath the sun holds a wreath

formed of globular shapes in his left hand. On his back appear to be a bow and quiver; balls surmount these weapons. Before him springs an object sprayed like a flower, and he is preceded, in advancing towards a superior kind of being, by a bareheaded figure, whose hands are held up as if in the act of addressing that being which fronts him standing upon the unicorn ball. An etherial personage is seen over the head of the uncovered and unadorned figure. The august bearded figure, which the last addresses, bears the symbols of divinity among the Chaldæans, such as sceptres, axes, and other weapons. The floating figure in the rays clearly points out a close affinity between the religious system of the Chaldæans and the ancient Persians; showing that they used the same symbolical representations, and also prefigured the same gods and their attributes in the sun and moon; and hence it appears probable that the alleged difference between the two religions chiefly lay in the one worshipping the imaged symbols as gods, while the other restricted itself to adoring the heavenly host in themselves alone. The two engravings which follow are introduced less with reference to their subjects than for the sake of the illustrations of Babylonian costume which they afford. The figures have been selected from the engraved cylinders and gems, and probably convey as much information on this subject as can now be obtained.



Babylon, as the centre of a great kingdom, was the seat of boundless luxury, and its inhabitants were notorious for their addiction to self-indulgence and effeminacy. Q. Curtius (v. 1) asserts that, 'nothing could be more corrupt than its morals, nothing more fitted to excite and allure to immoderate pleasures. The rites of hospitality were polluted by the grossest and most shameless lusts. Money dissolved every tie, whether of kindred, respect, or esteem. The Babylonians were very greatly given to wine, and the enjoyments which accompany inebriety. Women were present at their convivialities, first with some degree of propriety, but, growing worse and worse by degrees, they ended by throwing off at once their modesty and their clothing.' On the ground of their awful wickedness the Babylonians were threatened wi condign punishment, through the mouths of prophets; and the tyranny with which the rulers of the city exercised their sway was not without a decided effect in bringing on them the terrific consequences of the Divine vengeance. Nor in the whole range of literature is there anything to be found approaching to the sublimity, force, and terror with which Isaiah and others speak on this painful subject (Is. xiv. 11; xlvii. 1; Jer. li. 39; Dan. v. 1).

Under Nabonnidus, the last king, B.C. 538 or 539, Babylon was taken by Cyrus, after a siege of two years. An insurrection, under Darius Hystaspis (B.C. 500), the object of which was to gain emancipation from Persian bondage, led that prince to punish the Babylonians by throwing down the walls and gates which had been left by Cyrus, and by expelling them from their homes. Xerxes plundered and destroyed the temple of Belus, which Alexander the Great would probably, but for his death, have restored. Under Seleucus Nicator the city began to sink speedily, after that monarch built Seleucia on the Tigris, and made it his place of abode. In the time of Strabo and Diodorus Siculus the place

lay in ruins. Jerome, in the fourth century of the Christian era, learnt that the site of Babylon had been converted into a park or hunting-ground for the recreation of the Persian monarchs, and that, in order to preserve the game, the walls had been from time to time repaired. If the following extract from Rich (p. 30) is compared with these historical facts, the prophecy of Isaiah (xiii. 19) will appear to have been strikingly fulfilled to the letter: 'I had always imagined the belief of the existence of satyrs was confined to the mythology of the West; but a choadar who was with me when I examined this ruin (the Mujahlibah) mentioned that in this desert an animal is found resembling a man from the head to the waist, but having the thighs and legs of a sheep or goat: he also said that the Arabs hunt it with dogs, and eat the lower parts, abstaining from the upper, on account of their resemblance to those of the human species.'

More thorough destruction than that which has overtaken Babylon cannot well be conceived. Rich was unable to discover any traces of its vast walls, and even its site has been a subject of dispute. 'On its ruins,' says he, 'there is not a single tree growing, except the old one,' which only serves to make the desolation more apparent. Ruins like those of Babylon, composed of rubbish impregnated with nitre, cannot be cultivated. The ruins of Babylon and its vicinity consist in general of mounds of earth formed by the decomposition of buildings, channelled and furrowed by the weather, and having the surface strewed with pieces of brick, bitumen, and pottery. In addition to the Birs Nimrod and the Kasr, already described, mention may be made of the Mujahlibah, which lies to the north of the Kasr, five miles from Hillah, and 950 yards from the river bank. Its shape is oblong and its height irregular. The sides face the cardinal points: the northern is 200, the southern 219, the eastern 182, and the western 186 yards in length; and the elevation of the south-east or highest angle is 141 feet. The western face is the most interesting, on account of the appearance of building which it presents. Near the summit is a low wall, composed of unburnt bricks, mixed up with chopped straw or reeds, and cemented with clay mortar of great thickness, having between every layer of bricks a layer of reeds; and on the north side are also some vestiges of a similar construction. The south-west angle is crowned by something like a turret or lantern. All the sides are worn into furrows, which in some instances are of great depth. The summit is covered with heaps of rubbish, in which layers of broken burnt bricks cemented with mortar have been found, and also entire bricks with inscriptions. Scattered over the whole are fragments of pottery, brick, bitumen, pebbles, vitrified brick or scoria, and even shells, bits of glass, and mother-of-pearl. In the northern face, near the top, is a niche or recess, high enough for a man to stand upright in, at the back of which is a low aperture, leading to a small cavity, whence a passage branches off to the right, sloping upwards in a westerly direction, till it loses itself in the rubbish. Mr. Rich was informed that a human body had been found here, swathed in a tight wrapper, partially covered with bitumen, and inclosed in a coffin of mulberry-wood. Being induced to dig here, he came to a shaft, or hollow pier, 60 feet square, lined with fine brick laid in bitumen, and filled up with earth, in which were found a brass spike, some earthen vessels, and a beam of date-tree wood. This hollow pier corresponds with Strabo's description (p. 738) of the hollow brick piers which supported the hanging-gardens, and in which the large trees grew. Rich also discovered, in a continuation of the passage to the eastward, a wooden coffin containing a skeleton in good preservation. Under the head of the coffin was a round pebble; attached to the coffin, on the outside, was a brass bird, and inside an ornament of the same material, which had apparently been suspended to some part of the skeleton. A little farther on the skeleton of a child

[Site of Babylon.]

was found, and Rich was of opinion that the whole passage was occupied in a similar manner. It may therefore be conjectured that the Mujahlibah was a great brick pyramid for the dead. It may also have been used for an observatory.

Neither the ancient nor the modern authorities are in exact agreement respecting particular places and localities, and any attempt to fix them now can be nothing more than an approach to the reality. Instead, therefore, of repeating uncertainties, or adding conjectures to conjectures, we judge it better to refer the reader to the works enumerated at the foot of the ensuing article.

In the prophetic writings of the Apocalypse (xiv. 8; xvi. 19; xvii. 5; xviii. 2) Babylon stands for Rome, symbolizing Heathenism:—'Babylon is fallen, that great city, because she made all nations drink of the wine of the wrath of her fornication.' This reference appears to have been derived from the practice of the Jews, who were accustomed to designate Rome, which they hated, by the opprobrious and not inappropriate name of Babylon (Schöttgen, *Hor. Hebr.* i. p. 1125).—J. R. B.

BABYLONIA (so called from the name of its chief city, termed also Chaldæa, from those who at a later period inhabited it), a province of Middle Asia, bordered on the north by Mesopotamia, on the east by the Tigris, on the south by the Persian Gulf, and on the west by the Arabian Desert. On the north it begins at the point where the Euphrates and Tigris approach each other, and extends to their common outlet in the Persian Gulf, pretty nearly comprising the country now designated Irak Arabi. The two words, Babylonia and Chaldæa, were however sometimes used in another signification: Babylonia, as containing in an extended sense Assyria also and Mesopotamia, nearly all the countries which Assyria in its widest meaning embraced; while Chaldæa indicated, in a narrower signification, the south-western part of Babylonia between the Euphrates and Babylon (Strabo, xvi.; Ptol.). In Hebrew, Babylonia bore the name of שִׁנְעָר, Shinar, or 'the land of Shinar;' while 'Babylon' (Ps. cxxxvii. 1) and 'the land of the Chaldæans' (Jer. xxiv. 5; Ezek. xii. 13) seem to signify the empire of Babylon. The climate is temperate and salubrious. The country in ancient times was very prolific, especially in corn and palms. Timber-trees it did not produce. Many parts had springs of naphtha. As rain is infrequent, even in the winter months, the country owes its fruitfulness to the annual overflow of the Euphrates and the Tigris, whose waters are conveyed over the land by means of canals. Quintus Curtius (i. 5) declares that the country between the Euphrates and the Tigris was covered with so rich a soil, that the cattle were driven from their pastures lest they should be destroyed by satiety and fatness.

The alluvial plains of Babylonia, Chaldæa, and Susiana, including all the river, lake, and newer marine deposits at the head of the Persian Gulf, occupy an extent of about 32,400 square geographic miles. The rivers are the Euphrates and its tributaries, the Tigris and its tributaries, the Kerah, the Karun and its tributaries, the Jerahi, and the Idiyan; constituting, altogether, a vast hydrographical basin of 189,200 geographic square miles; containing, within itself, a central deposit of 32,400 miles of alluvium, almost entirely brought down by the waters of the various rivers, and which have been accumulating from periods long antecedent to all historical records. All these rivers present the peculiarity of flowing, for a great part of their course, through supra-cretaceous formations of a very friable nature, easily disintegrated by the action of the elements, and still more so by that of running waters when swollen by floods, and carrying down pebbles. Near Bushiyah, about ten miles beyond the south-east quarter of ancient Babylon, on a level plain, are found a number of sand-hills, which are constantly shifting their place and number, and yet always occupy the same general locality. They appear to owe their existence to the presence of springs, which moisten the sand and cause its accumulation, at the same time allowing the prevalent winds to alter the form and number of the hills, while their bases have a fixed point of attraction. They are objects of superstition to the Arabs, who often look upon them as the sepulchral pall of brethren who have fallen in battle. The efflorescences of nitrate of potassium and of chloride or hydro-chlorate of sodium are common on these plains; the one is most probably derived from the decomposition of vegetable matters, and, consequently, characteristic of alluvium of river or marshy origin; the other is indicative of depositions from seas or bays. The modern accumulations of soil in Babylonia from annual inundations is still very great. Several canals, such as the Isa, the Nahr Zimberani-Yah, the Muhawil, &c., convey water at certain seasons of the year from one river and part of the country to another. In general, the alluvium that is brought down by canals and rivulets, and deposited at their mouths, is a fine clay. The great extent of the plain of Babylonia is everywhere altered by artificial works; mounds rise upon the otherwise uniform level, walls and mud ramparts and dykes intersect each other, elevated masses and friable soil of pottery are succeeded by low plains inundated during great part of the year, and the antique beds of canals are visible in every direction. There is still some cultivation and some irrigation. Flocks pasture in meadows of coarse grasses; the Arabs' dusky encampments are met with here and there; but, except on the banks of the Euphrates, there are few remains of the date-groves, the vineyards, and the gardens which adorned the same land in the days of Artaxerxes; and still less of the population and labour which must have made a garden of such soil in the time of Nebuchadnezzar. The vegetation of these tracts is characterized by the usual saline plants, the river banks being fringed by shrubberies of tamarisk and acacia, and occasional groves of a poplar which has been mistaken for a willow, the weeping willow (Salix Babylonica) is not met with in Babylonia. The solitary tree, 'of a species altogether strange to this country' (Heeren, *Asiatic Nations*, vol. ii. p. 158), which Rich calls lignum-vitæ, and which has been supposed to be a last remnant or offspring of the sloping or hanging gardens that appeared to Quintus Curtius like a forest, is in reality a tamarisk. No monuments in Babylonia and Chaldæa appear to be more decisive of the antiquity and Assyrian origin of sites than the lofty artificial mound, of which the present degenerate hordes of the tent

and the spear narrate so many fabulous tales, but which almost everywhere present themselves where there are also other strong grounds of presumption of an Assyrian or Chaldæo-Babylonian origin. Thus at Irkah, at Wasit, at Teredon, at the Birs Nimrud, the Mujahlibah, El Heïmar, &c., these colossal piles are found domineering over the dreary waste, to the uniformity of which they offer a striking contrast, being visible at great distances; and, although thrown by the mirage into strange and contorted shapes, yet they always appear, when seen upon the verge of the horizon, as if possessing colossal dimensions, and produce an effect in point of grandeur which cannot easily be surpassed. Long before the period when man began to erect these feeble semblances of mountains, a various level of alluvium had been established in the spaces between the rivers, by which in one part the waters of the Euphrates find a higher level than the Tigris, into which they flow at the high season; while at another place the Tigris sends its waters to the Euphrates, and restores the flood by which it had been previously enriched from the 'Great River.'

The Euphrates is still a majestic stream, but wanders through a dreary solitude. Its banks are hoary with reeds, and the grey osier-willows are yet there on which the captives of Israel hung up their harps, and, while Jerusalem was not, refused to be comforted. At that time its now broken hills were palaces; its long undulating mounds, streets; its vast solitude was filled with the busy subjects of the proud mistress of the East. Now, 'wasted with misery,' her habitations are not to be found; and, for herself, 'the worm is spread over her.' Strabo makes the Euphrates a stadium (500 feet) in breadth at Babylon; according to Rennel it is about 491 English feet; D'Anville reduces it to 330; Rich, on the other hand, raises it to 450 feet; its breadth, however, varies in its passage through the ruins. Rich ascertained its depth to be 2½ fathoms, and that the current runs gently at the medium rate of about two knots an hour. The Euphrates is far less rapid than the Tigris, and rises at an earlier period. When at its height—from the latter end of April to the latter end of June—it overflows the surrounding country, fills, without the aid of human labour, the canals dug for its reception, and facilitates agriculture in a surprising degree. The ruins of Babylon are then so inundated as to render many parts of them inaccessible. The water of the Euphrates is esteemed more salubrious than that of the Tigris. The course of the river through the site of Babylon is north and south. Bricks and other fragments of buildings are frequently found in it by fishermen who ply on its waters.

During the three great empires of the East, no tract of the whole appears to have been so reputed for fertility and riches as the district of Babylonia, which arose in the main from the proper management of the mighty river which flowed through it. Herodotus mentions that, when reduced to the rank of a province, it yielded a revenue to the kings of Persia which comprised half their income. And the terms in which the Scriptures describe its natural as well as its acquired supremacy when it was the imperial city, evidence the same facts. They call it 'Babylon, the glory of kingdoms; the beauty of the Chaldee excellency; the lady of kingdoms, given to pleasure; that dwelleth carelessly, and sayeth in her heart, *I am*, and there is none else beside me.' But now, in the expressive and inimitable language of the same holy book, may it be said—'She sits as a widow on the ground. There is no more a throne for thee, O daughter of the Chaldæans!' As for the abundance of the country, it has vanished as clean away as if 'the besom of desolation' had swept it from north to south; the whole land, from the outskirts of Bagdad to the farthest reach of sight, lying a melancholy waste.

In order to defend the country against hostile attacks from its neighbours, northward from Babylon, between the two rivers, a wall was built, which is known under the name of the Median Wall (τὸ Μηδίας καλούμενον τεῖχος, Xen. *Anab.* ii. 4, 12). The Babylonians were famous for the manufacture of cloth and carpets: they also excelled in making perfumes, in carving in wood, and in working in precious stones. They were a commercial as well as a manufacturing people, and carried on a very extensive trade alike by land and by sea. Babylon was indeed a commercial depôt between the Eastern and the Western worlds (Ezek. xvii. 4; Is. xliii. 14). Thus favoured by nature and aided by art, Babylonia became the first abode of social order and the cradle of civilization. Here first arose a powerful empire—here astronomy was first cultivated—here measures and weights were first employed.

The original inhabitants were without doubt of the Shemitic family; and their language belonged to the class of tongues spoken by that race, particularly to the Aramaic branch, and was indeed a dialect similar to that which is now called Chaldee.

From the account which is found in Gen. x. 8, *Nimrod*, the son of Cush, appears to have founded the kingdom of Babylon, and to have been its first sovereign. In the 14th chap. of the same book, *Amraphel* is cursorily mentioned as king of Shinar. In the reign of Hezekiah (A.C. 713)—2 Kings xx. 12—'Berodach-baladan, the son of Baladan,' was 'king of Babylon,' and 'sent letters and a present unto Hezekiah, for he had heard that Hezekiah had been sick.' About a hundred years later, Jeremiah and Habakkuk speak of the invasion of the Babylonians under the name of the Chaldæans; and now *Nebuchadnezzar* appears in the historical books (2 Kings xxiv. 1, *sq.*; Jer. xxxvi. 9. 27) as head of the all-subduing empire of Babylon. *Evilmerodach* (2 Kings xxv. 27; Jer. lii. 31), son of the preceding, is also mentioned as 'king of Babylon;' and with *Belshazzar* (Dan. v. 1, 30), the Nabonedus of Berosus, the line of the Chaldæan kings was closed: he perished in the conquest of Babylon by the Medo-Persians (Dan. v. 31), 'and Darius, the Median, took the kingdom.'

The domination of the Chaldæans in Babylon has given historians some trouble to explain. The Chaldæans appear to have originally been a nomadic tribe in the mountains of Armenia, numbers of whom are thought to have settled in Babylon as subjects, where, having been civilized and grown powerful, they seized the supreme power and founded a Chaldæo-Babylonian empire.

Herodotus has noticed the Chaldæans as a tribe of priests (i. 28); Diodorus (i. 28), as a separate caste under Belus, an Egyptian priest; while the book of Daniel refers to them as astrologers, magicians, and soothsayers: but there can be

little doubt, as laid down by Gesenius on Isaiah xxiii. 13, that it was the name of a distinct nation, if not, as Heeren (*Manual of Anc. Hist.* 28) has maintained, the name of the Northern nomades in general. In connection with Babylonia the Chaldæans are to be regarded as a conquering nation as well as a learned people: they introduced a correct method of reckoning time, and began their reign with Nabonassar, B.C. 747. The brilliant period of the Chaldæo-Babylonian empire extended to B.C. 538, when the great city, in accordance with the prophecy of Daniel, was sacked and destroyed.

Babylonia, during this period, was 'the land of the Chaldæans,' the same as that into which the children of Judah were carried away captive (Jer. xxiv. 5); which contained Babylon (Jer. l. 1; Ezek. xii. 13); was the seat of the king of Babylon (Jer. xxv. 12), and contained the house of the god of Nebuchadnezzar (Dan. i. 1, 2). The profane historians lend their testimony to the same effect. There is another scriptural reference to this proud period in the history of the Chaldees, when learned men filled the streets and the temples of Nineveh and Babel:—'Behold the land of the Chaldæans; this people was not, till the Assyrian founded it for them that dwell in the wilderness: they set up the towers thereof, they raised up the palaces thereof; and he brought it to ruin' (Isa. xxiii. 13).

A full description of the actual condition of Babylonia, Babylon, and Babel, with illustrations, disquisitions, maps, plans, &c., may be found in the following works:—*Memoir on the Ruins of Babylon*, by C. J. Rich, 2nd edit. London, 1836; *Travels in Georgia, Persia, Armenia, and Ancient Babylonia*, by Sir Robert Ker Porter, London, 1822; Ainsworth's *Researches in Babylonia*, London, 1838; Fraser's *Travels in Koordistan, Mesopotamia, &c.* London, 1840; Rosenmüller's *Biblische Alterthumskunde;* Gesenius in the *Cyclopädie* of Ersch and Gruber; Heeren, *Ideen*, i. 4; Wahl, *Geschichte der Morg. Spr.* pp. 570; Winer, *Biblisches Real-wörterbuch*.—J. R. B.

BACA (בָּכָא) and BECAIM (בְּכָאִים) occur, the first in Ps. lxxxiv. 6, 'Who passing through the valley of Baca make it a well; the rain also filleth the pools;' the second in 2 Sam. v. 23, 24, and in 1 Chron. xiv. 14, 15, 'And let it be, when thou hearest the sound of a going in the tops of the mulberry trees, that thou shalt bestir thyself.'

Neither the *mulberry* nor the *pear-tree*, considered to be the baca of the Scriptures, satisfies translators and commentators, because they do not possess any characters particularly suitable to the above passages. With regard to the mulberry, Rosenmüller justly observes, that this interpretation is countenanced neither by the ancient translators nor by the occurrence of any similar term in the cognate languages. We should expect, however, some notice in Scripture of a tree which must have been common, and always esteemed for its fruit [SYKAMINOS]. Rosenmüller prefers pear-trees in the preceding passages, as being the oldest rendering of the words. But the correctness of this translation is not confirmed by any of the cognate dialects; nor is the pear-tree more appropriate than the mulberry.

In consequence no doubt of these difficulties, other plants have been resorted to; and Celsius quotes Abu'l Fadli's description of a shrub of Mecca: 'Baca nota est arbor s. frutex, in Mecca, et tractibus vicinis. Similis est τῷ بشام Baschâm, nisi quod folia ejus longiora sint. Fructum, perinde ac illa, plurimum fert, sed majorem et rotundiorem. Temperamento calida est et sicca. Et cum folium ejus resecatur, lacryma quædam inde distillat, alba, calida, et acris, virtutis tamen nullius. Probata est medicina contra dolorem dentium, si hujus arboris ramis fricentur. Quin et confortat gingivas, et prohibet ne malum renovetur' (Cels. i. 339).

The same plant is probably that referred to by Forskal (p. 198) among the obscure plants without fructification which he obtained from Djobba, and which he says was called بكا. Baka, vel ابكا Ebka: 'Arbor foliis obovatis, glabris, integris, lactescens, venenata.'

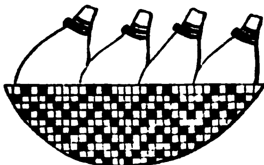
If this be the same as the former, both are still unknown any further, and we cannot therefore determine whether they are found in Palestine or not.

The tree alluded to in Scripture, whatever it is, must be common in Palestine, must grow in the neighbourhood of water, have its leaves easily moved, and have a name in some of the cognate languages similar to the Hebrew Baca. The only one with which we are acquainted answering to these conditions is that called *bak* by the Arabs, or rather *shajrat-al-bak* —that is, the *fly* or *gnat* tree. It seems to be so called from its seeds, when loosened from their capsular covering, floating about like gnats, in consequence of being covered with light silk-like hairs, as is the case with those of the willow. In Richardson's *Arabic Dictionary* the bak-tree is considered to be the elm, but to us it appears to be the poplar: for the *dirdar* of the Arabians seems to be another kind of bak-tree, probably the *arbor culicum* of the Latin translators of Avicenna. Of this tree Plempius says, 'Leguntur in codice Romano principio hæc, Dicit Dioscorides hanc arborem esse salici similem; à Syris vocari *dirdar*, à Chaldæis culicum arborem.' As this passage is not found in Dioscorides, it is curious that it should occur in an old manuscript. For in other Arabic authors the dirdar is said to be a kind of *ghurb*, and the ghurb we have ascertained to be the Lombardy poplar (v. *Illust. Himal. Bot.*, p. 344). The willow and the poplar are well known to have the same kind of seed, whence they are included by botanists in the group of Salicineæ.

As it seems to us sufficiently clear that the bak-tree is a kind of poplar, and as the Arabic 'bak' is very similar to the Hebrew 'Baca,' so it is probable that one of the kinds of poplar may be intended in the above passages of Scripture. And it must be noted that the poplar is as appropriate as any tree can be for the elucidation of the passages in which baca occurs. For the poplar is well known to delight in moist situations, and Bishop Horne, in his *Comm.* on Psalm lxxxiv., has inferred that in the valley of Baca the Israelites, on their way to Jerusalem, were refreshed by plenty of water. It is not less appropriate in the passages in 2 Samuel and 1 Chronicles, as no tree is more remarkable than the poplar for the ease with which its leaves are rustled by the slightest

movement of the air; an effect which might be caused in a still night even by the movement of a body of men on the ground, when attacked in flank or when unprepared. That poplars are common in Palestine may be proved from Kitto's *Palestine*, p. 114: 'Of poplars we only know, with certainty, that the black poplar, the aspen, and the Lombardy poplar grow in Palestine. The aspen, whose long leaf-stalks cause the leaves to tremble with every breath of wind, unites with the willow and the oak to overshadow the watercourses of the Lower Lebanon, and, with the oleander and the acacia, to adorn the ravines of southern Palestine: we do not know that the Lombardy poplar has been noticed but by Lord Lindsay, who describes it as growing with the walnut-tree and weeping-willow under the deep torrents of the Upper Lebanon.'—J. F. R.

BACA, THE VALLEY OF (Ps. lxxxiv. 6), or Valley of Weeping. Some, with our translators, regard this as the name of a place, and by such it has been usually sought in the Bekaa (el-Bekaa), a valley or plain in which Baalbek is situated. But this spot is far from possessing the dreariness and drought on which the point of the Psalmist's allulusion depends. It does not appear necessary to understand that there is any reference to an actual valley so called. The Psalmist in exile, or at least at a distance from Jerusalem, is speaking of the privileges and happiness of those who are permitted to make the usual pilgrimages to that city, in order to worship Jehovah in the Temple: 'They knew the ways that lead thither, yea, though they must pass through rough and dreary paths, even a vale of tears; yet such are their hope and joy of heart, that all this is to them as a well-watered country, a land crowned with blessings of the early rain.' Dr. Robinson (*Add. to Calmet*) concludes that something like this is the sense of the passage. Few versions regard the word as a proper name. The Sept. has *εἰς τὴν κοιλάδα τοῦ κλαυθμῶνος*; the Vulgate, *in valle lacrymarum*.



BAD. [Byssus.]

BADGER. This is unquestionably a wrong interpretation of the word תחש *tachash*, since the badger is not found in Southern Asia, and has not as yet been noticed out of Europe. The word occurs in the plural form in Exod. xxv. 5; xxvi. 14; xxxv. 7, 23; xxxvi. 19; xxxix. 34; Num. iv. 6, 8, 10, 11, 12, 14, 25; and Ezek. xvi. 10; and in connection with עור *oroth*, skins, is used to denote the covering of the Tabernacle. Skins of some animal no doubt are meant, though any confirmation in favour of the badger, derived from the Chaldee version, with or without a prefix, is equally untenable, since the species is likewise unknown in Chaldæa. A judicious Biblical critic observes that it is questionable whether the skin of an unclean animal would have been suffered to come in contact with objects kept so sacred as the Tabernacle and all that pertained to it. This consideration was evidently paramount when we find rams' skins, stained red, employed in the first covering, and these, like all the other materials required for the purpose, were free gifts from the people; consequently the skins for the external covering were likewise possessed by the public, and therefore were used or intended for common purposes.

In the present state of zoological knowledge it is not necessary to refute the notions that tachash was the name of a mermaid or homo marinus, or of the walrus, a Polar animal, or of the dugong or seal, for neither of these is known in the Indian, Red, or Persian seas, and there is little probability that in remote ages they frequented the south-east extremity of the Mediterranean, where the current sweeps all things northward; still less that they nestled in the lakes of the Delta, where crocodiles then abounded. But Niebuhr's hint respecting the name تخس *tachash*, given, with some reference to colours, to a species of delphinus or porpoise, by the Arabs near Cape Mussendum, may deserve consideration, since the same people still make small rounded bucklers and soles of sandals of the *hout's* skin, which is a cetaceous animal, perhaps identical with Niebuhr's. This material might have been obtained from the caravan-traders of Yemen, or from the Ismaelites of Edom, but does not appear to have been fitted for other purposes than pack-saddles and sandal-soles: considering tachash, therefore, not to indicate a colour, but the skin of an animal, which may have derived its name from its colour, probably deep grey, ash, or slaty (*hyaginus*), we must look for the object in question to the zoology of the region around, or to places accessible by means of the traders and tribute importations of raw materials in Egypt, where we actually observe leopard or panther skins and others of a smaller carnivorous animal with a long fox-tail represented in the triumphal procession of Thothmes III. at Thebes (Wilkinson's *Anc. Egyptians*, vol. i. pl. 4). These may have been of a canine genus, such as the agriodus, or megalotis Lalandii, which is actually iron-grey; or of a viverrous species, whereof there are many in Africa both grey and spotted. Still these are unclean animals, and for this reason we turn to another view of the case, which may prove the most satisfactory that can now be obtained. Negroland and Central and Eastern Africa contain a number of ruminating animals of the great antelope family: they are known to the natives under various names, such as pacasse, empacasse, thacasse, facasse, and tachaitze, all more or less varieties of the word tachash: they are of considerable size; often of slaty and purple-grey colours, and might be termed stag-goats and ox-goats. Of these one or more occur in the hunting-scenes on Egyptian monuments, and therefore we may conclude that the skins were accessible in abundance, and may have been dressed with the hair on for coverings of baggage, and for boots, such as we see worn by the human figures in the same processions. Thus we have the greater number of the conditions of the question sufficiently realized to enable us to draw the inference that tachash refers to a ruminant of the Aigocerine or Damaline groups, most likely of an iron-grey or slaty-coloured species.—C. H. S.

BAG, a purse or pouch (Deut xxv. 13; Job xiv. 17; 1 Sam. xvii. 40; Luke xii. 33). The money deposited in the treasuries of Eastern princes, or intended for large payments, or to be sent to a government as taxes or tribute, is collected in long, narrow bags or purses, each containing a certain amount of money, and sealed with the official seal. As the money is counted for this purpose, and sealed with great care by

officers properly appointed, the bag, or purse, passes current, as long as the seal remains unbroken, for the amount marked thereon. In the receipt and payment of large sums, this is a great and important convenience in countries where the management of large transactions by paper is unknown, or where a currency is chiefly or wholly of silver: it saves the great trouble of counting or weighing loose money. This usage is so well established, that, at this day, in the Levant, 'a purse' is the very name for a certain amount of money (now five pounds sterling), and all large payments are stated in 'purses.' The antiquity of this custom is attested by the monuments of Egypt, in which the ambassadors of

distant nations are represented as bringing their tributes in sealed bags of money to Thothmes III.; and we see the same bags deposited intact in the royal treasury. When coined money was not used, the seal must have been considered a voucher not only for the amount, but for the purity of the metal. The money collected in the Temple, in the time of Joash, seems to have been made up into bags of equal value after this fashion; which were probably delivered, sealed, to those who paid the workmen (2 Kings xii. 10; comp. also 2 Kings v. 23; Tobit ix. 5; xi. 16).

BAHURIM, a place not far from Jerusalem, beyond the Mount of Olives, on the road to the Jordan, where Shimei cursed and threw stones at David (2 Sam. xvi. 5; Joseph. *Antiq.* vii. 9. 7).

BALAAM (בִּלְעָם; Sept. and Philo, Βαλαάμ; Josephus, Βάλαμος). The name is derived by Vitringa from בַּעַל and עַם, *lord of the people;* but by Simonis from בָּלַע and עָם, *destruction of the people*—an allusion to his supposed supernatural powers. His father's name בעור comes likewise from a root which means *to consume* or *devour*. It is deserving of notice that בלע, the first king of the Edomites, was also the son of a בעור *Beor* (Gen. xxxvi. 32). In 2 Peter ii. 15, Balaam is called the Son of *Bosor*, which Gesenius attributes to an early corruption of the text, but Dr. Lightfoot considers it to be a Chaldaism, and infers from the Apostle's use of it, that he was then resident at Babylon. (Works, vol. vii. p. 80: *Sermon on the way of Balaam.*) In the other passage of the New Testament (Rev. ii. 14, 15), the sect of the Nicolaitans is described as following the doctrine or teaching of Balaam; and it appears not improbable that this name is employed symbolically, as Νικόλαος, Nicolaus, is equivalent in meaning to Balaam. The first mention of this remarkable person is in Numbers xxii. 5, where we are informed that Balak 'sent messengers unto Balaam the son of Beor to Pethor, which is by the river of the land of the children of his people.' Twelve Hebrew MSS. examined by Dr. Kennicott, two of De Rossi's, the Samaritan text, with the Syriac and Vulgate versions, instead of בני עמו 'children of his people,' read בני עמון 'children of Ammon.' This is approved by Houbigant and Kennicott, but is inconsistent with Deut. xxiii. 4, which informs us that Pethor was in Mesopotamia; for the Ammonites, as Rosenmüller observes, never extended so far as the Euphrates, which must be the river alluded to. If the received reading be correct, it intimates that Pethor was situated in Balaam's native country, and that he was not a mere sojourner in Mesopotamia, as the Jewish patriarchs were in Canaan. In Joshua xiii. 22, Balaam is termed 'the Soothsayer' קֹסֵם, a word which, with its cognates, is used almost without exception in an unfavourable sense. Josephus calls him *μάντις ἄριστος, an eminent diviner* (*Antiq.* iv. 6. § 2); and what is to be understood by this appellation, may be perhaps best learned from the following description by Philo:—'There was a man at that time celebrated for divination, who lived in Mesopotamia, and was an adept in all the forms of the divining art; but in no branch was he more admired than in augury; to many persons and on many occasions he gave great and astounding proofs of his skill. For to some he foretold storms in the height of summer; to others drought and heat in the depth of winter; to some scarcity succeeding a fruitful year, and then again abundance after scarcity; to others the overflowing and the drying up of rivers; and the remedies of pestilential diseases, and a vast multitude of other things, each of which he acquired great fame for predicting' (*Vita Moysis*, § 48). Origen speaks of Balaam as famous for his skill in magic, and the use of noxious incantations, but denies that he had any power to bless, for which he gives the following reason:—'*Ars enim magica nescit benedicere quià nec dæmones sciunt benefacere.*' (*In Num. Hom.* xiii.) Balak's language, 'I wot he whom thou blessest is blessed' (Numb. xxii. 6), he considers as only designed to flatter Balaam, and render him compliant with his wishes.

Of the numerous paradoxes which we find in 'this strange mixture of a man,' as Bishop Newton terms him, not the least striking is that with the practice of an art expressly forbidden to the Israelites, ('there shall not be found among you one that useth divination (קסם קסמים, Deut. xviii. 10), for all that do these things are an abomination to the Lord'—ver. 12) he united the knowledge and worship of Jehovah, and was in the habit of receiving intimations of his will: 'I will bring you word again as the Lord (Jehovah) shall speak unto me' (Num. xxii. 8). The inquiry naturally arises, by what means did he become acquainted with the true religion? Dr. Hengstenberg suggests that he was led to renounce idolatry by the reports that reached him of the miracles attending the Exodus; and that having experienced the deceptive nature of the soothsaying art, he hoped by becoming a worshipper of the God of the Hebrews, to acquire fresh power over nature, and a clearer insight into futurity. Yet the sacred narrative gives us no reason to suppose that he had any previous knowledge of the Israelites. In Num. xxii. 11, he merely repeats Balak's message, 'Behold there is a people come out of Egypt,' &c., without intimating that he had heard of the miracles wrought on their behalf. The allusion in Num.

xxiii. 23 might be prompted by the divine afflatus which he then felt. And had he been actuated, in the first instance, by motives of personal aggrandizement, it seems hardly probable that he would have been favoured with those divine communications with which his language in Num. xxii. 8 implies a familiarity. Since, in the case of Simon Magus, the offer to 'purchase the gift of God with money' (Acts viii. 20) called forth an immediate and awful rebuke from the Apostles, would not Balaam's attempt to obtain a similar gift with a direct view to personal emolument and fame have met with a similar repulse?—Dr. H. supposes, indeed, that there was a mixture of a higher order of sentiments, a sense of the wants of his moral nature, which led him to seek Jehovah, and laid a foundation for intercourse with him. In the absence of more copious and precise information, may we not reasonably conjecture that Jacob's residence for twenty years in Mesopotamia contributed to maintain some just ideas of religion, though mingled with much superstition? To this source and the existing remains of Patriarchal religion, Balaam was probably indebted for that truth which he unhappily 'held in unrighteousness' (Rom. i. 18).

On the narrative contained in Numbers xxii. 22-35 a difference of opinion has long existed, even among those who fully admit its authenticity. The advocates for a literal interpretation urge, that in a historical work and a narrative bearing the same character, it would be unnatural to regard any of the occurrences as taking place in vision, unless expressly so stated; — that it would be difficult to determine where the vision begins, and where it ends; — that Jehovah's 'opening the mouth of the ass' (Num. xxii. 28) must have been an external act; and, finally, that Peter's language is decidedly in favour of the literal sense: *ὑποζύγιον ἄφωνον, ἐν ἀνθρώπου φωνῇ φθεγξάμενον ἐκώλυσε τὴν τοῦ προφήτου παραφρονίαν*—'The dumb ass, speaking with a man's voice, reproved the madness of the Prophet' (2 Peter ii. 16). Those who conceive that the speaking of the ass and the appearance of the Angel occurred in vision to Balaam (among whom are Maimonides, Leibnitz, and Hengstenberg) insist upon the fact that dreams and visions were the ordinary methods by which God made himself known to the Prophets (Num. xii. 6); they remark that Balaam, in the introduction to his third and fourth prophecies (xxiv. 3, 4, 15), speaks of himself as 'the man who had his eyes shut' (שתם = סתם and סתם, *v.* Lam. iii. 8), and who, on falling down in prophetic exstasy, had his eyes opened;—that he expressed no surprise on hearing the ass speak; and that neither his servants nor the Moabitish princes who accompanied him appear to have been cognizant of any supernatural appearance. Dr. Jortin supposes that the Angel of the Lord suffered himself to be seen by the beast, but not by the Prophet; that the beast was terrified, and Balaam smote her, and then fell into a trance, and in that state conversed first with the beast and then with the Angel. The Angel presented these objects to his imagination as strongly as if they had been before his eyes, so that this was still a miraculous or preternatural operation. In dreaming, many singular incongruities occur without exciting our astonishment; it is therefore not wonderful if the Prophet conversed with his beast in vision, without being startled at such a phenomenon (*v.* Jortin's 'Dissertation on Balaam,' pp. 190-194).

The limits of this article will not allow of an examination of Balaam's magnificent prophecies, which, as Herder remarks (*Geist der Ebräischen Poesie*, ii. 221), 'are distinguished for dignity, compression, vividness, and fulness of imagery: there is scarcely anything equal to them in the later Prophets, and' (he adds, what few readers, probably, of Deut. xxxii. xxxiii. will be disposed to admit) 'nothing in the discourses of Moses.' We must refer on this subject to Bishop Newton and Dr. Hengstenberg. The latter writer has ably discussed the doubts raised by Dr. de Wette and other German critics, respecting the antiquity and genuineness of this portion of the Pentateuch. (Dr. Jortin's *Six Dissertations*, Lond. 1755, pp. 171-194: Bishop Butler's *Sermons at the Rolls' Chapel*, Serm. vii. Bishop Newton *On the Prophecies*, vol. i. ch. 5. *Discours Historiques, &c.*, par M. Saurin, Amst. 1720, tome ii. *Disc.* 64. *Die Geschichte Bileams und seine Weissagungen erläutert*, von E. W. Hengstenberg, 1842. *Origenis Opera*, Berl. 1840, tom. x. pp. 168-258.)—J. E. R.

BALADAN. [MERODACH-BALADAN.]

BALAK (בָּלָק, *empty;* Sept. Βαλάκ), son of Zippor, and king of the Moabites (Num. xxii. 2, 4), who was so terrified at the approach of the victorious army of the Israelites, who in their passage through the desert had encamped near the confines of his territory, that he applied to Balaam, who was then reputed to possess great influence with the higher spirits, to curse them. The result of this application is related under another head [BALAAM]. From Judg. xiv. 25, it is clear that Balak was so certain of the fulfilment of Balaam's blessing, 'blessed is he that blesseth thee, and cursed is he that curseth thee' (Num. xxiv. 9), that he never afterwards made the least military attempt to oppose the Israelites (comp. Mic. vi. 5; Rev. ii. 14).—E. M.

BALANCE. [WEIGHING.]

BALDNESS (קָרְחָה) may be artificial or natural. Artificial baldness, caused by cutting or shaving off the hair of the head, a custom among all the ancient and Eastern nations, in token of mourning for the death of a near relative (Jer. xvi. 6; Amos viii. 10; Micah i. 16), Moses forbade to the Israelites (Deut. xiv. 1), probably for the very reason of its being a heathen custom; for a leading object of his policy was to remove the Jews as far as possible from the ways and customs of the surrounding nations. Natural baldness, though Moses did not consider it as a symptom of leprosy, and declared the man afflicted with it to be clean and sound (Lev. xiii. 40, *sq.*), yet was always treated among the Israelites with contempt (*ibid.*), and a bald man was not unfrequently exposed to the ridicule of the mob (2 Kings ii. 3; Isa. iii. 17; comp. Suet. *Cæs.* 45; *Domit.* 18); perhaps from the suspicion of being under some leprous taint, as the Hebrew word קרח originally implied an *ulcer*, or an *ulcered person*. The public prejudice thus entertained against a bald-headed man was perhaps the main reason why he was declared unfit

for the priestly office (Lev. xxi. 20; *Mishn. tit. Bechoroth*, vii. 2).—E. M.

BANQUETS. The entertainments spoken of in Scripture, on however large a scale, and of however sumptuous a character, were all provided at the expense of one individual; the *ἔρανος* of the Greeks, to which every guest present contributed his proportion, being apparently unknown to the Jews, or at least practised only by the humbler classes, as some suppose that an instance of it occurs in the feast given to our Lord, shortly before his Passion, by his friends in Bethany (Matt. xxvi. 2; Mark xiv. 1: comp. with John xii. 2). Festive meetings of this kind were held only towards the close of the day, as it was not till business was over that the Jews freely indulged in the pleasures of the table; and although in the days of Christ these meals were, after the Roman fashion, called *suppers*, they corresponded exactly to the dinners of modern times, the hour fixed for them varying from five to six o'clock P.M., or sometimes later.

On occasions of ceremony the company were invited a considerable time previous to the celebration of the feast; and on the day and at the hour appointed, an express by one or more servants, according to the number and distance of the expected guests, was despatched to announce that the preparations were completed, and that their presence was looked for immediately (Matt. xxii. 8; Luke xiv. 17). (Grotius, *in loc.*; also Morier's *Journey*, p. 73.) This custom obtains in the East at the present day; and the second invitation, which is always verbal, is delivered by the messenger in his master's name, and frequently in the very language of Scripture: 'Behold I have prepared my dinner; my oxen and fatlings are killed, and all things are ready' (Matt. xxii. 4). It is observable, however, that this after-summons is sent to none but such as have been already invited, and have declared their acceptance; and, as in these circumstances, people are bound by every feeling of honour and propriety to postpone all other engagements to the duty of waiting upon their entertainer, it is manifest that the vehement resentment of the grandee in the parable of the great supper, where each of the guests is described as offering to the bearer of the express some frivolous apologies for absence, was, so far from being harsh and unreasonable, as infidels have characterized it, fully warranted and most natural according to the manners of the age and country. By accepting his invitation they had given a pledge of their presence, the violation of which on such trivial grounds, and especially after the liberal preparations made for their entertainment, could be viewed in no other light than as a gross and deliberate insult.

At the small entrance door a servant was stationed to receive the tablets or cards of those who were expected; and as curiosity usually collected a crowd of troublesome spectators, anxious to press forward into the scene of gaiety, the gate was opened only so far as was necessary for the admission of a single person at a time, who, on presenting his invitation ticket, was conducted through a long and narrow passage into the receiving-room; and then, after the whole company were assembled, the master of the house shut the door with his own hands—a signal to the servant to allow himself to be prevailed on neither by noise nor by importunities, however loud and long continued, to admit the bystanders. To this custom there is a manifest reference in Luke xiii. 24, and Matt. xxv. 10 (Morier's *Journey*, p. 142).

One of the first marks of courtesy shown to the guests, after saluting the host, was the refreshment of water and fragrant oil or perfumes; and hence we find our Lord complaining of Simon's omission of these customary civilities (Luke vii. 44; see also Mark vii. 4) [ANOINTING]. But a far higher, though necessarily less frequent attention paid to their friends by the great, was the custom of furnishing each of the company with a magnificent habit of a light and showy colour, and richly embroidered, to be worn during the festivity (Eccles. ix. 8; Rev. iii. 4, 5). The loose and flowing style of this gorgeous mantle made it equally suitable for all; and it is almost incredible what a variety of such sumptuous garments the wardrobes of some great men could supply to equip a numerous party. In a large company, even of respectable persons, some might appear in a plainer and humbler garb than accorded with the taste of the voluptuous gentry of our Lord's time; and where this arose from necessity or limited means, it would have been harsh and unreasonable in the extreme to attach blame, or to command his instant and ignominious expulsion from the banquet-room. But where a well-appointed and sumptuous wardrobe was opened for the use of every guest,—to refuse the gay and splendid costume which the munificence of the host provided, and to persist in appearing in one's own habiliments, implied a contempt both for the master of the house and his entertainment, which could not fail to provoke resentment—and our Lord therefore spoke in accordance with a well-known custom of his country, when, in the parable of the marriage of the king's son, he describes the stern displeasure of the king on discovering one of the guests without a wedding garment, and his instant command to thrust him out (Matt. xxii. 11). At private banquets the master of the house of course presided, and did the honours of the occasion; but in large and mixed companies it was anciently customary to elect a governor of the feast (John ii. 8; see also Ecclus. xxxii. 1), who should not merely perform the office of chairman, ἀρχιτρίκλινος, in preserving order and decorum, but take upon himself the general management of the festivities. As this office was considered a post of great responsibility and delicacy, as well as honour, the choice which among the Greeks and Romans was left to the decision of dice, was more wisely made by the Jews to fall upon him who was known to be possessed of the requisite qualities—a ready wit and convivial turn, and at the same time firmness of character and habits of temperance [ARCHITRICLINUS]. The guests were scrupulously arranged according to their respective ranks. This was done either by the host or governor, who, in the case of a family, placed them according to seniority (Gen. xlii. 33), and in the case of others, assigned the most honourable a place near his own person; or it was done by the party themselves, on their successive arrivals, and after surveying the company, taking up the position which it appeared fittest for each according to their respective claims to occupy. It might be expected that among the Orientals, by whom the

laws of etiquette in these matters are strictly observed, many absurd and ludicrous contests for precedence must take place, from the arrogance of some and the determined perseverance of others to wedge themselves into the seat they deem themselves entitled to. Accordingly Morier, who is well acquainted with the manners of the Persians, informs us, 'that it is easy to observe by the countenances of those present, when any one has taken a higher place than he ought.' 'On one occasion,' he adds, 'when an assembly was nearly full, the governor of Kashan, a man of humble mien, came in, and had seated himself at the lowest place, when the host, after having testified his particular attentions to him by numerous expressions of welcome, pointed with his hand to an upper seat, which he desired him to take' (*Second Journey*). As a counterpart to this, Dr. Clarke states that 'at a wedding feast he attended in the house of a rich merchant at St. Jean d'Acre, two persons who had seated themselves at the top were noticed by the master of ceremonies, and obliged to move lower down' (see also Joseph. *Antiq.* xv. 2). The knowledge of these peculiarities serves to illustrate several passages of Scripture (Prov. xxv. 6, 7; Matt. xxiii. 6; and especially Luke xiv. 7, where we find Jesus making the unseemly ambition of the Pharisees the subject of severe and merited animadversion). That class were notoriously eager to occupy the chief seats of honour when mingling in society with their fellow-citizens. Some unequivocal symptoms of such contention our Lord had probably witnessed in the house of the opulent Pharisee with whom he was dining, and if He himself were sitting at the lower part of the table, the reproof of their pride and foolish ambition, conveyed in the parable He delivered on that occasion, would be the more pointed and severely felt.

It would be difficult within a short compass to describe the form and arrangements of the table, as the entertainments spoken of in Scripture were not all conducted in a uniform style. In ancient Egypt, as in Persia, the tables were ranged along the sides of the room, and the guests were placed with their faces towards the walls. Persons of high official station were honoured with a table apart for themselves at the head of the room; and in these particulars every reader of the Bible will trace an exact correspondence to the arrangements of Joseph's entertainment to his brethren. According to Lightfoot (*Exercit. on John* xiii. 23), the tables of the Jews were either wholly uncovered, or two-thirds were spread with a cloth, while the remaining third was left bare for the dishes and vegetables. In the days of our Lord the prevailing form was the triclinium, the mode of reclining at which is described elsewhere [ACCUBATION]. This effeminate practice was not introduced until near the close of the Old Testament history, for amongst all its writers prior to the age of Amos ישב, *to sit*, is the word invariably used to describe the posture at table (1 Sam. xvi., margin, and Ps. cxxviii. 3, implying that the ancient Israelites sat round a low table, cross-legged, like the Orientals of the present day), whereas ἀνακλίνω, signifying a recumbent posture, is the word employed in the Gospel. And whenever the word 'sit' occurs in the New Testament, it ought to be translated 'lie,' according to the universal practice of that age.

The convenience of spoons, knives, and forks being unknown in the East, or, where known, being a modern innovation, the hand is the only instrument used in conveying food to the mouth, and the common practice, their food being chiefly prepared in a liquid form, is to dip their thin wafer-like bread in the dish, and folding it between their thumb and two fingers, enclose a portion of the contents. It is not uncommon to see several hands plunged into one dish at the same time. But where the party is numerous, the two persons near or opposite are commonly joined in one dish; and accordingly, at the last Passover, Judas, being close to his master, was pointed out as the traitor by being designated as the person 'dipping his hand with Jesus in the dish.' The Apostle John, whose advantageous situation enabled him to hear the minutest parts of the conversation, has recorded the fact of our Lord, in reply to the question, 'Who is it?' answering it by 'giving a sop to Judas when he had dipped' (John xiii. 27); and this leads us to mention it as not the least among the peculiarities of Oriental manners, that a host often dips his hand into a dish, and lifting a handful of what he considers a dainty, offers the ψωμίον or sop to one of his friends. However the fastidious delicacy of a European appetite might revolt at such an act of hospitality, it is one of the greatest courtesies that an Oriental can show, and to decline it would be a violation of propriety and good manners (see Jowett's *Christian Researches*). In earlier ages, a double or a more liberal portion, or a choice piece of cookery, was the form in which a landlord showed his respect for the individual he delighted to honour (Gen. xliii. 34; 1 Sam. i. 4; ix. 23; Prov. xxxi. 15; see Voller's *Grec. Antiq.* ii. 387; Forbes, *Orient. Mem.* iii. 187).

While the guests reclined in the manner described above, their feet, of course, being stretched out behind, were the most accessible parts of their person, and accordingly the woman with the alabaster-box of ointment could pay her grateful and reverential attentions to Jesus without disturbing him in the business of the table. Nor can the presence of this woman, uninvited and unknown even as she was to the master of the house, appear at all an incredible or strange circumstance, when we consider that entertainments are often given in gardens, or in the outer courts, where strangers are freely admitted, and that Simon's table was in all likelihood as accessible to the same promiscuous visitors as are found hovering about at the banquets and entering into the houses of the most respectable Orientals of the present day (Forbes, *Orient. Mem*). In the course of the entertainment servants are frequently employed in sprinkling the head and person of the guests with odoriferous perfumes, which, probably to counteract the effects of too copious perspiration, they use in great profusion, and the fragrance of which, though generally too strong for Europeans, is deemed an agreeable refreshment (see Ps. xlv. 8; xxiii. 5; cxxxiii. 2).

The various items of which an Oriental entertainment consists, bread, flesh, fish, fowls, melted butter, honey, and fruits, are in many places set on the table at once, in defiance of all taste. They are brought in upon trays—one, containing several dishes, being assigned to a

group of two, or at most three, persons, and the number and quality of the dishes being regulated according to the rank and consideration of the party seated before it. In ordinary cases four or five dishes constitute the portion allotted to a guest; but if he be a person of consequence, or one to whom the host is desirous of showing more than ordinary marks of attention, other viands are successively brought in, until, if every vacant corner of the tray is occupied, the bowls are piled one above another. The object of this rude but liberal hospitality is, not that the individual thus honoured is expected to surfeit himself by an excess of indulgence in order to testify his sense of the entertainer's kindness, but that he may enjoy the means of gratifying his palate with greater variety; and hence we read of Joseph's displaying his partiality for Benjamin by making his 'mess five times so much as any of theirs' (Gen. xliii. 34). The shoulder of a lamb, roasted, and plentifully besmeared with butter and milk, is regarded as a great delicacy still (Buckingham's *Travels*, ii. 136), as it was also in the days of Samuel. But according to the favourite cookery of the Orientals, their animal food is for the most part cut into small pieces, stewed, or prepared in a liquid state, such as seems to have been the 'broth' presented by Gideon to the angel (Judg. vi. 19). The made-up dishes are 'savoury meat,' being highly seasoned, and bring to remembrance the marrow and fatness which were esteemed as the most choice morsels in ancient times. As to drink, when particular attention was intended to be shown to a guest, his cup was filled with wine till it ran over (Ps. xxiii. 5), and it is said that the ancient Persians began their feasts with wine, whence it was called 'a banquet of wine' (Esther v. 6).

The hands, for occasionally both were required, besmeared with grease during the process of eating, were anciently cleaned by rubbing them with the soft part of the bread, the crumbs of which, being allowed to fall, became the portion of dogs (Matt. xv. 27; Luke xvi. 21). But the most common way now at the conclusion of a feast is for a servant to go round to each guest with water to wash, a service which is performed by the menial pouring a stream over their hands, which is received into a strainer at the bottom of the basin. This humble office Elisha performed to his master (2 Kings iii. 11).

People of rank and opulence in the East frequently give public entertainments to the poor. The rich man in the parable, whose guests disappointed him, despatched his servants on the instant to invite those that might be found sitting by the hedges and the highways—a measure which, in the circumstances, was absolutely necessary, as the heat of the climate would spoil the meats long before they could be consumed by the members of his own household. But many of the great, from benevolence or ostentation, are in the habit of proclaiming set days for giving feasts to the poor; and then, at the time appointed, may be seen crowds of the blind, the halt, and the maimed bending their steps to the scene of entertainment. This species of charity claims a venerable antiquity. Our Lord recommended his wealthy hearers to practise it rather than spend their fortunes, as they did, on luxurious living (Luke xiv. 12); and as such invitations to the poor are of necessity given by public proclamation, and female messengers are employed to publish them (Hasselquist saw ten or twelve thus perambulating a town in Egypt), it is probably to the same venerable practice that Solomon alludes in Prov. ix. 3.—R. J.

BAPTISM. A conviction of the holiness of God excites in man the notion that he cannot possibly come into any amicable relation with him before he is cleansed of sin, which separates him from God. This sentiment found a very widely extended symbolic expression in the lustrations which formed an essential part of the ceremonial creeds of the ancient nations. These lustrations were prevalent not only among the heathen nations, more especially those of the southern climates, such as the Indians, Egyptians, Greeks, and Romans (comp. Wetstein, *Nov. Test. Evang. Matth.* iii. 6), but also among the Jews. With these latter they were preparations for divine services of a different nature, and even for private prayer (Judith xii). They formed a part of the offering-service, and more especially of the sin-offering (Lev. xvi.); and for that reason they usually established the prayer-houses (προσευχαί) in the vicinity of running waters (comp. Kuinoel, *ad Act.* xvi. 13). Josephus (*Antiq.* xviii. 1. 5) gives an account of the manifold lustrations of the Essenes. In the language of the prophets, cleansing with water is used as an emblem of the purification of the heart, which in the Messianic age is to glorify the soul in her innermost recesses, and embrace the whole of the theocratic nation (Ezek. xxxvi. 25, sq.; Zech. xiii. 1). Such declarations gave rise to or nourished the expectation that the advent of the Messiah would manifest itself by a preparatory lustration, by which Elijah or some other great prophet would pave the way for him. This supposition lies evidently at the bottom of the questions which the Jews put to John the Baptist (John i. 25; comp. Matt. and Luke, iii. 7), whether he was the Messiah, or Elijah, or some other prophet? and if not, why he undertook to baptize? (comp. Schneckenberger, *Ueber das Alter der Jüdischen Proselytentaufe*, § 41, sq.). Thus we can completely clear up the historical derivation of the rite, as used by John and Christ, from the general and natural symbol of baptism, from the Jewish custom in particular, and from the expectation of a Messianic consecration. Danz, Ziegler, and others have, nevertheless, supposed it to be derived from the Jewish ceremonial of baptizing *proselytes;* and Wetstein has traced that rite up to a date earlier than Christianity. But this opinion is not at all tenable: for, as an act which strictly gives *validity* to the admission of a proselyte, and is no mere *accompaniment* to his admission, baptism certainly is not alluded to in the New Testament; while, as to the passages quoted in proof from the classical (profane) writers of that period, they are all open to the most fundamental objections. Nor is the utter silence of Josephus and Philo on the subject, notwithstanding their various opportunities of touching on it, a less weighty argument against this view. It is true that mention is made in the Talmud of that regulation as already existing in the first century A.D.; but such statements belong only to the traditions of the Gemara, and require careful investigation before they can serve as

proper authority. This Jewish rite was probably originally only a purifying ceremony; and it was raised to the character of an initiating and indispensable rite co-ordinate with that of sacrifice and circumcision, only *after* the destruction of the Temple, when sacrifices had ceased, and the circumcision of proselytes had, by reason of public edicts, become more and more impracticable (comp. Schneckenb. *ib.*). E. G. Bengel (*Ueber d. Alter der Jüd. Pros. Tauf.* 1814) sees, in its original establishment only an act of initiation, which, though before the destruction of the Temple merely of an accidental character, had through John and Christ received a peculiar and solid basis. The view of De Wette (*De Morte Christ. Expiat.*), that this rite was transferred from Christianity to Judaism, Winer (*Real-wörterb.* art. 'Proselyten') justly rejects as utterly improbable.

Baptism of John.—It was the principal object of John the Baptist to combat the prevailing opinion, that the performance of external ceremonies was sufficient to secure participation in the kingdom of God and his promises; he required repentance, therefore, (βάπτισμα μετανοίας,) as a preparation for the approaching kingdom of the Messiah. That he may possibly have baptized *heathens* also, seems to follow from his censuring the Pharisees for confiding in their descent from Abraham, while they had no share in his spirit: yet it should not be overlooked that this remark was drawn from him by the course of the argument (Matt. iii. 8, 9; Luke iii. 7, 8). Augusti (*Denkwürdigkeiten aus der Christl. Archäol.* vii. 30) it is true, advances a few counter-reasons, but they are easily refuted (comp. Schneckenb. l. i. § 37). We must, on the whole, assume that John considered the existing Judaism as a stepping-stone by which the Gentiles were to arrive at the kingdom of God in its Messianic form.

The relation of the baptism of John to the Christian baptism gave rise to a sharp controversy in the sixteenth century. Zwingle and Calvin were in favour of the essential equality of the two; while Luther, Melanchthon, and the Catholic church (*Concil. Trident.* Sess. vii.) maintained the contrary. The only difference Calvin allowed was, that John baptized in the name of the *future* Messiah, while the apostles baptized in that of the Messiah *already come*. But this difference could be of little moment; the less so, since a step towards the manifestation of the Messiah was already made in the appearance of John himself (comp. John i. 31). On the other hand, Calvin considers the most important point of equality between the two to exist in the fact, that both include repentance and pardon of sin in the name of Christ. The general point of view, however, from which John contemplated the Messiah and his kingdom was that of the Old Testament, though closely bordering on Christianity. He regards, it is true, an alteration in the mind and spirit as an indispensable condition for partaking in the kingdom of the Messiah; still he looked for its establishment by means of conflict and external force, with which the Messiah was to be endowed; and he expected in him a Judge and Avenger, who was to set up outward and visible distinctions. It is, therefore, by no means a matter of indifference whether baptism be administered in the name of that Christ who floated before the mind of John, or of the suffering and glorified One, such as the apostles knew him; and whether it was considered a preparation for a political, or a consecration into a spiritual theocracy (comp. Dr. Neander's *Leben Jesu Christi*, p. 57, sq.). John was so far from this latter view, so far from contemplating a purely spiritual development of the kingdom of God, that he even began subsequently to entertain doubts concerning Christ (Matt. xi. 2). Tertullian distinguishes the essential characteristics of the two baptisms in their spirit and nature. To that of John he ascribes the *negative character of repentance*, and to the Christian the *positive impartation* of new life (*De Bapt.* x. 11); a distinction which arises out of the relation of *law* and *gospel*, and is given in the words of the Baptist himself,—that *he* baptizes with water and unto repentance, while the greater one who was to come after him would baptize with the Holy Ghost (Matt. iii. 11; Luke iii. 16; John i. 25). John's baptism had not the character of an immediate, but merely of a preparatory consecration for the glorified theocracy (John i. 31). The apostles, therefore, found it necessary to re-baptize the disciples of John, who had still adhered to the notions of their master on that head (Acts xix.). To this apostolic judgment Tertullian appeals, and in his opinion coincide the most eminent teachers of the ancient church, both of the East and the West (comp. Augusti, l. l. p. 31).*

The Baptism of Jesus by John (Matt. iii. 13, sq.; Mark i. 9, sq.; Luke iii. 21, sq.; comp. John i. 19, sq.; the latter passage refers to a time *after* the baptism, and describes, ver. 32, the incidental facts attending it).—The baptism of Jesus, as the first act of his public career, is one of the most important events recorded in evangelical history: great difficulty is also involved in reconciling the various accounts given by the evangelists of that transaction, and the several points connected with it. To question the fact itself, not even the *negative criticism* of Dr. Strauss has dared. This is, however, all that has been conceded by that criticism, viz., the mere and bare fact 'that Christ was baptized by John,' while all the circumstances of the event are placed in the region of mythology or fiction.

Critical inquiry suggests the following questions:—

1. In what relation did Jesus stand to John before the baptism?

2. What object did Jesus intend to obtain by that baptism?

3. In what sense are we to take the miraculous incidents attending that act?

With regard to the first point, we might be apt to infer, from Luke and Matthew, that there had been an acquaintance between Christ and John even prior to the baptism; and that hence John declines (Matt. iii. 14) to baptize Jesus,

* Josephus (*Antiq.* xviii. 5. 2) gives a general character of John, tinctured, it is true, with some hellenistic notions, yet not contradictory to the gospels. He calls him 'a good man, who bade the Jews to be virtuous, just and devout, and so to come to his baptism; for in this way it would be accepted of God, if used, not for the blotting out of certain sins, but for purification of the body, supposing the soul to have been previously purified by righteousness.'

arguing that he needed to be baptized by him. This, however, seems to be at variance with John i. 31, 33. Lücke (*Comment.* i. p. 416, sq. 3rd edit.) takes the words 'I knew him not' in their strict and exclusive sense. John, he says, could not have spoken in this manner if he had at all known Jesus; and had he known him, he could not, as a prophet, have failed to discover, even at an earlier period, the but too evident 'glory' of the Messiah. In fact, the narrative of the first three Gospels presupposes the same, since, as the herald of the Messiah, he could give that refusal (Matt. iii. 14) to the Messiah alone. Lücke considers John as a sure authority; as for the contradiction in Luke, he makes less of it, regarding the whole narrative of the infancy to have only a secondary historical value; while the contradiction in Matthew he thinks to remove by giving to vers. 14, 15, a different place from that which they now occupy in the text; and, after the example of the Ebionitic revision of the Gospel according to the Hebrews, in Epiphanius (*Hæres.* xxx. 13), he puts these words into the mouth of John, only after Christ had been revealed to him to be the Messiah by means of the baptism (comp. also Schleiermacher, *Ueber die Schriften des Lucas*, p. 44). That such a compromise is forced, appears still more clearly by the remark of Neander (*Leben Jesu Christi*, p. 67), that the words, 'He forbad him,' and 'Suffer it to be so now,' naturally refer to Christ's descending into the water. Strauss (*Leb. Jesu*, i. 330, sq.) and De Wette (*ad Matth.* iii. 14) agree so far with Lücke, in admitting a contradiction between the Gospel of John and the other accounts. Strauss is of opinion that the three Gospels proceeded from the popular point of view, to designate the important relation of the two divine messengers as permanent or of long standing; while John had a different object in view, to found the acquaintance of both upon revelation. We may admit the truth of the latter part of this hypothesis, always bearing in mind that the fact to which John refers is historically true; but the first part is at variance with the silence which Matthew and Mark observe as to any early acquaintance, while Luke expressly brings only the mothers, and not the sons, into intercourse. There is more ground in the other objection, viz. how a prophet of John's developed character could, after the miraculous things that had passed, according to the accounts of the Gospels, begin to doubt as to the mission of Christ (Matt. xi. 2), especially after so short a period of observation. This difficulty has not escaped the notice of any sober critic; but in what we have stated at the outset concerning the theocratic views of John may easily be found the reason of his having afterwards entertained some doubts of Jesus. At all events, considering the scanty information we possess of John, we are not justified in resorting, like Strauss, to the conclusion, that because the narratives are at variance, therefore the accounts of the baptism, having for their object to extol John and Christ, must be a fiction (comp. Lücke).

Meyer (*ad Matth.* iii. 14), Neander (l. c. p. 65, sq.), and Winer (*Bibl. Real-wörterb.*, art. 'Johannes'), endeavour to explain the accounts of the baptism in favour of an earlier acquaintance between John and Jesus. Neander, for instance, maintains that John's disclaiming all knowledge of Jesus refers merely to his Messianic character, while his refusal to baptise him proceeded merely from the impression of sublime sanctity which Jesus had made on his mind while he stood before him and prayed (Luke iii. 21). This view does not, however, remove the following difficulties:—

1. That the simple construction of the words of John (John i. 31, sq.) speaks more in favour of Lücke's interpretation.

2. That Luke's account of the early history of Christ does not receive even by this view its full validity, since, from his narrative, we can hardly help coming to the conclusion that John was acquainted with all the circumstances attendant on the birth of Christ, in which the latter was characterized as the Messiah, and that he had even often been in previous intercourse with him, so that there was hardly any fair reason for his doubting who the Messiah was; and,

3. That the prayer of Jesus (Luke iii. 21) cannot be alleged as a reason for John's declining to baptize him, since it took place subsequently to the baptism.

With regard to the second point at issue, *as to the object of Christ in undergoing baptism*, we find, in the first instance, that he ranked this action among those of his Messianic calling. This object is still more defined by John the Baptist (John i. 31), which Lücke interprets in the following words: 'Only by entering into that community which was to be introductory to the Messianic, by attaching himself to the Baptist like any other man, was it possible for Christ to reveal himself to the Baptist, and through him to others.' Christ, with his never-failing reliance on God, never for a moment could doubt of his own mission, or of the right period when his character was to be made manifest by God (Paulus, *Exeget. Handbuch*, i.; Hase, *Leben Jesu*, § 54); but John needed to receive that assurance, in order to be the herald of the Messiah who was actually come. For all others whom John baptized, either before or after Christ, this act was a mere preparatory consecration to the kingdom of the Messiah; while for Jesus it was a direct and immediate consecration, by means of which he manifested the commencement of his career as the founder of the new theocracy, which began at the very moment of his baptism, the initiatory character of which constituted its general principle and tendency. Strauss, however, neglecting this point, only dwells on that which was unsuitable for the Messiah in the baptism of John, according to the Gospels. Jesus, he says, could not possibly have considered himself as the Messiah, or it would have been simulation in him to take a part in the act of baptism, which was performed for the purpose of initiation into the future Messiah. He probably came, like others, with the intention of becoming a disciple of John, whose notions he first imbibed, but which he afterwards purified, and carried through according to his own plan, when the Baptist had already quitted the stage of action (comp., against this view, Neander, l. c. p. 61).

Another objection raised by Strauss is to be found among the Ebionites of the ancient church. Jerome (*Dial. adv. Pelag.* iii. 2) quotes the following fragment from a gospel of that sect: 'Ecce mater Domini et fratres ejus dicebant ei: Joannes baptista baptizat in remissionem peccatorum; eamus et baptizemur ab eo. Dixit autem iis: quid peccavi ut vadam et baptizer ab eo?

Nisi forte hoc ipsum quod dixi ignorantia est.' This is also the opinion of Strauss, namely, that the partaking of βάπτισμα μετανοίας pre-supposes a participation in sin. In refutation of this, Neander (l. l. p. 64) argues that it would be absurd for Jesus to come to be baptized, because conscious of needing pardon of sin, and nevertheless afterwards profess to pardon sins himself. De Wette also thinks that the baptism of Christ must be founded, if not in *real* sin, at least in its *possibility*. If, by this possibility, he meant a disposition to sin, similar to the 'peccability' ascribed to him by Basilides, we must deny it in the Redeemer; nor does the history of the Temptation, which the advocates of this notion try to connect with it, prove anything in its favour. And if, by that possibility, he meant to imply the free principle which lies at the basis of the free will of man, neither can that constitute the ground for baptism.

With respect to the *miraculous incidents which accompanied the baptism of Jesus*, if we take for our starting-point the narration of the three Gospels, that the Holy Spirit really and visibly descended in the form of a dove, and proclaimed Jesus, in an audible voice, to be the Son of God, there can be no difficulty in bringing it to harmonize with the statement in the Gospel of John. This literal sense of the text has, indeed, for a long time been the prevailing interpretation, though many doubts respecting it had very early forced themselves on the minds of sober inquirers, traces of which are to be found in Origen (*Contr. Cels.* i. 48), and which Strauss (p. 376) has more elaborately renewed. To the natural explanations belong that of Paulus (*Exeg. Handb.*), that the dove was a *real* one, which had by chance flown near the spot at that moment; that of Meyer, that it was the figure of a meteor which was just then visible in the sky; and that of Kuinoel (*ad Matth.* iii.), who considers the dove as a figure for lightning, and the voice for that of thunder, which the eye-witnesses, in their extatic feelings, considered as a divine voice, such as the Jews called a *Bath-kol* (Meyer). Such interpretations are not only irreconcilable with the evangelical text, but even presuppose a violation of the common order of nature (comp. Strauss, p. 376, *sq.*), in favour of adherence to which these interpretations are advanced: it is not to be wondered at, therefore, that they have met with due ridicule from the last-mentioned critic. The conjecture of Schulthess, who proposes to read ὡς περιστερὰν, is ungrammatical and improbable, and hardly deserves notice.

A more close investigation of the subject, however, induces us to take as a starting-point the account of the apostle St. John. It is John the Baptist himself who speaks. He was an eye-witness, nay, to judge from Matthew and John, the only one present with Jesus, and is consequently the only source—with or without Christ—of information. Indeed, if there were more people present, as we are almost inclined to infer from Luke, they cannot have perceived the miracles attending the baptism of Jesus, or John and Christ would no doubt have appealed to their testimony in verification of them. (Comp. Schleiermacher, p. 43.)

In thus taking the statement in St. John for the authentic basis of the whole history, a few slight hints in it may afford us the means of solving the difficulties attending the *literal* conception of the text. John the Baptist knows nothing of an external and audible voice, and when he assures us (i. 33) that he had in the Spirit received the promise, that the Messiah would be made manifest by the Spirit descending upon him, and *remaining*—be it *upon* or *in* him—there; this very *remaining* assuredly precludes any material appearance in the shape of a bird. The internal probability of the text, therefore, speaks in favour of a spiritual vision in the mind of the Baptist; this view is still more strengthened by the fact, that Luke supposes there were many more present, who notwithstanding perceived nothing at all of the miraculous incidents. The reason that the Spirit in the vision assumed the figure of a dove, we would rather seek in the peculiar flight and movement of that bird, than, as Strauss and De Wette think, in its form and shape. Lücke and Neander find the resemblance in the swift flight of the dove; Winer, however (l. c. art. 'Taube'), in its rapid and straight movement. The image moreover was suited to the poetic character of the beholder, and it is probable, though not necessary, that the recollection of Gen. i. 2, where the Spirit of God is described as soaring over the waters, might have contributed to raise in the mind of the Baptist that image; neither is it *necessary* here to bear in mind the speculations of the Rabbins concerning the verse in Gen. (comp. Wetstein, *ad Matth.* iii.; Schöttgen, *Hor. Hebr.* i.), since all these are of a later date than the words of John, whose turn of mind and education were besides quite opposed to Rabbinism.

In a similar way is this event explained, without denying the divine operation upon the mind of the Baptist, by Origen (l. c.), Theodorus Mopsuest. (in Lücke, p. 423), 'according to a sort of spiritual contemplation.....to John alone:—for the appearance was a vision, not a reality.' (Lücke; Neander; comp. also De Wette, *ad Matth.* iii.). This interpretation moreover has the advantage of exhibiting the philosophic connection of the incidents, since the Baptist appears more conspicuously as the immediate end of the divine dispensation (Neander). Christ had thus the intention of being introduced by him into the Messianic sphere of operation, while the Baptist recognizes this to be his own peculiar calling: the signs by which he was to know the Messiah had been intimated to him, and now that they had come to pass, the prophecy and his mission were fulfilled. Neander, therefore, considers the manifestation as merely *subjective* (or in the mind of John), while Julius Müller and Lücke suppose a real operation at the same time of the Spirit on Christ. In process of time tradition converted this vision into a sensible external phenomenon. Matthew (comp. De Wette), though he appears (ver. 17) to consider the fact as external, nevertheless, to judge from the phrase 'unto *him*' (ver. 16), which most probably refers to the Baptist, agrees with John, that the Baptist was the immediate end of that revelation. But to the less refined conception of Mark and Luke, it was natural to refer that revelation solely to Jesus as the principal personage. Luke shows himself particularly partial to the sensible form (σωματικῷ εἴδει). The more the Ebionitic view obscures the tradition, the more does it stray from the simple exposition of the Gospel of St. John.

Justin Martyr mentions an anecdote (*Dial. cont. Tryph.* § 88) ascribed to the apostles, according to which Christ was surrounded by flames of fire when standing in the Jordan, but when he was rising from the water the Holy Spirit descended upon him, while a voice uttered, besides the words mentioned in the Gospels, those of the 7th verse of the 2nd Psalm. By this it was intended to establish the spiritual birth of Christ only from the moment of his baptism, contrary to the apostolic reports concerning his birth. The same report is given in a still more pointed manner in an Ebionitic Fragm. (Epiphan. xxx. 13), according to which a light shines around the place, while a voice addresses itself first to Jesus and next to the Baptist, who then falls at his feet. The Spirit, also, in the figure of a dove, not only descends *upon* him, but enters also *into* him (ἐν εἴδει περιστερᾶς κατελθούσης καὶ εἰσελθούσης εἰς αὐτόν). The notion that Christ was distinguished from the prophets in the Old Testament by the Holy Spirit remaining with him permanently, while with the former it was merely partial and momentary, is still more distinctly expressed in a fragment of the Gospels of the Nazarenes (Jerome, *Adv. Pelag.* iii. 2): 'Descendit fons omnis Spiritus sancti et requievit super eum et dixit: Fili mi, in omnibus Prophetis exspectabam te ut venires et requiescerem in te. Tu es enim requies mea, tu es filius primigenitus, qui regnas in sempiternum.' However disfigured the fact may appear in these Apocrypha, the general and decided purport of the tradition with regard to the divine manifestation, assuredly leads back to an historical origin, which can nowhere be better or more successfully sought than in the depositions of the Baptist.

Strauss, in his obstinate scepticism, refuses, notwithstanding, to accept this view. He rejects the assumption of a mere vision in John i. 31, *sq.*, and sees in 'like a dove' nothing but a visible phenomenon; neither indeed does it suit his views to assume such a vision, since it would pre-suppose a momentary miraculous inspiration, a thing he is averse to acknowledge. But there is no necessity for taking 'like a dove' for anything else than an embodied symbol, and more especially as the simile is wanting in ver. 33 (Lücke); nor is there, in the momentary inspiration in that instance, anything so extraordinary as to compel us to look at the incident as a mere fiction: on the contrary, we consider the state of prophetic ecstasy, which is so common to the prophets in the Old Testament, to be quite in unison with the prophetic character of John.

Strauss maintains, moreover, that the imparting of the Spirit at his baptism, and the superhuman generation of Jesus, are two facts altogether at variance with each other. De Wette also thinks it impossible to understand both in their proper and full signification, and is of opinion that the fact that Christ was in possession of the Spirit is more certain to the Christian than the manner in which he received it. Lücke's reply to this (*Comment.* p. 433, *sq.*) is of importance. He thinks that John makes a decided distinction between the divine *logos* in its existence before it was incarnated, and the Spirit. The former is a *person*, of whom it may be said 'He was made flesh,' but not so of the Spirit, which stands in contrast to flesh, and constitutes the principle of communication and manifestation to an already existing person. Jesus, having within himself the *logos* as the *divine subject*, was therefore capable of receiving the everlasting communication of the Spirit. As man, subject to human development, he stood in need of an external excitement and animation by God, such as took place at his baptism. It was, as Lücke thinks, one of those leading epochs, at which the ever-continued process of divine communication with mankind gives rise to new external developments.

This way of reconciling the two events is conceivable. On the other hand, those critics, who, like Neander and others, do not at all assume that there was any immediate operation of the Holy Spirit on Christ at the baptism, but consider all this as a mere development of the divine principle which was in him, do not need to make compromises in trying to reconcile the two events. According to their view, the Baptist saw in the resting of the Spirit on Christ, nothing but a necessary union of his own mission with that of Jesus; yet even so, we have to confine ourselves in this particular to the relation of John alone, since the other three Gospels, in connecting the baptism of Jesus with the history of his temptation, certainly seem to insinuate thereby a more powerful operation of the Spirit on Jesus. The advocates of the latter view may fairly refer to the fact that the difference that exists in the narrative of the baptism between the Three Gospels and that of John, is chiefly owing to their respective views with regard to the Messiah. The former rest their views of him more on the Old Testament: he is therefore with them a king and prophet acting in the name of God, by whom he is anointed with the Holy Spirit and power (Acts x. 37), and becomes manifest through miracles, and is finally raised to divine majesty. Not so the more sublime conception of John in that matter: he sees in him the incarnated *logos*, the independent source of his divine manifestations, to the execution of which he wanted, it is true, such external calls as present themselves in the relations of practical life, but by no means a new communication of the Spirit. The doctrine of St. Paul, 'Son of God after the Spirit, Son of David after the flesh,' may be considered as the link between them. 'The canonical Gospels have not gone so far in discrepancy as to come into real conflict. The three first speak plainly of the superhuman generation of Christ; and all that can be imputed to them is that they do not lay so much stress on it as John does, and are not fully aware of its import.' Only the partial view of the Ebionites renders the subject quite irreconcilable.

Christian Baptism.—Jesus, having undergone baptism as the founder of the new kingdom, ordained it as a legal act by which individuals were to obtain the rights of citizens therein. Though he caused many to be baptized by his disciples (John iv. 1, 2), yet *all* were not baptized who were converted to him; neither was it even necessary after they had obtained participation in him by his personal choice and forgiving of sin. But when he could no longer personally and immediately choose and receive members of his kingdom, when at the same time all had been accomplished which the founder thought necessary for its completion, he gave

power to the spiritual community to receive, in his stead, members by *baptism* (Matt. xxviii. 19; Mark xvi. 16). Baptism essentially denotes the regenerating of him who receives it, his participation both in the divine life of Christ and the promises rested on it, as well as his reception as a member of the Christian community.

Each of these momentous points implies all the rest; and the germ of all is contained in the words of Christ (Matt. xxviii. 19; comp. Neander, *History of the Planting*, &c. ii.). The details are variously digested by the Apostles according to their peculiar modes of thinking. John dwells—in like manner as he does on the holy communion—almost exclusively on the internal nature of baptism, the immediate mystical union of the Spirit with Christ; baptism is with him, equivalent to 'being born again' (John iii. 5, 7). Paul gives more explicitly and completely the other points also. He understands by it not only the union of the individual with the Head, by the giving one's self up to the Redeemer and the receiving of his life (Gal. iii. 27), but also the union with the other members (*ib.* 28; 1 Cor. 12, 13; Ephes. iv. 5; v. 26). He combines the negative and positive points of regeneration, alike with the death and resurrection of Christ, and also with the sinking *in* and rising *up* at baptism (Rom. vi. 4, *sq.*; Col. ii. 12).

As regards the relation between the external and the internal, the normal condition of baptism required that the ceremony should be combined with regeneration in him who received it, while he who administered it should have a perfect knowledge of the state of the baptized, and should aim at strengthening and promoting the new life in him. There is no doubt that when Christ himself gave the assurance that he had received some one into his community, whether with or without baptism, such a declaration of his choice was met by the individual with a disposition already prepared to begin the new life. But the Church is not in a state of perfection, and being deficient both in knowledge and will, she cannot fix the moment of regeneration in order to combine with it the act of baptism. She nevertheless places both in a necessary mutual relation, and considers baptism only then complete when regeneration takes place; the Church therefore either delays baptism until after regeneration, or administers it beforehand, confiding in the assurance that the agency of the Church (animated by the spirit of Christ and directed in behalf of an individual who enters into a sort of preliminary connection with the Church by this act of baptism) will also produce in him regeneration, provided always that the individual has the *will* for it.

In the Apostolic times the Church was in a less mixed state; a comparatively large number, perhaps an actual majority, of the whole body of the baptized might at that time have passed for *converts*, as the inward and outward conditions of baptism were then not so far removed from each other as they afterwards became. The necessity of examining the comparative merits of both conditions separately grew with the growing imperfection of the community. The Apostles did not yet feel it; they considered both only in the light of their necessary union with each other, as Paul, for instance, says (Tit. iii. 5; comp. Mark xvi. 16) of the external symbol, what belongs only to the union of both. Traces of separation, however, were already perceptible in the apostolic age. Among the symptoms of the perfect union of the convert with the Redeemer, was one peculiar to that period alone, manifesting the new life externally by the extatic state of the individual in whom the Spirit of God had operated. It was usually wrought by the hands laid on the baptized to bless, as the concluding act of baptism. Sometimes, however, that extacy manifested itself independently of the external act of baptism (Acts x. 47); while baptism, on the other hand, was sometimes performed without the requisite proper inward sentiments of the baptized, and without the 'gift of the Spirit' (Acts viii. 13, 19). The words of Peter (Acts x. 47) taken in connection with the whole, mean, that the Spirit of God is not bound to external ceremony, but to inward union and fellowship by belief. To ascribe the promises to baptism without that inward union, would be making it an *opus operatum* and its efficacy a magic power; but, on the other hand, since the institution of Christ comprises also the external signs, it cannot be complete without them, and he who would abolish these external signs would deprive the Church of an essential tie of fellowship. The Catholic church rather favours the former doctrine, and a few mystical sects, the Quakers, &c., the latter.

Infant Baptism was established neither by Christ nor the apostles. In all places where we find the necessity of baptism notified, either in a dogmatic or historical point of view, it is evident that it was only meant for those who were capable of comprehending the word preached, and of being converted to Christ by an act of their own will. A pretty sure testimony of its non-existence in the Apostolic age may be inferred from 1 Cor. vii. 14, since Paul would certainly have referred to the baptism of children for their holiness (comp. Neander, *Hist. of the Planting*, &c., i. p. 206). But even in later times, several teachers of the church, such as Tertullian (*De Bapt.* 18) and others, reject this custom; indeed, his church in general (that of North Africa) adhered longer than others to the primitive regulations. Even when baptism of children was already theoretically derived from the apostles, its *practice* was nevertheless for a long time confined to a maturer age.

In support of the contrary opinion, the advocates in former ages (now hardly any) used to appeal to Matt. xix. 14; but their strongest argument in its favour is the regulation of baptizing all the members of a house and family (1 Cor. xvi. 15; Acts xvi. 33; xviii. 8). In none of these instances has it been proved that there were little children among them; but, even supposing that there were, there was no necessity for excluding them from baptism in plain words, since such exclusion was understood as a matter of course. Many circumstances conspired early to introduce the practice of infant-baptizing. The confusion between the outward and inward conditions of baptism, and the magical effect that was imputed to it; confusion of thought about the visible and invisible church, condemning all those who did not belong to the former; the doctrine of the natural corruption of man so closely connected with the preceding; and, finally, the desire of distinguishing Christian children from the Jewish

and Heathen, and of commending them more effectually to the care of the Christian community—all these circumstances and many more have contributed to the introduction of infant baptism at a very early period.

But, on the other hand, the baptism of children is not at all at variance with the principle of Christian baptism in general, after what we have observed on the separation of regeneration and baptism. For, since it cannot be determined when the former begins, the real test of its existence lying only in the holiness continued to the end of man's life, the fittest point for baptism is evidently the beginning of life. Nevertheless, the profession of faith is still needed to complete it; Confirmation, or some equivalent observance, is therefore a very important consummation. The *fides infantium* is an absurd assumption, of which the Scriptures know nothing. On the other hand, the baptized child is strongly recommended to the community and to the Spirit of God dwelling therein, becoming the careful object of the education and holy influence of the Church (comp. 1 Cor. vii. 14). Nature and experience teach us, therefore, to retain the baptism of children, now that it is introduced.

To be admitted to baptism in the Apostolic age there needed no further development of Christian knowledge than a professed belief that Jesus was the promised Messiah. To be baptized in his name meant, to receive baptism in the belief that the power and dignity contained in the idea of a Messiah was realized in Jesus. The profession of faith (1 Pet. iii. 21) probably was such as to convey this idea; and next also the formula of baptism in the name of Christ, or, according to Matt. xxviii. 19, of the Father, Son, and Holy Ghost, when the whole body was immersed in water. Christ did not intend by these words to institute a fixed formula of baptism, but merely meant to indicate thereby the substance of the essential relations of baptism, since in his life-time people could not yet be baptized in the name of the Holy Ghost. As the Church, however, knew of no better compendiary text for the article of faith, she declared herself early for that formula, which was already in general use at the time of Justin Martyr. To preface the act of baptism by minute instruction was impossible in a time when the preaching of the Gospel was as yet limited to but a very few. A brief sketch of the history of Christ, the central point of which was his death and resurrection, and a reference to the Old Testament, where he had been pre-announced by the prophets, were deemed sufficient at that time (comp. Neander, *Hist. of the Plant.; Hist. of the Church*, ii.; Acts ii. 19). The apostles either themselves baptized, of which there are many instances in the Acts, or charged others to do it, and confined themselves to the 'laying on of hands' on which followed the communication of the Spirit. The reason of this limitation is, no doubt, the same which actuated also Christ in not himself baptizing, viz. that they might be less interrupted in the task of preaching the Gospel. Paul had subsequently also another inducement for not doing so, not to be made the leader of a party (1 Cor. i. 14-16).

Baptism for the Dead.—Paul (1 Cor. xv. 29) uses this phrase. It is difficult, almost impossible, to arrive at a satisfactory and certain result as to his meaning, since neither he nor any other authorities furnish us with the necessary data. Few passages have undergone more numerous and arbitrary emendations than this text. To give, however, some order to the numerous interpretations, we may in the first instance observe, that they all chiefly turn upon the question, whether the baptism here mentioned is the *general* church-baptism, or some *particular* one independent of the former. We shall examine, first—

A. *Those interpretations which take it to be some particular application of baptism.*

From the wording of the sentence, the most simple impression certainly is, that Paul speaks of a baptism which a living man receives in the place of a dead one. This interpretation is particularly adopted by those expounders with whom grammatical construction is of paramount importance, and the first thing to be considered.

Foremost among the older critics is Ambrose (Hilar.): 'In tantum natum et stabilem vult ostendere resurrectionem mortuorum, ut exemplum det eorum, qui tam securi erant de futura resurrectione, ut etiam pro mortuis baptizarentur, si quem forte mors prævenisset, timentes, ne aut male aut non resurgeret, qui baptizatus non fuerat; vivus nomine mortui tinguebatur.' Among the moderns are Erasmus, Scaliger, Grotius, Calixtus; and of the more recent the most considerable are Augusti (*Archæol.* iv.), Meyer (who understands ὑπέρ,=*to the advantage, in favour*, which may indeed well be the case), Billroth, and Rückert, who supposes that the Corinthians, convinced of the necessity and benefit of baptism, but erroneously considering it not as a symbol, but as a real means of purifying the heart itself, had taken it into their heads to give the benefit thereof also to the dead, by administering baptism to them by a substitute, a living person, and thus imagined that a *baptism by proxy* was practicable. De Wette considers this the only possible meaning of the words.

With regard to this interpretation, some doubt arises as to the real existence at that time of such a custom, since the only information respecting it would be this passage, though Rückert thinks this is sufficient evidence. It is true, that they refer to the Shepherd of Hermas (*Simil.* ix. 16); but all that can be inferred from it is, that they had at that time already begun to evince an overdue and extravagant respect for outward baptism. Tertullian (*Contr. Marcion.* v. 10) seems in a more direct way to speak of the existence of the custom: 'Noli apostolum novum statim auctorem aut confirmatorem ejus (institutionis) denotare, ut tanto magis sisteret carnis resurrectionem, quanto illi qui vanè pro mortuis baptizarentur, fide resurrectionis hoc facerent. Habemus illum alicubi unius baptismi definitorem. Igitur et pro mortuis tingui pro corporibus est tingui; mortuum enim corpus ostendimus' (comp. *De Resurrect. Carn.* 48). Tertullian in these words distinguishes a false application of baptism by substitution, from the general one adhered to by the apostle; he thinks that the apostle confirms baptism *pro mortuis*, not in that erroneous but in a proper sense, compatible with his other and general views of baptism. Of that erroneous practice, however, Tertullian, in this as in the other place, evidently knows no more than what is indicated by Paul in the above passage; neither does he mention that such a custom had prevailed in his time among the Marcionites or any others (comp. Neander,

Hist. of the Church, i. 2, p. 523, *sq.*, 3rd edit.). More certain information is given by Chrysostom, who relates of the Marcionites (*Homil.* 40, ad 1 Cor.) that when a catechumen died among them, a living person used to lay himself under the bed of the deceased, and answer in his stead the customary questions, after which the deceased was baptized. He says that they referred to the approval of St. Paul in the above passage. It is true that this absurd custom is certainly met with among the rough and superstitious Marcionites of later times, yet is it highly improbable, as Neander (*ut supra*) justly observes, that such a custom should ever have emanated from Marcion himself, who had entered more deeply into the spirit of the Pauline 'Faith' than any of his contemporaries.

A similar account is given by Epiphanius (*Hæres.* xxviii. 7) of the Gnostic sect of Cerinthus, who were much opposed to the Marcionites: 'In this country,—I mean, Asia,—and even in Galatia, their school flourished eminently; and a traditional fact concerning them has reached us, that when any of them had died without baptism, they used to baptize others in their name, lest in the resurrection they should suffer punishment as unbaptized.' We are not justified in denying credence to this statement, though there is just suspicion against Epiphanius from his total want of critical judgment, and his erroneous supposition that Paul was particularly combating the opinions of Cerinthus, a supposition which he applies also to the passage before us. In the *Concil. Carthagin.* A.D. 397, can. 6, and *Codex Eccles. Afric.* can. 18, it is forbidden to administer baptism and the holy communion to the dead: 'cavendum est etiam, ne mortuos baptizari posse fratrum infirmitas credat, quum eucharistiam mortuis non dari animadverterit.' Here baptism *by proxy* is not alluded to, and we must therefore assume that the Councils had no ground for its prohibition, the custom having, as it seems, not then existed in those parts. Augusti (l. l. vii. p. 42) refers to the proselyte baptism of the Jews, where, he thinks, parents underwent the rite for their children. But all the authorities quoted in its favour by Lightfoot (ad Math. iii. 6) prove nothing as to *substitution*; and even if they did so, it would still be highly improbable that the Gentile churches would have adopted it from them (comp. Schneckenberger, l. l. p. 79).

All therefore we can infer from the above statements is, that baptism by substitution had taken place among the Marcionites, and perhaps also among the Cerinthians and other smaller sects towards the end of the fourth century, a period when the confused views of the Church as to the relations of the external to the spiritual might easily have favoured that erroneous custom; but that it existed between that period and the time when Paul wrote the above passage is wholly unsubstantiated. Is it possible to suppose that in the various quarters of the Church of which we have any information, no notice whatever should have been taken either by a synodical decree, or by a contemporary writer within that period, of a custom, which, the earlier it existed, must have appeared only so much the more offensive. Is it not therefore evident that if it is found 300 years afterwards, it was by no means a continuation of the primitive custom, but had arisen independently of the latter, either in imitation of it, or from a mistaken interpretation of the Apostle in our passage?

The idea, then, that such a superstitious custom existed in the Corinthian community is devoid of all historical evidence; especially as the magical notions of baptism had as yet so little prevailed as not even to have given rise to infant baptism. Add to this, that the Corinthian church was far in advance of most others at that period in education and diffused knowledge, and that, in fact, their very striving for spiritual development threatened to lead them into onesidedness, and we must confess that the clearer the sense of the words becomes the more obscure becomes the thing itself.

The difficulties will still more increase, if we were to admit, with Olhausen, Rückert, and De Wette, that the Apostle approved of the absurd practice in question, since he would thus be brought into contradiction with his own principles on the importance of faith and external works, which he developes in his Epistle to the Galatians. Such a striking error could not have been a mere slip in Paul; it might therefore certainly give cause to suspect similar superstitious views in him. Even Ambrose (l. c.) had already correctly judged, when he said, 'Exemplo hoc non factum illorum probat, sed fidem fixam in resurrectione ostendit.' In the words of Paul we discover no opinion of his own concerning the justice or injustice of the rite; it is merely brought in as an *argumentum ex concesso* in favour of the object which he pursues through the whole chapter (comp. 1 Cor. ii. 5). However much may be objected against this interpretation, it is by far more reasonable than the explanations given by other critics. The Corinthian community was certainly of a mixed character, consisting of individuals of various views, ways of thinking, and different stages of education; so that there might still have existed a small number among them capable of such absurdities. We are not sufficiently acquainted with all the particulars of the case to maintain the contrary, while the simple grammatical sense of the passage is decidedly in favour of the proposed interpretation.

2. Origen (*Dial. contr. Marcion.*), Luther, Chemnitz, and Joh. Gerhard, interpret the words as relating to baptism over the graves of the members of the community, a favourite *rendezvous* of the early Christians. Luther says that, in order to strengthen their faith in the resurrection, the Christians baptized over the tombs of the dead. In that case ὑπὲρ with genit. must be taken in its local sense, quite an isolated instance in the New Testament (comp. Winer, *Grammat.* p. 263). The custom alluded to, moreover, dates from a much later period, when the adoration of the martyrs had begun to spread.

3. The above-quoted passage of Epiphanius mentions also a view, according to which νεκροὶ is not to be translated by *dead*, but *mortally ill* persons, whose baptism was expedited by sprinkling water upon them on their death-bed, instead of immersing them in the usual way; the rite is known under the name of *baptismus clinicus*, *lectualis*. But few of the modern theologians (among whom, however, are Calvin and Estius) advocate this view, which transgresses not less against the words of the text, than against all historical knowledge of the subject.

B. *The interpretations which suppose that the*

text speaks of general church baptism. To these belongs the oldest opinion we know of, given in Tertullian (l. c. comp. *De Resurrect. Carn.* 48): 'Quid et ipsos baptizari ait, si non quæ baptizantur corpora resurgunt?' According to this view ὑπὲρ is here taken in the sense of *on account of*, and νεκρῶν in that of *dead bodies, they themselves*, the baptized, as dead persons. The notion which lies at the bottom of this version is, that the body possesses a guarantee for resurrection in the act of baptism, in which it also shares. The sinking *under* and rising *up* is with them a symbol of burying and resurrection. Some of the Greek Fathers also favour this interpretation, and more especially Theodoret, who thus developes the notion: 'He who undergoes baptism is therein buried with his Lord, that having partaken in his death, he may become partaker in his resurrection also. But if the body is a corpse and rises not, why is it ever baptized?' Chrysostom: 'Paul said, Unless there is a resurrection, why art thou baptized for corpses, that is, for mere bodies. For to this end art thou baptized, for the resurrection of thy dead body, &c.' The idea thus developed is by itself admissible, and harmonizes well with the whole course of ideas pursued by Paul from ver. 19. The form of the sentence, however, becomes uncommonly harsh, because of the transition: 'else what shall they do who are baptized on account of the dead?' (on account of themselves, who are dead)? Indeed, it is by far more jarring than Rom. v. 6, which is quoted as a parallel passage.

2. The words of Chrysostom, just quoted, certainly convey also the same meaning as regards 'the dead,' but differ from the two former interpretations with regard to ὑπέρ: 'in behalf of the dead' thus means, 'in the belief of the resurrection of the dead.' This ungrammatical version is adopted by Theophylact: 'Why are men baptized at all in behalf of resurrection, that is, in expectation of resurrection, if the dead rise not?' (Isidor. Pelas. 'If bodies rise not at all, why do we believe that in baptism they are changed to incorruptibility?' perhaps with reference to our passage).

3. Pelagius, Olearius, Fabricius, are of opinion that the phrase, 'on account of the dead,' or 'of those who are dead,' although strictly plural, here alludes to an individual, namely, to Christ, 'on account of whom' we are baptized, alluding to Rom. vi. 3. Though the plural is in itself admissible (Winer, *Gram.* p. 163), its use here would nevertheless be rather strange, there being no ground whatever for the use of so peculiar a phraseology; neither can we account for the fact, that the regular construction of βαπτίζω with εἰς should have been converted into the unprecedented construction with ὑπέρ. Vater justifies the plural, by including in it *John the Baptist;* Semler understands it of Christ and those of the Apostles and teachers of the church who were already dead at that time; Flatt, by adding, on account of Christ, and those who have died in him (in the belief in him):—all quite inadmissible combinations.

4. Among the best interpretations is that of Spanheim and Joh. Christ. Wolf. They consider 'the dead' to be martyrs and other believers, who, by firmness and cheerful hope of resurrection, have given in death a worthy example, *by which* (ὑπὲρ) others were also animated to receive baptism. Still this meaning would be almost too briefly and enigmatically expressed, when no particular reason for it is known, while also the allusion to the exemplary death of many Christians could chiefly apply to the martyrs alone, of whom there were as yet none at Corinth.

5. Olhausen's interpretation is of a rather doubtful character. In the first instance he interprets ὑπὲρ = *instead of, in favour of;* and the meaning of the passage he takes to be, that 'all who are converted to the church are baptized—*for the good* of the dead, as it requires a certain number (Meyer: or rather the conversion of all, Rom. xi. 12-25), a "fulness" of believers, before the resurrection can take place. Every one therefore who is baptized is so for the good of believers collectively, and of those who have already died in the Lord' (both of which, we can hardly suppose νεκρῶν to embrace at once!). Olhausen is himself aware that the Apostle could not have expected that such a difficult and remote idea, which he himself calls 'a mystery,' would be understood by his readers without a further explanation and development of his doctrine. He therefore proposes an interpretation as already suggested by Clericus and Döderlein (*Instit.* I.). In this explanation, it is argued, that the miseries and hardships Christians have to struggle against in this life can only be compensated by resurrection. Death causes, as it were, vacancies in the full ranks of the believers, which are again filled up by other individuals. 'What would it profit those who are baptized *in the place* of the dead (to fill up their place in the community) if there be no resurrection? The tendency of the whole connection of the text, however, would rather lead us to expect the question, 'What would the *dead* profit by it?' since the tenor of the passage decidedly refers to them. To make ὑπὲρ = ἀντί, therefore, is quite unsuitable; not to mention, that the idea—to enter into the ranks of Christians—must first be supposed to be contained in the word 'baptism,' in order to draw from it the figure of *substitution*. A reference is made, in support of the opinion which considers ὑπὲρ = ἀντί, to Dionys. Halicar. (*Antiq.* viii.), where he is treating of a new conscription, which was to be made to fill up the ranks rendered vacant by the death of the soldiers who had fallen in the war, and the expression there used is—οὗτοι ἠξίουν ὑπὲρ τῶν ἀποθανόντων στρατιωτῶν ἑτέρους καταγράφειν. Nor are there wanting other similar passages in proof of this; but we must bear in mind, that in Dionys. the word denotes a literal substitution, while in our passage the *substitution* is figurative, far-fetched, and hard to unriddle. It is not probable that the Apostle should not have said ἀντί, if he had really wished to express that thought. Moreover, the very essence of the argument, the notion that resurrection is the compensation for the sufferings of life, is here not at all given, nor even hinted at except we connect the ἐπεί directly with ver. 19., a thing quite impossible. A somewhat similar opinion is expressed by F. J. Hermann, that ὑπὲρ = præter (עַל, Genes. xxvii. 9), 'Cur præter eos qui jam mortui sunt, alii quoque baptismum suscipiunt, et ita initiati religionem Christianorum profitentur, si tamen nulla

erit resurrectio mortuorum nec melioris vitæ præmium expectandum est?' In this sense, however, ὑπὲρ would require the accusative.

C. βαπτιζόμενοι, in a *figurative sense.*

Some (referring to the words of Christ, Matt. xx. 22) take it in the sense of the *baptism of passion, suffering:* this is evidently too forced to require refutation.

The interpretations of many others who have still more transgressed against grammar and history in the process, we have with reason omitted. They are partly to be found in the collection of interpretations in Joh. Christ. Wolf's *Curæ Philologicæ*, &c. and Heidenreich's *Comment. ad N. C.*—J. J.*

BAR (בַּר), a Hebrew word meaning *son*, but used only poetically in that language (Ps. ii. 12; Prov. xxxi. 2). In Syriac, however, Bar (ܒܪ or ܒܪܐ) answered to the more common Hebrew word for *son*, i. e. בֵּן *ben;* and hence in later times, in the New Testament, it takes the same place in the formation of proper names which *Ben* had formerly occupied in the Old Testament.

BARABBAS (probably בַּר אַבָּא, *son of Abba*, a common name in the Talmud), a person who had forfeited his life for sedition and murder (Mark xv. 7; Luke xxiii. 25). As a rebel, he was subject to the punishment laid down by the Roman law for such political offences; while, as a murderer, he could not escape death even by the civil code of the Jews. But the latter were so bent on the death of Jesus, that, of the two, they preferred pardoning this double criminal (Matt. xxvii. 16-26; Mark xv. 7-15; Luke xxiii. 18-25; John xviii. 40). Origen says that in many copies Barabbas was also called *Jesus*. The Armenian Version has the same reading: 'Whom will ye that I shall deliver unto you, Jesus Barabbas, or Jesus that is called Christ?' Griesbach, in his *Comment.*, considers this as an interpolation; while Fritzsche has adopted it in his text. We can certainly conceive that a name afterwards so sacred may have been thrown out of the text by some bigoted transcriber.—E. M.

* As the topic of baptism seemed to be well exhausted in this country, the Editor thought that some freshness of effect might be produced by presenting the subject to the reader from a German point of view. The article was, therefore, offered to Dr. Neander, the church historian, and Professor of Theology in the university of Berlin. His multiplied pre-engagements, however, induced him, with the Editor's consent, to consign the subject to the Rev. J. Jacobi, of the same university; and in due time the MS. of the present article arrived, accompanied by the following note from Dr. Neander, to whose inspection it had previously been submitted by the author:—

'As my other labours would not permit me to work out the article (on Baptism) for the "Cyclopædia of Biblical Literature," I requested a dear friend, J. Jacobi, to undertake it, who, by his knowledge and critical talents, is fully qualified for the task, and whose theological principles are in unison with my own.—A. Neander.'

BARACHIAS (Βαραχίας), father of the Zechariah (Zacharias) mentioned in Matt. xxiii. 35 [Zechariah].

BARAK (בָּרָק, *lightning;* Sept. Βάρακ), son of Abinoam of Kedesh-Naphtali, a Galilean city of refuge in the tribe of Naphtali (Judg. iv. 6; comp. Josh. xix. 37; xxi. 32). He was summoned by the prophetess Deborah to take the field against the hostile army of the Canaanitish king Jabin, commanded by Sisera, with 10,000 men from the tribes of Naphtali and Zebulon, and to encamp on Mount Tabor, probably because the 900 chariots of iron (Judg. iv. 3), in which the main force of Sisera consisted, could not so easily manœuvre on uneven ground. After some hesitation, he resolved to do her bidding, on condition that she would go with him, which she readily promised. Confiding, therefore, in the God of Israel, he attacked the hostile army by surprise, put them to flight, and routed them to the last man (Judg. v. 14, 15, 16). In conjunction with Deborah, he afterwards composed a song of victory in commemoration of that event (*ibid.*).—E. M.

BARBARIAN (βάρβαρος). This term is used in the New Testament, as in classical writers, to denote other nations of the earth in distinction from the Greeks. 'I am debtor both to the Greeks and Barbarians'—Ἕλλησί τε καὶ βαρβάροις (Rom. i. 14); 'der Griechen und der Ungriechen'—Luther; 'To the Grekes and to them which are no Grekes'—Tyndale, 1534, and Geneva, 1557; 'To the Grekes and to the Ungrekes'—Cranmer, 1539. In Coloss. iii. 11, 'Greek nor Jew—Barbarian, Scythian'—Βάρβαρος seems to refer to those nations of the Roman empire who did not speak Greek, and Σκύθης to nations not under the Roman dominion (Dr. Robinson). In 1 Cor. xiv. 11 the term is applied to a difference of language: 'If I know not the meaning of the voice, I shall be unto him that speaketh a barbarian ('as of another language,' *Geneva Vers.*), and he that speaketh shall be a barbarian ('as of another language,' *Geneva Vers.*) unto me.' Thus Ovid, 'Barbarus hic ego sum, quia non intelligor ulli,' *Trist.* v. 10. 37. In Acts xxviii. the inhabitants of Malta are called βάρβαροι, because they were originally a Carthaginian colony, and chiefly spoke the Punic language. In the Septuagint, βάρβαρος is used for the Hebrew לעז, 'A people of *strange* language' (Ps. cxiv. 1); in the Chaldee paraphrase מעמא ברבראי. In the Rabbinical writers לעז is applied to foreigners in distinction from the Jews; and in the Jerusalem Talmud it is explained by יונית, *i. e.* the Greek language; Rabbi Solomon remarks, that whatever is not in the Holy tongue, is called לעז (Buxtorf, *Lex-Talm.*). According to Herodotus, the Egyptians called all men barbarians who did not speak the same language as themselves: μὴ σφίσι ὁμογλώσσους, ii. 158. Clement of Alexandria uses it respecting the Egyptians and other nations, even when speaking of their progress in civilization, as in his *Strom.* i. c. 16, §74.: Οὐ μόνης δὲ φιλοσοφίας, ἀλλὰ καὶ πάσης σχεδὸν τέχνης εὑρεταὶ βάρβαροι. Αἰγύπτιοι γοῦν πρῶτοι ἀστρολογίαν εἰς ἀνθρώπους ἐξήνεγκαν, ὁμοίως δὲ καὶ Χαλδαῖοι.—'Barbarians have been inventors not only of philosophy, but

likewise of almost every art. The Egyptians, and in like manner the Chaldæans, first introduced among men the knowledge of astrology.' In a singular passage of Justin Martyr's first Apology, the term is applied to Abraham and other distinguished Hebrews: 'We have learned and have before explained, that Christ is the first begotten of God, being the Word (or reason) λόγον ὄντα, of which the whole human race partake. And they who live agreeably to the Word (or reason οἱ μετὰ λόγου βιώσαντες, are Christians, even though esteemed atheists: such among *the Greeks* were Socrates, Heraclitus, and the like; and among *the barbarians* ('among other nations,' Chevallier's *Trans.*) ἐν βαρβάροις, Abraham, Ananias, Azarias, Misael, and Elias, and many others.'—*Apol.* i. 46. Strabo (xiv. 2) suggests that the word *Bar-bar-os* was originally an imitative sound, designed to express a harsh dissonant language, or sometimes the indistinct articulation of the Greek by foreigners, and instances the Carians, who on the latter account he conjectures were termed by Homer βαρβαρόφωνοι (*Il.* ii. 867). The word appears to have acquired a reproachful sense during the wars with the Persians; their country was called ἡ βάρβαρος (γῆ). (Demosth. *Philipp.* iii.)—J. E. R.

BAR-JESUS (Βαριησοῦς). [ELYMAS.]

BAR-JONA (Βὰρ Ἰωνᾶ, *son of Jonas*), the patronymic appellation of the Apostle Peter (Matt. xvi. 17).

BARKENIM. [THORNS.]

BARLEY (שְׂעֹרָה). This grain is mentioned in Scripture as cultivated and used in Egypt (Exod. ix. 31), and in Palestine (Lev. xxvii. 16; Deut. viii. 8; 2 Chron. ii. 10; Ruth ii. 17; 2 Sam. xiv. 30; Isa. xxviii. 25; Jer. xli. 8; Joel i. 11). Barley was given to cattle, especially horses (1 Kings iv. 28), and was indeed the only corn grain given to them, as oats and rye were unknown to the Hebrews, and are not now grown in Palestine, although Volney affirms (ii. 117) that small quantities are raised in some parts of Syria as food for horses. Hence barley is mentioned in the Mishnah (*Pesach.* fol. 3) as the food of horses and asses. This is still the chief use of barley in Western Asia. Bread made of barley was, however, used by the poorer classes (Judg. vii. 13; 2 Kings iv. 42; John vi. 9, 13; comp. Ezek. iv. 9). In Palestine barley was for the most part sown at the time of the autumnal rains, October—November (Lightfoot, *Hor. Hebr. ad Matt.* xii. 1), and again in early spring, or rather as soon as the *depth* of winter had passed (*Mish. Berachoth.* p. 18). This later sowing has not hitherto been much noticed by writers on this part of Biblical illustration, but is confirmed by various travellers who observed the sowing of barley at this time of the year. Russell says that it continues to be sown to the end of February (*Nat. Hist. Aleppo*, i. 74; see his meaning evolved in the *Pictorial Palestine, Phys. Hist.*, p. 214; comp. p. 229). The barley of the first crop was ready by the time of the Passover, in the month Abib, March—April (Ruth i. 22; 2 Sam. xxi. 9; Judith viii. 2); and if not ripe at the expiration of a (Hebrew) year from the last celebration, the year was intercalated (Lightfoot, *ut supra*) to preserve that connection between the feast and the barley-harvest which the law required (Exod. xxiii. 15, 16; Deut. xvi. 16). Accordingly, travellers concur in showing that the barley-harvest in Palestine is in March and April—advancing into May in the northern and mountainous parts of the land; but April is the month in which the barley-harvest is chiefly gathered in, although it begins earlier in some parts and later in others (*Pict. Palestine*, pp. 214, 229, 239). At Jerusalem, Neibuhr found barley ripe at the end of March, when the later (autumnal) crop had only been lately sown (*Beschreib. von Arabien*, p. 160).

The passage in Isa. xxxii. 20 has been supposed by many to refer to rice, as a mode of culture by submersion of the land after sowing, similar to that of rice, is indicated. The celebrated passage, 'Cast thy bread upon the waters,' &c. (Eccles. xi. 1), has been by some supposed to refer also to such a mode of culture. But it is precarious to build so important a conclusion, as that rice had been so early introduced into the Levant, upon such slight indications; and it now appears that barley is in some parts subjected to the same submersion after sowing as rice, as was particularly noticed by Major Skinner (i. 320), in the vicinity of Damascus. In Exod. ix. 31, we are told that the plague of hail, some time *before* the Passover, destroyed the barley, which was then in the green ear; but not the wheat or the rye, which were only in the blade. This is minutely corroborated by the fact that the barley sown after the inundation is reaped, some after ninety days, some in the fourth month (Wilkinson's *Thebes*, p. 395), and that it there ripens a month earlier than the wheat (Sonnini, p. 395).

BARNABAS (בַּר נְבוּאָה; Βαρνάβας). His name was originally Ἰωσῆς, *Joses*, or Ἰωσήφ, *Joseph* (Acts iv. 36); but he received from the Apostles the surname of Barnabas, which signifies *the Son of Prophecy*. Luke interprets it by υἱὸς παρακλήσεως, *i. e. Son of Exhortation*. The Hebrew term and its cognates are used in the Old Testament with a certain latitude of meaning, and are not limited to that of foretelling future events. Thus Abraham is termed in Gen. xx. 7 נביא, Sept. προφήτης, as being a person admitted to intimate communion with the Deity, and whose intercession was deemed of superior efficacy. In Exod. vii. 1 Jehovah declares to Moses, 'I have made thee a god to Pharaoh, and Aaron, thy brother, shall be thy *prophet*,' נביאך, which Onkelos translates by מתורגמנך, *thy interpreter* (Buxtorf, *Lex. Talmud.*). In like manner προφητεία, in the New Testament, means not merely prediction, but 'includes the idea of declarations, exhortations, or warnings uttered by the prophets while under divine influence' (Dr. E. Robinson). 'He that *prophesieth* (ὁ προφητεύων) speaketh unto men, unto edification, and *exhortation* (παράκλησιν), and comfort' (1 Cor. xiv. 3). Of Silas and Judas it is said, 'being *prophets*, they *exhorted* (παρεκάλεσαν) the brethren' (Act xv. 32). It can hardly be doubted that this name was given to Joses to denote his eminence as a Christian teacher. In Acts xiii. 1 his name is placed first in the list of prophets and teachers belonging to the church at Antioch. Chrysostom, however, understands the surname in the same way as the Auth. Vers., *Son of Consolation*, and supposes that it was

given to Barnabas on account of his mild and gentle disposition: 'This Barnabas was a mild and gentle person. His name means *Son of Consolation*: hence he became a friend of Paul; and that he was very kind and easy of access is proved by the instance before us, and by the case of John (Mark)' (*In Act. Apost. Hom.* xxi.). He is described by Luke as 'a good man, full of the Holy Ghost and of faith' (Acts xi. 24). He was a native of Cyprus, but the son of Jewish parents of the tribe of Levi. From Acts iv. 36, 37 it appears that he was possessed of land, but whether in Judæa or Cyprus is not stated. He generously disposed of the whole for the benefit of the Christian community, and 'laid the money at the Apostles' feet.' As this transaction occurred soon after the day of Pentecost, he must have been an early convert to the Christian faith. According to Clement of Alexandria (*Strom.* ii. c. 20, vol. ii. p. 192, ed. Klotz), Eusebius (*Hist. Eccles.* i. 12), and Epiphanius (*Hær.* xx. 4), he was one of the seventy disciples (Luke x. 1). It has been maintained that Barnabas is identical with Joseph Barsabas, whose name occurs in Acts i. 23. Most modern critics, however, embrace the contrary opinion, which they conceive is supported by the circumstantial manner in which Barnabas is first mentioned. However similar in sound, the meanings of the names are very different; and if no further notice is taken of Barsabas (a circumstance which Ullman urges in favour of his identity with Barnabas), the same may be affirmed of Matthias. Chrysostom observes, on Acts iv. 36, 'This person is not, in my opinion, the same that is mentioned with Matthias; for he was called Joses and Barsabas, and afterwards surnamed Justus; but this man was surnamed by the apostles Barnabas, *Son of Consolation;* and the name seems to have been given him from the virtue, inasmuch as he was competent and fit for such a purpose' (*In Act. Apost.* Homil. xi. 1).

When Paul made his first appearance in Jerusalem after his conversion, Barnabas introduced him to the Apostles, and attested his sincerity (Acts ix. 27). This fact lends some support to an ancient tradition that they had studied together in the school of Gamaliel—that Barnabas had often attempted to bring his companion over to the Christian faith, but hitherto in vain—that meeting with him at this time in Jerusalem, not aware of what had occurred at Damascus, he once more renewed his efforts, when Paul threw himself weeping at his feet, informed him of 'the heavenly vision,' and of the happy transformation of the persecutor and blasphemer into the obedient and zealous disciple (Acts xxvi. 16).

Though the conversion of Cornelius and his household, with its attendant circumstances, had given the Jewish Christians clearer views of the comprehensive character of the new dispensation, yet the accession of a large number of Gentiles to the church at Antioch was an event so extraordinary, that the Apostles and brethren at Jerusalem resolved on deputing one of their number to investigate it. Their choice was fixed on Barnabas. After witnessing the flourishing condition of the church, and adding fresh converts by his personal exertions, he visited Tarsus to obtain the assistance of Saul, who returned with him to Antioch, where they laboured for a whole year (Acts xi. 23-26). In anticipation of the famine predicted by Agabus, the Antiochian Christians made a contribution for their poorer brethren at Jerusalem, and sent it by the hands of Barnabas and Saul (Acts xi. 29-30), who speedily returned, bringing with them John Mark, a nephew of the former. By divine direction (Acts xii. 2) they were separated to the office of missionaries, and as such visited Cyprus and some of the principal cities in Asia Minor (Acts xiii. 14). Soon after their return to Antioch, the peace of the church was disturbed by certain zealots from Judæa, who insisted on the observance of the rite of circumcision by the Gentile converts. To settle the controversy, Paul and Barnabas were deputed to consult the Apostles and elders at Jerusalem (Acts xv. 1, 2); they returned to communicate the result of their conference (ver. 22), accompanied by Judas Barsabas and Silas, or Silvanus. On preparing for a second missionary tour, a dispute arose between them on account of John Mark, which ended in their taking different routes; Paul and Silas went through Syria and Cilicia, while Barnabas and his nephew revisited his native island (Acts xv. 36-41). In reference to this event, Chrysostom remarks—'Τί οὖν; ἐχθροὶ ἀνεχώρησαν; μὴ γένοιτο. Ὁρᾷς γὰρ μετὰ τοῦτο Βαρνάβαν πολλῶν ἐγκωμίων ἀπολαύοντα παρὰ Παύλου ἐν ταῖς ἐπιστολαῖς. Παροξυσμός, φησίν, ἐγένετο, οὐκ ἔχθρα οὐδὲ φιλονεικία:' 'What then? Did they part as enemies? Far from it. For you see that after this Paul bestows in his Epistles many commendations on Barnabas. There was "a sharp fit of anger" (Doddridge) he (Luke) says, not enmity, nor love of strife.' At this point Barnabas disappears from Luke's narrative, which to its close is occupied solely with the labours and sufferings of Paul. From the Epistles of the latter a few hints (the only authentic sources of information) may be gleaned relative to his early friend and associate. From 1 Cor. ix. 5, 6, it would appear that Barnabas was unmarried, and supported himself, like Paul, by some manual occupation. In Gal. ii. 1 we have an account of the reception given to Paul and Barnabas by the Apostles at Jerusalem, probably on the occasion mentioned in Acts xv. In the same chapter (ver. 13) we are informed that Barnabas so far yielded to the Judaizing zealots at Antioch, as to separate himself for a time from communion with the Gentile converts. The date of this occurrence has been placed by some critics soon after the Apostolic convention at Jerusalem (about A.D. 52); by others, on the return of Paul from his second missionary journey (A.D. 55). Dr. Paley thinks 'that there is nothing to hinder us from supposing that the dispute at Antioch was prior to the consultation at Jerusalem, or that Peter, in consequence of this rebuke, might have afterwards maintained firmer sentiments' (*Horæ Paulinæ*, ch. v.). The same view has been taken by Hug and Schneckenburger; but (as Dr. Neander remarks) though Paul may not follow a strict chronological order, it is difficult to believe that he would not place the narrative of an event so closely connected with the conference at Jerusalem, at the beginning, instead of letting it follow as supplementary (*History of the Planting of the Christian Church*, vol. i. p. 218, Eng. Transl.). It has been inferred from 2 Cor. viii. 18, 19, that Barnabas was not only reconciled to Paul after their separation (Acts xv. 39),

but also became again his coadjutor; that he was 'the brother whose praise was in the Gospel through all the churches.' Chrysostom says that some suppose the brother was Luke, and others Barnabas. Theodoret asserts that it was Barnabas, and appeals to Acts xiii. 3, which rather serves to disprove his assertion, for it ascribes the appointment of Paul and Barnabas to an express divine injunction, and not to an elective act of the church; and, besides, the brother alluded to was chosen, not by a single church, but by several churches, to travel with Paul (χειροτονηθεὶς ὑπὸ τῶν ἐκκλησιῶν συνέκδημος ἡμῶν, 2 Cor. viii. 19). In Colos. iv. 10, and Philemon, ver. 24, Paul mentions Mark as his fellow-labourer; and at a still later period, 2 Tim. iv. 11, he refers with strong approbation to his services, and requests Timothy to bring him to Rome; but of Barnabas (his relationship to Mark excepted) nothing is said. The most probable inference is, that he was already dead, and that Mark had subsequently associated himself with Paul. For the latter years of Barnabas we have no better guides than the *Acta et Passio Barnabæ in Cypro*, a forgery in the name of John Mark, and, from the acquaintance it discovers with the localities of Cyprus, probably written by a resident in that island; and the legends of Alexander, a Cyprian monk, and of Theodore, commonly called Lector (that is, an ἀναγνωστής, or reader), of Constantinople: the two latter belong to the sixth century. According to Alexander, Barnabas, after taking leave of Paul, landed in Cyprus, passed through the whole island, converted numbers to the Christian faith, and at last arrived at Salamis, where he preached in the synagogue with great success. Thither he was followed by some Jews from Syria (the author of the *Acta* names Barjesus as their leader), who stirred up the people against him. Barnabas, in anticipation of his approaching end, celebrated the Eucharist with his brethren, and bade them farewell. He gave his nephew directions respecting his interment, and charged him to go after his decease to the Apostle Paul. He then entered the synagogue, and began as usual to preach Christ. But the Jews at once laid hands on him, shut him up till night, then dragged him forth, and, after stoning him, endeavoured to burn his mangled body. The corpse, however, resisted the action of the flames; Mark secretly conveyed it to a cave about five stadia from the city; he then joined Paul at Ephesus, and afterwards accompanied him to Rome. A violent persecution, consequent on the death of Barnabas, scattered the Christians at Salamis, so that a knowledge of the place of his interment was lost. This account agrees with that of the pseudo Mark, excepting that, according to the latter, the corpse was reduced to ashes. Under the emperor Zeno (A.D. 474-491), Alexander goes on to say, Peter Fullo, a noted Monophysite, became patriarch of Constantinople. He aimed at bringing the Cyprian church under his patriarchate, in which attempt he was supported by the emperor. When the Bishop of Salamis, a very worthy man, but an indifferent debater (ὀλιγοστὸς δὲ πρὸς διάλεξιν), was called upon to defend his rights publicly at Constantinople, he was thrown into the greatest perplexity. But Barnabas took compassion on his fellow-countryman, appeared to him by night no less than three times, assured him of success, and told him where he might find his body, with a copy of Matthew's gospel lying upon it. The bishop awoke, assembled the clergy and laity, and found the body as described. The sequel may be easily conjectured. Fullo was expelled from Antioch; the independence of the Cyprian church acknowledged; the manuscript of Matthew's gospel was deposited in the palace at Constantinople, and at Easter lessons were publicly read from it; and by the emperor's command a church was erected on the spot where the corpse had been interred. These suspicious visions of Barnabas are termed by Dr. Cave, 'a mere addition to the story, designed only to serve a present turn, to gain credit to the cause, and advance it with the emperor.'

Neither Alexander nor Theodore is very explicit respecting the copy of Matthew's gospel which was found with the corpse of Barnabas. The former represents Barnabas as saying to Anthemius, ἐκεῖ μοῦ τὸ πᾶν σῶμα ἀπόκειται, καὶ εὐαγγέλιον ἰδιόχειρον ὃ ἐξέλαβον ἀπὸ Ματθαίου—'There my whole body is deposited, and an autograph gospel which I received from Matthew. Theodore says, ἔχον ἐπὶ στηθοῦς τὸ κατὰ Ματθαῖον εὐαγγέλιον, ἰδιόγραφον τοῦ Βαρνάβα—'Having on his breast the Gospel according to Matthew, *an autograph of Barnabas*.' The pseudo Mark omits the latter circumstance. If we believe that, as Alexander reports, it was read at Constantinople, it must have been written not in Hebrew, but in Greek. The year when Barnabas died cannot be determined with certainty; if his nephew joined Paul after that event, it must have taken place not later than A.D. 63 or 64. 'Chrysostom,' it has been asserted, 'speaks of Barnabas as alive in A.D. 63.' The exact statement is this: in his *Eleventh Homily on the Epistle to the Colossians* he remarks, on ch. iv. 10, 'touching whom ye received commandments, if he come unto you receive him'—ἴσως παρὰ Βαρνάβα ἐντολὰς ἔλαβον—'perhaps they received commands from Barnabas.'

There is a vague tradition that Barnabas was the first bishop of the church at Milan, but it is so ill supported as scarcely to deserve notice. It is enough to say that the celebrated Ambrose (b. A.D. 340, d. 397) makes no allusion to Barnabas when speaking of the bishops who preceded himself (v. Hefele, *Das Sendschreiben des Apostels Barnabas*, pp. 42-47).

From the incident narrated in Acts xiv. 8-12 Chrysostom infers that the personal appearance of Barnabas was dignified and commanding. When the inhabitants of Lystra, on the cure of the impotent man, imagined that the gods were come down to them in the likeness of men, they called Barnabas Zeus (their tutelar deity), and Paul, Hermes, because he was chief speaker: ἐμοὶ δοκεῖ καὶ ἀπὸ τῆς ὄψεως ἀξιοπρεπὴς εἶναι ὁ Βαρνάβας (*In Act. Apost. Hom.* xxx).

BARNABAS, GOSPEL OF. A spurious gospel, attributed to Barnabas, exists in Arabic, and has been translated into Italian, Spanish, and English. It was probably forged by some heretical Christians, and has since been interpolated by the Mohammedans, in order to support the pretensions of their prophet. Dr. White has given copious extracts from it in his *Bampton Lectures*, 1784; *Sermon* viii. p. 358, and Notes, p. 41-69 (See also Sale's *Koran*, *Prelim. Dissert.* sect. 4). It is placed among the Apocryphal books in the

Stichometry prefixed by Cotelerius to his edition of the Apostolical Constitutions (Lardner's *Credibility*, part ii. ch. 147). It was condemned by Pope Gelasius I. (Tillemont, *Mémoires*, &c. i. p. 1055).

Barnabas, Epistle of. The title of this ancient composition is found in the Stichometries (or catalogues of the sacred books) of the ninth century; but from that period to the seventeenth century the work itself remained entirely unknown. Jacob Sirmond, a Jesuit, in copying the transcript of a Greek manuscript of Polycarp's *Epistle to the Philippians*, which belonged to Turrianus (a member of the same order), discovered another piece appended to it, which proved to be the Epistle (so called) of Barnabas. It was also found in two manuscripts of Polycarp, at Rome, which Cressolius collated. Sirmond sent a copy to the Benedictine, Hugo Menard, who had not long before found an ancient Latin translation of the Epistle of Barnabas in the Abbey of Corbey. About the same time Andreas Schottus (also a Jesuit) obtained a manuscript containing the Epistles of Polycarp and Barnabas; this was transcribed by Claudius Salmasius, and given, with a copy of the Corbey version, to Isaac Vossius. Vossius shortly after paid a visit to Archbishop Usher, who was then preparing for publication an ancient Latin version of the shorter Ignatian Epistles. It was agreed between them to annex to this work the Epistle of Barnabas. But it had hardly been sent to press when the great fire at Oxford occurred (1644), in which the manuscript was destroyed, with all the archbishop's notes, and only a few pages saved which were in the corrector's hands. These were afterwards inserted by Bishop Fell, in the Preface to his edition of Barnabas, Oxford, 1685. The first edition of Barnabas appeared at Paris, in 1645; it had been prepared by Menard, but, in consequence of his death, was edited by Luke d'Acherry. In the following year a new and much improved edition was published by Vossius, for which he collated three manuscripts; it was appended to his *editio princeps* of the Ignatian Epistles. In 1672 Cotelerius published his magnificent edition of the Apostolic Fathers. Besides the Greek text, and Corbey's version of Barnabas, it contained a new translation and valuable notes by the editor. The reprint, in 1724, contained additional notes by Davis and Le Clerc. In 1685 two additions appeared; Bishop Fell's, already noticed, and one by Stephen le Moyne, at Leyden, in the first volume of his *Varia Sacra*, with copious notes. It is also contained in Russel's edition of the Apostolic Fathers, Lond. 1746, and in the first volume of Galland's *Bibliotheca veterum Patrum*, Ven. 1765. The most recent and convenient edition is that by Dr. C. J. Hefele, in his *Patrum Apostolicorum Opera*, Tübingen, 1839 and 1842. Four German translations have appeared, by Arnold (1696), Glüsing (Hamb. 1723), Grynœus (1772), and Möst (1774); it was translated into English, by Archbishop Wake (*The genuine Epistles of the Apostolic Fathers*, &c., Lond. 1693 and 1710); and a French translation by Le Gras is inserted in Desprez's Bible, Paris, 1717. On comparing the Corbey version with the Greek text, it appears that the latter wants four chapters and a half at the beginning, and the former four chapters at the end; thus each supplies the deficiencies of the other. It is remarkable that all the Greek manuscripts hitherto found are similarly defective; which plainly shows that they are all derived from the same source, and form only one family of manuscripts.

The Epistle of Barnabas consists of twenty-one chapters. The first part (i. 17) treats of the abrogation of the Mosaic dispensation, and of the types and prophecies relating to Christ; the last four chapters are composed entirely of practical directions and exhortations. The names and residence of the persons to whom it is addressed are not mentioned, on which account, probably, it was called by Origen a *Catholic* Epistle (Origen, *Contr. Cels.* lib. i. p. 49). But if by this title he meant an epistle addressed to the general body of Christians, the propriety of its application is doubtful, for we meet with several expressions which imply a personal knowledge of the parties. It has been disputed whether the persons addressed were Jewish or Gentile Christians. Dr. Hefele strenuously contends that they were of the former class. His chief argument appears to be, that it would be unnecessary to insist so earnestly on the abolition of the Mosaic economy in writing to Gentile converts. But the Epistle of Paul to the Galatians is a proof to what danger Gentile Christians were exposed in the first ages from the attempts of Judaizing teachers; so that, in the absence of more exact information, the supposition that the persons addressed were of this class, is at least not inconsistent with the train of thought in the Epistle. But more than this: throughout the Epistle we find a distinction maintained between the writer and his friends on the one hand, and the Jews on the other. Thus in chap. iii., 'God speaketh to *them* (the Jews), concerning these things, "Ye shall not fast as ye do this day," &c.; but to *us* he saith, "Is not this the fast that I have chosen?" &c.; and at the end of the same chapter, 'He hath shown these things to all of *us* that we should not run *as proselytes* to the Jewish law'—'*ante ostendit omnibus nobis ut non incurramus tanquam proselyti ad illorum legem.*' This would be singular language to address to persons who were Jews by birth, but perfectly suited to Gentile converts. In chap. xiii. he says, 'Let us inquire whether the covenant be with *us* or with *them*' (the Jews), and concludes with quoting the promise to Abraham (with a slight verbal difference), 'Behold I have made thee a father of the nations which *without circumcision* believe in the Lord,' a passage which is totally irrelevant to *Jewish* Christians. For other similar passages, see Jones *On the Canon*, part iii. chap. 39.

Whether this Epistle was written by Barnabas, the companion of St. Paul, has been a subject of controversy almost ever since its publication in the seventeenth century. Its first editors, Usher and Menard, took the negative, and Vossius the affirmative side of the question. Of modern critics, Hug, Ullman, Neander, Winer, and Hefele agree with the former, and Rosenmüller, Gieseler, Bleek, Heuke, and Rordam with the latter. The external evidence for its genuineness, it may be allowed, is considerable; but besides some conflicting testimonies, criteria furnished by the Epistle itself lead to the opposite conclusion. We shall present a view of both as succinctly as possible.

I. The first writer who alludes to this Epistle is Clement of Alexandria. 1. He quotes a sen-

tence from the tenth chapter, and adds, 'These things saith Barnabas' (*Strom.* ii. 15. § 67, vol. ii. p. 165, ed. Klotz. Lips. 1831). 2. A sentence from chap. xxi., of which he says, 'Barnabas truly speaks mystically' (*Strom.* ii. 18. § 84. vol. ii. p. 174). 3. Again, quoting chap. x., 'Barnabas says' (*Strom.* v. 8. § 52, vol. iii. p. 38). 4. After quoting two passages from chap. i. and ii., he calls the author *the apostle Barnabas* (*Strom.* ii. 6. § 31, vol. ii. p. 142). 5. He cites a passage from chap. iv. with the words 'the apostle Barnabas says' (*Strom.* ii. 7. § 35, vol. ii. 144). 6. He prefaces a passage from chap. xvi. with 'I need not say more, when I adduce as a witness the apostolic Barnabas, who was one of the Seventy, and a fellow-labourer with Paul' (*Strom.* ii. 20. § 116, vol. ii. p. 192). 7. He makes two quotations from chap. vi., which he introduces with these words: 'But Barnabas also, who proclaimed the word with the apostle, in his ministry among the Gentiles' (*Strom.* v. 10. § 64, vol. iii. p. 46). The name of Barnabas occurs in another passage (*Strom.* vi. 8. § 64, vol. iii. 136), but probably by a lapse of memory, instead of Clemens Romanus, from whose first Epistle to the Corinthians a sentence is there quoted. There is also an evident allusion to the Epistle of Barnabas in *Pædag.* ii. 10. § 83, vol. i. p. 245), and in some other passages, though the author's name is not mentioned.

II. Origen quotes this Epistle twice. 1. The sentence in chap. v. respecting the apostles, which he says 'is written in the Catholic Epistle of Barnabas' (*Contr. Cels.* i. 49). 2. A passage from chap. xviii.: 'To the same purpose Barnabas speaks in his Epistle, when he says, that "there are two ways, one of light, the other of darkness,"' &c. (*De Princip.* iii. 2).

On these testimonies it has been remarked, that both these Alexandrian fathers have quoted works unquestionably spurious without expressing a doubt of their genuineness: thus Clement refers to the Revelation of Peter, and Origen to the Shepherd of Hermas, which he believed to be inspired ('quæ scriptura valde mihi utilis videtur, et, ut puto, divinitus inspirata,' *In Ep. ad Rom. Comment.* lib. x.); and though Clement speaks of the *apostolic* Barnabas, he evidently does not treat this Epistle with the same deference as the canonical writings, but freely points out its mistakes. Tertullian calls all the seventy disciples apostles, and in this inferior and secondary sense, as Dr. Lardner observes, Clement terms Barnabas an apostle.

III. Eusebius, in the noted passage of his *Ecclesiastical History* (iii. 25), quoted at length (in the original) by De Wette, in his *Lehrbuch der historisch-kritischen Einleitung in die Bibel*, &c., Berlin, 1840, Theil. i. § 32, and translated by Lardner, *Credibility*, part ii. chap. 72), says, 'The Epistle reputed to be written by Barnabas is to be ranked among the books which are *spurious*'—*ἐν τοῖς νόθοις κατατετάχθα—ἡ φερομένη* Βαρνάβα *ἐπιστολή*; and elsewhere, 'He (Clement of Alexandria) makes use of testimonies out of those scriptures that are contradicted (*ἀπὸ τῶν ἀντιλεγομένων γραφῶν*), that called the Wisdom of Solomon, and of Jesus the Son of Sirach, and the Epistle to the Hebrews, and *that of Barnabas* and of Clement, and of Jude' (*Hist. Eccles.* vi. 13). He also observes of Clement, 'In his book called Hypotyposes, he gives short explications of all the canonical Scriptures (*πάσης τῆς ἐνδιαθήκου γραφῆς*),* not neglecting even the *controverted* books (*τὰς ἀντιλεγομένας*), I mean that of Jude and the other Catholic Epistles, *the Epistle of Barnabas*, and that called the Revelation of Peter.'

IV. Jerome, in his work on illustrious men, or *Catalogue of Ecclesiastical Writers*, thus speaks of Barnabas: 'Barnabas of Cyprus, called also Joseph, a Levite, was ordained, with Paul, an apostle of the Gentiles: he wrote an Epistle for the edification of the church, which is read among the *Apocryphal* scriptures' (*Catal. Vir. illust.* cap. vi.); and in his *Commentary on Ezekiel* xlii. 19, 'Many parts of the Scriptures, and especially the Epistle of Barnabas, which is reckoned among the *apocryphal* Scriptures,' &c. In another place he quotes, as the words of Ignatius, the passage relative to the apostles, which is cited by Origen from the Epistle of Barnabas (Lardner's *Credibility*, pt. ii. ch. 114).

It is evident, as Valesius (with whom Lardner and Hefele agree) has remarked, that Eusebius uses the term *νόθα*, not in the strict sense of *spurious*, but as synonymous with *ἀντιλεγομένα*, i. e. *disputed*, *controverted*, and applies it to writings which were received by some, but rejected by others. The term *apocryphal* also, used by Jerome, was applied both by Jews and Christians to works which (though the authors were known) were not considered canonical. The use of these terms, therefore, in reference to the Epistle before us, cannot be deemed as absolutely decisive against its genuineness. The following considerations, however, omitting some of less weight which have been urged by different writers, will, it is believed, go far to prove that Barnabas was not the author of this Epistle.

1. Though the exact date of the death of Barnabas cannot be ascertained, yet from the particulars already stated respecting his nephew, it is highly probable that that event took place before the martyrdom of Paul, A.D. 64. But a passage in the Epistle (ch. xvi.) speaks of the temple at Jerusalem as already destroyed: it was consequently written after the year 70.

2. Several passages have been adduced to show that the writer (as well as the persons addressed) belonged to the Gentile section of the Church; but waiving this point, the whole tone of the Epistle is different from what the knowledge we possess of the character of Barnabas would lead us to expect, if it proceeded from his pen. From the hints given in the Acts he appears to have been a man of strong attachments, keenly alive to the ties of kindred and father-land; we find that on both his missionary tours his native island and the Jewish synagogues claimed his first attention. But throughout the Epistle there is a total absence of sympathetic regard for the Jewish nation: all is cold and distant, if not contemptuous. 'It remains yet that I speak to you (the 16th chapter begins) concerning the temple; how those *miserable men*, being deceived, have put their trust in the house.' How unlike

* 'Libri canonici vocantur *ἐνδιάθηκοι* quia efficiunt utrumque Testamentum (*διαθήκην* Græci appellant) vetus scilicet et novum' (Suiceri *Thes.* s. v. *ἐνδιάθηκος*.

the friend and fellow-labourer of him who had 'great heaviness and continual sorrow in his heart for his brethren, his kindred according to the flesh' (Rom. ix. 2).

3. Barnabas was not only a Jew by birth, but a Levite; from this circumstance, combined with what is recorded in the Acts, of the active part he took in the settlement of the points at issue between the Jewish and the Gentile converts, we might reasonably expect to find, in a composition bearing his name, an accurate acquaintance with the Mosaic ritual—a clear conception of the nature of the Old Economy, and its relation to the New Dispensation, and a freedom from that addiction to allegorical interpretation which marked the Christians of the Alexandrian school in the second and succeeding centuries. But the following specimens will suffice to show that exactly the contrary may be affirmed of the writer of this Epistle; that he makes unauthorized additions to various parts of the Jewish Cultus; that his views of the Old Economy are confused and erroneous; and that he adopts a mode of interpretation countenanced by none of the inspired writers, and at utter variance with every principle of sound criticism, being to the last degree puerile and absurd. The inference is unavoidable, that Barnabas, '*the Son of Prophecy*,' '*the Man full of the Holy Spirit and of faith*,' was not the author of this Epistle.

(1.) He mentions in two passages the fact recorded in Exod. xxxii. 19, of Moses breaking the two tables of stone, and infers that Jehovah's covenant was thereby annulled. The falsity of this statement need not be pointed out to the Biblical student. He says, 'They (the Jews) have for ever lost that which Moses received. For thus saith the Scripture: And Moses . . . . . . received the covenant from the Lord, even two tables of stone, &c. But, having turned themselves to idols, they lost it; as the Lord said unto Moses, Go down quickly, &c. And Moses cast the two tables out of his hands, and their covenant was broken, that the love of Jesus might be sealed in your hearts unto the hope of his faith' (ch. iv.). The second passage, in ch. xiv., is very similar, and need not be quoted.

(2.) On the rite of Circumcision (Acts xv. 1, 2) we find in this Epistle equal incorrectness. The writer denies that circumcision was a sign of the covenant. 'You will say the Jews were circumcised for a sign, and so are all the Syrians and Arabians, and all the idolatrous priests.' Herodotus (ii. 37), indeed, asserts that the Syrians in Palestine received the practice of circumcision from the Egyptians; but Josephus, both in his *Antiquities* and *Treatise against Apion*, remarks that he must have alluded to the Jews, because they were the only nation in Palestine who were circumcised (*Antiq.* viii. 10, § 3; *Contr. Apion.* i. 22). 'How,' says Hug, 'could Barnabas, who travelled with Paul through the southern provinces of Asia Minor, make such an assertion respecting the heathen priests!'

(3.) Referring to the goat (chap. vii.), either that mentioned in Num. xix. or Lev. xvi., he says, 'All the priests, and they only, shall eat the unwashed entrails with vinegar.' Of this direction, in itself highly improbable, not a trace can be found in the Bible, or even in the Talmud.

(4.) In the same chapter, he says of the scape-goat, that all the congregation were commanded to spit upon it, and put scarlet wool about its head; and that the person appointed to convey the goat into the wilderness took away the scarlet wool and put it on a thorn-bush, whose young sprouts, when we find them in the field, we are wont to eat; so the fruit of that thorn only is sweet. On all these particulars the Scriptures are silent.

(5.) In chap. viii. our author's fancy (as Mr. Jones remarks) seems to grow more fruitful and luxuriant. In referring to the red heifer (Num. xix.), he says that men in whom sins are come to perfection (ἐν οἷς ἁμαρτίαι τέλειαι) were to bring the heifer and kill it; that three youths were to take up the ashes and put them in vessels; then to tie a piece of scarlet wool and hyssop upon a stick, and so sprinkle every one of the people. 'This heifer is Jesus Christ; the wicked men that were to offer it are those sinners who brought him to death; the young men signify those to whom the Lord gave authority to preach his Gospel, being at the beginning twelve, because there were twelve tribes of Israel.' But why (he asks) were there *three* young men appointed to sprinkle? To denote Abraham, Isaac, and Jacob. And why was wool put upon a stick? Because the kingdom of Jesus was founded upon the cross, &c.

(6.) He interprets the distinction of clean and unclean animals in a spiritual sense. 'Is it not (Ἆρα οὐκ—v. Dr. Hefele's valuable note, p. 85) the command of God that they should not eat these things?—(Yes.) But Moses spoke in spirit (ἐν πνεύματι). He named the swine, in order to say, Thou shalt not join those men who are like swine, who, while they live in pleasure, forget their Lord,' &c. He adds—Neither shalt thou eat of the hyæna: that is, thou shalt not be an adulterer.' If these were the views entertained by Barnabas, how must he have been astonished at the want of spiritual discernment in the Apostle Peter, when he heard from his own lips the account of the symbolic vision at Joppa, and his reply to the command—'Arise, Peter, slay and eat. But I said, Not so, Lord, for nothing common or unclean hath at any time entered into my mouth' (Acts xi. 8).

(7.) In ch. ix. he attempts to show that Abraham, in circumcising his servants, had an especial reference to Christ and his crucifixion:—'Learn, my children, that Abraham, who first circumcised in spirit, having a regard to the Son (*in Jesum*, Lat. Vers.), circumcised, applying the mystic sense of the three letters (λαβὼν τριῶν γραμμάτων δόγματα—*den geheimen Sinn dreier Buchstaben anwendend*, Hefele). For the Scripture says that Abraham circumcised 318 men of his house. What then was the deeper insight (γνῶσις) imparted to him? Mark first the 18, and next the 300. The numeral letters of 18 are I (Iota) and H (Eta), I = 10, H = 8; here you have Jesus ΊΗσοῦν; and because the cross in the T (Tau) must express the grace (of our redemption), he names 300; therefore he signified Jesus by two letters, and the cross by one.'

It will be observed that the writer hastily assumes (from Gen. xiv. 14) that Abraham circumcised only 318 persons, that being the number of 'the servants born in his own house,' whom he armed against the four kings; but he circumcised his household nearly twenty years later, inclu-

ing not only those born in his house (with the addition of Ishmael), but 'all that were bought with money' (Gen. xvii. 23). The writer evidently was unacquainted with the Hebrew Scriptures, by his committing the blunder of supposing that Abraham was familiar with the Greek alphabet some centuries before it existed.

Our limits will not allow us to enter into the question of the integrity of the Epistle in its present form; but this and several other topics are discussed very fully and with great ability in Dr. Hefele's *Treatise*, to which, and the other works mentioned below, the reader is referred.

A new and full Method of settling the Canonical Authority of the New Testament, by the Rev. Jeremiah Jones, Oxford, 1827, vol. ii. part iii. ch. 37-43; *Das Sendschreiben des Apostels Barnabas aufs Neue untersucht, übersetzt, und erklärt*, von Dr. Carl Joseph Hefele, Tübingen, 1840; *Patrum Apostolicorum Opera*, edidit C. J. Hefele, Tubingæ, 1839; Lardner's *Credibility of the Gospel History*, part ii. ch. i.; Neander, *Allgemeine Geschichte der Christlichen Religion und Kirche*, i. 653, 1100, or, *History of the Christian Religion and Church*, translated by the Rev. J. H. Rose, 1841, vol. ii. pp. 329-331; *Lives of the most eminent Fathers of the Church*, by William Cave, D.D., Oxford, 1840, vol. i. pp. 90-105.—J. E. R.

BARRENNESS is, in the East, the hardest lot that can befal a woman, and was considered among the Israelites as the heaviest punishment with which the Lord could visit a female (Gen. xvi. 2; xxx. 1-23; 1 Sam. i. 6, 29; Isa. xlvii. 9; xlix. 21; Luke i. 25; Niebuhr, p. 76; Volney, ii. 359). In the Talmud (*Yeramoth*, vi. 6) a man was *bound*, after ten years childless conjugal life, to marry another woman (with or without repudiation of the first), and even a third one, if the second proved also barren. Nor is it improbable that Moses himself contributed to strengthen the opinion of disgrace by the promises of the Lord of exemption from barrenness as a blessing (Exod. xxiii. 26; Deut. vii. 14). Instances of childless wives are found in Gen. xi. 30; xxv. 21; xxix. 31; Judg. xiii. 2, 3; Luke i. 7, 36. Some cases of unlawful marriages, and more especially with a brother's wife, were visited with the punishment of barrenness (Lev. xx. 20, 21); Michaelis, however (*Mosaïsches Recht*, v. 290), takes the word עֲרִירִים here in a figurative sense, implying that the children born in such an illicit marriage should not be ascribed to the real father, but to the former brother, thus depriving the second husband of the share of patrimonial inheritance which would otherwise have fallen to his lot if the first brother had died childless.

This general notion of the disgrace of barrenness in a woman may early have given rise, in the patriarchal age, to the custom among barren wives of introducing to their husbands their maid-servants, and of regarding the children born in that concubinage as their own, by which they thought to cover their own disgrace of barrenness (Gen. xvi. 2; xxx. 3). [CHILDREN.]—E. M.

BARSABAS. [JOSEPH BARSABAS; JUDAS BARSABAS.]

BARTHOLOMEW (Βαρθολομαῖος בַּר תַּלְמַי, i. e. *the son of Tolmai*: תלמי) is a name that occurs in the Old Testament (Josh. xv. 14); Sept. Θολαμί, Θολμαΐ; Auth. Vers., *Talmai*; (2 Sam. xiii. 37) Sept. Θολμί, Θολομαί. In Josephus, we find Θολομαῖος (*Antiq.* xx. 1. § 1). The Θολμαῖος in *Antiq.* xiv. 8. 1 is called Πτολεμαῖος in *Bell. Jud.* i. 9. § 3, not improbably by an error of the transcriber, as another person of the latter name is mentioned in the same sentence. Bartholomew was one of the twelve Apostles, and is generally supposed to have been the same individual who in John's gospel is called Nathanael. The reason of this opinion is, that in the three first gospels Philip and Bartholomew are constantly named together, while Nathanael is nowhere mentioned; on the contrary, in the fourth gospel the names of Philip and Nathanael are similarly combined, but nothing is said of Bartholomew. Nathanael therefore must be considered as his real name, while Bartholomew merely expresses his filial relation. He was a native of Cana in Galilee (John xxi. 2). He was introduced by Philip to Jesus, who, on seeing him approach, at once pronounced that eulogy on his character which has made his name almost synonymous with sincerity: 'Behold an Israelite indeed, in whom there is no guile!' (John i. 47).* He was one of the disciples to whom our Lord appeared after his resurrection, at the Sea of Tiberias (John xxi. 2); he was also a witness of the Ascension, and returned with the other apostles to Jerusalem (Acts i. 4, 12, 13). Of his subsequent history we have little more than vague traditions. According to Eusebius (*Hist. Eccles.* v. 10), when Pantænus went on a mission to the Indians (towards the close of the second century), he found among them the Gospel of Matthew, written in Hebrew, which had been left there by the apostle Bartholomew. Jerome (*De Vir. Illustr.* c. 36) gives a similar account, and adds that Pantænus brought the copy of Matthew's Gospel back to Alexandria with him. But the title of Indians is applied by ancient writers to so many different nations, that it is difficult to determine the scene of Bartholomew's labours. Mosheim (with whom Neander agrees) is of opinion that it was a part of Arabia Felix, inhabited by Jews, to whom alone a Hebrew gospel could be of any service. Socrates (*Hist. Eccles.* i. 19) says that it was the India bordering on Ethiopia; and Sophronius reports that Bartholomew preached the Gospel of Christ Ἰνδοῖς τοῖς καλουμένοις εὐδαίμοσιν. This apostle is said to have suffered crucifixion at Albanopolis in Armenia, or, according to Nicephorus, at Urbanopolis in Cilicia. A spurious gospel which bears his name is in the catalogue of apocryphal books condemned by Pope Gelasius (Fabricius, *Cod. Apoc.* i. 137; Mosheim, *Commentaries on the Affairs of the Christians, &c., translated by Vidal*, vol. ii. p. 6, 7; Tillemont, *Mémoires*, &c., i. 960, 1160; Neander, *Allgemeine Geschichte*, i. 113; Cave, *Lives of the Apostles*, Oxford, 1840, pp. 387-392).—J. E. R.

* We have thus the highest evidence of the falsehood in one instance (and the apostle John is another), of the assertion of the pseudo-Barnabas 'that Jesus selected for his apostles men laden with the greatest sins (ὑπὲρ πᾶσαν ἁμαρτίαν ἀνομωτέρους) in order to show that he came not to call the righteous, but sinners to repentance' (*Ep. Barnab.* ch. v.: v. Hefele's *Das Sendschreiben*, &c., p. 160).

BARTIMÆUS (Βαρτίμαιος), the blind beggar of Jericho whom Christ restored to sight (Mark x. 46).

BARUCH (בָּרוּךְ, *blessed;* Sept. Βαρούχ), the faithful friend and amanuensis of the prophet Jeremiah, was of a noble family of the tribe of Judah, and generally considered to be the brother of the prophet Seraiah, both being represented as sons of Neriah; and to Baruch the prophet Jeremiah dictated all his oracles. During the siege of Jerusalem, Baruch was selected as the depositary of the deed of purchase which Jeremiah had made of the territory of Hanameel, to which deed he had been a witness. In the fourth year of the reign of Jehoiachim, king of Judah (B.C. 605), Baruch was directed to write all the prophecies delivered by Jeremiah up to that period, and to read them to the people, which he did from a window in the Temple upon two solemn occasions. He afterwards read them before the counsellors of the king at a private interview, when Baruch being asked to give an account of the manner in which the prophecy had been composed, gave an exact description of the mode in which he had taken it down from the prophet's dictation. Upon this they ordered him to leave the roll, advising that he and Jeremiah should conceal themselves. They then informed the king of what had taken place, upon which he had the roll read to him; but, after hearing a part of it, he cut it with a penknife, and, notwithstanding the remonstrances of his counsellors, threw it into the fire of his winter parlour, where he was sitting. He then ordered Jeremiah and Baruch to be seized, but they could not be found. The Jews to this day commemorate the burning of this roll by an annual fast.

Another roll was now written by Baruch from the prophet's dictation, containing all that was in the former, with some additions, the most remarkable of which is the prophecy respecting the ruin of Jehoiachim and his house, as the punishment of his impious act. This roll is the prophecy of Jeremiah which we now possess. Baruch, being himself terrified at the threats contained in the prophetic roll, received the comforting assurance that he would himself be delivered from the calamities which should befal Judah and Jerusalem. In the fourth year of Zedekiah (B.C. 595), Baruch is supposed by some to have accompanied Seraiah to Babylon, when the latter attended Zedekiah with the prophecies contained in Jeremiah, chaps. l. and li., which he was commanded by Jeremiah to read on the banks of the Euphrates, and then to cast the prophetic roll into the river, with a stone attached to it, to signify the everlasting ruin of Babylon (Jer. li. 61). At least, Baruch, in the book which bears his name [BARUCH, BOOK OF], is said to have read these prophecies at Babylon, in the hearing of king Jehoiachim and the captive Jews, in the fifth year of the taking of Jerusalem by the Chaldæans (see next article), which must have been the same taking of it in which Jehoiachim was made prisoner. For after the other taking of Jerusalem, in the eleventh year of the reign of king Zedekiah, when the Jews, after their return from Babylon, obstinately persisted in their determination to migrate to Egypt, against the remonstrances of the prophet, both Baruch and Jeremiah accompanied them to that country, where they remained until the death of Jeremiah, and from whence there is no account in Scripture of Baruch's return. The Rabbins, however, allege that he died in Babylon, in the twelfth year of the exile (see Calmet's *Preface*). Josephus asserts that he was well skilled in the Hebrew language; and that, after the taking of Jerusalem, Nebuzaradan treated Baruch with consideration, from respect to Jeremiah, whose misfortunes he had shared, and whom he had accompanied to prison and exile (*Antiq.* x. 11).—W. W.

BARUCH, BOOK OF (APOCRYPHA), follows next after the book of Jeremiah in the Septuagint Version. It is the only one of the deuterocanonical books named in the catalogue of the celebrated fifty-ninth canon of the Council of Laodicea. If Baruch, the scribe of Jeremiah, be the author of this book, he must have removed from Egypt to Babylon immediately after the death of Jeremiah, inasmuch as the author of the book lived in Babylon in the fifth year after that event, unless we suppose, with Eichhorn, Arnold, and others, that the reference (Baruch i. 1) is to the fifth year from the captivity of Jehoiachim. Jahn (*Introductio in Epitomen redacta*, § 217, &c.) considers this latter opinion at variance with Baruch i. 1, where the destruction of Jerusalem is spoken of as having already taken place. De Wette (*Lehrbuch der Einleitung in das A. und N. T.*) ingeniously conjectures that ἔτει (year) is a mistake or correction of some transcriber for μηνί (month); and there is no question that the present reading, which mentions the year, and the *day* of the month, without naming the month itself, is quite unaccountable.

If Baruch, the friend of Jeremiah, was the author of the present work, it must be a translation from the Hebrew or Chaldee; and it is by no means impossible that this is the case, as the work abounds in Hebraisms. These Hebraisms, however, in the opinion of Jahn (*Introduction*), might have originated with a Jew writing Greek, although he leans to the opinion that, from the use of the word *manna*, and the frequent Hebraisms, this work not only does not belong to the Greek age of the Jews, but was actually written in Hebrew. This is also the opinion of Calmet (*Preface to Baruch*), Huet (*Demonstratio Evangelica*), and others; while Grotius, Eichhorn, and most of the German writers favour the idea of a Greek original. They conceive that the writer was some unknown person in the reign of Ptolemy Lagos, who, wishing to confirm in the true religion the Jews then residing in Egypt, attributed his own ideas to Baruch the scribe. There appears, however, no reason, on this latter hypothesis, why the author should speak of the return from Babylon. Grotius conceives that the book abounds not only in Jewish, but even in Christian interpolations (see Eichhorn's *Einleitung in die Apokryfe Schriften*).

Although Cyril of Jerusalem speaks of the book of Baruch as canonical, it is not expressly named in any of the ancient catalogues of the canon of Scripture, except, as already observed, that of the Council of Laodicea; and the remarkable circumstance of this being the only deuterocanonical book named in the canon of that Council has given rise to various conjectures. Dean Prideaux, indeed, conceives that the words of the

canon, 'Jeremiah, with Baruch, the Lamentations, and the Epistle,' were intended to express no more than Jeremiah's Prophecies and Lamentions; that by *the Epistle* is meant only the epistle in the 29th chapter of Jeremiah; and that Baruch's name is added only because of the part he bore in collecting them together, and adding the last chapter (*Connexion*, vol. i. p. 50). But on examining the Alexandrian manuscript in the British Museum, it will be seen that the arrangement of these books exactly tallies with the words of the canon. Immediately after Jeremiah follows Baruch, with its title and subscription; then the Lamentations, with title and subscription; and, last of all, the Epistle, with the title, 'The Epistle of Jeremiah,' and the following subscription, 'Jeremiah, Lamentations, and the Epistle.'

Whiston (*Authentic Records*, vol. i. p. 1, &c.) strongly contends for the canonicity of this book, founding his opinion on Origen's mode of citing it, with the formula 'It is written,' as well as his testimony, recorded by Eusebius (*Hist. Eccles.* vi. 25), that *The Epistle* (Baruch vi.) was owned by the Jews; in addition to the fact, that it is stated in the Apostolical Constitutions that the book of Baruch, together with the Lamentations, was publicly read in the synagogues on the tenth day of the month Gorpiœus.

Among the fathers the book of Baruch is cited generally as part of the book of Jeremiah,—by Irenæus, Cyprian, Clement of Alexandria, Eusebius, Ambrose, Augustin, Chrysostom, Basil, Epiphanius, and others. Augustin, having cited under the name of Jeremiah the passage in our Bibles, Baruch iii. 35-37, observes, 'Some ascribe this saying not to Jeremiah, but to Baruch, his amanuensis, but it is now known under the name of Jeremiah (*City of God*, ch. xxxiii.). The book of Baruch is also cited as part of Jeremiah in the Roman office for the Saturday in Whitsun week. This mode of citing it most probably accounts for the fact of its name being omitted in the ancient catalogues, including those of Hippo and Carthage. It was at length cited as a separate book by the Council of Florence, and afterwards, not without a struggle (see Father Paul's history), by the Council of Trent.

It is at the same time observed by Calmet, that its 'canonicity had been denied not only by the Protestants, but by several Catholics,' among whom he instances Driedo, Lyranus, and Dionysius of Carthage. He considers that Jerome treats the book with harshness when (*Preface to Jeremiah*) that father observes, 'I have not thought it worth while to translate the book of Baruch, which is generally joined in the Septuagint version to Jeremiah, and which is not found among the Hebrews, nor the pseudepigraphal epistle of Jeremiah.' This is the epistle forming the sixth chapter of Baruch, the genuineness of which is questioned by several who acknowledge that of the former part of the book. Most modern writers of the Roman church, among whom are Du Pin (*Canon of Scripture*), Calmet (*Commentary*), and Allber (*Hermeneutica Generalis*), reckon this a genuine epistle of Jeremiah's. Jahn, however, after St. Jerome, maintains its spurious and pseudepigraphal character. This he conceives sufficiently attested by the difference of style, and its freedom from Hebraisms. He considers it to be an imitation of the Epistle of Jeremiah (ch. xxix.). This Epistle, however, is confessedly more ancient than the second book of Maccabees, for it is there referred to (Macc. ii. 2, comp. with Baruch vi. 4) as an ancient document. The position of this letter varies in manuscripts; it sometimes precedes and sometimes follows Lamentations.

The book of Baruch was marked with obeli in Origen's *Hexapla;* the translation in the Latin Vulgate is older than the time of Jerome.

The subject of the book is (1) an exhortation to wisdom and a due observance of the law. (2) It then introduces Jerusalem as a widow, comforting her children with the hope of a return. (3) An answer follows in confirmation of this hope. A prologue is prefixed, stating that Baruch had read his book to Jeremiah and the people in Babylon by the river Sud (Euphrates), by which the people were brought to repentance, and sent the book with a letter and presents to Jerusalem.—W. W.

BARZILLAI (ברזלי), a wealthy old Gileadite of Rogelim, who distinguished himself by his loyalty when David fled beyond the Jordan from his son Absalom. He sent in a liberal supply of provisions, beds, and other conveniences for the use of the king's followers (2 Sam. xvii. 27; xix. 32). On the king's triumphant return, Barzillai attended him as far as the Jordan, but declined, by reason of his advanced age, to proceed to Jerusalem and receive the favours to which he had entitled himself.

BASAM, or BAAL-SHEMEN (בעלשמן, *balsam-tree*). The word *balm* occurs frequently in the authorized version, as in Gen. xxxvii. 25; xliii. 11; Jerem. viii. 22; xlvi. 11; li. 8; and Ezek. xxviii. 17. In all these passages the Hebrew text has *tzeri*, translated *balm*, which is generally understood to be the true balsam, and is considered a produce of Gilead, a mountainous district, where the vegetation is that of the Mediterranean region and of Europe, with few traces of that of Africa or of Asia. But as it is not certain that *tzeri* indicates the balsam-tree, we shall confine our attention here to the latter, and reserve what we have to say respecting the former to the article Tzeri.

The name balsam is no doubt derived from the Arabic بلسان *balesan*, which is probably also the origin of the βάλσαμον of the Greeks. Forskal informs us that the balsam-tree of Mecca is there called Abosham, *i. e.* perodora. The word بشام *basham*, given by him, is the name of a fragrant shrub growing near Mecca, with the branches and tufts of which they clean the teeth, and is supposed to refer to the same plant. These names are very similar to words which occur in the Hebrew text of several passages of Scripture, as in the Song of Solomon, v. 1, 'I have gathered my myrrh with my spice' (*basam*); ver. 13, 'His cheeks are as a bed of spices' (*basam*); and in vi. 2, 'gone down into his garden to the beds of *spices*' (basam). The same word is used in Exod. xxxv. 28, and in 1 Kings x. 10, 'There came no more such great abundance of spices (basam) as those which the Queen of Sheba gave to King Solomon.' In all these passages *basom* or *bosem* בֹּשֶׂם and בָּשָׂם, though translated 'spices,' would seem to indicate the 'balsam-tree,

if we may infer identity of plant or substance from similarity in the Hebrew and Arabic names. But the word may indicate only a fragrant aromatic substance in general. The passages in the Song of Solomon may with propriety be understood as referring to a plant cultivated in Judæa, but not to spices in the general sense of that term. Queen Sheba might have brought balsam or balsam-trees, as well as spices, for both are the produce of southern latitudes, though far removed from each other.

The balsam-tree was one of the most celebrated and highly esteemed among the ancients. Pliny (*Hist. Nat.* xii. 25) says, 'Sed omnibus odoribus præfertur balsamum, uni terrarum Judææ concessum. Ostendere arbusculam hanc urbi imperatores Vespasiani.' Pompey the Great also boasted of having had it borne in triumph. Justin the historian (xxxvi. 3) says, 'Opes genti Judaicæ, ex vectigalibus opobalsami crevere, quod in his tantum regionibus gignitur. Est namque vallis, &c. nomine Hierichus dicitur. In ea valle sylva est, et ubertate, et amœnitate arborum insignis; siquidem palmeto et opobalsamo distinguitur.' So Strabo and Diodorus Siculus. Dioscorides states that it is found in one valley of Judæa, and also in Egypt. At a much earlier period Theophrastus was aware of the fact that the balsamum tree was found in a valley of Syria, and that it was cultivated only in two gardens, one of twenty acres, the other much smaller, as is also stated by Pliny. Josephus informs us that the balsam is produced only in the plains of Jericho. Abdollatif ('Memorabilia of Egypt,' as quoted by Rosenmüller) says that he has read in Galenus that the best balsam is produced in Palestine; but now (in Abdollatif's age) he says, that no more balsam is found in that country; also that he knew of it only as 'carefully reared at Ain-Shames in Egypt, in an enclosed piece of ground.' Prosper Alpinus informs us that Messoner, a eunuch, governor of Cairo in 1519, caused to be brought from Arabia forty plants, which he placed in the garden of Matareah. Belon, in the early part of the sixteenth century, saw the shrubs in the balsam gardens of Matareah, a village near Cairo, and his description of them agrees very well with that given by Abdollatif. Hence it would appear from ancient authors that the plant yielding balsam was never very common in Palestine—in fact, that it was confined to one locality, where it was found only as a plant in cultivation, though it may have been, and probably was, introduced at a very early period. That it has long disappeared from thence is evident from the authors we have just quoted, as well as from the testimony of all travellers in Palestine. That it was a southern plant we may believe from its being cultivated in the warm southern valley of Jericho, and that it was introduced into that locality we have the testimony of Josephus (*Antiq.* viii. 6), who says that it was brought thither by Queen Sheba. Strabo, moreover, states that myrrh, frankincense, and the balsam-tree were produced in the country of the Sabæans.

The balsam-tree, or balm of Gilead tree, as it is also very generally called, is not a native of that region, nor indeed does it appear ever to have been cultivated there. It is probable, therefore, that some other tree producing a balsamic secretion is intended in the above passages, where the word *balm* has been considered as the equivalent of *tzeri*. The true balsam, we have seen, was cultivated near Jericho, and at a later age in Egypt. From that country it has been traced to Arabia. Thus Gerlach, as quoted by Bergius, relates that the tree which produces the balsam of Mecca grows near Bederhunin, a village between Mecca and Medina, in a sandy rocky soil, confined to a small tract, about a mile in length. Strabo, we have found, was aware that the balsam-tree grows on the coast near Saba, in the happy land of the Sabæans. Bruce identifies this spot with that part of the African coast near the straits of Babelmandel, which now bears the name of Azab; and he further states, that among the myrrh-trees behind Azab all along the coast to the straits of Babelmandel is the native country of the balsam-tree. It grows to above fourteen feet high, spontaneously and without culture, like the myrrh, the coffee, and frankincense tree, all equally the wood of the country, and occasionally cut down and used for fuel. It was no doubt early transplanted into Arabia, that is, into the southern part of Arabia Felix, immediately fronting Azab: the high country of Arabia was too cold for it, being all mountainous, and water freezing there. The first plantation that succeeded seems to have been at Petra, the ancient metropolis of Arabia, now called Beder, or Beder Hunein. Bruce has, moreover, given two figures of the balsam-tree,—one of the whole tree, the other of a single branch, with the dissection of the fruit. These, he says, may be depended on, as being carefully drawn, after an exact examination, from two very fine trees brought from Beder-Hunein. Salt also found it on the west coast of the Red Sea, and Mr. Brown, having examined his specimen, is sufficient evidence of its authenticity.

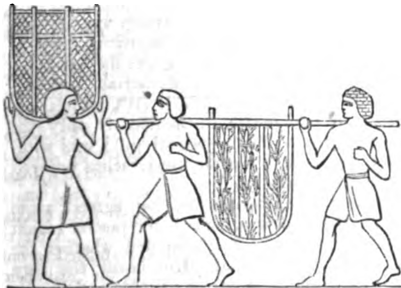
The balsam-tree, having been seen by Bruce and Salt, and figured by the former as well as by Nees von Esenbeek, and introduced into India, has been described by the first and by Wight and Arnott, and is now pretty well known. It forms a middle-sized tree, with spreading branches and a smooth ash-coloured bark, but which is no doubt rough in the older parts, as represented by Bruce. The ultimate branches are short, and thorn-like, with

small very short abortive branchlets, bearing at their extremities the leaves and flowers. The fruit is pointed, fleshy, with a viscid pulp; nut 4-angled; 1—2-celled, containing one perfect seed.

This species is now considered to be identical with the Amyris opobalsamum of Forskal, found by him in Arabia, in the neighbourhood of the caravanserai of Oude, not far from Has, where it is called ابوشام aboosham, *i. e.* perodora; and the wounded bark of which yields opobalsamum, or balsam of Mecca. It is as highly esteemed by all Orientals in the present day as it was by the civilized nations of antiquity. Another species, discovered by Forskal, and called by him Amyris Kăfal, from its Arabic name قفل, is now also referred to the genus Balsamodendron. It is a tree with reddish-coloured wood, and with branches rather spinous. The younger leaflets are described as being villous and acute, the old ones smooth, often obtuse; the berry compressed, with an elevated ridge on each side, the apex forming a black prominent point. The wood he describes as forming an article of considerable commerce, especially to Egypt, where water-vessels are impregnated with its smoke. It is probably the twigs of this species which are taken to India, and there sold under the name of aod-i balessan; that is, the wood of the balsam-tree, and therefore analogous to the xylobalsamum of the ancients. Carpobalsamum was probably only the fruit of one of these species. Opobalsamum, or juice of the balsam, is generally described as the finest kind, of a greenish colour, and found in the kernel of the fruit. Carpobalsamum is said to have been made by the expression of the fruit when in maturity, and xylobalsamum, by the expression or decoction of the small new twigs, which are of a reddish colour. But the ancients probably employed both the fruit and the wood for macerating in oil, which would extract the odour. The greatest quantity of balsam, and the best in quality, must in all times have been produced by an incision into the bark when the juice is in its strongest circulation, in July, August, and the beginning of September. It is then received into a small earthen bottle, and every day's produce is poured into a larger, which is kept closely corked. The whole quantity collected is but small. When Sultan Selim conquered Egypt and Arabia in 1516, three pounds were ordered to be sent yearly as a tribute to Constantinople.

If, then, we compare ancient statements with modern investigations, we find that the latter confirm the former, as to the balsam-tree being a native of southern latitudes,—that is, of Arabia and the opposite coast of Africa; to both of which regions Bruce supposes the name of Saba to have been applied. Again, if we consider the estimation in which the tree is even now held by Oriental nations, we shall have no difficulty in believing that the ancients may have equally valued it; and if so, the probability is, that it would be noticed in some part of the Old Testament, as we find it is, in the above passages of the Canticles, Exodus, and Kings; while the Hebrew and Arabic names are too similar to allow us to doubt their being applied to the same plant, namely, the far-famed balsam-tree of Arabia and Africa.—J. F. R.

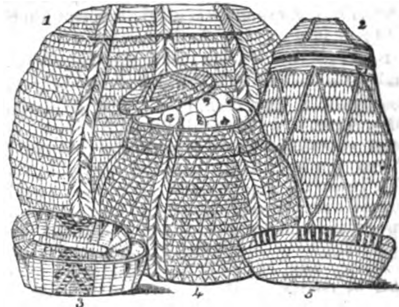
BASCA, or BASCAMA, a town near Bethshan, where Jonathan Maccabæus was killed (1 Macc. xiii. 23; Josh. xiii. 1).



BASHAN, בָּשָׁן and הַבָּשָׁן; Samaritan Vers. בתנין; Targ. בּוּתְנָן, Ps. lxviii. 13, also מַתְנַן; the latter Buxtorf suggests may have originated in the mistake of a transcriber, yet both are found in Targ. Jon.; Deut. xxxiii. 22; v. *Lex. Talm.* col. 370; Sept. Βασάν and Βασανῖτις; Josephus and Eusebius, Βαταναία. *El Bottein* is the modern name. The word probably denotes the peculiar fertility of the soil: in the ancient versions, instead of using it as a proper name, a word meaning *fruitful* or *fat* is adopted. Thus in Ps. xxii. 13, for *Bashan*, we find in Sept. πίονες; Aquila, λιπαροί; Symmachus, σιτιστοί; and Vulg. *Pingues* (Ps. lxvii. 16), for *hill of Bashan;* Sept. ὄρος πῖον; Jerome (v. Bochart, *Hierozoicon*, pars i. col. 531), *mons pinguis*. The sacred writers include in Bashan that part of the country eastward of the Jordan which was given to half the tribe of Manasseh, situated to the north of Gilead. Bochart incorrectly places it between the rivers Jabok and Arnon; and speaks of it as the allotment of the tribes of Reuben and Gad (Num. xxxii. 33). The first notice of this country is in Gen xiv. 5. Cherdorlaomer and his confederates 'smote the Rephaims in Ashtaroth Karnaim.' Now Og, king of Bashan, dwelt in Ashtaroth, and 'was of the remnant of the Rephaim' ('giants' Auth. Vers.), Joshua xii. 4. When the Israelites invaded the Promised Land, Argob, a province of Bashan, contained 'sixty fenced cities, with walls and gates and brazen bars, besides unwalled towns a great many' (Deut. iii. 4, 5; 1 Kings iv. 13). These were all taken by the Israelites, and Og and his people utterly destroyed. Golan, one of the cities of refuge, was situated in this country (Deut. iv. 43; Josh. xx. 8; xxi. 27). Γαυλανὰ ἐν τῇ Βαταναίδι (Joseph. *Antiq.* iv. 7. § 4). Solomon appointed twelve officers to furnish the monthly supplies for the royal household, and allotted the region of Argob to the son of Geber (1 Kings iv. 13). Towards the close of Jehu's reign, Hazael invaded the land of Israel, and smote the whole eastern territory, 'even Gilead and Bashan' (2 Kings x. 33; Joseph. *Antiq.* ix. 8. § 1); but after his death the cities he had taken were recovered by Jehoash (Joash) (2 Kings xiii. 25), who defeated the Syrians in three battles, as Elisha had predicted (2 Kings xiii. 19; Joseph. *Antiq.* ix. 8. § 7). After the captivity the name Batanæa was applied to only a part of the ancient Bashan; the rest being called Trachonitis, Auranitis, and Gaulanitis (v. Lightfoot's *Chorographical Notes* upon the places mentioned in St. Luke: Works, vol. x. p. 282). All these provinces were granted by Augustus to Herod the Great, and on his death Batanæa formed a part of Philip's tetrarchy (Joseph. *De Bell Jud.* ii. 6. § 3; *Antiq.* xviii. 4. § 6). At his decease, A.D. 34, it was annexed, by Tiberius, to the province of Syria; but in A.D. 37 it was given by Caligula to Herod Agrippa, the son of Aristobulus, with the title of king (Acts xii. 1; Joseph. *Antiq.* xviii. 6. § 10). From the time of Agrippa's death, in A.D. 44, to A.D. 53, the government again reverted to the Romans, but it

was then restored by Claudius to Agrippa II. (Acts xxv. 13; Joseph. *Antiq.* xx. 7. §1).

The richness of the pasture-land of Bashan, and the consequent superiority of its breed of cattle, are frequently alluded to in the Scriptures. We read in Deut. xxxii. 14, of 'rams of the breed (Heb. *sons*) of Bashan.' (Ezek. xxxix. 18) 'Rams, lambs, bulls, goats, all of them fatlings of Bashan.' The oaks of Bashan are mentioned in connection with the cedars of Lebanon (Isa. ii. 13; Zech. xi. 2). In Ezekiel's description of the wealth and magnificence of Tyre it is said, 'Of the oaks of Bashan have they made their oars' (xxvii. 6). The ancient commentators on Amos iv. 1, 'the kine of Bashan,' Jerome, Theodoret, and Cyril, speak in the strongest terms of the exuberant fertility of Bashan (Bochart, *Hierozoicon*, pars i. col. 306), and modern travellers corroborate their assertions (v. Burckhardt's *Travels in Syria and the Holy Land*, pp. 286-288; Buckingham's *Travels in Palestine*, through the countries of Bashan and Gilead, London, 1822, vol. ii. pp. 112-117).—J. E. R.

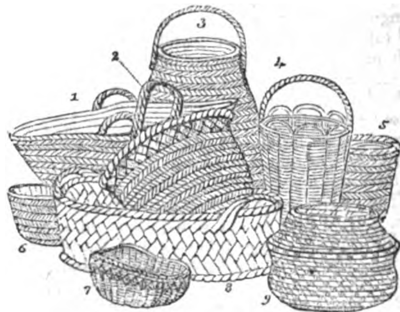


BASKET. There are several words in the Hebrew Scriptures by which different kinds of baskets appear to be indicated:—

1. דוד *dud*, which occurs in 2 Kings x. 7, where the heads of Ahab's sons are sent from Samaria to Jezreel in baskets; Jer. xxiv. 2, as containing figs; and Ps. lxxxi. 6 (rendered *pots*), also as containing figs; where, therefore, deliverance from the baskets means deliverance from the bondage of carrying burdens in baskets. In fact, very heavy burdens were thus carried in Egypt, as corn in very large baskets from the field to the threshing-floor, and from the threshing-floor to the granaries. They were carried between two men by a pole resting on their *shoulders;* which agrees with the previous clause of the cited text, 'I removed his shoulder from the burden.' This labour and form of the basket are often shown in the Egyptian sculptures.

2. טנא *teba*, which occurs in connection with agricultural objects, 'the *basket* and the store' (Deut. xxvi. 2-4; xxviii. 5-17), and would therefore appear to have been somewhat similar to the above; and, in fact, the Egyptian sculptures show different baskets applied to this use.

3. כלוב *kelub*. From the etymology, this appears to have been an interwoven basket, made of leaves or rushes. In Lev. v. 27, however, it is used for a bird-cage, which must have been of open-work, and probably not unlike our own wicker bird-cages. The name is also applied to fruit-baskets (Amos viii. 1, 2), Egyptian examples of which are presented in figs. 2 and 4 (which contain pomegranates) of the annexed cut.



[Ancient Egyptian.]

4. סלסלות, *salsilloth*, occurs only in Jer. vi. 9, where it obviously denotes baskets in which grapes were deposited as they were gathered. The form of the baskets used for this purpose is often shown on the Egyptian monuments, and is similar to that represented in fig. 4, cut 3.

5. In all the other places where the word basket occurs, we are doubtless to understand a basket made of rushes, similar both in form and material to those used by carpenters for carrying their tools. This is still the common kind of basket throughout Western Asia; and its use in ancient Egypt is shown by an actual specimen which was found in a tomb at Thebes, and which is now in the British Museum. It was, in fact, a carpenter's basket, and contained his tools (fig. 1).

The specimens of Egyptian baskets in the British Museum, represented in our cut, convey a favourable idea of the basket-work of ancient times. Some of these are worked ornamentally with colours (figs. 3, 5, cut 2; also the modern examples, figs. 2, 7, cut 3). And besides these the monuments exhibit a large variety of hand-baskets, of different shapes, and so extensively employed as to show the numerous applications of basket-work in the remote times to which these representations extend. They are mostly manufactured, the stronger and larger sorts of the fibres, and the finer of the leaves of the palm-tree, and not infrequently of rushes, but more seldom of reeds.

[Modern Oriental.]

In the preceding cut of examples of modern Oriental baskets, many are of the same form, and

mostly of the same materials as those found in the Egyptian tombs or pictured on their walls. We doubt not that the three engravings taken together furnish examples of all the different kinds of baskets in use among the Israelites.

BASTARD. By this word the Auth. Vers. renders the Hebrew מַמְזֵר, which occurs only in Deut. xxiii. 2, and Zech. ix. 6. But Michaelis (*Mos. Recht*, ii. § 139) reads the word with a different punctuation, so as to make it a compound of two words מוּם זָר, meaning *stain, defect* of a *stranger*, implying the stain that would be cast upon the nation by granting to such a stranger the citizen-right. Some understand by it the offspring of prostitutes, but they forget that prostitutes were expressly forbidden to be tolerated by the law of Moses (Lev. xix. 29; Deut. xxiii. 17). The most probable conjecture is that which applies the term to the offspring of heathen prostitutes in the neighbourhood of Palestine; since no provision was made by Moses against their toleration (Potter, *Archæol.* i. 354), and who were a sort of priestesses to the Syrian goddess *Astarte* (comp. Num. xxv. 1, *sq.*; Gesenius, *Comment. on Isaiah*, ii. 339; Hos. iv. 14; 1 Kings xiv. 24, xv. 12; xxii. 47; 2 Kings xxiii. 7; Herodot. i. 199).

That there existed such bastard offspring among the Jews, is proved by the history of Jephthah (Judg. xi. 1-7), who on this account was expelled, and deprived of his patrimony.—E. M.

BAT (עֲטַלֵּף *'atalleph*) occurs in Lev. xi. 19; Deut. xiv. 18; Isa. ii. 20; and Baruch vi. 22. In Hebrew the word implies flying in the dark; which, taken in connection with the sentence 'moreover the othelaph and every *creeping thing that flieth* is unclean unto you; they shall not be eaten,' is so clear, that there cannot be a mistake respecting the order of animals meant; though to modern zoology neither the species, the genus, nor even the family is thereby manifested: the injunction merely prohibits eating bats, and may likewise include some tribes of insects. At first sight, animals so diminutive, lean, and repugnant to the senses, must appear scarcely to have required the legislator's attention, but the fact evidently shows that there were at the time men or tribes who ate animals classed with bats, a practice still in vogue in the great Australasian islands, where the frugivorous Pteropi of the harpy or goblin family, by our seamen denominated flying-dogs, and erroneously vampyres, are caught and eaten; but where the insectivorous true bats, such as the genera common in Europe, are rejected. Some of the species of harpies are of the bulk of a rat, with from three to four feet of expanse between the tips of the wings; they have a fierce dog-like head, and are nearly all marked with a space of rufous hair from the forehead over the neck and along part of the back.

They reside in the most dense foliage of large trees, whence they fly out at night and do considerable damage to the plantations of fruit-trees. Among them the *Pteropus edulis*, kalong or edible goblin bat, is conspicuous, and not unfrequently found in our museums of natural history. The first tribe of them, distinguished by being without tails, is not at present known in Egypt or Northern Arabia, but of the second, having tails, a large species was discovered by M. Geoffroy in the pyramids, and a very large one is figured on the oldest monuments. Species of this or of both are likewise common in Madagascar; and thence it may be inferred that they still exist in Southern Arabia. It was to one or more species of this section of Cheiroptera that we think the Mosaic prohibition was chiefly directed; and it is likewise to them that may be referred the foundation of the ancient legends concerning harpies, which, however much they may be distorted, have a basis of truth. Indeed, when we consider their voice, the faculty they have of feeding with their thumbs, their formidable teeth, their habit of flying in the day during dark weather, and their willingness, though they are frugivorous, to devour not only insects, but also the blood and flesh of small animals, we may admit that originally they were more daring in the presence of man; that their true characters are but moderately amplified by poetical fancy; and that the Mosaic injunction was strikingly appropriate.

In the texts of Scripture, where allusion is made to caverns and dark places, true Vespertilionidæ, or insect-eating bats, similar to the European, are clearly designated.—C. H. S.

BATANÆA. [Bashan.]

BATH KOL (בַּת קוֹל *daughter of the voice*). Under this name the *Talmud*, the later Targums, and the Rabbinical writers, make frequent mention of a kind of oracular voice, constituting the fourth grade of revelation, which, although it was an instrument of divine communication throughout the early history of the Israelites, was the most prominent, because the sole, prophetic manifestation which existed during (and even after) the period of the second Temple. The *Midrashim* and the *Gemara*, cited in Reland's *Antiq. Sacr.* pt. ii. ch. ix., severally affirm that the Bath Kol is the voice which spoke to Abraham, Moses, David, Nebuchadnezzar, and others; and the Targums of Jonathan and of Jerusalem make the Bath Kol appear in Gen. xxxviii. 26; Num. xxi. 6; and in other places. The treatise *Sanhedrin*, cited in Vitringa's *Obser. Sacr.* ii. 338, uses the words:—'From the death of Haggai, Zechariah, and Malachi, the Holy Spirit [רוח הקדש, which, according to the Jewish distinction, is only the second degree of the prophetical gift] was withdrawn from Israel; but they nevertheless enjoyed the use of the Bath Kol.'

The Jewish authorities are not agreed as to what the Bath Kol was, nor as to the precise reason of its designation. It is disputed whether the persons hearing the Bath Kol heard the very voice from heaven, or only a daughter of it—an *echo* of it; whether, as thunder is often mentioned as a sign of the Divine presence, and as the word *voice* appears to be used for thunder in Exod. ix. 23; Jer. x. 13; Ps. xxix. 3, the Bath Kol may not signify an articulate voice proceeding out of the thunder; or whether, according to the explanation of Maimonides, 'the Bath Kol is when a man has such a strong imagination that he believes he hears a voice from without himself.' As to the meaning of the name itself, passages are cited in Buxtorf's *Lex. Talm.* s. v. בת, and in Reland's *Antiq. Sacr.* l. c., which show that the daughter of the voice sometimes means the echo of a sound, and sometimes merely a pri-

mary sound itself. It is certain that the *Peshito* has sometimes rendered the simple Greek φωνή by 'daughter of the voice,' as in Acts xii. 22; 1 Tim. vi. 20; Heb. iii. 15. It is necessary, however, to remark that, according to a fundamental law of all Syro-Arabian grammar, these two words must either stand to each other in the relation of *apposition*, or of the *state construct*. But as apposition can only take place between equivalent and convertible terms, which 'daughter' and 'voice' are not, accordingly, the alternative rendering of *daughter voice* proposed by Prideaux (which Horne also has adopted, *Introduct.* iv. p. 149) violates that rule; because, in such an English combination, the word 'daughter' has the force of an *adjective;* and the Hebrew language, possessing but few adjectives, would have expressed the sense of *daughter voice* (if that had been the sense intended to be conveyed by Bath Kol) by making Bath the *last* word, depending as a genitive on the former. For instance, what we render the Holy Spirit is literally 'the spirit of holiness' in Hebrew. Thus '*daughter voice*' is not an apposition in English, nor is it the translation of a state construct according to the Hebrew order; but of a state construct in which Prideaux has taken the liberty of transposing the dependent word, *i. e.* of making 'daughter of the voice' become, in effect, 'voice of a daughter.' Jennings also, in his *Jewish Antiq.* p. 229, when he renders Bath Kol by '*filia vox, seu filia vocis*,' only commits, in the first case, the same error more palpably; and is guilty of quite as great a violation of the first principle of Hebrew grammar, as he would be, in the case of Latin, were he to translate *filia vocis* by 'voice of the daughter.'

The occasions on which it is alleged that the Bath Kol was heard after the death of Malachi are of very various degrees of solemnity or significance. Supposing the instances mentioned in Josephus (*Antiq.* xiii. 10), of the voice which announced to Hyrcanus that his sons had conquered Antiochus, and (*De Bell. Jud.* vi. 5) of the awful voice which was heard in the Temple, just before the capture of Jerusalem, to exclaim, Μεταβαίνωμεν ἐντεῦθεν!—not to belong to the Bath Kol (as it is to be observed that the pseudo-Josephus ben Gorion has, in these cases, merely used the Hebrew word for *voice*), most of the other recorded instances fall far short of these in dignity; and some appear irreconcilable to even very credulous notions of the limits of Divine interposition. Only a few of them, however, can be classed with quite as trivial a species of divination as the Sortes Virgilianæ, which is done in the unfair statement of Prideaux (*Connex.* ii. p. 354). The fact is, that most Christian writers who have treated of the Bath Kol have not been able to divest themselves of an undue desire to discredit its pretensions, in consequence of their fearing any comparison which might be instituted between it and the voices from heaven mentioned in the New Test. Indeed, Lightfoot (in his *Hor. Hebr.* ad Matth. iii. 17) considers all cases of Bath Kol to be either Jewish fables or devices of the devil. Instances of voices from heaven, on occasions outwardly very analogous to some among the Jews, are recorded in the history of the early Christian church; as the voice which was instrumental in making Alexander bishop of Jerusalem, and that which exhorted Polycarp to be of good courage (Eusebii *Hist. Eccles.* vi. 11; iv. 15).

Two very learned dissertations on the Bath Kol may be found in Vitringa's *Obser. Sacr.* ii. pp. 341-363; and (by Danz) in Meuschen's *Nov. Test. ex Talmude illustratum*, pp. 351-378.—J. N.

BATH-SHEBA, also BATH-SHUA, daughter of Eliam, grand-daughter of Ahitophel, and wife of Uriah. She was seduced and became pregnant by King David during the absence of her husband, who was then engaged at the siege of Rabbah (2 Sam. xi. 4, 5; Ps. li. 2). The child thus born in adultery became ill and died (2 Sam. xii. 15-18). After the lapse of the period of mourning for her husband, who was slain by the contrivance of David (xi. 15), she was legally married to the king (xi. 27), and bore him Solomon (xii. 24; 1 Kings i. 11; ii. 13). In 1 Chron. iii. 5 she is called Bath-shua instead of Bathsheba; and her father, Ammiel, instead of Eliam (comp. Matt. i. 6). The other children of Bath-sheba are named in 2 Sam. v. 14; 1 Chron. iii. 5. She is afterwards noticed only in consequence of her good-natured intercession for Adonijah; which incidentally displays the respect with which she was treated by king Solomon, her son (1 Kings ii. 19). [DAVID, ADONIJAH.]

The Rabbins describe Bath-sheba as a woman of vast information and a highly cultivated mind, to whose education Solomon owed much of his wisdom and reputation, and even a great part of the practical philosophy embodied in his Proverbs.—E. M.

BATTLE, SYSTEM OF. Though the Hebrews in their mode of conducting warlike operations varied somewhat in the course of ages, and are elsewhere shown to have been swayed by the practice of greater and more military nations, still, from the period when the institution of royalty gave rise to an organized system, it was a maxim to spare the soldiers all unnecessary fatigue before an engagement, and to supply them liberally with food. Their arms were enjoined to be in the best order, and when drawn up for battle they formed a line of solid squares of a hundred men, each square being ten deep, and with sufficient interval between to allow of facility in movements, and the slingers to pass through. The archers may have occupied the two flanks, or formed in the rear, according to the intentions of the commander on the occasion; but the slingers were always stationed in the rear until they were ordered forward to impede an hostile approach, or to commence the engagement, somewhat in the manner of modern skirmishers. Meantime, while the trumpets waited to sound the last signal, the king, or his representative, appeared in his sacred dress (the הדרי קדש *hadrê kodesh*, rendered in our version 'the beauties of holiness'), except when he wished to remain unknown, as at Megiddo (2 Chron. xxxv. 22); and proceeded to make the final dispositions, in the middle of his chosen braves, attended by priests who, by their exhortations, animated the ranks within hearing. It was now, we may suppose, when the enemy was at hand, that the slingers would be ordered to pass between the intervals of the line of solid squares, open their order, and with shouts, let fly their stone or leaden missiles, until by the gradual approach of the opposing fronts they would be hemmed in, and be recalled

to the rear, or to cover a flank. Then would come the signal to charge, and the great shout of battle; the heavy infantry, receiving the order to attack, would, under cover of their shields and levelled spears, press direct upon the front of the enemy; the rear ranks might then, if so armed, cast their second darts, and the archers from the rear shoot high, so as to pitch the arrows over their own main line of spearmen into the dense masses beyond them. If the enemy broke through the intervals, we may imagine that a line of charioteers in reserve, breaking from their position, might in part charge among the disordered ranks of the foe, drive them back, and facilitate the restoration of the oppressed masses, or wheeling round a flank, fall upon the enemy, or be encountered by a similar manœuvre, and perhaps repulsed. The king, meanwhile, surrounded by his princes, posted close to the rear of his line of battle, and in the middle of the showered missiles, would watch the enemy and remedy every disorder. In this position it was that several of the sovereigns of Judah were slain (2 Chron. xviii. 33, and xxxv. 23), and that such an enormous waste of human life took place; for the shock of two hostile lines of masses, at least ten in depth, advancing under the confidence of breastplate and shield, when once engaged hand to hand, had difficulties of no ordinary nature to retreat; because the hindermost ranks not feeling personally the first slaughter, would not, and the foremost could not, fall back; neither could the commanders disengage the line without a certainty of being defeated. The fate of the day was therefore no longer within the control of the chief, and nothing but obstinate valour was left to decide the victory. Hence, from the stubborn character of the Jews, battles fought among themselves were particularly sanguinary; such, for example, as that in which Jeroboam, king of Israel, was defeated by Abijah of Judah (2 Chron. xiii, 3. 17), wherein, if there be no error of copyists, there was a greater slaughter than in ten such battles as that of Leipzig, although on that occasion three hundred and fifty thousand combatants were engaged for three successive days, provided with all the implements of modern destruction in full activity. Under such circumstances defeat led to irretrievable confusion; and where either party possessed superiority in cavalry and chariots of war, it would be materially increased: but where the infantry alone had principally to pursue a broken enemy, that force, laden with shields, and preserving order, could overtake very few who chose to abandon their defensive armour, unless they were hemmed in by the locality. Sometimes a part of the army was posted in ambush, but this manœuvre was most commonly practised against the garrisons of cities (Josh. viii. 12; Judg. xx, 38). In the case of Abraham (Gen. xiv. 16), when he led a small body of his own people suddenly collected, and fell upon the guard of the captives, released them, and recovered the booty, it was a surprise, not an ambush; nor is it necessary that he should have fallen in with the main army of the enemy. At a later period, there is no doubt that the Hebrew armies, in imitation of the Romans, formed into more than one line of masses; but there is ample evidence that they always possessed more stubborn valour than discipline.—C. H. S.

BATTLEMENT. [HOUSE.]

BAY-TREE. [EZRACH.]

BDELLIUM. [BEDOLACH.]

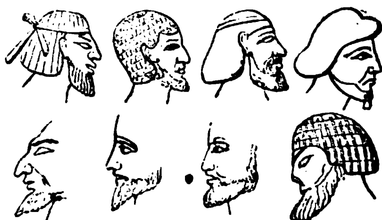
BEAN. [PHUL.]

BEAR (דוב) *dob*, in Arabic *dub*, in Persic *deeb* and *dob*, is noticed in 1 Sam. xvii. 34, 36, 37; 2 Sam. xvii. 8; 2 Kings ii. 24; Prov. xvii. 12; xxviii. 15; Isa. xi. 7; Lam. iii. 10; Hos. xiii. 8; Amos v. 19, &c. Although the moderns have

[Ursus Syriacus.]

denied the existence of bears in Syria and Africa, there cannot be a doubt of the fact, and of a species of the genus Ursus being meant in the Hebrew texts above noted. David defended his flock from the attacks of a bear (1 Sam. xvii. 34, 35, 36), and bears destroyed the children who mocked the prophet (2 Kings ii. 24). The genus Ursus is the largest of all the plantigrade carnassiers, and with the faculty of subsisting on fruit or honey unites a greater or less propensity, according to the species, to slaughter and animal food. To a sullen and ferocious disposition it joins immense strength, little vulnerability, considerable sagacity, and the power of climbing trees. The brown bear, Ursus arctos, is the most sanguinary of the species of the Old Continent, and Ursus Syriacus, or the bear of Palestine, is one very nearly allied to it, differing only in its stature being proportionably lower and longer, the head and tail more prolonged, and the colour a dull buff or light bay, often clouded, like the Pyrenæan variety, with darker brown. On the back there is a ridge of long semi-erect hairs running from the neck to the tail. It is yet found in the elevated woody parts of Lebanon. In the time of the first crusades these beasts were still numerous and of considerable ferocity; for during the siege of Antioch, Godfrey of Bouillon, according to Math. Paris, slew one in defence of a poor woodcutter, and was himself dangerously wounded in the encounter.—C. H. S.

BEARD. The ancient nations in general agreed with the modern inhabitants of the East in attaching a great value to the possession of a beard. The total absence of it, or a sparse and stinted sprinkling of hair upon the chin, is thought by the Orientals to be as great a deformity to the features as the want of a nose would appear to us; while, on the contrary, a long and bushy beard, flowing down in luxuriant profusion to the breast, is considered not only a most graceful ornament to the person, but as contributing in no small degree to respectability and dignity of character. So much, indeed, is the possession of this



venerable badge associated with notions of honour and importance, that it is almost constantly introduced, in the way either of allusion or appeal, into the language of familiar and daily life. When a man's veracity is doubted, 'Look at this beard,' he will say, 'the very sight of it may satisfy you as to the truth and probity of its owner.' When censuring a bad or dishonest action, 'Shame on your beard' is the ordinary style of rebuke. When friends express their mutual good wishes, 'May God preserve your beard' is the strongest and most ardent form of benediction. When requesting a favour from any one, the most earnest terms of supplication are to beg 'by his beard, or the life of his beard,' that he will grant it; and no higher idea of the value of a thing can be given than by saying, 'It is worth more than one's beard.' In short, this hairy appendage of the chin is most highly prized as the attribute of manly dignity; and hence the energy of Ezekiel's language when, describing the severity of the Divine judgments upon the Jews, he intimates that, although that people had been as dear to God and as fondly cherished by him as the beard was by them, the razor, *i. e.* the agents of his angry providence, in righteous retribution for their long-continued sins, would destroy their existence as a nation (Ezek. v. 1-5). With this knowledge of the extraordinary respect and value which have in all ages been attached to the beard in the East, we are prepared to expect that a corresponding care would be taken to preserve and improve its appearance; and, accordingly, to dress and anoint it with oil and perfume was, with the better classes at least, an indispensable part of their daily toilet (Ps. cxxxiii. 2). In many cases it was dyed with variegated colours, by a tedious and troublesome operation, described by Morier (*Journ.* p. 247), which, in consequence of the action of the air, requires to be repeated once every fortnight, and which, as that writer informs us, has been from time immemorial a universal practice in Persia. From the history of Mephibosheth, it seems probable, that the grandees in ancient Palestine 'trimmed their beards' with the same fastidious care and by the same elaborate process; while the allowing these to remain in a foul and dishevelled state, or to cut them off, was one among the many features of sordid negligence in their personal appearance by which they gave outward indications of deep and overwhelming sorrow (2 Sam. xix. 24; Ezra ix. 13; Isa. xv. 2; Jer. xli. 5; comp. Herodot. ii. 36; Suet. *Caligula*, ch. v.).

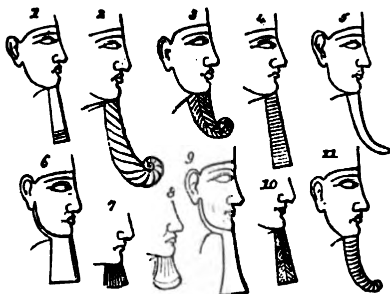
Nor were they less jealous in guarding the honour of this attribute of manhood, than in setting it off to advantage. The slightest exhibition of contempt, by sneering, spitting at, pulling, or even pressing against it in a rude and careless manner, was resented as an insult, such as would now, among men of the world, be deemed expiable only by a duel (Burckhardt, *Trav. in Arabia*, p. 61). No one was permitted to touch it except in the way of respectful and affectionate salutation, which was done by gently taking hold of its extremity with the right hand, and kissing it; but even in that case it was only wives in approaching their husbands, children their parents, or the nearest and most attached friends, to whom this unusual liberty was granted (D'Arvieux, *Coutumes des Arabes*, ch. 7). The act itself being an expression of kind and cordial familiarity, its performance by Joab shows in a flagrant light the base and unprincipled conduct of that ruthless veteran, when he took Amasa by the beard with his right hand to kiss him (rather *it*), and then, having assumed this attitude under the mask of the most friendly feelings, smote his unsuspecting victim under the fifth rib (2 Sam. xx. 9).

To be deprived of a beard was, and still is, in some places of the East, the badge of servility—a mark of infamy, that degraded a person from the ranks of men to those of slaves and women (Niebuhr, *Arabia*, ch. vii.; Volney, ii. p. 118); while to shave it off voluntarily, even for a time, as the former writer mentions he knew was done by some in mere wantonness or a drunken fit, frequently subjects the offender to so great odium as to exclude him from society. Nay, so great is the disgrace entailed by the appearance of a smooth and naked chin, that D'Arvieux describes the case of an individual who, having sustained a dangerous wound in his jaw, preferred hazarding his life rather than allow the surgeon to remove his beard. Among people influenced by such ideas, the forcible erasure of a beard must be felt to be the severest punishment that the malice of an enemy can inflict; and we can easily conceive how deep and intolerable was the affront which the young and ill-advised king of the Ammonites put upon the ambassadors of David, when, among other acts of insolence, he shaved off one-half of their beards, and sent them home in that grotesque condition, exposed to the derision of their countrymen (2 Sam. x.). Persons of their high rank, who, in all probability, were fastidious about the orderly state and graceful appearance of their beards, would be even more sensitive as to this ignominious treatment than those of an humbler condition; and, as the shaving off one-half of the beard was among some ancient nations the punishment of cowardice, these circumstances united will help to account for the spirit of determined revenge which the king and the whole nation of Israel breathed, on receiving intelligence of the national outrage. (See also Herodotus, ii. 121; Lane's *Modern Egyptians*, i. p. 322, *note*.)—R. J.

From the above facts it is clear that the Israelites maintained their beard and the ideas connected with it, during their abode among the Egyptians, who were a shaven people. This is not unimportant as one of the indications which evince that, whatever they learned of good or evil in that country, they preserved the appearance and habits of a separate people. As the Egyptians shaved their beards off entirely, the injunction in Lev. xix. 27 against shaving 'the corners of the beard' must have been levelled against the practices of some other bearded nation. The prohibition is usually understood to apply against rounding the corners of the beard where it joins the hair; and the reason is supposed to have been to counteract a superstition of certain Arabian tribes, who, by shaving off or rounding away the beard where it joined the hair of the head, devoted themselves to a certain deity who held among them the place which Bacchus did among the Greeks (Herodot. iii. 8; comp. Jer. ix. 26; xxv. 23; xlix. 32). The consequence seems to have been altogether to prevent the Jews from shaving off the edges of their beards. The effect

of this prohibition in establishing a distinction of the Jews from other nations cannot be understood, unless we contemplate the extravagant diversity in which the beard was and is treated by the nations of the East. The first cut is very in-

teresting, being a collection of bearded heads of foreigners obtained from the Egyptian monuments, and, without doubt, including the beards, head-dresses, and physiognomies of most of the nations bordering on Egypt and Palestine. In nearly all of them we see that the upper edges of the beard were shaven off, and apparently the hair of the upper lip. The second cut, fig. 1, represents the head and beard of the Babylonian figure given at full length (on a smaller scale) in the second cut at p. 272; fig. 2 is the regal Persian



beard, curiously curled and tressed; fig. 3 is a somewhat similar beard from the recently-discovered sculptures of Xanthus in Asia Minor; and fig. 4 is Græco-Syrian, from the sculptures at Palmyra. With these it may be useful to compare the principal varieties of the beard among the modern orientals, whose tastes in this matter are in general much less fantastic than those of their predecessors. In the following cut the first figure is that of a modern Egyptian (Copt), and the second that of a Persian, exhibiting a remarkable contrast between the amplitude of the one beard and the scantiness of the other. The other two figures we offer with pleasure, as presenting, in all probability, correct resemblances of such beards as were worn by the ancient Israelites. Fig. 3 is that of an Arab sheikh, and fig. 4 that of a Syrian Jew.

The ancient Egyptians, although they shaved

their beards, had the singular custom of tying a false beard upon the chin. This was probably by way of compromise between their love of cleanliness and their desire to preserve some trace of the distinguishing sign of manhood. It was made of plaited hair, and had a peculiar form according to the rank of the persons by whom they were worn. Private individuals had a small beard, scarcely two inches long; that of a king was of considerable length, and square at the bottom; and the figures of gods were distinguished by its turning up at the end (Wilkinson, *Anc. Egyptians*, iii. 362).

BEASTS. In the Bible, this word, when used in contradistinction to *man* (Ps. xxxvi. 6), de-

notes a brute creature generally; when in contradistinction to *creeping things* (Lev. xi. 2-7; xxvii. 26), it has reference to four-footed animals; and when to *wild mammalia*, as in Gen. i. 25, it means domesticated cattle.

Tziyim, ציים (Isa. xiii. 21), denotes wild beasts of the upland wilderness. *Ochim*, אחים, rendered 'doleful creatures' and 'marsh animals,' may, we think with more propriety, be considered as 'poisonous and offensive reptiles.'

Se'irim, שעירים, shaggy ones, is a general term for apes—not *satyrs*, a pagan poetical creation unfit for Scriptural language: it includes *Saadim* as a species, and תנים, *Tannim*, monsters of the deep and of the wilderness—boas, serpents, crocodiles, dolphins, and sharks.

The zoology of Scripture may, in a general sense, be said to embrace the whole range of animated nature; but after the first brief notice of the creation of animals recorded in Genesis, it is limited more particularly to the animals found in Egypt, Arabia, Palestine, Syria, and the countries eastward, in some cases, to beyond the Euphrates. It comprehends mammalia, birds, reptiles, fishes, and invertebrate animals; but in a work like the Bible, written for a far different purpose, we might naturally expect that only a small part of these would be found described, and that generical indications would more frequently occur than specific characteristics. As the intention of Scripture, in its allusions to animate or inanimate objects, was not scientific description, but the illustration of arguments and precepts by images drawn from objects familiar to those to whom it was addressed, it is not to be expected that zoology or botany should be treated systematically, or in terms such as modern science has adopted: yet, where we can now fully ascertain the true meaning of the text, the imagery drawn from natural history is always forcible, correct, and effective, even where it treats the subject under the conditions of the contemporary popular belief; for, had the inspired writers entered into explanations on matters of science not then commonly understood, the poetical force of the imagery, and consequently its intended effect, must necessarily have been greatly diminished; and, where system is appropriate, we find a classified general distribution of the creation, simple indeed, but sufficiently applicable to all the purposes for which it was introduced. It resembles other parts of the philosophy of the earliest nations, in which the physical distribution of matter, excepting so far as man is concerned, proceeds by triads. Botany is treated under the heads of grass, shrubs, and trees: in animated nature, beginning with the lowest organized in the watery element, we have first שרץ *Sheretz*, 'the moving creature that hath life,' animalcula, crustacea, insecta, &c.; second, תנינם *Tanninim*, fishes and amphibia, including the huge tenants of the waters, whether they also frequent the land or not, crocodiles, python serpents, and perhaps even those which are now considered as of a more ancient zoology than the present system, the great Saurians of geology; and third, it appears, birds, עוף *'Oph*, 'flying creatures' (Gen. i. 20); and still advancing (cetaceans, pinnatipeds, whales and seals being excluded), we have quadrupeds, forming three other divisions or orders: 1st, cattle, בהמה *Behemah*, embracing the ruminant herbivora, generally gregarious and capable of domesticity; 2nd, wild beasts, חיה *Chayah*, carnivora, including all beasts of prey; and 3rd, reptiles, רמש *Remes*, minor quadrupeds, such as creep by means of many feet, or glide along the surface of the soil, serpents, annelides, &c.; finally we have man, אדם *Adam*, standing alone in intellectual supremacy. The classification of Moses, as it may be drawn from Deuteronomy, appears to be confined to *Vertebrata* alone, or animals having a spine and ribs, although the fourth class might include others. Taking man as one, it forms five classes—1st, Man; 2nd, Beasts; 3d, Birds; 4th, Reptiles; 5th, Fishes. It is the same as that in Leviticus xi., where beasts are further distinguished into those with solid hoofs, the Solipedes of systematists, and those with cloven feet (Bisulci), or Ruminantia. But the passage specially refers to animals that might be lawfully eaten because they were clean, and to others prohibited because they were declared unclean, although some of them, according to the common belief of the time, might ruminate; for, it may be repeated, that the Scriptures were not intended to embrace anatomical disquisitions aiming at the advancement of human science, but to convey moral and religious truth, without disturbing the received opinions of the time on questions having little or no relation to their main object. In like manner, fishes and birds are divided into clean and unclean; and, taken altogether, the classification now described forms an excellent series of distinctions, which, even at the present day, and in countries far distant from the scene where it was ordained, still remains applicable, with few exceptions; and from its intrinsic propriety will remain in force, notwithstanding our present knowledge of the manners and opinions of the East and of Egypt has rendered many of the earlier comments upon it in a great measure useless.

The Scriptures, as already mentioned, contain no minute details on natural history, and notice only a small proportion of the animals inhabiting the regions alluded to. Notwithstanding the subsequent progress of science, the observation of Dr. Adam Clarke is still in a great measure true, that, 'of a few animals and vegetables we are comparatively certain, but of the great majority we know almost nothing. Guessing and conjecture are endless, and they have on these subjects been already sufficiently employed. What learning—deep, solid, extensive learning and judgment could do, has already been done by the incomparable Bochart in his *Hierozoicon*. The learned reader may consult this work, and, while he gains much general information, will have to regret that he can apply so little of it to the main and grand question.' With these facts before him, it is singular that the learned doctor did not suspect the incompetence of mere philologists to solve questions in natural history, of which the true principles were so little known in the time of Bochart, and which still remain but little investigated by Biblical scholars; for, even now, some appear to believe in the faculty of rumination 'in a variety of the hare,' although such a capability would remove the animal from the genus and even from the order of Rodents, and place it in that of the Ruminantia. Nor is physical science sometimes better understood; for we

find a recent writer objecting to needless miraculous interposition in the case of the prophet Jonah, by supposing that he was swallowed by a whale, because, according to him, whales do not exist in the Mediterranean, and have not swallow sufficiently wide to admit a human body: he therefore contends that the monster must have been a shark: as if anything short of a miracle could preserve human life for more than ten minutes in the swallow of a whale or shark, no matter which. Yet with such trifling do books on a subject above all others important, sometimes abound, being written by men who are believed competent to the task, merely on the ground of their extensive Biblical learning. But the acts and laws by which it has pleased the Almighty to vindicate his own incomprehensible power ought not to be trifled with in this way; a more logical spirit is demanded for such inquiries, and he who undertakes to explain His word must endeavour to comprehend at least the general laws which it has pleased Omnipotence to impress upon matter; laws from which He never departs, but on rare and great occasions, for the accomplishment of His unfathomable purposes. It is in this spirit that the questions connected with zoological science are intended to be viewed in this work. Care will be taken not to lose sight of the Hebrew and cognate languages, nor to overlook the possible influence of Pelhevi and other dialects of the Sanscrit family, which even in Palestine appear to have formed an element in the tongues of the population anterior to the great immigration of the people of Israel. Notwithstanding the advance of zoological science in the field in question, where Niebuhr, Forskal, Hasselquist, Bruce, Russell, Hemprich, Ehrenberg, Rüppell, Wilkinson, and others illustrious in this field of inquiry, have toiled, we are still obliged to confess that but a small portion of the local zoology is known, and that only a certain number of animals can be identified with complete certainty. Others can never attain more than the consent of acquiescence, because in the Hebrew text of the sacred writings the names of animals are mostly descriptive of characters applicable to several species, and some are more even than generically vague. Resorting to the roots of the language often increases the difficulty; and besides our still scanty knowledge of the present fauna of Western Asia and Egypt, it is only by inference that we can conjecture what changes have taken place in the species during the course of ages. Anciently the lion, ostrich, and wolf were undeniably abundant in these countries; while the hyæna, jackal, domestic horse, buffalo, &c. were either unknown or are not indicated with sufficiently distinguishable characters; and where we must rely upon an epithet or quality for fixing a name, our increased information supplies us with two or more distinct species equally entitled to the denomination. Thus, for instance, we might refer to the four or five species of smaller Canidæ, Thoes, Jackals, and true foxes at present found in Syria and Egypt, and the absence of the real wolf, such as he is so beautifully and distinctly characterized in the parables of our Saviour; while the hyæna, only known in classical literature by the absurdities assigned to it, has now not only superseded the real wolf in Palestine and Syria, but has spread northward into Natolia, and may be heard sometimes in Constantinople howling on the eastern side of the Bosphorus. Another difficulty arises from the many different Hebrew names given to one species. When this occurs with reference to the lion, so obviously important in the eyes of a resident population, we need not wonder; but the case is different as regards the ostrich, so liable to be confounded with the bustard or with the various names that are translated by owl, or where it is mixed with the epithets applied to the crane and stork.* Whether a clear indication of an otis can be derived from any of the texts in Scripture we have not yet been able to ascertain satisfactorily, and we own that where scholars have had no doubts of their own interpretations, but have shown the laxity of others who have given a different version of the same text, sometimes widely departing from the other, it is with no small hesitation we should venture to propose our own. These questions, however, will fall to be discussed under separate heads, as do those also which refer to animals now extinct, or which are differently located from what they were in the earlier ages of the world.—C. H. S.

BEDAN (בְּדָן). In 1 Sam. xii. 11, we read that the Lord sent as deliverers of Israel—Jerubbaal, *Bedan*, Jephthah, Samuel. Three of these we know to have been judges of Israel, but we nowhere find Bedan among the number. The Targum understands it of Samson, and so Jerome and the generality of interpreters; but this interpretation goes on the supposition that בדן should be rendered *in Dan*, *i. e.* one in Dan, or of the tribe of Dan, as Samson was. In this sense, as Kimchi observes, it would have the same force as Ben-Dan, a son of Dan, a Danite. Such an intermixture of proper names and appellatives, however, is very doubtful, and it is to be noted that Bedan is mentioned before Jephthah, whereas Samson was after him. The Septuagint, Syriac, and Arabic have *Barak*, which many think the preferable reading (comp. Heb. xi. 32). A man of the name of Bedan occurs, however, among the posterity of Manasseh (1 Chron. vii. 17), and Junius, followed by some others, thinks that the judge Jair is meant, and that he is here called Bedan to distinguish him from the more ancient Jair, the son of Manasseh. The order in which the judges are here named is not at variance with this view (Num. xxxii. 41; Judg. x. 3, 4); but surely if Jair had been really intended, he might have been called by that name without any danger of his being, in this text (where he is called a deliverer of Israel, and placed among the judges), confounded with the more ancient Jair.

BEDOLACH (בְּדֹלַח). This word occurs but twice in the Scriptures: in Gen. ii. 12, as a product of the land of Havilah; and Num. xi. 7, where the manna is likened to it. It has been much disputed among critics, both ancient and modern. In the Sept. it is considered as a precious stone, and translated (Gen. ii. 12) by

* *Otis Hobara*, *Otis Arabica*, and several other species are birds of the desert in Egypt and Arabia, and occur on the plain of Esdraelon. They are figured on monuments, and distinguished from the young ostrich by their quill-feathers and three-toed feet.

ἄνθραξ, and (Num. xi. 7) by κρυσταλλος; while Aquila, Symmachus, Theodotion, and the Vulgate render it *bdellium*, a transparent aromatic gum from a tree growing in Arabia. Of this opinion also is Josephus (*Antiq.* iii. 1. 6), where he describes the manna—ὅμοιον τῇ τῶν ἀρωμάτων βδέλλῃ, *i. e.* similar to the aromatic bdellium (Num. xi. 7). In the Syriac version it is ܒܪܘܠܟܐ *brulcho*, evidently for ܒܕܘܠܟܐ *bdulcho*, the two letters *r* and *d* being so similar —with the exception of the dot, which stands in the *r* over, and in the *d* under—as to be easily confounded with one another in transcribing. We find the same translation in the Samaritan and Chaldee, while the precious stones given by the Sept. and others bear with them a different name, פנקולה or פקולה.

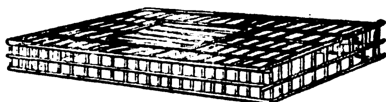
The Jewish Rabbins, however, followed by a host of their Arabian translators, and to whom Bochart (*Hieroz.* iii. p. 593, *sq.*), and Gesenius (*Thesaur.* i. 181), accede, translate *bedolach* by *pearl*, and consider *Havilah* (חוילה) as the part of Arabia near Catipha and Bahrein on the Persian Gulf, where the pearls are found.

Those who regard bedolach as some kind of precious stone, rest their argument on the fact that it is placed (Gen. ii. 12) by the side of שהם *shoham*, which is a precious stone, and occurs several times in the Scriptures, and that they are both mentioned as belonging to the productions of the land Havilah. But the least knowledge of Hebrew construction must satisfy us that, if this meaning were intended, the reading ought to be שם אבן הבדלה והשוהם, and not, as it actually stands, שם הבדלה ואבן השוהם, expressly excluding *bedolach* from the mineral kingdom.

Those who translate *bedolach* by 'pearl' refer to the later Jewish and Arabian expounders of the Bible, whose authority, if not strengthened by valid arguments, is but of little weight. It is, moreover, more than probable that the *pearl* was as yet unknown in the time of Moses, or he would certainly not have excluded it from the costly contributions to the tabernacle, the priestly dresses, or even the Urim and Thummim, while its fellow *shoham*, though of less value, was variously used among the sacred ornaments (Exod. xxv. 7; xxxv. 9, 27; xxviii. 20; xxxix. 13). Nor do we find any mention of pearl in the times of David and Solomon. It is true that Luther translates פנינים (Prov. iii. 15; viii. 11; x. 25; xxxi. 10) by *pearls*, but this is not borne out by Lament. iv. 7, where it is indicated as having a *red* colour. The only passage in the Old Testament where the pearl really occurs under its true Arabic name is in Esth. i. 6, דר (dar), Arab. در; and in the New Testament it is very frequently mentioned under the Greek name μαργαρίτης.

It is, therefore, most probable that the Hebrew *bedolach* is the aromatic gum *bdellium*, which issues from a tree growing in Arabia, Media, and the Indies. Dioscorides (i. 80) informs us that it was called μάδελκον or βολχόν, and Pliny (xii. 19) that it bore the names of *brochon*, *malacham*, and *maldacon*. The frequent interchange of the μ מ and the β ב brings the form very near to that of the Hebrew word; nor is the similarity of name in the Hebrew and Greek, in the case of natural productions, less conclusive of the nature of the article, since the Greeks probably retained the ancient Oriental names of productions coming from the East. Pliny's description of the tree from which the bdellium is taken makes Kæmpfer's assertion (*Amœn. Exot.* p. 668) highly probable, that it is the sort of palm-tree (*borassus flabelliformis*, Linn. ci. 6. 3, Trigynia) so frequently met with on the Persian coast and in Arabia Felix. The term bdellium, however, is applied to two gummy-resinous substances. One of them is the *Indian bdellium*, or *false myrrh* (perhaps the bdellium of the Scriptures), which is obtained from *Amyris* (balsamodendron?) *Commiphora*. Dr. Roxburgh (*Flor. Ind.* ii. 245) says that the trunk of the tree is covered with a light-coloured pellicle, as in the common birch, which peels off from time to time, exposing to view a smooth green coat, which in succession supplies other similar exfoliations. This tree diffuses a grateful fragrance, like that of the finest myrrh, to a considerable distance around. Dr. Royle (*Illust.* p. 176) was informed that this species yielded bdellium; and in confirmation of this statement, we may add that many of the specimens of this bdellium in the British Museum have a yellow pellicle adhering to them, precisely like that of the common birch, and that some of the pieces are perforated by spiny branches—another character serving to recognise the origin of the bdellium. Indian bdellium has considerable resemblance to myrrh. Many of the pieces have hairs adhering to them.

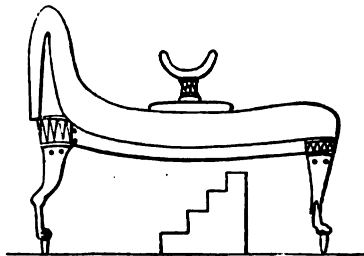
The other kind of bdellium is called *African bdellium*, and is obtained from *Heudolotia Africana* (Richard and Guillemin, *Fl. de Sénégambie*). It is a natural production of Senegal, and is called by the natives, who make toothpicks of its spines, *niottout*. It consists of rounded or oval tears, from one to two inches in diameter, of a dull and waxy fracture, which, in the course of time, become opaque, and are covered externally by a white or yellowish dust. It has a feeble but peculiar odour, and a bitter taste. Pellitier (*Ann. de Chim.* lxxx. p. 39) found it to consist of resin 59·0; *soluble gum*, 9·2; *bassorin*, 30·6; *volatile oil and loss*, 1·2. Resin of bdellium (African bdellium?) consists, according to Johnstone, of carb. 40, hydr. 31, oxyg. 5.—E. M.



BEDS. The manner of sleeping in warm Eastern climates is necessarily very different from that which is followed in our colder regions. The present usages appear to be the same as those of the ancient Jews, and sufficiently explain the passages of Scripture which bear on the subject. Beds of feathers are altogether unknown, and the Orientals generally lie exceedingly hard. Poor people who have no certain home, or when on a journey, or employed at a distance from their dwellings, sleep on mats, or wrapped in their outer garment, which from its importance in this respect was forbidden to be retained in pledge over night (D'Arvieux, iii. 257; Gen. ix 21, 23; Exod. xxii. 27; Deut. xxiii. 13). Under peculiar circumstances a stone covered with some folded cloth or piece of dress is often used for

a pillow (Gen. xxviii. 11). The more wealthy classes sleep on mattresses stuffed with wool or cotton, which are often no other than a quilt thickly padded, and are used either singly or one or more placed upon each other. A similar quilt finer materials forms the coverlet in winter, and in summer a thin blanket suffices; but sometimes the convenient outer garment is used for the latter purpose, and was so among the Jews, as we learn from 1 Sam. xix. 3, where Michal covers with a בגד, cloak or mantle (corresponding to the modern *abba* or *hyk*), the image which was to represent her husband sleeping. The difference of use here is, that the poor *wrap themselves up* in it, and it forms their whole bed; whereas the rich employ it as *a covering* only. A pillow is placed upon the mattress, and over both, in good houses, is laid a sheet. The bolsters are more valuable than the mattresses, both in respect of their coverings and material: they are usually stuffed with cotton or other soft substance (Ezek. 19; xviii. 21); but instead of these, skins of goats or sheep appear to have been formerly used by the poorer classes and in the hardier ages. These skins were probably sewed up in the natural shape, like water-skins, and stuffed with chaff or wool (1 Sam. xix. 13). It is not unlikely that the Israelites were acquainted with those wooden crescent-shaped bolsters of wood, which were common in ancient Egypt (see one in the cut of a couch below); the comfort in the use of which is not very apparent, till one tries the experiment and realizes the complete repose which is obtained by resting the nape of the neck and base of the skull upon some similar contrivance.

It has been doubted whether the couches of the Jews for repose and for the use of the sick, called מטה *mittah* (Gen. xlvii. 31; 1 Sam. xix. 13; 2 Sam. iv. 7; 2 Kings i. 4), משכב *mishcab* (Exod. xxi. 18; 2 Sam. xiii. 5; Cant. iii. 1). or ערש *'eres* (Job vii. 13; Cant. i. 16, properly 'bedstead,' comp. Deut. iii. 11), were actually bedsteads of different sorts, or simply the standing and fixed divans such as those on which the Western Asiatics commonly make their beds at night. It has been usually thought that the choice must lie between these alternatives, because it has not been understood that in the East there is, in fact, a variety of arrangement in this matter; but we feel satisfied that the different Hebrew words answer to and describe similarly different arrangements, although we may be unable now to assign to the several *words* their distinctive applications to still subsisting *things*.



The divan, or daïs, is a slightly elevated platform at the upper end and often along the sides of the room. On this are laid the mattresses on which the Western Asiatics sit cross-legged in the day-time, with large cushions against the wall to support the back. At night the light bedding is usually laid out upon this divan, and thus beds for many persons are easily formed. The bedding is removed in the morning, and deposited in recesses in the room, made for the purpose. This is a sort of general sleeping-room for the males of the family and for guests, none but the master having access to the inner parts of the house, where alone there are proper and distinct bedchambers. In these the bedding is either laid on the carpeted floor, or placed on a low frame or bedstead. This difference between the public and private sleeping-room, which the arrangement of an Eastern household renders necessary, seems to explain the difficulties which have perplexed readers of travels, who, finding mention only of the more public dormitory, the divan, have been led to conclude that there was no other or different one.

The most common bedstead in Egypt and Arabia is of this shape, framed rudely of palm-

sticks. It was used in ancient Egypt, and is figured in the mural paintings. In Palestine, Syria, and Persia, where the palm-tree is not common, and where timber is more plentiful, a bed-frame of similar shape is made of boards. This kind of bedstead is also used upon the house-tops during the season in which people sleep there. It is more than likely that Og's bedstead was of this description (Deut. iii. 11). In the times in which he lived the palm-tree was more common in Palestine than at present, and the bedsteads in ordinary use were probably formed of palm-sticks. They would therefore be incapable of sustaining any undue weight without being disjointed and bent awry; and this would dictate the necessity of making that destined to sustain the vast bulk of Og, rather of rods of iron than of the mid-ribs of the palm-fronds. These bedsteads are also of a length seldom more than a few inches beyond the average human stature (commonly 6 feet 3 inches); and hence the propriety with which the length of Og's bedstead is stated, to convey an idea of his stature—a fact which has perplexed those who supposed there was no other bedstead than the divan, seeing that the length of the divan has no determinate reference to the stature of the persons reposing on it.

It is not necessary to suppose that the bedsteads were all of this sort. There are traces of a kind of portable couch (1 Sam. xix. 15), which appears to have served as a sofa for sitting on in the day-time (1 Sam. xxviii. 3; Ezek. xxiii. 41; Amos vi. 4); and there is now the less reason to doubt that the ancient Hebrews enjoyed this convenience, as we find such couches in use among the neighbouring nations, and figured on their monuments. The subjoined example is from

ancient Egypt. The elegance of shape in this and other specimens, shows the perfection to which the manufacture of these articles had been brought among that people. Persons are represented sitting

on such sofas in the day-time; and that they were used by single persons for sleeping on at night, is shown by the wooden pillow placed thereon, as well as by the steps for ascent that occur beside some of the specimens (as the present) which stand higher than the others. Such couches were capable of receiving those ornaments of ivory which are mentioned in Amos vi. 4; which of itself shows that the Hebrews had something of the kind, forming an ornamental article of furniture.

The next cut shows another variety of couch-bed, from the sculptures discovered by Mr. Fellows in Asia Minor.

A bed with a tester is mentioned in Judith xvi. 23, which, in connection with other indications, and the frequent mention of rich tapestries hung upon and about a bed for luxuriousness and ornament, proves that such beds (represented in the annexed cut) as are still used by royal and distinguished personages were not unknown under the Hebrew monarchy (comp. Esth. i. 6; Prov. vii. 16, *seq.*; Ezek. xxiii. 41).

It is evident that the ancient Jews, like the modern inhabitants of their land, seldom or never changed their dress on going to bed. Most people only divest themselves of their outer garment, and loosen the ligatures of the waist, excepting during the hottest part of the summer, when they sleep almost entirely unclad.

BEE (occurs in Deut. i. 44; Judg. xiv. 8; Ps. cxviii. 2; Isa. vii. 18). This insect belongs to the family *apidæ*, order *hymenoptera*, species *apis mellifica*, commonly called the honey-bee, because this species has often yielded honey to man. The bee is one of the most generally diffused creatures on the globe, being found in every region. Its instincts, its industry, and the valuable product of its labours, have obtained for it universal attention from the remotest times. No nation upon earth has had so many historians as this insect. The naturalist, agriculturist, and politician have been led by a regard to science or interest to study its habits. Cicero and Pliny refer to one philosopher (Aristomachus) who devoted sixty years to it; and another (Philiscus) is said to have retired to the desert to pursue his inquiries, and to have obtained, in consequence, the name of Agrius.

A prodigious number of books have been written, periodical publications have appeared, and even learned societies have been founded with a view to promote the knowledge of the bee, and increase its usefulness to man. Poets and moralists of every age have derived from it some of their most beautiful and striking illustrations.

The following is a mere outline of the facts ascertained by Swammerdam, Maraldi, Reaumur, Schirach, Bonnet, and Huber. *Its anatomy and physiology*, comprehending the antennæ, or tactors, by which it exercises at least all the human senses, if not more;—

'Her glanceful eye
Set with ten thousand lenses,'

and studded with hairs to ward off the pollen, or dust of flowers, and the three additional eyes on the top of the head, giving a defensive vision upwards from the cups of flowers; the double stomach, the upper performing the office of the crop in birds, and regurgitating the honey, and the lower secreting the wax into various sacklets; the baskets on the thighs for carrying the pollen; the hooked feet; the union of chemical and mechanical perfection in the sting; its organs of progressive motion; its immense muscular strength:—the *different sorts* of bees inhabiting a hive, and composing the most perfect form of insect society, from the stately venerated queen-regnant, the mother of the whole population and their leader in migrations, down to the drone, each distinguished by its peculiar form and occupations:—the rapidity of their multiplication; the various transitions from the egg to the perfect insect; the amazing deviations from the usual laws of the animal economy; the means by which the loss of a queen is repaired, amounting to the literal *creation* of another; their *architecture* (taught by the great geometrician, who 'made all things by number, weight, and measure') upon the principles of the most refined geometrical problem; their streets, magazines, royal apartments, houses for the citizens; their *care of the young*, consultations and precautions in sending forth a new colony; their *military prowess*, fortifications, and discipline; their attachment to the hive and the common interest, yet patience under private wrongs; the *subdivision of labour*, by which thousands of individuals co-operate without confusion in the construction of magnificent public works; the uses they serve, as the promoting of the fructification of flowers; the amazing number and precision of their *instincts*, and the capability of modifying these by circumstances, so far as to raise a doubt whether they be not endowed with a portion at least of intelligence resembling that of man.

In proceeding to notice the principal passages of Scripture in which the bee is mentioned, we first pause at Deut. i. 44, where Moses alludes to the irresistible vengeance with which bees pursue their enemies: 'The Amorites came out against you and chased you as bees do, and destroyed you in Seir unto Hormah.' The powerlessness of man under the united attacks of these insects is well attested. Pliny relates that bees were so troublesome in some parts of Crete, that the inhabitants were compelled to forsake their homes; and Ælian records that some places in Scythia were formerly inaccessible on account of the swarms of bees with which they were infested. Mr. Park (*Travels*, vol. ii. p. 37) relates that at Doofroo, some of the people being in search of honey, unfortunately disturbed a swarm of bees, which came out in great numbers, attacked both men and beasts, obliged them to fly in all directions, so that he feared an end had been put to his journey, and that one ass died the same night, and another the next morning. Even in this country the stings of two exasperated hives have been known to kill a horse in a few minutes.

The reference to the bee contained in Judg. xiv. 8, has attracted the notice of most readers. It is related in the 5th and 6th verses that Samson, aided by supernatural strength, rent a young lion, that warred against him, as he would have rent a kid, and that 'after a time,' as he returned to *take his wife*, he turned aside to see the carcass of the lion, 'and, behold, there was a swarm of bees and honey in the carcass of the lion.' It has been hastily concluded that this narrative favours the mistaken notion of the ancients, possibly derived from misunderstanding this very account, that bees might be engendered in the dead bodies of animals (Virgil, *Georg.* iv.); and ancient authors are quoted to testify to the aversion of bees to flesh, unpleasant smells, and filthy places. But it may readily be perceived that it is not said that the bees were *bred* in the body of the lion. Again, the frequently recurring phrase, 'after a time,' literally 'after days,' introduced into the text, proves that at least sufficient time had elapsed for all the flesh of the animal to have been removed by birds and beasts of prey, ants, &c. The Syriac version translates 'the bony carcass.' The learned Bochart remarks that the Hebrew phrase sometimes signifies *a whole year*, and in this passage it would seem likely to have this meaning, because such was the length of time which usually elapsed between espousal and marriage (see ver. 7). He refers to Gen. iv. 3; xxiv. 55; Lev. xxv. 29, 30; Judg. xi. 4; comp. with ver. 40; 1 Sam. i. 3; comp. with vers. 7, 20; and 1 Sam. ii. 19; and 1 Sam. xxvii. 7. The circumstance that '*honey*' was found in the carcass as well as bees, shows that sufficient time had elapsed since their possession of it, for all the flesh to be removed. Nor is such an abode for bees, probably in the skull or thorax, more unsuitable than a hollow in a rock, or in a tree, or in the ground, in which we know they often reside, or those clay nests which they build for themselves in Brazil. Nor is the fact without parallel. Herodotus (v. 114) relates that a swarm of bees took up their abode in the skull of one Silius, an ancient invader of Cyprus, which they filled with honeycombs, after the inhabitants had suspended it over the gate of their city. A similar story is told by Aldrovandus (*De Insectis*, lib. i. p. 110) of some bees that inhabited and built their combs in a human skeleton in a tomb in a church at Verona.

The phrase in Ps. cxviii. 12, 'They compassed me about like bees,' will be readily understood by those who know the manner in which bees attack the object of their fury.

The only remaining passage has been strangely misunderstood (Isa. vii. 18): 'The Lord shall *hiss* for the fly that is in the uttermost parts of the river of Egypt, and for the bee that is in the land of Assyria.' Here the fly and the bee are no doubt personifications of those inveterate enemies of Israel, the Egyptians and Assyrians, whom the Lord threatened to excite against his disobedient people. But the *hissing* for them has been interpreted, even by modern writers of eminence, as involving 'an allusion to the practice of *calling out the bees from their hives*, by a hissing or whistling sound, *to their labour in the fields*, and summoning them to *return* when the *heavens begin to lower*, or the *shadows of evening to fall*' (Dr. Harris's *Natural History of the Bible*, London, 1825). No one has offered any proof of the existence of such a custom, and the idea will itself seem sufficiently strange to all who are acquainted with the habits of bees.

The true reference is, no doubt, to the custom of the people of the East, and even of many parts of Europe, of calling the attention of any one in the street, &c. by a significant *hiss* or rather *hist*, as Bishop Lowth translates the word both here and in Isa. v. 26, but which is generally done in this country by a short significant *hem!* or other exclamation. Hissing, or rather histing, is in use among us for setting a dog on any object. Hence the sense of the threatening is, I will direct the hostile attention of the Egyptians and Assyrians against you. It may be remarked that in the Septuagint version there is an allusion to the bee, immediately after that of the ant (Prov. vi. 8), which may be thus rendered—'Or go to the bee, and learn how industrious she is, and what a magnificent work she produces; whose labours kings and common people use for their health. And she is desired and praised by all. And though weak in strength, yet prizing wisdom, she prevails.' This passage is not now found in any Hebrew copy, and Jerome informs us that it was wanting in his time. Neither is it contained in any other version except the Arabic. It is nevertheless quoted by many ancient writers, as Clem. Alex. *Strom.* lib. i.; Origen, *in Num. Hom.* 27, and *in Isai. Hom.* 2; Basil, *Hexameron, Hom.* 8; Ambrose, v. 21; Jerome, *in Ezek.* iii.; Theodoret, *De Providentia, Orat.* 5; Antiochus, Abbas Sabbæ, *Hom.* 36; and John Damascenus, ii. 89. It would seem probable that it was in the copy used by the Greek translators. The ant and the bee are mentioned together by many writers, because of their similar habits of industry and economy.—J. F. D.

BEEF. [Food.]

BEELZEBUL (Βεελζεβούλ) is the name assigned (Matt. xii. 24) to the prince of the dæmons. There is no doubt that the reading *Beelzebul* is the one which has the support of almost every critical authority; and the *Beelzebub* of the *Peshito* (if indeed it is not a corrup-

tion, as Michaelis thinks), and of the Vulgate, and of some modern versions, has probably been accommodated to the name of the Philistine god *Baalzebub*. Some of those who consider the latter to have been a reverential title for that god, believe that Beelzebul is a wilful corruption of it, in order to make it contemptible. It is a fact that the Jews are very fond of turning words into ridicule, by such changes of letters as will convert them into words of contemptible signification. Of this usage Lightfoot gives many instances (*Hor. Hebr.* ad Matth. *l. c.*). Beelzebul, then (*Be'el* being the Aramaic pronunciation for *Ba'al*), is considered to mean *dominus stercoris*. In the Hebrew language of the Old Test., however, all the derivations of the root זבל occur solely in the sense of *dwelling;* and it is only the later language of the *Talmud* which has the sense of *stercorare*. The very form *zebûl* is not, indeed, found in that later idiom. Nevertheless, if the word is only a contemptuous perversion of *zebub*, *fly*, some licence of formation would be easily excused. It is evident from numerous passages in the *Talmud*, cited by Lightfoot, that many derivatives of זבל are used, as terms of the utmost disgust, to denote *idolatry*. It also appears that *zabbel, stercorare*, is at the same time a perversion of *zabach*, *to sacrifice*, and, as such, is used, with the same construction as the latter, to mean sacrificing to idols. From these combinations, it is easy to conceive how the name Beelzebub might have been formed, and how, as meaning *dominus stercoris*, it might be considered an appropriate name of the *archdæmon of idolatry*.

Some scholars, however, still adhere to the ancient Hebrew sense of *dwelling*. Among these, J. D. Michaelis (*Suppl. ad Lex*, p. 205), proposes an astrological interpretation of the name: *zebul*, according to him, means *house*, in that sense in which the heavens are divided into twelve mansions, in every one of which some planet presides, called the *lord of the house*. As the planets also were objects of idolatrous worship, he conceives *lord of the house* to have become a fitting name for the author of idolatry. This view, however untenable otherwise, produces a striking antithesis when seen in connection with the rest of the passage: 'If they have called the master of the house Beelzebul,' &c. (Matt. x. 25).

If the reading *Beelzebub* were retained, it might, according to the proposal of Storr and Döderlein, receive some support from the Syriac *Be'eldebobo*, *lord of hatred, of enmity* (which is often used for *enemy*)=διάβολος. Michaelis (in his *Lex. Syr.*) questions whether *debobo* by itself means *enmity*; although he admits that the compound *Beeldebobo* means *enemy*. His doubt may, however, be removed; for, although debobo does not occur in that sense by itself, in Aramaic, yet it does in the Samaritan Version (*e. g.* Gen. iii. 15), and *dabûb* means *slanderer*, in Arabic.

It is remarkable that, amidst all the dæmonology of the Talmud and Rabbinical writers, this name should be exclusively confined to the New Testament.—J. N.

BEER (בְּאֵר, *a well;* Sept. Βαιήρ), a local proper name, denoting, whether by itself or in composition, the presence of a well of water. There were two places so called.—1. A place in the land of Moab, which was one of the encampments of the Israelites (Num. xxi. 16).—2. A town in the tribe of Judah. It is mentioned only once in Scripture (Judg. ix. 21), as the place to which Jotham fled. Eusebius (*Onomast. s.v.* Βηρά, *Bera*) places Beer eight R. miles north of Eleutheropolis; but this is probably an error, as he also states that it becomes visible at the seventh R. mile on the road from Nicopolis to Jerusalem, which cannot be true of a town situated as he indicates; but is true of a place still bearing the corresponding name of el-Bireh, which, since Maundrell's time, has been identified with Beer (*Journey*, March 25). Eusebius probably wrote 'Eleutheropolis' instead of 'Jerusalem;' for the place in question is nearly at the expressed distance, northward, from the latter city. Bireh is mentioned, under the name of *Bira*, by Brocard (c. vii. p. 178), in whose time it was held by the Templars. By the Crusaders and the later ecclesiastics it was erroneously confounded with the ancient Michmash. Bireh is situated on the ridge, running from east to west, which bounds the northern prospect, as beheld from Jerusalem and its vicinity, and may be seen from a great distance north and south. It is now a large village, with a population of 700 Moslems. The houses are low, and many of them half underground. Many large stones and various substructions evince the antiquity of the site; and there are remains of a fine old church of the time of the Crusades (Robinson, ii. 131; Reland, *Palæstina*, p. 617; Richter, *Wallfahrten*, p. 54).

BEEROTH (בְּאֵרוֹת), the plural of Beer, and by many taken for the same place. Dr. Robinson thinks that if they were different (but he believes them the same), the Bireh mentioned in the preceding article represents Beeroth rather than Beer. Beeroth is mentioned as a city of the Gibeonites (Josh. ix. 17), and was reckoned in the tribe of Benjamin (2 Sam. iv. 2; Ezra ii. 25). Eusebius distinguishes it from Beer (*Onomast. s. v.* Βηρώθ, *Beeroth*), and assigns it a position coincident with that now occupied by Bireh, *i. e.* seven R. miles (in fact rather more) north of Jerusalem.

BEERSHEBA (בְּאֵר שֶׁבַע, *well of the oath;* Sept. Βηρσαβεέ), a place in the southernmost part of Canaan, celebrated for the sojourn of the patriarchs. It took its name from the *well* which was dug there by Abraham, and the oath which confirmed his treaty with Abimelech (Gen. xxi. 31). It seems to have been a favourite station of that patriarch, and here he planted one of those 'groves' which formed the temples of those remote times (Gen. xxi. 33). A town of some consequence afterwards arose on the spot, and retained the same name. It was first assigned to the tribe of Judah (Josh. xv. 28), and afterwards transferred to Simeon (Josh. xix. 2), but was still popularly ascribed to Judah (2 Sam. xxiv. 7). As it was the southernmost city of the land, its name is of frequent occurrence, being proverbially used in describing the extent of the country, in the phrase 'from Dan (in the north) to Beersheba' (in the south), and reversely, 'from Beersheba unto Dan' (Judg. xx. 1; 2 Sam. xvii. 11; 1 Chron. xxi. 2; 2 Chron. xxx. 5). When the land was divided into two kingdoms, the extent of that of Judah was in like manner described by the phrase 'from Beersheba to Mount Ephraim'

(2 Chron. xix. 4). It was at Beersheba that Samuel established his sons as judges for the southernmost districts (1 Sam. viii. 2): it was from thence that Elijah wandered out into the southern desert (1 Kings xix. 3): here was one of the chief seats of idolatrous worship in the time of Uzziah (Amos v. 5; viii. 14); and to this place, among others, the Jews returned after the Captivity (Neh. xi. 27, 30). This is the last time its name occurs in the Old Testament. In the New Testament it is not once mentioned; nor is it referred to, as then existing, by any writer earlier than Eusebius and Jerome, in the fourth century, who describe it as a large village (Euseb. κώμη μεγίστη; Jerome, *vicus grandis*), and the seat of a Roman garrison. In the centuries before and after the Moslem conquest it is mentioned among the episcopal cities of Palestine (Reland, *Palæst.* i. 35); but none of its bishops are anywhere named. The site seems to have been forgotten till the fourteenth century, when Sir John Maundeville, Rudolf de Suchem, and William de Baldensel recognised the name at a place which they passed on their route from Sinai to Hebron. It was then uninhabited, but some of the churches were still standing. From that time till the recent visit of Dr. Robinson, the place remained unvisited and unknown, except for the slight notice obtained by Seetzen from the Arabs (Zach's *Monatl. Corresp.* xvii. 143). Dr. Robinson gives a clear idea of the southernmost district of Palestine, in which is Beersheba, and with which the book of Genesis has connected so many interesting associations. Coming from the south, he emerged from the desert by a long and gradual ascent, over swelling hills scantily covered with grass. The summit of this ascent afforded a view over a broad barren tract, bounded on the horizon by the mountains of Judah south of Hebron: 'We now felt that the desert was at an end. Descending gradually, we came out upon an open undulating country; the shrubs ceased, or nearly so; green grass was seen along the lesser watercourses, and almost green sward; while the gentle hills, covered in ordinary seasons with grass and rich pasture, were now burnt over with drought. In three-quarters of an hour we reached Wady es-Leba, a wide watercourse or bed of a torrent, running here W.S.W., upon whose northern side, close upon the bank, are two deep wells, still called Bir-es-Leba, the ancient Beersheba. We had entered the borders of Palestine!' These wells are 55 rods apart. They are circular, and stoned up very neatly with masonry, apparently very ancient. The largest of them is 12½ feet in diameter, and 44½ feet deep to the surface of the water, 16 of which, at the bottom, are excavated in the solid rock. The other well is 5 feet in diameter by 12 feet deep. 'The water in both is pure and sweet, and in great abundance; the finest, indeed, we had found since leaving Sinai. Both wells are surrounded with drinking-troughs of stone for camels and flocks, such as were doubtless used of old by the flocks which were fed on the adjacent hills' (Robinson, i. 301). No ruins were at first visible; but, on examination, foundations of former dwellings were traced, dispersed loosely over the low hills, to the north of the wells, and in the hollows between. They seem to have been built chiefly of round stones, although some of the stones are squared and some hewn; suggesting the idea of a small straggling city. The site of the wells is nearly midway between the southern end of the Dead Sea and the Mediterranean at Raphæa, or twenty-seven miles south-east from Gaza, and about the same distance south-by-west from Hebron. Its present Arabic name, Bir-es-Seba, means 'well of the seven,' which some take to be the signification also of Beersheba, in allusion to the seven ewe-lambs which Abraham gave to Abimelech, in token of the oath between them. There is no ground for rendering it by '*seven wells*,' as some have done.

BEETLE. [CHARGOL.]
